Han-sung Kim, Kyungki-do, Rep. of Korea, assignor to Samsung Electronics Co., Ltd., Rep. of Korea

Filed Feb. 13, 1998, Appl. No. 22,794

Claims priority, application Rep. of Korea, May 13, 1997, 97-18575

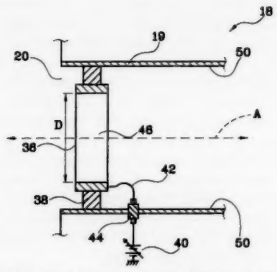
Int. Cl.[7] H01J *37/30*

U.S. Cl. 250—492.21 **9 Claims**

1. An ion analyzer for an ion implanter used for implanting ions on a semiconductor wafer surface, said ion analyzer comprising:

a curved ion analyzer chamber having an inlet and an outlet at respective ends thereof;

a focusing guide secured within, and electrically insulated from, said curved ion analyzer chamber inlet, said focusing guide having an aperture formed therein, wherein said focusing guide is configured to focus an ion beam passing through said curved ion analyzer chamber such that said ion beam exiting said focusing guide has less dispersion than said ion beam



entering said curved ion analyzer chamber inlet, and wherein collisions of ions with said curved ion analyzer chamber between said inlet and outlet are reduced; and

means for forming one of an electric field and a magnetic field around said focusing guide to focus said ion beam passing through said aperture.

ELECTRON BEAM EXPOSURE METHOD USING A MOVING STAGE

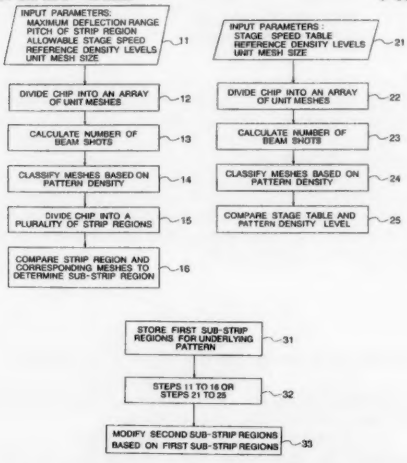
Naka Onoda, Tokyo, Japan, assignor to NEC Corporation, Tokyo, Japan

Filed May 22, 1998, Appl. No. 83,095

Claims priority, application Japan, May 22, 1997, 9-131539

Int. Cl.[7] **H01J** *37/302*

U.S. Cl. 250—492.22 **6 Claims**



1. An electron beam exposure method comprising the steps of:

dividing a semiconductor chip into a plurality of sub-strip regions each having a width equal to or lower than a maximum width determined by an electron beam deflection range, at least two of said sub-strip regions having different widths; and

consecutively exposing said plurality of sub-strip regions to form desired patterns on said semiconductor chip,

wherein each said sub-strip region is modified based on sub-strip regions used in exposure during exposure for underlying patterns.

6,040,584

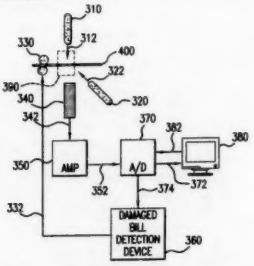
METHOD AND FOR SYSTEM FOR DETECTING DAMAGED BILLS

Jiancheng Liu, and Kazuo Yamazaki, both of Davis, Calif., assignors to MTI Corporation, Aurora, Ill.

Filed May 22, 1998, Appl. No. 83,138

Int. Cl.[7] **G01N** *21/86*

U.S. Cl. 250—559.11 **8 Claims**



1. A method for detecting an extent of deterioration of a bill, comprising:

generating at least one transmitted light image and at least one reflected light image of the bill;

determining at least one disorder curve length for at least some of the at least one transmitted light image and at least some of the at least one reflected light image;

determining at least one evaluation factor for at least some of the at least one transmitted light image and at least one evaluation factor for at least some of the at least one reflected light image based on the determined disorder curve lengths; and

determining the extent of deterioration of the bill based on at least some of the determined evaluation factors.

6,040,585

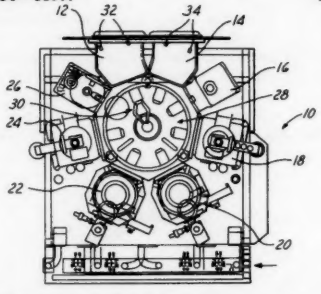
METHOD FOR DETECTING WAFER ORIENTATION DURING TRANSPORT

Yi Li Hsiao, Ta-Lin, Taiwan, assignor to Taiwan Semiconductor Manufacturing Co., Ltd, Hsin-chu, Taiwan

Filed Aug. 20, 1999, Appl. No. 379,134

Int. Cl.[7] **G01N** *21/86;* **C23C** *16/00;* **G01B** *11/14;* **B65G** *25/00;49/07*

U.S. Cl. 250—559.4 **20 Claims**



1. A method of controlling the operation of a semiconductor wafer transfer system of the type having a blade upon which a wafer is carried, and a robotic arm for transferring said blade between a plurality of chambers in a semiconductor processing system, comprising the steps of:

rotating said arm between each of a plurality of indexed positions respectively corresponding to said chambers;

shifting said arm between an extended, wafer transferring position, and a retracted, home position;

sensing by at least two laser beams and at least two receivers when said wafer is not in a preselected, desired position on said blade; and,

inhibiting rotation and shifting of said arm when the position of said wafer sensed in said sensing step is not said preselected position.

6,040,586

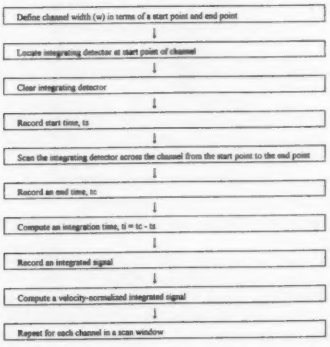
METHOD AND SYSTEM FOR VELOCITY-NORMALIZED POSITION-BASED SCANNING

Tor Slettnes, Oakland, Calif., assignor to The Perkin-Elmer Corporation, Foster City, Calif.

Filed May 5, 1998, Appl. No. 73,130

Int. Cl.[7] G01N *15/06*

U.S. Cl. 250—573 **25 Claims**



Define channel width (w) in terms of a start point and end point
Locate integrating detector at start point of channel
Clear integrating detector
Record start time, ts
Scan the integrating detector across the channel from the start point to the end point
Record an end time, te
Compute an integration time, ti = te - ts
Record an integrated signal
Compute a velocity-normalized integrated signal
Repeat for each channel in a scan window

1. A data collection method for scanning a scan window comprising one or more channels comprising the steps of:

detecting an integrated signal (S) across a scan window comprising one or more channels using an integrating detector; and

calculating a velocity-normalized integrated signal (Sn) as a function of a scan velocity and the integrated signal S.

6,040,587

SPIN-POLARIZED ELECTRON EMITTER HAVING SEMICONDUCTOR OPTO-ELECTRONIC LAYER WITH SPLIT VALENCE BAND

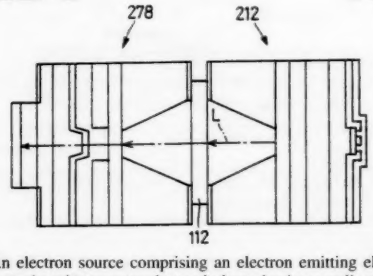
Katsumi Kishino, Yokohama, and Toshihiro Kato, Kasugai, both of Japan, assignors to Katsumi Kishino, Yokohama, and Daido Tokushuko Kabushiki Kaisha, Nagoya, both of Japan

Division of application No. 08/920,704, Aug. 29, 1997, abandoned, which is a continuation of application No. 08/124,624, Sep. 22, 1993, Pat. No. 5,747,862. This application Dec. 10, 1998, Appl. No. 208,861.

Claims priority, application Japan, Sep. 25, 1992, 4-280822; Oct. 22, 1992, 4-308259; Oct. 22, 1992, 4-308260

Int. Cl.[7] H01L *29/06*

U.S. Cl. 257—11 **13 Claims**



1. An electron source comprising an electron emitting element with a semiconductor opto-electronic layer having a split valence band, said opto-electronic layer emitting a beam of spin-polarized electrons from an emitting surface thereof upon incidence of an excitation laser radiation upon said opto-electronic layer, said electron source further comprising:

a semiconductor light modulating element disposed on one of opposite sides of said electron emitting element remote from said opto-electronic layer, said light modulating element including a pair of electrodes and modulating an intensity of the laser radiation to be incident upon said opto-electronic layer, such that said intensity varies with an amount of an electric current to be a=lied between said pair of electrodes.

6,040,588

SEMICONDUCTOR LIGHT-EMITTING DEVICE

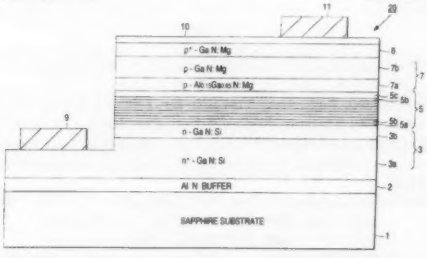
Norikatsu Koide; Shinya Asami; Junichi Umezaki; Masayoshi Koike; Shiro Yamasaki, and Seiji Nagai, all of Aichi, Japan, assignors to Toyoda Gosei Co., Ltd., Japan

Filed Sep. 8, 1997, Appl. No. 925,325

Claims priority, application Japan, Sep. 8, 1996, 8-257819; Oct. 22, 1996, 8-299404

Int. Cl.[7] H01L *29/06;33/00*

U.S. Cl. 257—15 **10 Claims**



1. A semiconductor light-emitting device comprising:

a first semiconductor layer being made of n-type GaN;

a light-emitting layer of superlattice structure being formed on the first semiconductor layer by laminating a barrier layer being made of $In_{Y2}Ga_{1-Y1}N$ (Y1≧0) and a quantum well layer being made of $In_{Y2}Ga_{1-Y2}N$ (Y2>Y1 and Y2>0); and

a second semiconductor layer being made of p-type $Al_XGa_{1-X}N$ (0.05<X<0.2);

wherein layers being adjacent to the first semiconductor layer and the second semiconductor layer are the barrier layers in the light-emitting layer.

6,040,589

SEMICONDUCTOR DEVICE HAVING LARGER CONTACT HOLE AREA THAN AN AREA COVERED BY CONTACT ELECTRODE IN THE HOLE

Hongyong Zhang; Jun Koyama, and Satoshi Teramoto, all of Kanagawa, Japan, assignors to Semiconductor Energy Laboratory Co., Ltd., Kanagawa-ken, Japan

Filed Jun. 12, 1997, Appl. No. 873,846

Claims priority, application Japan, Jun. 18, 1996, 8-178508; Oct. 8, 1996, 8-286001

Int. Cl.[7] H01L *21/312;29/04*

U.S. Cl. 257—59 **27 Claims**

1. A semiconductor device comprising:

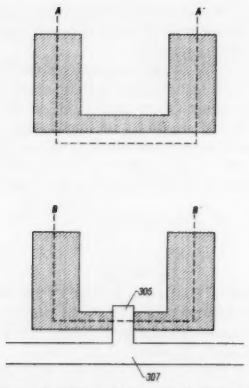
a semiconductor layer formed on an insulating surface;

an interlayer insulating film formed over said semiconductor layer;

a contact hole formed through said interlayer insulating film to expose a portion of said semiconductor layer therein;

an electrode formed on said interlayer insulating film and extending into said contact hole to electrically contact said semiconductor layer,

wherein said semiconductor layer and said electrode are patterned in said contact hole coextensively, and



wherein an area of said contact hole is larger than an area in which said electrode contacts the semiconductor layer.

6,040,590

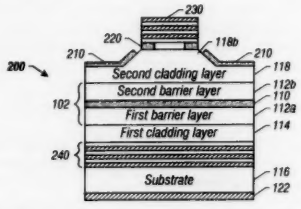
SEMICONDUCTOR DEVICE WITH ELECTROSTATIC CONTROL

John OBrien, Pasadena; Axel Scherer, Laguna Beach; Amnon Yariv, San Marino; Reginald Lee, Pasadena; Yuanjian Xu, Pasadena, and Oskar Painter, Pasadena, all of Calif., assignors to California Institute of Technology, Kanagawa-ken, Japan

Provisional application No. 60/032,660, Dec. 12, 1996. This application Dec. 12, 1997, Appl. No. 990,145.

Int. Cl.[7] **H01L** *33/00*

U.S. Cl. 257—94 **26 Claims**



1. A semiconductor device formed on a semiconductor substrate, comprising:

an active semiconductor medium layer responsive to a driving current across said active semiconductor medium layer to produce photons;

a first semiconductor cladding layer formed on a first side of said active semiconductor medium layer;

a second semiconductor cladding layer formed on a second opposing side of said active semiconductor medium layer, said first and second cladding layers operable to confine said photons within said active semiconductor medium layer;

first and second ohmic contacts respectively formed on said first side and second opposing side of said active semiconductor medium layer to supply said driving current;

an optical cavity formed to enclose at least a portion of said active semiconductor medium layer and having a cavity optic axis substantially perpendicular to said active semiconductor medium layer, said optical cavity controlling said photons to travel along said cavity optic axis; and

a plurality of control electrodes separate from one another and disposed relative to said active semiconductor medium layer, at least one control electrode biased at a first control potential and one control electrode biased at a second control potential to control a spatial distribution of said driving current in said active semiconductor medium layer such that said driving current has an elongated cross section profile to make a polarization of said photons along the elongation direction.

6,040,591

SOLID STATE IMAGING DEVICE HAVING REFRACTIVE INDEX ADJUSTING LAYER AND METHOD FOR MAKING SAME

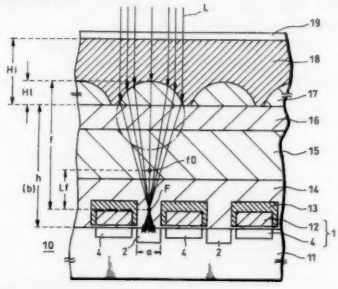
Youichi Otsuka, Kanagawa, Japan, assignor to Sony Corporation, Tokyo, Japan

Filed Mar. 24, 1998, Appl. No. 46,766

Claims priority, application Japan, Mar. 25, 1997, 9-071886

Int. Cl.[7] **H01L** *27/148;29/768*

U.S. Cl. 257—232 **10 Claims**



1. A solid-state imaging device comprising:

a semiconductor substrate including at least one photosensor formed therein;

a first transparent flattening layer on the substrate and including formed therein transfer electrodes for the photosensor;

a color filter layer on the first transparent flattening layer;

a second transparent flattening layer on the color filter layer;

a microlens on the second the second transparent flattening layer in registry with the photosensor;

a refractive index adjusting layer formed over the microlens and the second transparent flattening layer, the refractive adjusting layer having a refractive index **n2** that is lower than refractive index **n1** of the microlens,

wherein,

a focal length f of the microlens as adjusted by the refractive index adjusting layer extends into the first transparent flattening layer and is expressed by the relationship $f=(n2)r/(n2-n1)$, where r is a radius of lens curvature of the microlens, and a top surface of the device is flat.

6,040,592

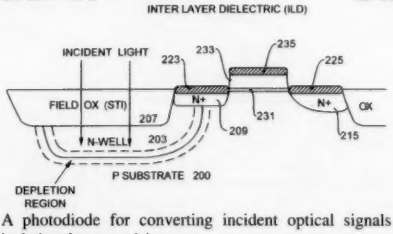
WELL TO SUBSTRATE PHOTODIODE FOR USE IN A CMOS SENSOR ON A SALICIDE PROCESS

Bart McDaniel, Phoenix; Mark A. Beiley, Chandler; Lawrence T. Clark, Phoenix; Eric J. Hoffman, and Edward J. Bawolek, both of Chandler, all of Ariz., assignors to Intel Corporation, Santa Clara, Calif.

Filed Jun. 12, 1997, Appl. No. 873,987

Int. Cl.[7] **H01L** *31/068;31/0352*

U.S. Cl. 257—292 **23 Claims**



1. A photodiode for converting incident optical signals into electrical signals, comprising:

substrate layer of semiconductor material of a first conductivity type;

well of semiconductor material of a second conductivity type having a top and bottom, the bottom of the well being disposed in the substrate and a p-n junction defined there

between, the well and substrate defining a photosensitive region of said photodiode;

tap region of semiconductor material of the second conductivity type in contact with the well, the tap region having a greater dopant concentration than the well to promote electrical contact with the well; and

a field oxide region covering a substantial portion of the top of the well, the oxide region permitting the passage of at least some of the incident optical signals into the photosensitive region.

6,040,593

IMAGE SENSOR HAVING SELF-ALIGNED SILICIDE LAYER

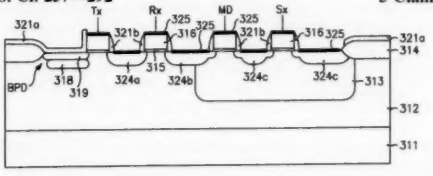
Sang Hoon Park, Ichon, Rep. of Korea, assignor to Hyundai Electronics Industries Co., Ltd., Kyoungki-do, Rep. of Korea

Filed Jun. 29, 1999, Appl. No. 342,486

Claims priority, application Rep. of Korea, Jun. 29, 1998, 98-24648

Int. Cl.[7] **H01L** *27/108*

U.S. Cl. 257—292 **5 Claims**



1. A CMOS (Complementary Metal Oxide Semiconductor) image sensor, comprising:

a photo-sensing region, in which a buried photodiode is formed, for sensing light from an object;

a plurality of transistors electrically coupled to the buried photodiode;

silicide layers formed on gates and heavily doped regions of said pluralit of transistors except the photo-sensing region; and

a plurality of insulating layer patterns which are provided by patterning an insulating layer, wherein the insulating layer patterns include:

insulating spacers formed on sidewalls of the gates, which are respectively provided for the plurality of transistors; and

a passivation layer formed on the photo-sensing region and on a sidewall of neighboring one of the gates.

6,040,594

HIGH PERMITTIVITY ST THIN FILM AND A CAPACITOR FOR A SEMICONDUCTOR INTEGRATED CIRCUIT HAVING SUCH A THIN FILM

Seigen Otani, Kawasaki, Japan, assignor to Fujitsu Limited, Kawasaki, Japan

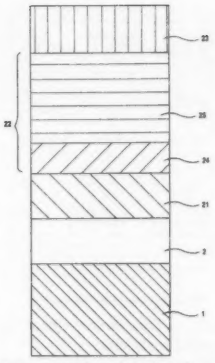
Division of application No. 08/429,169, Apr. 26, 1995, Pat. No. 5,882,946. This application Dec. 4, 1998, Appl. No. 205,398.

Claims priority, application Japan, Jul. 27, 1994, 6-175549

Int. Cl.[7] **H01L** *29/76;29/94;31/062;31/113;31/119*

U.S. Cl. 257—295 **6 Claims**

1. A high-permittivity thin film essentially consisting of strontium titanate ($SrTiO_3$) comprising a surface layer where concentration of titanium atoms is higher than that in a rest of the high-permittivity thin film.



6,040,595

STRUCTURE OF A NON-DESTRUCTIVE READOUT DYNAMIC RANDOM ACCESS MEMORY

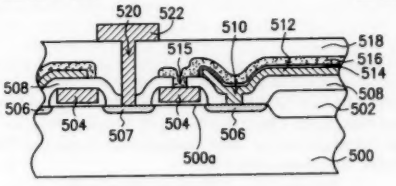
Yu-Hao Yang, Hsinchu Hsien, Taiwan, assignor to Winbond Electronics Corp., Hsinchu, Taiwan

Filed May 15, 1998, Appl. No. 80,131

Claims priority, application Taiwan, Mar. 13, 1998, 87103702

Int. Cl.[7] **H07L** *27/108*

U.S. Cl. 257—300 **15 Claims**



1. A structure of a circuit of a dynamic random access memory (DRAM), the structure of the circuit comprising:

a word line; wherein the word line supplies a voltage source;

a bit line;

a capacitor; wherein the capacitor in the DRAM is used for the storing a binary data and comprises a lower electrode and an upper electrode;

a field effect transistor (FET); wherein the FET comprises a gate being electrically coupled to the word line, a source region being electrically coupled to the bit line and a drain region being electrically coupled to the lower electrode of the capacitor; and

a coupling structure of the capacitor, wherein the upper electrode of the capacitor is electrically coupled to the word line.

6,040,596

DYNAMIC RANDOM ACCESS MEMORY DEVICES HAVING IMPROVED PERIPHERAL CIRCUIT RESISTORS THEREIN

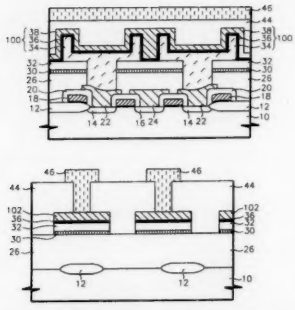
Chang-Shik Choi, and Young-Woo Park, both of Kyunggi-do, Rep. of Korea, assignors to Samsung Electronics Co., Ltd., Rep. of Korea

Filed Jul. 22, 1997, Appl. No. 897,365

Int. Cl.[7] **H01L** *27/108;29/76;29/94;29/00*

U.S. Cl. 257—306 **9 Claims**

1. A dynamic random access memory (DRAM) device having a memory cell array region and a peripheral circuit region at spaced apart locations in a semiconductor substrate, comprising:



an interlayer insulating layer having a planarized upper surface, on the semiconductor substrate;

a lower DRAM capacitor electrode on a first portion of the planarized upper surface of said interlayer insulating layer extending opposite the memory cell array region;

a capacitor dielectric layer having a first region therein that extends on said lower DRAM capacitor electrode and a second region therein that extends on a second portion of the planarized upper surface of said interlayer insulating layer;

an upper DRAM capacitor electrode on the first region of said capacitor dielectric layer, opposite said lower DRAM capacitor electrode; and

a resistor comprising the same material as said upper DRAM capacitor electrode and having a planar upper surface that extends opposite the second region of said capacitor dielectric layer.

6,040,597

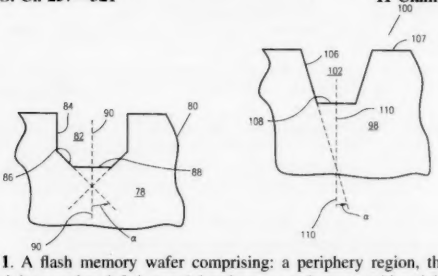
ISOLATION BOUNDARIES IN FLASH MEMORY CORES

Unsoon Kim, Santa Clara; Yowjuang W. Liu, San Jose, and Yu Sun, Saratoga, all of Calif., assignors to Advanced Micro Devices, Inc., Sunnyvale, Calif.

Filed Feb. 13, 1998, Appl. No. 23,166

Int. Cl.[7] **H01L** *29/788*

U.S. Cl. 257—321 **11 Claims**



1. A flash memory wafer comprising: a periphery region, the periphery region defining peripheral memory elements said peripheral memory elements being isolated from each other by an insulator region, said insulator region being formed using a LOCOS method;

a core memory region, the core memory region defining core memory elements;

isolation grooves separating the core memory elements from each other, at least some of the isolation grooves being V-shaped isolation grooves and being formed by a wet etching process such that said at least some of the V-shaped isolation grooves define respective axes and respective walls, and wherein at least a respective portion of each wall defines an angle of between twenty degrees and seventy degrees (20°–70°) relative to the respective axis to facilitate directing a dopant beam against the walls, and

a conductivity dopant implanted by said dopant beam into said respective walls, Said conductivity dopant being implanted in a parallel direction to said respective axes.

6,040,598

HIGH-BREAKDOWN-VOLTAGE SEMICONDUCTOR APPARATUS

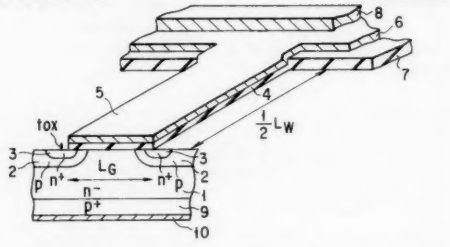
Kazuya Nakayama, Sagamihara, and Koichi Sugiyama, Yokohama, both of Japan, assignors to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Mar. 17, 1998, Appl. No. 42,614

Claims priority, application Japan, Mar. 18, 1997, 9-065146; Mar. 10, 1998, 10-057956

Int. Cl.[7] **H01L** *29/76*

U.S. Cl. 257—329 **12 Claims**



1. A high-breakdown-voltage semiconductor apparatus comprising:

a first-conductity-type base layer;

a second-conductivity-type base layer formed on a surface of the first-conductivity-type base layer;

a first-conductivity-type source layer formed on a surface of the second-conductivity-type base layer;

a gate electrode provided over that portion of the second-conductivity-type base layer, which is interposed between the first-conductivity-type source layer and the first-conductivity-type base layer, with a gate insulation film interposed between the gate electrode and the interposed portion of the second-conductivity-type base layer;

a second-conductivity-type drain layer formed on a surface of the first-conductivity-type base layer, which is opposed to the surface thereof on which the second-conductivity-type base layer;

a drain electrode put in contact with the second-conductivity-type drain layer; and

a source electrode put in contact with the first-conductivity-type source layer and the second-conductivity-type base layer,

wherein when a gate capacitance of that portion of the gate electrode, under which a channel is formed, is Cg [F],

a resistance in a channel length direction of that portion of the gate electrode, under which the channel is formed, is Rg [Ω],

a threshold voltage, which is to be applied to the gate electrode and application of which permits flow of a drain current, is Vth [V],

a voltage to be applied to the gate electrode to cut off the drain current is Voff [V], and

a ratio of increase in the drain voltage per unit time at the time of cutting off the drain current is dV/dt [V/s],

the following condition is satisfied:

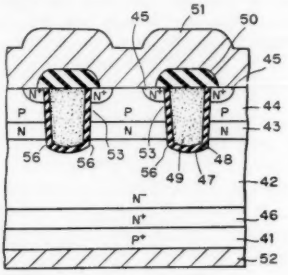
$$|Vth-Voff| \geqq 0.5 \cdot Cg \cdot Rg \cdot (dV/dt)$$

6,040,599

INSULATED TRENCH SEMICONDUCTOR DEVICE WITH PARTICULAR LAYER STRUCTURE

Hideki Takahashi, Tokyo, Japan, assignor to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Sep. 25, 1996, Appl. No. 721,576
Claims priority, application Japan, Mar. 12, 1996, 8-054656
This patent is subject to a terminal disclaimer.
Int. Cl.[7] H01L *29/76;27/108;29/74*
U.S. Cl. 257—330 **15 Claims**



1. An insulated gate semiconductor device, comprising:
- a first semiconductor layer of a first conductivity type having first and second main surfaces
- a second semiconductor layer of a second conductivity type provided over the first main surface of said first semiconductor layer;
- a third semiconductor layer of the second conductivity type provided in close contact on a surface of said second semiconductor layer and having an impurity concentration higher than the impurity concentration of said second semiconductor layer;
- a fourth semiconductor layer of the first conductivity type provided in close contact on a surface of said third semiconductor layer;
- a fifth semiconductor layer of the second conductivity type selectively provided in a surface of said fourth semiconductor layer;
- a trench having an opening in a surface of said fifth semiconductor layer and having a depth extending through at least said fourth semiconductor layer from the surface of said fifth semiconductor layer;
- an insulating film provided on an inner entire wall of said trench;
- a control electrode provided in said trench to face said fourth semiconductor layer through said insulating film;
- a first main electrode provided on the surface of said fourth and fifth semiconductor layers; and
- a second main electrode provided on the second main surface of said first semiconductor layer, wherein said second semiconductor layer is thicker than said third semiconductor layer.

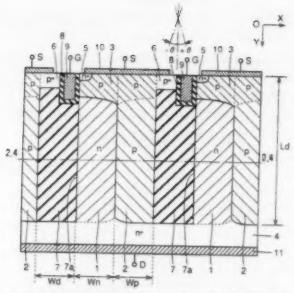
6,040,600

TRENCHED HIGH BREAKDOWN VOLTAGE SEMICONDUCTOR DEVICE

Akio Uenishi, and Tadaharu Minato, both of Hyogo, Japan, assignors to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Aug. 11, 1997, Appl. No. 909,411
Claims priority, application Japan, Feb. 10, 1997, 9-026997
Int. Cl.[7] H01L *29/78*
U.S. Cl. 257—330 **20 Claims**

1. A high breakdown voltage semiconductor device comprising:
- a semiconductor substrate having first and second main surfaces opposite to each other and also having a plurality of trenches provided at said first main surface;
- a first impurity region of a first conductivity type formed within a region of said semiconductor substrate sandwiched between one and another trenches of said plurality of trenches at a sidewall surface of said one trench;



- a second impurity region of a second conductivity type formed within said region sandwiched between said one and another trenches at a sidewall surface of said another trench, and forming a pn junction together with said first impurity region;
- a third impurity region of the second conductivity type formed closer to said first main surface than said first and second impurity regions;
- a fourth impurity region of the first conductivity type formed on at least one of said first main surface and a sidewall surface of said one trench such that said fourth impurity region is disposed opposite to said first impurity region with said third impurity region disposed therebetween; and
- a gate electrode layer opposite to said third impurity region, sandwiched between said first and fourth impurity regions, with a gate insulating layer disposed therebetween;

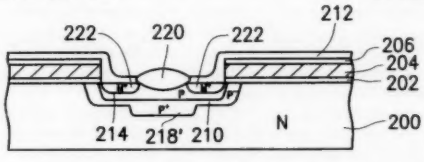
wherein
- said first impurity region has a distribution of concentration of an impurity diffused from a sidewall surface of said one trench; and
- said second impurity region has a distribution of concentration of an impurity diffused from a sidewall surface of said another trench.

6,040,601

HIGH VOLTAGE DEVICE

Jeng Gong, and Sheng-Hsing Yang, both of Hsinchu, Taiwan, assignors to United Microelectronics Corp., Hsinchu, Taiwan

Filed May 27, 1998, Appl. No. 85,681
Claims priority, application Taiwan, Apr. 3, 1998, 87105065
Int. Cl.[7] H01L *29/72*
U.S. Cl. 257—341 **20 Claims**



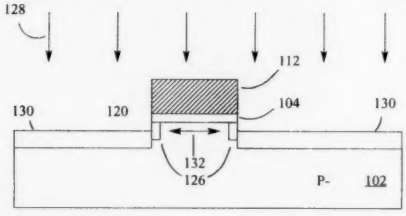
1. A high voltage device, wherein a semiconductor substrate having at least a gate formed thereon is provided, the high voltage device comprising:
- a first diffusion in the semiconductor substrate, wherein the first diffusion region has an edge portion extending under an edge portion of the gate;
- a second diffusion region within the first diffusion region, wherein the second diffusion region is exposed by the gate;
- a third diffusion region extending downward from a central portion of the first diffusion region under the second diffusion region;
- a field oxide layer on a part of the second diffusion region over the third diffusion region; and
- a source/drain region under a surface of the second diffusion region between the field oxide layer and the gate.

6,040,602

FORMATION OF LIGHTLY DOPED REGIONS UNDER A GATE

H. James Fulford, Austin, and Mark I. Gardner, Cedar Creek, both of Tex., assignors to Advanced Micro Devices, Inc., Sunnyvale, Calif.

Filed Dec. 18, 1997, Appl. No. 993,919
Int. Cl.[7] H01L *29/76*
U.S. Cl. 257—344 **10 Claims**



1. A device comprising:

a gate over a semiconductor substrate;

at least one lightly doped region within the substrate substantially underneath the gate, said lightly doped region having a side wall oriented perpendicular to the substrate, a portion of said side wall extending above the surface of the substrate;

at least one heavily doped region within the substrate adjacent to the gate; and

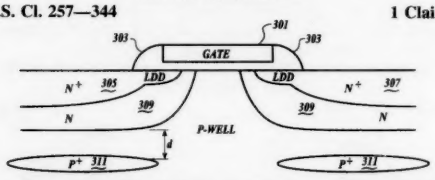
a gate oxide layer over said lightly doped region, not extending substantially beyond said portion of the side wall of the lightly doped region.

6,040,603

ELECTROSTATIC DISCHARGE PROTECTION CIRCUIT EMPLOYING MOSFETS HAVING DOUBLE ESD IMPLANTATIONS

Jiuun-Jer Yang, Chin-Men Hsien, Taiwan, assignor to Worldwide Semiconductor Manufacturing Corporation, Chin-Men Hsien, Taiwan

Filed Apr. 30, 1999, Appl. No. 303,769
Int. Cl.[7] H01L *21/336*
U.S. Cl. 257—344 **1 Claim**



1. A transistor formed in a semiconductor substrate having improved FSD protection comprising:

a gate structure formed atop of said semiconductor substrate, said gate structure comprised of a conducting layer formed atop a thin gate oxide layer;

sidewall spacers formed on the sidewalls of said gate structure;

lightly doped source and drain regions formed in said semiconductor substrate and substantially underneath said sidewall spacers;

a source region formed in said semiconductor substrate and adjacent to one of said sidewall spacers;

a drain region formed in said semiconductor substrate and adjacent to a second one of said sidewall spacers:

a first ESD implant formed underneath said source region and said drain region, said first ESD implant having the same impurity type as said source region and said drain region;

wherein said source region, said drain region, and said lightly doped drain regions are within said first ESD implant; and

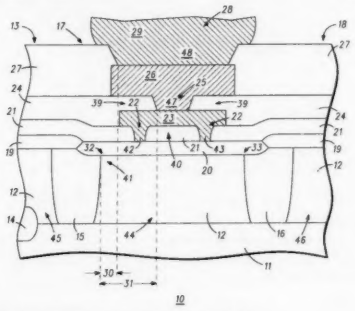
a second ESD implant formed underneath said first ESD implant, said second ESD implant having an impurity type opposite to that of said first ESD implant, said second ESD implant also being spaced apart vertically from said first ESD implant.

6,040,604

SEMICONDUCTOR COMPONENT COMPRISING AN ELECTROSTATIC-DISCHARGE PROTECTION DEVICE

Olivier J. Lauvray, Chandler, and David Rodriguez, Phoenix, both of Ariz., assignors to Motorola, Inc., Schaumburg, Ill.

Filed Jul. 21, 1997, Appl. No. 897,964
Int. Cl.[7] H01L *21/44*
U.S. Cl. 257—355 **9 Claims**



1. A semiconductor component comprising:

a substrate;

a first doped region in the substrate;

an electrostatic-discharge protection device in the substrate comprising a second doped region in the substrate wherein a first portion of the second doped region contacts the first doped region at a first portion of the substrate;

a first interconnect layer overlying the electrostatic-discharge protection device, wherein a ring-shaped portion of the first interconnect layer overlies and contacts a second portion of the second doped region;

a second interconnect layer overlying the first interconnect layer and the electrostatic-discharge protection device, wherein a portion of the second interconnect layer overlies and contacts the first interconnect layer, overlies the electrostatic-discharge protection device, is devoid of overlying the ring-shaped portion of the first interconnect layer, and is devoid of overlying the first and second portions of the second doped region; and

a third interconnect layer overlying the first and second interconnect layers and the electrostatic-discharge protection device, wherein a portion of the third interconnect layer overlies and contacts the second interconnect layer, overlies the electrostatic-discharge protection device, and overlies the portions of the first and second interconnect layers.

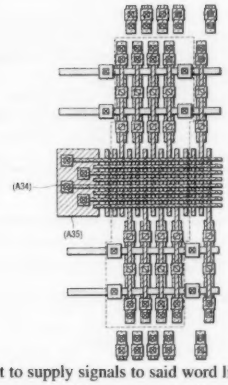
6,040,605

SEMICONDUCTOR MEMORY DEVICE

Toshiaki Sano, Tachikawa; Tomoyuki Ishii, Hachioji; Kazuo Yano, Hino, and Toshiyuki Mine, Fussa, all of Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Continuation-in-part of application No. 09/126,437, Jul. 30, 1998. This application Jan. 26, 1999, Appl. No. 236,630.
Claims priority, application Japan, Jan. 28, 1998, 10-015369
Int. Cl.[7] H01L *29/76;29/94;31/062;31/113*
U.S. Cl. 257—369 **34 Claims**

1. A semiconductor memory device having memory cell blocks each comprised of a plurality of memory cells positioned at the cross points of intersecting word lines and data lines, and a



peripheral circuit to supply signals to said word lines and said data lines; and said memory cell being comprised of a substrate, a first area laminated on said substrate, an insulating film, a second area,

a channel region interconnecting said first area and said second area, a gate electrode for applying an electrical field to said channel region, and an electric charge trap area and wherein information storage is performed by changing the semiconductor threshold voltage by controlling the quantity of carriers in said electric charge trap area and wherein at least a portion of said peripheral circuit is a CMOS circuit comprised of nMOS transistors and pMOS transistors.

6,040,606

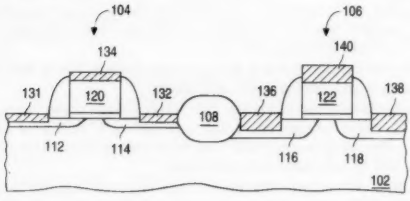
INTEGRATED CIRCUIT STRUCTURE WITH DUAL THICKNESS COBALT SILICIDE LAYERS AND METHOD FOR ITS MANUFACTURE

Christopher S. Blair, San Jose, Calif., assignor to National Semiconductor Corporation, Santa Clara, Calif.

Filed Nov. 4, 1998, Appl. No. 187,306

Int. Cl.[7] **H01L** *29/78;27/085;29/45*

U.S. Cl. 257—384 **3 Claims**



1. An IC structure with dual thickness cobalt silicide layers, the IC structure comprising:

a plurality of first MOS transistor structures with shallow source and drain regions and polysilicon gates;

a plurality of second MOS transistor structures with deep source and drain regions and polysilicon gates;

thin cobalt silicide ($CoSi_2$) layers on the first MOS transistor structures; and

thick cobalt silicide ($CoSi_2$) layers on the second MOS transistor structures.

6,040,607

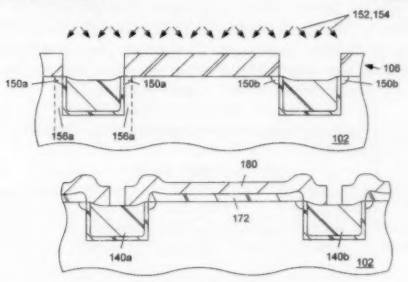
SELF ALIGNED METHOD FOR DIFFERENTIAL OXIDATION RATE AT SHALLOW TRENCH ISOLATION EDGE

Derick J. Wristers; H. Jim Fulford, both of Austin, and Mark I. Gardner, Cedar Creek, all of Tex., assignors to Advanced Micro Devices, Inc., Sunnyvale, Calif.

Filed Feb. 23, 1998, Appl. No. 928,607

Int. Cl.[7] **H01L** *27/02;29/68*

U.S. Cl. 257—389 **4 Claims**



1. An integrated circuit comprising:

a semiconductor substrate, wherein said semiconductor substrate includes at least one isolation region;

at least one isolation structure, wherein said isolation structure comprises an isolation dielectric contained within an isolation trench formed within said isolation region of said semiconductor substrate; and

a gate dielectric formed on an upper surface of said semiconductor substrate, wherein said semiconductor substrate includes an oxygen bearing impurity distribution in portions of said semiconductor substrate proximal to said isolation structure, and further wherein a first thickness of said gate dielectric over regions of said proximal portions of said semiconductor substrate is greater than a second thickness of said gate dielectric over portions of said semiconductor substrate distal from said isolation structure, and wherein said proximal portions of said semiconductor substrate are only within approximately 200 angstroms of said isolation structure.

6,040,608

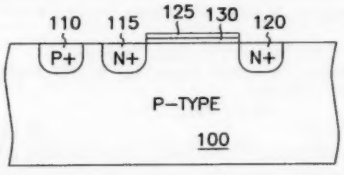
FIELD-EFFECT TRANSISTOR FOR ONE-TIME PROGRAMMABLE NONVOLATILE MEMORY ELEMENT

Manny K. F. Ma; Rajesh Somasekharan, and Wen Li, all of Boise, Id., assignors to Micron Technology, Inc., Boise, Id.

Division of application No. 08/652,376, May 23, 1996, Pat. No. 5,834,813. This application Nov. 4, 1997, Appl. No. 964,164.

Int. Cl.[7] **H01L** *29/68*

U.S. Cl. 257—390 **40 Claims**



1. An integrated circuit programmed nonvolatile memory element comprising:

a field-effect transistor (FET) having drain and source terminals, an electrically interconnected gate terminal that is substantially adjacent to the substrate and separated therefrom by an insulator, and a body terminal, wherein the FET has been programmed such that a channel region has a crystalline

lattice stricture which has been permanently altered by temporarily applying a differential drain-to-source programming voltage that exceeds a characteristic drain-to-source avalanche breakdown voltage magnitude (Bvdss).

6,040,609

PROCESS FOR INTEGRATING, IN A SINGLE SEMICONDUCTOR CHIP, MOS TECHNOLOGY DEVICES WITH DIFFERENT THRESHOLD VOLTAGES

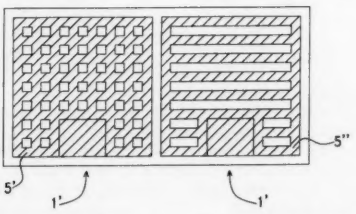
Ferruccio Frisina, Sant'Agata Li Battiati; Davide Bolognesi, Argenta, and Argelo Magri', Belpasso, all of Italy, assignors to STMicroelectronics S.r.l., Agrate Brianza, Italy

Filed Oct. 23, 1998, Appl. No. 178,369

Claims priority, application European Pat. Off., Oct. 24, 1997, 97830543

Int. Cl.[7] **H01L** *29/76*

U.S. Cl. 257—391 **18 Claims**



1. A process for integrating in a same MOS technology devices with different threshold voltages, comprising:

simultaneously forming on a semiconductor material layer of at least two gate electrodes for at least two MOS devices, said gate electrodes comprising substantially rectilinear portions and corners, each gate electrode having a respective corner density per unit area; and

selectively introducing in the semiconductor material layer a dopant for the simultaneous formation of respective channel regions for said at least two MOS devices, said channel regions extending under the respective gate electrode, said selective introduction using as a mask the respective gate electrodes so that said channel regions have, at the corners of the respective gate electrode, a dopant concentration lower than that at the substantially rectilinear portions, and said two MOS devices consequently have respective threshold voltages that depend on the corner density per unit area and on the aperture angles of the corner of the respective gate electrodes.

6,040,610

SEMICONDUCTOR DEVICE

Mitsuhiro Noguchi, and Yukihito Oowaki, both of Yokohama, Japan, assignors to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Apr. 8, 1998, Appl. No. 56,632

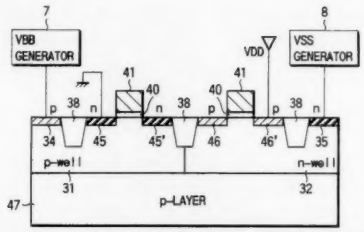
Claims priority, application Japan, Apr. 8, 1997, 9-089538; Jan. 14, 1998, 10-005986

Int. Cl.[7] **H01L** *29/72*

U.S. Cl. 257—392 **25 Claims**

1. A semiconductor device comprising: a chip including a MISFET having a source and a drain, in which one of the source and the drain is connected to a second current supply node; an impedance element having a first terminal connected to the other of the source and the drain and a second terminal connected to a first current supply node; and a switching element, wherein

a well or a body electrode of the MISFET has an active state and a standby state, and is connected to a bias voltage generator for generating different voltages through the switching element,



the threshold voltage V_{ths} during standby state of the MISFET is higher than the threshold voltage V_{tha} during active state of the MISFET,

a voltage applied to a gate of the MISFET being able to take two stationary values, and

the following relationship is satisfied:

$$V_{DD}(1-V_{ths}/V_{DD})<V_{ths}-V_{tha}$$

where V_{DD} represents the higher voltage among the two stationary values.

6,040,611

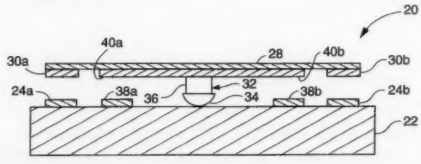
MICROELECTROMECHANICAL DEVICE

Hector J. De Los Santos, Inglewood; Yu-Hua Kao, Los Angeles; Arturo L. Caigoy, Chino Hills, and Eric D. Ditmars, Redondo Beach, all of Calif., assignors to Hughes Electonics Corporation, Los Angeles, Calif.

Filed Sep. 10, 1998, Appl. No. 150,901

Int. Cl.[7] **H01L** *27/14;29/82;29/84*

U.S. Cl. 257—415 **15 Claims**



1. A microelectromechanical, MEM, device comprising:

a substrate having:

a first interconnection line;

a second interconnection line being parallel to the first interconnection line; and

a first and second primary control electrode wherein the first primary control electrode is positioned on one side of the first interconnection line and wherein the second primary control electrode is positioned on the other side of the second interconnection line;

a flexible cantilever beam having a top surface and a bottom surface and a beam width and having:

a flexible anchor secured to the bottom surface of the beam at a center of the beam and attached to a center of the substrate so as to position the beam orthogonally to the first and second interconnection lines;

a first and second secondary control electrode secured to the bottom surface of the beam and positioned opposite the first and

second primary control electrode said

a first and second contact pad secured to the bottom surface of the beam and positioned opposite the first and second interconnection lines wherein said first contact pad and said first interconnection line define a first gap having a first gap width, and said second contact pad and said second interconnection line define a second gap having a second gap width, and wherein said flexible cantilever beam has a beam width larger than said first and second gap widths at a first and second portion corresponding to the first and second interconnection lines; and

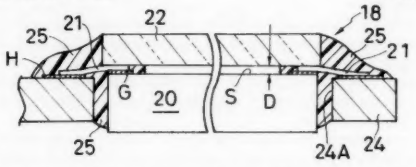
wherein when a voltage is applied to one of the first and second primary control electrodes and the corresponding one of the first and second secondary control electrodes the beam will move towards one of the first and second primary control electrodes causing one of the first and second contact pads to overlap the corresponding one of the first and second gaps so as to make an electrical connection between the corresponding one of the first and second interconnection lines.

6,040,612

IMAGE PICKUP APPARATUS FOR ENDOSCOPE HAVING REDUCED DIAMETER

Itsuji Minami, and Kazuaki Takahashi, both of Omiya, Japan, assignors to Fuji Photo Optical Co., Ltd., Saitama, Japan

Filed Jan. 27, 1998, Appl. No. 13,934
Claims priority, application Japan, Feb. 7, 1997, 9-039936
Int. Cl.[7] H01L *31/0232*
U.S. Cl. 257—432 **4 Claims**



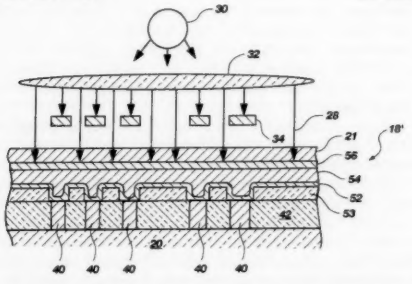
1. An image pickup apparatus for an endoscope comprising:
a circuit board having a through hole aperture and at least one terminal;
an image pickup device body having at least one terminal on an image plane pickup side, and an outer periphery;
a conductor lead connected to the terminal of the image pickup device and protruding from the outer periphery;
an optical element attached to the image plane pickup side of the image pickup device body by a sealant;
an airtight air gap formed between the image pickup device, image pickup plane and the optical element;
wherein the image pickup device body is inside the circuit board through hole aperture; and
wherein the conductor lead is a tape automated bond lead.

6,040,613

ANTIREFLECTIVE COATING AND WIRING LINE STACK

Everett A. McTeer; Russell C. Zahorik, and Scott G. Meikle, all of Boise, Id., assignors to Micron Technology, Inc., Boise, Id.

Filed Jan. 19, 1996, Appl. No. 588,738
Int. Cl.[7] H01L *31/0232*
U.S. Cl. 257—437 **13 Claims**



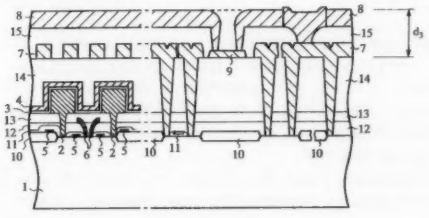
1. An antireflective coating for a semiconductor substrate, the coating comprising a layer, the layer formed of titanium, aluminum, and nitrogen, wherein the substrate is part of a field emission display device, the field emission display device further comprising a display screen,
wherein the substrate comprises: a plurality of emitter sites and a display transistor, the plurality of emitter sites coupled to a source of the display transistor;
wherein the coating shields display transistor junctions from photons emitted by the display surface and from an ambient environment of the field emission display device; and
wherein said antireflective coating contains between about 10 and 90 percent aluminum by weight.

6,040,614

SEMICONDUCTOR INTEGRATED CIRCUIT INCLUDING A CAPACITOR AND A FUSE ELEMENT

Akira Kitaguchi; Makoto Hatakenaka; Michio Nakajima; Kaoru Motonami, all of Tokyo; Kiyoyuki Shiroshima, Hyogo, and Takekazu Yamashita, Nagasaki, all of Japan, assignors to Mitsubishi Denki Kabushiki Kaisha, Tokyo, and Mitsubishi Electric System LSI Design Corporation, Hyogo, both of Japan

Filed Mar. 3, 1998, Appl. No. 33,611
Claims priority, application Japan, Sep. 2, 1997, 9-237391
Int. Cl.[7] H01L *29/40*
U.S. Cl. 257—529 **5 Claims**



1. A semiconductor integrated circuit comprising:
a semiconductor substrate;
a capacitor disposed on said semiconductor substrate;
an insulating layer disposed on said capacitor and on said semiconductor substrate, said insulating layer having a substantially planar surface smoothed by chemical mechanical polishing; and
a fuse element disposed on the substantially planar surface of said insulating layer.

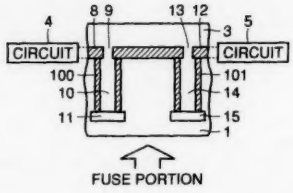
6,040,615

SEMICONDUCTOR DEVICE WITH MOISTURE RESISTANT FUSE PORTION

Yukihiro Nagai, and Tomoharu Mametani, both of Hyogo, Japan, assignors to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Apr. 14, 1998, Appl. No. 59,280
Claims priority, application Japan, Nov. 20, 1997, 9-319447
Int. Cl.[7] H01L *29/00;23/58;23/62*
U.S. Cl. 257—529 **6 Claims**

1. A semiconductor device, comprising:
a semiconductor substrate;
a first circuit and a second circuit with a space therebetween, provided on said semiconductor substrate;
a fuse provided on said semiconductor substrate between said first circuit and said second circuit;
a first metal portion provided on said semiconductor substrate having one end connected to said first circuit;
a first trench provided in a main surface of said semiconductor substrate between said fuse and said first metal portion;
a first doped layer formed at a bottom of said first trench;



a first plug provided at a sidewall surface of said first trench to electrically connect another end of said first metal portion with said first doped layer;

a second plug provided at the sidewall surface of said first trench, spaced apart from said first plug, to electrically connect one end of said fuse with said first doped layer; and

an insulating film provided on said semiconductor surface to fill in said first trench.

6,040,616

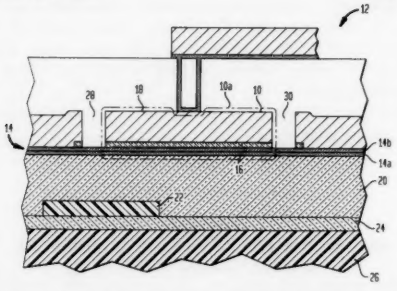
DEVICE AND METHOD OF FORMING A METAL TO METAL CAPACITOR WITHIN AN INTEGRATED CIRCUIT

Donald C. Dennis; Joseph R. Radosevich, and Ranbir Singh, all of Orlando, Fla., assignors to Lucent Technologies Inc., Murray Hill, N.J.

Continuation-in-part of application No. 08/472,033, Jun. 6, 1995, Pat. No. 5,654,581. This application Aug. 12, 1997, Appl. No. 909,563.

Int. Cl.[7] **H01L** *29/00*

U.S. Cl. 257—535 **10 Claims**



1. For use in an integrated circuit structure having a prior level that includes a foundation dielectric, a capacitor comprising:

substantially planar first and second electrodes having a capacitor dielectric formed there between, said first electrode formed immediately over said prior level and a portion of said first electrode overlapping said second electrode to define a common area, said first electrode:

extending beyond said common area, and

connecting said capacitor to said prior level outside said common area; and

a contact metal located on the same level as and in close proximity to said capacitor and on a portion of said first electrode that extends beyond said common area, thereby to improve a circuit packing density of said integrated circuit structure.

6,040,617

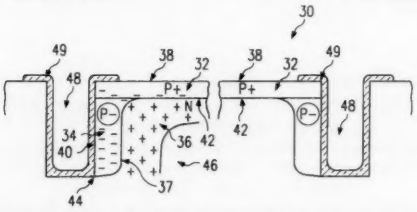
STRUCTURE TO PROVIDE JUNCTION BREAKDOWN STABILITY FOR DEEP TRENCH DEVICES

Viren C. Patel, Belle Meade, N.J., assignor to STMicroelectronics, Inc., Carrollton, Tex.

Filed Dec. 22, 1992, Appl. No. 995,582

Int. Cl.[7] **H01L** *27/082;29/861;23/58;29/00*

U.S. Cl. 257—571 **16 Claims**



1. A deep trench transistor structure which provides junction breakdown stability, comprising:

a base region;

a collector region surrounded by a buffer region, wherein the base region rests on top of the buffer region and the collector region;

a deep trench having at least two vertical sidewalls and a floor, wherein the base region extends to a vertical sidewall of the deep trench; and

a base-collector junction connecting the base region and the collector region, wherein the buffer region is located adjacent to the vertical sidewall, thereby shifting the base-collector junction towards the collector region and away from the vertical sidewall.

6,040,618

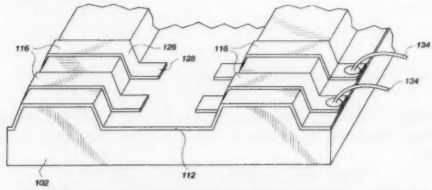
MULTI-CHIP MODULE EMPLOYING A CARRIER SUBSTRATE WITH MICROMACHINED ALIGNMENT STRUCTURES AND METHOD OF FORMING

Salman Akram, Boise, Id., assignor to Micron Technology, Inc., Boise, Id.

Filed Mar. 6, 1997, Appl. No. 812,476

Int. Cl.[7] **H01L** *27/082;27/102;29/70;31/11*

U.S. Cl. 257—586 **35 Claims**



1. A carrier substrate for a semiconductor element, comprising:

a substrate with a substantially planar surface having at least one elongated, substantially linear mesa defined by two inclined sidewalls rising therefrom and extending to a top surface substantially parallel to said substantially planar surface;

an insulating layer disposed over said substantially planar substrate surface and said at least one elongated substantially linear mesa; and

a plurality of conductive traces extending over said insulating layer and including mutually parallel, laterally spaced, substantially linear segments oriented transversely to said at least one elongated, substantially linear mesa, said mutually parallel, laterally spaced, substantially linear segments of said plurality of conductive traces each extending over a first portion of said planar substrate surface on one side of said at least one elongated mesa, over said at least one elongated, substantially linear mesa and onto a second portion of said substantially planar substrate surface on an opposing side of said at least one elongated, substantially linear mesa.

6,040,619

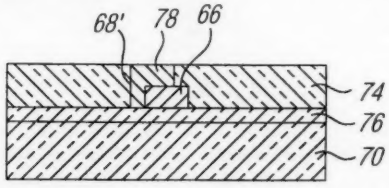
SEMICONDUCTOR DEVICE INCLUDING ANTIREFLECTIVE ETCH STOP LAYER

Fei Wang; David K. Foote, both of San Jose; Myron R. Cagan, Saratoga, and Subhash Gupta, San Jose, all of Calif., assignors to Advanced Micro Devices, Sunnyvale, Calif.

Continuation-in-part of application No. 08/479,718, Jun. 7, 1995, Pat. No. 5,710,067. This application Sep. 25, 1997, Appl. No. 937,774.

Int. Cl.[7] **H01L** *23/58;21/316;23/48*

U.S. Cl. 257—649 **10 Claims**



1. A semiconductor structure, comprising:

a semiconductor substrate;

a semiconductor device formed on a surface of the substrate; and

a layer of silicon oxime formed over the surface of the substrate and the device, the layer having a silicon content of approximately 40% to 50% by weight and a thickness of approximately 800 Å±10%.

6,040,620

LEAD FRAME FOR LOC HAVING A REGULATING LEAD TO PREVENT VARIATION IN ADHESIVE COVERAGE

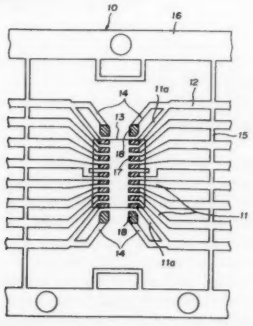
Hiroshi Sugimoto; Shigeo Hagiya; Noriaki Taketani; Takaharu Yonemoto, and Osamu Yoshioka, all of Ibaraki, Japan, assignors to Hitachi Cable, Ltd., Tokyo, Japan

Filed Jul. 3, 1997, Appl. No. 888,121

Claims priority, application Japan, Jul. 5, 1996, 8-176114; Jul. 5, 1996, 8-176115

Int. Cl.[7] **H01L** *23/495*

U.S. Cl. 257—666 **4 Claims**



1. A lead frame for LOC, comprising:

a plurality of inner leads for mounting a semiconductor chip at front ends thereof;

an insulating adhesive material for fixing a semiconductor chip on said plurality of inner leads, said insulating adhesive material being coated on a portion of said plurality of inner leads located within a semiconductor chip mounting region; and

an additional lead for regulating coverage of said insulating adhesive material, said additional lead being located outside said semiconductor chip mounting region and adjacent to one of said plurality of inner leads which is located in an outermost position in said semiconductor chip mounting region;

said additional lead being coated at a front end thereof with said insulating adhesive material.

6,040,621

SEMICONDUCTOR DEVICE AND WIRING BODY

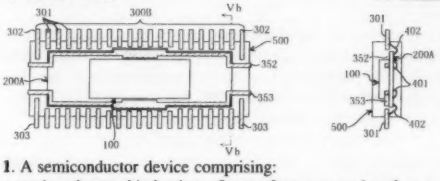
Sachiyuki Nose, Kyoto, Japan, assignor to Matsushita Electronics Corporation, Osaka, Japan

Filed Mar. 23, 1998, Appl. No. 45,832

Claims priority, application Japan, Mar. 26, 1997, 9-073142

Int. Cl.[7] **H01L** *23/495;23/48;23/52*

U.S. Cl. 257—666 **50 Claims**



1. A semiconductor device comprising:

a semiconductor chip having a first surface, a second surface and plural bonding pads on said first surface;

a wiring body including a plate-shaped insulating supporting substrate and plural lines supported by said insulating supporting substrate, said wiring body being mounted on said first surface of said semiconductor chip;

a bonding member for electrically connecting said bonding pads of said semiconductor chip with a part of each of said plural lines of said wiring body; and

plural leads connected with another part of each of said plural lines of said wiring body,

wherein said plural lines include a signal line, a power line and a ground line,

said plural leads include a signal lead, a power lead and a ground lead, and

said signal line is electrically connected with said signal lead, said power line is electrically connected with said power lead, and said ground line is electrically connected with said ground lead.

6,040,622

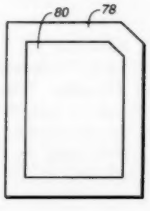
SEMICONDUCTOR PACKAGE USING TERMINALS FORMED ON A CONDUCTIVE LAYER OF A CIRCUIT BOARD

Robert F. Wallace, Sunnyvale, Calif., assignor to SanDisk Corporation, Sunnyvale, Calif.

Filed Jun. 11, 1998, Appl. No. 96,140

Int. Cl.[7] **H01L** *23/02*

U.S. Cl. 257—679 **26 Claims**



1. A package including:

a circuit board;

an set of circuit elements on the circuit board, the set of circuit elements including at least one integrated circuit and passive components; and

packaging material surrounding the set of circuit elements and part of the circuit board,

wherein one side of the circuit board includes a set of terminals that are visible from the side of the package, the set of terminals being positioned away from the edge of the circuit board, and

wherein the package is a flash EEPROM package.

6,040,623

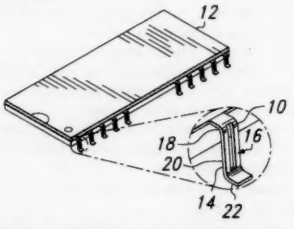
SLOTTED LEAD FOR A SEMICONDUCTOR DEVICE

Min Yu Chan, and Jing Sua Goh, both of Singapore, Singapore, assignors to Texas Instruments Incorporated, Dallas, Tex.

Continuation of application No. 08/476,958, Jun. 7, 1995, abandoned, which is a division of application No. 08/232,975, Apr. 25, 1994, abandoned, which is a continuation of application No. 08/565,224, Nov. 30, 1995, Pat. No. 5,647,124. This application Feb. 5, 1997, Appl. No. 795,056.

Int. Cl.[7] **H01L** *23/495;23/48;23/52*

U.S. Cl. 257—692 **6 Claims**



1. A lead disposed to connect a semiconductor device to a surface, comprising:

a plurality of discrete, independent electrically conductive lead fingers, each of said lead fingers having a first substantially horizontal segment connectable to a semiconductor device, a substantially vertical segment connected to said first substantially horizontal segment, and a second substantially horizontal segment connected to said substantially vertical segment; and

at least one slot formed in at least said substantially vertical segment, said slot dividing said vertical segment into at least two substantially parallel vertically oriented leg segments that are connected at first and second slot ends, respectively, formed in the lead finger, whereby said slot is fully positioned external of the semiconductor device, thereby inhibiting contamination flow alone the lead fingers into the semiconductor device.

6,040,624

SEMICONDUCTOR DEVICE PACKAGE AND METHOD

Benjamin C. Chambers, Chandler; William R. Blood, Jr., Fountain Hills, and Tien-Yu T. Lee, Phoenix, all of Ariz., assignors to Motorola, Inc., Schaumburg, Ill.

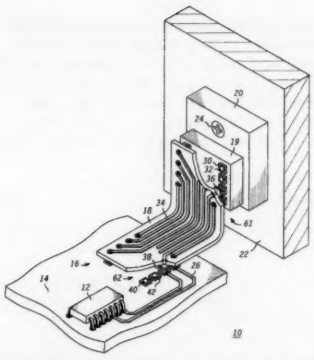
Filed Oct. 2, 1997, Appl. No. 943,020

Int. Cl.[7] **H01L** *23/48*

U.S. Cl. 257—692 **4 Claims**

1. A semiconductor package, comprising:

a flexible substrate having a plurality of conductors routed along the flexible substrate between a mounting region of the flexible substrate and a terminal region of the flexible substrate wherein the mounting region is physically separated a distance of at least 2.0 millimeters from the terminal region to thermally isolate the mounting region and the terminal region; and



a heat generating semiconductor device having a first surface disposed on the mounting region of the flexible substrate, where the heat generating semiconductor device is mountable to a heat dissipating surface for dissipating the heat generated by the semiconductor device.

6,040,625

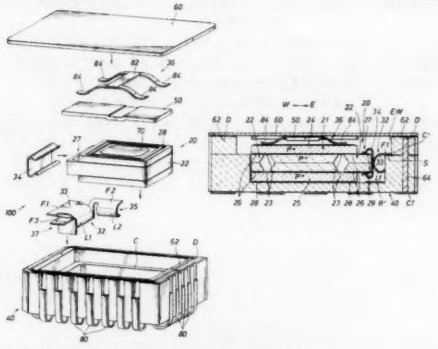
SENSOR PACKAGE ARRANGEMENT

Matthew W. Ip, Austin, Tex., assignor to I/O Sensors, Inc., Austin, Tex.

Filed Sep. 25, 1997, Appl. No. 935,093

Int. Cl.[7] **H01L** *23/34*

U.S. Cl. 257—719 **8 Claims**



1. A sensor-package arrangement comprising,

a case of insulating material, said case having walls which define an internal cavity, said cavity having at least one internal surface with conductive material thereon and having a conductive channel placed in one of said walls between an external conductive contact on the exterior of said case and said conductive material of said internal surface,

a sensor die disposed between walls in said cavity of said case, said sensor die having at least one die electrical contact,

an electrically conductive spring placed between said conductive material of said internal surface and said die electrical contact,

whereby said spring resiliently forces said sensor die against at least one of said walls of said cavity and completes a conductive path which includes said conductive channel from said external conductive contact to said die electrical contact,

said case having a conductive top surface and a second conductive channel placed in one of said walls between a second external conductive contact on the exterior of said case and said conductive top surface,

said sensor die having top and bottom sides with said bottom side facing downwardly in said cavity and said top side facing upwardly, said top side having a second electrical surface,

a conductive lid to which a downwardly facing electrically conductive top spring is attached, said lid being electrically connected while being physically secured to said top surface of said case,

said conductive top spring arranged and designed to force said sensor die downwardly in said cavity while contacting said second electrical surface,

whereby said lid and said attached secured spring simultaneously close said cavity, force said sensor die into said cavity, and complete an electrically conductive path from said second external conductive contact to said second electrical surface of said die.

6,040,626

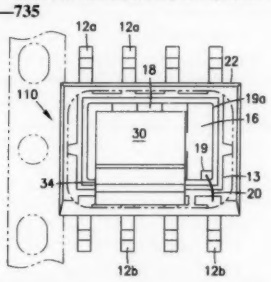
SEMICONDUCTOR PACKAGE

Chuan Cheah, El Segundo; Jorge Munoz, Cypress, and Dan Kinzer, El Segundo, all of Calif., assignors to International Rectifier Corp., El Segundo, Calif.

Provisional application No. 60/101,810, Sep. 25, 1998. This application Jan. 4, 1999, Appl. No. 225,153.

Int. Cl.[7] **H01L** *23/48;23/52;29/40*

U.S. Cl. 257—735 **28 Claims**



1. A power semiconductor package, comprising:

a bottom leadframe having a bottom plate portion and at least one first terminal extending from the bottom plate portion;

at least one second terminal being co-planar with the first terminal;

a third terminal;

a semiconductor power MOSFET die having a bottom surface defining a drain connection and a top surface on which a first metalized region defining a source and a second metalized region defining a gate are disposed, the bottom surface being coupled to the bottom plate of the leadframe such that the first terminal is electrically connected to the drain;

a copper plate coupled to and spanning a substantial part of the first metalized region defining the source connection;

at least one beam portion being sized and shaped to couple the copper plate portion to the at least one second terminal such that it is electrically coupled to the source; and

a wire bond coupling the gate to a third terminal.

6,040,627

SEMICONDUCTOR DEVICE AND METHOD OF MANUFACTURING SEMICONDUCTOR DEVICE

Akihiko Harada, and Keiichi Higashitani, both of Tokyo, Japan, assignors to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Apr. 14, 1998, Appl. No. 59,702

Int. Cl.[7] **H01L** *23/48;23/52;29/40*

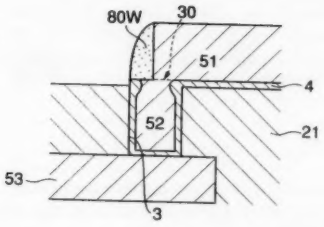
U.S. Cl. 257—752 **8 Claims**

1. A semiconductor device comprising:

a first insulating film formed on a semiconductor substrate;

a first conductive element formed on the first insulating film with a high melting point barrier metal therebetween;

a second conductive element formed in a plugging space of the insulating film and electrically connected to the first conductive element at an opening on the first insulating film, a portion of which opening is covered by the first conductive element; and



a sidewall formed on a side surface of the first conductive element and having a bottom surface covering a portion of the opening of the plugging space which is not covered by the first conductive element.

6,040,628

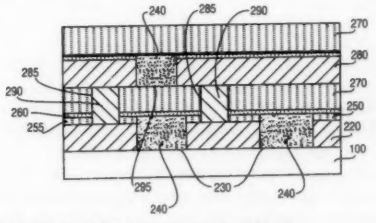
INTERCONNECT STRUCTURE USING A COMBINATION OF HARD DIELECTRIC AND POLYMER AS INTERLAYER DIELECTRICS

Chien Chiang, Fremont, and David B. Fraser, Danville, both of Calif., assignors to Intel Corporation, Santa Clara, Calif.

Filed Dec. 19, 1996, Appl. No. 769,549

Int. Cl.[7] **H01L** *23/48;23/58*

U.S. Cl. 257—760 **20 Claims**



1. An integrated circuit structure, comprising:

a first layer of electrically conductive material in which a trench separates one section of the first layer of electrically conductive material from another section of the first layer of electrically conductive material;

a planarization stop layer having a thickness of about 300 to 1,000 angstroms formed on the surface of the first layer of electrically conductive material;

a first insulating material substantially filling the trench of said first layer of electrically conductive material;

a protective coating having a thickness of less than about 300 angstroms formed over said first insulating material; and

a second insulating material deposited over said protective coating.

6,040,629

SEMICONDUCTOR INTEGRATED CIRCUIT HAVING SILICIDED ELEMENTS OF SHORT LENGTH

Satoshi Shimizu, and Hidekazu Oda, both of Tokyo, Japan, assignors to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Jun. 4, 1997, Appl. No. 868,738

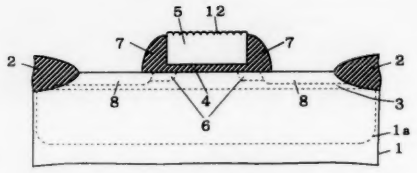
Claims priority, application Japan, Feb. 5, 1997, 9-022426

Int. Cl.[7] **H01L** *23/48;23/52;29/40*

U.S. Cl. 257—770 **3 Claims**

1. A semiconductor integrated circuit comprising:

an insulating film;



a conductive member being provided on said insulating film and insulated by said insulating film for supplying an electric charge; and

side walls being provided on said insulating film and holding said conductive member,

said conductive member including a silicide layer being provided on its surface with a number of undulations having semispherical projections,

said conductive member, being held between said side walls, having only a width being not more than $(2/\pi)$ times a width hardly causing phase transition of silicide when said silicide layer is flatly formed, said semispherical projections having a radius smaller than $(2/\pi)$ times said width hardly causing the phase transition.

6,040,630

INTEGRATED CIRCUIT PACKAGE FOR FLIP CHIP WITH ALIGNMENT PREFORM FEATURE AND METHOD OF FORMING SAME

Karen A. Panchou, Grant; Charles M. Newton, Palm Bay, and Charles D. Rosier, Indialantic, all of Fla., assignors to Harris Corporation, Palm Bay, Fla.

Filed Apr. 13, 1998, Appl. No. 59,163

Int. Cl.[7] H01L *23/48;23/52;29/40*

U.S. Cl. 257—783 **14 Claims**

1. An integrated circuit package comprising:

a substrate;

a circuitry pattern formed on the substrate;

a thermoplastic attachment film positioned on the substrate and having vias that expose the circuitry pattern;

a flip chip having input/output contacts formed as conductive thermoplastic bumps, wherein said flip chip is mounted on the thermoplastic attachment film such that the conductive thermoplastic bumps are received within the cut openings and engage the circuitry pattern, wherein the thermoplastic attachment film forms an underfill and the thermoplastic attachment film and conductive thermoplastic bumps form a thermoplastic bond between the substrate and the flip chip that allows ready removal of the flip chip upon application of heat when the thermoplastic attachment film and the thermoplastic conductive bumps become pliable and allow removal.

6,040,631

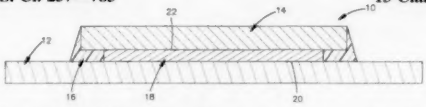
METHOD OF IMPROVED CAVITY BGA CIRCUIT PACKAGE

Eric P. Dibble, Endicott; Eric A. Johnson, Greene, and Raymond A. Phillips, Jr., Vestal, all of N.Y., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Jan. 27, 1999, Appl. No. 238,872

Int. Cl.[7] H01L *23/48;23/52;29/40*

U.S. Cl. 257—783 **13 Claims**



1. An integrated circuit package comprising a semiconductor chip having a chip connection surface thereon, a metal heat spreader having a heat-spreader connection surface and an adhesive bond adhering said chip to said heat spreader, said bond comprising

a first adhesive attached to a first portion of said chip connection surface and to a first portion of said heat spreader connection surface, and

a second adhesive attached to a second portion of said chip connection surface and to a second portion of said heat spreader connection surface wherein said second adhesive exhibits higher thermal, conductivity than said first adhesive and lower bond strength than said first adhesive.

6,040,632

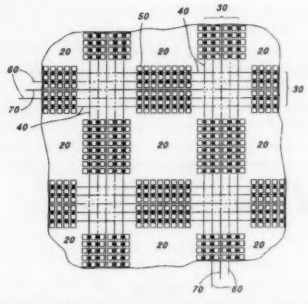
MULTIPLE SIZED DIE

Qwai H. Low; Chok J. Chia, both of Cupertino, and Seng-Sooi Lim, San Jose, all of Calif., assignors to LSI Logic Corporation, Milpitas, Calif.

Filed Jan. 14, 1998, Appl. No. 6,784

Int. Cl.[7] H01L *27/10*

U.S. Cl. 257—784 **6 Claims**



1. A wafer on which multiple-sized integrated circuit (IC) dies are formed comprising:

(a) a wafer;

(b) a plurality of IC dies formed on the wafer, each IC die having a periphery;

(c) multiple rows of bonding pads located near and along the periphery of each IC die, adjacent bonding pads on separate rows of each IC die being electrically connected to each other; and

(d) a plurality of scribe lines positioned between the multiple rows of bonding pads whereby each scribe line defines a different IC die size.

6,040,633

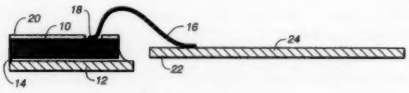
OXIDE WIRE BOND INSULATION IN SEMICONDUCTOR ASSEMBLIES

Kamran Manteghi, Manteca, Calif., assignor to VLSI Technology, Inc., San Jose, Calif.

Division of application No. 08/997,295, Dec. 23, 1997. This application Feb. 11, 1999, Appl. No. 249,225.

Int. Cl.[7] **H01L** *21/44*

U.S. Cl. 257—784 **14 Claims**



1. An improved semiconductor integrated circuit package with electrically-insulated bonding wires, comprising:

a semiconductor die attached to a mounting base;

a plurality of aluminum bonding wires having respective first ends wire-bonded to respective bonding pads on the semiconductor die and having respective second ends bonded to respective bonding fingers at inner ends of leads of a leadframe;

the aluminum bonding wires having an oxygen-plasma oxide formed thereupon to thereby provide electrically-insulated bonding wires to prevent short-circuits between adjacent bonding wires; and

the leads of the leadframe also having an oxygen-plasma oxide formed thereupon except at the exposed outer ends thereof.

6,040,634

ELECTRIC MOTOR/THERMAL ENGINE DRIVE FOR A VEHICLE IN WHICH THE ELECTRIC MOTOR FUNCTIONS AS A FLYWHEEL, STARTER MOTOR, AND GENERATOR

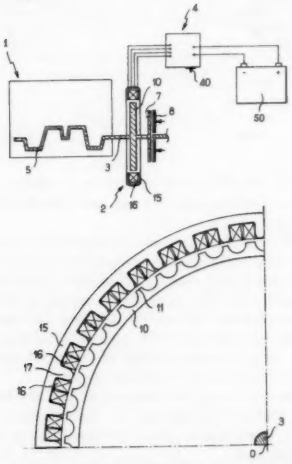
René Larguier, 39 Boulevard d'Argenson, F-92200 Neuilly-sur-Seine, France

Continuation-in-part of application No. 08/651,852, Jan. 30, 1996, which is a continuation of application No. 08/252,252, which is a continuation of application No. 07/861,787, filed as application No. PCT/FR90/00916, Dec. 17, 1990, abandoned. This application Aug. 5, 1996, Appl. No. 692,099.

Claims priority, application Luxembourg, Dec. 19, 1989, 87644

Int. Cl.[7] **B60L** *11/02*

U.S. Cl. 290—45 **5 Claims**



1. In a vehicle engine unit that includes a thermal engine having a maximum torque and a starting resisting torque at a lowest ambient temperature for operating the thermal engine, and an electric motor mounted coaxially with the thermal engine,

the electric motor having a nominal torque, a maximum torque at zero and low speed, and a maximum torque per unit volume, where the volume is defined by a cylinder having a diameter and an axial length of active parts of the electric motor, the active parts being a stator, a rotor, and stator coils,

the electric motor being arranged and constructed to provide inertia to the thermal engine during operation of the thermal engine, to start the thermal engine, and to provide electricity when the electric motor is being driven by the thermal engine, and

the stator and the rotor are both substantially flat, where a ratio of a total axial length of the electric motor to a diameter of the electric motor does not exceed one-third:

the improvement in which the electric motor has a total axial length of no more than 100 mm and a diameter of no more than 350 mm, the electric motor is arranged and constructed to provide the maximum torque at zero and low speed that is more than twice the nominal torque of the electric motor and more than the starting resistive torque of the thermal engine at the lowest ambient temperature for operating the thermal engine, and in which the maximum torque per unit volume of the electric motor is at least 10 Nm per cubic decimeter at zero and low speed.

6,040,635

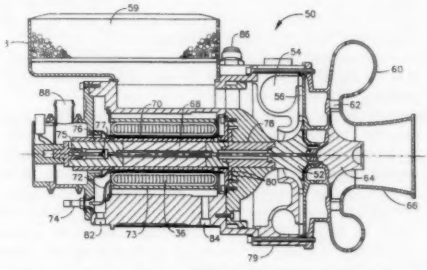
MICROTURBINE POWER GENERATING SYSTEM

Robert A. Nims, Rancho Palos Verdes; Patrick Lee O'Brien, Torrance, and Terrence Emerson, Hermosa Beach, all of Calif., assignors to AlliedSignal, Inc., Morristown, N.J.

Filed Dec. 20, 1997, Appl. No. 995,462

Int. Cl.[7] **F01D** *15/10*

U.S. Cl. 290—52 **12 Claims**



1. A rotating group for a microturbine power generating system, comprising:

a turbine wheel receiving expanding gas, the expanding gas causing the turbine wheel to rotate about an axis;

a rotor having a rotor bore concentric with the axis, at least a portion of said rotor being magnetic;

a single tieshaft having a diameter of less than about one-half inch, the tieshaft being concentric with the axis and extending through the rotor bore, the tieshaft having a yield strength and being preloaded in tension to a predetermined percentage of said yield strength; and

means for maintaining the tension in the tieshaft and securing said rotor and said turbine wheel to rotate in unison with the tieshaft.

6,040,636

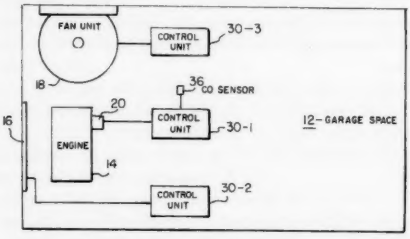
SYSTEM CONTROLLING VEHICLE WARM UP OPERATION RESPONSIVE TO ENVIRONMENT CO LEVEL

John R. DiCroce, Oceanside, N.Y., assignor to Audiovox Corporation, Hauppauge, N.Y.

Filed Nov. 13, 1997, Appl. No. 969,681

Int. Cl.[7] F02N *17/00*

U.S. Cl. 307—10.1 **7 Claims**



1. System for controlling vehicle engine operation responsive to engine emitted CO presence in a closed space wherein the engine is operated and for controlling ventilation of the space to reduce a level of the CO therein, said system comprising

a device connected with the engine having an engine shutdown mode operable on receipt thereby of a shutdown signal to shutdown the engine when the engine is operating,

a first control unit operable on an initiation thereof to output at least a first discrete RF signal,

a second control unit,

a CO sensor unit for sensing a presence of CO, the CO sensor unit outputting a distinct signal when a sensed CO value is above an acceptable level, said CO sensor being effective to initiate operation of said first control unit,

one of said distinct signal and said at least a first discrete RF signal constituting the engine shutdown signal, an other of said distinct and said at least a first discrete RF signals being received by the second control unit for enabling a start of a space ventilation operation which includes the opening of a closure member separating a communication of the closed space with an outside air environment, and the operation of a fan unit for exchanging CO containing air from within the closed space with air from the outside air environment, the second control unit being associated with the opening of said closure member, the system including

a third control unit associated with said fan unit, said at least a first RF signal being received by said third control unit for enabling start of said fan unit,

the respective ones of the second and third control units controlling the closure member and fan unit, respectively, with a circuit connection thereto which includes control relays in the control units, receipt of the said other of said distinct and said at least a first of said discrete RF signals by said second control unit and receipt of said at least a first discrete RF signal by said third control unit being effective to provide momentary relay contact closure to start opening the closure member and turn on the fan unit.

6,040,637

SELECTOR SWITCH CIRCUIT FOR DISABLING AN AIRBAG

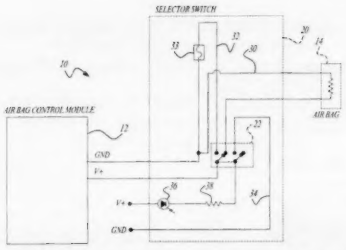
Lisa M. Paganini, Howell; Frank Casilio, Troy; Roy Peters, Almont; Kurt M. Straub, Plymouth; Rene C. DeHondt, Armada, and Tova Fry, Detroit, all of Mich., assignors to Chrysler Corporation, Auburn Hills, Mich.

Filed Apr. 1, 1998, Appl. No. 53,037

Int. Cl.[7] B60R *21/16*

U.S. Cl. 307—10.1 **12 Claims**

1. A selector switch system for disabling an airbag of a motor vehicle, comprising:



an electrical power source having a supply terminal and a return terminal;

a switch connected to the supply terminal of said power source;

a first circuit path connected to said switch for activating the airbag, said first circuit path having an airbag device; and

a second circuit path connected to said switch for preventing activation of the airbag;

said switch selectively movable between an enabled position for enabling the airbag device by interconnecting the supply terminal of said power source to said first circuit path, and a disabled position for preventing activation of said airbag device by interconnecting the supply terminal of said power source to said second circuit path, whereby the supply terminal of said power source does not connect to said first circuit path in the disabled position.

6,040,638

IMMOBILIZATION SYSTEM FOR MOTOR VEHICLES

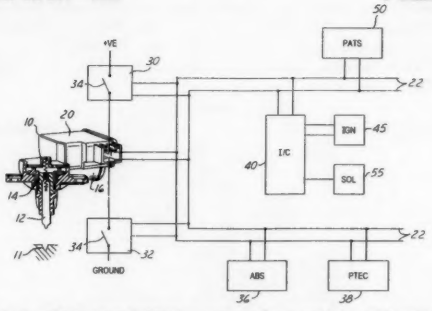
Steven Christopher Howell, Leamington Spa, United Kingdom, assignor to Jaguar Cars, Limited, Whitley, Coventry, United Kingdom

Filed Oct. 13, 1998, Appl. No. 170,379

Claims priority, application United Kingdom, Oct. 15, 1997, 9721777

Int. Cl.[7] B60R *25/00*

U.S. Cl. 307—10.2 **8 Claims**



1. A vehicle immobilization system for a vehicle, said vehicle having an on/off switch and an engine, said vehicle immobilization system comprising:

an electronically controlled locking mechanism responsive to a remote command signal to move between a locked state and an unlocked state, said electronically controlled locking mechanism requiring an electrical supply to move in either direction between said locked state and said unlocked state, such that said electronically controlled locking mechanism remains in its current locked or unlocked state whenever disconnected from said electrical supply;

switch means for selectably connecting said electronically controlled locking mechanism to said electrical supply in response to an enable power command and a disable power command; and

control means coupled to said electronically controlled locking mechanism and said switch means, said control means gener-

ating said enable power command in response to activity of said on/off switch and preventing said enable power command when said engine is running or when said vehicle is moving.

6,040,639

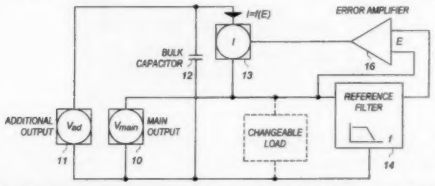
CIRCUIT FOR IMPROVED LOAD TRANSIENT RESPONSE IN POWER SUPPLIES

Thomas Ginell, Hagersten; Lars Thorsell, Upplands-Vasby, and Per Lindman, Djursholm, all of Sweden, assignors to Telefonaktiebolaget LM Ericsson, Stockholm, Sweden

Filed Sep. 29, 1995, Appl. No. 536,098

Int. Cl.[7] H02J *1/10*

U.S. Cl. 307—44 **11 Claims**



1. An electric power supply for a changeable load, comprising:

means for supplying an electric direct current to the changeable load;

additional means, operatively connected to the supplying means, for supplying additional electric direct current to the load in response to changes in the load; and

means for sensing changes in an output voltage of the supplying means and for controlling the additional supplying means based on the sensed voltage changes;

wherein an output voltage of the additional supplying means is larger than the output voltage of the supplying means, and the supplying means, additional supplying means, and sensing means are connected in a closed loop.

6,040,640

DIRECT VOLTAGE BACK-UP SYSTEM AT A POWER SUPPLY OUTLET

Hans-Joachim Gehre, Chemnitz, and Frank Winterstein, Nuernberg, both of Germany, assignors to Siemens Aktiengesellschaft, München, Germany

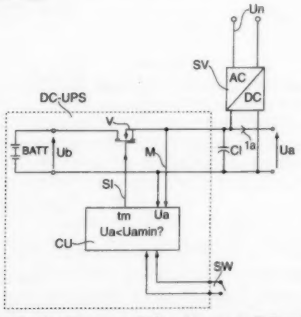
PCT No. PCT/DE96/02011, § 371 Date Jun. 18, 1998, § 102(e) Date Jun. 18, 1998, PCT Pub. No. WO97/15976, PCT Pub. Date May 1, 1997

PCT Filed Oct. 23, 1996, Appl. No. 66,474

Claims priority, application Germany, Oct. 26, 1995, 195 39 928

Int. Cl.[7] H02J *7/00*

U.S. Cl. 307—66 **8 Claims**



1. A device for backing-up a DC voltage at a DC voltage output of a power-line operated power supply, the power supply supplying power to a load, the device comprising

at least one back-up battery; and

a control unit performing the following functions:

comparing an actual value of the DC voltage at the DC voltage output to a predetermined minimum value,

connecting the at least one back-up battery to the DC voltage output of the power supply when an actual value of the DC voltage is less than the predetermined minimum value, the at least one connected back-up battery providing a battery voltage which, together with the DC voltage at the DC voltage output of the power supply, supplies the power to the load,

determining a predetermined back-up time period,

disconnecting the at least one connected back-up battery from the DC voltage output of the power supply after the predetermined back-up time period expires, and

repeating a comparison of the actual value of the DC voltage to the predetermined minimum value.

METHOD FOR MANUFACTURING PROBABILISTIC SWITCH USING MULTIPLICATIVE NOISE

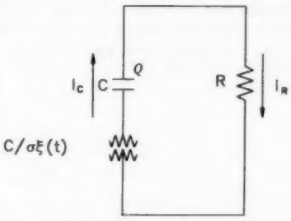
Seung-Hwan Kim; Seon-Hee Park, and Chang-Su Ryu, all of Daejeon, Rep. of Korea, assignors to Electronics and Telecommunications Research Institute, Daejeon, Rep. of Korea

Filed Jun. 26, 1997, Appl. No. 882,875

Claims priority, application Rep. of Korea, Jun. 27, 1996, 96-24715

Int. Cl.[7] H01H *1/04;* **H02B** *1/24*

U.S. Cl. 307—112 **3 Claims**



1. A method for manufacturing a probabilistic switch in a probabilistic computer for probabilistically performing computations, the method comprising the steps of:

applying an electrical signal to a nonlinear device;

applying a multiplicative noise to the nonlinear device, the multiplicative noise having an intensity which varies with an operation state of the nonlinear device; and

controlling the applied multiplicative noise intensity and an initial condition of the electrical signal applied to the nonlinear device to control probability so as to probabilistically generate different logic signal states.

6,040,642

LINEAR MOTOR EQUIPPED WITH A STATOR WHICH IS EASILY ASSEMBLED

Noritaka Ishiyama, Inagi, Japan, assignor to GMC Co., Ltd., Kawasaki, Japan

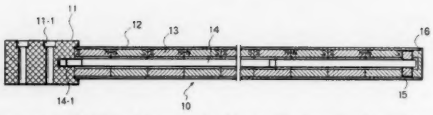
Filed May 12, 1998, Appl. No. 75,872

Claims priority, application Japan, May 12, 1997, 9-120830

Int. Cl.[7] H02K *41/00*

U.S. Cl. 310—12 **3 Claims**

1. A linear motor including a stator which comprises a plurality of permanent magnets assembled in series so that those opposite magnetic poles may face to each other, wherein each of the permanent magnets has a cylindrical base shape, the stator comprises a center shaft made of non-magnetic material and inserted in the plurality of permanent magnets, and the plurality of permanent



magnets are tightened from both sides thereof so that the adjacent permanent magnets may be close to each other, wherein the stator ftnther comprises a tubular member made of non-magnetic material and covering the outer peripheries of the plurality of permanent magnets, wherein the stator further comprises a bracket provided with a female screw portion, a male screw portion provided on one end portion of the center shaft is relatively screwed in the female screw portion of the bracket, another male screw portion having a predetermined length is provided on the other end side of the center shaft, and a nut is engaged with the male screw portion on the other end side so that the permanent magnets are brought into close contact with each other between the nut and the bracket.

6,040,643

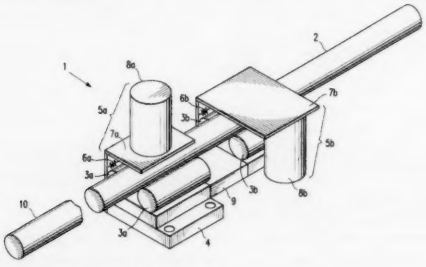
LINEAR ACTUATOR

Donald G. Bruns, San Diego, Calif., assignor to Thermotrex Corporation, San Diego, Calif.

Provisional application No. 60/066,231, Nov. 20, 1997. This application Nov. 20, 1998, Appl. No. 197,303.

Int. Cl.[7] **H02K** *41/00;* **H02N** *2/00*

U.S. Cl. 310—26 **20 Claims**



1. A linear actuator including:

(a) guide structures;

(b) an armature slidably mounted on the guide structures;

(c) a normally closed electromagnetic clamp assembly operationally positioned with respect to the armature to prevent sliding movement of the armature when closed and allow sliding movement of the armature when open;

(d) a normally open electromagnetic clamp assembly operationally positioned with respect to the armature to allow sliding movement of the armature when open and prevent sliding movement of the armature when closed, and spaced apart from the normally closed electromagnetic clamp assembly; and

(e) a high resolution translator coupled between the normally closed and the normally open electromagnetic clamp assemblies, for changing the spacing between the normally closed and the normally open electromagnetic clamp assemblies;

wherein the armature is selectively extended or retracted with respect to the linear actuator by controlled sequencing of the translator and opening and closing of the normally closed and the normally open electromagnetic clamp assemblies.

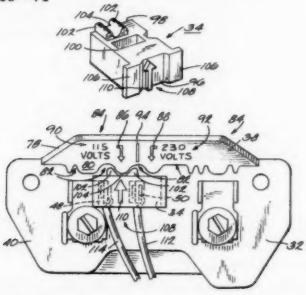
PLUG FOR CHANGING AN OPERATING CONDITION OF AN ELECTRIC MOTOR

Richard E. Peters, Tipp City, Ohio, assignor to A. O. Smith Corporation, Milwaukee, Wis.

Filed Jan. 22, 1999, Appl. No. 235,433

Int. Cl.[7] H02K *11/00;* **H01R** *27/00*

U.S. Cl. 310—71 **23 Claims**



1. An electric motor having an axis, said electric motor comprising:

a housing;

a stator fixed relative to said housing;

a shaft rotatable about the axis;

a rotor supported by said shaft for rotation therewith relative to said stator;

a support structure which is fixed relative to said housing and which has at least one electrical contact;

a plug which has at least one electrical contact engageable with said support structure electrical contact such that said plug is electrically connectable to said support structure in at least first and second positions in which at least one plug electrical contact engages at least one support structure electrical contact, said support structure and said plug engaging each other independently of said electrical contacts such that said plug is positionable only in a number of predetermined acceptable positions, including said first and second positions, and such that said plug is not positionable in an unacceptable position in which one plug electrical contact would engage one support structure electrical contact and in which said plug would be positionable except for said engagement of said plug and said support structure independently of said electrical contacts; and

wherein one of said support structure and said plug includes two projections, and wherein the other of said support structure and said plug includes a recess, such that when said plug is electrically connected to said support structure in said first position, one of said projections mates with said recess, and such that when said plug is electrically connected to said support structure in said second position, said other of said projections mates with said recess.

PIEZOELECTRIC RESONATOR ADAPTED TO GENERATE A HARMONIC WAVE IN A THICKNESS EXTENSIONAL VIBRATION MODE

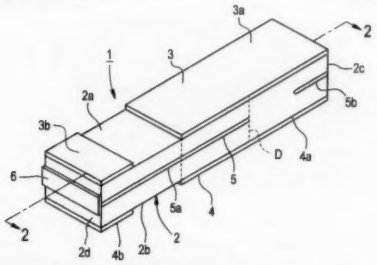
Hiroaki Kaida, Moriyama, Japan, assignor to Murata Manufacturing Co., Ltd, Japan

Filed Dec. 16, 1998, Appl. No. 212,943

Claims priority, application Japan, Dec. 24, 1997, 9-355606

Int. Cl.[7] H03H *9/15*

U.S. Cl. 310—320 **19 Claims**



1. A piezoelectric resonator, comprising:

a piezoelectric member including piezoelectric layers;

a plurality of excitation electrodes disposed at respective vertical positions on or within said piezoelectric member and superposed on one another in a thickness direction of said piezoelectric member with said piezoelectric layers of said piezoelectric member interposed therebetween;

lead-out electrodes respectively connected to said excitation electrodes and extending to side surfaces of the piezoelectric member at the same vertical positions as the excitation electrodes; and

at least one dummy electrode disposed at least one of the vertical positions at which said excitation electrodes are disposed and arranged to have a symmetrical relationship with the lead-out electrode connected to the excitation electrode relative to the corresponding excitation electrode wherein said plurality of excitation electrodes are disposed within said piezoelectric member, a piezoelectric layer existing outside in the thickness direction of an outermost excitation electrode of said plurality of excitation electrodes.

PIEZOELECTRIC POSITIONER

Cormac G. O'Neill, Walnut Creek, Calif., assignor to Kinetic Ceramics, Inc., Hayward, Calif.

Continuation-in-part of application No. 08/733,156, Oct. 17, 1996, Pat. No. 5,925,969. This application Jun. 15, 1998, Appl. No. 94,901.

Int. Cl.[7] H02N *2/04;2/06*

U.S. Cl. 310—328 **21 Claims**

1. A piezoelectric positioner, comprising:

A) a frame;

B) a first piezoelectric stack mounted on said frame;

C) a second piezoelectric stack mounted on said frame;

D) a T-lever defining a yoke having a first side and a second side and a T-lever arm;

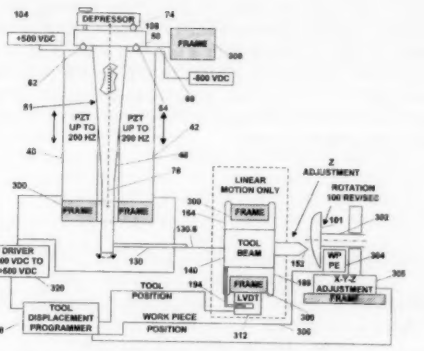
E) a compression element positioned to hold in compression:

1) said first stack between said first side of said yoke and said frame, and

2) said second stack between said second side of said yoke and said frame;

F) a programmable voltage source programmed to provide elongating voltages alternatingly to said first and said second stacks to cause said stacks to alternatingly expand against compressive forces produced by said compression element so as to cause said yoke to rock back and forth and to cause said T-lever arm to swing back and forth;

G) a tool beam flexibly connected to said T-lever arm;



H) a tool beam restraint for restraining movement of said tool beam to back and forth motion in a single direction.

6,040,654

PIEZOELECTRIC TRANSFORMER

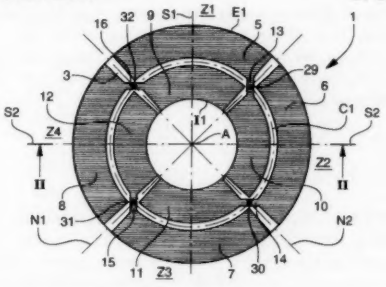
Ronan Le Letty, Grenoble, France, assignor to Eta SA Fabriques d'Ebauches, Grenchen, Switzerland

Filed Aug. 10, 1998, Appl. No. 131,888

Claims priority, application Switzerland, Aug. 15, 1997, 1924/97

Int. Cl.[7] H01L *41/08*

U.S. Cl. 310—366 **14 Claims**



1. A piezoelectric transformer including:

a body made of piezoelectric material having a first and a second face and an outer lateral surface;

a plurality of primary electrodes arranged on said body to cause said body to vibrate in response to a primary alternative voltage; and

a plurality of secondary electrodes arranged on said body to generate a secondary voltage in response to said vibration;

said outer surface having, in the absence of said vibration, the shape of a first circular cylinder having a circular axis of symmetry and said faces each having an outer portion situated on the side of said outer lateral surface and an inner portion surrounded by said outer portion,

wherein said primary electrodes are arranged so that, when said primary voltage has a frequency at least substantially equal to a determined frequency, said outer lateral surface alternately takes the shape of a first elliptical cylinder and the shape of a second elliptical cylinder, said first elliptical cylinder having a major axis and a minor axis perpendicular to said circular axis of symmetry and respectively situated in a first plane of symmetry including said circular axis of symmetry and a second plane of symmetry perpendicular to said first plane of symmetry and also including said circular axis of symmetry, said second elliptical cylinder having a major axis and a minor axis perpendicular to said circular axis of symmetry and respectively situated in said second plane of symmetry and said first plane of symmetry, and, when said outer

lateral surface has the shape of one of said first and second elliptical cylinders, the respective major axis having a length which varies regularly increasing from a minimum value equal to the diameter of said circular cylinder to a maximum value then decreasing from said maximum value to said minimum value, said outer lateral surface then taking the shape of the other of said first and second elliptical cylinders.

DEVICE FOR CONTROLLING THE INTENSITY OF THE LIGHT EMITTED BY A LIGHTING ELEMENT OF A LIGHTING APPARATUS, IN PARTICULAR A FLASHLIGHT

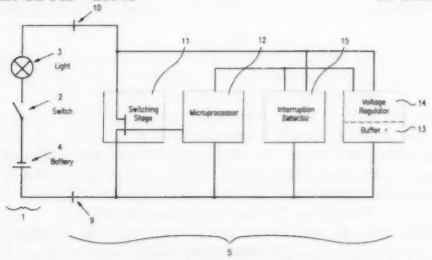
Rudolf Schmidt, Dr. Balthasar-Hubmeier-Str. 14 86316, Friedberg-West, and Augustin Thalhofer, Keltenstr. 16 86863, Langenneufnach-Unterrothern, both of Germany

Filed Jun. 13, 1997, Appl. No. 876,021

Claims priority, application Germany, Jul. 9, 1996, 196 27 607

Int. Cl.[7] H05B *37/02*

U.S. Cl. 315—200 A **18 Claims**



1. A device for controlling the intensity of the light emitted by a lighting element of a lighting apparatus, in particular a flashlight, the lighting apparatus including a light switch element, comprising:

a module arranged in series with the lighting element for controlling the supply of current to the lighting element,

said module having a detection device for detecting a control pulse triggered at the light switch element of the lighting apparatus;

a circuit device for controlling the light intensity of the lighting element; and

a central control device for detecting a detection signal of the detection device as well as for triggering said circuit device, wherein the control pulse, detected by said detection device, is an interruption of the supply current of the lighting element generated by means of the light switch element, at a time distance from the last control pulse of less than a preselected switch-over time interval, and wherein the light intensity of the lighting element is controlled in stages, and is reduced one stage by said circuit device when actuating the light switch element, within a time interval following prior actuation which is less than the switch-over time interval.

6,040,661

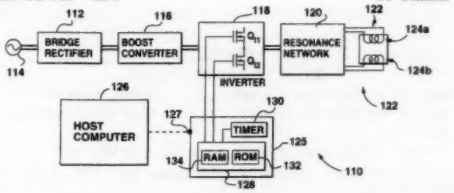
PROGRAMMABLE UNIVERSAL LIGHTING SYSTEM

Alexei Bogdan, Bolton, Canada, assignor to Lumion Corporation, Ontario, Canada

Provisional application No. 60/076,688, Feb. 27, 1998. This application May 12, 1998, Appl. No. 75,841.

Int. Cl.[7] H05B *37/02*

U.S. Cl. 315—224 **16 Claims**



1. A universal lamp system comprising:

(a) a lamp having a predetermined set of lamp operating characteristics, said operating characteristics including a lamp running voltage and a filament voltage, said lamp running voltage having a value between a first value and a second value and said lamp filament voltage having a value between a third value and a fourth value;

(b) a universal ballast having:

(i) a first power circuit for outputting a high frequency AC signal;

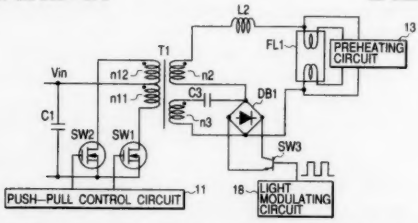
(ii) a coupling circuit coupled to the power circuit for applying the AC signal to the lamp to provide said lamp running voltage and said filament voltage at said lamp; and

(iii) a control circuit adapted to vary the duty cycle of the AC signal in a range of between about a 50/50 ratio and about a 2/98 ratio and the frequency of the AC signal in a range of between about 20 and about at least 47 kilohertz but not greater than about 55 kilohertz and therefore to vary said lamp running voltage between said first and second values and said filament voltage between said third and fourth values, said first and second values having a difference between them of about 77 percent and said third and fourth values having a difference between them of about 58 percent.

6,040,662
FLUORESCENT LAMP INVERTER APPARATUS

Atsushi Asayama, Yokohama, Japan, assignor to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Dec. 30, 1997, Appl. No. 882
Claims priority, application Japan, Jan. 8, 1997, 9-011871
Int. Cl.[7] G05F *1/00*
U.S. Cl. 315—291 **11 Claims**



1. A fluorescent lamp inverter apparatus for lighting a fluorescent lamp, comprising:

a transducer;

a control circuit for driving a primary winding of said transducer;

a choking coil connected to a first secondary winding of said transducer, and connected in series with said fluorescent lamp;

a capacitor connected to a second secondary winding of said transducer; and

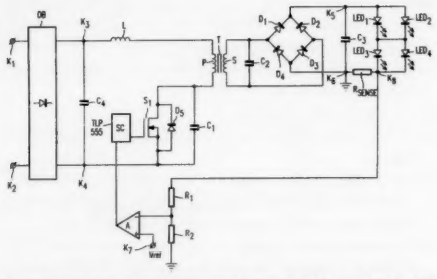
a switching circuit for switching over connection between said first secondary winding and said second secondary winding, to series connection or parallel connection;

wherein said switching circuit switches over the connection to the series connection or the parallel connection at a frequency lower than a frequency used when said control circuit drives said primary winding.

6,040,663
CIRCUIT ARRANGEMENT

Marcel J. M. Bucks, and Engbert B. G. Nijhof, both of Eindhoven, Netherlands, assignors to U.S. Philips Corporation, New York, N.Y.

Filed Aug. 3, 1998, Appl. No. 128,149
Claims priority, application European Pat. Off., Aug. 1, 1997, 97202401
Int. Cl.[7] G05F *1/00*
U.S. Cl. 315—291 **11 Claims**



1. A circuit arrangement for supplying a load, provided with a DC—DC converter comprising:

input terminals for connection to a DC voltage source;

a circuit portion comprising inductive means and first capacitive means, said circuit portion interconnecting the input terminals;

a switching element for shunting the first capacitive means;

a control circuit coupled to the switching element for rendering the switching element conducting and non-conducting with high frequency;

a transformer comprising a primary winding and a secondary winding, said primary winding being included in the circuit portion; and

an output circuit coupled to the secondary winding, said output circuit comprising:

output terminals for connection to the load;

rectifying means coupled between the secondary winding and the output terminals; and

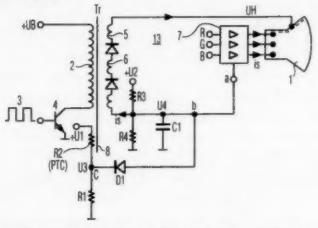
second capacitive means connected between the secondary winding and the output terminals,

characterized in that the rectifying means is full-wave rectifying means for ensuring that energy is transferred to the output terminals during two time intervals in each high frequency cycle of an output signal on the secondary winding.

6,040,664
CIRCUIT FOR LIMITING THE BEAM CURRENT OF A CATHODE RAY TUBE

Franz Dieterle, Schiltach, and Martin Läufer, Villingen-Schwenningen, both of Germany, assignors to Deutsche-Thompson Brandt GmbH, Germany

Continuation of application No. 08/829,545, Mar. 28, 1997, abandoned. This application Feb. 25, 1998, Appl. No. 999,879.
Claims priority, application Germany, Apr. 24, 1996, 196 16 272
Int. Cl.[7] H01J *29/52*
U.S. Cl. 315—383 **8 Claims**



1. An arrangement for providing high-tension for a cathode ray tube of a television receiver comprising:

a high tension transformer including a primary winding fed by an alternating current and a high-tension winding for providing the high-tension via rectifier means, both windings being arranged on a coil former located on a core of said transformer,

said cathode ray tube being coupled to a network for providing a control voltage for limiting the beam current of said cathode ray tube,

a temperature sensor being arranged in physical contact with the high tension transformer so that heat conduction between the body of said high tension transformer and the temperature sensor is provided, the temperature sensor being coupled to the network so that if the temperature of said high-tension transformer exceeds a predetermined value endangering said transformer, the beam current is reduced by said control voltage.

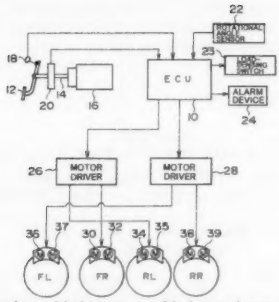
ELECTRIC BRAKE DEVICE

Kenji Shirai, Mishima; Seiya Yokoyama, Toyohashi, and Tsutomu Oota, Hamakita, all of Japan, assignors to Toyota Jidosha Kabushiki Kaisha, Aichi-ken, Japan

Filed Aug. 2, 1999, Appl. No. 364,887
Claims priority, application Japan, Aug. 31, 1998, 10-246255
Int. Cl.[7] B60T *8/00;13/74*
U.S. Cl. 318—14 **8 Claims**

1. An electric brake device comprising:

a disc rotor which is rotatable together with a wheel of an automotive vehicle;



an output rod provided to press a friction pad onto the disc rotor so as to exert a braking force on the wheel;

a brake motor provided to generate a rotating force in response to an electric signal;

a gear mechanism provided to axially move the output rod relative to the disc rotor in accordance with the rotating force, such that the output rod is moved toward the disc rotor when the brake motor rotates in a forward direction, and that the output rod is separated from the disc rotor when the brake motor rotates in a reverse direction;

load detecting means for detecting a load acting on an end of the output rod opposite to a position where the output rod presses the friction pad onto the disc rotor; and

motor deceleration means for decreasing the rate of rotation of the brake motor when the load detected by the load detecting means is above a reference level.

6. An electric brake device comprising:

a disc rotor which is rotatable together with a wheel of an automotive vehicle;

an output rod provided to press a friction pad onto the disc rotor so as to exert a braking force on the wheel;

a brake motor provided to generate a rotating force in response to an electric signal;

a gear mechanism provided to axially move the output rod relative to the disc rotor in accordance with the rotating force, such that the output rod is moved toward the disc rotor when the brake motor rotates in a forward direction, and the output rod is separated from the disc rotor when the brake motor rotates in a reverse direction;

a sensor provided to output a signal indicative of a rotational angle of a rotation shaft, the rotation shaft being rotated by the brake motor and connected to the output rod; and

motor control means for decreasing the rate of rotation of the brake motor when the brake motor rotates in the reverse direction and the rotational angle indicated by the output signal of the sensor is above a reference angle, and the motor control means continuing the rotation of the brake motor when the brake motor rotates in the reverse direction and the rotational angle indicated by the output signal of the sensor is below the reference angle.

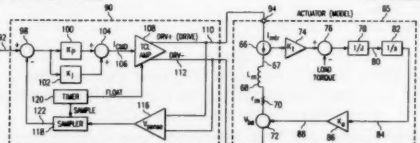
CONSTANT VELOCITY CONTROL FOR AN ACTUATOR USING SAMPLED BACK EMF CONTROL

Joao Carlos F. Brito, Richardson; John K. Rote, Dallas; Frederick W. Trafton, Lewisville, and Marcus M. Martins, Richardson, all of Tex., assignors to Texas Instruments Incorporated, Dallas, Tex.

Filed Jan. 28, 1999, Appl. No. 239,188

Int. Cl.[7] H02K *23/00;* **H02P** *1/04*

U.S. Cl. 318—603 **10 Claims**



1. An apparatus for controlling an actuator having a moveable member and having a coil that influences movement of the member, by provision of a drive current to said coil in response to a target speed voltage signal, comprising:

an up/down counter, counting at a predetermined count rate and providing a count output;

a control unit for controlling the direction of count of said up/down counter depending on whether the voltage across said coil, sensed periodically a first predetermined interval after said drive current to said coil is interrupted, is greater

than, or less than, a reference voltage having a predetermined relationship to said target speed voltage;

a digital-to-analog converter responsive to said count output to provide a compensated voltage signal having a voltage corresponding to said count output;

a voltage sensing and holding unit that periodically, after said drive current is interrupted for a second predetermined interval, senses and holds a sample voltage corresponding to the voltage across said coil;

a plus/minus indicator that senses when said up/down counter is in a down count direction and is at a count of zero, and in response thereto changes between a plus state and a minus state;

a switch node combining said sample voltage signal with said compensated voltage signal to produce a command voltage signal, and providing said command voltage signal with a polarity controlled by the state of said plus/minus indicator; and

a transconductance amplifier unit, receiving said command voltage signal and providing said drive current to said coil in a direction determined by the state of said plus/minus indicator.

MOTOR CONTROL APPARATUS

Yoshinori Isomura; Masahiro Yasohara, both of Hyogo-ken, and Kazuyuki Takada, Osaka-fu, all of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Osaka-fu, Japan

Filed May 27, 1999, Appl. No. 320,735

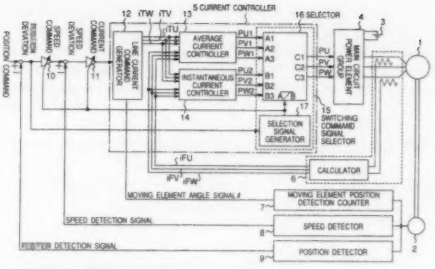
Claims priority, application Japan, May 29, 1998, 10-148958

Int. Cl.[7] **G05B** *5/01*

U.S. Cl. 318—615 **20 Claims**

1. A motor control apparatus comprising:

a motor;



a main circuit dc source;

a main circuit power element group for supplying power from the main circuit dc source to a drive coil of the motor;

a line current detector for detecting a line current flowing to a drive coil of the motor, and outputting the detected line current as a line current measurement;

a position detector for detecting movement of a moving element of the motor; and

a current controller for controlling the line current so that movement detected by the position detector equals a desired value by applying a switching command signal to the main circuit power element group, the switching command signal being dependent upon a position deviation, which is a difference between movement detected by the position detector and the desired movement;

wherein said current controller comprises:

a line current command generator for outputting based on the position deviation a command signal indicative of a line current to flow to the motor;

an average current controller for comparing a PWM carrier signal and a voltage command signal obtained by amplifying a difference between the line current measurement and line current command signal, and outputting a first switching command signal;

an instantaneous current controller for outputting a second switching command signal based on a comparison of the line current measurement and line current command signal; and

a switching command signal selector for selecting and outputting to the main circuit power element group as the switching command signal either the first switching command signal or second switching command signal; and

the switching command signal selector selects as the switching command signal the first switching command signal when the position deviation is within a specified range, and selects the second switching command signal when the position deviation is outside this specified range.

1. A supporting apparatus for supporting a table having N degrees of freedom, where N is an integer greater than one, said apparatus comprising:

a stage;

a leaf spring mounted on said stage and initially contacting said table at a contact point, said leaf spring having a coefficient of elasticity greater in a first direction and smaller in a direction perpendicular to said first direction, and having a characteristic of positive rigidity; and

a pair of permanent magnets mounted in an area between said stage and said table, in an arrangement such that magnetic poles of said permanent magnets oppose each other and are arranged in a direction perpendicular to said first direction, said pair of permanent magnets generating a force that substantially corresponds to the self weight of said table at a neutral position and counterbalancing said characteristic of positive rigidity of said leaf spring.

PASSIVE ELECTRONIC DAMPING FOR STEP MOTOR

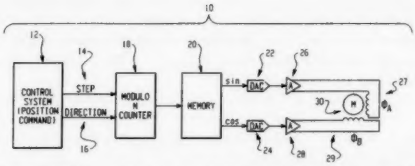
Jack Nordquist, Santa Rosa; Mark J. Calahan, Sebastopol; Timothy J. Damiano, Petaluma, and Christopher M. Botka, Santa Rosa, all of Calif., assignors to Parker-Hannifin Corporation, Cleveland, Ohio

Provisional application No. 60/010,871, Jan. 31, 1996. This application Jan. 22, 1997, Appl. No. 787,434.

Int. Cl.[7] H02P *8/00*

U.S. Cl. 318—696 **18 Claims**

1. Passive damping apparatus for a step motor of the type having a number of phase windings, comprising: a respective transconductance amplifier coupled to each phase winding for producing a phase drive current in the winding in response to a position command; each transconductance amplifier exhibiting an output impedance including a capacitive reactance and a dissipative resistance in shunt with the phase winding impedance; and means for changing said amplifier output impedance to dissipate resonant energy to effect motor damping.



6,040,677

APPARATUS FOR DRIVING STEPPER MOTOR OF CAMERA

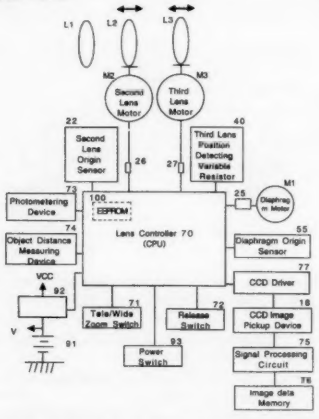
Masahiro Oono, Saitama-ken; Hisao Iwanade, Tokyo; Noboru Saitoh, Saitama-ken; Koji Sato, Saitama-ken; Sukenori Shiba, Saitama-ken; Tatsuya Yoshida, Saitama-ken, and Nobuyuki Nagai, Saitama-ken, all of Japan, assignors to Asahi Kogaku Kogyo Kabushiki Kaisha, Tokyo, Japan

Filed Feb. 9, 1998, Appl. No. 20,849

Claims priority, application Japan, Feb. 10, 1997, 9-026897

Int. Cl.[7] H02P *8/00*

U.S. Cl. 318—696 **13 Claims**



1. A stepping motor driving apparatus for a camera, comprising:

a digital still camera having an image pickup device, a memory capable of storing image data produced by said image pickup device, and a display capable of displaying said image data;

a 1–2 phase excitation type stepping motor;

said camera having a mode of normal drive control and high precision drive control of said camera;

a drive controller which drives said stepping motor by 1–2 phase excitation;

wherein, when said camera is in said mode of normal drive control responsive to image data being displayed on said display but not being recorded in said memory, said drive controller always stops said stepping motor at a 1-phase excitation position by de-energizing said stepping motor at said 1-phase excitation position, and

wherein, when said camera is in said mode of high precision control responsive to image data being recorded in said memory, said drive controller stops said stepping motor at one of said 1-phase excitation position and a 2-phase excitation position without stopping excitation of said stepping motor.

6,040,678

SWITCHED RELUCTANCE MOTOR HAVING NOISE AND VIBRATION REDUCED

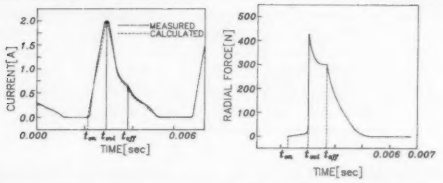
Kyung Bum Huh, Busan, and Kwang Joon Kim, Taejun, both of Rep. of Korea, assignors to Korea Advanced Institute Science and Technology, Taejun, Rep. of Korea

Filed Jun. 24, 1998, Appl. No. 103,978

Claims priority, application Rep. of Korea, Jun. 24, 1997, 97-26966

Int. Cl.[7] H02P *1/46*

U.S. Cl. 318—701 **18 Claims**



1. A switched reluctance motor having a relatively low dominant natural frequency, wherein the motor comprises:

a rotor and a stator;

a first angle associated with a position at which the motor is switched off;

a second angle associated with a position at which an edge of a rotor tooth begins to meet an edge of a stator tooth; and

means for adjusting a difference between said first angle and said second angle such that noise and vibration levels of said motor are minimized.

6,040,679

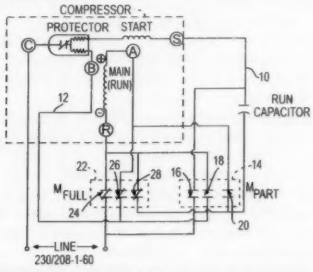
VARIABLE CAPACITY COMPRESSOR HAVING TWO-STEP MOTOR STRENGTH ADJUSTABILITY

David T. Monk, Lebanon; Joe T. Hill, Bristol, both of Va.; Phillip C. Wagner, Bristol, Tenn.; Joseph F. Loprete, Bristol, Tenn., and Michael R. Young, Bristol, Tenn., assignors to Bristol Compressors, Inc., Bristol, Va.

Filed Feb. 6, 1998, Appl. No. 19,834

Int. Cl.[7] H02P *1/26*

U.S. Cl. 318—778 **5 Claims**



1. A control system for a variable capacity compressor having an A/C motor, comprising:

a first circuit having a start winding in series with a capacitor;

a second circuit having a main winding;

a third circuit having said start winding;

a fourth circuit having the main winding in series with said capacitor;

a power supply line connected to each of said circuits to provide power thereto;

a first switch responsive to loading conditions and operable to place the first and second circuits in parallel with the power supply line to run the compressor for high load operation; and

a second switch responsive to loading conditions and operable place the third and fourth circuits in parallel with the power supply line to run the compressor for partial load operation.

6,040,680

RECHARGEABLE BATTERY PACK AND CHARGING STAND FOR CHARGING THE RECHARGEABLE BATTERY PACK BY ELECTROMAGNETIC INDUCTION

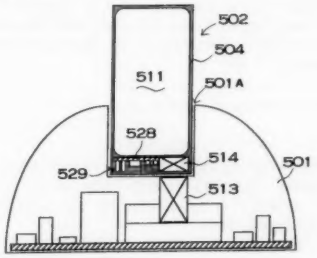
Shoichi Toya, Mihara-gun, and Toshiharu Kokuga, Tsuna-gun, both of Japan, assignors to Sanyo Electric Co., Ltd., Moriguchi, Japan

Filed Jul. 20, 1998, Appl. No. 118,853

Claims priority, application Japan, Jul. 22, 1997, 9-195643

Int. Cl.[7] H01M *10/46*

U.S. Cl. 320—108 **15 Claims**



1. A battery pack comprising:

a rectangular-shaped casing having a rectangular bottom face;

at least one rectangular rechargeable battery disposed within said casing,

wherein a width of said casing is greater than a width of said rectangular rechargeable battery such that a gap is defined between a side face of said casing and an opposing side face of said rectangular rechargeable battery;

a secondary coil disposed in said gap and in close proximity to said bottom face of said casing, said secondary coil having a central axis that is oriented in an elongated direction of said casing; and

a control circuit for controlling electric power induced in said secondary coil for charging said rectangular rechargeable battery contained in said casing.

6,040,681

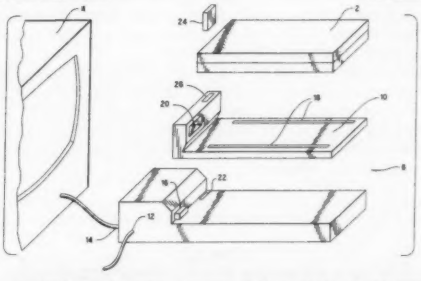
ENHANCED DOCKING TRAY SUPPORTS FOR CUSTOM FEATURING FOR EXTERNAL BATTERY CHARGING FOR NOTEBOOK COMPUTERS

Gregory J. May, Corvallis, Oreg., assignor to Hewlett-Packard Company, Palo Alto, Calif.

Filed Oct. 26, 1998, Appl. No. 179,340

Int. Cl.[7] H02J *7/00*

U.S. Cl. 320—113 **20 Claims**



1. A docking apparatus, for use with a piece of equipment selected from a set of pieces of equipment having different physical configurations, each of the pieces of equipment having a respective removable and rechargeable power storage module, the power storage modules of the pieces of equipment having different configurations, for coupling the respective piece of equipment to an equipment interface having a standard physical configuration, the apparatus comprising:

a standard first module including the equipment interface, the first module having a power output interface for coupling with the power storage modules and for providing power to charge the power storage modules; and

a respective second module, selected from a set of second modules which correspond with respective ones of the pieces of equipment, each of the second modules being compatible with the standard first module for coupling therewith, the respective second module being compatible with the respective piece of equipment, the second module including a power storage module receptacle having a configuration which is compatible with the configuration of the power storage module, for receiving the power storage module and coupling the power storage module with the power output interface for recharging.

6,040,682

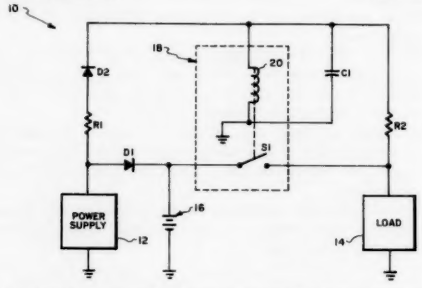
CIRCUIT FOR PREVENTING BATTERY DAMAGE

Fumio Kaneda, Camarillo, Calif., assignor to The United States of America as represented by the Secretary of the Navy, Washington, D.C.

Filed Feb. 2, 1999, Appl. No. 243,271

Int. Cl.[7] H02J *7/00*

U.S. Cl. 320—136 **15 Claims**



1. A circuit for preventing battery damage to a battery coupled to a load, said circuit comprising:

a battery charger connected to said battery, said battery charger providing a direct current voltage to said battery to maintain a charge on said battery at a predetermined charging voltage;

a relay having a coil and a contact, the contact of said relay having a first terminal connected to said battery and a second terminal connected to said load;

deactivation means connected to the coil of said relay, said deactivation means de-energizing the coil of said relay to open the contact of said relay whenever an output voltage of said battery drops below a predetermined battery cell voltage, said battery being decoupled from said load whenever the contact of said relay is opened; and

activation means connected to the coil of said relay, said activation means energizing the coil of said relay to close the contact of said relay whenever the output voltage of said battery rises to said predetermined charging voltage, said battery being coupled to said load whenever the contact of said relay is closed.

6,040,683

BATTERY CHARGER WITH ACTIVE FEEDBACK VOLTAGE CONTROLLER

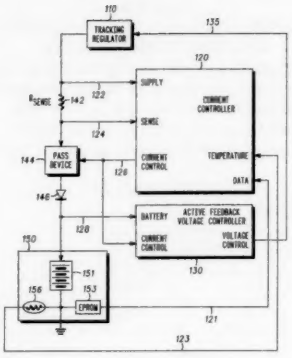
Matthew D. Mottier, Lake Zurich, Ill., assignor to Motorola, Inc., Schaumburg, Ill.

Filed May 28, 1999, Appl. No. 322,093

Int. Cl.[7] H02J *7/04;7/16*

U.S. Cl. 320—137 **14 Claims**

1. A battery charger with active feedback voltage controller comprising:



a pass device configured for connection between a tracking regulator and a battery pack;

a current controller, coupled to the pass device, for determining a present charging current going to the battery pack and determining a current control value for controlling the pass device based on the present charging current; and

an active feedback voltage controller, coupled to the current controller and configured for connection to the tracking regulator and the battery pack, for receiving the current control value and an actual battery voltage and determining a voltage control value to control an output voltage of the tracking regulator based on the current control value and an actual battery voltage.

6,040,684

LITHIUM ION FAST PULSE CHARGER

Nathan Mitchell, The Woodlands, Tex., assignor to Compaq Computer Corporation, Houston, Tex.

Filed Jun. 30, 1997, Appl. No. 885,049

Int. Cl.[7] H01M *10/46;10/44*

U.S. Cl. 320—139 **18 Claims**

7. A method of charging a lithium-containing battery which has a electrochemically-determined maximum threshold voltage which must not be exceeded, comprising the steps of:

(1.) applying current from a supply voltage which is greater than said threshold voltage, until the voltage seen across the battery reaches a first target voltage which is not substantially greater than said threshold voltage;

(2.) applying intermittent current pulses to said battery from a supply voltage which is greater than said threshold voltage, to intermittently produce a voltage at external terminals of said battery, which is greater than said threshold voltage;

(3.) thereafter operating a pass transistor intermittently as a linear regulator element, to intermittently apply a clamped voltage to said battery which is approximately equal to said threshold voltage; and

(4.) thereafter operating said pass transistor continuously as a linear regulator element to apply a clamped voltage to said battery which is approximately equal to said threshold voltage, wherein said pass transistor is integrated in a single package with said battery.

13. A portable computer system, comprising:

memory, and a microprocessor operatively connected to read said memory, and at least one nonvolatile bulk data storage device, all located within a single chassis;

a battery located within said chassis, and electrically connected to supply power to said memory under at least some circumstances; and

charging circuitry, which operates in a first phase to intermittently apply current pulses to said battery, to intermittently produce a voltage at external terminals of said battery which is greater than a threshold voltage; and

control circuitry which operates in a second phase to operate a pass transistor as a linear regulator element to apply a clamped voltage to said battery which is approximately equal to said threshold voltage, wherein said pass transistor is integrated in a single package with said battery.

6,040,685

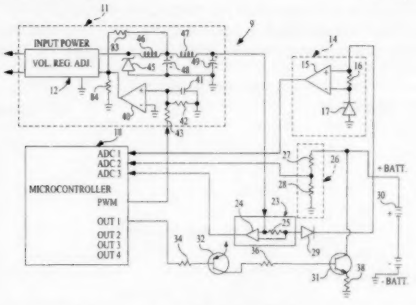
ENERGY TRANSFER AND EQUALIZATION IN RECHARGEABLE LITHIUM BATTERIES

Boris Tsenter, and Mikhail Golod, both of Roswell, Ga., assignors to Total Battery Management, Inc., Chamblee, Ga.

Continuation-in-part of application No. 08/771,030, Dec. 20, 1996, Pat. No. 5,729,116, which is a continuation-in-part of application No. 08/699,130, Aug. 16, 1996, Pat. No. 5,900,718. This application Apr. 10, 1997, Appl. No. 838,570. This patent is subject to a terminal disclaimer.

Int. Cl.[7] H01M *10/44*

U.S. Cl. 320—160 **21 Claims**



1. A method of charging a rechargeable lithium battery comprising:

charging the battery with a charging current;

sampling a charging voltage of the battery during charging;

interrupting the charging current periodically to create a current-free period;

sampling an open circuit voltage of the battery during the current-free period;

identifying a potential adverse charging condition within the rechargeable battery from said sampled charging voltage or said sampled open circuit voltage;

lowering the charging current if the potential adverse charging condition is identified;

continuing charging with the charging current if the potential adverse charging condition is not identified; and

terminating charging when the charging current is lowered below a pre-determined minimum level.

6,040,686

LOW NOISE STEP-DOWN SWITCHING REGULATOR CIRCUITS WITH PROGRAMMABLE SLEW RATE LIMITER AND METHODS OF USE

Jeffrey Schenkel, Burlington, Mass., assignor to Linear Technology Corporation, Milpitas, Calif.

Filed Jan. 7, 1999, Appl. No. 227,002

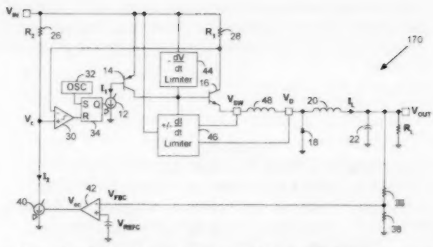
Int. Cl.[7] G05F *1/40*

U.S. Cl. 323—282 **33 Claims**

1. A low noise buck switching regulator that generates an output at an output node from an input at an input node, the regulator comprising:

a switching transistor having a first terminal coupled to the input node, a second terminal, and a third terminal;

an inductor having a first terminal coupled to the third terminal of the switching transistor, and a second terminal coupled to the output node;



a first circuit having a first terminal coupled to the second terminal of the switching transistor, and a second terminal coupled to the input node, the first circuit limiting a voltage slew rate at the third terminal of the switching transistor to a first predetermined value; and

a second circuit having a first terminal coupled to the first terminal of the inductor, a second terminal coupled to the second terminal of the inductor, and an third terminal coupled to the second terminal of the switching transistor, the second circuit limiting a current slew rate at the third terminal of the switching transistor to a second predetermined value.

6,040,687

NONLINEAR MULTIPLIER FOR SWITCHING MODE CONTROLLER

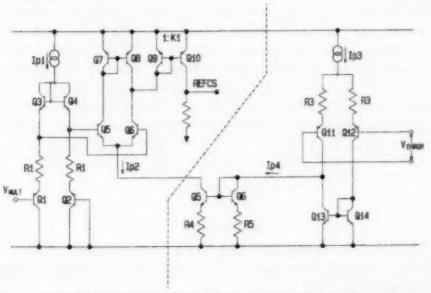
Albino Pidutti, Udine, and Marco Alessandro Legnani, Saronno, both of Italy, assignors to STMicroelectronics S.R.L., Agrate Brianza, Italy

Filed Nov. 5, 1998, Appl. No. 187,084

Claims priority, application European Pat. Off., Nov. 10, 1997, 97830584

Int. Cl.[7] G05F *3/16*

U.S. Cl. 323—316 **19 Claims**



1. A multiplier circuit for a first signal and a second signal according to a multiplying factor proportional to an amplitude of the second signal, said multipler circuit comprising:

a first degenerated differential stage;

a second nondegenerated differential stage;

an output stage comprising a first current mirror and a resistive load connected thereto;

said first degenerated differential stage performing a linear to logarithmic conversion of said first signal for providing an input differential voltage for said second nondegenerated differential stage;

said second nondegenerated differential stage performing a logarithmic to linear conversion of said input differential voltage for providing an input current to said first current mirror; and

means for generating a current proportional to said second signal and forcing said current through said second nondegenerated differential stage, said means for generating a current comprising a second current mirror including a first diode-configured input transistor and a second output transistor, and respective degeneration resistors connecting the first diode-configured input transistor and the second output transistor to

a supply node, an emitter area ratio between said first diode-configured input transistor and second output transistor being different from an emitter area ratio of respective degeneration resistors.

6,040,688

ELECTRICAL CURRENT SUPPLY DEVICE WITH INCORPORATED ELECTRICAL CURRENT SENSOR

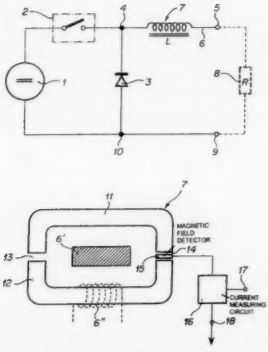
Pierre Strübin, Bellevue, Switzerland, assignor to Liaisons Electronique - Mecaniques Lem S.A., Switzerland

Filed Dec. 10, 1998, Appl. No. 209,394

Claims priority, application Switzerland, Jan. 28, 1998, 0207/98

Int. Cl.[7] H03H *1/00*

U.S. Cl. 323—368 **5 Claims**



1. A current supply device for supplying a direct current, a sinusoidal current or a pulsed current to a load, said device comprising a conductor portion and a self-induction means connected in series with said load, said self-induction means adapted to smooth said current or absorb transient current wherein said self-induction means comprises a magnetic circuit coupled with said conductor portion and having at least one air-gap, a magnetic field detector device being arranged in said air-gap and being connected to a measuring or control circuit for producing an output signal representing the current supplied by said current supply device.

6,040,689

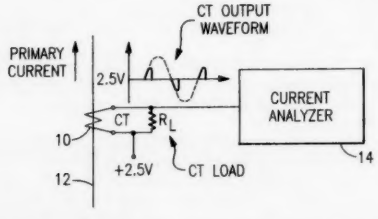
CURRENT SENSING METHOD AND APPARATUS

Andrew Gluszek, Liverpool, N.Y., assignor to SSAC, Inc., Baldwinsville, N.Y.

Filed Jun. 17, 1997, Appl. No. 877,281

Int. Cl.[7] G01R *19/10*

U.S. Cl. 324—127 **48 Claims**



1. A current sensing apparatus for sensing current in a conductor, said apparatus comprising:

a current transformer disposed in electrical communication with said conductor, said current transformer having a secondary current output waveform;

a current analyzing means in communication with said current transformer, said current analyzing means including

selecting means for selecting at least two data points in an undistorted region of said secondary current output waveform, wherein said selecting means selects a point at which said secondary current reaches a predetermined deviation from a sinewave as one of said data points; and

estimating means for estimating characteristics of said conductor current based on said selected data points.

6,040,690

ELECTRICITY MEASUREMENT USING TWO CONDUCTORS

David Anthony Ladds, Bath, United Kingdom, assignor to Horstmann Timers & Controls Limited, United Kingdom

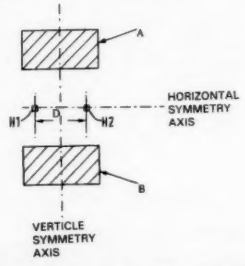
PCT No. PCT/GB96/00040, § 371 Date Oct. 28, 1997, § 102(e) Date Oct. 28, 1997, PCT Pub. No. WO96/22539, PCT Pub. Date Jul. 25, 1996

Continuation of application No. PCT/GB96/00040, Jan. 10, 1996. This PCT application Jan. 10, 1996, Appl. No. 875,031.

Claims priority, application United Kingdom, Jan. 18, 1995, 9500974

Int. Cl.[7] G01R *19/00*

U.S. Cl. 324—142 **22 Claims**



1. An electricity measurement apparatus comprising:

two spaced-apart parallel conductors through which current flows in a same direction, a magnetic field being induced in the space at least substantially between the conductors,

two magnetic field sensors disposed in the space, the sensors disposed one on each side of a first plane in which the conductors lie, the sensors providing signals representative of measured field strengths,

and an arithmetic processor provided to process the signals to provide a value representative of current flow, said value being dependent on the current flow in each conductor,

in which the two sensors are positioned in a second plane passing between the conductors and perpendicular to the first plane, the provided value representative of current flow being substantially independent of the position of the second plane within the space between the conductors.

6,040,691

TEST HEAD FOR INTEGRATED CIRCUIT TESTER ARRANGING TESTER COMPONENT CIRCUIT BOARDS ON THREE DIMENSIONS

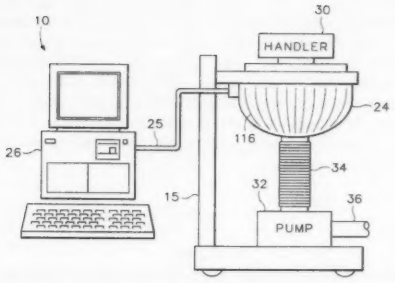
John C. Hanners, Brentwood; Charles A. Miller, and Dean Stanford, both of Fremont, all of Calif., assignors to Credence Systems Corporation, Fremont, Calif.

Filed May 23, 1997, Appl. No. 862,596

Int. Cl.[7] G01R *31/02*

U.S. Cl. 324—158.1 **35 Claims**

1. A test head for an electronic circuit tester of the type having a plurality of tester nodes, each tester node communicating with a device under test (DUT) during a test via a separate test signal, the test head comprising:



a plurality of node cards, each having a first planar surface holding at least one of said tester nodes;

a plurality of daughterboards, each having connectors on a second planar surface holding a plurality of said node cards;

a DUT interface board for holding said DUT, said DUT interface board having a third planar surface containing a plurality of contact pads and having means for conveying test signals between said DUT and said contact pads; and

means for holding said daughterboards such that each daughterboard contacts a separate subset of said contact pads and such that their second planar surfaces lie in separate planes intersecting at a single common axis perpendicular to said third planar surface of said DUT interface board.

6,040,692

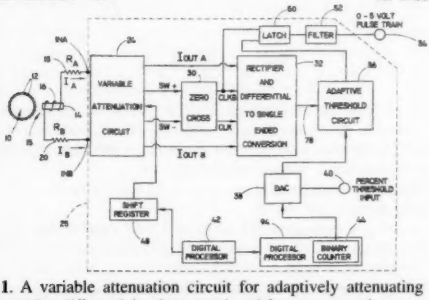
VARIABLE ATTENUATION CIRCUIT FOR A DIFFERENTIAL VARIABLE RELUCTANCE SENSOR USING CURRENT MODE

Gregory Jon Manlove, and Mark Billings Kearney, both of Kokomo, Ind., assignors to Delco Electronics Corporaiton, Kokomo, Ind.

Filed May 18, 1998, Appl. No. 80,383

Int. Cl.[7] **G01P** *3/488;3/489;* **H03L** *5/00;* **G01R** *15/08*

U.S. Cl. 324—173 **11 Claims**



1. A variable attenuation circuit for adaptively attenuating an alternating differential voltage produced from a magnetic sensor in response to rotation of a wheel, comprising:

an input circuit for receiving an input alternating differential voltage from a magnetic sensor via first and second input lines, said input circuit including first and second resistors coupled to said first and second input lines, respectively;

a first current sourcing circuit coupled to said first input line for sourcing current to maintain a fixed voltage at said first input line and provide a first current, said first current sourcing circuit including a first plurality of selectable current sourcing branches for attenuating said first current;

a second current sourcing circuit coupled to said second input line for sourcing current to maintain a fixed voltage at said second input line and provide a second current, said second current sourcing circuit including a second plurality of selectable current sourcing branches for attenuating said second current;

switching circuitry for controlling selection of pairs of said first and second plurality of current sourcing branches so as to provide selectable amounts of current sourcing to attenuate the first and second currents;

a controller for adaptively selecting combinations of said current sourcing branches to attenuate the differential first and second currents in said first and second current sourcing circuits as needed to maintain the differential current within a preferred range; and

an output for providing a differential output current to achieve rotational speed information about said wheel.

6,040,693

USER INITIATED MAGNETIC HEAD WEAR MEASURING AND DISPLAY SYSTEM

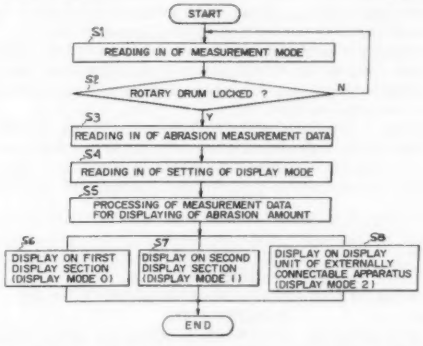
Seiichi Sakai, Tokyo; Teruyuki Yoshida, and Fumiyoshi Abe, both of Kanagawa, all of Japan, assignors to Sony Corporation, Tokyo, Japan

Filed Jun. 20, 1997, Appl. No. 879,793

Claims priority, application Japan, Jun. 27, 1996, 8-167516

Int. Cl.[7] **G11B** *5/00;* **G01R** *33/12;* **G01N** *27/72*

U.S. Cl. 324—210 **14 Claims**



1. A magnetic recording and reproducing apparatus in which a magnetic head contacts a recording medium to record or reproduce a signal onto or from the recording medium, said apparatus comprising:

measurement means for measuring an abrasion amount of said magnetic head and outputting measurement data;

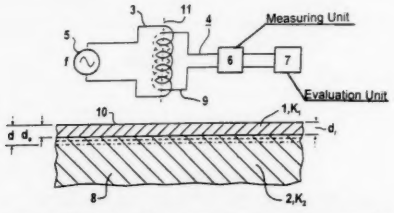
display means for displaying the abrasion amount of said magnetic head represented by the measurement data outputted from said measurement means; and

switch means operable by a user of the apparatus for causing said measurement means to measure said abrasion amount of said magnetic head, wherein said display means selectively displays a first mode wherein the abrasion amount of said magnetic head is displayed by lighting or blinking of a plurality of light emitting diodes, a second mode wherein the abrasion amount of said magnetic head is displayed in a form of a graph having a starting point which represents that said magnetic head is abraded little and an end point representative of a limit of use of said magnetic head, and a third mode wherein the abrasion amount of said magnetic head is displayed in the form of a numerical value.

6,040,694
METHOD AND DEVICE FOR DETERMINING THE THICKNESS OF AN ELECTRICALLY CONDUCTIVE LAYER

Erich Becker, Marl, Germany, assignor to Siemens Aktiengesellschaft, Munich, Germany

Continuation of application No. PCT/DE96/02383, Dec. 10, 1996. This application Jun. 22, 1998, Appl. No. 103,161.
Claims priority, application Germany, Dec. 22, 1995, 195 48 508
Int. Cl.[7] **G01B** *7/06;101/00;121/02;* **G01R** *33/12*
U.S. Cl. 324—230 **12 Claims**



1. A method for determining a thickness of a protective layer of a component, which comprises:

providing a component having a protective layer with an electrical conductivity κ_1 and a base material with an electrical conductivity κ_2, the protective layer disposed on the base material and the electrical conductivity κ_1 and the electrical conductivity κ_2 being different from each other;

applying a high-frequency electric current to an excitation coil, the excitation coil being coupled to a probe coil;

moving the excitation coil near to the protective layer to produce an electric eddy current in at least the protective layer;

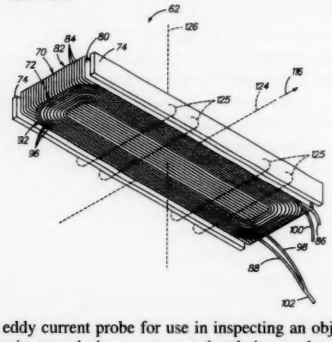
determining a parameter related to an impedance of the probe coil, using the determined parameter, according to an eddy-current testing principle, as a basis for determining a thickness of the protective layer; and

selecting a frequency of the high-frequency electric current, based on the eddy-current testing principle, to unambiguously determine the thickness of the protective layer where a ratio κ_2/κ_1 of the electrical conductivities is between 0.7 and 1.5.

6,040,695
METHOD AND APPARATUS FOR INSPECTION OF COMPONENTS

David A. Raulerson, Palm Beach Gardens; Jay Amos, Hobe Sound, and Kevin D. Smith, Jupiter, all of Fla., assignors to United Technologies Corporation, Hartford, Conn.

Filed Dec. 22, 1997, Appl. No. 996,127
Int. Cl.[7] **G01R** *33/12;* **G01N** *27/72*
U.S. Cl. 324—240 **29 Claims**



1. An eddy current probe for use in inspecting an object, where the probe is moved along a scan path relative to the object, the probe comprising:

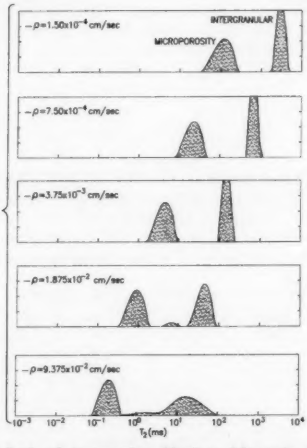
a driver having a coil with an effective coil axis, said driver having a length and a width, said length being the dimension in a direction substantially parallel to the scanning path; and

a receiver having a coil with a coil axis oriented substantially perpendicular to said driver coil effective coil axis, said receiver having a length, a width, and a thickness, said length being the dimension in the direction parallel to the scanning path, said width having a dimension substantially greater than that of said length.

6,040,696
METHOD FOR ESTIMATING PORE STRUCTURE IN CARBONATES FROM NMR MEASUREMENTS

Terizhandur S. Ramakrishnan, Bethel; Lawrence M. Schwartz, Westport; Edmund J. Fordham, Danbury; William E. Kenyon, and David J. Wilkinson, both of Ridgefield, all of Conn., assignors to Schlumberger Technology Corporation, Ridgefield, Conn.

Filed Sep. 16, 1997, Appl. No. 932,141
Int. Cl.[7] **G01V** *3/00*
U.S. Cl. 324—303 **19 Claims**



1. A method of interpreting Nuclear Magnetic Resonance (NMR) data to determine the pore geometry of microporous carbonate rock, by estimating porosity components and their volume to surface area ratios, comprising the steps of:

a) obtaining a measurement of a transverse magnetization relaxation decay curve, $M_d(t)$;

b) utilizing a parameterized physical model representing the pore geometry and diffusion of magnetization between pore components in order to predict magnetization, M(t); and

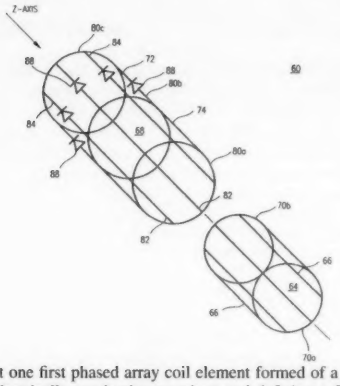
c) inferring porosity components of microporous carbonate rock and their relevant volume to surface area ratios or pore sizes by comparing said magnetization M(t) with said transverse magnetization relaxation decay curve, $M_d(t)$.

6,040,697
MAGNETIC RESONANCE IMAGING RECEIVER/ TRANSMITTER COILS

George J. Misic, Allison Park, Pa., assignor to Medrad, Inc., Indianola, Pa.

Filed Nov. 26, 1997, Appl. No. 979,842
Int. Cl.[7] **G01V** *3/00*
U.S. Cl. 324—318 **22 Claims**

1. A magnetic resonance imaging coil system for forming images of regions of interest, comprising,:



at least one first phased array coil element formed of a plurality of electrically conductive members and defining a first array volume;

at least one extension element operably associated with said at least one first phased array coil element for extending said at least one first phased array coil element to define a further array volume;

at least one second phased array coil element formed of a second plurality of electrically conductive members and defining a second array volume, said at least one second phased array coil element disposed at least partially within said first and further array volumes;

said at least one first phased array coil element and said at least one extension element being adapted to apply a first magnetic field to at least said first and further array volumes; and

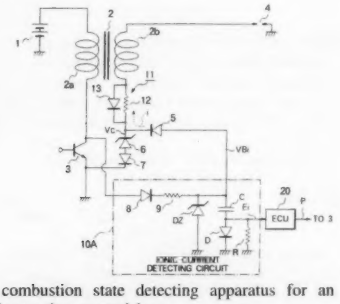
said at least one first and second phased array coil elements being further adapted to receive a second magnetic field generated by a subject in response to said first magnetic field.'

6,040,698

COMBUSTION STATE DETECTING APPARATUS FOR AN INTERNAL-COMBUSTION ENGINE

Yasuhiro Takahashi, and Wataru Fukui, both of Tokyo, Japan, assignors to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Jul. 10, 1997, Appl. No. 890,020
Claims priority, application Japan, Feb. 18, 1997, 9-033965
Int. Cl.[7] F02P *17/00*
U.S. Cl. 324—399 **5 Claims**



1. A combustion state detecting apparatus for an internal-combustion engine, comprising:

an ignition coil composed of a transformer which has a primary winding and a secondary winding, and which generates a high voltage for ignition at a high voltage end of the secondary winding when supply of current to the primary winding is cut off;

a spark plug, comprising opposed electrodes, connected to the high voltage end of the secondary winding and which discharges under application of a high voltage for ignition to ignite a fuel-air mixture in a cylinder of the internal-combustion engine;

an ionic current detecting circuit which includes biasing means connected to a low voltage end of the secondary winding and which detects ionic current flowing from the biasing means via the spark plug after the combustion of the fuel-air mixture;

rectifying means, inserted between the biasing means and the low voltage end of the secondary winding, for controlling flow of the ionic current in a forward direction;

voltage clamping means, inserted between the low voltage end of the secondary winding and ground; and

an ECU which detects a combustion state at the spark plug according to the ionic current;

wherein the biasing means applies a bias voltage of a polarity opposite to the high voltage for ignition to the spark plug via the rectifying means and the secondary winding; and

the voltage clamping means limits the voltage at the low voltage end of the secondary winding to a predetermined value when the high voltage for ignition appears;

an absolute value of the predetermined value being set to the absolute value or more of the bias voltage of the biasing means,

and wherein:

current limiting means is installed between the junction of the rectifying means and the voltage clamping means and the low voltage end of the secondary winding; and

the current limiting means controls the current flowing from the biasing means to the spark plug via the secondary winding so as to control the voltage at the high voltage end of the secondary winding when current begins to be supplied to the primary winding,

and wherein the current limiting means comprises a resistor and a diode connected in parallel to each other; and

the diode sets the direction of the secondary current flowing through the secondary winding at the time of applying the high voltage for ignition to the forward direction so as to suppress a potential difference across the resistor during ignition control.

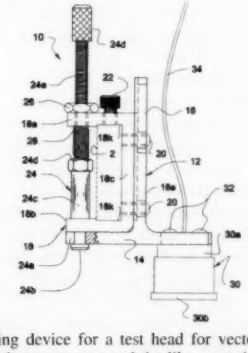
MOUNTING APPARATUS FOR VECTORLESS TESTING

Frederick J. Holmes, Plainville, Mass., assignor to Semco Machine Corporation, Wrentham, Mass.

Filed Jun. 16, 1997, Appl. No. 877,032
Int. Cl.[7] G01R *31/22*
U.S. Cl. 324—754 **16 Claims**



1. A mounting device for a test head for vectorless testing of integrated circuit components and the like comprising

a mounting member having a first laterally extending base leg, a test head seat formed on the first leg for mounting the test head, a second leg extending upwardly from the first leg along a length to a distal end, at least one slot formed through the second leg and extending along a portion of the length of the second leg,

a generally U-shaped bracket having upper and lower arms extending from a bight portion and guide projections extending from the bight portion and received in the at least one slot, a threaded bore formed through the upper arm and a smooth bore formed through the lower arm,

a pin member having opposite ends and a longitudinal axis, a threaded portion extending along the longitudinal axis to a distal free end, the threaded portion threadingly received in the threaded bore in the upper arm and the pin member slidingly received through the bore in the lower arm with the other end of the pin member rotatably attached to the base leg, whereby rotating movement of the threaded portion will cause vertical (z) movement of the mounting member and concomitantly the seat.

6,040,700

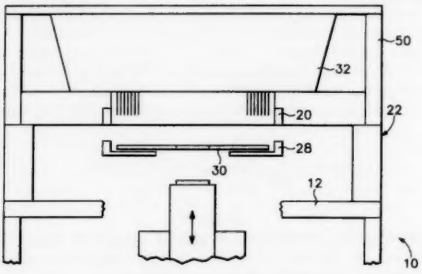
SEMICONDUCTOR TESTER SYSTEM INCLUDING TEST HEAD SUPPORTED BY WAFER PROBER FRAME

Andrei Berar, Campbell, Calif., assignor to Credence Systems Corporation, Fremont, Calif.

Filed Sep. 15, 1997, Appl. No. 929,502

Int. Cl.[7] G01R *31/02*

U.S. Cl. 324—754 **14 Claims**



1. A semiconductor tester for testing a semiconductor device in wafer form, comprising:

a wafer prober including a wafer prober frame, a chuck for holding a wafer under test and a displacement mechanism for displacing the chuck upward relative to the wafer prober frame toward a test station,

a mechanical interface member,

an interface member support structure mounted on the wafer prober frame for supporting the mechanical interface member, the interface member support structure being adjustable, whereby the orientation of the interface member relative to the prober frame can be adjusted,

a test head having test head terminals distributed over a test face,

a test head mounting structure to which the test head is rigidly attached, the test head mounting structure being fixed to and supported by the wafer prober frame, independently of the mechanical interface member, with the test face oriented toward the chuck and the entire weight of the test head being carried by the prober frame,

a probe card, and

a probe card latching mechanism for releasably attaching the probe card to the mechanical interface member at a location in which the probe card engages the test head terminals and the wafer under test engages the probe card when at the test station.

6,040,701

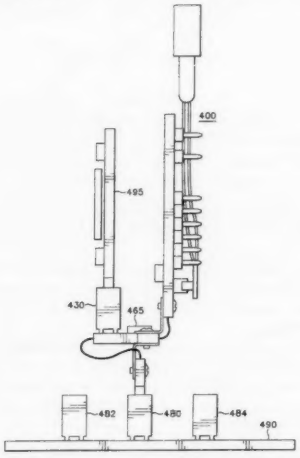
THIN PROFILE VERTICALLY ORIENTED PROBE ADAPTER

M. David Swafford, Hillsboro, and James M. Fenton, Tigard, both of Oreg., assignors to Tektronix, Inc., Beaverton, Oreg.

Filed Jun. 17, 1998, Appl. No. 99,076

Int. Cl.[7] G01R *31/02*

U.S. Cl. 324—754 **2 Claims**



1. A probe adapter for providing a testing interface between a circuit board under test and a test instrument, comprising:

a first rigid circuit board member for connecting to a first receptacle on a motherboard;

a second rigid circuit board member mounted perpendicular to said first rigid circuit board member for supporting a second receptacle for receiving a circuit under test and supporting said circuit test in a vertical orientation parallel to said first rigid circuit board member;

a first flexible circuit board member for connecting signals between said first and second rigid circuit board members,

a third rigid circuit board member for coupling signals from said receptacle supporting said circuit board under test to said test instrument; and

a second flexible circuit board member for coupling signals between said second and third rigid circuit board members.

6,040,702

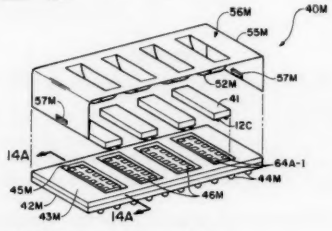
CARRIER AND SYSTEM FOR TESTING BUMPED SEMICONDUCTOR COMPONENTS

David R. Hembree, Boise; Warren M. Farnworth, Nampa; Alan G. Wood, Boise; Derek Gochnour, Boise, and Salman Akram, Boise, all of Id., assignors to Micron Technology, Inc., Boise, Id.

Filed Jul. 3, 1997, Appl. No. 888,075

Int. Cl.[7] G01R *31/02*

U.S. Cl. 324—755 **31 Claims**



1. A semiconductor carrier comprising:

a base comprising an external contact, the base configured to retain a semiconductor component comprising a contact bump;

an interconnect on the base comprising a contact member in electrical communication with the external contact configured to electrically contact the contact bump on the component;

a first alignment member on the base comprising a first opening configured to contact an edge of the component to coarse align the contact bump to the contact member;

a second alignment member on the interconnect comprising a second opening configured to contact the contact bump to fine align the contact bump to the contact member; and

a force applying mechanism attached to the base configured to bias the component against the interconnect.

6,040,703

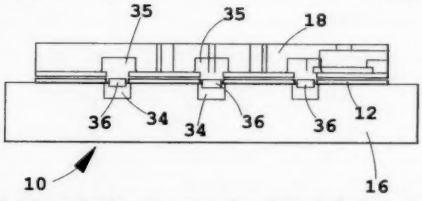
FIXTURE FOR VIBRATION TESTING

David V. Kimball, San Clemente, Calif., assignor to Environmental Screening Technology, Inc., Zeeland, Mich.

Filed Oct. 31, 1997, Appl. No. 962,205

Int. Cl.[7] G01R *31/02*

U.S. Cl. 324—755 **17 Claims**



1. A fixture for dynamic testing of an electronic device having a body and a plurality of electrical leads projecting therefrom, comprising:

first and second dielectric carrier plates;

a fastener for securely fastening the first and second carrier plates together in a predetermined orientation without engaging the body of the electronic device;

at least one of the carrier plates having a plurality of electrical contacts thereon, the plurality of electrical contacts being arranged in a pattern with each of the plurality of electrical contacts corresponding with one of the plurality of electrical leads projecting from the body of the electronic device; and

at least the first carrier plate defining an aperture with a plurality of individually resiliently flexible tabs being defined adjacent the periphery of the aperture, each of the individually flexible tabs corresponding with one of the electrical leads of the electronic device, whereby each of the electrical leads of the electronic device is capable of being securely clasped between one of the resiliently flexible tabs along the periphery of the aperture defined by the first carrier plate and the second carrier plate, and whereby each of the electrical leads of the electronic device is capable of being electrically connected with a corresponding electrical contact on at least one of the carrier plates.

6,040,704

PROBE UNIT AND INSPECTION HEAD

Motoyasu Kondo, Mitaka; Fukuyo Sakuma, Houya; Youichi Urakawa; Yoshihito Yokoyama, both of Chofu, and Masatoshi Hinai, Tokyo, all of Japan, assignors to Kabushiki Kaisha Nihon Micronics, Tokyo, Japan

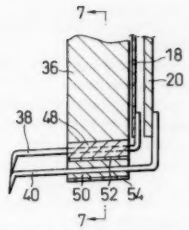
Filed May 16, 1997, Appl. No. 858,019

Claims priority, application Japan, May 24, 1996, 8-151847

Int. Cl.[7] G01R *31/02;1/06*

U.S. Cl. 324—762 **7 Claims**

1. A probe unit comprising:



a support member having an edge extending in a first direction parallel to the surface of a test substance having the shape of a flat plate;

a plurality of conductive needle-like probes disposed on the edge and extended in a third direction intersecting both the first direction and a second direction that is perpendicular to the surface of the test substance, the plurality of probes having axes at intervals in the second direction and being divided into at least a first group and a second group; and

a sheet-like conductive layer being formed between the first and second groups;

wherein the probes of the second group are disposed closer to the test substance than are the probes of the first group.

6,040,705

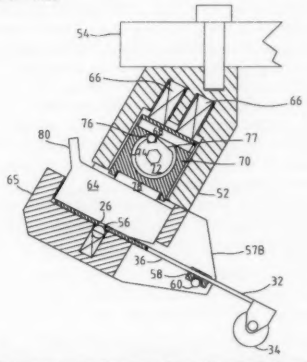
ROLLING ELECTRICAL CONTACTOR

Douglas J. Garcia, Escondido, Calif., and Christian Saulnier, Boutigny, France, assignors to Electro Scientific Industries, Inc., Portland, Oreg.

Provisional application No. 60/056,750, Aug. 20, 1997. This application Feb. 27, 1998, Appl. No. 32,696.

Int. Cl.[7] G01R *1/06*

U.S. Cl. 324—762 **10 Claims**



1. A rolling contactor for providing electrical signal communication between a component terminal and a support structure for said rolling contactor, comprising:

a) electrically conductive means for rolling across the component terminal to communicate one or more signals therewith;

b) a holder connectable to the support structure and in signal communication therewith, the holder comprising:

i) a pair of flanges projecting orthogonally from oposite sides of the arm at said opposite end; and,

ii) a pair of aligned holes defined by respective flanges for journaling the axle ends, the axle being disposed normal to the arm; and,

c) means for resiliently cantilevering the means for rolling from the holder, so as to flex in response to deflection of the means for rolling by a component, said means for cantilevering including means for communicating signals between the means for rolling and the holder, said means for cantilevering said means for rolling comprising:

i) an elongated arm, the arm being electrically conductive to provide signal communication between the means for rolling and the holder;

ii) means for connecting the arm electrically and mechanically at one end to the holder; and,

iii) means for connecting the arm electrically and mechanically at an opposite end to the means for rolling; and,

d) wherein said holder comprises:

i) base means for providing a resting place for an end of the arm remote from the roller means;

ii) means for locating the arm longitudinally and laterally into its resting place; and,

iii) releasable clamping means, acting in opposition to the base means, for holding the arm in its resting place.

6,040,706

CONTACTOR AND SEMICONDUCTOR DEVICE INSPECTING METHOD

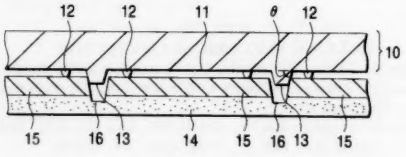
Katsuhiko Tsuura, Takatsuki, Japan, assignor to Matsushita Electronics Corporation, Osaka, Japan

Filed Nov. 3, 1997, Appl. No. 963,141

Claims priority, application Japan, Nov. 7, 1996, 8-295077

Int. Cl.[7] G01R *1/02*

U.S. Cl. 324—765 **10 Claims**



1. A contactor for use in testing a plurality of individual semiconductor chips of a semiconductor wafer, said semiconductor wafer being cut so as to at least partially separate said individual semiconductor chips from one another, said contactor comprising:

a plurality of recesses, each of said recessing being substantially equal in size to said individual semiconductor chips;

side walls provided respectively around said recesses; and

a plurality of bump electrodes formed in said recesses in correspondence to a plurality of pad electrodes formed on said individual semiconductor chips,

wherein said side walls are engaged with grooves, said grooves being formed when said semiconductor wafer is cut to at least partially separate said individual semiconductor chips from one another.

6,040,707

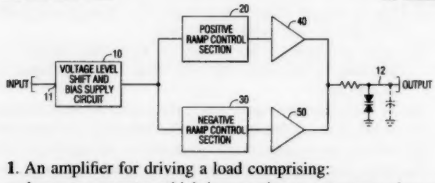
CONSTANT SLEW RATE AMPLIFIER

William R. Young, Palm Bay, Fla., and William B. Shearon, Findlay, Ohio, assignors to Intersil Corporation, Palm Bay, Fla.

Filed Sep. 15, 1997, Appl. No. 929,734

Int. Cl.[7] H03K *17/16*

U.S. Cl. 326—21 **41 Claims**



1. An amplifier for driving a load comprising:

a slew rate generator which is operative to generate a slew rate reference signal that is independent of said load; and

a driver circuit, which is operative to drive said load with an output signal in accordance with an input signal and having a slew rate based upon said slew rate reference signal; and wherein

said slew rate reference signal is a changing voltage, and wherein said driver circuit is operative to drive said load with said output signal that follows said changing voltage and then transitions from said changing voltage to a prescribed output level different from that of said changing voltage.

6,040,708

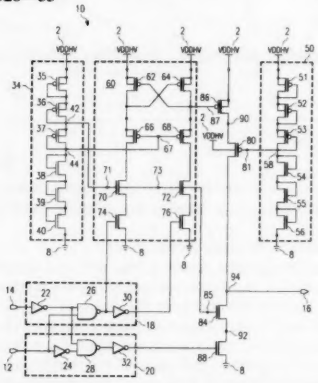
OUTPUT BUFFER HAVING QUASI-FAILSAFE OPERATION

Terence G. W. Blake; Bernhard H. Andresen, both of Dallas, and Frederick G. Wall, Garland, all of Tex., assignors to Texas Instruments Incorporated, Dallas, Tex.

Provisional application No. 60/034,170, Jan. 2, 1997. This application Dec. 30, 1997, Appl. No. 687.

Int. Cl.[7] H03K *17/16*

U.S. Cl. 326—33 **20 Claims**



1. An output buffer coupling a data input and an enable input to an output, the output buffer operable to receive a first voltage from a first power supply and a second voltage from a second power supply, the output buffer comprising:

a first output driver coupled to the output and having a gate oxide protected from voltage changes on the output;

a second output driver coupled to data input, to the enable input, and to the output, the second output driver having a gate oxide protected from voltage changes on the output;

a level shifter coupled to the data input, to the enable input, and to the first output driver, the level shifter having at least one cascode device and operable to switch the first output driver in accordance with the values of the data input and the enable input; and

a bias-generation circuit operable to generate a quasi-failsafe voltage that is approximately equal to the second voltage when the second power supply is supplying the second voltage and equal to a portion of the first voltage when the second power supply is not supplying the second voltage, the bias-generation circuit coupled to a device of the output buffer selected from the group consisting of:

a first output cascode coupled to the first output driver;

a second output cascode coupled to the second output driver; and

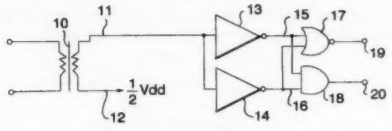
the cascode device of the level shifter.

6,040,709

TERNARY SIGNAL INPUT CIRCUIT

Kazunori Kishimoto, Tokyo, Japan, assignor to NEC Corporation, Tokyo, Japan

Filed May 21, 1998, Appl. No. 82,561
Claims priority, application Japan, May 30, 1997, 9-141696
Int. Cl.[7] H03K *19/01;19/02*
U.S. Cl. 326—59 **4 Claims**



1. A ternary signal input circuit for converting a ternary signal supplied through a transformer into binary signals and outputting the binary signals, comprising:

a first inverter for being supplied with the ternary signal;

a second inverter for being supplied with the ternary signal, said first inverter and said second inverter having opposite hysteresis characteristics, respectively;

a NOR gate for producing an output signal indicative of an inversion of the logical sum of output signals from said first and second inverters; and

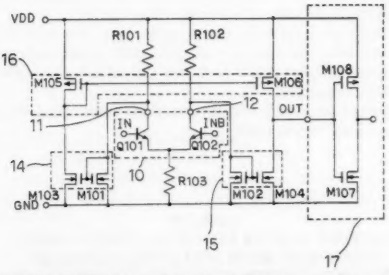
an AND gate for producing an output signal indicative of the logical product of output signals from said first and second inverters.

6,040,710

CML-CMOS CONVERSION CIRCUIT

Osamu Nakauchi, Tokyo, Japan, assignor to NEC Corporation, Tokyo, Japan

Filed Jun. 4, 1998, Appl. No. 92,012
Claims priority, application Japan, Jun. 5, 1997, 9-148104
Int. Cl.[7] H03K *19/0175*
U.S. Cl. 326—66 **6 Claims**



1. A CML-CMOS conversion circuit that converts input signals complementary-inputted at CML (Current Mode Logic) amplitude into signals of CMOS (Complementary Metal Oxide Semiconductor) logic amplitude and outputs a result, comprising:

a differential circuit that is connected to resistors that function as load and that amplifies and complementary-outputs a difference in potential between a positive input signal, which is one signal of said input signals, and an inverted input signal, which is another signal of said input signals;

a first current mirror circuit that is connected to one output of said differential circuit;

a second current mirror circuit that is connected to the other output of said differential circuit;

a third current mirror circuit that is provided with a first transistor connected in a series to the output of said first current mirror circuit and a second transistor connected in a series with the output of said second current mirror circuit, wherein said second transistor enters a conductive state when current flows to said first transistor and said second transistor enters a nonconductive state when current does not flow to said first transistor; and

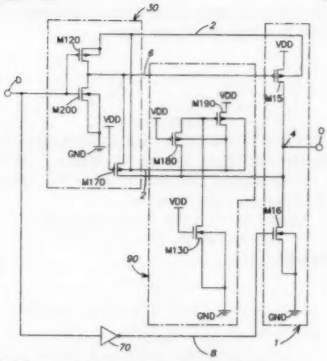
a CMOS inverter that is provided with a p-channel MOS transistor and a first n-channel MOS transistor that are in complementary connection, that takes as input a signal outputted from said second current mirror circuit, and that outputs a signal at CMOS logic amplitude.

6,040,711

CMOS OUTPUT BUFFER HAVING A SWITCHABLE BULK LINE

Maria Leena Airaksinen, Tremestieri Etneo, and Giorgio Catanzaro, Messina, both of Italy, assignors to SGS-Thomson Microelectronics S.r.l., Agrate Brianza, Italy

Continuation-in-part of application No. 08/623,317, Mar. 26, 1996, Pat. No. 5,852,382. This application Jun. 26, 1996, Appl. No. 670,000.
Claims priority, application European Pat. Off., Mar. 31, 1995, 95830120
This patent is subject to a terminal disclaimer.
Int. Cl.[7] H03K *19/0185*
U.S. Cl. 326—81 **16 Claims**



5. A CMOS output buffer circuit comprising:

a final amplifier stage that includes a pull-up transistor and a pull-down transistor connected between a voltage supply terminal having a supply voltage and a ground terminal and sharing a common output node, the pull-up transistor having a bulk electrode connected to a switchable bulk line;

an auxiliary circuit to selectively couple the switchable bulk line to the voltage supply terminal as long as a voltage of the output node is not higher than the supply voltage, and to selectively decouple the switchable bulk line from the voltage supply terminal when the voltage of the output node exceeds the supply voltage;

a first logic gate to drive the pull-down transistor, a control terminal of the first logic gate to receive the input data signal; and

a second logic gate to drive the pull-up transistor, the second logic gate including a first transistor having:

a control terminal to receive the input data signal;

a first terminal connected to the switchable bulk line; and

a second terminal to control the pull-up transistor,

wherein the second terminal of the first transistor is coupled to the output node of the final amplifier stage, and

wherein the second logic gate is operative to transfer the voltage on the output node of the final amplifier stage to the switchable bulk line when the voltage of the output node exceeds the supply voltage.

6,040,712

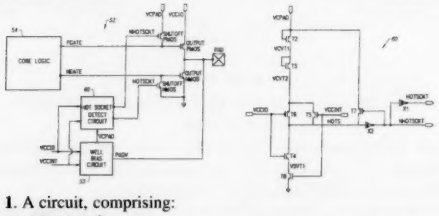
APPARATUS AND METHOD FOR PROTECTING A CIRCUIT DURING A HOT SOCKET CONDITION

Manuel Mejia, San Jose, Calif., assignor to Altera Corporation, San Jose, Calif.

Provisional application No. 60/110,260, Nov. 30, 1998. This application May 24, 1999, Appl. No. 317,710.

Int. Cl.[7] H03K *19/0175*

U.S. Cl. 326—82 **20 Claims**



1. A circuit, comprising:

an output node;

a set of transistors operative to control the signal level on said output node;

a first voltage supply;

a second voltage supply; and

a hot socket detection circuit to identify when said first voltage supply or said second voltage supply is below a predetermined value indicative of a hot socket condition, and in response thereto, generate control signals that place said set of transistors in a high impedance state.

6,040,713

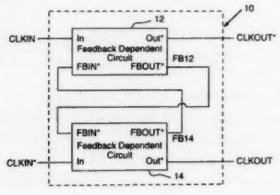
BUFFER WITH FAST EDGE PROPAGATION

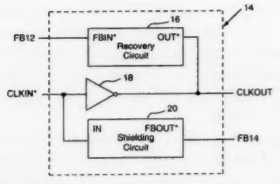
John D. Porter, Meridian; Larren G. Weber, Caldwell, and William N. Thompson, Meridian, all of Id., assignors to Micron Technology, Inc., Boise, Id.

Filed Apr. 22, 1998, Appl. No. 64,531

Int. Cl.[7] H03K *19/0175;19/094*

U.S. Cl. 326—83 **31 Claims**





1. A buffer having first and second input terminals and first and second output terminals, comprising:

a first fast edge driver having an input terminal and an output terminal, said input terminal connected to the first input terminal of the buffer, and said output terminal connected to the first output terminal of the buffer;

a first shielding circuit having an input terminal and an output terminal, said input terminal connected to the first input terminal of the buffer;

a first recovery circuit having an input terminal and an output terminal, said output terminal connected to the first output terminal of the buffer;

a second fast edge driver having an input terminal and an output terminal, said input terminal connected to the second input terminal of the buffer, and said output terminal connected to the second output terminal of the buffer;

a second shielding circuit having an input terminal and an output terminal, said input terminal connected to the second input terminal of the buffer, and said output terminal connected to said input terminal of said first recovery circuit; and

a second recovery circuit having an input terminal and an output terminal, said input terminal connected to said output terminal of said first shielding circuit, and said output terminal connected to the second output terminal of the buffer.

6,040,714

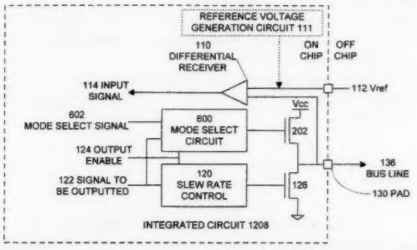
METHOD FOR PROVIDING TWO MODES OF I/O PAD TERMINATION

Dean A. Klein, Eagle, Id., assignor to Micron Electronics, Inc., Nampa, Id.

Filed Dec. 12, 1997, Appl. No. 990,057

Int. Cl.[7] H03K *19/0175;17/16*

U.S. Cl. 326—86 **13 Claims**



1. A method of providing a dual mode output signal for an integrated circuit, comprising:

receiving an output mode signal indicating a first output mode or second output mode;

wherein receiving the output mode signal includes sampling a specific pin on the integrated circuit during system reset to determine the state of the output mode signal;

providing an open drain output signal including activating a pullup transistor for one clock cycle if the output mode signal indicates the first output mode and a signal to be outputted has a high value; and

providing a totem pole output signal if the mode signal indicates the second output mode.

6,040,715

OUTPUT BUFFER CONTROL CIRCUIT THAT PERFORMS HIGH SPEED OPERATION BY GENERATING A PREDETERMINED WIDTH OF A PULSE BASED ON AN OUTPUT CONTROL SIGNAL

Hee-Bok Kang, Daejeon, and Dae-Hui Kim, Kyungki-Do, both of Rep. of Korea, assignors to LG Semicon Co., Ltd., Cheongju, Rep. of Korea

Filed Jul. 11, 1997, Appl. No. 893,613

Claims priority, application Rep. of Korea, Jul. 12, 1996, 96/28129

Int. Cl.[7] H03K *19/0175;19/094*

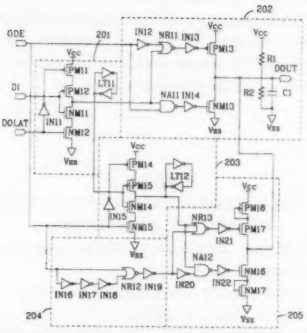
U.S. Cl. 326—87 **16 Claims**

1. An output buffer control circuit, comprising:

a first data latch means for inverting and latching an input data based on a first signal;

a data output means for logically operating an output signal from the first data latch means based on a second signal and generating an output data;

a second data latch means for inverting and latching the output signal from the first data latch unit based on the second signal;



a signal detecting means for generating a predetermined width pulse based on the second signal; and

an output terminal pre-reset unit for logically operating the predetermined width pulse outputted from the signal detecting means and an output signal from the second data latch means to pre-reset the output data of the data output means.

6,040,716

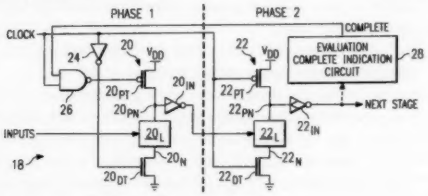
DOMINO LOGIC CIRCUITS, SYSTEMS, AND METHODS WITH PRECHARGE CONTROL BASED ON COMPLETION OF EVALUATION BY THE SUBSEQUENT DOMINO LOGIC STAGE

Patrick W. Bosshart, Plano, Tex., assignor to Texas Instruments Incorporated, Dallas, Tex.

Provisional application No. 60/047,028, May 19, 1997. This application May 8, 1998, Appl. No. 75,056.

Int. Cl.[7] **H03K** *19/096;19/094;19/01*

U.S. Cl. 326—98 **29 Claims**



1. A domino logic circuit, comprising:

a first phase domino logic circuit;

a second phase domino logic circuit;

wherein each of the first and second phase domino logic circuits comprises:

a precharge node;

a coupling device which when conducting couples the precharge node to a precharge voltage during a precharge phase;

a discharge path connected to the precharge node which when conducting couples the precharge node to a voltage different than the precharge voltage during an evaluate phase; and

an inverter coupled to the precharge node and providing an output responsive to a voltage at the precharge node;

wherein the output of the inverter of the first phase domino logic circuit is connected to control the conduction of the discharge path of the second phase domino logic circuit;

and further comprising:

a conductor for providing a clock signal;

circuitry for commencing the evaluate phase of the first phase domino logic circuit at a first time in response to the clock signal transitioning from a first state to a second state;

circuitry for commencing the evaluate phase of the second phase domino logic circuit at a second time following the first time; and

circuitry for commencing the precharge phase of the first phase domino logic circuit at a third time following the second time;

wherein the third time corresponds to the latest of a plurality of events;

wherein a first of the plurality of events is responsive to the clock signal transitioning from the second state to the first state; and

wherein a second of the plurality of events is the discharge path of the second phase domino logic circuit having sufficient time following a beginning of the evaluate phase of the second phase domino logic circuit to conduct to cause the voltage at the precharge node of the second phase domino logic circuit to transition to a level sufficient to trigger the output of the inverter of the second phase domino logic circuit.

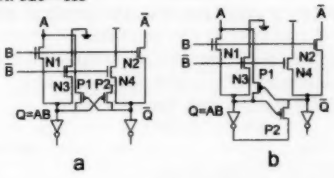
FRCPG: FORECASTED RESTORATION COMPLEMENTARY PASS GATES

Rafael Fried, Caesaria, Israel, assignor to I.C. Com Ltd., Azor, Israel

Filed Jul. 28, 1997, Appl. No. 901,834

Int. Cl.[7] **H03K** *19/094*

U.S. Cl. 326—113 **4 Claims**



AND/NAND implementation in FRCPG
a: CPL like
b: EEPL like

1. A static pass-transistor logic gate comprising

(a) pass-transistor logic circuitry, said pass-transistor logic circuitry including logic inputs, said logic inputs for receiving complementary logic input signals;

(b) an output logic-level restoration circuit, said restoration circuit including restoration-circuit inputs;

(c) each logic input which is not needed in determining the need for output logic-level restoration connected to the appropriate input logic level; and,

(d) a restoration circuit input connected to the appropriate logic-gate input to accomplish forecasting of the need for output logic-level restoration.

6,040,718

MEDIAN REFERENCE VOLTAGE SELECTION CIRCUIT

Paul M. Henry, Tucson, Ariz., assignor to National Semiconductor Corporation, Santa Clara, Calif.

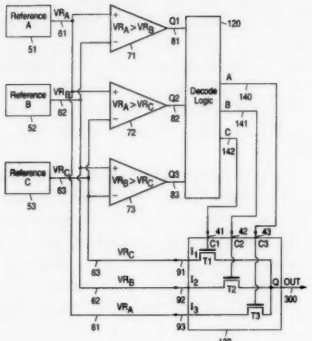
Filed Dec. 15, 1997, Appl. No. 990,561

Int. Cl.[7] **H03K** *5/22*

U.S. Cl. 327—71 **13 Claims**

1. A circuit comprising:

a comparative circuit for performing at least three compare operations, wherein in each compare operation the comparator compares two of at least three reference voltages to one another and provides a logic signal to indicate which of the two reference voltages is greater; and



a decode and select circuit for decoding the logic signals provided by the comparator circuit in the at least three compare operations and for selecting the median reference voltage from among the at least three reference voltages.

6,040,719

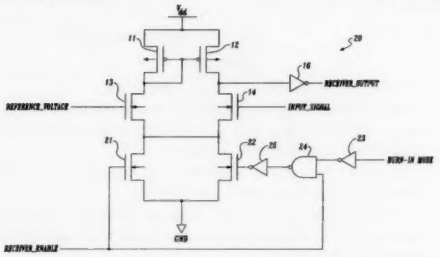
INPUT RECEIVER FOR LIMITING CURRENT DURING RELIABILITY SCREENING

Jeffrey S. Earl, San Jose, Calif., assignor to Vanguard International Semiconductor Corporation, Hsinchu, Taiwan

Filed Mar. 17, 1998, Appl. No. 44,205

Int. Cl.[7] H03K *5/22*

U.S. Cl. 327—78 **24 Claims**



1. An input receiver that is selectively configured into a burn-in mode and a normal mode, the input receiver comprising:

a first transistor having a first terminal connected to a Vdd voltage source, a second terminal, and a third terminal connected to the second terminal;

a second transistor having a first terminal connected to the Vdd voltage source, a second terminal connected to the second and third terminals of the first transistor, and a third terminal;

a third transistor having a first terminal connected to the second and third terminals of the first transistor, a second terminal for receiving a reference_voltage signal, and a third terminal;

a fourth transistor having a first terminal connected to the third terminal of the second transistor, a second terminal for receiving an input signal, and a third terminal; and

a fifth transistor having a first terminal connected to the third terminal of the third transistor and the third terminal of the fourth transistor, a second terminal for receiving a receiver_enable signal, and a third terminal connected to a Vss voltage source;

wherein the receiver_enable signal is adjusted to a first voltage level when the input receiver is enabled during the burn-in mode and to a second voltage level when the input receiver is enabled during the normal mode, the first voltage level being different from the second voltage level.

6,040,720

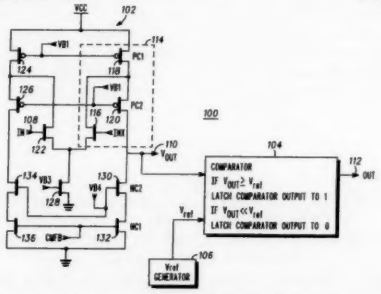
RESISTORLESS LOW-CURRENT CMOS VOLTAGE REFERENCE GENERATOR

Jeannie Han Kosiec, Schaumburg, Ill., assignor to Motorola, Inc., Schaumburg, Ill.

Filed Jun. 12, 1998, Appl. No. 94,534

Int. Cl.[7] H03K *5/153*

U.S. Cl. 327—83 **5 Claims**



1. A ciruit with a temperature compensated output, comprising:

an output circuit including a folded cascode output stage, the output circut producing an output voltage in response to an input voltage, the folded cascode output stage producing the output voltage with a temperature characteristic of the folded cacode output stage;

a comparator stage which compared the output voltage with a threshold voltage and produces an output signal; and

a voltage reference generator for producing the threshold voltage with the temperature characteristic of the folded cascode output stage, the voltage reference generator including

a first transistor and a second transistor series coupled between a reference potential and the comparator stage, and

a current source for biasing the first transistor and the second transistor so that the threshold voltage has the temperature characteristic of the folded cascode ourput stage.

POWER-ON RESET CIRCUIT WITH ADJUSTABLE INTERVAL

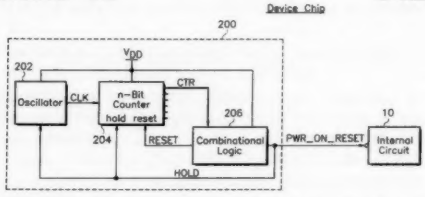
Sang-oh Lee, Seoul, Rep. of Korea, assignor to Samsung Electronics, Co., Ltd., Suwon, Rep. of Korea

Filed May 1, 1998, Appl. No. 71,518

Claims priority, application Rep. of Korea, May 2, 1997, 97-16951

Int. Cl.[7] **H03L** *7/00*

U.S. Cl. 327—143 **15 Claims**



1. A power-on reset circuit for use with sequential logics, for generating a power-on reset signal as a power supply potential is applied, so as to allow the sequential logics to reset immediately to desired logic states, said circuit comprising:

an oscillator for generating a clock signal as the power supply potential is applied;

a counter for counting an initial data in synchronization with the clock signal to generate a counted data;

a combinational logic circuit coupled to the sequential logic, said combinational logic circuit having a power supply input coupled to the power supply potential for generating a counter reset signal used to reset the counter when the power supply potential is applied, and generating the power-on reset signal when the counted data is equal to a preset data; and

means for simultaneously disabling said oscillator and said counter,

wherein each of said oscillator and said counter includes an input for receiving the power-on reset signal, said counter also including a second input for receiving the reset signal from said combinational logic circuit and resetting said counter responsive to said reset signal.

INTERFACE CIRCUIT WITH HIGH SPEED DATA TRANSMISSION

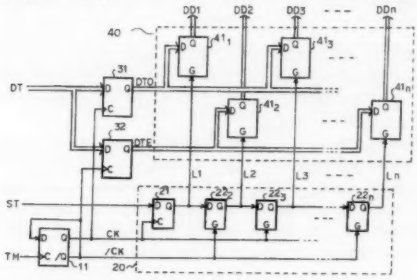
Hisatake Sato, Miyazaki, Japan, assignor to Oki Electric Industry Co., Ltd., Tokyo, Japan

Filed Jul. 13, 1998, Appl. No. 114,518

Claims priority, application Japan, Jul. 17, 1997, 9-192405

Int. Cl.[7] **H04L** *7/00*

U.S. Cl. 327—144 **20 Claims**



1. An interface circuit comprising:

a clock signal generator outputting a clock signal and an inversion clock signal;

a shift signal generator receiving a start signal, the clock signal and the inversion clock signal, and outputting shift signals having odd shift signals and even shift signals, the odd shift signals including a first odd shift signal and subsequent odd shift signals, wherein the first odd shift signal is generated in response to the start signal and the clock signal, wherein the even shift signals are generated in response to a previous one of the odd shift signals and the inversion clock signal, and wherein the subsequent odd shift signals are generated in response to a previous one of the even shift signals and the clock signal;

a data distribution circuit receiving data, the clock signal and the inversion clock signal, said data distribution circuit outputting odd data in response to the data and the clock signal, and outputting even data in response to the data and the inversion clock signal;

a plurality of odd data output circuits each of which receives the odd data and outputs the received data in response to one of the odd shift signals, respectively; and

a plurality of even data output circuits each of which receives the even data and outputs the received data in response to one of the even shift signals, respectively.

6,040,724

BUS DRIVER CIRCUIT HAVING ADJUSTABLE RISE AND FALL TIMES

Hiroshi Kamiya, Tokyo, Japan, assignor to NEC Corporation, Tokyo, Japan

Continuation of application No. 08/323,776, Oct. 17, 1994, Pat. No. 5,589,789. This application Sep. 13, 1996, Appl. No. 713,840.

Claims priority, application Japan, Oct. 16, 1993, 5-281904; Oct. 26, 1993, 5-266821; Dec. 2, 1993, 5-352432

Int. Cl.[7] **H03K** *5/12*

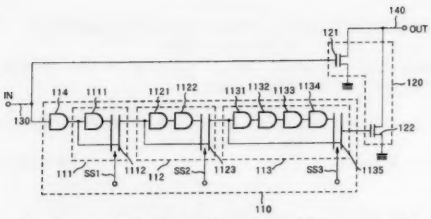
U.S. Cl. 327—170 **17 Claims**

1. A bus driver circuit for transmitting data onto a bus, comprising:

an input terminal for inputting an input signal;

a delay circuit for outputting a delayed signal based on said input signal, said delay circuit generating said delayed signal by receiving at least one selection signal which causes said delay circuit to delay said input signal for one of a plurality of preset delay periods;

an output circuit for forming an output signal by superimposing the input signal from said input terminal onto said delayed



signal from said delay circuit, so that said output signal has a rise time and fall time which defines a waveform shape; and

an output terminal for outputting the output signal from said output circuit to said bus,

wherein said one of said plurality of preset delay periods used to generate said delayed signal is selected by said at least one selection signal so that said waveform shape causes said driver circuit to achieve a through rate which is faster than a through rate achieved by selection of any of remaining ones of said plurality of preset delay periods.

6,040,725

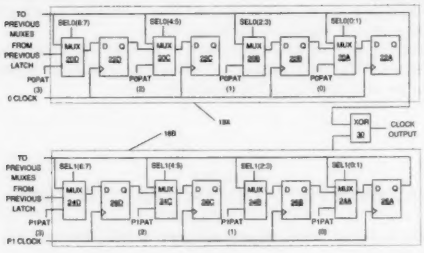
DYNAMICALLY CONFIGURABLE VARIABLE FREQUENCY AND DUTY CYCLE CLOCK AND SIGNAL GENERATION

William Robert Lee, and Leland Duane Richardson, both of Apex, N.C., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Jun. 2, 1998, Appl. No. 89,757

Int. Cl.[7] H03K *1/04*

U.S. Cl. 327—175 **24 Claims**



1. A variable clock generator comprising:

a clock multiplier that is responsive to a reference clock and which generates at least two clock signals which are out of phase with each other; and

a clock divider which is responsive to at least one divider pattern and which is operably associated with the clock multiplier for receiving the at least two clock signals from the clock multipler to generate an output clock based on the divider patterns and the clock signals;

wherein the clock divider comprises:

a plurality of loadable linear feedback shift registers each having an output; and

an EXCLUSIVE OR gate that is responsive to the outputs of the linear feedback shift registers to produce the output clock.

6,040,726

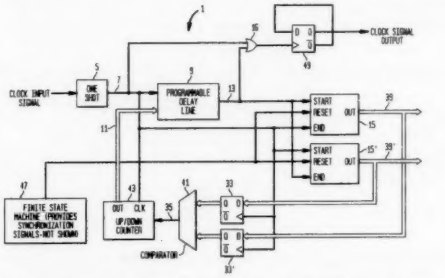
DIGITAL DUTY CYCLE CORRECTION LOOP APPARATUS AND METHOD

David G. Martin, Bethlehem, Pa., assignor to Lucent Technologies Inc., Murray Hill, N.J.

Filed Sep. 14, 1998, Appl. No. 152,656

Int. Cl.[7] H03K *3/017*

U.S. Cl. 327—175 **15 Claims**



1. An apparatus for providing a clock signal having a fifty-percent duty cycle, comprising:

a signal input having a plurality of pulses;

a programmable delay line coupled to said signal input and producing a delayed output signal having a plurality of delayed pulses, each of said plurality of delayed pulses being delayed relative to one of said plurality of pulses, said programmable delay line having a plurality of delay selection lines for adjusting the delay between said each of said plurality of pulses and a corresponding delayed pulse of said plurality of delayed pulses;

a first thermometer code generator, said delayed output signal and said signal input being coupled to said first thermometer code generator, said first thermometer code generator generating a first thermometer code output representing the delay between one of said plurality of delayed pulses and a next of said plurality of pulses;

a second thermometer code generator, said signal input and said delayed output signal being coupled to said second thermometer code generator, said second thermometer code generator generating a second thermometer code output representing the delay between one of said plurality of pulses and the corresponding delayed pulse of said plurality of delayed pulses;

a comparator circuit, said first thermometer code output and said second thermometer code output being coupled to said comparator circuit, said comparator circuit comparing said first thermometer code output to said second thermometer code output and generating an output based on the comparison;

a counter circuit receiving said output of said comparator circuit, said counter having an output coupled to said delay selection lines, so that if said first thermometer code output is greater than said second thermometer code output, then said counter output increments said delay selection lines thereby increasing the delay between said plurality of pulses and said plurality of delayed pulses, and if said first thermometer code output is less than said second thermometer code output, then said counter output decrements said delay selection lines thereby decreasing the delay between said plurality of pulses and said plurality of delayed pulses;

an or-gate, said or-gate receiving said signal input and said delayed output signal, and generating an output; and

an edge triggered toggle circuit, said toggle circuit receiving said output of said or-gate and generating an output, so that when said first thermometer code output equals said second thermometer code output, said output of said toggle circuit has a fifty-percent duty cycle.

6,040,727
DELAY DEVICE

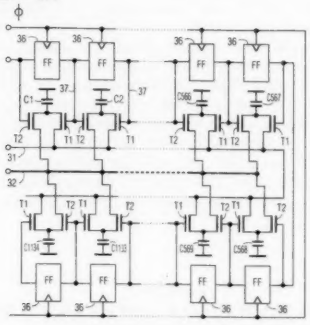
Sönke Struck, Ney Wulmstorf, and Ernst Holger, Hamburg, both of Germany, assignors to U.S. Philips Corporation, New York, N.Y.

Filed Apr. 16, 1998, Appl. No. 61,814

Claims priority, application Germany, May 2, 1997, 197 18 617

Int. Cl.[7] H03H *11/26*

U.S. Cl. 327—277 **5 Claims**



1. A delay device comprising storage elements arranged in at least two rows in an integrated circuit, characterized in that the delay device comprises an even number of storage elements, and a clock generation circuit for receiving a first clock signal for producing a delay time equal to an odd multiple of a clock period of the first clock signal, said clock generation circuit generating a second clock signal for clocking the storage elements said second clock signal being generated from the first clock signal in such a manner that one clock pulse of the first clock signal is suppressed in a selectable or given cycle and all the other clock pulses in the cycle are taken over in the second clock signal.

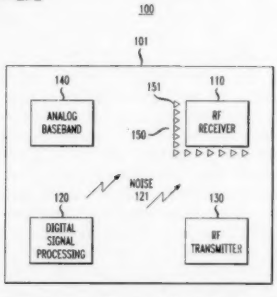
6,040,728
ACTIVE SUBSTRATE NOISE INJECTION CANCELLATION

Dale H. Nelson, Shillington, and Iconomos A. Koullias, Reading, both of Pa., assignors to Lucent Technologies, Inc., Murray Hill, N.J.

Filed May 29, 1998, Appl. No. 86,842

Int. Cl.[7] H03K *5/00*

U.S. Cl. 327—292 **12 Claims**



1. In an integrated circuit formed within a substrate, an array of noise cancellation circuits located at a first location of the substrate for blocking noise generated within the substrate from a noise source located at a second location, wherein each noise cancellation circuit comprises:

(a) a first input terminal coupled to a reference ground;

(b) a second input terminal coupled to the substrate and an output terminal coupled to the substrate, wherein the noise cancellation circuit injects current into the substrate so as to prevent a substrate potential at the first location from changing.

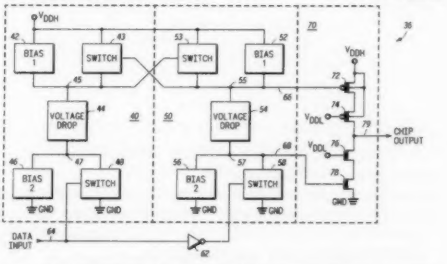
6,040,729
DIGITAL OUTPUT BUFFER FOR MULTIPLE VOLTAGE SYSTEM

Hector Sanchez, Cedar Park; Jose M. Alvarez, Leander; Joshua Siegel, and Carmine Nicoletta, both of Austin, all of Tex., assignors to Motorola, Inc., Schaumburg, Ill.

Filed Aug. 25, 1997, Appl. No. 917,306

Int. Cl.[7] H03K *17/687*

U.S. Cl. 327—309 **22 Claims**



1. A digital output buffer for a multiple voltage system, comprising:

a first voltage limiting logic circuit having a first power supply terminal for receiving a first voltage, a second power supply terminal for receiving a second voltage, an input terminal for receiving a digital input signal, a first output terminal for providing a first predrive signal, and a second output terminal for providing a second predrive signal;

said digital input signal characterized as having logic levels corresponding to said second voltage and a third voltage;

said first predrive signal having logic levels corresponding to either said first voltage or a first intermediate voltage;

said second predrive signal having logic levels corresponding to either a second intermediate voltage or said second voltage;

a first transistor having a first current electrode for receiving said first voltage, a control electrode for receiving said first predrive signal, and a second current electrode coupled to an output terminal of the digital output buffer; and

a second transistor having a first current electrode coupled to said output terminal of the digital output buffer, a control electrode for receiving said second predrive signal, and a second current electrode for receiving said second voltage,

a difference between said first voltage and said first intermediate voltage being less than a dielectric breakdown voltage of said first transistor,

said first voltage limiting logic circuit comprising:

a first bias element having a first terminal for receiving said first voltage, and a second terminal for providing said first predrive signal;

a voltage dropping element having a first terminal coupled to said second terminal of said first bias element, and a second terminal for providing said second predrive signal; and

switching means coupled between said second output terminal of said first voltage limiting logic circuit and said second power supply terminal for providing either said first voltage or said first intermediate voltage to said first output terminal of said first voltage limiting logic circuit in response to said digital input signal.

6,040,730

INTEGRATED CAPACITANCE MULTIPLIER ESPECIALLY FOR A TEMPERATURE COMPENSATED CIRCUIT

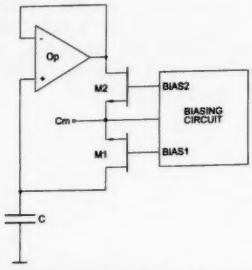
Bruno Ferrario, Fino Mornasco, Italy, assignor to SGS-Thomson Microelectronics S.r.l., Agrate Brianza, Italy

Filed Jul. 28, 1993, Appl. No. 98,740

Claims priority, application European Pat. Off., Jul. 28, 1992, 92830419

Int. Cl.[7] G06G *7/64;* **H03B** *1/00*

U.S. Cl. 327—344 **22 Claims**



1. An integrated capacitance multiplier circuit, comprising:

an integrated circuit capacitor;

first and second field-effect transistors, integrated on a common substrate with said capacitor; said first transistor having a width-to-length ratio which is more than ten times the width-to-length ratio of said second transistor;

a biasing circuit connected to bias said first and second transistors, into an ohmic regime of operation, with first and second respective gate voltages which have different temperature dependences;

an operational amplifier configured and operatively connected to follow the potential of a first terminal of said capacitor, and to drive a first source/drain terminal of said second transistor with a corresponding voltage;

said second transistor having a second source/drain terminal which is connected to a capacitance node;

said first transistor being connected in series between said capacitance node and said first terminal of said capacitor;

whereby said capacitance node sees an effective capacitance which is much greater than the capacitance of said capacitor.

6,040,731

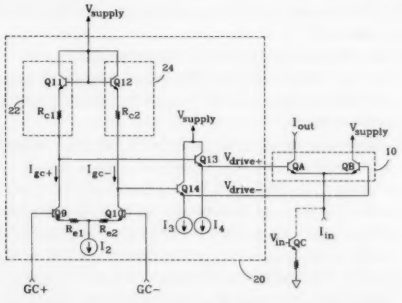
DIFFERENTIAL PAIR GAIN CONTROL STAGE

Ricky Y. Chen, Irvine; Lloyd F. Linder, Agoura Hills; Don C. Devendorf, Carlsbad, and Matthew S. Gorder, Riverside, all of Calif., assignors to Raytheon Company, El Segundo, Calif.

Filed May 1, 1997, Appl. No. 848,930

Int. Cl.[7] G06F *7/44;* **H03L** *5/00*

U.S. Cl. 327—359 **16 Claims**



1. A differential pair gain control stage with offset, comprising:

a first differential pair comprising first and second transistors having respective control inputs and respective current circuits controlled by said control inputs with said current circuits connected at a common junction, said common junction forming a current input, said first transistor's current circuit providing a current output and said second transistor's current circuit connected to a line that is adapted to receive a fixed supply voltage, and

a drive circuit comprising a second differential transistor pair having respective control inputs and respective current circuits controlled by said control inputs, said control inputs connected to receive a differential input signal, said current circuits connected to a supply voltage line through respective loads to produce respective drive signals which vary with said differential input signal and are connected to said control inputs of said first differential pair to control the flow of current between said current input and said current output,

said loads arranged to introduce an offset into the transfer function between said differential input signal and said drive signals that increases the range over which said first transistor conducts current for a symmetrical differential input signal.

6,040,732

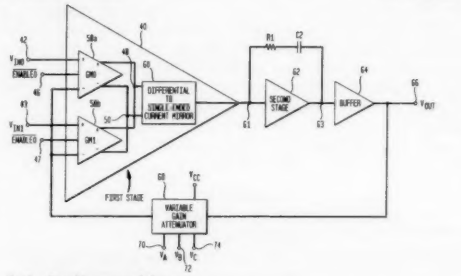
SWITCHED-TRANSCONDUCTANCE CIRCUIT WITHIN INTEGRATED T-SWITCHES

A. Paul Brokaw, Burlington, Mass., assignor to Analog Devices, Inc., Norwood, Mass.

Filed Apr. 9, 1997, Appl. No. 833,715

Int. Cl.[7] H03K *19/094;17/16*

U.S. Cl. 327—408 **16 Claims**



1. A circuit, comprising:

a first transconductance stage including:

a transconductance element that receives a first control signal to enable the transconductance element and a first input voltage and, when enabled, provides a first output current to at least one output node of the transconductance element, the first output current having an amplitude that is proportional to an amplitude of the first input voltage;

at least one first switch coupled between the at least one output node of the transconductance element and an output node of the first transconductance stage such that activation of the at least one first switch causes the at least one output node of the transconductance element to be coupled to the output node of the first transconductance stage; and

at least one second switch coupled between the at least one output node of the transconductance element and a constant voltage node, the at least one second switch being activated such that, regardless of a state of the at least one first switch, the at least one output node of the transconductance element is coupled to the constant voltage node;

a second transconductance stage that receives a second input voltage and provides a second output current having an amplitude that is proportional to an amplitude of the second input voltage; and

at least one additional circuit stage that receives the first and second output currents and, responsive thereto, provides an output signal at a signal output node that is proportional to a combination of the first and second output currents.

6,040,733

TWO-STAGE FUSIBLE ELECTROSTATIC DISCHARGE PROTECTION CIRCUIT

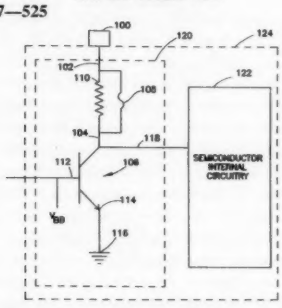
Stephen L. Casper, and Manny Ma, both of Boise, Id., assignors to Micron Technology, Inc., Boise, Id.

Continuation of application No. 08/859,693, May 21, 1997, Pat. No. 5,805,009. This application Jul. 17, 1998, Appl. No. 118,543.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] H02H *7/20*

U.S. Cl. 327—525 **12 Claims**



1. A electrostatic discharge protection circuit operatively coupled between a bonding pad of a semiconductor device and internal circuitry of the semiconductor device, the protection circuit comprising:

first means, operatively coupled to the bonding pad and the internal circuitry, for providing a first discharge path having a relatively low resistance when a voltage on the bonding pad exceeds a threshold voltage value;

wherein the resistance of the first discharge path substantially increases when a voltage on the bonding pad exceeds a prescribed voltage value and wherein the prescribed voltage value is greater than the threshold voltage value; and

a second means, operatively coupled to the bonding pad and the internal circuitry, for providing a second discharge path when a voltage on the bonding pad exceeds the threshold voltage value and after the resistance of the first discharge path has been substantially increased.

6,040,734

SUPPLY VOLTAGES SWITCH CIRCUIT

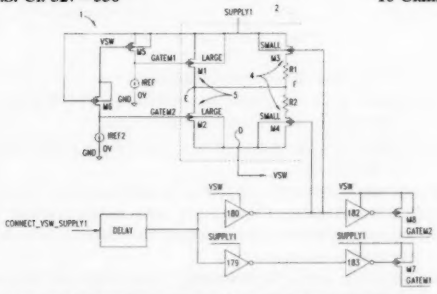
Corrado Villa; Luigi Bettini, both of Milan, and Simone Bartoli, Pisa, all of Italy, assignors to SGS-Thomson Microelectronics S.r.l., Agrate Brianza, Italy

Continuation of application No. 08/775,109, Dec. 30, 1996, abandoned. This application Jul. 2, 1998, Appl. No. 109,630.

Claims priority, application European Pat. Off., Dec. 29, 1995, 95830556; Jun. 20, 1996, 96830353

Int. Cl.[7] H02J *3/38*

U.S. Cl. 327—530 **10 Claims**



1. In an electrically programmable non-volatile memory device, a circuit having a ground voltage reference and a plurality of branch circuits for switching between a plurality of voltage supplies other than the ground voltage reference, each branch circuit being coupled between a respective one of the voltage supplies and a terminal coupled to an element in the memory device to receive one of the voltage supplies other than the ground voltage reference, at least one of the branch circuits comprising:

a bridge circuit coupled between one of the voltage supplies and the terminal coupled to the element in the memory device, the bridge circuit comprising a first pair of first and second transistors coupled in series between the voltage supply and the terminal and a second pair of third and fourth transistors coupled in series between the voltage supply and the terminal, wherein the third and fourth transistors comprise transistors of a P-channel type; and

a pair of resistors coupled in series between the third and fourth transistors of the second pair of transistors.

6,040,735

REFERENCE VOLTAGE GENERATORS INCLUDING FIRST AND SECOND TRANSISTORS OF SAME CONDUCTIVITY TYPE

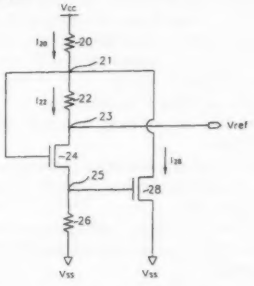
Jong-min Park, Kyunggi-do, and Tae-sung Jung, Seoul, both of Rep. of Korea, assignors to Samsung Electronics Co., Ltd., Rep. of Korea

Filed Sep. 12, 1997, Appl. No. 927,606

Claims priority, application Rep. of Korea, Sep. 13, 1996, 96-39902

Int. Cl.[7] G05F *1/10*

U.S. Cl. 327—541 **8 Claims**



1. A reference voltage generator that generates a reference voltage at a reference voltage output terminal thereof, the reference voltage generator comprising:

first and second transistors of same conductivity type, each having a controlling electrode and a pair of controlled electrodes; and

first and second nodes, a respective one of which is connected to respective first and second power supply voltages;

the controlled electrodes of the first transistor being connected between the reference voltage output terminal and the second node;

the controlled electrodes of the second transistor being connected between the first node and the second power supply voltage;

the controlling electrode of the first transistor being connected to the first node; and

the controlling electrode of the second transistor being connected to the second node;

wherein the first and second transistors include complementary temperature characteristics.

6,040,736

CONTROL CIRCUIT FOR POWER TRANSISTORS IN A VOLTAGE REGULATOR

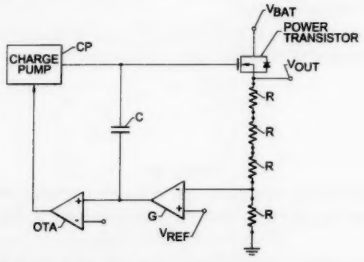
Andrea Milanesi, Casalnoceto; Vanni Poletto, Casale Monferrato; Alberto Poma, Pavia, and Marco Morelli, Leghorn, all of Italy, assignors to SGS-Thomson Microelectronics S.r.l., Arate Brianza, Italy, and Magneti Marelli S.p.A., Milan, Italy

Filed Dec. 4, 1997, Appl. No. 984,959

Claims priority, application European Pat. Off., Dec. 5, 1996, 96830610

Int. Cl.[7] **G05F** *1/10*

U.S. Cl. 327—541 **14 Claims**



1. A voltage-regulator circuit comprising:

a power transistor which is supplied with an input voltage for regulating an output voltage;

a voltage-raising circuit which is supplied with the input voltage for driving a control terminal of said power transistor;

a closed feedback control circuit cooperating with said power transistor and said voltage-raising circuit for defining a first feedback loop having high gain and low response speed, and a second feedback loop having low gain, wide passband, and quick response speed, said feedback control circuit operating based on a difference between a signal indicative of the output voltage and a reference voltage;

wherein said first feedback loop comprises:

a resistive divider for providing the signal indicative of the output voltage;

a first amplifier having a first input connected to said resistive divider, a second input connected to the reference voltage, and an output; and

a second amplifier having an input connected to the output of said first amplifier and an output connected to said voltage-raising circuit.

6,040,737

OUTPUT BUFFER CIRCUIT AND METHOD THAT COMPENSATE FOR OPERATING CONDITIONS AND MANUFACTURING PROCESSES

Nalini Ranjan, Sunnyvale, and Henry Yang, San Jose, both of Calif., assignors to S3 Incorporated, Santa Clara, Calif.

Filed Jan. 9, 1998, Appl. No. 5,077

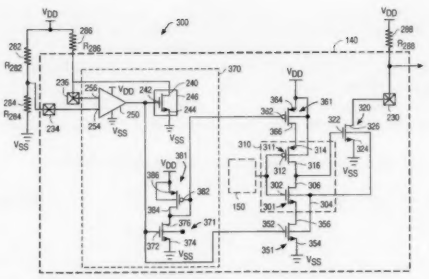
Int. Cl.[7] **G05F** *1/10*

U.S. Cl. 327—543 **16 Claims**

1. A circuit for compensating an integrated circuit chip to account for variations in process and operating conditions, the circuit comprising:

a resistor having a first end coupled to a first voltage, and having a second end for supplying a control voltage;

a transistor having a first port coupled to the second end of the resistor, a second port coupled to a second voltage, and a third port for controlling the amplitude of a current flowing between the first and second ports;



an operational amplifier having a first input coupled to the second end of the resistor for receiving the control voltage, a second input coupled to a reference voltage between the first and second voltages, and an output coupled to the third port of the transistor for providing a compensation voltage thereto, with the compensation voltage maintaining said current in the transistor at a substantially constant amplitude;

a second transistor having a fourth port coupled to the output of the operational amplifier for receiving the compensation voltage, a fifth port coupled to the second voltage, and a sixth port for supplying a flow of current at an amplitude responsive to the compensation voltage; and

circuitry having an effective resistance, the circuitry providing a third end and a fourth end, the third end coupled to the sixth port of the second transistor for receiving the flow of current, the fourth end coupled to the first voltage for supplying said flow of current thereto, with the voltage drop across the circuitry providing a second compensation voltage at the third end of the circuitry.

6,040,738

DIRECT CONVERSION RECEIVER USING SINGLE REFERENCE CLOCK SIGNAL

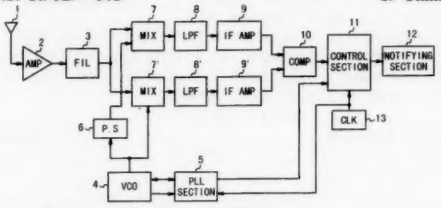
Jun Uchida, Shizuoka, Japan, assignor to NEC Corporation, Tokyo, Japan

Filed Nov. 30, 1998, Appl. No. 201,176

Claims priority, application Japan, Dec. 10, 1997, 9-339550

Int. Cl.[7] **H04Q** *7/14;7/18;* **H03D** *3/00;* **H04L** *27/14;27/152*

U.S. Cl. 329—302 **19 Claims**



1. A direct conversion receiver comprising:

an amplifier section for amplifying a received signal and extracting a desired signal from the amplified signal;

a reference clock signal generating section for generating reference clock signal;

an extraction reference clock signal generating section for frequency-dividing said reference clock signal based on a frequency division data to generate first and second extraction reference clock signals;

an extracting section for extracting a data from said desired signal and said first and second extraction reference clock signals; and

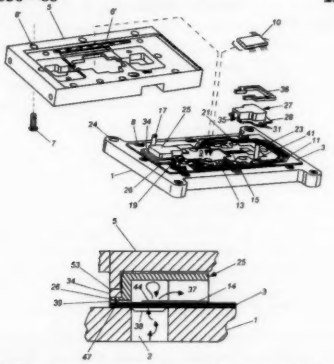
a control and processing section for outputting said frequency division data to said extraction reference clock signal generating section and for processing said data based on a control section clock signal corresponding to said reference clock signal.

6,040,739

WAVEGUIDE TO MICROSTRIP BACKSHORT WITH EXTERNAL SPRING COMPRESSION

Robert S. Wedeen, Manhattan Beach; Arthur J. Durham, Torrance; Matthew D. Ferris, Redondo Beach, and G. Sam Dow, Rancho Palos Verdes, all of Calif., assignors to TRW Inc., Redondo Beach, Calif.

Filed Sep. 2, 1998, Appl. No. 145,917
Int. Cl.[7] H03F *1/00;* H01P *5/107*
U.S. Cl. 330—66 **23 Claims**



6. A MMW microwave amplifier module, comprising:

a base plate;

a cover plate for attachment to said base plate in covering relationship therewith;

said base plate including at least a first passage there through defining a waveguide for propagation of microwave energy;

a printed wiring board comprising a dielectric material, said printed wiring board being bonded to said base plate and covering an end of said waveguide;

a backshort member, said backshort member including an internal cavity defining a short circuited waveguide transmission line of a predetermined length, and said short-circuited waveguide transmission line having an open end;

said backshort member being positioned atop said printed wiring board and overlying an end of said waveguide with said open end of said short-circuited waveguide transmission line overlying and aligned with said end of said waveguide;

said printed wiring board including at least a probe and a microstrip transmission line, and said microstrip transmission line being coupled to said probe to couple microwave energy there between;

said microstrip transmission line extending under and through said backshort member;

said probe being located within said open end of said short-circuited waveguide transmission line overlying said end of said waveguide to couple microwave energy between said waveguide and said microstrip transmission line;

a spring member associated with said metal backshort member, said spring member being positioned between said metal cover plate and the exterior surface of said metal backshort member;

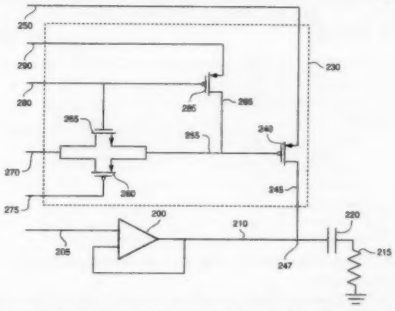
said metal cover plate for compressing said spring member against said printed wiring board when said cover plate is attached to said metal base plate, whereby said backshort is held in position pressed against said printed wiring board.

6,040,740

AUDIO TRANSIENT SUPPRESSION DEVICE

Charles Stephen Dondale, Fort Collins, Colo., assignor to LSI Logic Corporation, Milpitas, Calif.

Filed Apr. 9, 1997, Appl. No. 833,816
Int. Cl.[7] H03F *1/26*
U.S. Cl. 330—149 **8 Claims**



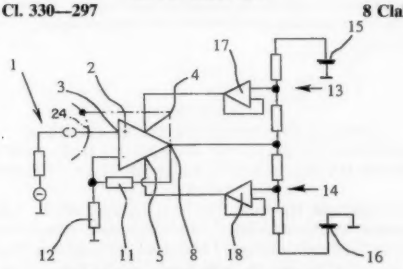
1. A method of suppressing an audible transient generated from an amplifier comprising the step of biasing an output node coupled to the amplifier to approximately a voltage corresponding to a common mode voltage of an audio signal input to the amplifier.

6,040,741

PREAMPLIFIER FOR AMPLIFYING SIGNAL VOLTAGES FROM A SIGNAL SOURCE WITH HIGH SOURCE IMPEDANCE

Roland Van der Pol, Venlo, Netherlands, assignor to Krohne Messtechnik GmbH & Co. KG, Germany

Filed Jun. 4, 1997, Appl. No. 868,849
Int. Cl.[7] H03F *3/04*
U.S. Cl. 330—297 **8 Claims**

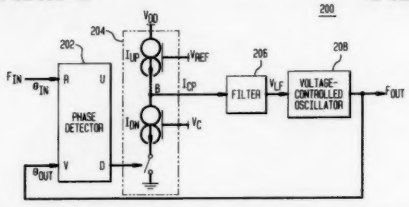


1. A preamplifier for amplifying signal voltages from a signal source (**1**) having high source impedance, with an operational amplifier (**2**), which operational amplifier (**2**) is provided with a signal input (**3**), a first supply voltage terminal (**4**) for a first supply-voltage potential, a second supply voltage terminal (**5**) for a second supply-voltage potential, and a signal output (**8**), the said signal output (**8**) delivering an output signal and the said first supply-voltage potential and the second supply-voltage potential permitting parallel shifting as a function of the output signal, wherein the signal output (**8**) can be connected via a first voltage divider (**13**) having a center pick-off tap to a first supply voltage source (**15**) and via a second voltage divider (**14**) having a center pick-off tap to a second supply voltage source (**16**) and the center pick-off tap of the first voltage divider (**13**) is connected via a first voltage follower (**17**) to the first supply voltage terminal (**4**) of the operational amplifier (**2**) and the center pick-off tap of the second voltage divider (**14**) is connected via a second voltage follower (**18**) to the second supply voltage terminal (**5**) of the operational amplifier (**2**) characterized in that the potential on a shielding (**24**) of the signal source (**1**) is controllable by the output signal.

6,040,742
CHARGE-PUMP PHASE-LOCKED LOOP WITH DC CURRENT SOURCE

James A. Bailey, Snowflake, Ariz., and William B. Wilson, Macungie, Pa., assignors to Lucent Technologies Inc., Murray Hill, N.J.

Provisional application No. 60/057,875, Sep. 2, 1997. This application Sep. 1, 1998, Appl. No. 144,913.
Int. Cl.[7] H03L *7/07;7/089;7/093*
U.S. Cl. 331—2 **12 Claims**



1. An integrated circuit having a phase-locked loop (PLL), the PLL comprising:

(a) a first phase detector, configured to receive an input signal and a feedback signal and to generate DOWN pulses based on differences in phase between the input and feedback signals;

(b) a first charge pump, configured to receive the DOWN pulses from the first phase detector and comprising:

(1) a first UP current source configured to generate a first DC UP current; and

(2) a first DOWN current source, configured to generate a first DOWN current based on the DOWN pulses from the first phase detector, wherein the first charge pump generates a first charge-pump current based on the first DC UP current and the first DOWN current;

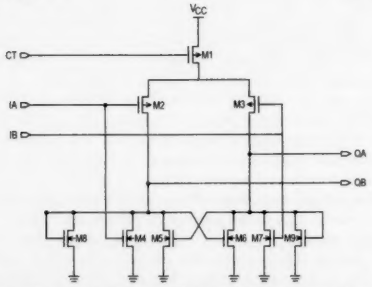
(c) a loop filter, configured to receive the first charge-pump current and to generate a loop-filter voltage based on a net accumulation of charge from the first charge-pump current; and

(d) a voltage-controlled oscillator, configured to receive the loop-filter voltage and to generate an output signal whose frequency is based on the loop-filter voltage, wherein the feedback signal is generated from the output signal.

6,040,743
VOLTAGE CONTROLLED OSCILLATOR FOR RECOVERING DATA PULSES FROM A DATA INPUT STREAM HAVING DIGITAL DATA WITH AN UNKNOWN PHASE

Anders Björklid, Hässelby; Malcolm Hardie, Järfälla, both of Sweden, and Heinz Mäder, Weinfelden, Switzerland, assignors to Telefonaktiebolaget LM Ericsson, Stockholm, Sweden

Filed Jul. 14, 1998, Appl. No. 114,846
Claims priority, application Sweden, Jul. 14, 1997, 9702691
Int. Cl.[7] H03B *5/24;* **H03L** *7/099;* **H03F** *3/45*
U.S. Cl. 331—57 **6 Claims**



1. A voltage controlled oscillator (VCO) for use in a phase locked loop for clock multiplication, which can be used to recover data pulses from a data input stream comprising digital data with an unknown phase, comprising:

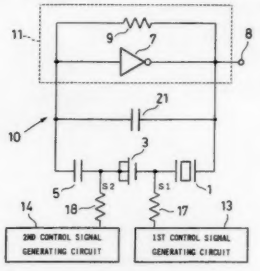
a plurality of VCO stages, each of said stages being implemented as a differential amplifier;

the amplifier load being formed of two cross-coupled gate devices and two gate devices which are connected as diodes, wherein a differential input is applied to a source coupled pair of gate devices as well as to two pull-down gate devices.

6,040,744
TEMPERATURE-COMPENSATED CRYSTAL OSCILLATOR

Yasuhiro Sakurai, and Hiroyuki Fukayama, both of Tokorozawa, Japan, assignors to Citizen Watch Co., Ltd., Tokyo, Japan

Filed Jul. 8, 1998, Appl. No. 111,800
Claims priority, application Japan, Jul. 10, 1997, 9-185309
Int. Cl.[7] H03L *1/02*
U.S. Cl. 331—176 **18 Claims**



1. A temperature-compensated crystal oscillator, comprising:

a crystal oscillation circuit provided with an AT-cut crystal resonator and an MOS capacitor for providing a variable capacitance for adjustment of an oscillation frequency;

a first control signal generating circuit for temperature compensation, connected directly or via a first input resistor to one terminal of the MOS capacitor; and

a second control signal generating circuit for temperature compensation, connected directly or via a second input resistor to another terminal of the MOS capacitor,

wherein the crystal oscillation circuit further comprises:

a series connection of the AT-cut crystal resonator, the MOS capacitor, and a first fixed capacitor, in that order;

an amplifier connected in parallel with series connection; and

a second fixed capacitor coupled in parallel with the amplifier.

6,040,745
UNBALANCED-TO-BALANCED CONVERTER

Hiroaki Tanaka, Mishima-gun; Yutaka Sasaki, Nagaokakyo, and Takuya Hashimoto, Kyoto, all of Japan, assignors to Murata Manufacturing Co., Ltd., Japan

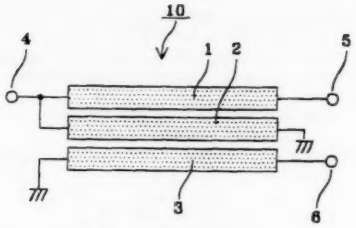
Filed Nov. 25, 1997, Appl. No. 978,402
Claims priority, application Japan, Nov. 26, 1996, 8-315215
Int. Cl.[7] H03H *7/42*
U.S. Cl. 333—26 **6 Claims**

1. An unbalanced-to-balanced converter for use at a given wavelength, comprising:

first, second, and third distributed-constant lines disposed in this order and arranged for being electromagnetically coupled with each other;

said first, second, and third distributed-constant lines having coupling sections whose length is substantially one fourth of said given wavelength; and

a first end of said first distributed-constant line is an input terminal, said first end of said first distributed-constant line is connected to a first end of said second distributed-constant



line, a second end of said second distributed-constant line and a first end of said third distributed-constant line are grounded, a second end of said first distributed-constant line is a first output terminal, and a second end of said third distributed-constant line is a second output terminal,

wherein said first, second and third distributed-constant lines are disposed so that in response to an input signal received at said input terminal, a pair of output signals appear at said first and second output terminals having phases substantially 180° apart and having substantially the same level, and

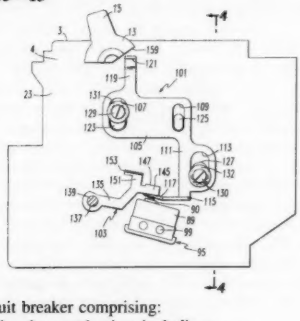
wherein said first, second and third distributed-constant lines are at least 10 μm apart.

6,040,746

ACTUATION MECHANISM FOR TRIP ACTUATED BREAKER AUXILIARY MULTIPLE MICROSWITCH

James G. Maloney, Industry, and Ronald D. Smiddle, Canonsburg, both of Pa., assignors to Eaton Corporation, Cleveland, Ohio

Filed Dec. 30, 1998, Appl. No. 223,203
Int. Cl.[7] H01H *75/02;3/20;9/02*
U.S. Cl. 335—13 **9 Claims**



1. A circuit breaker comprising:

a circuit breaker mechanism including:

a fixed contact;

a contact arm;

a movable contact secured to one end of said contact arm and movable by said contact arm toward and way from said fixed contact to close and open said contacts:

a pivotally mounted operating member engaging another end of said contact arm for moving, and for movement by, said contact arm between off/open and on/closed positions of said operating member and said contacts respectively, said operating member having an integral handle and a cam surface;

a pivotally mounted latchable cradle;

a spring connecting said latchable cradle and said contact arm; and

a trip device latching said cradle in a latched position and unlatching said cradle in response to preset current conditions, said cradle tripping said contact arm to open said contacts and move said operating member to a tripped position when unlatched;

a first microswitch having a plunger;

a second microswitch having a plunger;

said first and second microswitches positioned adjacent one another;

actuating means including a first actuating member and a second actuating member,

said first actuating member bearing against said cam surface on said operating member, said cam surface actuating said first and second microswitches through said first actuating member when said operating member and said integral handle are in the off position;

said second actuating member engaging said cradle and actuating said first and second microswitches through said first actuating member when said cradle is unlatched, said first and second actuating members being cascaded to operate said plunger of said first microswitch and said plunger of said second microswitch; and

a housing with first and second compartments separated by a partition, wherein said contacts, said contact arm, said spring, said cradle, and said trip device are mounted in said first compartment, and said first and second microswitches are mounted in said second compartment, wherein said operating member extends into both compartments with said cam surface located in said second compartment, said partition having an opening through which said second actuating member extends to engage said cradle and wherein said first actuating member is mounted in said second compartment to engage said camming surface and actuate said first and second microswitches.

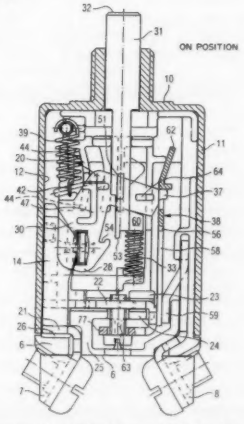
OVERCURRENT CIRCUIT BREAKER

Fritz Krasser, and Franz Winkler, both of Altdorf, Germany, assignors to Ellenberger & Poensgen GmbH, Altdorf, Germany

Filed Sep. 8, 1997, Appl. No. 925,045
Claims priority, application Germany, Sep. 7, 1996, 296 15 644; Sep. 10, 1996, 296 15 761; Nov. 19, 1996, 196 47 716
Int. Cl.[7] H01H *75/12*
U.S. Cl. 335—35 **27 Claims**



1. An overcurrent circuit breaker switch having a flat, approximately block shaped housing made of insulating material with first and second front walls and side walls that extend approximately parallel to each other, and a switch gear located between the parallel side walls and having a movement plane in which components of the switch gear move that extends approximately parallel to the side walls of the housing, the first front wall having a bushing for contact connections and the second front wall having a bushing for a device for manual actuation of the switch gear, said switch comprising:

a contact bridge support made of insulating material, said contact bridge support being a component of the switch gear;

two fixed contacts, each having a narrow edge and a flat piece with a longitudinal axis which extends away from said first front wall into an interior of the housing, said two fixed contacts being spaced from one another and being positioned so that said contact bridge support projects into the space between said two fixed contacts; and

a contact bridge movable between an on position and an off position, said contact bridge being held inside the contact bridge support and having a longitudinal axis that extends in a bridging direction which aligns approximately at a right angle to the movement plane for the switch gear, said contact bridge having contact ends that project on both sides over said contact bridge support in the direction of the side walls of the housing,

wherein said fixed contacts are flat pieces that are aligned in the manner of a knife blade, are each positioned with a flat side approximately parallel to the side walls, and form respectively one contact point with a side of the narrow edge facing said contact bridge, the contact points being parallel to one another, the other side of the narrow edge of the fixed contacts facing and fitting flush against a flank wall of the housing.

MAGNETIC MICROSWITCH

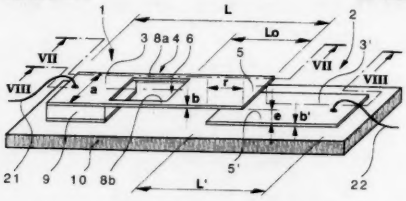
François Gueissaz, Marin, Switzerland, assignor to Asulab S.A., Bienne, Switzerland

Filed Apr. 10, 1998, Appl. No. 58,303

Claims priority, application Switzerland, Apr. 21, 1997, 0919/97

Int. Cl.[7] H01H *51/22*

U.S. Cl. 335—78 **16 Claims**



1. A magnetic microswitch, made in one piece by galvanic growth from a substrate, including two conductive strips having, with respect to one another, overlapping ends and remote ends, connected at their remote ends to electric connection means, and each including a distal portion, whose overlap determines an air gap of distance e,

at least one of said strips being made of magnetic material and consisting of one remote end attached to the substrate via a foot, a distal portion, and a median portion formed by at least one isthmus connecting said distal portion to the end fixed to the foot, said strip having a constant thickness and being flexible with respect to the distal portion of the second strip between an open position in the absence of a magnetic field and a closed position in which the two strips are in contact with each other under the influence of the magnetic field,

wherein said median portion of the flexible strip is formed with a total cross-section less than the cross-section of the distal portion, thereby allowing the strip to have both deflection of an amplitude at least equal to e to make contact under the influence of a magnetic field and sufficient return force towards the open position in the absence of a magnetic field.

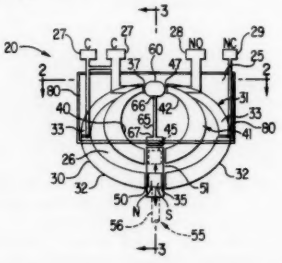
APPARATUS AND METHOD FOR OPERATING A MICROMECHANICAL SWITCH

Daniel W. Youngner, Maple Grove, and Jeffrey A. Ridley, Burnsville, both of Minn., assignors to Honeywell Inc., Minneapolis, Minn.

Filed Dec. 30, 1998, Appl. No. 223,559

Int. Cl.[7] H01H *51/22*

U.S. Cl. 335—78 **21 Claims**



1. A micromechanical switch operating between a closed position and an open position, the micromechanical switch comprising:

a first electrically and magnetically conductive layer forming a first closure path having a first primary opening for accepting a magnet therein and a first secondary opening providing an electrical opening between a first set of contacts of the switch, a second electrically and magnetically conductive layer forming a second closure path having a second primary opening for accepting a magnet therein and a second secondary opening providing an electrical opening between a second set of contacts of the switch, the first closure path conductively isolated from the second closure path;

a magnet movably mounted with respect to the first closure path and the second closure path, the magnet movable between a magnet first position within the first primary opening and a magnet second position within the second primary opening;

an actuator selectively moving the magnet between the magnet first position and the magnet second position; and

an electrical contact element separate from the magnet and movably mounted with respect to the first closure path and the second closure path, the electrical contact element movable between an element first position where the contact element electrically shorts the first conductive layer across the first secondary opening and an element second position where the electrical contact element electrically shorts the second conductive layer across the second secondary opening;

whereby the first and second closure paths for magnetic shunt paths for directing magnetic flux from the magnet through a selected primary opening to a respective secondary opening, the flux in the secondary opening thereby drawing the electrical contact to close the secondary opening.

ELECTROMAGNETIC SWITCHING DEVICE

Hans Pfab, Hahnbach, Germany, assignor to Siemens Aktiengesellschaft, Munich, Germany

PCT No. PCT/DE97/02603, § 371 Date May 20, 1999, § 102(e) Date May 20, 1999, PCT Pub. No. WO98/22966, PCT Pub. Date May 28, 1998

PCT Filed Nov. 7, 1997, Appl. No. 308,546

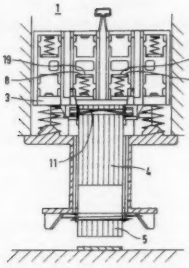
Claims priority, application Germany, Nov. 20, 1996, 196 48 053

Int. Cl.[7] H01H *7/16*

U.S. Cl. 335—156 **2 Claims**

1. An electromagnetic switching device, comprising:

movable contact parts held in a movable contact carrier, the movable contact parts forming a break contact and a make contact with fixed contact parts; and



a magnet system including an armature and a yoke, the yoke being elastically mounted in a closing direction of the magnet system, and, in an OFF position, the yoke being at a spacing of a magnet path from the armature, the yoke being elastically suspended so as to permit a movement of the yoke as far as closure of the magnet system after the magnet system has been switched on in a case of a welded break contact, the yoke being mounted via a volute spring inserted between the yoke and the coil form, a maximum resilience of the volute spring in the OFF position being at least as large as the spacing of the magnet path reduced by a resilience of the break contact.

6,040,751

BATTERY SECTION SWITCH

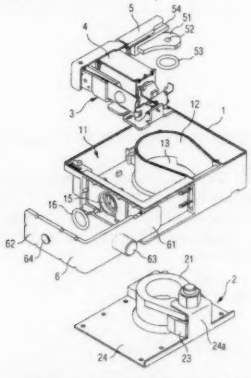
Thomas Haehnel; Juergen Breitlow-Hertzfeldt, both of Berlin; Bernd Saffian, Brandenbueg, and Josef Kern, Berlin, all of Germany, assignors to Siemens Electromechanical Components GmbH & Co. KG, Munich, Germany

Filed Jul. 20, 1999, Appl. No. 358,146

Claims priority, application Germany, Jul. 20, 1998, 198 32 573

Int. Cl.[7] H01H *3/00*

U.S. Cl. 335—185 **16 Claims**



1. A battery section switch for a load circuit of a vehicle battery, said battery section switch comprising:

a housing;

an electromagnet system having an armature and arranged in said housing;

an input lead adapted for connection to a terminal post of a vehicle battery;

an output lead connectable to a load circuit;

a contact carrier connected to said input lead and having a length and a movable contact, said contact carrier being switchable between an open position and a closed position and being pre-stressed into said open position by spring power;

a stationary contact connected to said output lead and in contact with said movable contact when said contact carrier is in said closed position, to produce a switched connection between said input lead and said output lead; and

a toggle spring device having a first lever attached to said contact carrier and having a second lever seated in said housing that are connected to form a toggle via a middle toggle link, said toggle being coupled to said armature and locking said contact carrier in said closed position in an approximately stretched condition of said toggle,

upon excitation of said electromagnet system, said armature releasing said locking between said toggle and said contact carrier, and

said contact carrier comprising an elongated contact spring having a first end clamped only to said housing and having a second end engaging an outer end of said first lever to form a rotary coupling, and said movable contact being carried in a middle region along said contact carrier length.

6,040,752

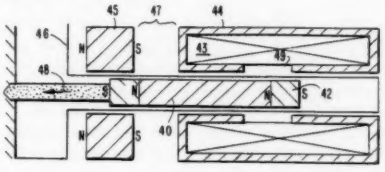
FAIL-SAFE ACTUATOR WITH TWO PERMANENT MAGNETS

Jack E. Fisher, 13 Amberly Ct., Gloucester, Ontario, Canada, K1J 8A2

Continuation-in-part of application No. 08/844,828, Apr. 22, 1997, abandoned. This application Jun. 18, 1998, Appl. No. 99,720.

Int. Cl.[7] H01F *7/00;7/08*

U.S. Cl. 335—234 **5 Claims**



1. An actuator comprising: a magnetizable yoke having a central aperture within which an armature made at least partly of soft iron reciprocates; a permanent ring magnet proximal one end of said yoke and having its central aperture coextensive with the central aperture of said yoke and having opposite sides of opposite polarity, the ring magnet being spaced a fixed distance from the yoke; said armature having a first permanent magnet affixed as part thereof near said ring magnet; said central aperture of said ring magnet sized to permit at least part of said first permanent magnet to pass into said ring magnet when moving to one of two open and closed reciprocating positions of the armature, the first permanent magnet in said one position being partially inside the ring magnet and in the other position being spaced away from the ring magnet, and the ring magnet interacting with said first permanent magnet such that when the armature is in each of the two said positions the first permanent magnet causes the armature to remain in that position, and said armature reciprocating between said open and closed positions upon momentary magnetization of said yoke by means of an electrical pulse having predetermined polarity.

6,040,753

ULTRA-LOW-PROFILE TUBE-TYPE MAGNETICS

Sriram Ramakrishnan, Clifton Park; Robert Louis Steigerwald, and William Hull Bicknell, both of Burnt Hills, all of N.Y., assignors to Lockheed Martin Corp., Moorestown, N.J.

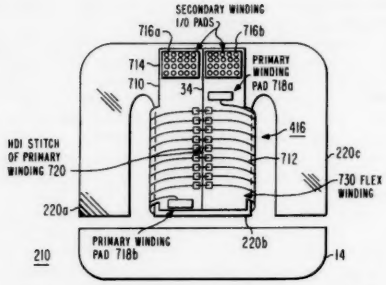
Filed Apr. 6, 1999, Appl. No. 287,157

Int. Cl.[7] H01F *5/00;27/28*

U.S. Cl. 336—223 **11 Claims**

1. A magnetically coupled winding structure, comprising:

a flat, magnetically permeable core including a flat first portion defining first and second broad sides and at least one peripheral edge, and also defining mutually parallel first and second slots extending inward from said edge, to thereby define a



central core portion lying generally between said first and second slots, and to also define first and second side core portions extending parallel with said central core portion, said magnetically permeable core further including a flat, magnetically permeable end portion coplanar with said first portion and magnetically coupled to said central core and to said first and second side core portions adjacent the ends of said slots;

a dielectric sheet defining first and second broad, flat, mutually opposed sides, said dielectric sheet including a first electrically conductive layer affixed to at least a substantial portion of said first side, and further including a second layer affixed to said second side of said dielectric sheet, said second layer including a plurality of elongated second electrical conductors, each of said plurality of elongated second electrical conductors defining first and second ends, and an axis of elongation extending between said first and second ends, with said axes of elongation of said second electrical conductors being mutually parallel, said dielectric sheet being curved in a generally cylindrical manner to thereby define a structure having the general shape of a flat tube defining first and second ends and having said first side of said dielectric sheet on the inner side of said flat tube, said flat tube defining a central axis, and being dimensioned to fit over said central core portion with said first end of said tube adjacent the juncture of said central core portion and said side core portions, and with said second end of said tube adjacent said end portion of said core, so that said first electrically conductive layer is formed into an electrically open single turn about said central core, and so that each of said second electrical conductors also defines an open single turn about said central core, with a first end of each of said elongated second electrical conductors adjacent a second end thereof, said first and second ends of said second electrical conductors being substantially coplanar with one of said first and second broad sides of said magnetically permeable core when said tube is fitted over said central portion of said core;

a flexible interconnection sheet overlying said one of said first and second sides of said magnetically permeable core and said first and second ends of said second elongated electrical conductors, said flexible interconnection sheet including a layer of electrically conductive material defining at least interconnections between said first and second ends of said elongated second electrical conductors, said interconnections being defined in a manner which electrically interconnects at least the first end of one of said elongated second electrical conductors to the second end of a nearby one of said elongated second electrical conductors, to thereby define a single continuous electrical conductor wound in multiple turns about said central core portion; and

electrically conductive means coupled to mutually adjacent portions of said electrically conductive first layer, to thereby define a single turn of electrical conductor about said central core portion of said magnetically permeable core.

CHIP THERMISTORS AND METHODS OF MAKING SAME

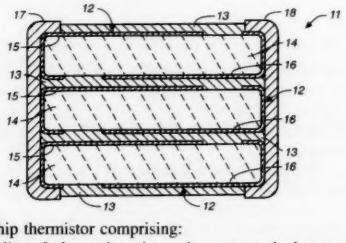
Yoshiaki Abe, and Toshiharu Hirota, both of Shiga, Japan, assignors to Murata Manufacturing Co., Ltd., Kyoto, Japan

Filed Jun. 8, 1999, Appl. No. 327,906

Claims priority, application Japan, Jul. 8, 1998, 10-192832; Feb. 16, 1999, 11-037546

Int. Cl.[7] **H01C** *7/10*

U.S. Cl. 338—22 R **13 Claims**



1. A chip thermistor comprising:

a plurality of planar thermistor elements stacked one on top of another;

insulating layers each disposed between said thermistor elements and insulating one from the other of a different mutually adjacent pair of said thermistor elements; and

a pair of outer electrodes;

wherein each of said thermistor elements has a mutually oppositely facing pair of end surfaces, a mutually oppositely facing pair of main surfaces each extending between said pair of end surfaces, and a pair of inner electrodes;

wherein each of said insulating layers entirely covers the main surfaces of the corresponding pair of said thermistor elements;

wherein one of said inner electrodes is in part on one of said main surfaces and extends continuously onto one of said end surfaces and the other of said inner electrodes is in part on the other of said main surfaces and extends continuously onto the other of said end surfaces;

wherein said thermistor elements are stacked through the main surfaces to together form a stacked structure with a mutually oppositely facing outer surfaces;

wherein each of said outer electrodes is formed on a respective one of said outer surfaces and is electrically connected to a different one of the inner electrodes of each of said thermistor elements on an associated one of the end surfaces thereof; and

wherein the inner electrodes on different ones of said thermistor elements are electrically connected to each other only through one of said outer electrodes.

VEHICLE THEFT PREVENTION DEVICE WITH A LOW POWERED RECEIVER

Yoshiyuki Nakajima, Saitama, Japan, assignor to Honda Giken Kogyo Kabushiki Kaisha, Tokyo, Japan

Filed Jul. 17, 1997, Appl. No. 896,067

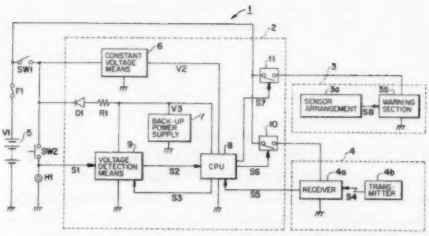
Claims priority, application Japan, Jul. 17, 1996, 8-187910

Int. Cl.[7] **B60R** *25/10*

U.S. Cl. 340—427 **20 Claims**

1. A theft prevention device for preventing theft of a vehicle, the theft prevention device comprising:

a theft prevention unit for sensing a disturbance of a vehicle, said theft prevention unit including an indicating device for



reporting a sensed disturbance, said theft prevention unit sensing disturbances while in an activated state and not sensing disturbances while in a deactivated stated;

a remote control having a transmitter for transmitting transmission signals including a deactivation signal;

a receiver, for mounting to the vehicle, operating to receive the deactivation signal in order to place said theft prevention unit in said deactivated state; and

an operating controller, for mounting to the vehicle, for normally placing said receiver in a disabled state, wherein said receiver does not respond to said transmission signals from said transmitter, said operating controller placing said receiver in an enabled state for a predetermined period of time after a predetermined operation of the vehicle has occurred, wherein said receiver responds to said transmission signals from said transmitter, said operating controller returning said receiver to said disabled state after said predetermined period of time has expired.

6,040,764

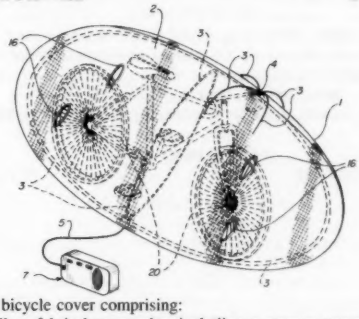
BICYCLE COVER WITH AN ATTACHABLE ALARM SYSTEM

Frances E. Crisci, 1828 Sweeney Ave., Las Vegas, Nev. 89104

Filed Apr. 9, 1998, Appl. No. 57,858

Int. Cl.[7] **B25R** *25/10*

U.S. Cl. 340—432 **6 Claims**



1. A bicycle cover comprising:

a hollow fabric bag member including a storage compartment dimensioned to receive a bicycle, said bag member having an opening for removably inserting a bicycle into the compartment;

a housing removably attachable to said bag member, said housing having an alarm means received therein for alerting a user when an unauthorized person is tampering with said bag member, said alarm means including a first circuit path including a motion switch means for detecting movement of said bag member; said motion switch means in communication with a timer and a sound emitting means for audibly signalling a user within a predetermined delay after said bag member and thus said motion switch means is manipulated;

a second circuit path formed with a plurality of electrically conductive cables integral with said bag member and in selective communication with said sound emitting means for audibly alerting a user when said cables are disconnected therefrom;

a display means on the exterior surface of said housing and in communication with said timer for visually indicating the status thereof.

6,040,765

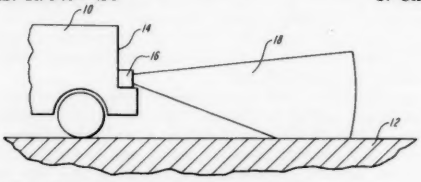
OBSTACLE DETECTION SYSTEM BUILT-IN TEST METHOD AND APPARATUS

James R. Cherry, Windham, N.H., and Abel Raynus, Malden, Mass., assignors to Armatron International, Inc., Melrose, Mass.

Filed Jan. 23, 1998, Appl. No. 12,785

Int. Cl.[7] B60Q *1/00;* **G01S** *15/00*

U.S. Cl. 340—436 **17 Claims**



1. An obstacle detection system, comprising:

an acoustic piezoelectric transducer;

means for applying an AC transmit signal to said acoustic piezoelectric transducer during a built-in-test (BIT) transmission period; and

means for sensing a vibration generated signal from said transducer during a BIT receive period during the absence of reflected ultrasonic energy associated with said acoustic piezoelectric transducer.

6,040,766

MOTOR VEHICLE NAVIGATION SYSTEM ARRANGEMENT

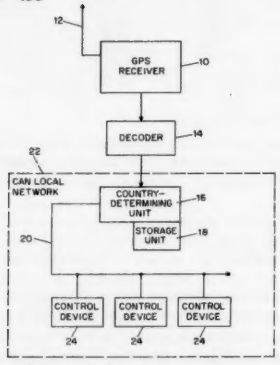
Andreas Lübke, Wolfsburg; Bernd Rech, Saarlouis, and Torsten Zawade, Peine, all of Germany, assignors to Volkswagen AG, Wolfsburg, Germany

Filed Jan. 20, 1999, Appl. No. 234,262

Claims priority, application Germany, Jan. 23, 1998, 198 02 595

Int. Cl.[7] B60Q *1/00*

U.S. Cl. 340—438 **11 Claims**



1. A motor vehicle navigation system arrangement comprising:

a receiver for receiving navigation data from a navigation system

an evaluation unit connected to the receiver for evaluating navigation data and providing position data relating to the current position of the vehicle;

a country-determining arrangement connected to the evaluation unit for determining the country in which the vehicle is currently located, and

a control arrangement responsive to the country-determining arrangement for setting at least one of a measuring unit for a speed indicator and a measuring unit for an indicator of distance traveled.

6,040,767

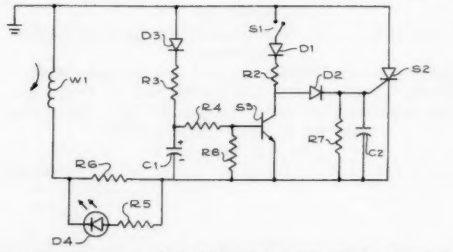
CONTROL SYSTEM FOR ENGINE LUBRICANT LEVEL SENSOR

Richard A. Dykstra, Cedar Grove, Wis., assignor to Briggs & Stratton Corporation, Wauwatosa, Wis.

Filed Jun. 19, 1997, Appl. No. 878,790

Int. Cl.[7] B60Q *1/00*

U.S. Cl. 340—450.3 **17 Claims**



1. A control system used with an engine lubricant level sensor, comprising:

a switch that closes when the engine has a low lubricant level during engine starting;

a start prevention circuit that prevents starting of the engine if said switch is closed during an attempted engine starting;

a disabler that disables said start prevention circuit only after engine starting during substantially all of the remaining time that the engine is operated before the engine is shut off; and

a winding that provides power to said disabler;

whereby the disabling means prevents the shutting down of the engine due to a low lubricant level after the engine has started.

6,040,768

ARRANGEMENT FOR MONITORING THE WEAR STATUS OF A FRICTION CLUTCH

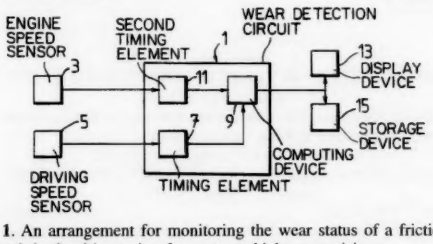
Hans-Jürgen Drexl, Schonungen, Germany, assignor to Mannesmann Sachs AG, Schweinfurt, Germany

Filed Mar. 8, 1999, Appl. No. 264,115

Claims priority, application Germany, Mar. 9, 1998, 198 10 033

Int. Cl.[7] G08B *21/00*

U.S. Cl. 340—453 **14 Claims**



1. An arrangement for monitoring the wear status of a friction clutch in the drive train of a motor vehicle, comprising:

a wear detection circuit for determining load information of the friction clutch;

a first speed sensor operatively connectable in the motor vehicle for detecting an instantaneous input speed of the friction clutch and transmitting a first speed information to said wear detection circuit in response to said input speed of the friction clutch;

a movement sensor operatively connectable to the motor vehicle for determining a beginning of a starting process and transmitting a beginning of starting process signal to said wear detection circuit; and

said wear detection circuit determining said load information from at least one value of said first speed information within a time period after receiving said beginning of starting process signal.

6,040,769

DETECTING DEVICE AND AN ALARM SYSTEM

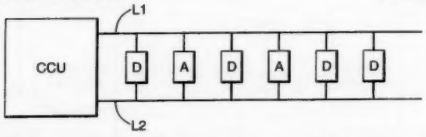
Roger Dennis Payne, Havant, United Kingdom, assignor to Apollo Fire Detectors Limited, United Kingdom

Filed Apr. 15, 1999, Appl. No. 292,199

Claims priority, application United Kingdom, Apr. 16, 1998, 9808094

Int. Cl.[7] **G08B** *29/00*

U.S. Cl. 340—506 **18 Claims**



1. A detecting device for connection to a pair of current supply lines to which at least one alarm device and a control unit is also connected, the control unit providing operating current on the supply lines for the detecting and alarm devices, the supply lines being used to signal a current drain in the detecting device as a fire detection signal, the detecting device operating when a first voltage is present on the supply lines, the alarm device operating when a second voltage, which is higher than the first voltage, is present on the supply lines; the detecting device comprising:

signalling device for producing a change of state signal from a quiescent state to an alarm state when a change in a condition or environment occurs, no such change occurring in the quiescent state;

terminals for connection to said supply lines;

a switch having high and low impedance states, said switch being connected across said terminals, said switch normally being in its high impedance state when the signalling device is in its quiescent state, but responding to said change of state signal from the signalling device so as to switch to the low impedance state, the low impedance state increasing current drain on the supply lines so that it is recognisable as the fire detection signal; and

a voltage responsive device which responds to said second voltage so as to cause said switch to switch to a high impedance state so that the line impedance across said terminals is increased so as to reduce the current drain and thereby conserve power.

6,040,770

COMMUNICATION PATH INTEGRITY SUPERVISION IN A NETWORK SYSTEM FOR AUTOMATIC ALARM DATA COMMUNICATION

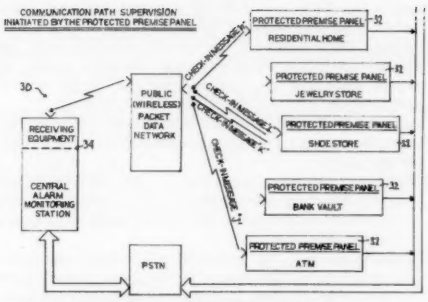
Rick A. Britton, 3319 S. Saratoga, Springfield, Mo. 65804

Provisional application No. 60/057,940, Sep. 5, 1997. This application Sep. 4, 1998, Appl. No. 148,438.

Int. Cl.[7] **G08B** *1/08*

U.S. Cl. 340—539 **17 Claims**

1. A method of communication path integrity supervision for a network system of automatic alarm data communication, comprising the steps of:



providing a network of communication paths;

providing a plurality of automatic alarm data transmitters on the network for transmitting alarm messages;

providing at least one receiver on the network for receiving the message traffic of the transmitters; and,

establishing a protocol between the receiver and the transmitters which achieves supervision of communication path integrity;

configuring the protocol on the transmitter-side to utilize processing circuitry and software for self-empowering any given transmitter to periodically test its ability to establish communication with the receiver by having a given transmitter:

generating a message of a next-appointed "check-in" time;

transmitting such message of a next-appointed "check-in" time to the receiver; and,

monitoring the elapse of time so that before the expiration of the "next-appointed check-in time" the given transmitter returns to the above step of generating a message, hence generating a succeeding message of a successor "next-appointed check-in time;"

configuring the protocol on the receiver-side to utilize processing circuitry and software for organizing the "check-in" message traffic from the transmitters in an appointment schedule by having it, the receiver:

for each received "check-in" message, scheduling or rescheduling an appointment in the appointment schedule for this transmitting transmitter for a next-appointed "check-in" time corresponding to this received "check-in" message; and

monitoring concurrently the appointment schedule against the passage of time for any occurrence of an unmet appointment, which signifies problems with integrity.

6,040,771

INTELLIGENT SAFE SYSTEM

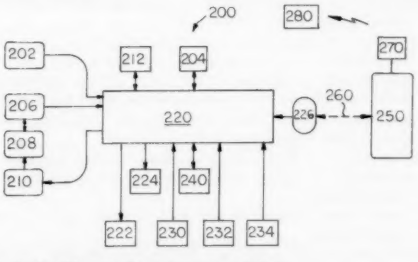
Jitae Kim, 23212 Park Corniche, Calabasas, Calif. 91302

Filed Sep. 30, 1996, Appl. No. 723,862

Claims priority, application Rep. of Korea, Dec. 2, 1995, 95-46144

Int. Cl.[7] **G08B** *13/08*

U.S. Cl. 340—545 **3 Claims**



1. An intelligent safe system, comprising:

a safe door locking means (**208**);

a central processing unit (**220**) for operating said door locking means to the door-unlocked condition;

a memory (**204**) coupled to said central processing unit, said memory comprising stored activation codes for activating said central processing unit, and a stored deactivation code for cancelling the action of the stored activating codes;

a data entry device (**202**) coupled to said central processing unit for delivering user-generated actuation codes to said central processing unit;

said central processing unit having a code-comparing capability for delivering an operating signal to said door-locking means when a user-generated activation code is the same as a stored activation code;

a remotely-accessed data transmission telephone means comprising a modem (**226**) coupled to said central processing unit for delivering an owner-generated deactivation code from a remote area to said central processing unit;

said telephone means comprising a telephone transmitter and means for inputting a DTMF tone deactivation code to said telephone transmitter for delivery to said modem;

said central processing unit having a code-comparing capability for comparing the owner-generated deactivation code with the stored deactivation code, to produce an override signal when the owner-generated deactivation code and the stored deactivation code are the same;

said central processing unit being responsive to said override signal to cancel any operating signal that might otherwise produce a door-unlocking action.

6,040,772

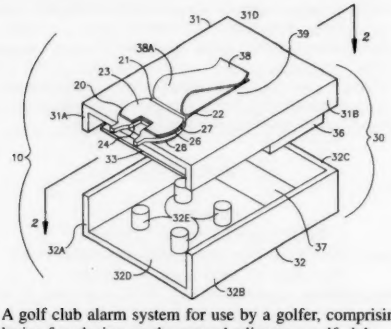
ALARM SYSTEM FOR FORGOTTEN GOLF CLUB

Susan M. Jackson; Robert A. Jackson, both of 10100 Hobby Hill Rd., Richmond, Va. 23235, and John M. Davis, 12418 Queensgate Rd., Midlothian, Va. 23113

Filed Sep. 25, 1998, Appl. No. 161,070

Int. Cl.[7] G08B *13/14*

U.S. Cl. 340—568.6 **20 Claims**



1. A golf club alarm system for use by a golfer, comprising:

a device for placing on the ground adjacent a golf club;

a radio transmitter mounted in said device, said radio transmitter being powered by a rechargeable transmitter power source for transmitting a coded transmission;

said device and radio transmitter being of small size and also functioning as a divot tool or golf club handle rest;

a radio receiver for carrying with a golfer tuned to receive said coded transmission, said radio receiver including circuitry that generates an alarm signal whenever said transmitted coded transmissions drops below a threshold level;

at least one alarm device coupled to said circuitry for generating at least one golfer-detectable alarm when said alarm signal is supplied thereto;

a power source coupled to said radio receiver for supplying power thereto;

an electrical coupling having a first portion mounted on said radio transmitter and electrically connected to said transmitter power source, said electrical coupling further having a second portion mounted on said radio receiver and electrically connected to said power source wherein, when said first portion and said second portion are electrically coupled to one another, said transmitter power source is electrically connected to said power source for receiving a charging current; and

said receiver having in said circuitry an automatic cut-off of said golfer-detectable alarm after a predetermined time.

6,040,773

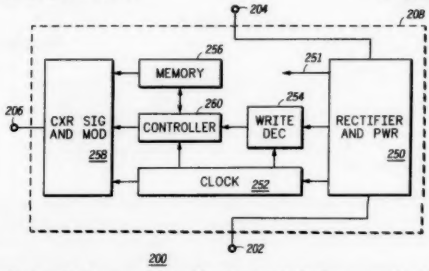
RADIO FREQUENCY IDENTIFICATION TAG ARRANGED FOR MAGNETICALLY STORING TAG STATE INFORMATION

Victor Allen Vega, Hercules, and Noel H. Eberhardt, Cupertino, both of Calif., assignors to Motorola, Inc., Schaumburg, Ill.

Continuation-in-part of application No. 08/540,813, Oct. 11, 1995. This application Mar. 12, 1998, Appl. No. 41,480.

Int. Cl.[7] G08B *13/181*

U.S. Cl. 340—572.1 **92 Claims**



20. A radio frequency identification tag including a tag circuit, a tag common electrode, a first tag antenna element and a second tag antenna element, the tag common electrode, the first tag antenna element and the second tag antenna element coupled to the tag circuit,

the tag common electrode arranged for coupling to ground,

the first tag antenna element arranged for electrostatically receiving an exciter signal from a proximately-located electrostatic exciter and coupling the exciter signal to the tag circuit,

the tag circuit arranged for becoming energized based on the exciter signal,

generating a read signal and coupling the read signal to the second tag antenna element,

the second tag antenna element arranged for electrostatically sending the read signal to a proximately-located electrostatic reader,

exactly one of the tag common electrode, the first tag antenna element and the second tag antenna element arranged for magnetically storing tag state information such that the tag state information can be magnetically read by a proximately-located magnetic reader, the tag state information comprising exactly one state of two possible states; and

the read signal being a transmitted signal.

6,040,774

LOCATING SYSTEM AND METHOD EMPLOYING RADIO FREQUENCY TAGS

Jonathan Lloyd Schepps, Princeton, N.J., assignor to Sarnoff Corporation, Princeton, N.J.

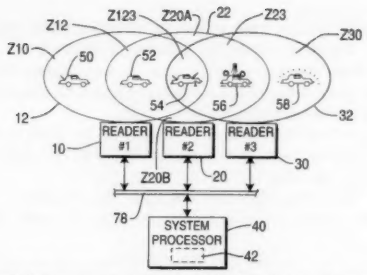
Filed May 27, 1998, Appl. No. 85,410

Int. Cl.[7] G08B *13/14*

U.S. Cl. 340—572.1 **29 Claims**

1. Apparatus for locating a tag comprising:

at least first and second readers each having a respective coverage area in which a tag can be identified, wherein at least a



part of the coverage area of said first reader overlaps at least a part of the coverage area of said second reader; and

a processor responsive to said first and second readers to identify a tag located in one of (a) the overlap of the coverage areas of said first and second readers and (b) in the coverage area of said first reader but not in the coverage area of said second reader.

6,040,775

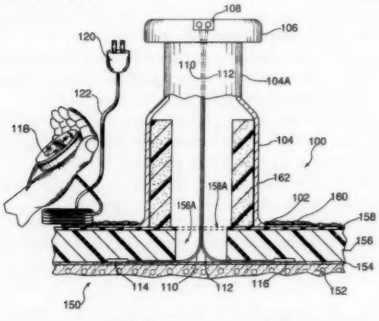
ROOF VENTS WITH MOISTURE DETECTORS AND ROOF SYSTEMS INCORPORATING SAME

Andrew J. Nill, Jr., 44A Lewis Ct., Huntington Station, N.Y. 11746

Filed May 19, 1998, Appl. No. 81,177

Int. Cl.[7] G08B *21/00*

U.S. Cl. 340—604 **17 Claims**



1. A roof vent system for use in a roof having a plurality of layers of roofing material including a waterproof membrane, said roof vent system comprising:

a) a base flange dimensioned to fit in between two of the plurality of layers of roofing material;

b) an upstanding hollow member having an interior which hollow member is coupled to said base flange and terminating in a cap, said upstanding hollow member and said cap defining an annular opening into the interior of said hollow member;

c) a portable, battery-operated moisture indicating device having a first electrical connector;

d) electrical connector means mounted in one of said hollow member and said cap for releasably connecting with said first electrical connector; and

e) at least one moisture sensing element electrically coupled to said electrical connector means and permanently mounted on one of the plurality of layers of roofing material.

6,040,776

COLLECTION OF PROCESS EFFLUENT

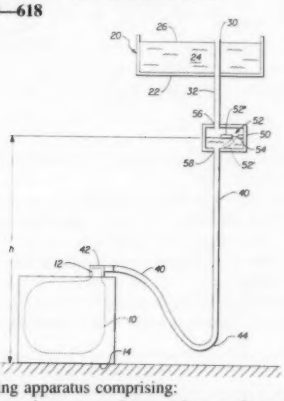
Edward Charles Glover, London, and Martyn Stuart Glover, Watford, both of United Kingdom, assignors to Eastman Kodak Company, Rochester, N.Y.

Filed Apr. 16, 1996, Appl. No. 633,236

Claims priority, application United Kingdom, Apr. 18, 1995, 9507844

Int. Cl.[7] G08B *21/00*

U.S. Cl. 340—618 **16 Claims**



1. Processing apparatus comprising:

(a) a first container arranged to supply a predetermined volume of processing solution to a processing tank;

(b) a sealed flexible container comprising a "bag-in-box" arrangement having an outer liquid-tight container inside which a flexible bag is located;

(c) an inlet pipe connected to the flexible container via a self sealing, dry-break connector for conducting effluent processing solution from the processing tank to the flexible container; and

(d) an alarm system comprising a sensor arranged at a predetermined height h above the base of the sealed flexible container to provide an alarm signal when the level of the solution in the pipe has reached the height h to produce a pressure head determined by the height h corresponding to the flexible container being overfilled to a predetermined pressure.

6,040,777

DEVICE AND PROCESS FOR INDICATING THE EXHAUSTION OF A FILTER

Klaus Ammann, Sereetz, and Wolfgang Bäther, Lübeck, both of Germany, assignors to Drager Sicherheitstechnik GmbH, Germany

Filed May 27, 1999, Appl. No. 321,465

Claims priority, application Germany, Oct. 28, 1998, 198 49 900

Int. Cl.[7] G08B *21/00*

U.S. Cl. 340—632 **8 Claims**

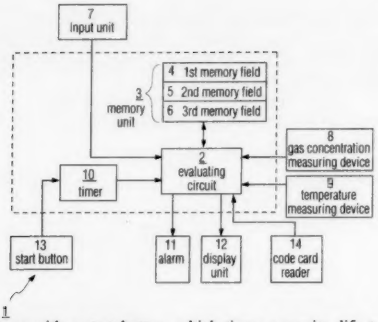
1. A device for determining the exhaustion of an adsorption filter for toxic gases in the ambient air, the device comprising:

a gas concentration-measuring device for determining the toxic substance content in the ambient air;

a temperature-measuring device for determining the temperature of the ambient air;

a memory unit with a first memory field, in which filter data sets associated with adsorption filters are stored, with a second memory field, in which data sets for the toxic substance to be adsorbed are contained, and with a third memory field, which contains preset values for the ambient air humidity and the respiratory minute volume,

an input unit for selecting the preset values from at least said first memory field, said second memory field and said third memory field;



a timer with a start button, which times a service life t of the adsorption filter;

an evaluating circuit, which determines the maximum service life t_{max} from the selected preset values, the toxic substance content in the ambient air and the temperature of the ambient air and forms a remaining capacity of the adsorption filter from the difference t_{max} minus t; and

an indicator for generating a filter exhaustion indication when the remaining capacity is lower than or equal to a preset limit value.

6,040,778

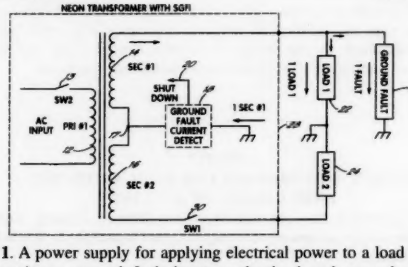
NEON POWER SUPPLY WITH MIDPOINT GROUND DETECTION AND DIAGNOSTIC FUNCTIONS

William Thomas Hopkins; David Henrik Riesland, and Anthony William Banks, all of Dickson, Tenn., assignors to France/Scott Fetzer Company, West Fairview, Tenn.

Filed Apr. 20, 1998, Appl. No. 63,475

Int. Cl.[7] G08B *21/00*

U.S. Cl. 340—650 **22 Claims**



1. A power supply for applying electrical power to a load while detecting a ground fault between the load and ground and/or connection of a load midpoint to ground, comprising:

first and second power terminals for connection to the load for applying electrical power thereto,

a ground terminal for connection to an earth ground connection,

a power application circuit connected to the first and second power terminals and the ground terminal, wherein in a test mode the power application circuit applies electrical power to the first power terminal relative to the ground terminal while applying substantially no electrical power to the second power terminal relative to the ground terminal, and in an operative mode the power application circuit applies electrical power to both the first and second power terminals relative to the ground terminal,

a ground fault detection circuit connected to the ground terminal for detecting electrical current flow between the ground terminal and the power application circuit, and for generating an electrical signal indicating the presence of a ground fault upon detection of current flow between the ground terminal and the power application circuit.

6,040,779

METHOD AND CIRCUIT FOR MONITORING THE FUNCTIONING OF A SENSOR BRIDGE

Georg Pfaff, Markgroeningen, and Herbert Keller, Wiernsheim, both of Germany, assignors to Robert Bosch GmbH, Stuttgart, Germany

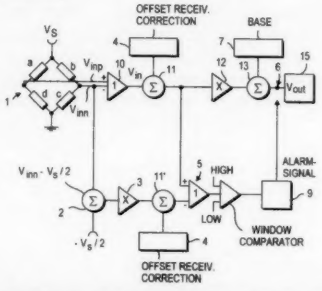
PCT No. PCT/DE98/01698, § 371 Date Feb. 24, 1999, § 102(e) Date Feb. 24, 1999, PCT Pub. No. WO99/01777, PCT Pub. Date Jan. 14, 1999

PCT Filed Jun. 19, 1998, Appl. No. 242,804

Claims priority, application Germany, Jul. 3, 1997, 197 28 381

Int. Cl.[7] G08B *21/00*

U.S. Cl. 340—661 **12 Claims**



1. A method for monitoring the function of a symmetrical sensor bridge circuit (**1**) having sensor elements (a, b, c, d), which are connected in a full bridge circuit and are supplied by a bridge supply voltage

characterized by the following steps:

derivation of a full bridge signal (V_{in}) from the sensor bridge circuit;

derivation of a half-bridge signal (V_{inp}, V_{inn}) from the positive or the negative half-bridge circuit;

subtraction of the instantaneous level of the half-bridge signal (V_{inp}, V_{inn}) from half the bridge supply voltage ($V_s/2$) while forming a difference signal ($V_{inn}-V_s/2$);

amplification of the difference signal by a defined amplification factor (x), so that it corresponds to the full bridge signal (V_{in}) if the sensor bridge circuit (**1**) operates correctly;

comparison of the full bridge signal (V_{in}) with the amplified difference signal; and

generation of an alarm signal if the amplified difference signal deviates from the full bridge signal (V_{in}) in an unacceptable manner.

6,040,780

CHILD'S PERSONAL SECURITY ASSISTANT

Michael Lucas, 146 Quassaic Ave., New Windsor, Mass. 12553

Filed Dec. 9, 1998, Appl. No. 208,513

Int. Cl.[7] G08B *3/00*

U.S. Cl. 340—691.1 **9 Claims**

1. A child's personal security assistant, comprising:

an electrically powered stand;

a body removeably mated with said stand, and connected electrically thereto, and further comprising:

a front;

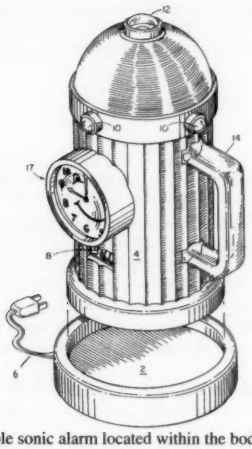
a timer located on the body, with a readout visible from the front;

electrical storage means located within the body;

means for recharging the storage means;

one or more switchable strobe lights located on the outside of the body,

and powered by the storage means;



a switchable sonic alarm located within the body and powered by the storage means;

means to detect removal of the body from the stand; and

means to communicate said removal to the timer, strobe lights, and sonic alarm, switching them on thereby.

6,040,781

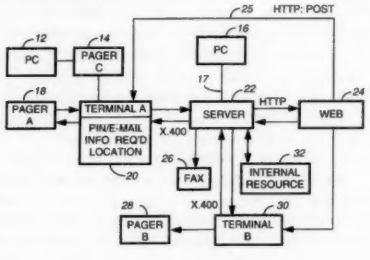
EVENT REMINDER FOR A COMMUNICATION DEVICE

Bradley A. Murray, West Palm Beach, Fla., assignor to Motorola, Schaumburg, Ill.

Filed May 26, 1998, Appl. No. 83,930

Int. Cl.[7] H04Q *7/14*

U.S. Cl. 340—825.22 **20 Claims**



10

1. A method for prompting a user to change a mode of operation of an electronic device based on an updated event time, the method comprising the steps of:

maintaining a clock within the electronic device;

storing an event time in a memory coupled to the electronic device;

prompting a user of the electronic device within a predetermined time of the event time to request a wireless update of the event time; and

updating the electronic device with the event time if requested by the user by wirelessly retrieving data from an independent widely distributed information source.

6,040,782

RADIO SIGNAL RECEIVING APPARATUS WITH AUDIO SIGNAL RECEIVING AND REPRODUCING FUNCTION

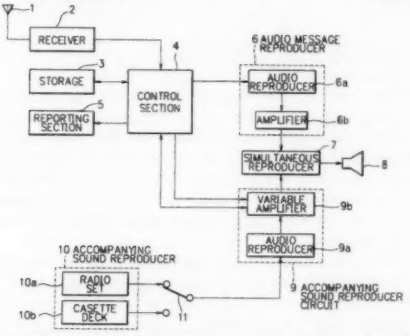
Satoshi Banno, Tokyo, Japan, assignor to NEC Corporation, Tokyo, Japan

Filed Oct. 23, 1997, Appl. No. 956,721

Claims priority, application Japan, Oct. 23, 1996, 8-280841

Int. Cl.[7] G08B *5/22*

U.S. Cl. 340—825.25 **15 Claims**



1. A radio signal receiving apparatus with audio signal receiving and reproducing function, comprising:

a receiver section for receiving a message signal sent from an external device, converting said message signal into an audio signal, and outputting said audio signal therefrom;

a message reproducer circuit for conducting a reproducing operation for said audio signal from said receiver section and outputting therefrom an audio signal thus reproduced;

an accompanying sound reproducer circuit for conducting a reproducing operation for an audio signal fed from an accompanying sound reproducer and outputting therefrom an audio signal reproduced through the operation;

output means for receiving said audio signals respectively from said message reproducer circuit and said accompanying sound reproducer circuit and outputting audio sound corresponding to said audio signals; and

a simultaneous producer section for mixing said audio signal from said message reproducer circuit with said audio signal from said accompanying sound reproducer circuit and delivering a signal resultant from the mixing operation to said output means,

the accompanying sound reproducer circuit automatically changing, when said message signal is inputted to said receiver section, a sound volume of said audio signal to a prescribed sound volume value.

6,040,783

SYSTEM AND METHOD FOR REMOTE, WIRELESS POSITIVE IDENTITY VERIFICATION

Robert C. Houvener, Nashua; Ian P. Hoenisch, Salem, and Joseph Schappler, Bedford, all of N.H., assignors to Image Data, LLC, Nashua, N.H.

Continuation-in-part of application No. 08/684,677, Jul. 19, 1996, Pat. No. 5,790,674, which is a continuation-in-part of application No. 08/436,146, May 8, 1995, Pat. No. 5,657,389.

This application Nov. 10, 1997, Appl. No. 966,520.

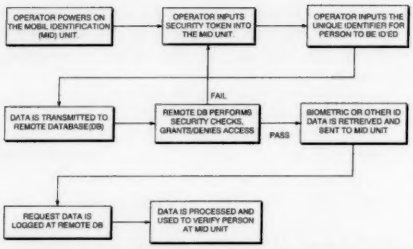
This patent is subject to a terminal disclaimer.

Int. Cl.[7] G06F *7/04*

U.S. Cl. 340—825.31 **9 Claims**

1. A mobile positive identification system comprising:

at least one remote database site having stored therein a database comprising a plurality of access authority information units corresponding to authorized users of the system and a database comprising a plurality of digital photographic images of persons to be identified;



OPERATOR POWERS ON THE MOBIL IDENTIFICATION (MID) UNIT.
OPERATOR INPUTS SECURITY TOKEN INTO THE MID UNIT.
OPERATOR INPUTS THE UNIQUE IDENTIFIER FOR PERSON TO BE ID'ED
FAIL
DATA IS TRANSMITTED TO REMOTE DATABASE(DB)
REMOTE DB PERFORMS SECURITY CHECKS, GRANTS/DENIES ACCESS
PASS
BIOMETRIC OR OTHER ID DATA IS RETRIEVED AND SENT TO MID UNIT
REQUEST DATA IS LOGGED AT REMOTE DB
DATA IS PROCESSED AND USED TO VERIFY PERSON AT MID UNIT

a mobile point of identification terminal having an access authority information unit input for inputting an access authority information unit presented by a user of the system, an identifying information input for accepting identifying information presented by a person to be positively identified at said mobile point of identification terminal and a display device for displaying digital photographic images of persons to be identified;

a communications link, linking said mobile point of identification terminal to said at least one remote database, wherein said communications link is comprised, at least in part, of a wireless communications link;

a means for verifying that said point of identification terminal is authorized to access said remote database site; and

a means for verifying that said user of said system has compared the digital photographic images displayed on the display means with the physical appearance of the person being identified at the point of identification terminal and that a match exists between at least one of said digital photographic images and the physical appearance of said person being identified.

6,040,784

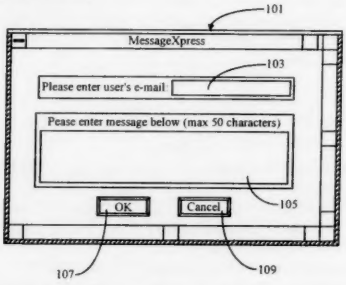
ALPHANUMERIC PAGING MESSAGE SYSTEM OPERATING ON INTERNET

Nicholas R. Miller, West Vancouver, Canada, assignor to Datalink Systems Corporation, San Jose, Calif.

Filed Mar. 7, 1997, Appl. No. 813,925

Int. Cl.[7] G08B *5/22*

U.S. Cl. 340—825.44 **9 Claims**



1. A message delivery system, comprising:

a WEB page on a WEB Server having an input window on the WEB page, the input window comprising a first input text field for entering identity of an intended recipient, and a second input text field for entering an alphanumeric message;

a pager message preparation facility operating on the WEB server integrating the identifier and message from the input windows on the WEB page with data retrieved from a database, matching routing information for the intended recipient with the identifier, thereby providing a pager message for the intended recipient; and

a pager message sending facility sending the prepared pager message to a paging system to be transmitted to a pager associated with the intended recipient.

6,040,785

MIXED LOCK TYPE TOLL COLLECTING SYSTEM AND METHOD FOR TOLL COLLECTION OF VEHICLES ON TOLL ROAD

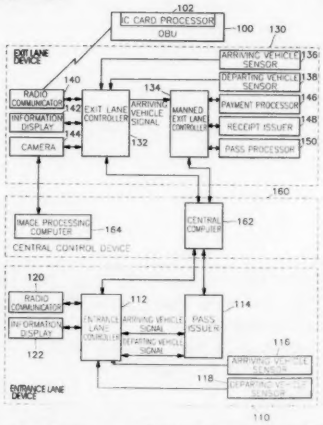
Won-seo Park, 221-1102 Woosung Sibeom Apt., Seohyun-dong Bundang-gu, Sungnam-city, Kyungki-do; Wan-chol Ho, 102-2001 Hankook Apt., Yeokgok-dong, Wonmi-gu, Bucheon-city, Kyungki-do; Duk-Kyun Ryu, 249-204 Jugong Apt., Wonmoon-dong, Kwacheon-city, Kyungki-do, and Jong-yeob Kim, 605-102 Chowon Hanyang Apt., Pyeongchon-dong, Dongan-gu, Anyang-city, Kyungki-do, all of Rep. of Korea

Filed Feb. 25, 1998, Appl. No. 30,320

Claims priority, application Rep. of Korea, Apr. 18, 1997, 97-14459

Int. Cl.[7] G08G *1/00*

U.S. Cl. 340—928 **25 Claims**



1. A mixed lock-type toll collecting system, comprising:

an on-board unit for installation in a vehicle for toll collection at a toll gate of a toll road;

an entrance lane device for installation at an entrance lane of said toll gate of the toll road for transmitting entrance information to the vehicle entering the entrance lane;

an exit lane device for installation at an exit lane of said toll gate of the toll road for collecting a toll from the vehicle exiting the exit lane;

a central control device for controlling said entrance lane device and said exit lane device for toll collection from the vehicle entering the entrance lane and exiting the exit lane of the toll road;

said entrance lane device comprising a first radio communicator performing radio communication with said on-board unit when installed in the vehicle which enters the entrance lane and transmitting the entrance information to said on-board unit when installed in the vehicle which enters the entrance lane when radio communication with the vehicle can be performed, and including a pass issuer issuing a pass to a driver of a vehicle when radio communication with the vehicle cannot be performed; and

said exit lane device comprising a second radio communicator performing radio communication with said on-board unit when installed in the vehicle upon exiting and collecting the toll, when radio communication with the vehicle can be performed; and

a manned exit lane device for installation collecting the toll in accordance with the pass issued to the driver of the vehicle, when radio communication with the vehicle can not be performed.

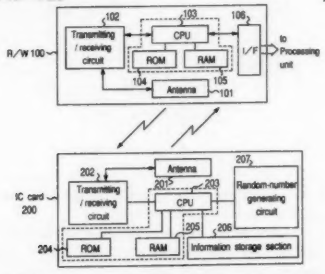
RECOGNITION SYSTEM AND RECOGNITION METHOD FOR NON-CONTACT IC CARDS

Shuzo Fujioka, Itami, Japan, assignor to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Jul. 16, 1998, Appl. No. 116,196
Claims priority, application Japan, Jan. 16, 1998, 10-006463
Int. Cl.[7] G08G *1/00*
U.S. Cl. 340—928 **10 Claims**



1. A recognition system for non-contact IC cards comprising a plurality of non-contact IC cards and a reader/writer that recognizes said non-contact IC cards,

each of said non-contact IC cards having a first response signal transmitting means for immediately transmitting a first response signal to a predetermined time slot in response to a first polling trial by said reader/writer and a second response signal transmitting means for transmitting a second response signal to a time slot randomly selected from a predetermined number of succeeding time slots, in response to a subsequent polling trial by said reader/writer and

said reader/writer having a polling means for receiving the first response signal from each of said non-contact IC cards at the predetermined time slot during the execution of the first polling trial and receiving respective second response signals from said non-contact IC cards at the predetermined number of succeeding time slots during the execution of the subsequent polling trial.

LASER VEHICLE PARKING APPARATUS

Lamoyne W. Durham, 1844 Stonebridge Dr., Saline, Mich. 48176

Filed Dec. 3, 1998, Appl. No. 205,108
Int. Cl.[7] B60Q *1/48*
U.S. Cl. 340—932.2 **19 Claims**

1. A device for parking a vehicle having a windshield at a desired distance relative to a surface forward of the vehicle, comprising:

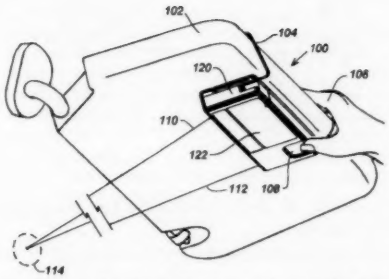
an enclosure;

a laser outputting a primary beam of light within the enclosure;

an optical element disposed in the path of the primary beam to establish first and second beams which exit the enclosure;

a beam-shaping element causing at least one of the first and second beams to appear as a line on the surface forward of the vehicle;

a adjustment means for angling one or both of the first and second beams so as to converge in a region of the surface forward of the vehicle when the vehicle is positioned at a desired distance therefrom; and



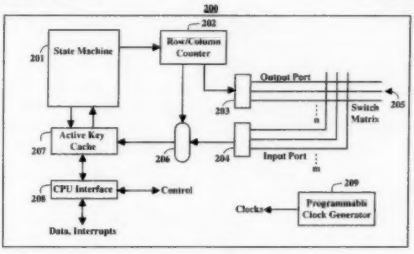
means for mounting the enclosure to a visor within the vehicle such that the first and second beams pass through the windshield.

6,040,788

CACHE BASED SCAN MATRIX KEYBOARD CONTROLLER

Peter Chambers, and Omer Lem Wehunt, Jr., both of Phoenix, Ariz., assignors to VLSI Technology, Inc., San Jose, Calif.

Filed Jan. 21, 1998, Appl. No. 10,217
Int. Cl.[7] H03M *11/00*
U.S. Cl. 341—26 **18 Claims**



1. A keyboard controller system comprising:

a keyboard with a plurality of keys;

a key matrix coupled to the plurality of keys for generating a signal when one of said plurality of keys is activated;

an output port coupled to the matrix;

an input port coupled to the matrix;

a cache memory component that receives signals from the key matrix wherein the cache stores the signal and identifies which of the plurality of keys is actuated; and

a state machine coupled to the cache memory and the key matrix wherein the state machine efficiently controls the keyboard.

6,040,789

DATA CONVERSION SYSTEM

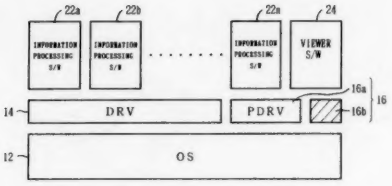
Takanobu Nishida, and Ichiro Jikuhara, both of Tokyo, Japan, assignors to Nippon Steel Corp., Tokyo, Japan

Filed Oct. 27, 1997, Appl. No. 958,395
Claims priority, application Japan, Oct. 24, 1996, 284956
Int. Cl.[7] H03M *7/00*
U.S. Cl. 341—50 **24 Claims**

1. A data conversion apparatus, comprising:

conversion means for converting original data created by any of a plurality of different information processing programs into printer output format data;

means for converting the printer output format data to data of a predetermined common format;



means for storing the common format data and the corresponding original data; and

means for visually displaying the stored common format data.

6,040,790

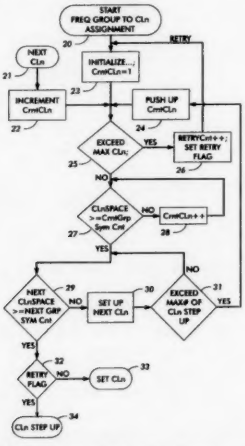
METHOD OF BUILDING AN ADAPTIVE HUFFMAN CODEWORD TREE

Simon M. Law, Torrance, Calif., assignor to Xerox Corporation, Stamford, Conn.

Filed May 29, 1998, Appl. No. 87,389

Int. Cl.[7] H03M *7/40*

U.S. Cl. 341—65 **4 Claims**



1. A method of building an adaptive Huffman codeword tree for input symbols comprising the steps of:

a) creating a number of bands to continuously cover all frequencies of use from least to most used symbols,

b) assigning a number of codeword bits to each band, lower numbers being assigned to higher frequencies,

c) assembling all symbols into a list in order of frequency of use, and assigning each symbol to a group so that the frequency of each symbol falls within the band of the group,

d) if there is enough space in a current group for all symbols assigned to the group, assign to each symbol a current codeword, and increment the codeword for each symbol,

f) if there is enough space in the current group for all of the remaining symbols, assign to each remaining symbol a current codeword and increment the codeword, and

g) if the current symbol is the last symbol of a group, increment the codeword, add a zero to the end of the codeword to start a new group, and go back to step d).

6,040,791

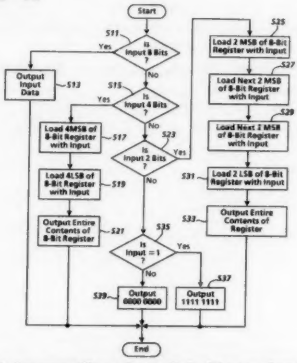
SYSTEM AND METHOD FOR GREY VALUE EXPANSION OF PIXEL DATA

Gary W. Kassmann, Rochester, N.Y., assignor to Xerox Corporation, Stamford, Conn.

Filed Nov. 17, 1994, Appl. No. 340,785

Int. Cl.[7] G06K *9/00*

U.S. Cl. 341—95 **14 Claims**



1. A circuit for expanding a byte of pixel image data having a bit resolution of at least two bits, comprising:

detecting means for detecting a bit resolution of the byte of pixel image data, the bit resolution of the byte of pixel image data being equal to an integer N; and

new pixel generating means for generating a new pixel image data byte having a predetermined bit resolution, the predetermined bit resolution being equal to an integer M, in response to said detecting means detecting that the bit resolution of the byte of pixel image data is less than the predetermined bit resolution, the new pixel image data byte being a compilation of the byte of pixel image data repeated M/N times in the compilation, M/N being an integer.

6,040,792

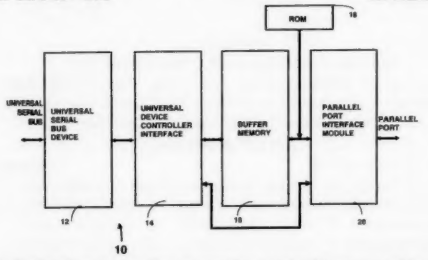
UNIVERSAL SERIAL BUS TO PARALLEL BUS SIGNAL CONVERTER AND METHOD OF CONVERSION

Lynn R. Watson; James E. Castleberry; David D. Luke, and David C. Gilbert, all of Boise, Id., assignors to In-System Design, Inc., Boise, Id.

Filed Nov. 19, 1997, Appl. No. 974,736

Int. Cl.[7] H03M *9/00*

U.S. Cl. 341—100 **21 Claims**



1. A signal converter, for converting a serial bit stream of data, including command data, interrupt request data and data packets, encoded in a Uniform Serial Bus communications protocol, from a host, into data encoded in a communications protocol compliant with IEEE 1284 specifications for retransmission to a parallel port, which comprises:

means for receiving a serial bit stream of data from a host in a Uniform Serial Bus communications protocol;

means for extracting data bytes from the serial bit stream of data from the Uniform Serial Bus communications protocol; and

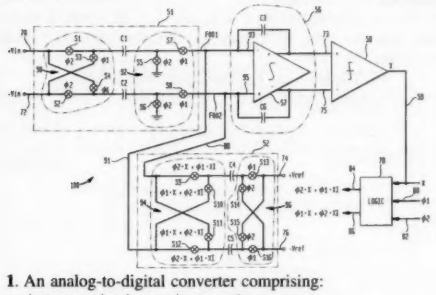
means for transmitting the data bytes in a communications protocol which complies with an IEEE 1284 specifications communications protocol to a parallel port.

6,040,793

SWITCHED-CAPACITOR SIGMA-DELTA ANALOG-TO-DIGITAL CONVERTER WITH INPUT VOLTAGE OVERLOAD PROTECTION

Paul F. Ferguson, Jr., N. Andover, and James Wilson, Sharon, both of Mass., assignors to Analog Devices, Inc., Norwood, Mass.

Filed Mar. 18, 1998, Appl. No. 40,620
Int. Cl.[7] H03M *3/00;1/12*
U.S. Cl. 341—143 **10 Claims**



1. An analog-to-digital converter comprising:

an integrator having an input and an output;

a switched-capacitor input circuit having an input capacitor, the input circuit connectable to the input of the integrator, for charging the input capacitor by an input voltage during each of first and second non-overlapping time intervals and for transferring charge from the input capacitor to the integrator during only one of the first and second time intervals; and

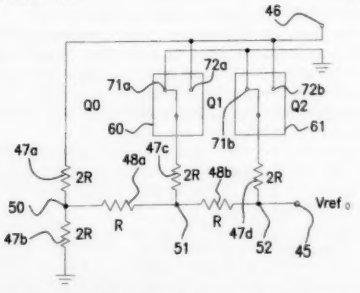
a switched-capacitor feedback circuit having a feedback capacitor, said feedback circuit connected in a feedback path between the input and output of the integrator, for charging the feedback capacitor by a feedback reference voltage during each of the first and second time intervals and for transferring charge from the feedback capacitor to the integrator during each of the first and second time intervals.

6,040,794

HIGH-SPEED ANALOG-TO-DIGITAL CONVERTER

Jerry Jaw, Hsinchu Hsien, Taiwan, assignor to United Microelectronics Corp., Taiwan

Filed Apr. 14, 1998, Appl. No. 60,427
Claims priority, application Taiwan, Dec. 19, 1997, 86221135
Int. Cl.[7] H03M *1/12*
U.S. Cl. 341—155 **6 Claims**



1. An analog-to-digital converter apparatus for converting an input analog signal into an n-bit digital data represented by binary data bits Q_{n-1}, Q_{n-2}, . . . , Q_0 with Q_{n-1} being the most significant bit and Q_0 the least, the converter comprising:

a plurality of n reference voltage supply circuits each generating a corresponding reference voltage $Vref_{n-1}$, $Vref_{n-2}$, . . . , $Vref_0$ based on a maximum reference voltage V_{max}, and each of the n reference voltage supply circuits being connected across the maximum reference voltage and the system ground potential, wherein

a first of the n reference voltage supply circuits is a first resistor network that includes a first series-resistor network having two resistors connected in series, with one terminal of the first series-resistor network connected to the maximum reference voltage and the other terminal of the first series-resistor network connected to a system ground potential, and a junction between the tow resistors of the first series-resistor network supplying the first voltage $Vref_{n-1}$; and

a second of the n reference voltage supply circuits is a second resistor network that includes a first series-resistor network for the first of the n reference voltage supply circuits, a second series-resistor network having two resistors connected in series, with one terminal of the second series-resistor connected to the junction of the first series-resistor network supplying the first reference voltage, and the other terminal thereof connected to the common terminal of a 2-to-1 switch means, the first switched terminal of the switch means being connected to the system ground potential, and the second switched terminal to the maximum reference voltage, with a junction between the two resistors of the second series-resistor network supplying the second reference voltage $V_{ref_{n-2}}$

a plurality of n comparators having each of the positive inputs thereof connected to the analog input and each of the negative inputs thereof connected to a corresponding one of the n reference voltage supply circuits, and each of the outputs of the plurality of n comparators generating a corresponding digital data bit of Q_{n-1}, Q_{n-2}, . . . , Q_0 respectively;

wherein the reference voltages generated by the plurality of n reference voltage supply circuits are determined by

$$Vref_{n-1}=(\tfrac{1}{2})V_{max},$$

$$Vref_{n-2}=[Q_{n-1}(\tfrac{1}{2})+(\tfrac{1}{4})]V_{max},$$

$$Vref_0=[Q_{n-1}(\tfrac{1}{2})+Q_{n-2}(\tfrac{1}{4})+\ldots+Q_1(\tfrac{1}{2}^{n-1})+\tfrac{1}{2}^n]V_{max}$$

and the digital output bits Q_{n-1}, Q_{n-2}, . . . , Q_0 being determined as a set of n data bits representing the converted digital data of the input analog signal, wherein each of the digital output bits Q_{n-1}, Q_{n-2}, . . . , Q_0 are fed back to the reference voltage supply circuits for the determination of the output digital bits in a series of time periods.

6,040,795

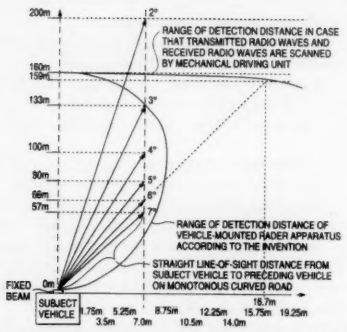
VEHICLE-MOUNTED RADAR APPARATUS

Masahiro Watanabe, Tokyo, Japan, assignor to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Jan. 16, 1998, Appl. No. 8,546
Claims priority, application Japan, Jul. 15, 1997, 9-189518
Int. Cl.[7] G01S *13/93*
U.S. Cl. 342—70 **2 Claims**

1. A vehicle-mounted radar apparatus for mounting on a subject vehicle comprising:

a fixed beam antenna unit for transmitting radio waves and receiving radio waves reflected by a vehicle, said antenna unit configured to have an antenna gain which is set so that a maximum detection distance for detecting objects using the vehicle-mounted radar apparatus is a straight line-of-sight distance with respect to each straight line-of-sight angle from said subject vehicle to a target vehicle traveling on a same path; and



a signal processing unit for determining a relative distance and a relative velocity of said target vehicle based on reflected radio waves received by said antenna.

6,040,796

RADAR SYSTEM INSTALLABLE IN AN AUTOMOTIVE VEHICLE FOR DETECTING A TARGET OBJECT

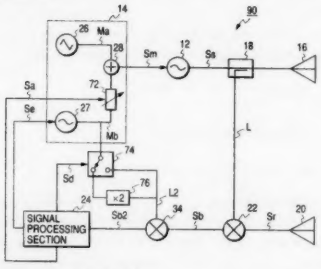
Kazuoki Matsugatani, and Masanobu Yukumatsu, both of Kariya, Japan, assignors to Denso Corporation, Kariya, Japan

Filed Mar. 17, 1998, Appl. No. 39,942

Claims priority, application Japan, Mar. 18, 1997, 9-064865; May 16, 1997, 9-127266; Aug. 29, 1997, 9-235157

Int. Cl.[7] G01S *13/93;13/42*

U.S. Cl. 342—70 **19 Claims**



1. A radar system comprising:

transmitting signal generating means for producing a high-frequency transmitting signal which is carried on a radar wave, said transmitting signal being frequency modulated in accordance with a linear modulation component and a cyclic modulation component, the transmitting signal generating means including

first component generating means for producing said linear modulation component, the linear modulation component varying a frequency of said transmitting signal linearly relative to time,

second component generating means for producing said cyclic modulation component, the cyclic modulation component varying said frequency of said transmitting signal cyclically at a cyclic frequency larger than twice a frequency of a beat signal,

adding means for adding said linear modulation component and said cyclic modulation component and producing a modulation signal, and

a high-frequency oscillator producing said high-frequency transmitting signal whose frequency is variable in accordance with said modulation signal;

a high-frequency mixer for mixing a received signal of the radar wave reflected from a target object with a local signal derived from said transmitting signal produced from said transmitting signal generating means, and producing the beat signal, the beat signal being a signal having a frequency component representing a difference between said received signal and said local signal; and

calculating means for obtaining a distance from the radar system and a velocity relative to the radar system of said target object based on harmonic components of said beat signal produced when said transmitting signal is modulated by said cyclic modulation component.

6,040,797

METHOD FOR DETECTING A RADAR TARGET

Franz-Xaver Hofele, Donzdorf, Germany, assignor to Daimler-Chrysler AG, Germany

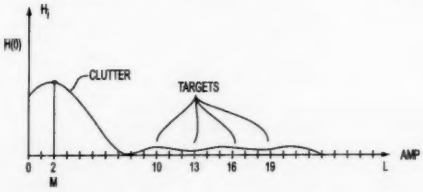
PCT No. PCT/EP98/05535, § 371 Date Jul. 20, 1999, § 102(e) Date Jul. 20, 1999, PCT Pub. No. WO99/12051, PCT Pub. Date Mar. 11, 1999

PCT Filed Sep. 1, 1998, Appl. No. 297,515

Claims priority, application Germany, Sep. 2, 1997, 197 38 252

Int. Cl.[7] G01S *13/534*

U.S. Cl. 342—159 **4 Claims**



1. A method of detecting a radar target in the presence of clutter, in which

the echo signals received by a radar system, which include both radar targets and clutter, are converted into the video range such that digitized pulse-height values are present, which correspond to the echo signals and correspond to the amplitudes of the echo signals in the video range;

the digitized pulse-height values are evaluated by means of a radar-target extractor;

a measurement window of a predeterminable size is formed in the radar-target extractor, the window corresponding to a predeterminable monitoring region having a predeterminable area;

a threshold value corresponding to the clutter is determined for the measurement window from the pulse-height values present there; and

the pulse-height values present in the measurement window are compared to the threshold value, and an echo of a radar target is recognized when a pulse-height value exceeds the threshold value, characterized in that

a frequency distribution is determined for all pulse-height values within the measurement window;

starting from the smallest present pulse-height value, having the associated frequency (H_0), the pulse-height values are added until a first predeterminable component of all of the pulse-height values present in the measurement window, the component amounting to 50% in a Gaussian distribution, is detected;

the pulse-height value (i_M) associated with this predeterminable first component is determined and established as the average value (M) of all pulse-height values within the measurement window;

the addition of the pulse-height values continues until a second predeterminable component of all of the pulse-height values present in the measurement window, the component amounting to 84% in a Gaussian distribution, is detected;

the pulse-height value (i_{M+S}) associated with this predeterminable second component is determined;

the standard deviation (S) is determined from the difference between the pulse-height value (i_{M+S}) associated with the second component and the pulse-height value (i_M) associated with the first component, according to the formula $S=i_{M+S}-i_M$;

a hit-recognition threshold TEK is determined according to the formula TEK=Function(M, S, P_{fa}), where

Function=a predeterminable function;

M=the average value of the pulse-height values;

S=the standard deviation; and

P_{fa}=a predeterminable false-alarm probability; and

within the measurement window, each pulse-height value is compared to the hit-recognition threshold TEK such that a pulse-height value larger than the hit-recognition threshold TEK is assessed as being associated with a radar target.

6,040,798

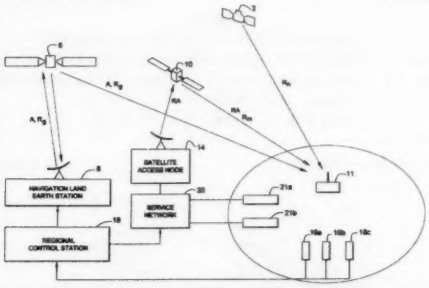
SATELLITE RADIODETERMINATION

George Vladimir Kinal, London; James Robert Nagle, II, Northwood; Claudio Soddu, Harrow, and Fintan Richard Ryan, Weybridge, all of United Kingdom, assignors to International Mobile Satellite Organization, London, United Kingdom

Filed Oct. 15, 1996, Appl. No. 730,208

Int. Cl.[7] **G01S** *5/02;* **H04B** *7/185*

U.S. Cl. 342—357.01 **9 Claims**



9. A method of satellite radiodetermination, comprising receiving at a receiver a multiple frequency ranging signal from a first satellite;

receiving at the receiver a further ranging signal from a second satellite, deriving at the receive first ionospheric delay data from said multiple frequency ranging signal; and

estimating at the receiver second ionospheric delay data for the further ranging signal on the basis of said first ionospheric delay data.

6,040,799

BEAM STEERING ANTENNA UNIT

Hiroyuki Tachihara, Inzai; Hidemichi Inoue, Inagi, and Hiroshi Endo, Tokyo, all of Japan, assignors to Harada Industry Co., Ltd., Tokyo, Japan

Filed Jun. 23, 1998, Appl. No. 103,198

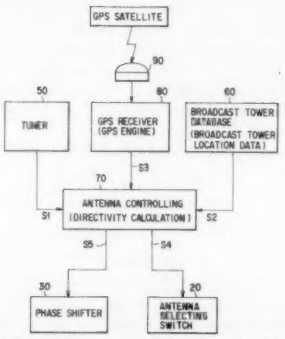
Claims priority, application Japan, Jun. 23, 1997, 9-165876

Int. Cl.[7] **G01S** *5/02;* **H04B** *7/185*

U.S. Cl. 342—357.06 **2 Claims**

1. A beam steering antenna unit comprising:

direction detection means for detecting the direction of the broadcast tower which is releasing the electric wave currently being received based on the objective broadcast station data obtainable from the tuner, broadcast tower position data obtainable from the broadcast tower data base, and the present position information obtainable from the receiver of GPS in receiving the FM or AM band, TV band, etc.;



an antenna directivity determining means for determining the directivity of the antenna based on the direction detected by the direction detecting means; and

a directivity variable operation means for varying the directivity of the antenna based on the information on the directivity of the antenna determined by the antenna directivity determining means;

said directivity variable operation means comprising:

an antenna element selecting means for selecting a plurality of antenna elements existing at specified positions out of the plural non-directivity antenna elements arrayed in a specified pitch based on the information on the directivity of antenna and combine; and

a phase relation determining means for variably determining the phase relations between the RF signals of each band received with the above antenna element selected by the antenna element selecting means based on the information on the directivity of antenna.

6,040,800

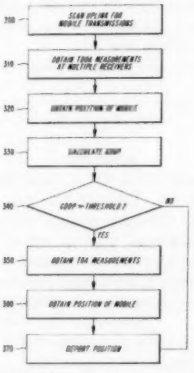
SYSTEMS AND METHODS FOR LOCATING REMOTE TERMINALS IN RADIOCOMMUNICATION SYSTEMS

Alex K. Raith, Durham; Rajaram Ramesh; Karl Molnar, both of Cary; R. David Koilpillai, Apex, and Havish Koorapaty, Raleigh, all of N.C., assignors to Ericsson Inc., Research Triangle Park, N.C.

Filed Apr. 22, 1997, Appl. No. 839,864

Int. Cl.[7] **G01S** *1/24;3/02*

U.S. Cl. 342—387 **12 Claims**



1. A method for determining a position of a remote unit communicating with a radiocommunication system comprising the steps of:

receiving, at a plurality of measurement stations, a signal transmitted by said remote unit;

forwarding, by each of said plurality of measurement stations, said received signal to a central processing center;

selecting, by said central processing center, one of a time-of-arrival (TOA) and time-difference-of-arrival (TDOA) technique for processing said received signals, wherein the TOA and the TDOA technique is selected based on a predetermined threshold; and

determining said position of said remote unit using said selected technique.

6,040,801

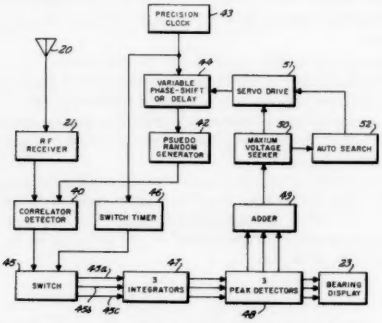
LOW DUTY CYCLE NAVIGATION SYSTEM

Willis R. Dawirs, San Diego, Calif., assignor to The United States of America as represented by the Secretary of the Navy, Washington, D.C.

Filed Apr. 30, 1964, Appl. No. 364,892

Int. Cl.[7] G01S *3/02*

U.S. Cl. 342—457 **10 Claims**



8. A mobile station of the class described comprising:

a radio receiver;

a stabilized fixed frequency clock generator of the frequency f_o;

a pseudo-random signal generator driven by said clock generator for generating a predetermined non-repetitive sequence of binary ones and zeros at said frequency of f_o;

a correlation detector coupled to said radio receiver and said signal generator for multiplying together the signals of said receiver and pseudo-random generator;

a plurality of integrator circuits;

a switch means responsive to said clock generator for successively connecting the output of said correlation detector to said integrator circuits, and

resolver means coupled to said integrators for bearing display.

6,040,802

ANTENNA CROSS-POLAR SUPPRESSION MEANS

Martin Stevens Smith, Chelmsford; Adrian David Smith, Paignton; James Edward Joseph Dalley, Harlow, and Stephen John McKenna, Torquay, all of United Kingdom, assignors to Northern Telecom Limited, Montreal, Canada

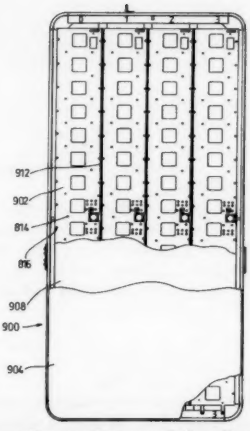
Filed May 2, 1997, Appl. No. 850,428

Claims priority, application United Kingdom, May 2, 1996, 9609265

Int. Cl.[7] H01Q *13/10*

U.S. Cl. 343—700 MS **9 Claims**

1. A linear array layered antenna assembly the antenna assembly comprising first and second apertured ground planes with an antenna assembly probe feed network printed upon a dielectric substrate supported therebetween, the probe feed network providing an array of antenna probes having different phase input feeds,



wherein an outwardly extending ground plane flange extends from one of the apertured ground planes, whereby resonant cross-polar fields are suppressed in a desired frequency of operation of the antenna.

6,040,803

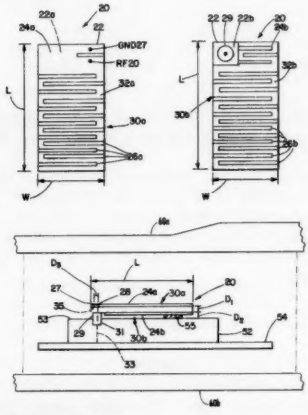
DUAL BAND DIVERSITY ANTENNA HAVING PARASITIC RADIATING ELEMENT

John M. Spall, Raleigh, N.C., assignor to Ericsson Inc., Research Triangle Park, N.C.

Filed Feb. 19, 1998, Appl. No. 26,456

Int. Cl.[7] H01Q *1/38*

U.S. Cl. 343—700 MS **16 Claims**



1. An antenna, comprising:

a dielectric substrate comprising opposite first and second faces;

a first radiating element disposed on said dielectric substrate first face, said first radiating element comprising a first meandering electrically conductive path having an RF feed point and a around post;

a second radiating element disposed on said dielectric substrate second face and capacitively coupled with said first radiating element, said second radiating element comprising a second meandering electrically conductive path, wherein said first and second meandering electrically conductive paths have different lengths;

a hot feed element extending through said dielectric substrate and electrically connected to said RF feed point; and

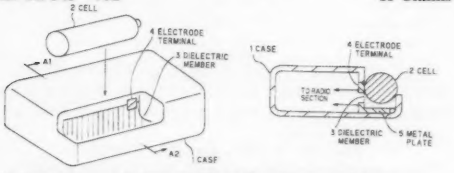
a ground feed element extending through said dielectric substrate and electrically connected to said ground post, wherein the ground feed element is not in electrical contact with the second radiating element.

6,040,804

ANTENNA UNIT FOR PORTABLE RADIO UNIT

Nobuya Harano, Shizuoka, Japan, assignor to NEC Corporation, Tokyo, Japan

Filed Sep. 29, 1998, Appl. No. 162,166
Claims priority, application Japan, Sep. 30, 1997, 9-265604
Int. Cl.[7] H01Q *1/24*
U.S. Cl. 343—702 **11 Claims**



1. An antenna unit for portable radio unit, comprising:

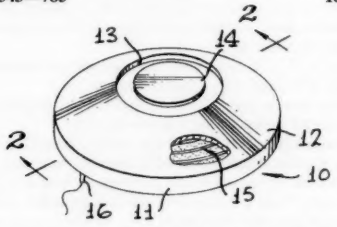
a cell with a metal covering that is disposed opposite to a conductive plate through a dielectric member.

6,040,805

LOW PROFILE CERAMIC CHOKE

Son Huy Huynh, and George Cheng, both of Torrance, Calif., assignors to Antcom Corp., Torrance, Calif.

Filed May 8, 1998, Appl. No. 75,009
Int. Cl.[7] H01Q *13/00*
U.S. Cl. 343—785 **10 Claims**



1. A low profile choke for a global positioning antenna system comprising:

a ring of high dielectric constant material having an open center and a circular peripheral edge;

a plurality of concentric segments forming said ring of high dielectric constant material providing a highly capacitive surface;

a metallized undersurface backing carried on said ring;

an antenna disposed in said open center of said ring; and

an upper surface of said ring being tapered to provide moisture runoff.

6,040,806

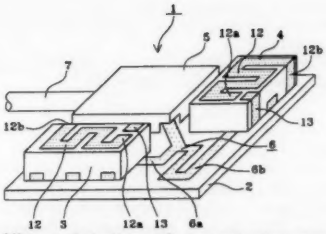
CIRCULAR-POLARIZATION ANTENNA

Yuichi Kushihi, and Masaru Shikata, both of Kanazawa, Japan, assignors to Murata Manufacturing Co., Ltd., Japan

Filed Apr. 15, 1998, Appl. No. 60,697
Claims priority, application Japan, Apr. 18, 1997, 9-101658; Dec. 19, 1997, 9-350444; Feb. 27, 1998, 10-047332
Int. Cl.[7] H01Q *1/24*
U.S. Cl. 343—853 **32 Claims**

1. A circular-polarization antenna, comprising:

a mounting substrate;



a pair of linear-polarization surface-mount antennas mounted on said mounting substrate each having a plane of polarization, the surface-mount antennas disposed such that the respective planes of polarization in a direction normal to the mounting surface of said mounting substrate are substantially perpendicular to each other;

a phase circuit connected to said pair of linear-polarization surface-mount antennas for at least one of sending thereto and receiving therefrom signals having the same amplitude and a phase difference of 90 degrees to each other;

an amplification circuit connected to said phase circuit;

a shield case covering said amplification circuit; and

said pair of linear-polarization surface-mount antennas, said phase circuit, said amplification circuit and said shield case being mounted on the same mounting surface of said mounting substrate, said phase circuit comprising a first microstrip line having a first end and a second end, the first end being divided into a pair of second and third microstrip lines, which are connected to a pair of surface-mount antennas respectively, and the second end being connected to the amplification circuit.

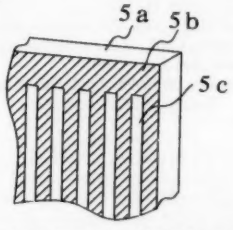
THREE-DIMENSIONAL DISPLAY

Goro Hamagishi, Toyonaka; Keiichi Kanatani, Hirakata; Shunichi Kishimoto, Kaizuka; Masahiro Sakata, Hirakata; Atsuhiro Yamashita, Osaka; Naoki Matsushita, Hirakata, and Ken Mashitani, Nara-ken, all of Japan, assignors to Sanyo Electric Co., Ltd., Osaka-fu, Japan

Continuation of application No. 08/340,392, Nov. 15, 1994, abandoned. This application Dec. 8, 1997, Appl. No. 987,140.
Claims priority, application Japan, Nov. 15, 1993, 5-284810; Apr. 27, 1994, 6-89859; Aug. 19, 1994, 6-195299
Int. Cl.[7] G09G *5/00*
U.S. Cl. 345—6 **9 Claims**



1. Three-dimensional display in which light passing through left eye pixels in a display panel and light passing through right eye pixels are emitted externally of the display panel toward an observer in a separated state, comprising:

an internal light source for emitting internal light in a plane shape;

a vertical striped filter having slits, transmitting the internal light from the internal light source, and barriers, screening the internal light emitted from the internal light source, alternately formed horizontally therein for bringing the internal light from the internal light source to a stripe shape, wherein

the barriers in said vertical striped filter are constituted by a reflector which reflects the internal light toward said internal light source; and

a display panel of a transmission type arranged on the light emission side of the vertical striped filter.

6,040,808

METHOD OF ADDRESSING A MAGNETIC MATRIX ELECTRON SOURCE FLAT PANEL DISPLAY

Andrew Knox, Kilbirnie, and John Beeteson, Skelmorlie, both of United Kingdom, assignors to International Business Machines Corporation, Armonk, N.Y.

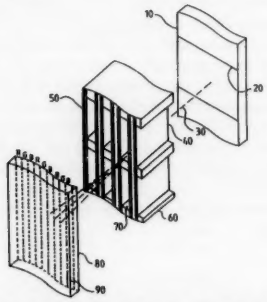
Division of application No. 08/695,856, Aug. 9, 1996. This application Oct. 22, 1997, Appl. No. 955,507.

Claims priority, application United Kingdom, Aug. 25, 1995, 9517465

This patent is subject to a terminal disclaimer.

Int. Cl.[7] H01J *29/70*

U.S. Cl. 345—13 **1 Claim**



1. A method for addressing pixels of a display screen having a plurality of pixels, each pixel having successively first, second, and third sub-pixels in line, the method comprising: generating a plurality of electron beams, each electron beam corresponding to a different one of the pixels; and, deflecting each electron beam to repetitively address the sub-pixels of the corresponding pixel in the sequence second pixel, first pixel, second pixel, third pixel.

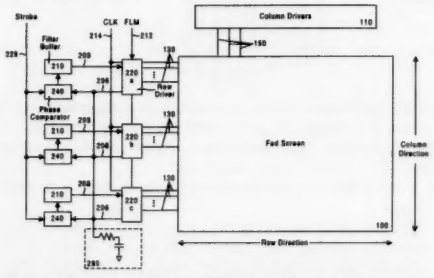
FED DISPLAY ROW DRIVER WITH CHIP-TO-CHIP SETTLING TIME MATCHING AND PHASE DETECTION CIRCUITS USED TO PREVENT UNEVEN OR NONUNIFORM BRIGHTNESS IN DISPLAY

Jay Friedman, Felton, Calif., assignor to Candescent Technologies Corporation, San Jose, Calif.

Filed Jan. 30, 1998, Appl. No. 16,829

Int. Cl.[7] G09G *3/32;5/00*

U.S. Cl. 345—74 **23 Claims**



1. A field emission display (FED) including a plurality of rows and a plurality of columns, the FED comprising:

a plurality of column drivers each coupled to provide modulated signals to the columns;

a plurality of row drivers coupled to activate and deactivate the rows one row at a time, wherein each row driver has a settling time, further wherein the row drivers are activated one at a time; and

a plurality of phase detection circuits each coupled to a respective one of the row drivers for comparing the settling time of each row driver with a pre-determined target settling time, the phase detection circuits for providing to the row drivers a phase signal representative of a time difference between the settling time and the target settling time, wherein each row driver adjusts the settling time to match the target settling time in response to the phase-signal.

DISPLAY DEVICE HAVING DISPLAY AND IMAGING PIXELS SANDWICHED BETWEEN SAME SUBSTRATES

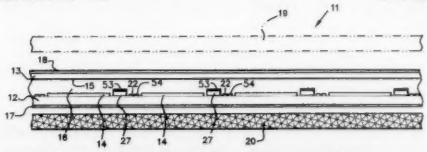
Toshio Nishimura, Kyoto, Japan, assignor to Sharp Kabushiki Kaisha, Osaka, Japan

Filed Jan. 7, 1997, Appl. No. 779,529

Claims priority, application Japan, Jan. 8, 1996, 8-000775

Int. Cl.[7] G09G *3/36*

U.S. Cl. 345—87 **19 Claims**



1. A television communication apparatus comprising:

(a) a displaying/imaging apparatus disposed to face an operator comprising:

a pair of spaced apart substrates which define an internal volume therebetween, at least one of the substrates being light transmissive;

a matrix of pixel electrodes mounted on a volume-oriented side of at least one of the substrates;

at least one light-receiving element of an imaging device mounted within the internal volume;

a discrete light receiving electrode having means for adjusting the amount of light received by the light-receiving element;

a dielectric interposed within the internal volume, the dielectric providing a display function in accordance with activation of the pixel electrodes;

(b) image driving means for receiving an image signal through a communication line and providing the pixel electrodes with the image signal to perform a display operation;

(c) a speaker;

(d) an audio driving circuit for receiving an audio signal through the communication line and driving the speaker;

(e) a microphone; and

(f) transmitting means for transmitting outputs from the outputting means and the microphone to the communication line.

6,040,811

THIN DISPLAY UNIT FOR PORTABLE COMPUTERS

Satwinder D. S. Malhi, Garland, Tex., assignor to Texas Instruments Incorporated, Dallas, Tex.

Filed Jun. 18, 1997, Appl. No. 877,773

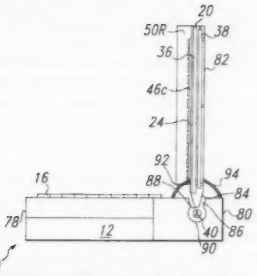
Int. Cl.[7] G09G *3/36*

U.S. Cl. 345—87 **3 Claims**

1. An electronic device having a display unit, said device comprising:

a base member;

a visual display including a viewing surface for displaying a visual image secured to said base member, said display including:



at lease one flap attached to the at least one edge of said display, and extending outwardly from said viewing surface in a direction substantially normal to said viewing surface;

electronic components housed within said at least one flap, said electronic components electrically coupled to said visual display; and

wherein said base member includes top, bottom and side surfaces, said at least one flap extending opposite a said side surface.

6,040,812

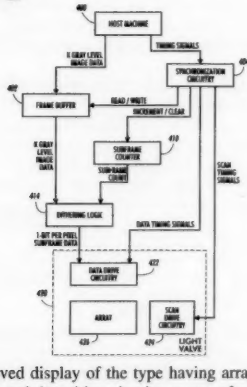
ACTIVE MATRIX DISPLAY WITH INTEGRATED DRIVE CIRCUITRY

Alan G. Lewis, Sunnyvale, Calif., assignor to Xerox Corporation, Stamford, Conn.

Filed Jun. 19, 1996, Appl. No. 666,033

Int. Cl.[7] G09G *3/36*

U.S. Cl. 345—89 **20 Claims**



1. An improved display of the type having array circuitry, scan drive circuitry, and data drive circuitry at a surface of a substrate; the array circuitry including scan lines, data lines, and, for each of a set of scan line/data line pairs, cell circuitry connected to the scan line and the data line; the cell circuitry including:

an electrooptical element for controlling presentation of a part of images; and

a switching element connected to receive a scan signal provided on the scan line by the scan drive circuitry; the scan signal being periodic at a scanning frequency, with each period including a duty interval during which the switching element electrically connects the data line and a data lead of an electrical component of the electrooptical element; the data drive circuitry providing a data signal on the data line that includes, during the duty interval, a signal segment with a voltage magnitude;

the improvement comprising, in combination:

the scan drive circuitry being structured to provide the scan signals with the scanning frequency being at least K times the lesser of a maximum response frequency of the electrooptical element and a normal human viewer's maximum perceptual frequency, where K is eight or more; and

the data drive circuitry being structured to receive digital input signals from digital input leads and, in response, to provide, during each duty interval, a signal segment with either a maximum or a minimum voltage magnitude;

the electrooptical element receiving, during each duty interval, either approximately the maximum voltage magnitude or approximately the minimum voltage magnitude and presenting, through time averaging, any of K distinct, continuous gray levels without perceptible flicker.

6,040,813

ACTIVE MATRIX LIQUID CRYSTAL DISPLAY DEVICE AND A METHOD FOR DRIVING THE SAME

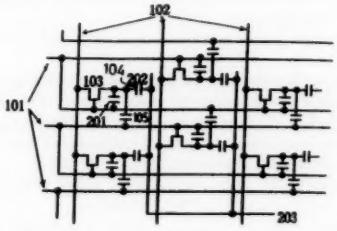
Yoneharu Takubo, Ishikawa, Japan, assignor to Matsushita Electric Industrial Co., Ltd., Osaka, Japan

Filed Dec. 9, 1996, Appl. No. 762,563

Claims priority, application Japan, Dec. 12, 1995, 7-322106

Int. Cl.[7] G09G *3/36*

U.S. Cl. 345—92 **11 Claims**



1. An active matrix liquid crystal display device comprising a plurality of scanning lines and a plurality of signal lines which are disposed in a matrix to form combinations of one of said plurality of scanning lines and of one of said plurality of signal lines, said device further including a single switching element and a pixel electrode corresponding to each of said combinations of a first scanning line and a signal line; wherein said first scanning line corresponding to each of said pixel electrodes is located on both upper and lower sides of said pixel electrode, said switching element is provided on a single side of said first scanning line of each pixel, and an additive capacitance is formed between said pixel electrode and a second scanning line, said second scanning line being a scanning line other than said first scanning line in the combinations corresponding to said pixel electrode; and wherein a scanning line on which the additive capacitance is formed between said second scanning line and said pixel electrode associated with said first scanning line differs in subsequent scanning lines relative to said signal line.

6,040,814

ACTIVE-MATRIX LIQUID CRYSTAL DISPLAY AND METHOD OF DRIVING SAME

Hiroshi Murakami; Koji Yoshioka; Keizo Morita; Masafumi Itokazu; Ken-ichi Nakabayashi; Akira Yamamoto, and Munehiro Haraguchi, all of Kawasaki, Japan, assignors to Fujitsu Limited, Kawasaki, Japan

Filed May 13, 1996, Appl. No. 647,685

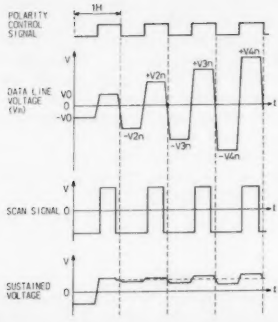
Claims priority, application Japan, Sep. 19, 1995, 7-239773

Int. Cl.[7] G09G *3/36*

U.S. Cl. 345—94 **47 Claims**

1. An active-matrix LCD comprising:

a liquid crystal panel having data lines arranged in parallel with one another, scan lines arranged orthogonally to the data lines, and liquid crystal cells arranged at the intersections of the data and scan lines, respectively, each of the cells having a cell electrode and switching means that is arranged between and



connected to the cell electrode and a corresponding one of the data lines, the conduction of the switching means being controlled in response to a scan pulse applied to a corresponding one of the scan lines;

a data driver for applying data signals to the data lines, respectively, so that the data signals are written to the corresponding ones of the cells; and

a scan driver for applying the scan pulse sequentially to the scan lines,

the data driver applying positive and negative signals that are opposite to each other with respect to a reference level, to each of the data lines within the period of the scan pulse to reduce an influence of parasitic capacitance between the cell electrode and the data lines.

6,040,815

LCD DRIVE IC WITH PIXEL INVERSION OPERATION

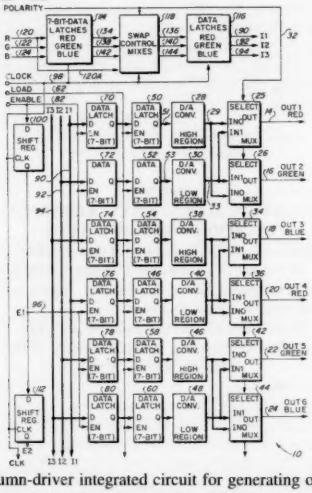
Richard Alexander Erhart, Chandler, and James Richard Kozicek, Mesa, both of Ariz., assignors to Vivid Semiconductor, Inc., Chandler, Ariz.

Continuation of application No. 08/715,788, Sep. 19, 1996, Pat. No. 5,754,156. This application Feb. 20, 1998, Appl. No. 27,513.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] G09G *3/36*

U.S. Cl. 345—98 **1 Claim**



1. A column-driver integrated circuit for generating output voltages to be applied to the columns of an LCD display, such output voltages falling within either an upper voltage range or a lower voltage range, said column-driver integrated circuit comprising in combination:

a. a first digital-to-analog converter circuit having a plurality of input terminals for receiving a first digital data word corresponding to a voltage within the upper voltage range, said first digital-to-analog converter circuit including a first analog voltage terminal for providing a first analog voltage signal within the upper voltage range;

b. a second digital-to-analog converter circuit having a plurality of input terminals for receiving a second digital data word corresponding to a voltage within the lower voltage range, said second digital-to-analog converter circuit including a second analog voltage terminal for providing a second analog voltage signal within the lower voltage range;

c. a first column output terminal for providing an analog output voltage to drive a first column within the LCD display;

d. a second column output terminal for providing an analog output voltage to drive a second column within the LCD display; and

e. analog multiplexer circuitry coupled to said first and second analog voltage terminals for receiving the first and second analog voltage signals, said analog multiplexer circuitry also being coupled to said first and second column output terminals, said analog multiplexer circuitry transmitting, during a first column driving cycle, the first analog voltage signal to said first column output terminal and the second analog voltage signal to said second column output terminal, and said analog multiplexer circuitry transmitting, during a second column driving cycle, the second analog voltage signal to said first column output terminal.

6,040,816

ACTIVE MATRIX DISPLAY DEVICE WITH PHASE-ADJUSTED SAMPLING PULSES

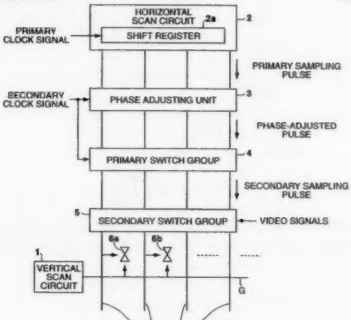
Katsuhide Uchino, Kanagawa, Japan, assignor to Sony Corporation, Japan

Filed Nov. 4, 1997, Appl. No. 964,012

Claims priority, application Japan, Nov. 8, 1996, P08-296045

Int. Cl.[7] G09G *3/36*

U.S. Cl. 345—99 **16 Claims**



1. An active matrix display device including:

a pixel unit including gate lines, signal lines and pixels which are arranged at respective intersecting portions of said gate lines and said signal lines;

a vertical scan circuit for successively scanning said gate lines to select one row of pixels every horizontal period;

a horizontal scan circuit for supplying video signals to the signal lines to write the video signals in the pixels of the selected row, said horizontal scan circuit having a shift register which operates in accordance with a primary clock signal to output primary sampling pulses;

a phase adjusting unit for performing phase adjustment on the primary sampling pulses in accordance with a secondary clock signal to output phase-adjusted pulses;

a primary switch group which is connected to output stages of said phase adjusting unit and which performs a switching operation in accordance with the phase-adjusted pulses to sample the primary clock signal or the secondary clock signal and generate secondary sampling pulses; and

a secondary switch group which is connected to one end of each of said signal lines and performs a switching operation in accordance with the secondary sampling pulses to supply the video signals to said signal lines.

6,040,817

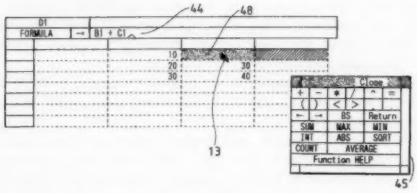
DISPLAY APPARATUS AND METHOD FOR DISPLAYING WINDOWS ON A DISPLAY

Akihiro Sumikawa, Saitama, Japan, assignor to Fuji Xerox Co., Ltd., Tokyo, Japan

Continuation of application No. 07/896,887, Jun. 10, 1992, abandoned, which is a continuation of application No. 07/595,802, Oct. 10, 1990, abandoned. This application Feb. 3, 1994, Appl. No. 193,356.

Int. Cl.[7] G09G *5/00*

U.S. Cl. 345—113 **11 Claims**



1. A display apparatus comprising:

a display;

means for displaying a first window containing first information and a second window containing second information on the display;

cursor means for indicating a first point on the display;

means for positioning said second window on said display at a selected horizontal distance and a selected vertical distance from said first point, said second window being movable with said first point while maintaining said selected horizontal and vertical distances from said first point when said first point is moved to other positions on the display, said second window excluding the first point.

6,040,818

METHOD AND APPARATUS FOR DISPLAYING PIXELS ON A DISPLAY DEVICE

Toshiya Minami, Sagamihara; Hiroshi Satoh, Machida, and Takanobu Satoh, Yokohama, all of Japan, assignors to International Business Machines Corporation, Armonk, N.Y.

Continuation of application No. 07/879,075, May 1, 1992, abandoned, which is a continuation of application No. 07/565,598, Aug. 10, 1990, abandoned. This application Jul. 12, 1994, Appl. No. 274,133.

Claims priority, application Japan, Nov. 8, 1989, 1-207040

Int. Cl.[7] G09G *5/10*

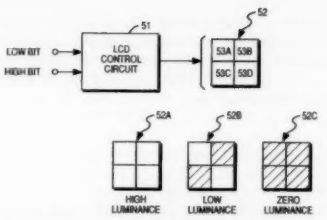
U.S. Cl. 345—147 **24 Claims**

1. A device for generating pixel luminance signals corresponding to text to be displayed comprising:

a) means for selectively generating a normal mode signal for selected first text and a high intensity mode signal for highlighting selected second text concurrently displayed with said first text;

b) means for receiving an intensity signal specifying a first mode or a second mode; and

c) means, coupled to the means for receiving, for generating background pixel luminance signals of a first luminance level



and, in the first mode, for decreasing contrast while increasing overall luminance, relative to said second mode, of said first text by generating foreground pixel luminance signals of a second luminance level with less luminance than the first luminance level and, in the second mode, for increasing contrast while decreasing overall luminance of said second text to be highlighted by generating foreground pixel luminance signals of a third luminance level with less luminance than the second luminance level, whereby said first text in the first mode and said second text in the second mode are displayed concurrently.

DISPLAY APPARATUS FOR REDUCING DISTORTION OF A DISPLAYED IMAGE

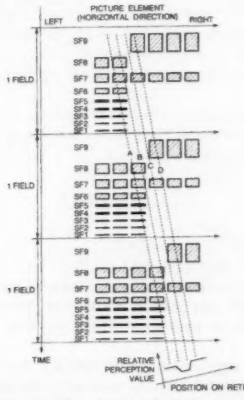
Jun Someya, Tokyo, Japan, assignor to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Jun. 9, 1997, Appl. No. 871,409

Claims priority, application Japan, Jun. 11, 1996, 96-149158

Int. Cl.[7] G09G *5/10*

U.S. Cl. 345—147 **25 Claims**



1. A display apparatus, in which one field is divided into a plurality of sub-fields, and a relative ratio of luminescent time of each sub-field is previously determined so that by determining a combination of luminescence and non-luminescence in respective sub-fields for a picture element, a gradation level representing by a total sum of said luminescent time in said one filed is established to provide a half-tone display, comprising:

code conversion means for converting a picture signal into a coded signal including a plurality of bits which indicate said combination of luminescence and non-luminescence in said respective sub-fields,

wherein, when a gradation level of said picture element changes from a first level in which a first display is performed by luminescence in a first sub-field which has a first relative ratio of luminescent time to a second level in which a second display is performed by luminescence in a second sub-field which has a second relative ratio of luminescent time which is greater than said first relative ratio or when said gradation

level changes from said second level to said first level, said code conversion means provides a code conversion when said gradation level is in said second level, and a third display is performed by luminescence in a third sub-field which has a third relative ratio of luminescent time which is not greater than said first relative ratio.

6,040,820

TRACK BALL INPUT DEVICE

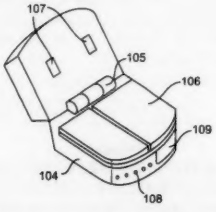
Dong Joon Choi, Daejeon, Rep. of Korea, assignor to LG Electronics Inc., Seoul, Rep. of Korea

Filed Sep. 11, 1997, Appl. No. 927,273

Claims priority, application Rep. of Korea, Sep. 12, 1996, 96-29058

Int. Cl.[7] **G09G** *5/00*

U.S. Cl. 345—156 **8 Claims**



1. An input device used as a track ball mouse and a ball mouse, comprising:

a first housing including a ball and a track ball button;

a second housing, including a ball mouse button, the first housing hinged to the second housing to be selectively usable in a track ball position and a ball mouse position, said track ball position including a position where the first and second housings are folded upon one another, said ball mouse position including a position where the first and second housings are unfolded; and

a controlling unit sensing a rotating direction of the ball and controlling a movement of a pointer on a screen based on the rotating direction of the ball.

6,040,821

CURSOR TRACKING

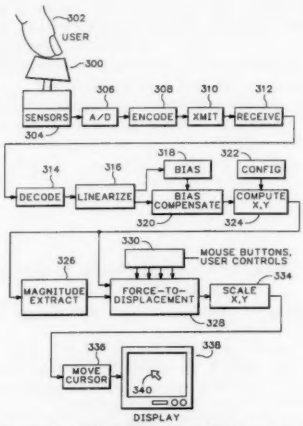
Patrick J. Franz, Portland; Philip D. Biehl, Tigard; David H. Straayer, Colton, and Robert H. Dodier, Portland, all of Oreg., assignors to InControl Solutions, Inc., Beaverton, Oreg.

Continuation of application No. 07/688,921, Apr. 19, 1991, abandoned, which is a continuation-in-part of application No. 07/649,711, Feb. 1, 1991, Pat. No. 5,189,403, which is a continuation-in-part of application No. 07/412,680, Sep. 26, 1989, Pat. No. 5,124,689, said application No. 07/688,921 is a continuation-in-part of application No. 07/557,546, Jul. 24, 1990, Pat. No. 5,231,386, said application No. 07/688,921 is a continuation-in-part of application No. 07/672,641, Mar. 18, 1991, Pat. No. 5,252,971. This application Jan. 19, 1993, Appl. No. 6,139.

Int. Cl.[7] **G09G** *5/08*

U.S. Cl. 345—159 **27 Claims**

1. In an integrated keyboard coupled to a display having a cursor, the keyboard having an array of typing keyswitches that includes a multi-purpose pointing key and a plurality of force sensors coupled to the pointing key, each force sensor having an associated direction and the force sensors providing sensor signals having a non-inear relationship to force applied to the force sensors, a method of acquiring pointing signals for repositioning the cursor comprising the steps of:



providing means in the keyboard for selecting one at a time of a typing mode of operation for acquiring typing signals and a pointing mode of operation for acquiring pointing signals;

when the keyboard is not in pointing mode, periodically scanning each of the force sensors to acquire a corresponding force signal defining a sensor bias signal;

during a pointing operation, periodically scanning each of the force sensors to acquire a corresponding force signal defining a pointing signal;

linearizing the acquired sensor bias signals and the acquired pointing signals so that the linearized signals have a generally linear relationship to force applied to the sensors at the time said signals were acquired;

deducting each linearized force sensor bias signal from the corresponding linearized pointing signal to form respective net pointing signals;

combining the net pointing signals according to the associated directions of the corresponding force sensors; and

repositioning the cursor responsive to the combined net pointing signals.

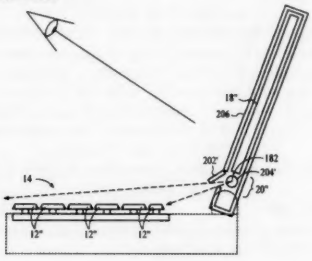
ILLUMINATED KEYBOARD SYSTEM

Mark R. Decker, 2245 Palmer Dr., St. Helena, Calif. 94574

Continuation-in-part of application No. 08/502,913, Jul. 17, 1995, Pat. No. 5,684,513. This application Oct. 29, 1997, Appl. No. 959,674.

Int. Cl.[7] **G09G** *5/00;3/36;* **H03K** *17/94*

U.S. Cl. 345—168 **15 Claims**



1. In a device which includes at least one key pad and a panel for displaying information responsive to the pressing of at least one keypad, an illuminated keypad system comprising

a light source within the panel for illuminating the panel,

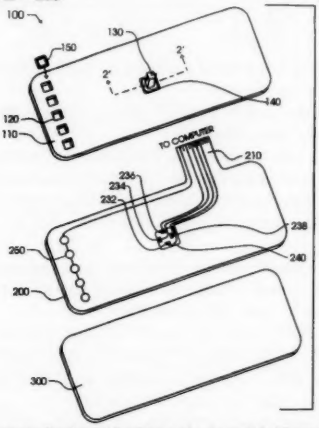
a window for allowing a portion of the light from the light source to illuminate at least one keypad.

6,040,823

COMPUTER KEYBOARD HAVING TOP MOLDED HOUSING WITH RIGID POINTING STICK INTEGRAL AND NORMAL TO FRONT SURFACE OF HOUSING AS ONE UNIT PART TO BE USED WITH STRAIN SENSORS IN NAVIGATIONAL CONTROL

Lewis L. Seffernick, Adams, and David L. Poole, Portland, both of Ind., assignors to CTS, Elkhatt, Ind.

Filed Dec. 2, 1997, Appl. No. 982,619
Int. Cl.[7] G09G *5/00;5/08;* **H03K** *17/94*
U.S. Cl. 345—168 **15 Claims**



1. A computer keyboard having a plastic molded housing having a first major surface through which keys pass to a wiring layer to control electrical connection and further having a backing plate for structural support and protection, wherein the improvement comprises in further combination a rigid projection extending normal to said first major surface between said keys;

a strain sensor adhered to said molded housing adjacent said rigid projection; and

a force concentrator formed within said plastic molded housing adjacent said rigid projection;

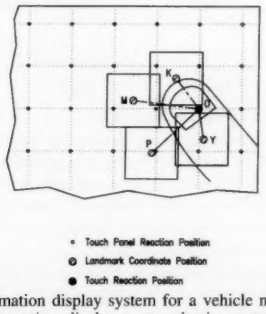
wherein said rigid projection, force concentrator and housing are all formed during a single molding process as an integral unit.

6,040,824

INFORMATION DISPLAY SYSTEM WITH TOUCH PANEL

Kazuteru Maekawa; Yukiyoshi Suzuki, and Takeshi Yanagikubo, all of Anjo, Japan, assignors to Aisin AW Co., Ltd., Japan

Filed Jun. 30, 1997, Appl. No. 885,138
Claims priority, application Japan, Jul. 31, 1996, 8-201982
Int. Cl.[7] G09G *5/00*
U.S. Cl. 345—173 **15 Claims**



1. An information display system for a vehicle navigation system, said information display system having a touch panel for selecting an item by touching the selected item among a plurality of items displayed on a single display screen, comprising

storing means for storing display data for displaying the plurality of items including one set of typical coordinates indicating a position for each of the items;

said plurality of items displayed on the display screen being marks displayed on a map so that the coordinates of the displayed items are the locations of the marks on the map;

calculation means for calculating coordinate differences between the typical coordinates for each of the plurality of displayed items and a set of coordinates of a position of a single touch;

select means for selecting the selected item by determining which item of the plurality of displayed items has the least calculated coordinate difference;

deciding means for deciding whether or not a present touch is being made to correct an erroneous selection made from a previous touch; and

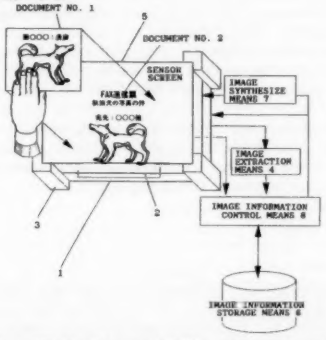
probability reducing means, responsive to a decision that the present touch is being made to correct an erroneous selection, for reducing a probability of said select means selecting the previously selected item.

6,040,825

INPUT/DISPLAY INTEGRATED INFORMATION PROCESSING DEVICE

Hiroshi Yamamoto, Katano; Yasuharu Shimeki, Suita; Kazuhiro Kayashima, Hirakata; Susumu Maruno, Osaka; Makoto Fujimoto, Ibaraki, and Yoshihiro Kojima, Kobe, all of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Japan

Continuation of application No. 08/337,372, Nov. 8, 1994, Pat. No. 5,742,279. This application Sep. 30, 1997, Appl. No. 941,299.
Claims priority, application Japan, Nov. 8, 1993, 5-278617; Apr. 12, 1994, 6-073201; Jul. 29, 1994, 6-178079; Aug. 3, 1994, 6-182288; Aug. 12, 1994, 6-190465
Int. Cl.[7] G09G *5/00*
U.S. Cl. 345—173 **5 Claims**



1. An input/display integrated information processing device, comprising:

image display means for displaying image information;

image input means for inputting two-dimensional image information from an item having a two-dimensional image when the item is placed upon said image input means, the two dimensional image having been present on the item prior to placing the item on said input means;

a visual coincidence structure for integrally combining a display screen of said image display means with an input screen of said image input means so as to establish visual coincidence of said screens as viewed by an user;

image extraction means for extracting a portion of the two-dimensional image information on said image input means;

image information storage means for storing two-dimensional image information extracted by said image extraction means; and

image information control means for controlling input/output operations of the two-dimensional image information;

wherein said image input means scans in the two-dimensional image information; and

wherein said image extraction means includes object image extraction means for extracting only image information in a portion corresponding to a surface of the item placed upon the image input means from the two-dimensional image information scanned by the image input means.

6,040,826

DRIVING CIRCUIT FOR DRIVING SIMPLE MATRIX TYPE DISPLAY APPARATUS

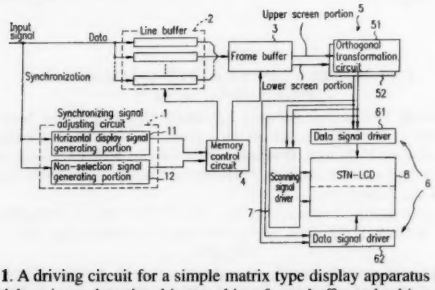
Hiroyuki Furukawa, Ueno, Japan, assignor to Sharp Kabushiki Kaisha, Osaka, Japan

Filed Oct. 27, 1997, Appl. No. 958,213

Claims priority, application Japan, Oct. 30, 1996, 8-288855

Int. Cl.[7] G09G *5/00*

U.S. Cl. 345—196 **8 Claims**



1. A driving circuit for a simple matrix type display apparatus in which an input data signal is stored in a frame buffer and subjected to orthogonal transformation, said driving circuit comprising:

a plurality of line buffers having a number equal to a number of selected scanning lines selected in accordance with a multiple-scanning line simultaneous selection method, each of said plurality of line buffers having a first region and a second region, wherein while one of the first and second regions is used for writing, the other region is used for reading; and

a frame buffer which enables data from the plurality of line buffers to be written during a plurality of horizontal non-display periods and enables all of the selected scanning lines of data to be written at a same time, wherein the number of the selected scanning lines is equal to the number of the plurality of horizontal non-display periods.

LIQUID CRYSTAL DISPLAY

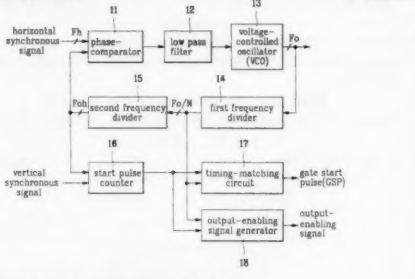
Ki Pan Park, Seoul, Rep. of Korea, assignor to LG Electronics Inc., Seoul, Rep. of Korea

Filed May 15, 1997, Appl. No. 856,576

Claims priority, application Rep. of Korea, May 15, 1996, 96-16137

Int. Cl.[7] G09G *5/00*

U.S. Cl. 345—213 **8 Claims**



1. A liquid display device comprising:

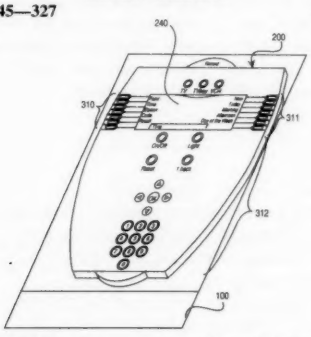
a frequency division circuit for receiving a horizontal synchronous signal Fh and for providing a signal Fo/N and a signal Foh, said Fo/N signal having a frequency equal to at least twice the frequency of said horizontal synchronous signal Fh, and said signal Foh having a frequency equal to approximately said signal Fh; and

a gate driver circuit for receiving said signal Fo/N as a clock thereof and for producing at least two gate line pulses per one period of said signal Fh.

6,040,829
PERSONAL NAVIGATOR SYSTEM

Clemens Croy, Staufenstrasse 39, 60323 Frankfurt am Main, and Rainer F.R. Bermbach, Billrothstrasse 7, D-38302 Wolfenbüttel, both of Germany

Filed May 13, 1998, Appl. No. 78,604
Int. Cl.[7] G06F *3/00*
U.S. Cl. 345—327 **40 Claims**



1. A control device for monitoring and controlling an electronic device, comprising:

a display component for displaying a dual partition selection list, the dual partition selection list having a first selection list and a second selection list, at least a portion of the first selection list and at least a portion of the second selection list being at least partly concurrently displayable on the display component; and

a selection component for selecting elements from the dual partition selection list, the selection component having a first selection component for selecting elements from the first selection list, a selection made from the first selection list using the first selection component causing a display of corresponding items in the second selection list while the first selection list is at least partly concurrently displayed, a selection made from the second selection list using the second selection component causing a display of corresponding items in the first selection list while the second selection list is at least partly concurrently displayed.

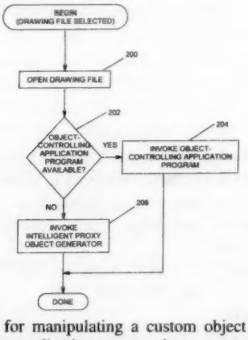
INTELLIGENT PROXY OBJECTS

Keshaba Chandra Sahoo, San Rafael, Calif., assignor to Autodesk, Inc., San Rafael, Calif.

Filed Jun. 20, 1997, Appl. No. 880,184
Int. Cl.[7] G06F *15/00;9/44*
U.S. Cl. 345—335 **27 Claims**



1. A method for manipulating a custom object created by an object-controlling application program in a parent application program executed by an object-oriented computer system, comprising the steps of:

receiving an indication that the custom object is to be manipulated;

attempting to load the object-controlling application program that created the custom object from the parent application program, so that the object-controlling application is available to manipulate the custom object;

determining in the parent application program that the object-controlling application program is not available to manipulate the custom object;

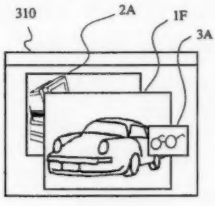
creating an intelligent proxy object in the parent application program as a surrogate for the custom object when it is determined that the object-controlling application program is not available; and

manipulating the intelligent proxy object rather than the custom object using messages sent to the intelligent proxy object, wherein the object-controlling application program defines the messages to which the intelligent proxy object can respond when the object-controlling application program is not available.

6,040,831
APPARATUS FOR SPACIALLY CHANGING SOUND WITH DISPLAY LOCATION AND WINDOW SIZE

Shinsuke Nishida, Tokyo, Japan, assignor to Fourie Inc., Tokyo, Japan

PCT No. PCT/JP96/01832, § 371 Date Feb. 21, 1997, § 102(e) Date Feb. 21, 1997, PCT Pub. No. WO97/03433, PCT Pub. Date Jan. 30, 1997
PCT Filed Jul. 1, 1996, Appl. No. 793,625
Claims priority, application Japan, Jul. 13, 1995, 7-200351
Int. Cl.[7] G06F *3/14*
U.S. Cl. 345—340 **3 Claims**



1. An apparatus for presenting a picture along with sound comprising:

a display for displaying pictures;

a speaker for producing sounds;

data supply means for supplying plural sets of presentation information, each set of presentation information including picture data for allowing the display to display a picture and sound data for allowing the speaker to produce sound;

input means for inputting respective designated positions and respective designated sizes for respective picture data; and

control means for controlling the display so that pictures are displayed based on picture data supplied from the data supply means and for controlling the speaker so that sounds are produced based on sound data supplied from the data supply means;

said control means having;

a first function to adjust respective magnifications of the picture data so that pictures are displayed in respective display areas having said respective designated sizes;

a second function to display individual pictures in said respective display areas located at said respective designated positions on a screen on the basis of adjusted picture data, a part of a picture being concealed by other pictures when they are overlapped;

a third function to determine actual display areas which are not concealed on the screen for said individual pictures; and

a fourth function to adjust volumes of the sound data so that sounds related to said individual pictures are respectively

produced with volumes corresponding to said actual display areas of said individual pictures.

6,040,832

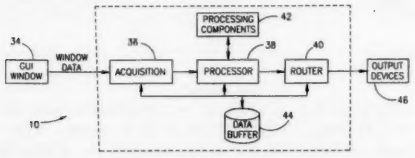
APPARATUS FOR AND METHOD OF ACQUIRING, PROCESSING AND ROUTING DATA CONTAINED IN A GUI WINDOW

Illan Poreh, Havazelet-Hasharon; Avner Algom, Tel Aviv; Alexander Vaindiner, Or Akiva, and Ilya Shpilberg, Netanya, all of Israel, assignors to AnySoft Ltd., Herzlia, Israel

Division of application No. 08/540,530, Oct. 10, 1995. This application Aug. 10, 1998, Appl. No. 132,163.

Int. Cl.[7] G06F *17/00*

U.S. Cl. 345—340 **26 Claims**



1. A graphical user interface window data processing system comprising:

acquisition means associated with a first application program for capturing data in a standard graphical user interface format from a graphical user interface window associated with a second application program, wherein at least a portion of said format comprises a text format, said acquisition means storing said data in said standard graphical user interface format in a data buffer;

a processor for processing said data stored in said data buffer; and

a router for transmitting said data processed by said processor to at least one output device.

6,040,833

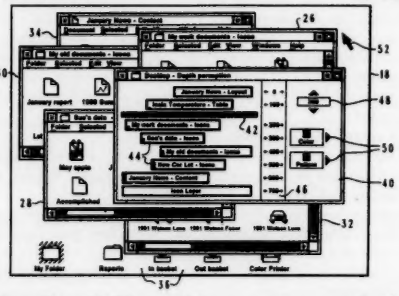
METHOD AND SYSTEM FOR DISPLAY MANIPULATION OF MULTIPLE APPLICATIONS IN A DATA PROCESSING SYSTEM

Susan F. Henshaw, Cary, N.C., assignor to International Business Machines Corp., Armonk, N.Y.

Filed Dec. 10, 1993, Appl. No. 165,430

Int. Cl.[7] G06F *3/14*

U.S. Cl. 345—344 **21 Claims**



1. A graphic method for permitting access to any one of multiple windows displayed in a graphical user interface and which are relatively positioned in an order from a bottom position to a top position, said method comprising the steps of:

displaying a depth control object within said graphical user interface, said depth control object including a plurality of graphic elements arranged in said order, each of said plurality of graphic elements corresponding to one of said windows; and

altering said display of said windows within said graphical user interface in response to a selection by a user of a particular one of said graphic elements within said depth control object to display a selected window corresponding to said particular one of said graphic elements and each window relatively positioned beneath said selected window.

6,040,834

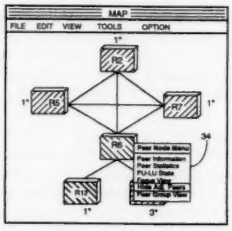
CUSTOMIZABLE USER INTERFACE FOR NETWORK NAVIGATION AND MANAGEMENT

Sunil Jain, and Robert Williams, both of Cary, N.C., assignors to Cisco Technology, Inc., San Jose, Calif.

Filed Dec. 31, 1996, Appl. No. 775,289

Int. Cl.[7] G06F *3/14;15/177*

U.S. Cl. 345—356 **31 Claims**



1. A graphical user interface for network management comprising:

a repository of information pertaining to components which form a computer network and connections to those components;

means for receiving a user selection of two or more of the components, which comprise less than all of the components whose information is stored in said repository; and

means responsive to a user selection for displaying a topological map of the computer network comprising (a) only the selected components, (b) logical connections between the selected components, and (c) an indicator which identifies a relationship between each selected component and non-displayed components which are logically connected to the selected components.

6,040,835

SYSTEM FOR DEPICTING SURFACES USING VOLUMETRIC DISTANCE MAPS

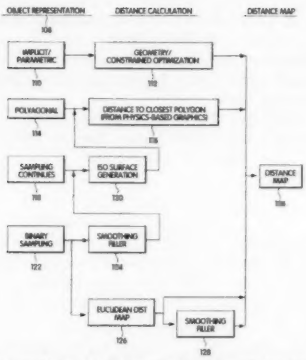
Sarah F. Gibson, Arlington, Mass., assignor to Mitsubishi Electric Information Technology Center America, Inl. (ITA), Cambridge, Mass.

Filed Nov. 6, 1997, Appl. No. 965,569

Int. Cl.[7] G06T *15/00*

U.S. Cl. 345—424 **8 Claims**

1. In a volumetric data representation system for graphical objects in which graphical objects are generated from volumetric data elements,



means for encoding the distance of a volumetric data element to the nearest object surface point; and,

means responsive to the distance of said volumetric data element to the nearest object surface point for estimating a surface normal thereof.

6,040,836

MODELLING METHOD, MODELLING SYSTEM, AND COMPUTER MEMORY PRODUCT OF THE SAME

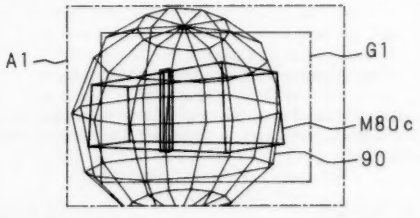
Shuichi Shiitani, and Masaki Watanabe, both of Kawasaki, Japan, assignors to Fujitsu Limited, Kawasaki, Japan

Filed Apr. 30, 1996, Appl. No. 640,438

Claims priority, application Japan, Sep. 29, 1995, 7-253056

Int. Cl.[7] G06T *15/10*

U.S. Cl. 345—427 **21 Claims**



1. A modelling method for creating a three-dimensional model of an object in a screen, comprising the steps of:

positioning a two-dimensional image within a virtual three-dimensional space, the two-dimensional image corresponding to a real three-dimensional object;

dividing said two-dimensional image into plural portions;

positioning first and second existing models within a virtual three-dimensional space, the first and the second existing models corresponding to one and the other of said portions of said two-dimensional image;

creating a first partial model and a second partial model by correcting said first and said second existing models so that a projection image of each of said first and said second existing models accords with each of said portions of said two-dimensional image; and

combining said first partial model and said second partial model so that projection images of said first partial model and said second partial model accord with the two-dimensional image of said real three-dimensional object.

6,040,837

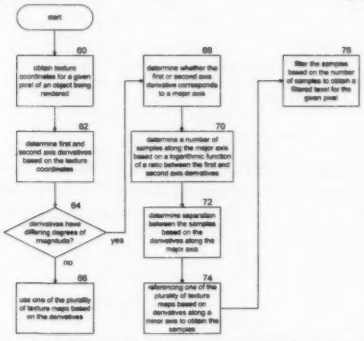
METHOD AND APPARATUS FOR SPACE VARIABLE TEXTURE FILTERING

Daniel Wong, North York, and Milivoje Aleksic, Richmond Hill, both of Canada, assignors to ATI Technologies, Inc., Thornhill, Canada

Filed Apr. 22, 1998, Appl. No. 64,630

Int. Cl.[7] G06T *17/00*

U.S. Cl. 345—430 **42 Claims**



start
60
obtain texture coordinates for a given pixel of an object being rendered
62
determine first and second axis derivatives based on the texture coordinates
64
derivatives have differing degrees of magnitude?
yes
no
66
use one of the plurality of texture maps based on the derivatives
68
determine whether the first or second axis derivative corresponds to a major axis
70
determine a number of samples along the major axis based on a logarithmic function of a ratio between the first and second axis derivatives
72
determine separation between the samples based on the derivatives along the major axis
74
referencing one of the plurality of texture maps based on derivatives along a minor axis to obtain the samples
76
filter the samples based on the number of samples to obtain a filtered texel for the given pixel

1. A method for space variant texture filtering, the method comprises the steps of:

a) obtaining texture coordinates for a given pixel of an object being rendered;

b) determining a first axis derivative and a second axis derivative based on the texture coordinates;

c) when the first and second axis derivatives have differing degrees of magnitude, determining whether the first axis derivative or the second axis derivative corresponds to a major axis;

d) determining a number of samples along the major axis based on a logarithmic function of a ratio between the first and second axis derivatives;

e) determining separation between the samples based on derivatives along the major axis;

f) referencing one of a plurality of related texture maps based on derivatives along a minor axis to obtain the samples; and

g) filtering the samples based on the number of samples to obtain a filtered texel for the given pixel.

6,040,838

GRAPHIC STATE PROCESSING

Richard D. Webb, Sunnyvale, and Ryoji Watanabe, Cupertino, both of Calif., assignors to Obejct Technology Licensing Corporation, Cupertino, Calif.

Filed Nov. 5, 1993, Appl. No. 148,052

Int. Cl.[7] G06F *15/00*

U.S. Cl. 345—433 **47 Claims**

1. An apparatus for drawing a plurality of graphic images on a graphic device, the apparatus comprising:

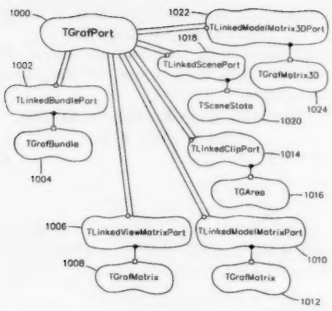
(a) processor means;

(b) storage means attached to the processor means;

(c) a graphic device under the control of the processor means;

(d) a plurality of graphic objects in the storage means, the plurality of graphic objects being arranged in a hierarchy, each graphic object comprising data and a member function for drawing an associated one of the plurality of graphic images on the graphic device means;

(e) a graphic state object in the storage means associated with each graphic object, the graphic state object containing data needed to draw the associated one graphic image; and



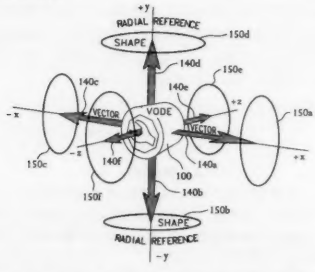
(f) application means for arranging the graphic state objects into a sequence and for processing the sequence of graphic state objects to draw one of the plurality of graphic images on the graphic device.

6,040,839

REFERENCING SYSTEM AND METHOD FOR THREE-DIMENSIONAL OBJECTS DISPLAYED ON A COMPUTER GENERATED DISPLAY

Benjamin J. Van Eldik, 16 Mattingley Court, and Martin Coffey, 22 Mattingley Court, both of Banks ACT 2906, Australia

Filed Jan. 31, 1997, Appl. No. 792,502
Int. Cl.[7] G06T *17/40*
U.S. Cl. 345—433 **30 Claims**



1. A referencing system for determining relative distances and locations of three-dimensional objects in an object field that can be displayed on a computer generated display, to enable the objects to be connected or otherwise manipulated relative to one another, comprising:

a) one or more reference points for objects found on the object field; and

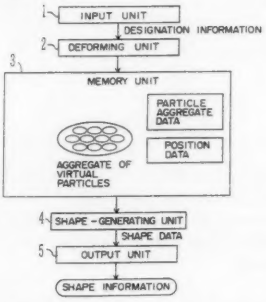
b) a referencing shape projecting subsystem for projecting from a reference point, upon activation of that reference point, one or more referencing shapes that extend along vectors radiating from the reference point, which referencing shapes extend to other positions of the object field, such referencing shapes thereby indicating relationships between objects in the object field.

6,040,840

VIRTUAL CLAY SYSTEM AND ITS METHOD OF SIMULATION

Takeshi Koshiba; Masahiro Matsuoka, and Kuniharu Takayama, all of Kawasaki, Japan, assignors to Fujitsu Limited, Kawasaki, Japan

Filed Feb. 27, 1998, Appl. No. 31,916
Claims priority, application Japan, May 28, 1997, 9-137359
Int. Cl.[7] G06F *15/00*
U.S. Cl. 345—441 **17 Claims**



1. A virtual clay system utilizing a computer, comprising:

memory means for storing particle aggregate data representing an aggregate of virtual particles and position data representing a position of each particle in the aggregate;

shape-generating means for generating shape data representing a shape of the aggregate;

input means for inputting designation information on the aggregate from a user;

deforming means for dynamically changing the shape of the aggregate by modifying a position of at least some of the particles in the aggregate according to the designation information; and

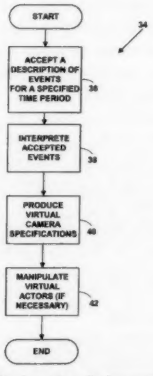
output means for outputting shape information based on the shape data.

6,040,841

METHOD AND SYSTEM FOR VIRTUAL CINEMATOGRAPHY

Michael F. Cohen; Li-wei He, and David H. Salesin, all of Seattle, Wash., assignors to Microsoft Corporation, Redmond, Wash.

Filed Aug. 2, 1996, Appl. No. 691,996
Int. Cl.[7] G06T *15/70*
U.S. Cl. 345—473 **31 Claims**



1. A method for displaying virtual cinematography on a display, the method comprising:

receiving cinematographic events in real time using a real-time application module;

interpreting the received cinematographic events in real time using cinematographic logic; and

automatically producing a camera view specification from the interpreted cinematographic events, where the camera specification is used to view a virtual scene on the display.

6,040,842

PROCESS CONTROL WITH EVALUATION OF STORED REFERENTIAL EXPRESSIONS IN A MULTI-AGENT SYSTEM ADAPTED FOR USE WITH VIRTUAL ACTORS WHICH ARE DIRECTED BY SEQUENTIALLY ENABLED SCRIPT AGENTS

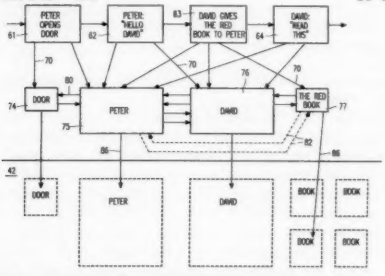
Peter R. Wavish, West Hoathly, and David M. Connah, Reigate, both of United Kingdom, assignors to U.S. Philips Corporation, New York, N.Y.

Filed Apr. 29, 1997, Appl. No. 840,366

Claims priority, application United Kingdom, May 2, 1996, 9609197

Int. Cl.[7] G06T *13/00;15/70;* **G06F** *15/18*

U.S. Cl. 345—473 **16 Claims**



14. A process control apparatus comprising:

a rule-based data processing apparatus comprising:

a processor coupled with first and second memory means, said first memory means having stored therein first and second groups of agents, each group of agents being defined by respective sets of rules, said processor being arranged to run said respective sets of rules in parallel, and said second memory means having stored therein data defining a plurality of objects, at least some of the data having a respective qualifier term associated therewith,

the agents of the first group being script agents and being arranged as a sequentially enabled chain, one or more of said script agents including a respective reference to one of said objects and a specified qualifier term,

each of the agents of the second group being object agents and being operable to identify an object and specified qualifier term from a script agent, to identify an instance or each instance of said object in the second memory means, to compare the specified qualifier term with the respective associated qualifier term of each identified object and, when a match occurs, to generate an identifying pointer for the identified and matched object, and

said first memory means has stored therein a group of agents being operator agent, each said operator agent being arranged to execute a selected one of two or more procedural steps, said selected one being made within the operator agent based on one or more external factors; and

external interface means coupled with the processor of said rule-based data processing apparatus, said external interface means being configured to control a plurality of external processes linked thereto on triggering of respective operator agents.

6,040,843

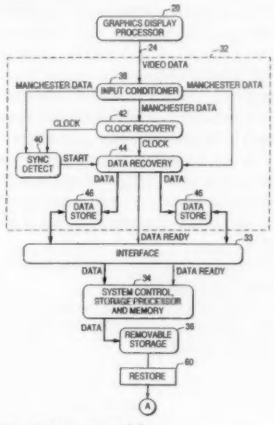
SYSTEM FOR TRANSMISSION AND RECOVERY OF DIGITAL DATA USING VIDEO GRAPHICS DISPLAY PROCESSOR AND METHOD OF OPERATION THEREOF

John W. Monroe, Flint Hill; John J. Smith, Manassas; Stephen C. Kenyon, Fairfax, and Michael E. Anderson, Herndon, all of Va., assignors to Sparta, Inc., Mclean, Va.

Continuation of application No. 08/545,508, Oct. 19, 1995, Pat. No. 5,835,102. This application Oct. 29, 1998, Appl. No. 181,850.

Int. Cl.[7] G09G *5/00*

U.S. Cl. 345—507 **27 Claims**



1. A computer system comprising:

a computer system memory which stores digital data;

a video monitor which displays information;

a graphics display processor, coupled to the computer system memory, which processes the digital data stored in the computer system memory to produce at least one data stream including the digital data and which outputs information to be displayed by the video monitor;

a video channel, coupling the video monitor to the graphics display processor, which outputs the information to be displayed to the video monitor and which outputs the at least one data stream including the digital data; and

a system, coupled to the video channel, which processes the at least one data stream including the digital data outputted from the video channel.

6,040,844

APPARATUS AND METHOD FOR STORING AND ACCESSING PICTURE GENERATION DATA

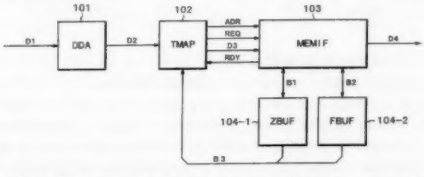
Yuji Yamaguchi; Masaharu Yoshimori; Hiroyuki Ozawa; Ryohei Iida, all of Tokyo, and Kazuo Taniguchi, Kanagawa, all of Japan, assignors to Sony Corporation, Tokyo, Japan

Filed Jul. 24, 1997, Appl. No. 899,925

Claims priority, application Japan, Jul. 31, 1996, 8-217774

Int. Cl.[7] G06F *12/06*

U.S. Cl. 345—518 **28 Claims**



1. In a picture generating system, the combination comprising:

a display;

a memory subsystem for storing picture generation data, said memory subsystem having an addressable main memory and an addressable auxiliary memory, said main memory storing picture generation data, said auxiliary memory responsive to said main memory for receiving picture generation data therefrom and for temporarily storing said received picture generation data;

a read/write port for accessing said main memory;

a dedicated read only port for accessing said auxiliary memory;

means for reading/writing certain selected portions of said picture generation data through said read/write port;

means for reading other selected portions of said picture generation data through said dedicated read only port when said other selected portions of said picture generation data are present in said auxiliary memory;

means for transferring said other selected portions of said picture generation data from said main memory to said auxiliary memory when said other selected portions of said picture generation data are not present in said auxiliary memory; and

means for processing said certain selected portions of said picture generation data and said other selected portions of said picture generation data to generate picture data for forwarding to said display;

wherein said reading/writing means, reading means and transferring means operate in parallel;

wherein said certain selected portions of said picture generation data and said other selected portions of said picture generation data are mutually exclusive.

6,040,845

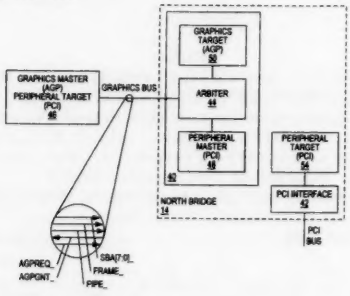
DEVICE AND METHOD FOR REDUCING POWER CONSUMPTION WITHIN AN ACCELERATED GRAPHICS PORT TARGET

Maria L. Melo, Houston, and Gregory N. Santos, Cypress, both of Tex., assignors to Compaq Computer Corp., Houston, Tex.

Filed Dec. 22, 1997, Appl. No. 995,763

Int. Cl.[7] G06F *13/14*

U.S. Cl. 345—520 **17 Claims**



1. A computer, comprising:

a graphics master coupled to a graphics bus; and

a bus interface unit comprising a graphics target and an arbiter operably coupled to the graphics bus, wherein said arbiter is adapted for granting mastership of the graphics bus to the graphics master only during a first time period in which a power supply and a clocking signal are selectively connected to said graphics target.

6,040,846

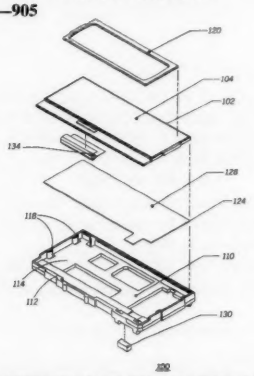
IMPACT RESISTANT DISPLAY APPARATUS

Stephen Millard Stanton; James Talmage Davis, II; Alan James Dutson, all of Fort Worth, and Gregory Lane Henderson, Watauga, all of Tex., assignors to Motorola, Inc., Schaumburg, Ill.

Filed Feb. 16, 1998, Appl. No. 24,040

Int. Cl.[7] G09G *5/00*

U.S. Cl. 345—905 **12 Claims**



1. A display apparatus having improved mechanical integrity, the display apparatus comprising:

a display; and

a support bezel, mechanically coupled to the display, the support bezel comprising:

peripheral walls forming an aperture for containing the display, the peripheral walls comprising an extended portion extending beyond a viewable surface of the display in a direction perpendicular to the viewable surface; and

a plurality of cantilevered clips integral to the extended portion of the peripheral walls and comprised of the same material as the support bezel for holding the display in the aperture, the plurality of cantilevered clips projecting towards the display in a direction parallel to the viewable surface and touching the viewable surface,

wherein the support bezel is a one-piece molded member of the display apparatus.

6,040,847

METHOD OF RECORDING IMAGES AND AN IMAGE-FORMING DEVICE FOR APPLICATION OF THE METHOD

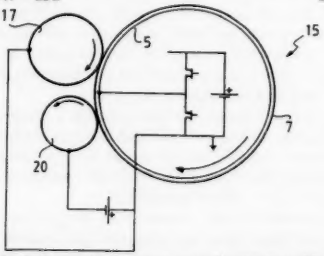
Mike Paul van Eekhout; Pierre Antonius Marie Klerken, and Robertus Petrus Cornelis Quirijnen, all of Venlo, Netherlands, assignors to OCE-Nederland B.V., Ma Venlo, Niger

Filed Dec. 20, 1995, Appl. No. 575,617

Claims priority, application Netherlands, Dec. 23, 1994, 9402196

Int. Cl.[7] B41J *2/39;2/395;2/40;2/06*

U.S. Cl. 347—151 **13 Claims**



1. A method of recording images on an image-recording medium and having a dielectric surface, which method comprises the step of applying, in accordance with an image pattern to be recorded, a

voltage between a set of image-recording electrodes and a companion electrode, either one of the set of image-recording electrodes and the companion electrode being situated beneath the dielectric surface and an other one of the set of image-recording electrodes and the companion electrode being situated a distance above the dielectric surface, the applied voltage causing toner powder situated in the space between the dielectric surface and the electrode disposed thereabove, to be deposited onto the dielectric surface in accordance with the image pattern to be recorded, wherein the improvement comprises the steps of:

(a) applying a first voltage of a first orientation between the image-recording electrodes and the companion electrode to effect image recording; and then

(b) applying a second voltage of a second orientation opposite and substantially equal to said first voltage of said first orientation between the image-recording electrodes and the companion electrode, wherein the second voltage is of opposite orientation relative to the first voltage.

6,040,848

INFORMATION RECORDING APPARATUS AND METHOD OF RECORDING INFORMATION BY APPLYING VOLTAGE BETWEEN PROBE AND RECORDING MEDIUM

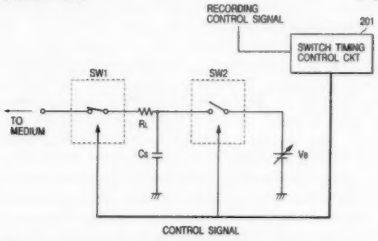
Shunichi Shido, Zama, and Ryo Kuroda, Kawasaki, both of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Oct. 6, 1997, Appl. No. 944,895

Claims priority, application Japan, Oct. 7, 1996, 8-284670

Int. Cl.[7] B41J *2/385;* **G11B** *9/00*

U.S. Cl. 347—159 **4 Claims**



1. An information recording apparatus, comprising:

a probe disposed in a position opposed to a recording medium;

a capacitor;

a first switch arranged between, and connecting, said probe and said capacitor;

a DC power supply supplying charge to said capacitor;

a second switch, arranged between and connecting said capacitor and said DC power supply; and

a control circuit controlling opening and closing motion of said first and second switches with reference to a recording signal,

wherein said control circuit first sets said second switch closed when said first switch is open so that the charge supplied from said DC power supply is stored in said capacitor, and then said control circuit turns said second switch open and turns said first switch closed so that the charge stored in said capacitor is applied as a voltage between said probe and said recording medium, thereby recording information.

INSERTABLE THERMAL PRINTER CARTRIDGES FOR DIGITAL CAMERA

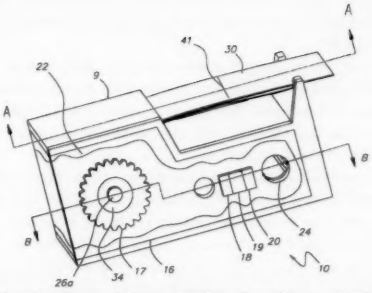
Dale F. McIntyre, Honeoye Falls, and Loretta E. Allen, Hilton, both of N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.

Filed Nov. 24, 1998, Appl. No. 199,291

Int. Cl.[7] B41J *3/36;32/00*

U.S. Cl. 347—214 **5 Claims**

1. An insertable thermal printer cartridge for insertion into a digital camera or the like, comprising:



a) a housing for receiving a plurality of receivers each of which is adapted to receive colorant;

b) a donor supply roll for supplying a donor having colorant to a colorant transfer area and a donor take-up spool for receiving donor after colorant has been transferred;

c) means for serially moving the receivers and the donor from the donor supply roll to the colorant transfer area where colorant is transferred from the donor to the receiver; and

d) the housing including identifying contacts which, after the insertable thermal printer cartridge has been inserted into the camera, which provide an electrical connection to identify the type of receiver and donor in the inserted insertable thermal printer cartridge and further defining a cavity for mounting at least one battery which is adapted to provide power for colorant transfer at the colorant transfer area.

METHOD FOR INTERFACING BETWEEN TRANSMITTER AND RECEIVER OF DIGITAL BROADCASTING SYSTEM THROUGH SATELLITE

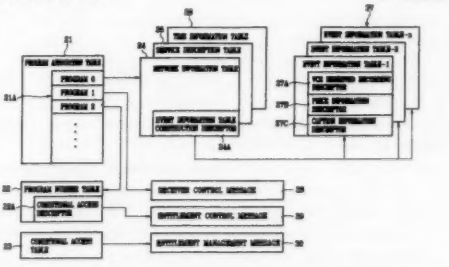
Sung-Kyong Un; Hyun-Sook Cho; Hwan-Chul Kim, and Soo-In Lee, all of Daejeon, Rep. of Korea, assignors to Electronics and Telecommunications, Daejeon, and Research Institute Korea Telecom, Seoul, both of Rep. of Korea

Filed May 5, 1997, Appl. No. 851,440

Claims priority, application Rep. of Korea, Oct. 9, 1996, 1996-44702

Int. Cl.[7] H04N *7/16*

U.S. Cl. 348—10 **6 Claims**



1. A method for interfacing between a transmitter and receiver of a digital broadcasting system using a satellite, the method comprising the steps of:

searching a program association table of the receiver for a relevant program number, and detecting a receiver control message packet number;

detecting a receiver control message through the detected packet number;

detecting public switched telephone network and public switched data network numbers through the receiver control message;

searching for a network information table of the receiver and then detecting an event information table packet number at a time zone corresponding to an event information table construction descriptor in order to search for a corresponding event information table;

inserting a reserved recording descriptor into the event information table to impose an identification number on a corresponding program, thereby performing a reserved recording;

inserting a price information descriptor table into the event information table to transmit program price information; and

inserting a caption information descriptor into the event information table to provide information about a caption of a program before broadcasting the program.

6,040,851

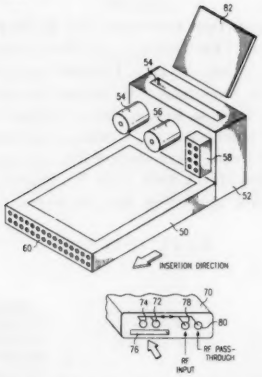
SMALL-FORMAT SUBSYSTEM FOR BROADBAND COMMUNICATION SERVICES

Vernon Cheng, San Diego, and Greg Mauro, La Jolla, both of Calif., assignors to Conexant Systems, Inc., Newport Beach, Calif.

Filed Jan. 20, 1998, Appl. No. 9,662

Int. Cl.[7] H04N *7/10*

U.S. Cl. 348—10 **12 Claims**



1. An electronic broadband network communication system comprising:

(a) a separate, connectable network-dependent digital interface conditional access module (DICAM) configured to receive an RF audiovisual signal, and generate therefrom an error-corrected digital signal in a transport stream, the DICAM including a stub;

(b) a separate network-independent common module configured to be coupled to an electronically communicate with the DICAM, for receiving the transport stream and generating at least a video output signal therefrom, the common module including a socket coupled to the common module, wherein the stub is configured to be connected to the socket so as to allow the DICAM to electronically communicate with the common module.

PROCESS FOR DETECTING SURFACE DEFECTS ON A TEXTURED SURFACE

Philippe Delagnes, Baye, and Dominique Barba, Carquefou, both of France, assignors to Laboratoire Central des Ponts et Chaussees, Paris, and L'Institut de Recherche et D'Enseignement Superieur aux Techniques de Electronique, Nantes Cedex, both of France

Filed Oct. 2, 1997, Appl. No. 957,987

Claims priority, application France, Oct. 2, 1996, 96 11997

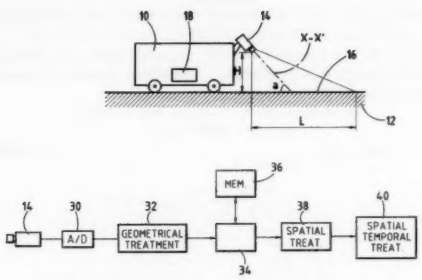
Int. Cl.[7] H04N *7/18*; **G06K** *9/00*

U.S. Cl. 348—128 **9 Claims**

1. Process for detecting surface defects in a substantially plane textured surface,

wherein it comprises the following steps of:

a) making, with the aid of an optical sensor presenting an inclination of sight with respect to the substantially plane textured surface and being in relative movement with



respect to this surface, a succession of images of parts of this surface at successive instants, each image corresponding to a surface part of length L in the direction of displacement, each image being offset from the preceding one by a length 1, 1 being equal to L/K with K, a whole, greater than 2;

b) defining sub-images corresponding to elementary portions of the surface whose length is equal to 1 in the direction of displacement, whereby for the length of portion of surface **1**, K sub-images of this portion are available;

c) extracting from these K consecutive sub-images N sub-images (Ii) corresponding to the same portion of the surface of length 1 at N successive instants with N included between 2 and K;

d) applying to each of the N sub-images (Ii) the same spatial mathematical processing in order possibly to demonstrate a configuration of presumed defect, which gives a processed intermediate sub-image (Yi);

e) applying to the first processed elementary sub-image (Yo) a combinatorial algorithm for detection of presumed defect in the elementary sub-image, whereby a spatial and temporal sub-image ST_0 is obtained;

f) iteratively repeating the application of said combinatorial algorithm to the spatial and temporal sub-image ST_{i-1} obtained at instant ti−1 and to the processed elementary sub-image Yi in order to obtain a spatial and temporal sub-image ST_i up to i=N−1; and

g) obtaining with the spatial and temporal sub-image ST_{N-1} the image of the elementary portion of the textured surface with its possible defects.

6,040,854

ELECTRO-OPTICAL PROCESS FOR THE STATIC HARMONIZATION OF WEAPON SYSTEMS AND AIRCRAFT

Thomas Esser, Karlsruhe, and Ulrich Schneidereit, Donauwoerth, both of Germany, assignors to Eurocopter Deutschland GmbH, Germany

Filed Nov. 19, 1997, Appl. No. 974,399

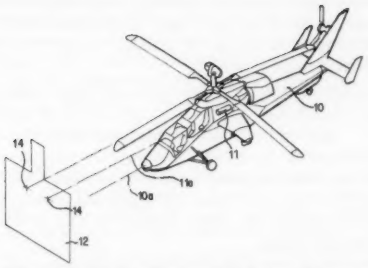
Claims priority, application Germany, Nov. 19, 1996, 196 47 756

Int. Cl.[7] **H04N** *7/18*

U.S. Cl. 348—159 **8 Claims**

1. An electro-optical process for static harmonization of weapon systems and aircraft having onboard systems which are to be measured relative to one another and on the fuselage axis, by means of video cameras, said process comprising:

at all points of an aircraft to be measured, arranging mechanical adapters in which at least one video camera can be mounted to display, on an external harmonization environment as a reference, a reproduction of an actual core axis of the onboard systems to be measured from a system of coordinates of the aircraft and thus permits a simultaneous harmonization of axes; and



generating an external environmental reference generated by means of one or two projectors mounted at the main references.

6,040,855

COLOR SIGNAL ADJUSTMENT APPARATUS

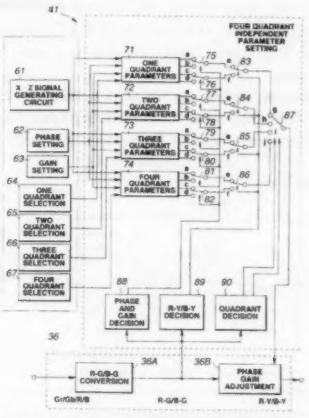
Naoyasu Gamou, Kanagawa, Japan, assignor to Sony Corporation, Tokyo, Japan

Filed Feb. 18, 1997, Appl. No. 801,519

Claims priority, application Japan, Feb. 20, 1996, 8-032516

Int. Cl.[7] **H04N** *5/228*

U.S. Cl. 348—223 **3 Claims**



1. A color signal adjustment apparatus comprising:

first color difference signal generating means for generating a (R-G) signal and a (B-G) signal from R, G and B signals;

second color difference generating means for generating, in a (B-Y)–(R-Y) coordinate system having a (B-Y) signal and an (R-Y) signal, respectively, the (R-Y) signal and the (B-Y) signal, using the (R-G) signal and the (B-G) signal from said first color difference signal generating means, in accordance with the following equations:

$$R\text{-}Y=X\{(R\text{-}G)+Z(B\text{-}G)\}$$

where X: gain of the (R-Y) signal

Z: phase of the (R-Y) signal; and

$$B\text{-}Y=X\{(B\text{-}G)+Z(R\text{-}G)\}$$

where X: gain of the (B-Y) signal

Z: phase of the (B-Y) signal;

first parameter outputting means for outputting a gain and a phase for the (R-Y) signal and a gain and a phase for the (B-Y) signal in the first quadrant in said (B-Y)–(R-Y) coordinate system;

second parameter outputting means for outputting a gain and a phase for the (R-Y) signal and a gain and a phase for the (B-Y) signal in the second quadrant in said (B-Y)–(R-Y) coordinate system;

third parameter outputting means for outputting a gain and a phase for the (R-Y) signal and a gain and a phase for the (B-Y) signal in the third quadrant in said (B-Y)–(R-Y) coordinate system;

fourth parameter outputting means for outputting a gain and a phase for the (R-Y) signal and a gain and a phase for the (B-Y) signal in the fourth quadrant in said (B-Y)–(R-Y) coordinate system;

selection means for switchingly selecting the gain or the phase from one of said first parameter setting means, second parameter setting means, third parameter setting means and the fourth parameter setting means, and sending the selected gain or phase to said second color difference generating means; and

control means for controlling said selection means based on the (R-G) signal and the (B-G) signal from said first color difference signal generating means.

6,040,856

ELECTRONIC CAMERA CAPABLE OF PERFORMING PHOTOGRAPHY AND CHARACTER RECOGNITION

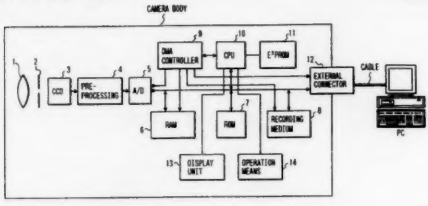
Yuji Sakaegi, Yokohama, Japan, assignor to Canon Kabushiki Kaisha, Japan

Continuation of application No. 08/330,999, Oct. 28, 1994, abandoned. This application Oct. 18, 1996, Appl. No. 732,683.

Claims priority, application Japan, Oct. 29, 1993, 5-272116

Int. Cl.[7] H04N *5/76*

U.S. Cl. 348—232 **4 Claims**



1. An electronic camera comprising:

image pickup means for receiving an image and outputting an image signal corresponding thereto;

a connector for receiving from an external source (i) camera mode setting information and (ii) a character recognition program;

a first memory for storing (i) the received camera mode setting information and (ii) a file name of the character recognition program;

a second memory for storing the external source character recognition program received by said connector;

a third memory for storing a built-in photography mode control program;

a designator for designating one of a photography mode and a character recognition mode; and

signal processing circuitry for processing the image signal output from said image pickup means (i) as a photograph and in accordance with the camera mode setting information stored in said first memory when said designating means designates the photography mode, and (ii) as character signals when said designating means designates the character recognition mode.

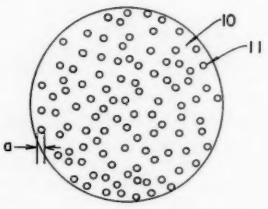
PHASE-NOISE TYPE BROAD SPECTRAL BANDWIDTH OPTICAL LOW-PASS ANTI-ALIASING FILTER

Jeffrey I. Hirsh; Joseph F. Revelli, Jr., and Alan C. G. Nutt, all of Rochester, N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.

Filed May 27, 1997, Appl. No. 863,648

Int. Cl.[7] H04N *5/217*

U.S. Cl. 348—241 **13 Claims**



1. An optical broad spectral bandwidth low-pass filter for use with an optical imaging system of a solid-state imager, comprising: a transparent substrate and material forming a plurality of transparent spots randomly placed on said substrate for producing a phase difference between a wave front transmitted through said spots and that portion of the substrate other than said spots to define a filter having a spatial sampling cut-off frequency which is approximately independent of the wavelength of light over a specific spectral bandwidth from a lower wavelength λ_B to an upper wavelength λ_R, said phase difference satisfying the following condition

$$\phi_o = \pi$$

where ϕ_o is the phase difference due to the spots at a certain specific wavelength, λ_o, such that

$$\lambda_B \leqq \lambda_o \leqq \lambda_R$$

and where ϕ_o is given by the relationship

$$\phi_o = 2\pi \frac{n_o - n_o'}{\lambda_o} t$$

so that

$$t = \frac{\lambda_o}{2(n_o - n_o')}$$

where n_o is the index of refraction of the material forming said spots at the specific wavelength λ_o; n_o' is the index of refraction of the medium surrounding said spots at the specific wavelength λ_o; and t is the physical thickness of said spots and wherein the solid state imager is a monochrome imager characterized by a system spectral sensitivity $S_{sys}(\lambda)$ which is common to all pixels in the array comprising said monochrome imager and which has a peak sensitivity at a wavelength λ_{sys} and wherein the specific wavelength λ_o is equal to λ_{sys}.

METHOD AND APPARATUS FOR EXPANDING THE DYNAMIC RANGE OF SENSED COLOR IMAGES

Eiichiro Ikeda, Tokyo, Japan, assignor to Canon Kabushiki Kaisha, Tokyo, Japan

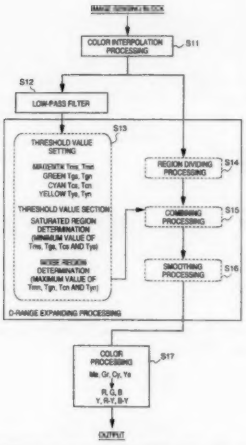
Filed Nov. 16, 1995, Appl. No. 559,074

Claims priority, application Japan, Nov. 18, 1994, 6-285066; Nov. 18, 1994, 6-285067

Int. Cl.[7] H04N *5/52;5/335;9/64;9/68*

U.S. Cl. 348—242 **31 Claims**

1. An image processing method of forming an image based on color signals output from an image sensing device, comprising:



the image picking-up step of picking up, in advance by said image sensing device, a first plurality of color signals in a standard exposure and a second plurality of color signals in a non-standard exposure;

the threshold value setting step of setting a different threshold value for each color; and

the combining step of generating a combined color signal by replacing, for each color, a part of a color signal out of the first plurality of color signals obtained in the standard exposure with a corresponding part of a corresponding color signal of the second plurality of color signals, a replacement of a color signal part being made on the basis of the threshold value set for the color.

IMAGE SENSING APPARATUS AND METHOD FOR DISCHARGING DARK CURRENT CHARGE STORED THEREIN

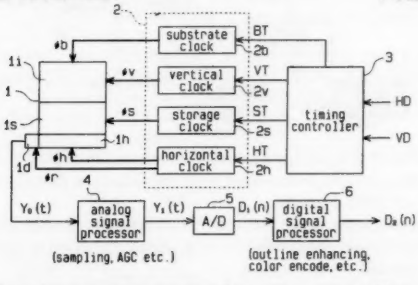
Tatsuya Takahashi, Gifu-ken, Japan, assignor to Sanyo Electric Co., Ltd., Osaka, Japan

Filed Nov. 27, 1996, Appl. No. 774,253

Claims priority, application Japan, Nov. 30, 1995, 7-313324

Int. Cl.[7] H04N *5/335;9/64*

U.S. Cl. 348—243 **7 Claims**



1. An image sensing apparatus for sensing a target object and producing a still image signal, comprising:

a solid state image sensor including a light-receiving section having a plurality of light-receiving elements arranged in a matrix form, each light-receiving element storing an information charge generated in accordance with an incident light reflected from the target object and a storage section for temporarily storing the information charges transmitted element by element from the light-receiving section, wherein said solid state image sensor performs an electronic shutter operation for discharging the information charges in the light-receiving section; and

a clock generator including a vertical clock generating circuit, a storage clock generating circuit, a horizontal clock generating circuit and a substrate clock generating circuit, said clock generator controlling the information charge transferred between the light-receiving section and the storage section of said solid state image sensor;

said clock generator performing a first discharging operation for discharging noise-containing information charges previously existing in the light-receiving section, a first transferring operation for transferring noise-containing information charges previously existing in the storage section in a reverse direction from the storage section to the light-receiving section, a second discharging operation for discharging noise-containing information charges transferred from the storage section into the light-receiving section, an image sensing operation for storing the information charges generated in accordance with the incident light reflected from the target object in the light-receiving section for a predetermined period of time, and a second transferring operation for transferring information charges stored in the light-receiving section in a forward direction from the light-receiving section to the storage section.

IMAGING APPARATUS FOR SUPPLYING IMAGES WITH RICH GRADATION ACROSS THE ENTIRE LUMINANCE RANGE FOR ALL SUBJECT TYPES

Akihiro Tamura, Hirakata; Shigeo Sakaue, Toyonaka, and Takeshi Hamasaki, Yao, all of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Osaka, Japan

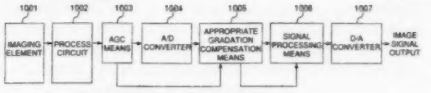
PCT No. PCT/JP95/01990, § 371 Date Mar. 28, 1997, § 102(e) Date Mar. 28, 1997, PCT Pub. No. WO96/10886, PCT Pub. Date Apr. 11, 1996

PCT Filed Sep. 29, 1995, Appl. No. 809,714

Claims priority, application Japan, Sep. 30, 1994, 6-236732; Oct. 6, 1994, 6-242774

Int. Cl.[7] H04N *5/208*

U.S. Cl. 348—252 **10 Claims**



1. An imaging apparatus comprising:

an imaging element for outputting an image signal,

an AGC circuit for controlling the gain of the image signal output from the imaging element,

an AGC control means for controlling an output signal level of the AGC circuit to a constant level,

a gradation compensation means for applying gradation compensation by varying a gain of each luminance level of the image signal output of the AGC circuit based on a gradation compensation coefficient,

a feature quantity extraction means for extracting an image feature quantity from the image signal output of the AGC circuit,

an image evaluation means for determining the amount of backlighting and strong normal lighting from the feature quantity extracted by the feature quantity extraction means, and outputting the degree of gradation compensation to be applied, and

a gradation compensation suppression means for suppressing the degree of gradation compensation output from the image evaluation means and determining the gradation compensation coefficient according to a control signal from the AGC control means,

wherein the gain of the gradation compensation means is controlled according to the gradation compensation coefficient of the gradation compensation suppression means, and the gradation-compensated image signal is output.

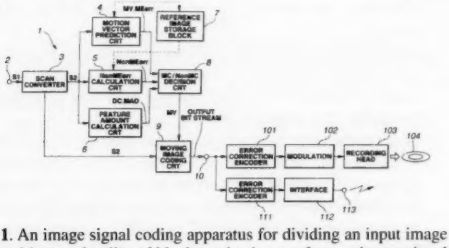
IMAGE SIGNAL CODING METHOD AND APPARATUS, IMAGE SIGNAL TRANSMISSION METHOD, AND SIGNAL RECORDING MEDIUM

Motoki Kato; Nobuhiro Igi, and Kazunori Yasuda, all of Kanagawa, Japan, assignors to Sony Corporation, Tokyo, Japan

Filed Dec. 16, 1997, Appl. No. 991,517
Claims priority, application Japan, Dec. 18, 1996, 8-338236
Int. Cl.[7] H04N *7/32*
U.S. Cl. 348—416 **15 Claims**



1. An image signal coding apparatus for dividing an input image signal into a plurality of blocks and using a reference image signal for each of said blocks so as to carry out motion compensative prediction coding, said apparatus comprising:

a division unit for dividing said image signal into a plurality of blocks;

a first calculation unit for calculating a motion vector prediction residue for which a motion compensation is carried out by using said reference image signal for each of said blocks;

a second calculation unit for calculating a residue of a block for which no motion compensation is carried out;

a third calculation unit for calculating an average luminance value of pixel data within each of blocks and a value representing flatness of said block;

a motion compensation/non-motion compensation decision unit for deciding whether to carry out a motion compensative coding according to a comparison result obtained by comparing a magnitude of a motion vector prediction residue of said block to a magnitude of a residue of said block, said motion compensation/non-motion compensation decision unit adaptively switching between decision making region division types to be used in said motion compensation/non-motion compensation decision, according to said average luminance value and said flatness value of said block; and

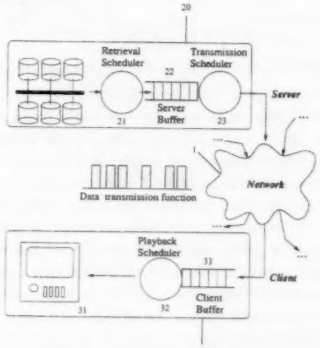
a coding unit for carrying out a motion/compensative prediction coding for each of the blocks according to a result of said decision.

6,040,866

TRANSMISSION OF VARIABLE-BIT-RATE INFORMATION DATA ON CONSTANT-BIT-RATE CHANNEL

Meng-Chang Chen; Jan-Ming Ho; Ming-Tat Ko, and Ray-I Chang, all of Institute of Information Science Academia Sinica, Nankang, Taipei, Taiwan

Filed Aug. 19, 1997, Appl. No. 912,849
Int. Cl.[7] H04N *7/12;11/02;11/04*
U.S. Cl. 348—419 **3 Claims**



1. A method for transmitting variable-bit-rate information through constant-bit-rate channels to a recipient comprising a memory and a playback device, comprising the steps of:

obtaining an information stream v, $v=\{f_0, f_1, f_2, \ldots, f_{n-1}\}$ wherein f_i denotes an with information frame of said information stream, and wherein said information frames are numbered from 0 to n−1, i.e., $0 \leq i < n$, for a peak transmission rate r of said channel and a buffer size b of the recipient;

calculating the cumulative frame size F_i of said information stream v, $F_i=F_{i-1}+f_i$, wherein $0 \leq i < n$ and $F_{i-1}=0$;

determining a lazy transmission schedule L_i for said information stream v, $L_i=\{r; t_0,t_1,t_2, \ldots, t_{2p+1}\}$ wherein $0 \leq p < n$, times t_0, t_2, t_4, . . . t_{2p} represent starting points of transmission of respective frames f_0 to f_{n-1}, and times t_1, t_3, t_5, . . . t_{2p+1} represent end points of transmission of said respective frames f_0 to f_{n-1}, such that none of said information frames is transmitted to said recipient before said information frames are required for play back;

determining a revised transmission schedule γ_A for the reorganized information stream $v,\gamma_A=\{r; t_0,t_1,t_2, \ldots, t_{2q+1}\}$ wherein

$0 \leqq p < n$, times t_0, t_2, t_4, . . . t_{2q} represent starting points of transmission of said respective frames f_0 to f_{n-1} according to said revised transmission schedule, and times t_1, t_3, t_5, . . . t_{2q+1} represent end points oftransmission of said respective frames f_0 to f_{n-1} according to said revised transmission schedule, such that the information stream is transmitted as long as a vacancy in the buffer memory of said recipient is available to receive said information stream, said revised transmission schedule thereby constituting an aggressive transmission schedule; and

transmitting said information data according to said aggressive transmission schedule when said buffer is available to receive said information stream, and transmitting said information frame according to said lazy transmission schedule, in which information frames are transmitted only when required for play back, when said buffer is not available to receive said information stream.

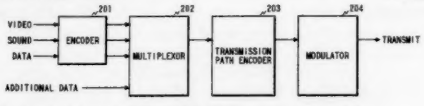
TELEVISION SIGNAL RECEIVING APPARATUS AND METHOD SPECIFICATION

Yumi Bando; Takumi Okamura, and Toshinori Murata, all of Yokohama, Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Filed Feb. 20, 1997, Appl. No. 803,532

Int. Cl.[7] H04N *7/18*

U.S. Cl. 348—423 **7 Claims**



1. A television signal receiving apparatus, comprising:

a channel decoder which receives a television signal containing a video signal, a sound signal, a data signal, and additional data multiplexed therein for tuning, demodulation, and error correction to produce a channel decoded signal;

a demultiplexor which separates the video signal, the sound signal, the data signal and additional data multiplexed from the channel decoded signal to produce coded data of each of the video signal, the sound signal, and the data signal and to extract service information as one of the additional data;

a storage device which stores the service information extracted from said demultiplexor;

a write controller which controls writing of the service information into said storage device in accordance with a user command input by a user;

a read controller which controls reading of the service information from said storage device in accordance with the user command input by a user;

a source decoder which decodes the coded data outputted from said demultiplexor by using the service information outputted from said storage device to produce the video signal, the sound signal, and the data signal; and

wherein said storage device is controlled by said write controller to memorize at least service information having a transmitting period greater than a predetermined time and having a quantity of information greater than a predetermined amount, and is controlled by said read controller to output necessary memorized information as required by the user to thereby enhance the processing speed of the service information for a quick response to the user command.

DEVICE AND METHOD OF CONVERTING SCANNING PATTERN OF DISPLAY DEVICE

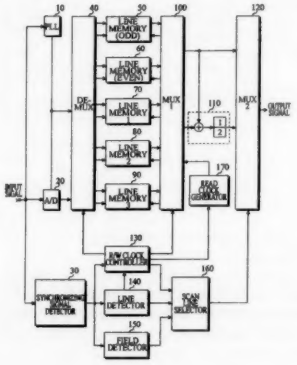
Sung-Gon Jun, Kyungki-do, Rep. of Korea, assignor to Sam-Sung Electronics Co., Ltd., Kyungki-do, Rep. of Korea

Filed Feb. 14, 1997, Appl. No. 801,783

Claims priority, application Rep. of Korea, Feb. 17, 1996, 96/3969

Int. Cl.[7] H04N *7/01;11/20*

U.S. Cl. 348—448 **10 Claims**



1. A device for converting scanning patterns from interlaced scanning to sequential scanning, comprising:

means for receiving an input interlaced scanning video signal having alternating odd and even fields of scanning lines;

a first line memory for storing picture elements of the input interlaced scanning video signal in a first line of an odd field;

a second line memory for storing picture elements of the input interlaced scanning video signal in a last line of an even field;

a plurality of sequential line memories serving as buffers for storing picture elements of the input interlaced scanning video signal in sequence for each scanning line;

a demultiplexer for sequentially inputting the picture elements of the input interlaced scanning video signal into each of said first line memory, said second line memory and each of said plurality of sequential line memories in accordance with a write clock signal;

a first multiplexer connected to said first line memory, said second line memory and said plurality of sequential line memories, for producing a first output signal by multiplexing between the picture elements of the input interlaced scanning video signal stored in one of said first line memory, said second line memory and selected one from said plurality of sequential line memories in accordance with a read clock signal;

an interpolator for interpolating picture elements between adjacent scanning lines of the input interlaced scanning video signal in one of said odd field and said even field to produce interpolated picture elements;

a second multiplexer connected to said first multiplexer and said interpolator, for producing a second output signal representing a sequential scanning video signal by multiplexing between the picture elements contained in said first output signal and the interpolated picture elements provided from said interpolator; and

a control section for controlling operations of said demultiplexer, said first and second multiplexers.

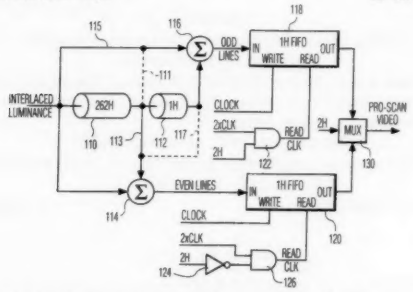
Int. Cl.[7] H04N *7/01;11/02*

U.S. Cl. 348—448 **11 Claims**



1. An interlace-scan to progressive-scan video signal conversion system comprising:

a terminal for receiving the interlace-scan video signal;

a first delay element, coupled to the terminal for delaying the interlace-scan video signal by a number, N, of horizontal line intervals to produce a first delayed video signal, wherein N horizontal line intervals is less than one field period but N+1 horizontal line intervals is greater than one field period;

a second delay element, coupled to the first delay element for delaying the first delayed video signal by one horizontal line interval to produce a second delayed video signal;

a first interpolator which combines the received interlace-scan video signal with the first delayed video signal to produce a first interpolated signal;

a second interpolator which combines the received interlace-scan video signal with the second delayed video signal to produce a second interpolated signal;

a first speed-up memory coupled to the first interpolator to receive samples of the first interpolated signal at a first sample rate and to provide the samples of the first interpolated signal, as an output signal, at a second sample rate which is twice the first sample rate;

a second speed-up memory coupled to the second interpolator to receive samples of the second interpolated signal at the first sample rate and to provide the samples of the second interpolated signal, as an output signal, at the second sample rate; and

a multiplexer, coupled to the first and second speedup memories, to alternately provide the output signals of the first and second speedup memories as a progressive-scan video signal.

METHOD AND APPARATUS FOR NESTING SECONDARY SIGNALS WITHIN A TELEVISION SIGNAL

David Small, San Jose, Calif., assignor to Shoot the Moon Products, Inc., Pleasanton, Calif.

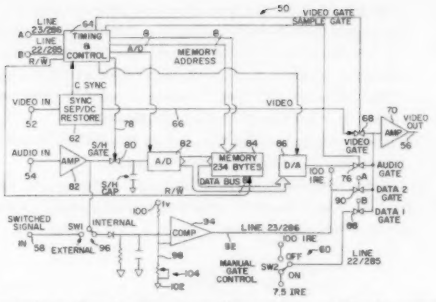
Continuation of application No. 08/523,848, Sep. 5, 1995, Pat. No. 5,808,689, which is a continuation of application No. 08/230,490, Apr. 20, 1994, abandoned. This application Sep. 14, 1998, Appl. No. 153,098.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] H04N *7/08;7/04*

U.S. Cl. 348—476 **19 Claims**

1. A method of transmitting secondary information having a digital format within a television signal, the method comprising:



selecting a first plurality of scan lines to be encoded with control information and the secondary information;

producing samples of the secondary information by sampling the secondary information at a predetermined rate; and

encoding overscan portions of active video regions of the first plurality of scan lines with the control information and a plurality of the samples, the control information indicating that the plurality of the samples are present in the first plurality of scan lines, the first plurality of scan lines being encoded with the samples at a temporally compressed rate within the overscan portions of the active video regions.

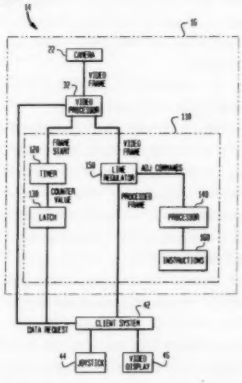
METHOD AND APPARATUS FOR SYNCHRONIZING VIDEO SIGNALS

Russell L. Andersson, Manalapan, N.J., assignor to Lucent Technologies Inc., Murray Hill, N.J.

Filed Dec. 27, 1996, Appl. No. 777,339

Int. Cl.[7] H04N *9/475;7/01;5/445*

U.S. Cl. 348—510 **18 Claims**



12. A system for synchronizing a frame of video data with a client system, comprising:

a timer for measuring a sampling period of said client system;

a processor for:

(i) receiving said frame of video data;

(ii) detecting a duration of said frame of video data:

(iii) computing a desired duration of said frame of video data necessary to make said duration of said frame of video data match said sampling period of said client system by computing a required number of video lines of which said frame of video data should consist in order to make said frame of video data of said desired duration;

(iv) computing an adjustment necessary to make said frame of video data of said desired duration; and

an adjuster, controlled by said processor, for adjusting said duration of said frame of video data to match said sampling period of said client system.

COMMUNICATION CONTROL DEVICE AND METHOD FOR TELEVISION RECEIVER

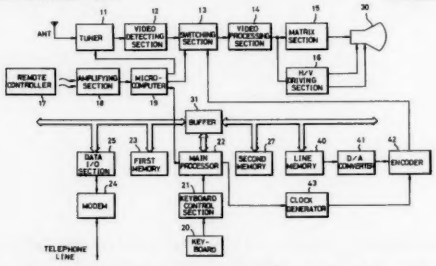
Hak Lyang Kim, Taegu, Rep. of Korea, assignor to LG Electronics, Inc., Seoul, Rep. of Korea

Filed Oct. 27, 1995, Appl. No. 549,560

Claims priority, application Rep. of Korea, Oct. 28, 1994, 94-27986; Dec. 28, 1994, 94-37803

Int. Cl.[7] H04N *7/00;7/10*

U.S. Cl. 348—553 **4 Claims**



1. A communication control device for a television receiver comprising:

a television/communication switching section adapted to select one of an image signal of a television broadcasting channel and a television communication image signal for computer communication, wherein each of the image signal of a television broadcasting channel and the television communication image signal comprises a composite video signal appropriate to television display;

key input means for manually inputting a key signal for performing the computer communication;

a controller adapted to control the operation of said television/communication switching section and controlling transmission and reception for the computer communication in accordance with the key signal from said key input means;

a modem, connected to an external communication line, for modulating and demodulating communication information to be transmitted and received;

data memory for storing the communication data being inputted through said modem and outputting the stored communication data under the control of said controller; and

an image interface adapted to convert the communication data received through said modem or the data stored in said data memory into the television communication image signal under the control of said controller, and further adapted to output the television communication image signal to a television screen through said television/communication switching section, said image interface including a line memory for converting the input data of frequency f suitable for sequential scanning into an output signal of frequency f/2 suitable for interlaced scanning, a digital-to-analog converter for converting the output signal of said line memory into an analog signal, an encoder for converting an output signal of said digital-to-analog converter into a composite video signal, and a clock generating section for providing a clock signal to said encoder.

METHOD TO COMPENSATE FOR A FADE IN A DIGITAL VIDEO INPUT SEQUENCE

Charles E. Boice; John M. Kaczmarczyk, both of Endicott; Agnes Y. Ngai, Endwell, and Michael P. Vachon, Johnson City, all of N.Y., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Mar. 23, 1998, Appl. No. 46,290

Int. Cl.[7] H04N *9/74;7/12;5/14*

U.S. Cl. 348—595 **37 Claims**

1. A method to compensate for a fade in a digital video input sequence which is compressed according to a video compression standard in which a first encoding processor applies an encoding algorithm for the compression, the video input sequence comprising a group of sequential picture frames, each frame comprising an array of pixels, each pixel having associated luminance and chrominance values, the method comprising the steps of:

(a) dividing each frame of a current frame into two fields,

(b) dividing each field of the current frame into at least one field band,

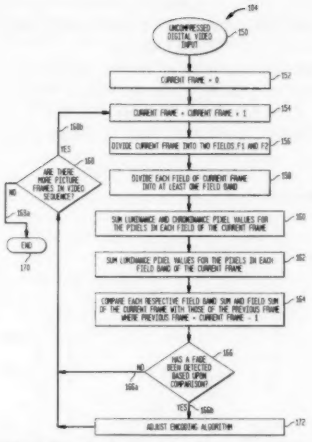
(c) summing the luminance and summing the chrominance pixel values for the pixels in each field of the current frame,

(d) summing the luminance pixel values for the pixels in each field band of the current frame,

(e) comparing each respective field band sum and field sum of the current frame with that of the previous frame in the video input sequence,

(f) detecting whether a fade has occurred based upon the comparison in step (e),

(g) adjusting the encoding algorithm if a fade has occurred, and



UNCOMPRESSED DIGITAL VIDEO INPUT
150
CURRENT FRAME = 0
152
CURRENT FRAME = CURRENT FRAME + 1
154
DIVIDE CURRENT FRAME INTO TWO FIELDS F1 AND F2
156
DIVIDE EACH FIELD OF CURRENT FRAME INTO AT LEAST ONE FIELD BAND
158
SUM LUMINANCE AND CHROMINANCE PIXEL VALUES FOR THE PIXELS IN EACH FIELD OF THE CURRENT FRAME
160
SUM LUMINANCE PIXEL VALUES FOR THE PIXELS IN EACH FIELD BAND OF THE CURRENT FRAME
162
COMPARE EACH RESPECTIVE FIELD BAND SUM AND FIELD SUM OF THE CURRENT FRAME WITH THOSE OF THE PREVIOUS FRAME WHERE PREVIOUS FRAME = CURRENT FRAME - 1
164
WAS A FADE BEEN DETECTED BASED UPON COMPARISON?
166
ADJUST ENCODING ALGORITHM
172
END
170
ARE THERE MORE PICTURE FRAMES IN VIDEO SEQUENCE?
168
YES
NO

(h) repeating steps (a) through (g) for at least one subsequent frame in the input video sequence.

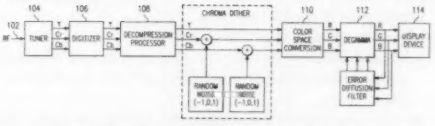
LOW INTENSITY CONTOURING AND COLOR SHIFT REDUCTION USING DITHER

Gregory S. Pettitt, Rowlett, and Vishal Markandey, Dallas, both of Tex., assignors to Texas Instruments Incorporated, Dallas, Tex.

Provisional application No. 60/005,195, Oct. 13, 1995. This application Oct. 11, 1996, Appl. No. 729,121.

Int. Cl.[7] H04N *5/21*

U.S. Cl. 348—624 **7 Claims**



1. A method of avoiding perceptual artifacts in an image display, said method comprising the steps of:

receiving a gamma corrected image signal, said gamma corrected image signal comprised of at least one luminance component and at least one chrominance component;

dithering one or more of said at least one chrominance component to form a dithered image signal, said dithering step operable to reduce image contouring in said dithered image signal;

converting said image signal to an RGB (red, green, blue) image signal;

removing said gamma correction from said RGB image signal; and

wherein said RGB image signal is comprised of three digital signal components, said method further comprising the step of reducing the number of data bits of said three signal components of said RGB image signal by dividing each of said digital signal components into a group of most significant bits and a group of least significant bits for each pixel of a pixelated image, wherein said most significant bits are transmitted to a spatial light modulator and said least significant bits are diffused to other pixels in said pixelated image.

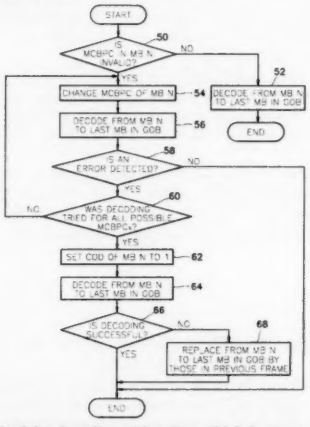
METHOD FOR DECODING VIDEO DATA CORRUPTED BY CHANNEL NOISE

Dong seek Park, Daegu, Rep. of Korea, assignor to Samsung Electronics Co., Ltd., Kyungki-do, Rep. of Korea

Filed Apr. 21, 1997, Appl. No. 844,654

Int. Cl.[7] H04N *7/32*

U.S. Cl. 348—845.1 **3 Claims**



1. A method for decoding video data which is arranged in a first unit, the first unit including a plurality of data units, and each of the data units including information on a status of the respective data unit, said method comprising the steps of:

(a) determining whether the status information in a current data unit is invalid or not;

(b) changing the status information into another one among a set of possible status information to decode the video data from the current data unit to a last data unit in a current first unit on the basis of the changed status information if it is determined that the status information in the data unit is invalid in said step (a);

(c) changing a flag representing an encoding scheme of the video data such that the flag indicates that the data unit is encoded in an inter-frame mode if the decoding of video data from the current data unit to the last data unit in the current first unit was successful for none of the possible status information;

(d) decoding the video data from the current data unit to the last data unit in the current first unit according to the changed flag; and

(e) replacing the video data from the current data unit to the last data unit in the current first unit with corresponding data units in a previous frame if the decoding of the video data in said step (d) is unsuccessful.

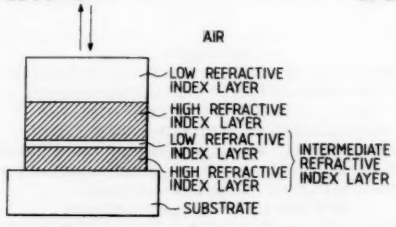
Int. Cl.[7] G02F *1/1335;* **G02B** *1/10*

U.S. Cl. 349—8 **30 Claims**



13. A projection type display apparatus for superposing a plurality of images of primary colors upon one another to thereby form a colored image, comprising:

a plurality of optical elements each of which includes at least one of:

(a) an element of a color-combining prism passing light of one of said primary colors;

(b) an element of a color-separating prism passing light of one of said primary colors; and

(c) a lens passing light of one of said primary colors; and

a plurality of anti-reflection films wherein each of said anti-reflection films:

(a) is formed on one of said plurality of optical elements,

(b) is optimized or substantially optimized for a corresponding primary color,

(c) is formed of two kinds of materials;

(d) has a layer of high refractive index, a layer of low refractive index and a layer of intermediate refractive index, and said layer of intermediate refractive index is constructed of equivalent film of said layer of high refractive index and said layer of low refractive index; and

(e) has one of the following configurations:

(i) substrate-$\lambda/4$ (intermediate refractivity layer)-$\lambda/4$ (high refractivity layer)-$\lambda/4$ (low refractivity layer)-air;

(ii) substrate-$\lambda/2$ (intermediate refractivity layer)-$\lambda/2$ (high refractivity layer)-$\lambda/4$ t(low refractivity layer)-air; or

(iii) substrate-$3\lambda/4$ (intermediate refractivity layer)-$\lambda/2$ (high refractivity layer)-$\lambda/4$ (low refractivity layer)-air.

LIQUID CRYSTAL DISPLAY DEVICE WITH WIDE VIEWING ANGLE CHARACTERISTICS COMPRISING HIGH RESISTIVITY BLACK MATRIX

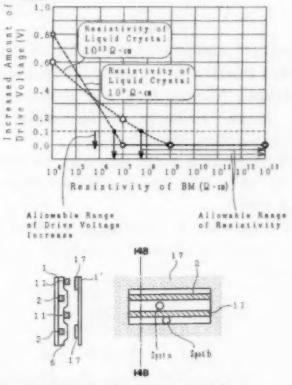
Shigeru Matsuyama; Hiroaki Asuma; Masato Shimura; Yoshifumi Tomita, all of Mobara, and Sukekazu Aratani, Hitachi, all of Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Continuation of application No. 08/659,650, Jun. 6, 1996, Pat. No. 5,831,701. This application Oct. 28, 1998, Appl. No. 181,039.

Claims priority, application Japan, Jun. 14, 1995, 7-147720; Jul. 27, 1995, 7-191994; Jul. 27, 1995, 7-192004

Int. Cl.[7] G02F *1/1335;1/1393;1/136*

U.S. Cl. 349—141 **22 Claims**



1. A liquid crystal display device comprising:

a pair of substrates at least one of which is transparent;

a black mask formed on one of said pair of substrates and having an opening which has at least one pair of edges confronting each other and extending in a first direction;

a first group of electrodes and a second group of electrodes being formed on at least one of said pair of substrates, extending in the first direction of said one pair of edges of said opening of said black mask and one of said first group of electrodes being disposed alternately with one of said second group of electrodes;

a liquid crystal layer comprising a liquid crystal composition substance having a dielectric anisotropy and held between said pair of substrates;

an orientation control film formed between said liquid crystal layer and one of said pair of substrates for orienting liquid crystal molecules of said liquid crystal composition substance in a predetermined direction;

a polarizing means laminated on at least one of said pair of substrates; and

a drive means for applying a drive voltage to at least one of said first group of electrodes and said second group of electrodes;

at least one of said first group of electrodes and at least one of said second group of electrodes are spaced from each other so as to divide a region enclosed by said opening of said black mask into a pair of first regions and at least one second region and to generate an electric field having a component predominantly in parallel with the interface between said orientation control film and said liquid crystal layer in each of said pair of first regions and said at least one second region, said pair of first regions and said at least one second region extending in the first direction of said one pair of edges of said opening of said black mask;

one of said pair of first regions being disposed adjacent to one of said one pair of edges of said opening of said black mask and another of said pair of first regions being disposed adjacent to another of said one pair of edges of said opening of said black mask;

said at least one second region being spaced from both of said one pair of edges of said opening of said black mask by each of said of first regions, respectively,

said liquid crystal composition substance has a resistivity of not smaller than 10^N Ω·cm, and

said black mask has a resistivity of not smaller than 10^M Ω·cm,

wherein N and M are integers satisfying the relationships N≧9 and M≧6.

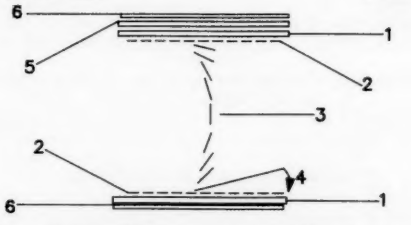
Claims priority, application Japan, Dec. 27, 1995, 7-353704

Int. Cl.[7] C09K *19/52*

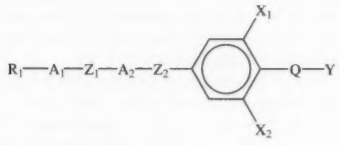
U.S. Cl. 349—182 **17 Claims**



1. In an electric optical system, wherein outsides of transparent upper and lower substrates in a bend cell are placed crossnicolly between at least one birefringent film and at least two polarized plates, and wherein the substrates facing each other have such a relationship that the pre-tilt direction of liquid crystal molecules layer in one substrate interface and pre-tilt direction of liquid crystal molecules layer in the other substrate interface of the substrates are symmetrical with respect to a plane parallel to the substrates, the improvement wherein the system contains at least one compound selected from the group consisting of liquid crystal compounds and liquid crystalline compounds expressed by the formula 1, and/or a liquid crystal mixture comprising at least one compound selected from the group consisting of liquid crystal

compounds and liquid crystalline compounds expressed by the formulae 2, 3, 4A and 4B, and an oriented membrane made of compounds expressed by the formula 5,

(1)



wherein, in formula 1, R_1 denotes an alkyl or alkoxy with 1 to 8 carbon atoms, an alkoxymethyl or alkoxyethyl group, or an alkenyl group with up to 7 carbon atoms,

Z_1 and Z_2 denote independently from each other $—CH_2CH_2—$, —COO— or a single bond,

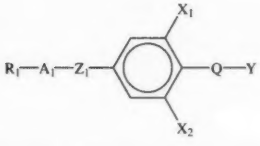
Q is $—CF_2—$, $—OCF_2—$, $OCF_2CFHCF_2—$ or a single bond,

Y denotes H, F, Cl or an alkyl group optionally substituted with F atoms(s),

X_1 and X_2 are H, Cl or F, and

A_1 and A_2 are independently from each other trans-1,4-cyclohexylene, 1,4-phenylene, 2-fluoro-1,4-phenylene, 3-fluoro-1,4-phenylene, 2,3-difluoro-1,4-phenylene, 3,5-difluoro-1,4-phenylene, pyrimidine-2,5-diyl or pyridine-2,5-diyl,

(2)



wherein, in formula 2, R_1 is alkyl, alkoxy or alkoxyalkyl with 1 to 8 carbon atoms,

Z_1 denotes $—CH_2CH_2—$, —COO— or a single bond,

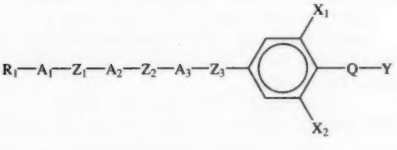
Q is $—CF_2—$, $—OCF_2—$ or a single bond,

Y denotes H, F, Cl or an alkyl group optionally substituted with F atom(s),

X_1 and X_2 are H, Cl or F, and

A_1 is trans-1,4-cyclohexylene, 1,4 phenylene, 2-fluoro-1,4-phenylene, 3-fluoro-1,4-phenylene, 2,3-difluoro-1,4-phenylene, 3,5-difluoro-1,4-phenylene, pyrimidine-2,5-diyl or pyridine-2,5-diyl,

(3)



wherein, in formula 3, R_1 is an alkyl group with 1 to 8 carbon atoms,

Z_1, Z_2 and Z_3 denote independently from each other $—CH_2CH_2—$, —COO— or a single bond,

Q is $—CF_2—$, $—OCF_2—$ or a single bond,

Y denotes H, F, Cl or an alkyl group optionally substituted with F atom(s),

X_1 and X_2 are H, Cl or F, and

A_1, A_2 and A_3 are independently from each other trans-1,4-cyclohexylene, 1,4-phenylene, 2-fluoro-1,4-phenylene, 3-fluoro-1,4-phenylene, 2,3-difluoro-1,4-phenylene, 3,5-difluoro-1,4-phenylene, pyrimidine-2,5-diyl or pyridine-2,5-diyl,

R_1-L-E-R_2 (4A)

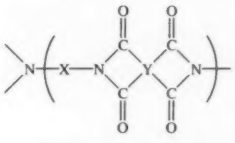
R_1-L-CH_2CH_2-E-R_2 (4B)

wherein, in formulae 4A and 4B, L and E denote independently from each other -Phe-, -Cyc-, -Phe-Phe-, -Phe-Cyc-, -Cyc-Cyc-, -Pyr-, -G-Phe-, -G-Cyc- and enantiomers, wherein -Phe- denotes 1,4-phenylene optionally substituted with F atom(s), -Cyc-denotes trans-1,4-cyclohexylene or trans-1,4-cyclohexenylene, -Pyr-denotes pyrimidine-2,5-diyl or pyridine-2,5-diyl, -G- denotes 2-(trans-1,4-cyclohexyl) ethyl, pyrimidine-2,5-diyl or pyridine-2,5-diyl,

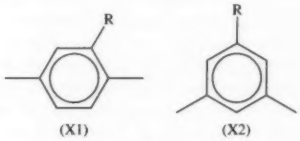
one of substituents L and E is -Phe-, -Cyc-, -Pyr- or -Phe-Cyc-, and

R_1 and R_2 are independently from each other alkyl, alkenyl, alkoxy, alkenyloxy or alkanoyloxy with up to 8 carbon atoms,

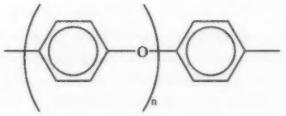
(5)



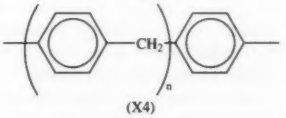
wherein X represents a group from formulae X1 to X8, and Y represents a group from formulae Y1 to Y8,



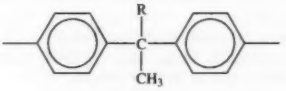
(X1) (X2)



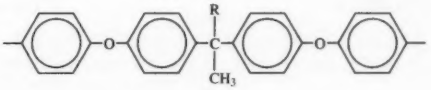
(X3)



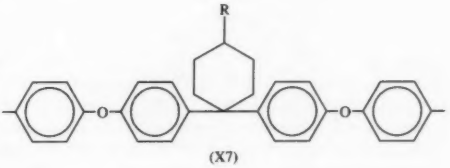
(X4)



(X5)

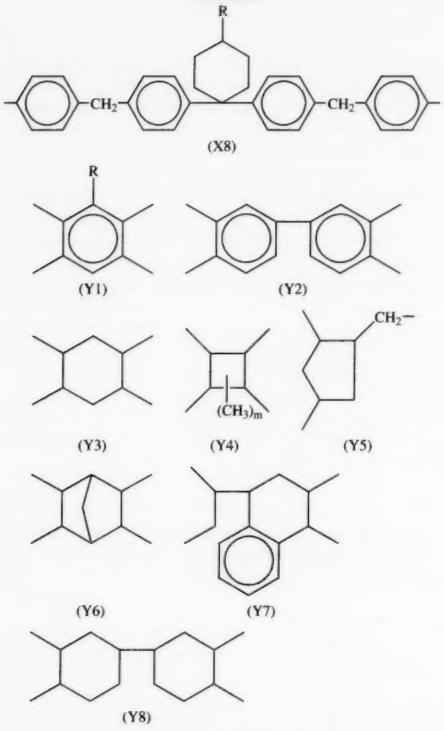


(X6)



(X7)

-continued



wherein in formulae X1 to X8, R represents H or an alkyl group with 1 to 10 carbon atoms, and n represents a real number of 1 to 3, and in formulae Y1 to Y8, R represents H or an alkyl group with 1 to 10 carbon atoms, and m represents a real number of 1 to 4.

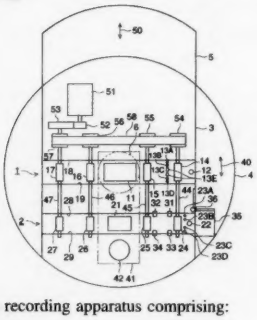
U.S. Cl. 355—46 **32 Claims**



1. An image recording apparatus comprising:

a film loading section on which a first film or a second film having a width which differs from that of the first film can be loaded;

a printing section distant from the film loading section;

detecting means for detecting a film width of the loaded film on the film loading section and for outputting detection signals;

conveyance means for conveying said loaded film from the film loading section to the printing section;

conveyance control means for controlling said conveyance means in accordance with said detection signals; and

a light source to irradiate the loaded film at the printing section, thereby projecting light corresponding to an image formed on the loaded film onto a light-sensitive material.

6,040,892

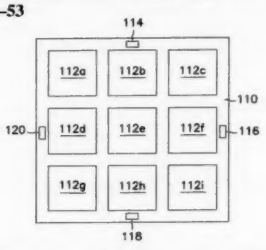
MULTIPLE IMAGE RETICLE FOR FORMING LAYERS

Christophe Pierrat, Boise, Id., assignor to Micron Technology, Inc., Boise, Id.

Filed Aug. 19, 1997, Appl. No. 914,417

Int. Cl.[7] G03B *27/42;* **G03F** *9/00*

U.S. Cl. 355—53 **18 Claims**



1. A reticle for use in controllably exposing a wafer with desired patterns, comprising:

a substrate;

a plurality of spaced apart independent images of different patterns of a single integrated circuit die on the substrate,

least some of the patterns rendering different processing levels of the single integrated circuit die, and

all of the patterns being oriented in a single direction with respect to the integrated circuit die.

6,040,893

SCANNING EXPOSURE METHOD AND APPARATUS FOR CONTROLLING ACCELERATION AND DECELERATION OF A MASKING DEVICE

Ryuichi Ebinuma, Tokyo, Japan, assignor to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Sep. 23, 1997, Appl. No. 935,902

Claims priority, application Japan, Sep. 25, 1996, 8-272886

Int. Cl.[7] G03B *27/42;27/54;27/72*

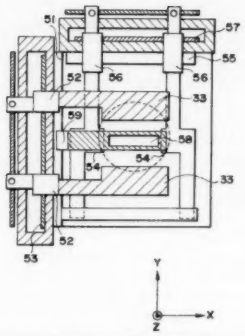
U.S. Cl. 355—53 **4 Claims**

1. A scanning exposure apparatus for projecting a portion of a pattern of an original onto a substrate in a slit-like shape through a projection optical system and for scanningly moving the original and the substrate perpendicular to an optical axis of said projection optical system, to thereby print the pattern of the original on the substrate, said apparatus comprising:

masking means for restricting an exposure area on the original;

driving means for moving said masking means in accordance with a scan of the original and the substrate; and

control means for controlling said driving means so that acceleration of said masking means is completed (i) before a start of the exposure and (ii) after completion of acceleration of



one of the original and the substrate for scan exposure, and for initiating deceleration of said masking means after completion of the exposure.

PROJECTION EXPOSURE APPARATUS AND DEVICE MANUFACTURING METHOD

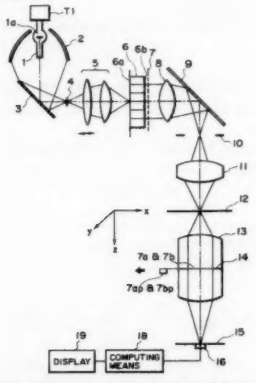
Kazuhiro Takahashi, Utsunomiya, Japan, assignor to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Oct. 28, 1997, Appl. No. 959,301

Claims priority, application Japan, Oct. 29, 1996, 8-303902

Int. Cl.[7] **G03B** *27/42;27/54*

U.S. Cl. 355—53 **4 Claims**



1. A projection exposure apparatus, comprising:

an illumination optical system for illuminating a mask with light from a light source;

a projection optical system for projecting an image of a pattern of the mask being illuminated, said projection optical system having a pupil plane;

a holding member for holding a substrate for receiving the image of the pattern;

a light detector for receiving light from the light source, passed through said projection optical system;

stop means, disposed adjacent to at least one of the pupil plane and a plane optically conjugate with the pupil plane, having a variable aperture for selectively passing light, wherein said light detector performs light detection a plurality of times while the aperture of said stop means is changed;

determining means for determining a light intensity distribution upon the pupil plane based on outputs of said light detector corresponding to the plural light detections; and

adjusting means for adjusting the light intensity distribution on the pupil plane as desired by adjusting a position of the light source based on the determined light intensity distribution.

METHOD AND DEVICE FOR CONTROLLED ILLUMINATION OF AN OBJECT FOR IMPROVING IDENTIFICATION OF AN OBJECT FEATURE IN AN IMAGE OF THE OBJECT

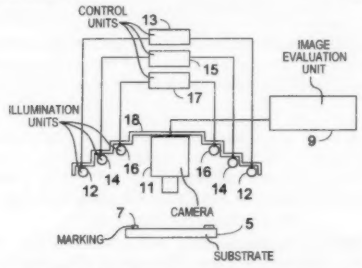
Gerhard Haas, Oberschleissheim, Germany, assignor to Siemens Aktiengesellschaft, Munich, Germany

Filed Apr. 29, 1998, Appl. No. 69,283

Claims priority, application Germany, Oct. 8, 1997, 197 44 454

Int. Cl.[7] **G03B** *27/54;* **G01B** *11/00;* **H04N** *7/18*

U.S. Cl. 355—70 **10 Claims**



6. An apparatus for optimally illuminating a group of objects having substantially identical object features, comprising:

a camera having a field of view;

means for placing a first object of a group of objects in said field of view of said camera, said camera obtaining an image of said first object, said first object having an object feature and said object feature being present in said image;

means for illuminating said first object while said first object is in the field of view of said camera, with illuminating light formed by emitted light from a plurality of illumination sources, the emitted light from each illumination source having a spectral distribution;

a plurality of control devices respectively connected to said illumination sources and controlling said illumination sources by varying parameters of said control devices to vary the spectral distribution of the emitted light from each of said illumination sources until an optimized illumination of said first object by said illuminating light is achieved at which said object feature is reliably recognizable in said image;

means for storing said parameters which produce an optimized illumination of said first object as stored parameters; and

means for setting said control devices with said stored parameters for illuminating all other objects in said group.

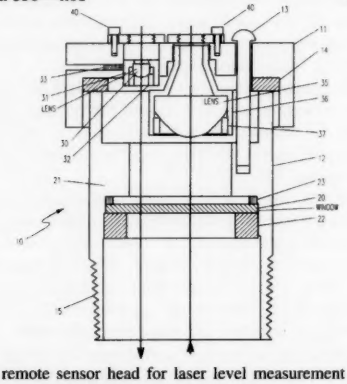
REMOTE SENSOR HEAD FOR LASER LEVEL MEASUREMENT DEVICES

Bruce Clifford, Ontario, Canada, and John Harrison, Shalimar, Fla., assignors to Laser Technology, Inc., Englewood, Colo.

Filed Apr. 29, 1998, Appl. No. 69,447

Int. Cl.[7] G01C *3/08;* **G01F** *23/00*

U.S. Cl. 356—4.01 **9 Claims**



1. A remote sensor head for laser level measurement in liquid storage vessels, said sensor head comprising:

a sleeve, said sleeve generally cylindrical in shape, with a component end opposite a connecting end, said sleeve being hollow throughout providing fluid connectivity between said component end and said connecting end and forming a sleeve interior cavity;

a base, said base generally cylindrical in shape with a cable end opposite a component end, said base being hollow on said component end and forming a base interior cavity, said base connected to said sleeve at said component end by a plurality of leveling screws such that the longitudinal axis of said base is parallel to the longitudinal axis of said sleeve and such that said base interior cavity is in fluid communication with said sleeve interior cavity;

a transmitter lens assembly, said transmitter lens assembly having a generally cylindrical shape, said transmitter lens assembly being hollow throughout with a transmitter lens assembly cable end in fluid communication with a transmitter lens assembly component end, said transmitter lens assembly secured to said base interior cavity in a manner such that the longitudinal axis of said transmitter lens assembly is parallel to the longitudinal axis of said sleeve and said base and such that said transmitter lens assembly component end is in fluid communication with said sleeve interior cavity and said base interior cavity;

a receiver lens assembly, said receiver lens assembly being generally cylindrical in shape and hollow throughout with a receiver lens assembly cable end in fluid communication with a receiver lens assembly component end, said receiver lens assembly secured to said base interior cavity in a manner such that the longitudinal axis of said receiver lens assembly is parallel to the longitudinal axis of said sleeve and said base and such that said receiver lens assembly component end is in fluid communication with said sleeve interior cavity and said base interior cavity;

a window, said window affixed perpendicular to the longitudinal axis of said sleeve interior cavity and spanning the interior cross-section of said sleeve and secured by a window retaining ring;

a transmitter lens, said transmitter lens affixed in said transmitter lens assembly perpendicular to the longitudinal axis of said transmitter lens assembly and secured by a transmitter lens retaining ring; and

a receiver lens, said receiver lens affixed in said receiver lens assembly perpendicular to the longitudinal axis of said receiver lens assembly and secured by a receiver lens retaining ring.

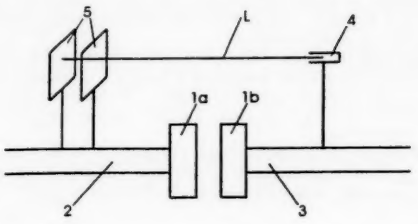
1. Electro-optical measuring instrument for detecting the relative position assumed by at least surface regions of two bodies with respect to one another, having a measuring arrangement which has



at least one light beam transmitter and at least one optoelectronic position detector with a light-sensitive measuring surfaces wherein:

a) the light beam transmitter is arranged in a path fixed with respect to at least the surface region at least one of the two bodies in a manner for directing a focused light beam of small divergence onto the light-sensitive measuring surface of the position detector, and the position detector supplying electric signals corresponding to coordinates of the instantaneous point of impingement of the light beam on the measuring surface in response to impingement of said light beam thereon, and

b) at least parts of the measuring arrangement are configured to be displaceable in a defined measuring movement with the surface region of one of the two bodies in such a way that a geometrical locus, produced in the course of the measuring movement, of the points of impingement of the light beam on the measuring surface is in a predetermined relationship to the relative position of the at least surface regions of the two bodies to be determined, the measuring instrument having means for calculating, under programmed control, the relative position to be detected on the basis of the electric signals as supplied by the position detector during the measuring movement and further comprising a device which carries an extension of the measuring region while monitoring the measuring movement.

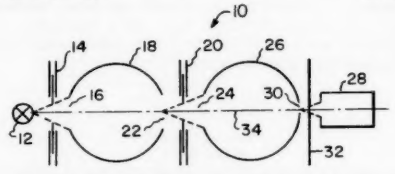
DIFFUSE OPTICAL TRANSMISSION DENSITY MEASUREMENT SYSTEM

Eric L. Fallet, Pittsford; Michael R. Goodwin, Rochester, and Timothy P. Hahm, Spencerport, all of N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.

Filed Dec. 23, 1998, Appl. No. 219,691

Int. Cl.[7] **G01J** *1/04*

U.S. Cl. 356—236 **11 Claims**



1. An apparatus for measuring diffuse optical transmission density of a film sample comprising:

(a) a diffuse light source:

(b) a first light modulation system through which light from said light source is transmitted to a first optical diffuser;

(c) a second light modulation system positioned between said first optical diffuser and a second optical diffuser;

(d) a detector system which receives light from an exit port of said second optical diffuser and through said second light modulation system; and

(e) means for supporting the film sample between said exit port of said second optical diffuser and said detector system.

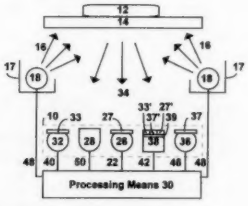
6,040,905
FIBER COLOR GRADING SYSTEM

Luo Cheng; Glenn E. Irick, Sr.; Youe-Tsyr Chu; Hossein M. Ghorashi; Michael E. Galyon, and Mark A. Overbay, all of Knoxville, Tenn., assignors to Zellweger Uster, Inc., N.C.

Filed Aug. 5, 1998, Appl. No. 129,271

Int. Cl.[7] G01N *21/00*

U.S. Cl. 356—238.3 **20 Claims**



1. A fiber classing device comprising:

a sample window for viewing a fiber sample,

a light source for providing light that is directed toward and reflected by the fiber sample, producing reflected light,

a photo sensitive detector positioned to receive the reflected light, for detecting lightness, redness, and yellowness of the fiber sample, and for producing a lightness signal, a redness signal, and a yellowness signal based on the lightness, redness, and yellowness of the fiber sample, and

processing means for (1) receiving the lightness signal, redness signal, and yellowness signal from the photo sensitive detector, (2) assigning a preliminary grade to the fiber sample based at least in part on the lightness signal and yellowness signal, and (3) selectively adjusting the preliminary grade to a final grade based at least in part on the redness signal.

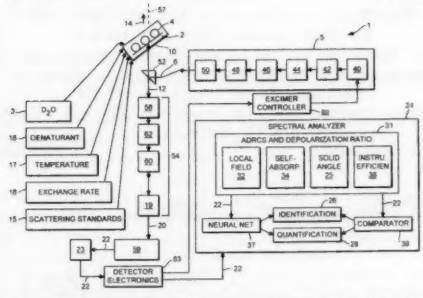
6,040,906
RESONANCE RAMAN SPECTROSCOPY FOR IDENTIFYING AND QUANTITATING BIOMATTER, ORGANIC, AND INORGANIC ANALYTES

Gregory P. Harhay, 26 John St., Chicopee, Mass. 01013

Filed Jul. 11, 1996, Appl. No. 678,649

Int. Cl.[7] G01J *3/44*

U.S. Cl. 356—301 **30 Claims**



1. A method of resonance Raman spectroscopy for identifying and quanitating proton-bearing analytes including bacteria, viruses, prions, biomolecules, biomolecular assemblies, inorganic and organic compounds comprising:

deuterating with dideuterium oxide (D20) a sample containing one or more analytes, each analyte having exchangeable protons such that said deuteration will cause the protons of said analyte to be exchanged with deuterons;

providing a monochromatic light at an excitation frequency onto a sample for producing Raman sample light and rejecting Rayleigh light;

passing said Raman sample light through a depolarizer for producing randomized polarization components of said Raman sample light;

generating a Raman sample spectrum calibrated with respect to an absolute differential Raman cross-section standard in response to said randomized polarization components;

providing said Raman sample spectrum to a spectral analyzer; provides the identity of analytes in the sample.

6,040,907
MICROSCOPE SYSTEM FOR THE DETECTION OF EMISSION DISTRIBUTION AND PROCESS FOR OPERATION OF THE SAME

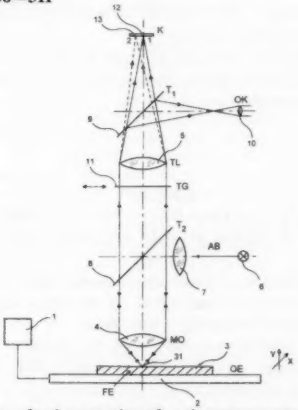
Reinhard Steiner, Stadtroda, and Dieter Graefe, Jena, both of Germany, assignors to Carl Zeiss Jena GmbH, Jena, Germany

Filed Aug. 29, 1997, Appl. No. 920,680

Claims priority, application Germany, Jan. 21, 1997, 197 01 703

Int. Cl.[7] G01J *3/18;3/36*

U.S. Cl. 356—311 **6 Claims**



1. A process for the operation of a microscope system having an imaging beam path from a specimen in a direction of an at least one-dimensional receiver distribution, comprising the steps of:

imaging the specimen to produce a light output from said specimen;

displaying an image representative of said light output by the specimen;

marking one or more points or areas of the displayed image;

providing, after marking of said one or more points or areas, within the imaging beam path an element adapted to spectral divide fight emitted at least in a punctiform manner;

moving the one or more marked points or areas into a predetermined image coordinate of the displayed image; and

receiving a spectrum of light resulting from the spectral division of light by said element.

6,040,908
METHOD FOR STRESS TUNING FIBER OPTIC SENSOR COILS

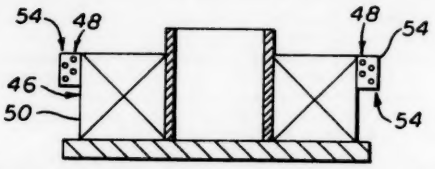
John P. Rahn, West Hills; Ralph A. Patterson, Moorpark, and Amado Cordova, Woodland Hills, all of Calif., assignors to Litton Systems, Inc., Woodland Hills, Calif.

Filed Jul. 28, 1998, Appl. No. 123,626

Int. Cl.[7] G01C *19/72*

U.S. Cl. 356—350 **15 Claims**

1. A method for reducing Shupe bias in a fiber optic gyroscope of the type that includes a source of optical energy, a coil pack comprising a potted sensor coil formed of fiber segments wound



clockwise and counterclockwise from the midpoint of said coil, said coil pack being located upon and adjacent to a coil mount, a phase modulator engaged to said coil for imposing an artificial phase shift upon light counterpropagating within said coil and a photodetector for receiving and converting the output of said coil into an electrical signal, said method including the steps of:

a) applying a plurality of temperature ramps to said coil pack; and

b) measuring the output of said coil in response to each of said temperature ramps; then

c) calculating the strain differential between the clockwise and counterclockwise-wound fiber segments; then

d) determining a coil lead profile for imposing a counteracting differential stress; and then

e) attaching fiber leads to the ends of said clockwise and counterclockwise wound fiber segments in accordance with said lead profile.

6,040,909

SURFACE POSITION DETECTING SYSTEM AND DEVICE MANUFACTURING METHOD USING THE SAME

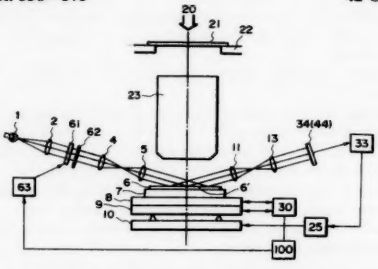
Masanobu Hasegawa, Utsunomiya; Minoru Yoshii, Tokyo, and Yoshinori Ohsaki, Utsunomiya, all of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Filed May 1, 1998, Appl. No. 70,741

Claims priority, application Japan, May 2, 1997, 9-130484; Apr. 25, 1998, 10-131132

Int. Cl.[7] G01B *11/14*

U.S. Cl. 356—375 **42 Claims**



1. A detecting system for detecting positional information related to a surface of an object, said detecting system comprising:

a variable pattern generator for projecting an arbitrary pattern image on the surface of the object;

a light projecting optical system for projecting a pattern, defined by said variable pattern generator, to the surface of the object along an oblique direction;

a light receiving optical system for directing light from an image of the pattern; and

a light receiving element for detecting the light directed by said light receiving optical system, wherein surface position information about the surface of the object is detected on the basis of the detection by said light receiving element.

6,040,910

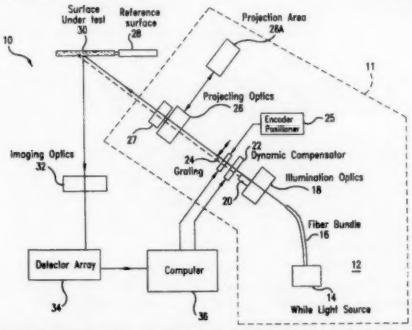
OPTICAL PHASE-SHIFT TRIANGULATION TECHNIQUE (PST) FOR NON-CONTACT SURFACE PROFILING

Shudong Wu, San Francisco, and Guowen Lu, Mountain View, both of Calif., assignors to The Penn State Research Foundation, University Park, Pa.

Filed May 20, 1998, Appl. No. 82,409

Int. Cl.[7] G01B *11/24*

U.S. Cl. 356—376 **16 Claims**



1. An apparatus for profiling a surface of an object comprising:

illumination means for directing an incident beam of light having a varying intensity pattern onto said surface, said illumination means including means for reducing high order harmonics of said varying intensity pattern;

means for selectively adjusting an intensity of a selected point or pixel of said varying intensity pattern from said illumination means;

means for spatially phase shifting the varying intensity pattern of said incident beam of light;

detector means for receiving deformed grating images of said surface; and

processing means, coupled to said detector means, for determining a profile of said surface based on a number of the deformed grating images at different spatial phases, said processing means further controlling said means for selectively adjusting to adjust an intensity of a selected point according to surface reflectivity conditions of said surface.

6,040,911

REFERENCE IMAGE FORMING METHOD AND PATTERN INSPECTION APPARATUS

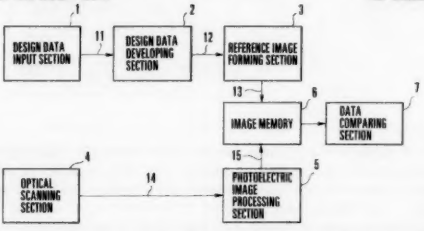
Takeo Nozaki, Tokyo, and Satoshi Nishii, Kanagawa, both of Japan, assignors to NEC Corporation, Tokyo, Japan

Filed Aug. 27, 1998, Appl. No. 141,364

Claims priority, application Japan, Aug. 29, 1997, 9-234018

Int. Cl.[7] G01B *11/00*

U.S. Cl. 356—394 **18 Claims**



1. A reference image forming method in a pattern inspection apparatus for scanning a pattern formed on an object to be inspected on the basis of design data with a laser beam having a predetermined wavelength, focusing transmitted light passing through the object on a light-receiving element by using an objective lens, forming a real image from pattern information obtained

from said light-receiving element, and comparing the real image with a reference image obtained by imaging the design data, thereby detecting a defect in the object, comprising the steps of:

forming reference data by developing the design data as a pattern made of multilevel gradation values on pixels having a resolution higher than an inspection resolution; and

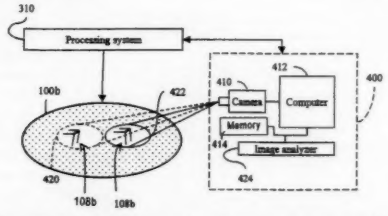
forming a reference image by increasing or decreasing a width of each pattern of the reference data as a multilevel gradation pattern with a precision higher than the inspection resolution on the basis of an edge position of a corresponding pattern in the real image.

6,040,912

METHOD AND APPARATUS FOR DETECTING PROCESS SENSITIVITY TO INTEGRATED CIRCUIT LAYOUT USING WAFER TO WAFER DEFECT INSPECTION DEVICE

Steven J. Zika, Fremont, and C. Bradford Hopper, San Francisco, both of Calif., assignors to Advanced Micro Devices, Inc., Sunnyvale, Calif.

Filed Sep. 30, 1998, Appl. No. 163,314
Int. Cl.[7] G01B *11/00*
U.S. Cl. 356—394 **11 Claims**



1. A method of detecting random layout structures sensitive to process induced pattern errors in semiconductor device manufacturing, the method comprising the steps of:

applying a first manufacturing process to a first wafer containing semiconductor devices;

applying a second manufacturing process to a second wafer containing semiconductor devices, the second manufacturing process being different from the first manufacturing process;

comparing the first and second wafers by image subtraction to detect systematic pattern defects in the semiconductor devices of one of the first and second wafers.

6,040,913

METHOD TO DETERMINE LIGHT SCATTERING EFFICIENCY OF PIGMENTS

Robert William Johnson, Kennett Square, Pa., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del.

Filed Jan. 29, 1999, Appl. No. 240,251
Int. Cl.[7] C10D *8/23*
U.S. Cl. 356—432 **16 Claims**

1. A method to determine light scattering efficiency of a white pigment wherein the light scattering efficiency correlates with performance in an end-use application, comprising:

(a) preparing a dilute slurry of a pigment in a continuous liquid medium having a known concentration, where concentration is the concentration of pigment in the slurry;

(b) measuring the total transmittance (T) of the slurry at a wavelength (λ) of at least 600 nm;

(c) converting the transmittance measurement (T) to optical density (OD) by the equation

$$OD = -\log(T)$$

and

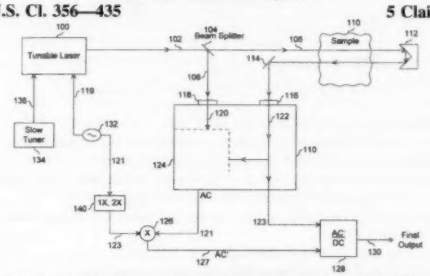
(d) dividing the optical density by the concentration of the pigment in the slurry to determine light scattering efficiency of the pigment.

6,040,914

SIMPLE, LOW COST, LASER ABSORPTION SENSOR SYSTEM

Michael L. Bortz, Palo Alto, and Asif A. Godil, Mountain View, both of Calif., assignors to New Focus, Inc., Santa Clara, Calif.

Filed Jun. 10, 1997, Appl. No. 872,617
Int. Cl.[7] G01N *21/31;21/39*
U.S. Cl. 356—435 **5 Claims**



1. A laser absorption system for measuring optical absorption of a sample across a range of wavelengths, and the laser absorption system comprising:

a tunable external cavity diode laser with a first input and a second input and an optical output, and the external cavity diode laser responsive to a sweep signal at the first input to mechanically sweep a beam at the output across the range of wavelengths, and the external cavity diode laser responsive to a modulation signal at the second input to dither the beam;

a signal source coupled to the second input of said tunable external cavity diode lasers and said signal source generating the modulation signal at a frequency suitable for derivative spectroscopy;

a splitter to split the laser beam into a reference beam and a signal beam and the signal beam intersecting the sample;

a reference photodetector that detects the reference beam and outputs a reference signal corresponding thereto;

a signal photodetector that detects the signal beam intersecting the sample and outputs an absorption signal corresponding thereto;

an autobalancer with a first input, a second input, and a first output, and the first input coupled to said reference photodetector to receive said reference signal, and the second input coupled to said signal photodetector to receive said absorption signal, and said autobalancer for processing the reference signal and the absorption signal and outputting at the first output a first autobalanced signal corresponding to the absorption signal with a reduction in a noise level thereof; and

a demodulator with a first input, a second input and an output, and the first input coupled to said signal source, and the second input coupled to said first output of said autobalancer, and said demodulator for demodulating the first autobalanced signal with the modulation signal and generating at the output a derivative signal corresponding to a derivative of an absorption curve of the sample.

6,040,915

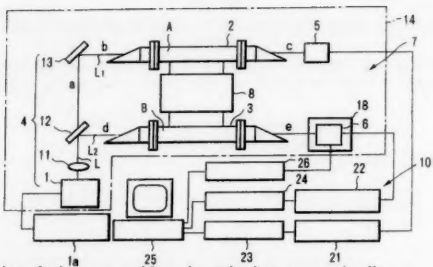
ANALYSIS METHOD FOR GASES AND APPARATUS THEREFOR

Shang-Qian Wu; Jun-ichi Morishita; Yoshio Ishihara, and Tetsuya Kimijima, all of Tokyo, Japan, assignors to Nippon Sanso Corporation, Tokyo, Japan

PCT No. PCT/JP98/01608, § 371 Date Dec. 7, 1998, § 102(e) Date Dec. 7, 1998, PCT Pub. No. WO98/45686, PCT Pub. Date Oct. 15, 1998
PCT Filed Apr. 8, 1998, Appl. No. 147,349
Claims priority, application Japan, Apr. 9, 1997, 9-091158
Int. Cl.[7] G01N *21/61*
U.S. Cl. 356—435 **22 Claims**

1. A method for analyzing an impurity in a gas, comprising the steps of

introducing a gas with an impurity into a first cell;



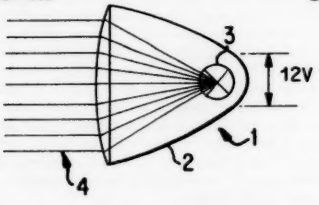
introducing a gas with no impurity into a second cell;
maintaining identical pressures in said first and second cells;
irradiating a light from a light irradiating source;
varying the frequency of said light over a frequency spectrum including an absorption frequency of said impurity;
splitting the light into a first beam and a second beam with a splitting device
passing said first beam through said first cell;
passing said second beam through said second cell;
measuring an intensity of light passed through said first cell over said frequency spectrum with a first measuring device;
measuring an intensity of light passed through said second cell over said frequency spectrum with a second measuring device; and
determining an absorption spectrum of the impurity in the gas with the impurity based on a difference between from measured with said first measuring device and data measured with said second measuring device.

6,040,916

PROCESS AND APPARATUS FOR DETERMINING THE CONDITION OF A ROAD SURFACE

Manfred Griesinger, Leonberg, Germany, assignor to Daimler-Chrysler AG, Germany

Filed Aug. 20, 1998, Appl. No. 136,928
Claims priority, application Germany, Aug. 20, 1997, 197 36 138; European Pat. Off., Feb. 26, 1998, 98103365
Int. Cl.[7] G01N *21/25;21/00;* **G01B** *11/00;* **G08G** *1/09*
U.S. Cl. 356—448 **20 Claims**



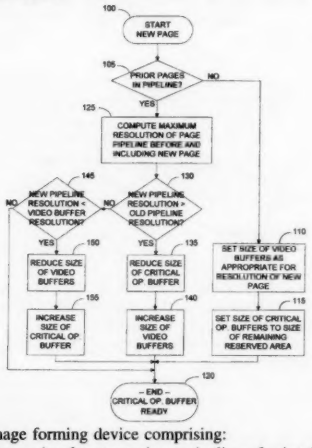
1. A process for determining a condition of a road surface, comprising:
beaming light onto the road surface, said light including a first light fraction having a first wavelength range which is not significantly absorbed by water/ice, and a second light fraction having a second wavelength range which is significantly absorbed by water/ice, said first light fraction including first light components with differing wavelengths;
detecting backscattered light from the road surface;
analyzing the backscattered light from the road surface to obtain a spectral intensity distribution curve;
determining an approximation reference curve for spectral intensity distribution of the backscattered light when the road is dry using spectral data of the detected backscattered light;
calculating a difference between spectral data of light backscattered from the second light fraction and corresponding data of the approximation reference curve for at least one wavelength of the second wavelength range, to obtain a difference curve; and
determining the condition of the road surface based on the calculated difference curve; wherein
the second light fraction contains a plurality of different wavelengths; and
the difference between the spectral data of the second backscattered-light fraction and the corresponding approximation reference curve data is determined as a difference curve between a measured spectral curve of the backscattered light and the approximation reference curve in the second wavelength range.

6,040,917

MEMORY PARTITIONING FOR MULTI-RESOLUTION PAUSELESS PAGE PRINTING

Russell Campbell; Richard M. Dow; Timothy P. Blair, and Burton H. Poppenga, all of Boise, Id., assignors to Hewlett-Packard Company, Palo Alto, Calif.

Filed Oct. 27, 1997, Appl. No. 958,437
Int. Cl.[7] G06K *15/00*
U.S. Cl. 358—1.17 **20 Claims**



1. An image forming device comprising:
(a) a print engine for processing a pipeline of print data;
(b) a general memory area connected to the print engine;
(c) first and second reserved memory areas connected to the print engine; and,
(d) means for managing page description data in the general memory area, and for managing rendered page strip data in the first reserved memory area for immediate next output to the print engine, and for managing critical operation data in the second reserved memory area for enabling a generation of the rendered page strip data without flushing the first reserved memory area, such that constant throughput of the pipeline of print data is improved through reduced printing pauses.

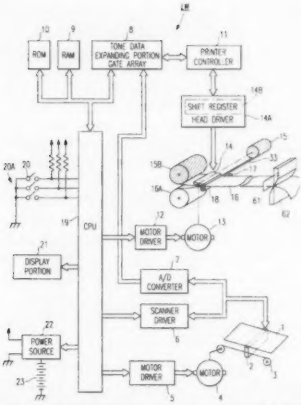
COPYING MACHINE

Isao Edatsune; Hiroshi Kuriyama, and Osamu Urano, all of Nagano-ken, Japan, assignors to Sieko Epson Corporation, Tokyo, Japan

Continuation of application No. 08/491,833, filed as application No. PCT/JP94/01660, Apr. 10, 1994, Pat. No. 5,699,166.
This application Sep. 9, 1997, Appl. No. 926,385.
Claims priority, application Japan, Nov. 9, 1993, 5-279859; Nov. 18, 1993, 5-289549
Int. Cl.[7] G03G *15/05*
U.S. Cl. 358—296 **10 Claims**

1. A copying machine comprising:



a recording medium being in a form of a roll having an image carrying sheet with a printing face for printing an image, a release sheet releasably secured to a back surface of the image carrying sheet;

an image reading scanner for reading an original image line by line and digitally transforming the original image into image data storable in a memory, wherein the image data includes tone data;

an image printing device having a printing head for printing the image data based on the tone data on the recording medium by the printing head;

a recording medium conveying mechanism; and

a cartridge for mounting the recording medium and the recording medium conveying mechanism;

the recording medium conveying mechanism conveying the recording medium to the image printing device, wherein the recording medium conveying mechanism has a cartridge fitting portion adapted for removably mounting the cartridge to the copying machine.

6,040,919

READING-RECORDING APPARATUS HAVING A LID MEMBER WHICH SERVES AS A PAPER GUIDE

Naohiro Iwata, Yokosuka; Katsumi Obana, Funabashi; Hideyuki Terashima, Sagamihara, and Noriyuki Aoki, Tokyo, all of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Sep. 12, 1997, Appl. No. 928,459

Int. Cl.[7] H04N *1/00;1/04;* **G03G** *15/00*

U.S. Cl. 358—400 **10 Claims**

1. A reading-recording apparatus including:

an apparatus body;

an operating portion disposed on the upper surface of said apparatus body;

an original conveying path for conveying an original from above to forwardly of said apparatus body;

a recording sheet conveying path for conveying a recording sheet from above to forwardly of said apparatus body, with said recording sheet conveying path being arranged substantially parallel to said original conveying path in a same conveying direction to form a space portion between said recording sheet conveying path and said original conveying path;

a reading portion for causing said original conveying path to convey the original and reading image information therefrom, with said reading portion being provided on the space portion;

a recording portion for causing said recording sheet conveying path to convey the recording sheet and effecting recording thereon, with said recording portion being provided on the space portion adjacent to said reading portion; and

said lid member, when in its closed position, covering said operating portion, and when in its opened position, supporting the original and the recording sheet so as to be guided by said original conveying path and said recording sheet conveying path.

6,040,920

DOCUMENT STORAGE APPARATUS

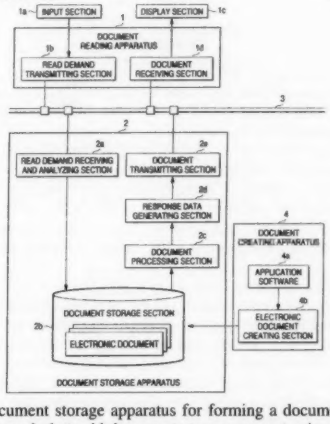
Hideki Ichiriki, Kanagawa, Japan, assignor to Fuji Xerox Co., Ltd., Tokyo, Japan

Filed Feb. 19, 1997, Appl. No. 802,567

Claims priority, application Japan, Feb. 20, 1996, 8-032484; Feb. 20, 1996, 8-032490

Int. Cl.[7] H04N *1/00*

U.S. Cl. 358—403 **8 Claims**



1. A document storage apparatus for forming a document reading system such that said document storage apparatus is combined with a document reading apparatus comprising read demand transmitting means for transmitting a read demand and document receiving means for receiving a document transmitted in response to the read demand to display the received document and to create a read demand in accordance with reference information of the displayed document in a case where the reference information has been instructed, said document storage apparatus comprising:

read demand receiving and analyzing means for receiving the read demand issued from said document reading apparatus to analyze required contents;

document storage means for storing an electronic document held in page units;

document extracting means for extracting a subject page of the electronic document to meet the read demand;

response data generating means for generating reference information to a front page and a rear page to meet the read demand to synthesize the reference information to the page of the electronic document extracted by said document extracting means so as to generate response data;

instruction means for referring to a preceding or next page of the extracted electronic document:

display means for displaying said reference information together with an image of the extracted page of the electronic document and for displaying instruction means; and

document transmitting means for transmitting the generated response data to said document reading apparatus from which the read demand has been issued.

6,040,921

COMMUNICATION APPARATUS

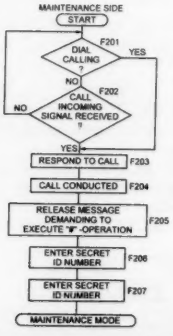
Motohiko Hayashi, Yamatokoriyama, and Masahiro Tanaka, Ikoma-gun, both of Japan, assignors to Sharp Kabushiki Kaisha, Osaka, Japan

Filed Apr. 11, 1997, Appl. No. 843,159

Claims priority, application Japan, Apr. 11, 1996, P8-089722

Int. Cl.[7] H04N *1/00*

U.S. Cl. 358—434 **16 Claims**



1. A communication apparatus for data communication over a communication channel based on technical communication parameters, the communication apparatus comprising:

detecting means for detecting a dual tone signal received through the communication channel for a maintenance mode separately establishable from a facsimile transmission mode, the dual tone signal representing at least a facsimile signaling setting of a particular one of the technical communication parameters for supporting traffic on the communications channel;

controlling means for controlling at least the facsimile signaling setting of the particular one of the communication parameters in accordance with a detection result obtained by the detecting means after a set-up time period of the maintenance mode primarily dependent upon determining whether a detected secret identification number represented by the dual tone signal matches a stored identification number; and

a monitor for monitoring the controlling means and the facsimile signaling setting of the particular one of the communication parameters during the maintenance mode to transmit a corresponding status message associated with the facsimile signaling setting over the communications channel.

6,040,922

DEVICE AND METHOD FOR FACSIMILE AND DATA COMMUNICATION

Takashi Umeda, Yokosuka, and Motoyasu Ohno, Tokyo, both of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Osaka, Japan

Filed May 19, 1995, Appl. No. 444,588

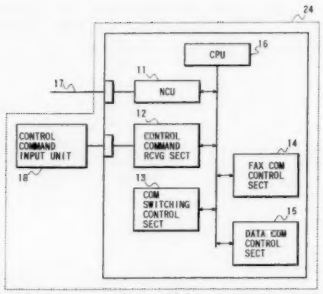
Claims priority, application Japan, May 20, 1994, 6-106547

Int. Cl.[7] H04N *1/32*

U.S. Cl. 358—468 **10 Claims**

1. A communication control device comprising:

a host computer; and



a data modem connected to said host computer for establishing communication between said host computer and a separate counterpart communication terminal,

said host computer feeding a predetermined command to said data modem before establishment of said communication, so as to command said data modem to shift to a data communication after performing a facsimile communication between said host computer and said counterpart communication terminal via said data modem, and

said data modem responding to a data communication shift acknowledge signal, received from said counterpart communication terminal after performing said facsimile communication, by feeding a predetermined notification signal to said host computer thereby carrying out a data communication shift process for implementing data communication with said counterpart communication terminal.

6,040,923

TRANSFER CONTROL APPARATUS FOR OPTICAL IMAGE READING APPARATUS

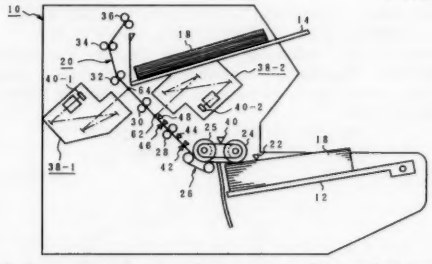
Yoshihiro Takashimizu, and Yoshio Tabata, both of Kawasaki, Japan, assignors to Fujitsu Limited, Kawasaki, Japan

Filed Jun. 11, 1997, Appl. No. 873,024

Claims priority, application Japan, Nov. 21, 1996, 8-310407

Int. Cl.[7] H04N *1/04;* **B65H** *7/12*

U.S. Cl. 358—498 **34 Claims**



1. A paper transfer control apparatus used for optical image reading apparatus that detects paper, which is transferred by a transfer mechanism, using one or more sensors, and optically reads an image on the paper, the paper transfer control apparatus comprising:

a transmission-type sensor detecting the paper;

a reflection-type sensor detecting the paper;

a sensor mode selecting unit for selecting one of said sensors;

a transmission-type sensor processing unit performing paper detection processing for said transmission-type sensor, based on a detection signal of the transmission-type sensor when selected by said sensor mode selecting unit; and

a reflection-type sensor processing unit performing paper detection processing for said reflection-type sensor, based on a detection signal of the reflection-type sensor when selected by said sensor mode selecting unit,

wherein each of said transmission-type sensor processing unit and said reflection-type sensor processing unit comprises:

a paper pass detection processing unit for detecting information regarding paper pass from change of sensor detection levels regarding front and back edges of the paper; and

a double-feed detection processing unit for detecting double-feed of paper based on the sensor detection level,

wherein said double-feed detection processing unit of said transmission-type sensor processing unit comprises:

a criterion-level setting unit for obtaining a sensor output L at the time of transferring the first sheet of paper in a criterion-level setting range having an upper limit Lup and a lower limit Ldown based on a quantity of light transmitted from a base color portion of paper by controlling light emission current of a sensor, detecting a sensor output corresponding to the quantity of light transmitted from the base color portion of the paper within the criterion-level setting range, and setting a criterion-level for double-feed decision, L0; and

a double-feed decision unit for setting a lower decision limit Lr1 and an upper decision limit Lr2 based on the criterion-level for double-feed decision, L0 that is set by said criterion-level setting unit, deciding to be double-feed of paper presently being transferred if the sensor output L becomes equal to or lower than said lower decision limited Lr1 when the second and later sheets of paper are transferred, and deciding to be double-feed of the first sheet of paper if the sensor output L becomes equal to or larger than said upper decision limit Lr2.

6,040,924

COLOR IMAGE FORMING APPARATUS

Akira Tamagaki, Souraku-gun; Yoichi Shimazawa; Hideo Matsuda, both of Nara, and Syoichiro Yoshiura, Tenri, all of Japan, assignors to Sharp Kabushiki Kaisha, Osaka, Japan

Filed Jun. 23, 1998, Appl. No. 103,670

Claims priority, application Japan, Jun. 24, 1997, 9-167592

SELECT 2^d OF VERTEX VALUES
200
COMPUTE A VERTEX NUMBER
201
SELECT ONE OF THE 2^d VERTEX VALUES USING THE VERTEX NUMBER
202
COMPUTE A SET OF 2^d AVERAGES
203
400
COMPUTE n VALUES FOR i RANGING FROM n-1 TO ZERO
401
SELECT n+1 OF INTERPOLATION DATA VALUES
402
COMPUTE INTERPOLATION RESULT FROM THE SELECTED n+1 INTERPOLATION DATA VALUES

1. A pruned radial interpolator for interpolating between interpolation data values using input data values each having d components to generate output data values, each of said interpolation data values includes a plurality of interpolation data value bits, said d components of said input data values represented by d sets of bits each partitioned to form d sets of higher order bits and d sets of lower order bits, said d sets of higher order bits used for selecting 2^d of said interpolation data values, said pruned radial interpolator comprising:

a first multiplexer having a first multiplexer output, said first multiplexer configured for receiving said 2^d of said interpolation data values, said first multiplexer for selecting a first one of said 2^d of said interpolation data values responsive to a first value determined from said d sets of lower order bits; and

a first adder having a first input, a second input, and an output, said first input coupled to said first multiplexer output, said second input configured to receive a second one of said 2^d of said interpolation data values selected using said d sets of upper order bits.

COMMON NON-SYMMETRIC PRUNED RADIAL AND NON-SYMMETRIC PRUNED TETRAHEDRAL INTERPOLATION HARDWARE IMPLEMENTATION

Gary L. Vondran, Jr., Winchester, Mass., assignor to Hewlett-Packard Company, Palo Alto, Calif.

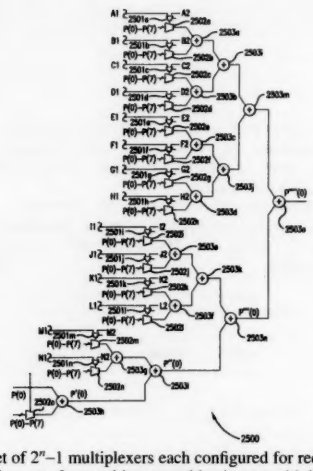
Filed Dec. 12, 1997, Appl. No. 989,998

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **G03F** *3/08;* **H04N** *1/46;* **B41B** *15/00*

U.S. Cl. 358—525 **18 Claims**

1. A common non-symmetric pruned radial and non-symmetric pruned tetrahedral interpolator for interpolating between interpolation data values using input data values each having d components to generate output data values, said d components represented, correspondingly, by d sets of bits each partitioned to form d sets of lower order bits each having, respectively, $n_1, n_2, n_3, \ldots n_d$ of said bits, said common non-symmetric pruned radial and non-symmetric pruned tetrahedral interpolator comprising:



a first set of 2^n-1 multiplexers each configured for receiving one of a first set of control inputs and having a multiplexer output where n equals the greatest of said n_1, n_2, n_3, . . . n_d, each of said multiplexers of said first set for selecting from said interpolation data values responsive to said one of said first set of control inputs;

a second set of 2^n-2 multiplexers each having a multiplexer output, each of said multiplexer output of said second set coupled to one of said multiplexers of said first set of multiplexers, said second set of multiplexers to supply 2^n-2 of said first set of control inputs by each of said second set of multiplexers selecting between one of a first set of values and one of a second set of values, responsive to one of a second set of control inputs, where determining said first set of values includes using a first function and determining said second set of values includes using a second function and a third function; and

a means for adding configured for receiving said multiplexer output of said first set of multiplexers.

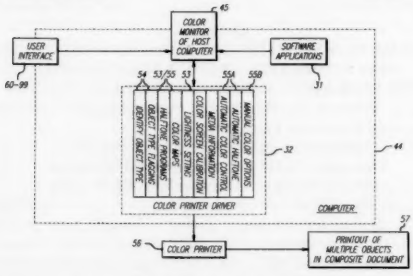
COLOR HALFTONING OPTIONS INFLUENCED BY PRINT-MODE SETTING

Kirt Alan Winter, Escondido, and Thomas G. Smith, San Diego, both of Calif., assignors to Hewlett-Packard Company, Palo Alto, Calif.

Continuation of application No. 08/187,933, Jan. 27, 1994, abandoned. This application Dec. 4, 1996, Appl. No. 759,399.

Int. Cl.[7] **H04N** *1/40*

U.S. Cl. 358—534 **31 Claims**



1. A method of controlling the quality of printing a composite document having objects of different object types to be printed, wherein selection of printing-quality or printing-speed modes, which allocate printing of pixels as among passes or nozzles of a scanning printhead, is used to automatically control methods of rendition as well; said method comprising the steps of:

providing a plurality of different selectable print modes, namely and specifically printing-quality modes or printing-speed modes, or both, to allocate printing of pixels as among passes or nozzles of a scanning printhead;

automatically distinguishing a plurality of different object types any of which may be in such composite document, including distinguishing at least one particular given object of a particular given one type;

developing a designation of one of said plurality of print modes, to be used in printing;

in response to said designation-developing step, automatically selecting said designated print mode for use in printing;

for printing said one particular given object of said particular given one type, either:

invoking a first print-rendering option, namely and specifically a first method for establishing what colors will be printed at each elemental position of said object, if said object is to be printed in a first print mode; or

alternatively invoking a second print-rendering option, namely and specifically a second method for establishing what colors will be printed at each elemental position of said object, if said object is to be printed in a second print mode; and

then automatically rendering and printing, using whichever of said first or second print modes whose designation was developed in the designation-developing step, including rendering and printing said one particular given object of said particular given one type using the corresponding first or second invoked rendering option, respectively.

LIGHT BEAM SCANNING APPARATUS

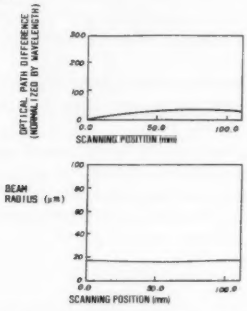
Shinya Hasegawa; Shigeo Kayashima; Satoshi Maeda, and Hirokazu Aritake, all of Kawasaki, Japan, assignors to Fujitsu Limited, Kawasaki, Japan

Division of application No. 07/949,520, filed as application No. PCT/JP92/00371, Mar. 26, 1992, Pat. No. 5,680,253. This application Apr. 23, 1997, Appl. No. 844,994.

Claims priority, application Japan, Mar. 27, 1991, 3-62961; Jun. 12, 1991, 3-140205; Oct. 23, 1991, 3-275271; Oct. 24, 1991, 3-277497; Oct. 24, 1991, 3-277498; Oct. 24, 1991, 3-277499; Oct. 24, 1991, 3-277500; Dec. 4, 1991, 3-320162

Int. Cl.[7] G02B *5/32;26/10;27/44*

U.S. Cl. 359—17 **6 Claims**



1. A light-beam scanning apparatus for conducting a light scanning on a scanning surface by diffracting a light incident from a light source portion by a rotatable hologram, and by diffracting, by a fixed hologram plate, the resulting diffracted light, for use in a scanning conducted by a rotation of said rotatable hologram,

wherein said fixed hologram plate has a phase distribution Φ_H represented as a difference obtained when subtracting a reference wave phase Φ_a defined below from an object wave phase Φ_O defined below, where X is a scanning direction and Y is a cross scanning direction, C_1, C_2, Y_0, and Z_0 are constants, where

$\Phi_0(X, Y)=k_2(C_1X^2+C_2Y^2)$, $k_2=2\pi/\lambda_2$ where λ_2 is a wavelength of said incident light; and

$$\Phi_R(X, Y) = k_1\left(\sqrt{X^2 + (Y - Y_0)^2 + Z_0^2} - \sqrt{X^2 - Z_0^2}\right),$$

$$k_1 = 2\pi/\lambda, \text{ where } \lambda_1,$$

where λ_1 is a wavelength of a constructing wave used for forming said fixed hologram plate.

VOLUME HOLOGRAPHIC STORAGE USING ROTATED SIGNAL BEAM ENCODER

John F. Heanue, San Jose; Andrew J. Daiber, Palo Alto, and James Colvin, Sunnyvale, all of Calif., assignors to Siros Technologies, Inc., San Jose, Calif.

Filed May 1, 1998, Appl. No. 71,428

Int. Cl.[7] G02B *5/32;* **G03H** *1/26;1/00;* **G11C** *13/04*

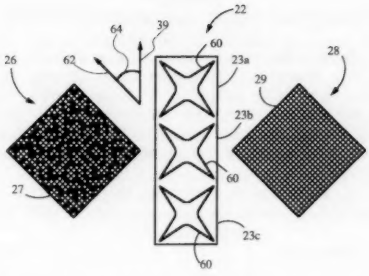
U.S. Cl. 359—21 **8 Claims**

1. A method of optimizing a packing density of holograms in a holographic storage medium, said method comprising the steps of:

a) generating a signal beam and a reference beam, said signal and reference beams defining a plane;

b) encoding a first data page in said signal beam, using an encoder having an oblique optical orientation with respect to a normal to said plane;

c) relaying said signal and reference beams to said storage medium, an overlap of said signal and reference beams within said storage medium defining a first storage subvolume; and



d) holographically storing said first data page in said first storage subvolume;

wherein said oblique optical orientation is selected to minimize a length parallel to said normal of said first storage subvolume.

6,040,931
OPTICAL TRANSMITTER, TERMINAL-STATION APPARATUS HAVING THE OPTICAL TRANSMITTER, AND OPTICAL COMMUNICATION SYSTEM

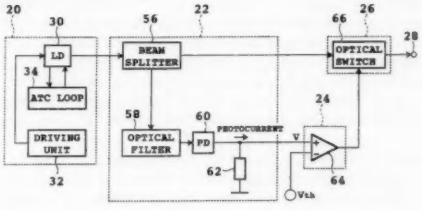
Akimitsu Miyazaki; Sadao Ibukuro, and Yasunori Nagakubo, all of Kawasaki, Japan, assignors to Fujitsu Limited, Kawasaki, Japan

Filed May 20, 1997, Appl. No. 859,253

Claims priority, application Japan, Nov. 26, 1996, 8-314744

Int. Cl.[7] H04B *10/08*

U.S. Cl. 359—110 **24 Claims**



19. An optical transmitter comprising:

a light-source unit for generating an optical signal;

a monitor for monitoring a parameter depending on a wavelength of said optical signal;

a determiner for determining as to whether or not said monitored parameter satisfies a predetermined condition; and

a shut-off unit for shutting off said optical signal in case said monitored parameter does not satisfy said predetermined condition, wherein

said monitor comprises

a beam splitter for splitting said optical signal into a main beam and an auxiliary beam,

means for providing an angle dispersion to said auxiliary beam, and

a photo detector for detecting said auxiliary beam having said angle dispersion, and

said parameter is a signal output by said photo detector.

6,040,932

METHOD AND CIRCUIT FOR DEMULTIPLEXING AN OPTICAL SIGNAL

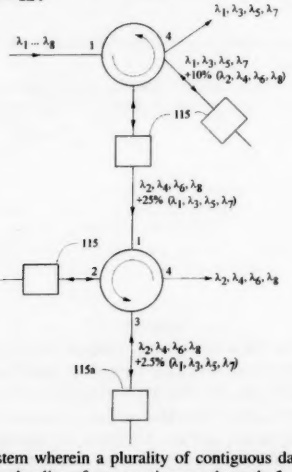
Gary S. Duck, 6 Barcham Crescent, Nepean, Ontario, Canada, K2J 3Z7; Koichi Abé, 60 Robert Street, Ottawa, Ontario, Canada, K2P 1G4; Joseph Ip, 57 Drainic Drive, Kanata, Ontario, Canada, K2C 3J7; Mark Farries, 26 Tiverton, Drive, Nepean, Ontario, Canada, K2E 6L5, and Paul Colbourne, 45D Woodfield Drive, Nepean, Ontario, Canada, K2G 3Y6

Filed May 29, 1997, Appl. No. 864,895

Claims priority, application Canada, Apr. 25, 1997, 2203729

Int. Cl.[7] H04J *14/02*

U.S. Cl. 359—124 **18 Claims**



1. In a system wherein a plurality of contiguous data channels comprising a plurality of non-contiguous channels **1**, . . . n centered at wavelengths of light λ1 . . . λn, respectively, multiplexed within a single optical signal, wherein the signal comprises at least a data channel spaced having a center wavelength spaced from a center wavelength of a subsequent or next data channel by a distance of "d" nanometers, and wherein λ . . . <λn, and wherein n is an integer, a method of demultiplexing or de-interleaving data channels corresponding to at least some non-contiguous data channels from the single optical signal, comprising the steps of:

launching the single optical signal into an input port of an etalon, the etalon having a free spectral range (or period) corresponding to substantially "k2d", where "k" is an integer >0;

extracting only a portion of the launched optical signal in the form of a reflected signal captured from an output port on the etalon comprising only data channels spaced by a distance "k2d".

6,040,933

METHOD AND APPARATUS FOR CHANNEL EQUALIZATION IN WAVELENGTH DIVISION MULTIPLEXED SYSTEMS

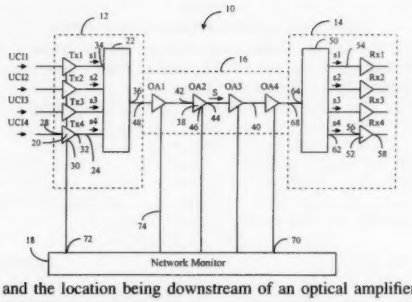
Farideh Khaleghi, Ottawa; Alan Glen Solheim, Kanata, and Chris Wilhelm Barnard, Ottawa, all of Canada, assignors to Nortel Networks Corporation, Montreal, Canada

Filed Dec. 19, 1997, Appl. No. 994,761

Int. Cl.[7] H04B *14/00; 10/08*

U.S. Cl. 359—124 **13 Claims**

1. A method of equalizing performance of a first channel transmitting a first signal from a first transmitter along a first transmission path with respect to performance of a second channel transmitting a second signal from a second transmitter along a second transmission path the equalization being effective at a predetermined location in an optical wavelength division multiplexed system and the location being downstream of an optical amplifier in the first path and downstream of an optical amplifier in the second path, the method comprising:



measuring the optical power of the first signal and the second signal at the inputs of each optical amplifier that is upstream of said location; and

adjusting the optical power of the first transmitter by an amount dependent upon the sum of the reciprocal of the first signal optical power measurements relative to the sum of the reciprocal of the second signal optical power measurements.

6,040,934

RECEPTACLE-TYPE OPTICAL TRANSMISSION/ RECEPTION APPARATUS

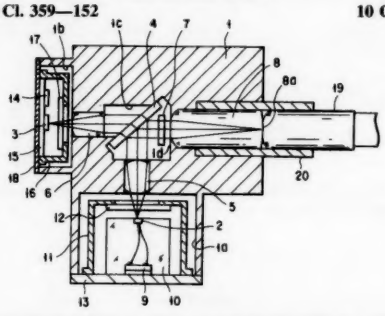
Masahiro Ogusu; Tazuko Tomioka, both of Tokyo, and Shigeru Ohshima, Yokohama, all of Japan, assignors to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Jun. 19, 1997, Appl. No. 878,553

Claims priority, application Japan, Jun. 21, 1996, 8-161780

Int. Cl.[7] H04B *10/00*

U.S. Cl. 359—152 **10 Claims**



1. A receptacle-type optical transmission/reception apparatus comprising:

a casing;

a glass rod rigidly affixed to said casing and including a physical contact face contacted with an optical fiber ferrule;

a receptacle arranged in said casing and configured to detachably hold said optical fiber ferrule in tight contact with said physical contact face of said glass rod;

a semiconductor laser device arranged in said casing and configured to emit light through said glass rod;

a photodetecting device arranged in said casing and configured to detect light incident through said glass rod; and

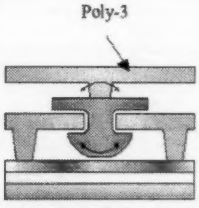
an optical branching device configured to guide the light emitted from said semiconductor laser device to said glass rod and to guide the light incident through said glass rod to said photodetecting device.

6,040,935

FLEXURELESS MULTI-STABLE MICROMIRRORS FOR OPTICAL SWITCHING

M. Adrian Michalicek, Broomfield, Colo., assignor to The United States of America as represented by the Secretary of the Air Force, Washington, D.C.

Filed Jan. 25, 1999, Appl. No. 237,140
Int. Cl.[7] G02B *26/08*
U.S. Cl. 359—198 3 Claims



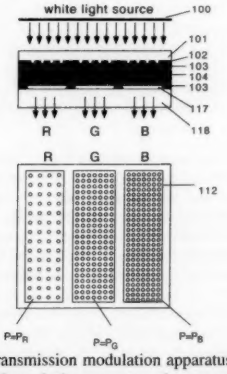
1. A flexureless micromirror device in a structural assembly, comprising a micromirror surface attached to one or more support columns, said support columns being anchored to the structural assembly of the device by a flexible locking joint, whereby the mirror surface is free to move about the joint and the mirror surface can be electronically switched between multiple stable positions.

6,040,936

OPTICAL TRANSMISSION CONTROL APPARATUS UTILIZING METAL FILMS PERFORATED WITH SUBWAVELENGTH-DIAMETER HOLES

Tae Jin Kim, Plainsboro; Tineke Thio, Princeton, and Thomas Wren Ebbesen, Plainsboro, all of N.J., assignors to NEC Research Institute, Inc., Princeton, N.J.

Filed Oct. 8, 1998, Appl. No. 168,265
Int. Cl.[7] G02F *1/03;* G09G *3/36*
U.S. Cl. 359—245 71 Claims



1. An optical transmission modulation apparatus for modulating light transmitted through the apparatus, the apparatus comprising:

a metal film having a periodic array of subwavelength-diameter holes provided therein; and

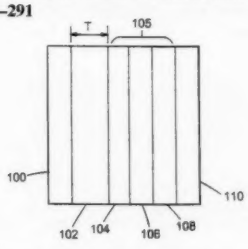
a supporting layer, at least a portion of the supporting layer having a selectively variable refractive index, the selectively variable refractive index portion being substantially adjacent to the metal film such that the metal film and the supporting layer comprise a perforated metal film unit, and wherein selective variation of the refractive index of the selectively variable refractive index portion modulates the intensity of the light transmitted through the perforated metal film unit without substantially changing the direction of the light.

6,040,937

INTERFEROMETRIC MODULATION

Mark W. Miles, Boston, Mass., assignor to Etalon, Inc., Boston, Mass.

Division of application No. 08/554,630, Nov. 6, 1995, abandoned, which is a continuation-in-part of application No. 08/238,750, May 5, 1994, Pat. No. 5,835,255. This application Jul. 31, 1996, Appl. No. 688,710.
Int. Cl.[7] G02B *26/00;1/10;5/28*
U.S. Cl. 359—291 26 Claims



1. An interferometric modulator comprising

a first element comprising a reflector, and

a second element including an induced absorber comprising a sandwich of an absorber between two matching layers,

at least one of the matching layers comprising a combination of at least two of; a metal film, a dielectric film, and a semiconducting film, and

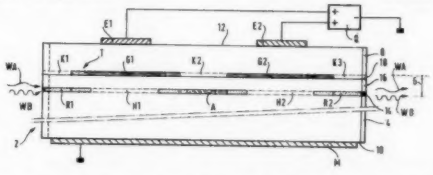
the reflector comprising at least one of a metal film, a dielectric film, and a semiconducting film.

6,040,938

SEMICONDUCTOR OPTICAL AMPLIFIER

Thomas Ducellier, Bures sur Yvette, France, assignor to Alcatel, Paris, France

Filed Sep. 4, 1997, Appl. No. 923,584
Claims priority, application France, Sep. 6, 1996, 96 10898
Int. Cl.[7] H01S *3/18;* H01L *31/14;* G02F *1/35*
U.S. Cl. 359—344 9 Claims



1. A semiconductor optical amplifier including, in integrated form,

a guide structure with a succession of longitudinal segments to constitute guide segments forming a path for lightwaves, said path for lightwaves including a linear response attenuation segment in series between first and second amplification segments,

wherein said amplification segments are adapted to amplify said lightwaves by recombination of charge carriers with said amplification performed with local gains proportionately to local densities of said carriers and

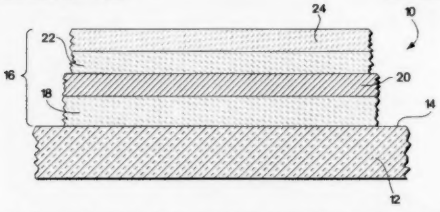
wherein attenuation by said attenuation segment is less than a gain of the first amplification segment but sufficient to avoid saturation of a gain of the second amplification segment.

6,040,939

ANTI-SOLAR AND LOW EMISSIVITY FUNCTIONING MULTI-LAYER COATINGS ON TRANSPARENT SUBSTRATES

Hüyla Demiryont, Philadelphia, Pa.; Hüseyin Parlar, Erenköy, Turkey; Ayse Ersoy, Sahrayicedid, Turkey, and Ender Aktulga, Şa¸kinbakkal, Turkey, assignors to Turkiye Sise ve cam Fabrikalari A.S., Istanbul, Turkey

Filed Jun. 16, 1998, Appl. No. 98,316
Int. Cl.[7] G02B *5/28;1/10;* C03C *17/36;* B05D *5/06*
U.S. Cl. 359—360 40 Claims



1. A coated article of manufacture comprising a substantially transparent substrate with a substantially transparent coating on a surface of the substrate, the substantially transparent coating comprising:

a first anti-reflection layer of dielectric material,

an infra-red reflective layer of silver metal overlying the anti-reflection dielectric layer,

a buffer layer selected from silica, silicon, silicon nitride and tungsten nitride materials, directly overlying the infra-red reflective layer of silver metal, and

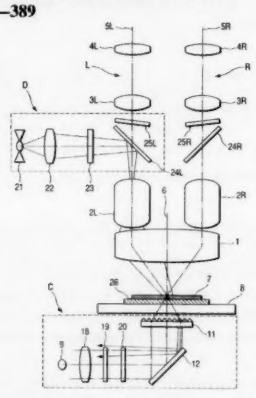
a second anti-reflection layer of tungsten oxide overlying the buffer layer.

6,040,940

REFLECTING FLUORESCENCE MICROSCOPE

Kenji Kawasaki, Musashimurayama, Japan, assignor to Olympus Optical Co., Ltd., Tokyo, Japan

Filed Feb. 1, 1999, Appl. No. 241,050
Claims priority, application Japan, Feb. 4, 1998, 10-022451
Int. Cl.[7] G02B *21/06;21/16*
U.S. Cl. 359—389 17 Claims



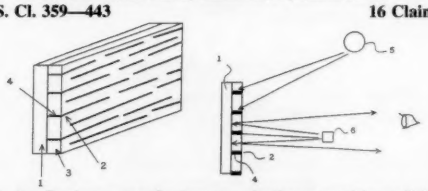
1. A microscope having a reflecting fluorescence illumination optical system, equipped with an observation optical system and specimen supporting means for mounting a specimen, wherein an optical member for attenuating excited light supplied from said reflecting fluorescence illumination optical system is interposed between said specimen and said specimen supporting means.

6,040,941

REFLECTION SCREEN AND METHOD FOR PRODUCING THE SAME

Minoru Miwa, Kakamigahara; Akiyoshi Takeno, Gifu; Toshihiro Koike, Urawa; Satoshi Ako, Asaka, and Yasunori Sugiyama, Yono, all of Japan, assignors to Kimoto Co., Ltd., Japan

Filed Jul. 15, 1997, Appl. No. 892,398
Claims priority, application Japan, Jul. 19, 1996, 8-208875
Int. Cl.[7] G03B *21/56;* G02B *27/00;* B29D *11/00*
U.S. Cl. 359—443 16 Claims



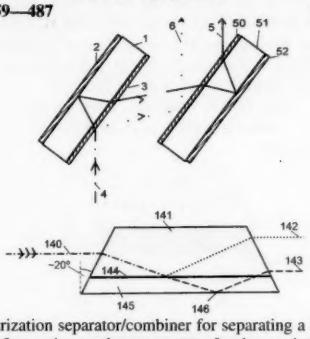
1. A reflection screen for image projection comprising a light-reflecting substrate and, adhered to one surface of said substrate, a light-transmitting polymer layer having light absorptive crazes of regular directionality, said light absorptive crazes containing a light absorptive dye or pigment.

6,040,942

POLARIZATION SEPARATOR/COMBINER

Ernest Eisenhardt Bergmann, Fountain Hill, Pa., assignor to Lucent Technologies, Inc., Murray Hill, N.J.

Filed Jul. 24, 1997, Appl. No. 899,581
Int. Cl.[7] G02B *5/30*
U.S. Cl. 359—487 10 Claims



1. A polarization separator/combiner for separating a light beam comprising first and second components of orthogonal polarization into separate first and second light beams having substantially homogeneous and orthogonal polarization, or for combining separate first and second light beams having substantially homogeneous and orthogonal polarization into a single light beam comprising orthogonally polarized components, the separator/combiner comprising:

a first plate and a second plate, each plate comprising:

a first surface and a second surface, the first surface and the second surface being parallel, and spaced apart by the thickness of a transparent body therebetween,

the first surface having a coating applied thereto, such that the first surface forms a planar polarizing interface,

the coating being selected such that when a light beam having a first component having a first polarization and a second component having a second polarization orthogonal to the polarization of the first component strikes the first surface at a predetermined angle, the first component of light beam is substantially reflected by the coating, and the second component of the light beam is substantially transmitted through the coating;

the second surface of the plate forming a planar reflective interface;

such that the second component of light passes through the polarizing interface and through the transparent body of the plate, reflects off the reflective interface, and passes again through the polarzing interface, emerging parallel to the first light component,

the first plate being mounted parallel to the second plate and spaced apart therefrom, such that the first component and the second component pass from the first plate to the second plate without any optical components in the optical path between the first plate and the second plate which would effect the polarization of either the first component or the second component,

such that one of the first component and second component is reflected from the polarizing interface of the second plate to become parallel to the light beam, and the other component is transmitted through the polarizing interface of the second plate, reflects from the reflective interface of the second plate, and emerges through the polarization interface of the second plate, parallel to the light beam.

6,040,943

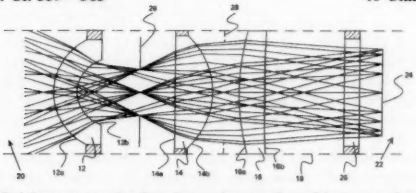
DIGITAL CAMERA OBJECTIVE WITH DIFFRACTIVE OPTICAL SURFACE

Michael P. Schaub, Tucson, Ariz., assignor to Donnelly Optics, Tucson, Ariz.

Filed Mar. 23, 1998, Appl. No. 46,168

Int. Cl.[7] G02B *27/44;3/02;9/00*

U.S. Cl. 359—565 **40 Claims**



24. A lens system for forming an image of an object on an image plane, said lens system comprising a first negative lens closest to an object side, a third lens closest to an image side, and a second power lens disposed between said first lens and said third lens, with each lens having first and second surfaces, said first surface of said third lens comprising a diffractive surface, said first surface being closer to said object side, said lens system comprising no more than three lens elements and being corrected for axial and lateral chromatic aberrations of light passing therethrough.

6,040,944

PRECISION TUNABLE OPTICAL FILTER

Jing-Jong Pan, Milpitas; Jingyu Xu, and Yingzhong Shi, both of San Jose, all of Calif., assignors to E-Tek Dynamics, Inc., San Jose, Calif.

Provisional application No. 60/047,938, May 29, 1997. This application Jan. 26, 1998, Appl. No. 13,803.

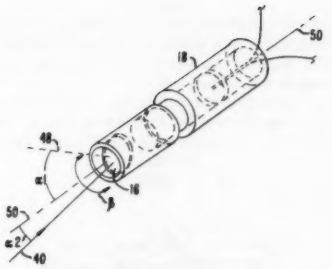
Int. Cl.[7] G02B *6/38;5/28;26/08*

U.S. Cl. 359—590 **21 Claims**

1. A method for tuning an optical filter system, the filter system including a first filter and a second filter, the first filter having a surface and transmitting or reflecting light along a normal to the surface in a first wavelength range, the second filter reflecting or transmitting light in a target wavelength range, the method comprising;

directing light toward the first filter so that the light is incident upon the surface at an angle, and so that the first filter transmits or reflects a portion of the incident light which is within a second wavelength range;

displacing the second wavelength range independently of the target wavelength range by rotating the first filter relative to the second filter and about an axis which is oblique to the



incident light, and which is also oblique to the normal to the surface of the first filter to change the incident angle, wherein the first filter is rotated with a collimator assembly, wherein a GRIN lens of the collimating assembly is substantially coaxial with the axis of rotation, and

monitoring the second wavelength range from the first filter and terminating the rotating step when the second wavelength range is aligned with the target wavelength range.

6,040,945

HEAD MOUNT DISPLAY DEVICE

Joji Karasawa, Suwa, Japan, assignor to Seiko Epson Corporation, Tokyo, Japan

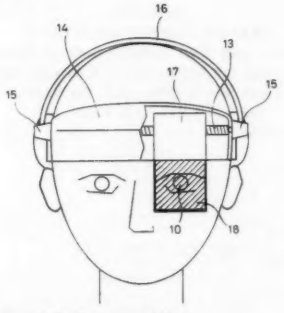
Continuation of application No. 08/945,807, Nov. 12, 1997, which is a continuation of application No. PCT/JP97/00747, Mar. 10, 1997. This application Jan. 25, 1999, Appl. No. 236,442.

Claims priority, application Japan, Mar. 11, 1996, 8-53296

This patent is subject to a terminal disclaimer.

Int. Cl.[7] G02B *27/14*

U.S. Cl. 359—630 **1 Claim**



1. A head mount display, comprising:

an image display device;

a magnifying optical device configured to refract a first light beam representing an image formed on the image display device and thereby magnifying the image to create a magnified virtual image which is to be observed with one of the eyes of a user;

an image combining device for making the first light beam representing the virtual image enter the eye of the user simultaneously with a second light beam from a background view, thereby combining the virtual image with the background view to form a composite image; and

a switching device configured to shift at least two among the image display device, the magnifying optical device, and the image combining device, in order to make a switch between a first state in which the composite image of the virtual image and the background view is observed with one eye of the user and a second state in which the composite image is observed with the other eye of the user.

6,040,946

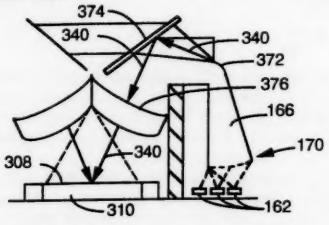
COLOR SUPERPOSITION AND MIXING OF LIGHT BEAMS FOR A VIDEO DISPLAY SYSTEM

Raymond T. Hebert, Los Gatos, Calif., assignor to Optimize Incorporated, Los Gatos, Calif.

Division of application No. 09/241,828, Feb. 1, 1999, which is a division of application No. 09/056,934, Apr. 6, 1998, Pat. No. 5,926,318. This application Jul. 27, 1999, Appl. No. 362,927.

Int. Cl.[7] G02B *27/14*

U.S. Cl. 359—630 **2 Claims**



1. A method of superimposing and mixing light beams of differing color components, comprising:

Collecting light beams of differing color components from a plurality of spatially distinct light emitting devices on a diffractive collector, said light beams of differing color components impinging on said diffractive collector at differing angles of incidence uniquely related to said differing color components; and

diffracting said light beams of differing color components at said diffractive collector, such that each said light beam of differing color components is diffracted at an angle uniquely related to said differing color component, wherein said light beams of differing color components are superimposed on one another.

6,040,947

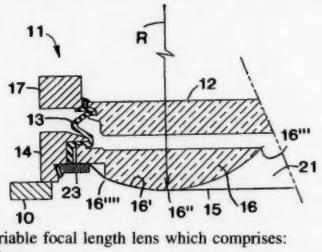
VARIABLE SPECTACLE LENS

Stephen Kurtin, and Saul Epstein, both of Sherman Oaks, Calif., assignors to Lane Research, Sherman Oaks, Calif.

Filed Jun. 9, 1998, Appl. No. 93,991

Int. Cl.[7] G02B *1/06;* G02C *7/06*

U.S. Cl. 359—666 **26 Claims**



1. A variable focal length lens which comprises:

a rigid lens;

a membrane support member positioned across and within the field of view of said rigid lens and spaced therefrom, said membrane support member including a toroidally shaped surface which comprises support means for supporting a transparent distensible membrane;

a transparent distensible membrane under radial tension positioned across the field of view of said rigid lens and against said toroidally shaped surface, tension in said membrane causing said membrane to bear against said toroidially shaped surface;

a transparent liquid filling the space between said rigid lens and said membrane;

flexible sealing means for retaining said transparent liquid between said rigid lens and said membrane; and

variable spacing means for adjusting the spacing between said membrane support member and said rigid lens.

THREE-GROUP ZOOM LENS HAVING A FIRST POSITIVE REFRACTING LENS GROUP, A SECOND POSITIVE REFRACTING LENS GROUP AND A THIRD NEGATIVE REFRACTING LENS GROUP

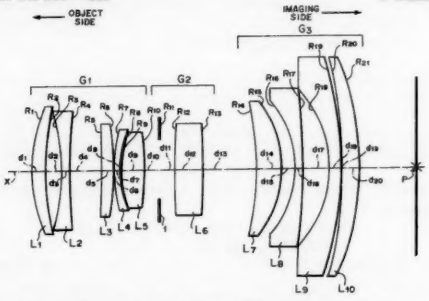
Nobuaki Toyama, Omiya, Japan, assignor to Fuji Photo Optical Co., Ltd., Saitama, Japan

Filed Feb. 12, 1998, Appl. No. 22,055

Claims priority, application Japan, Mar. 24, 1997, 9-090103

Int. Cl.[7] G02B *15/14*

U.S. Cl. 359—689 **3 Claims**



1. A three-group zoom lens comprising, successively from an object side, a first lens group having a positive refracting power, a second lens group having a positive refracting power, and a third lens group having a negative refracting power, in which, upon changing power from a wide angle end to a telephoto end, the three lens groups are moved toward the object side while changing a distance between said lens groups, so as to change the power;

wherein the first lens group comprises, successively from the object side, a positive refraction first lens having a convex surface directed onto the object side, a negative refraction second lens having a concave surface directed onto the object side, a positive refraction third lens, and a fourth lens subgroup composed of at least one positive refraction and at least one negative refraction lens; and

wherein the following conditional expressions:

$$2.2 \leqq f_2/f_1 \leqq 6.6 \quad (1)$$

$$2.2 \leqq f_2/f_w \leqq 5.0 \quad (2)$$

$$-1.1 \leqq R_3/f_w \leqq -0.5 \quad (3)$$

wherein

f_1 is a focal length of the first lens group;

f_2 is a focal length of the second lens group;

f_w is a focal length of the whole system at the wide angle end; and

R_3 is a radius of curvature of a surface of the second lens on the object side are satisfied.

6,040,949

SIMPLE WIDE-ANGLE ZOOM LENS

Kazunori Ohno, Omiya, Japan, assignor to Fuji Photo Optical Co., Ltd., Omiya, Japan

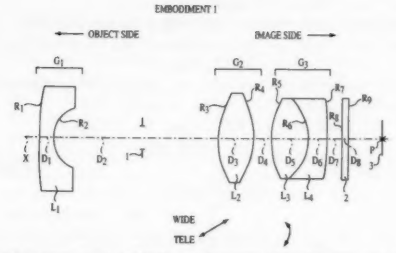
Filed Feb. 12, 1999, Appl. No. 249,159

Claims priority, application Japan, Feb. 19, 1998, 10-054387

Int. Cl.[7] G02B *15/14*

U.S. Cl. 359—689 **20 Claims**

1. A wide-angle lens comprising, in order from the object side, a first lens group of negative refractive power having a concave lens element surface on the image side, a second lens group of positive



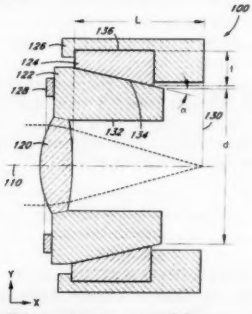
refractive power and including a biconvex lens element, and a third lens group of positive refractive power, side wide-angle zoom lens including only three lens groups and only four lens elements.

6,040,950

ATHERMALIZED MOUNTS FOR LENSES

Barry G. Broome, Carlsbad, Calif., assignor to Intel Corporation, Santa Clara, Calif.

Filed Jan. 5, 1998, Appl. No. 2,931
Int. Cl.[7] G02B *7/02*
U.S. Cl. 359—820 **42 Claims**



1. An athermalizing apparatus, comprising:

a lens element;

a support member coupled to the lens element, the support member having a sloped outer surface

a rib member having a sloped surface substantially complementary and adjacent to the sloped outer surface of the support member; and

an outer member coupled to the rib member.

6,040,951

OPTICAL APPARATUS HAVING HARD CIRCUIT BOARD ENCODER

Seiichi Kashiwaba, Tokyo, Japan, assignor to Canon Kabushiki Kaisha, Tokyo, Japan

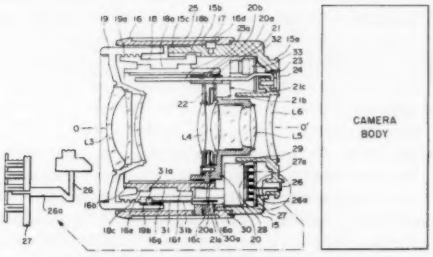
Continuation of application No. 08/245,824, May 18, 1994, abandoned, which is a continuation of application No. 07/744,326, Aug. 13, 1991, abandoned. This application Dec. 15, 1997, Appl. No. 990,638.
Claims priority, application Japan, Aug. 16, 1990, 2-216314
Int. Cl.[7] G02B *7/02;15/14*
U.S. Cl. 359—823 **40 Claims**

1. An optical apparatus comprising:

(a) a lens which can be moved in the direction of an optical axis of the apparatus;

(b) moving means for moving said lens; and

(c) a signal generator for detecting information about the movement of said lens, said signal generator comprising a circuit board which is disposed on a plane intersecting the optical axis and on which a signal generating pattern and a connector



are formed, and a signal generating member which is moved around the optical axis by a rotating member in said moving means and which slides on said signal generating pattern, wherein said signal generating pattern and said connector are provided on the same surface of said circuit board and wherein a wiring member in said apparatus is inserted into said connector; and

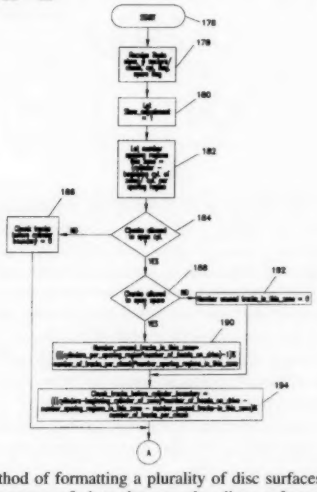
(d) a contact member contacting with another apparatus so as to electrically connect said optical apparatus to said another apparatus, said contact member having an elongated lead portion, the lead portion being soldered to the circuit board.

6,040,952

SYSTEM AND METHOD FOR FORMATTING DISC SURFACES

Mark A. Gaertner, Woodbury, Minn., and Mark A. Heath, Oklahoma City, Okla., assignors to Seagate Technology, Inc., Shakopee, Minn.

Division of application No. 08/911,322, Aug. 14, 1997. This application Aug. 27, 1999, Appl. No. 384,683.
Int. Cl.[7] G11B *5/09*
U.S. Cl. 360—48 **2 Claims**



1. A method of formatting a plurality of disc surfaces in a disc drive for storage of data thereon, the disc surfaces having a plurality of tracks thereon, associated tracks on the disc surfaces forming a cylinder, each cylinder being separated from adjacent cylinders by cylinder boundaries, the data being formed of data chunks, each data chunk to be stored in a group of tracks, at least some of the disc surfaces having spare tracks not to be formatted to receive data, the method comprising:

receiving a first parameter θ_{skew} indicative of a desired angular displacement between a beginning of a first data chunk and a beginning of a second data chunk to be stored on the disc surfaces;

receiving a second parameter θ_{gap} indicative of a desired angular displacement between an end of a previously adjacent data chunk and a beginning of a subsequent data chunk;

determining whether data chunks to be stored on the disc surfaces are allowed to cross cylinder boundaries;

determining whether data chunks to be stored on the disc surfaces are allowed to cross spare boundaries; and

formatting the disc surfaces, based on θ_{skew}, θ_{gap}, and whether the data blocks are allowed to span cylinder and spare boundaries, to store the data chunks such the beginning of data chunks on separate cylinders are separated by an angular displacement which is sufficient such that a seek time required to seek between the separate cylinders is less than a time required for the disc surfaces to rotate through the angular displacement.

6,040,953

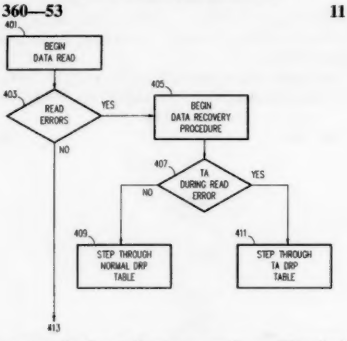
ADAPTIVE DATA RECOVERY METHOD AND MEANS TUNED TO THERMAL ASPERITIES IN A CYCLIC, MULTITRACKED MAGNETIC STORAGE SUBSYSTEM

Dan J. Malone, and Paul Hardy, both of San Jose, Calif., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Mar. 25, 1997, Appl. No. 823,732

Int. Cl.[7] G11B *5/09;5/02;21/02*

U.S. Cl. 360—53 **11 Claims**



1. In a system having at least one cyclic, multitracked storage medium, means including a transducer for recording and reading binary data streams onto and from ones of said tracks, said data streams comprising codewords in an error correction code (ECC), means for detecting anomalous events associated with the transducer reading of said track-recorded data streams, and means responsive to detected events for executing an ordered list of data recovery protocols (DRPs) to resolve any consequential errors, a method for adaptively managing recovery from said detected events, comprising the steps of:

(a) concurrently detecting at least one anomalous event and an error or erasure in the read back of a track-recorded data stream;

(b) responsive to said concurrent detection, ascertaining whether the detected event is a member of a set of events associated with a high error or erasure rate in the read back of recorded data streams; and

(c) if the event is a member of the set of high error or erasure rate events, executing an ordered sublist of predetermined ones of the list of DRPs for resolving the detected error or erasure, otherwise executing the DRPs of the list in linear order whereby the average time of said system in executing lists of DRPs is reduced.

6,040,954

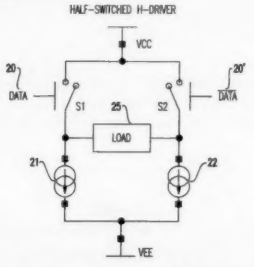
HIGH SPEED WRITE DRIVER FOR MAGNETIC INDUCTIVE WRITE HEAD USING A HALF-SWITCHED H-DRIVER

Steven J. Tanghe, Essex Junction, Vt., assignor to International Business Machines Corporation, Armonk, N.Y.

Filed Apr. 17, 1997, Appl. No. 837,410

Int. Cl.[7] G11B *5/02*

U.S. Cl. 360—68 **7 Claims**



1. An H-driver circuit for operating an inductive recording head, said H-driver having a top half and a bottom half, comprising:

means for switching a current bidirectionally through said inductive recording head, responsive to binary alternations in a data signal, from said top half of said H-driver;

means for maintaining current flow bilaterally through said bottom half of said H-driver,

wherein increased current flow and voltage drop across said bidirectional switching means is very small and more than offset by an increase in a speed of transition of said bidirectional switching, thereby increasing transition speed of current through said inductive recording head.

6,040,955

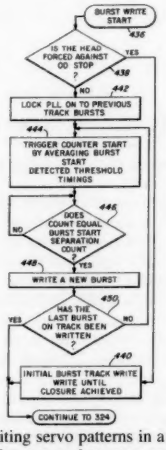
SELF SERVO WRITING FILE

Dana Henry Brown; Thomas Charles Christensen; Earl A. Cunningham, and Wayne A. Rogelstad, all of Rochester, Minn., assignors to International Business Machines Corporation, Armonk, N.Y.

Continuation of application No. 07/896,954, Jun. 11, 1992, abandoned. This application Aug. 8, 1994, Appl. No. 287,477.

Int. Cl.[7] G11B *21/10*

U.S. Cl. 360—75 **6 Claims**



1. A method for writing servo patterns in a direct access storage device including at least one data storage media mounted for rotation by a drive motor and an actuator for moving transducer

means relative to the data storage media for reading and writing data to the data storage media, said method comprising the steps of:

rotating said data storage media using the drive motor;

using said transducer means, writing servo information on the data storage media at a first portion of the data storage media using timing information developed without requiring the use of a clock track;

using said actuator and transducer means, moving offset from said last written servo information and detecting said written servo information until said detected servo signal equals a predetermined value;

developing timing information from said last written servo information;

using said transducer means, writing servo information on said data storage media responsive to said detected servo signal equal to said predetermined value using said timing information developed from said last written servo information without requiring the use of a clock track;

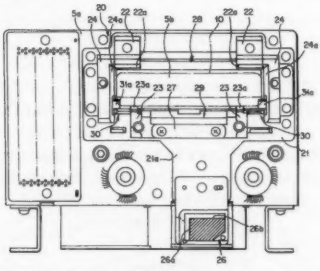
sequentially repeating said moving, developing timing information from said last written servo information and writing steps until a second portion of the data storage media is reached; and said servo information writing steps include writing a quad-burst servo amplitude pattern; and said moving and detecting steps include the steps of averaging of burst positions to create a circumferential position reference for writing subsequent servo information.

6,040,956

CARTRIDGE INSERTION/DISCHARGE OPENING STRUCTURE OF RECORDING/REPRODUCTION UNIT FOR LIBRARY APPARATUS

Kenichi Utsumi, Kawasaki, Japan, assignor to Fujitsu Limited, Kawasaki, Japan

Filed Feb. 10, 1998, Appl. No. 21,345
Claims priority, application Japan, Sep. 9, 1997, 9-244318
Int. Cl.[7] G11B *15/68*
U.S. Cl. 360—92 **5 Claims**



1. A cartridge insertion/discharge opening structure of a recording/reproduction unit for use in a library apparatus for storing cartridges, each accommodating a storage medium in a casing mainly made of polycarbonate, the library apparatus having a transferring mechanism for transferring the cartridges stored in the library apparatus, the recording/reproduction unit being operable to perform a recording/reproduction process on the storage media within the cartridges transferred by the transferring mechanism, said cartridge insertion/discharge opening structure comprising:

a base member having an opening generally corresponding to a cartridge insertion/discharge opening section of the recording/reproduction unit for allowing the cartridges to be inserted into the recording/reproduction unit; and

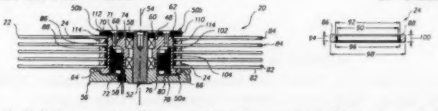
at least one guide member attached to said base member near a top of said opening and at least one guide member attached to said base member near a bottom of said opening for guiding the cartridges to be inserted into the recording/reproduction unit by the transferring mechanism, said guide members being made of polyacetal and extending into said opening of said base member to define a clearance space between said top and said bottom of said opening of said base member and a cartridge inserted in said cartridge insertion/discharge opening section of the recording/reproduction unit, to allow the transferring mechanism to release said cartridge once said cartridge is inserted in said cartridge insertion/discharge opening section.

6,040,957

DISK DRIVE DISK DAMPER

John Konings, Milpitas, Calif., assignor to Quantum Corporation, Milpitas, Calif.

Filed Jun. 3, 1997, Appl. No. 868,190
Int. Cl.[7] G11B *17/028*
U.S. Cl. 360—98.08 **15 Claims**



1. A disk separator for separating two storage disks on a spindle of a disk drive, each storage disk having two sides, the disk separator comprising:

a disk spacer adapted for extending between one of the sides of each of the two storage disks and maintaining the two storage disks spaced apart a fixed, disk distance on the spindle, the disk spacer having a disk spacer height; and

a substantially elastic disk damper adapted for extending between one of the sides of each of the two storage disks and dampening the level of vibration in the storage disks, the disk damper having a disk damper height which is larger than the disk spacer height;

wherein the disk damper is substantially annular and is adapted for substantially encircling the spindle, and the disk spacer is substantially annular and is adapted for substantially encircling the spindle;

wherein the disk damper and the disk spacer are substantially concentric; and

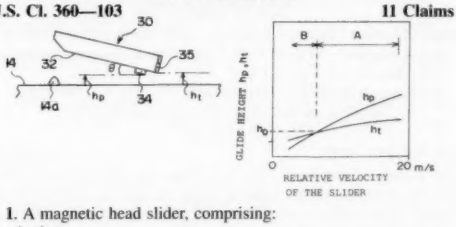
wherein the disk damper has a disk damper outer diameter which is larger than a disk spacer outer diameter of the disk spacer, and the disk damper and the disk spacer are secured together.

6,040,958

MAGNETIC HEAD SLIDER AND MAGNETIC DISK APPARATUS HAVING THE MAGNETIC HEAD SLIDER

Takayuki Yamamoto; Yoshiharu Kasamatsu; Takashi Toyoguchi; Toru Yokohata, and Ryosuke Koishi, all of Kanagawa, Japan, assignors to Fujitsu Limited, Kawasaki, Japan

Filed Dec. 16, 1996, Appl. No. 766,967
Claims priority, application Japan, Apr. 26, 1996, 8-106930
Int. Cl.[7] G11B *5/60*
U.S. Cl. 360—103 **11 Claims**



1. A magnetic head slider, comprising:

a body;

a first rail plane arranged on one side of the body for generating a first floating force;

at least one first pad arranged near an air outflow end of the first rail plane;

a second rail plane arranged on the other side of the body for generating a second floating force;

at least one second pad arranged near an air outflow end of the second rail plane on condition that a distance from the rearmost second pad closest to the air outflow end of the second rail plane is greater than a distance from the rearmost first pad to the air outflow end of the first rail plane; and

an electro-magnetic transducing device arranged on an air outflow end of the second rail plane;

wherein the magnetic head slider is inclined in a floating state in which the magnetic head slider floats over a surface of a disk medium such that said air outflow end of said first and second rail planes is lower than a corresponding air inflow end of said first and second rail planes and said air outflow end of said second rail plane is generally lower than said air outflow end of said first rail plane.

6,040,959

SLIDER WITH BLUNT EDGES

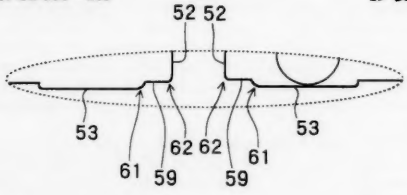
Kanji Kobayashi, Saku, and Masao Yamaguchi, Komoro, both of Japan, assignors to TDK Corporation, Tokyo, Japan

Filed Apr. 23, 1998, Appl. No. 64,745

Claims priority, application Japan, Dec. 17, 1997, 9-347679; Apr. 15, 1998, 10-104236

Int. Cl.[7] G11B *5/60*

U.S. Cl. 360—103 **19 Claims**



1. A slider comprising:

a medium facing surface that faces toward a medium, a portion of the medium facing surface defining a protruding rail such that a medium facing surface of the rail forms part of the medium facing surface of the slider;

at least part of a lateral wall of the rail facing outward and being located closer to a center of the slider than a lateral wall of the slider;

first edges located between the medium facing surface of the rail and the outward facing lateral wall of the rail;

a second edge located closer to the lateral wall of the slider than the first edges;

at least the first edges and the second edge are blunt.

6,040,960

AIR DAMPER FOR DISC DRIVE ACTUATOR LATCH MECHANISM

Albert Michael Lindrose, Boulder, and Frederick Mark Stefansky, Longmont, both of Colo., assignors to Seagate Technology, Inc., Scotts Valley, Calif.

Provisional application No. 60/048,753, Jun. 3, 1997. This application Jun. 3, 1998, Appl. No. 89,677.

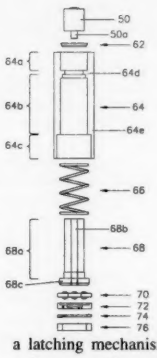
Int. Cl.[7] G11B *5/54*

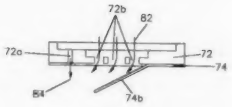
U.S. Cl. 360—105 **1 Claim**

1. A disc drive having a disc drive housing and an actuator for moving an array of heads relative to data recorded on a plurality of tracks on the surfaces of an array of discs, the actuator having a moving portion and the disc drive including a predetermined park location to which the moving portion of the actuator can be moved, the disc drive further comprising:

latching means for maintaining the actuator at the park location comprising

a latching feature carried on the moving portion of the actuator, and





a latching mechanism cooperating with the latching feature for generating a latching force which acts to hold the latching feature in contact with the latching mechanism, and

mounting means for mounting the latching mechanism and supporting the latching mechanism in relation to the disc drive housing and the moving portion of the actuator, the mounting means further comprising damping means for providing controlled, damped compliance in parallel with the latching force; said damping means comprising:

an outer can element fixed in relationship to the disc drive housing;

an inner can element axially movable within the outer can element;

bias means for maintaining the inner can element at a rest position relative to the outer can element, and;

a valve mechanism for controlling the flow of air into and out of a cavity formed between the inner and outer can elements by motion of the inner can element relative to the outer can element.

6,040,961

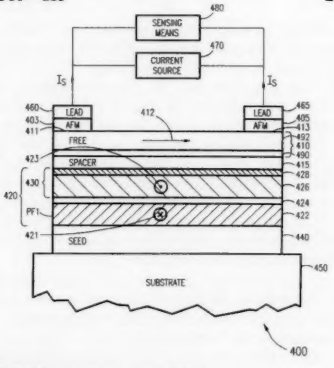
CURRENT-PINNED, CURRENT RESETTABLE SOFT AP-PINNED SPIN VALVE SENSOR

Hardayal Singh Gill, Portola Valley, Calif., assignor to International Business Machines Corporation, Armonk, N.Y.

Filed Oct. 27, 1997, Appl. No. 957,851

Int. Cl.[7] G11B *5/39*

U.S. Cl. 360—113 **20 Claims**



11. A disk drive system, comprising:

a magnetic recording disk;

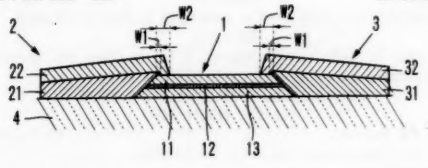
an anti-parallel (AP)-pinned spin valve (SV) sensor, comprising:
a free layer made of cobalt (Co) having a magnetization direction;
an AP-pinned layer, said AP-pinned layer including:
a first pinned layer of low coercivity ferromagnetic material;
a second pinned layer of ferromagnetic material comprising a first sub-layer of low coercivity material and a second sub-layer of high coercivity material, said second sub-layer coercivity being higher than said first sub-layer coercivity and said first pinned layer coercivity; and
an anti-parallel coupling layer disposed between said first pinned layer and said first sub-layer; and
a non-magnetic, electrically conducting spacer layer disposed between said free layer and said second sub-layer;
an actuator for moving said spin valve sensor across the magnetic recording disk so the spin valve sensor may access different regions of magnetically recorded data on the magnetic recording disk; and
means electrically coupled to the spin valve sensor for detecting changes in resistance of the sensor caused by rotation of the magnetization axis of the free ferromagnetic layer relative to the fixed magnetization direction of said AP-pinned layer in response to magnetic fields from the magnetically recorded data.

6,040,962

MAGNETORESISTIVE ELEMENT WITH CONDUCTIVE FILMS AND MAGNETIC DOMAIN FILMS OVERLAPPING A CENTRAL ACTIVE AREA

Kiyosumi Kanazawa, Nagano, and Yoshiro Nakagawa, Yamanashi, both of Japan, assignors to TDK Corporation, Tokyo, Japan

Filed May 14, 1998, Appl. No. 78,484
Claims priority, application Japan, May 14, 1997, 9-124563
Int. Cl.[7] G11B *5/39*
U.S. Cl. 360—113 **22 Claims**



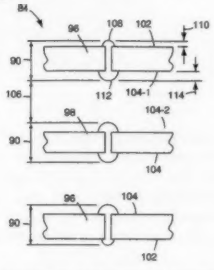
11. A thin film magnetic head including a magnetoresistive element comprising:
a central active area; and
passive areas provided at two side ends of said central active area, each passive area including a magnetic domain control film and a conductive film;
wherein said magnetic domain control film of each passive area partially overlaps the surface of said central active area, each conductive film is laminated onto a surface of a respective magnetic domain control film and overlaps surfaces of said respective magnetic domain control film and said central active area, and the degree to which said conductive films overlap said surface of said central active area is set larger than the degree to which said magnetic domain control films overlap said surface of said central active area.

6,040,963

FRINGE FIELD COMPENSATION SYSTEM FOR MULTI-TRACK SERVO RECORDING HEAD

Stephen J. Rothermel, Roseville, Minn., assignor to Imation Corp., Oakdale, Minn.

Continuation of application No. 08/900,523, Jul. 25, 1997, Pat. No. 5,959,812. This application Jun. 22, 1999, Appl. No. 337,233.
Int. Cl.[7] G11B *5/127;5/596*
U.S. Cl. 360—118 **31 Claims**



1. A method for recording a plurality of tracks of servo information longitudinally defined within a servo section of a magnetic recording medium, the method comprising:
writing a servo signal that extends substantially continuously over a width of the servo section along at least a portion of the magnetic recording medium;
providing an erase transducer that includes two or more erase elements, wherein each of the two or more erase elements has a predetermined width and is separated from any adjacent erase elements by a non-erasing portion, wherein the predetermined width of each of the two or more erase elements is less than a desired servo track pitch, wherein each erase element is operable to erase alternating portions of the servo signal in the servo section resulting in transitions between alternating erased portions and adjacent continuous servo signal, wherein such transitions define at least one of the plurality of tracks of servo information; and
repeatedly passing and stopping an erase current through an erase transducer to erase alternating portions of the servo signal in the servo section, wherein passing and stopping the erase current through the erase transducer includes controlling the amplitude of the erase current to control the fringe field effect between erase elements such that a width of the erased alternating portions matches the desired servo track pitch.

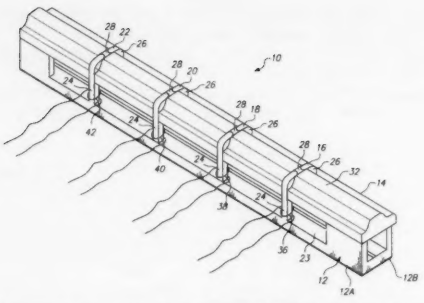
6,040,964

METHOD AND APPARATUS FOR MULTIPLE CHANNEL HEAD ASSEMBLY

George Saliba, Northborow, Mass., assignor to Quantum Corporation, Milpitas, Calif.

Continuation of application No. 08/507,618, Jul. 26, 1995, abandoned. This application Jul. 23, 1997, Appl. No. 899,082.
Int. Cl.[7] G11B *5/255;5/265*
U.S. Cl. 360—121 **4 Claims**

1. A magnetic recording head assembly comprising:
a core-bar of ferromagnetic material having a longitudinal axis;
the core bar defining a plurality of spaced apart magnetic transducer elements integrally fabricated therefrom, each said magnetic transducer element including:
a first pole segment defining a pole tip;
a second pole segment having a pole tip oppositely facing the pole tip of the first pole segment and separated by a narrow magnetic gap;
the magnetic gap between the pole tips being substantially aligned with the longitudinal axis of the core-bar and being filled with insulative material;
a coil of wire wound around at least one of the first and second pole segments;



a magnetic tape contacting structure defining longitudinal wear regions extending between the plurality of spaced-apart magnetic transducer elements, the magnetic tape contacting structure including laterally formed slots, each slot being formed between longitudinal wear regions, aligned with each transducer element, for receiving one of the transducer elements; and

end portions formed at opposing longitudinal ends of the core bar, each end portion having a top surface for registering and supporting the magnetic tape contacting structure.

6,040,965

THIN FILM MAGNETIC HEAD HAVING GROOVES WHICH BECOME GRADUALLY SHALLOWER

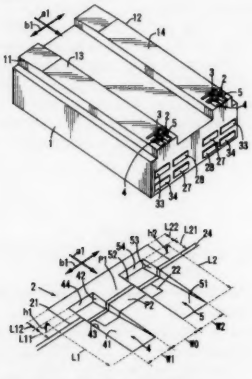
Koichi Terunuma, Hoya, and Akifumi Kamijima, Tokyo, both of Japan, assignors to TDK Corporation, Tokyo, Japan

Filed Aug. 27, 1997, Appl. No. 917,801

Claims priority, application Japan, Aug. 28, 1996, 8-227214

Int. Cl.[7] G11B *5/31*

U.S. Cl. 360—122 **18 Claims**



1. A thin film magnetic head comprising:

a slider having a leading edge and a trailing edge and having an air bearing surface; and

at least one inductive thin film magnetic conversion element disposed on said slider, and having first and second pole tips and a gap therebetween, the first pole tip being closer to the leading edge than the second pole tip, wherein:

a width of the gap in a direction perpendicular to a direction from the leading edge to the trailing edge of the slider is essentially defined by grooves formed in said air bearing surface, the grooves extending from within the first pole tip through the gap and towards the trailing edge; and

each of said grooves become gradually shallower along said direction from the leading edge of the groove to the trailing edge of the groove of said slider until a bottom surface of said grooves reaches flush with said air bearing surfaces at a region located passed the second pole tip.

6,040,966

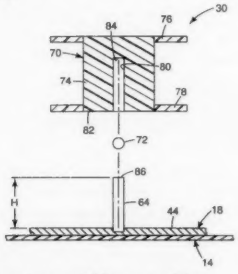
DATA STORAGE TAPE CARTRIDGE WITH HUB ALIGNMENT INSERT

Leif O. Erickson, Riverfalls, Wis., assignor to Imation Corp., Oakdale, Minn.

Filed Jun. 11, 1998, Appl. No. 96,019

Int. Cl.[7] G11B *23/087;23/037*

U.S. Cl. 360—132 **7 Claims**



1. A data storage tape cartridge comprising:

a housing defining a first housing section and a second housing section;

a hub pin attached to an interior surface of the first housing section, the hub pin extending in a generally perpendicular fashion from the interior surface and terminating in a leading end;

a tape reel assembly rotatably associated with the hub pin, the tape reel assembly comprising:

a tape reel including a hub and opposing flanges, the hub defining an axial bore extending from one end of the hub and terminating at an axial thrust surface, and

an insert selectively disposed within the axial bore, the insert abutting the axial thrust surface, wherein the hub pin is axially received within the axial bore such that the leading end of the hub pin abuts the insert; and

a storage tape maintained by the hub.

6,040,967

RESET LOCKOUT FOR CIRCUIT INTERRUPTING DEVICE

Nicholas L. DiSalvo, Levittown, N.Y., assignor to Leviton Manufacturing Co., Inc., Little Neck, N.Y.

Filed Aug. 24, 1998, Appl. No. 138,955

Int. Cl.[7] H02H *3/00*

U.S. Cl. 361—42 **18 Claims**

1. A circuit interrupting device comprising:

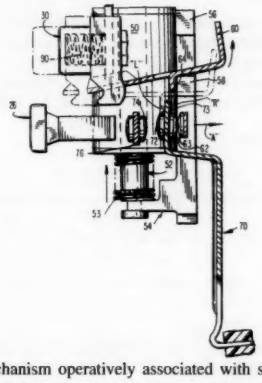
a housing;

at least one input conductor disposed at least partially within said housing and capable of being electrically connected to a source of electricity;

at least one output conductor disposed within said housing and capable of conducting electrical current to a load when electrically connected to said at least one input conductor;

a circuit interrupter disposed within said housing and configured to break said electrical connection between said input and output conductors in response to the occurrence of a predetermined condition;

a reset lock-out responsive to the occurrence of said predefined condition such that said reset lock-out is operable between a lock-out position wherein said reset lock-out inhibits resetting of said electrical connection between said input and output conductors and a reset position wherein said reset lock-out does not inhibit resetting of said electrical connection between said input and output conductors; and



a reset mechanism operatively associated with said reset lock-out and said circuit interrupter such that activation of said reset mechanism activates said circuit interrupter which facilitates movement of said reset lock-out from said lock-out position to said reset position by said reset mechanism.

6,040,968

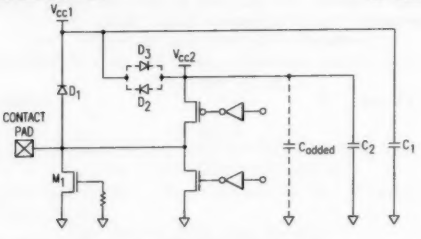
EOS/ESD PROTECTION FOR HIGH DENSITY INTEGRATED CIRCUITS

Charvaka Duvvury; E. Ajith Amerasekera, both of Plano, and Sridhar Ramaswamy, Dallas, all of Tex., assignors to Texas Instruments Incorporated, Dallas, Tex.

Provisional application No. 60/051,324, Jun. 30, 1997. This application Jun. 17, 1998, Appl. No. 99,654.

Int. Cl.[7] H02H *9/00*

U.S. Cl. 361—56 **29 Claims**



1. An integrated circuit structure, comprising:

a semiconductor substrate having:

a plurality of contact pads including a first contact pad for connection to a first external power supply voltage;

an overvoltage protection circuit for said integrated circuit structure operatively connected to said first contact pad; and

a power supply line connected to said overvoltage protection circuit and to said first contact pad to supply power to internal circuitry of said integrated circuit; said power supply line disposed over a predetermined portion of said substrate to provide a distributed capacitor in conjunction with said predetermined portion of said substrate to increase the capacitance between said power supply line and said substrate, said distributed capacitor delaying the rise in transient voltage levels and also reducing voltage supply noise when a voltage transient appears at said first contact pad.

6,040,969

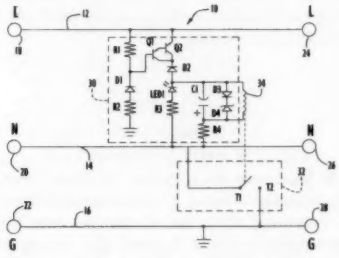
POWER FILTER CIRCUIT RESPONSIVE TO SUPPLY SYSTEM FAULT CONDITIONS

Peter G. Winch, Raleigh, N.C., and Richard Billingsley, Rossland, Canada, assignors to Electronic Systems Protection, Inc., Zebulon, N.C.

Filed Aug. 4, 1998, Appl. No. 128,435

Int. Cl.[7] H02H *3/18*

U.S. Cl. 361—82 **36 Claims**



1. A circuit for controlling electromagnetic interference, comprising:

a line conductor, a neutral conductor and a ground conductor, each connectable to a load and to a supply system having line, neutral and ground connectors, to provide an electrical connection between the supply system and the load;

a wiring fault condition sensing circuit connected to said line conductor, said neutral conductor and said ground conductor, said sensing circuit being configured to determine whether the line, neutral and ground connectors of the supply system are correctly wired and connected; and

a switch activated by said sensing circuit to form a short circuit between said neutral conductor and said ground conductor, irrespective of a voltage level appearing across said neutral conductor and said ground conductor, when all of the line, neutral and ground connectors of the supply system are correctly wired and connected.

6,040,970

INTERRUPTER UNIT OF A HIGH-VOLTAGE POWER CIRCUIT BREAKER

Volker Lehmann, Trevenbrietzen, and Joachim Gericke, Berlin, both of Germany, assignors to Siemens AG, Munich, Germany

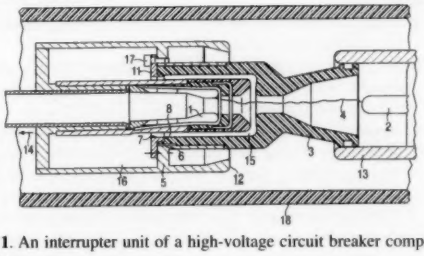
PCT No. PCT/DE97/00824, § 371 Date Feb. 16, 1999, § 102(e) Date Feb. 16, 1999, PCT Pub. No. WO97/40507, PCT Pub. Date Oct. 30, 1997

PCT Filed Apr. 22, 1997, Appl. No. 171,684

Claims priority, application Germany, Apr. 22, 1996, 296 07 660 U

Int. Cl.[7] H01H *73/00*

U.S. Cl. 361—115 **2 Claims**



1. An interrupter unit of a high-voltage circuit breaker comprising:

a cylindrical component;

at least two arcing contacts;

a hollow cylindrical nozzle coupled to the cylindrical component for blowing out an arc that may form between the at least two arcing contacts, the nozzle being composed of an insulating material and including at least one of an internal thread and an external thread for coupling to the cylindrical component, the nozzle further including a lateral surface situated opposite the at least one of the internal thread and the external thread; and

a connection piece connectable to the interrupter unit and supporting the nozzle on the lateral surface of the nozzle, a side of the connection piece having a knurling thereon for securing the nozzle against twisting.

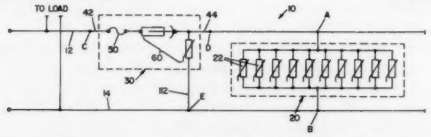
CIRCUIT PROTECTION DEVICE

Kenneth R. Martenson, 54 High Rd., Newbury, Mass. 01951; Jerry L. Mosesian, 5 Russia St., Newburyport, Mass. 01950; Alan F. Wilkinson, 219 S. Rd., Kensington, N.H. 03827, and William Goldbach, 10490 Dunkirk Rd., Spring Hill, Fla. 34608

Filed Jun. 8, 1998, Appl. No. 93,367
Int. Cl.[7] H02H *1/00*
U.S. Cl. 361—118 **12 Claims**



1. A voltage suppression device for suppressing voltage surges in an electrical circuit, said device comprised of:

a voltage sensitive element having a first surface and a second surface and a predetermined voltage rating across said first and second surfaces, said voltage sensitive element increasing in temperature as voltage applied across said first and second surfaces exceeds said voltage rating;

a first terminal electrically connected to said first surface of said voltage sensitive element, said first terminal being connectable to a ground or neutral line;

a thermal element electrically connected to said second surface of said voltage sensitive element, said thermal element being an electrically conductive solid at room temperature and having a predetermined softening temperature;

a second terminal and a third terminal in electrical connection with said thermal element, said second terminal and said third terminal being connectable to an electrical power line and forming an electrical current path, said voltage sensitive element sensing the voltage drop between said electrical current path and said first terminal; and,

at least one terminal of said second and third terminals being, comprised of:

a) a conductive sleeve, one end of said sleeve being adjacent said voltage sensitive element,

b) an electrically conductive plunger within said sleeve, said plunger being secured to said voltage sensitive element by said thermal element, and

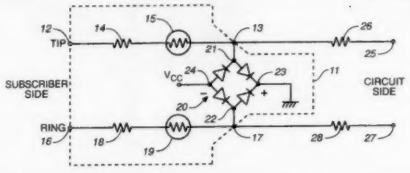
c) biasing means disposed between said sleeve and said plunger for biasing said plunger away from said voltage sensitive element, wherein said plunger moves away from electrical contact with said thermal element and breaks said electrical current path if an over-voltage condition sensed by said voltage sensitive element exceeds the voltage rating of said voltage sensitive element and causes said voltage sensitive element to heat said thermal element beyond its softening point.

6,040,972

PROTECTION DEVICE FOR COMMUNICATION

Haruyuki Takeuchi, Ishikawa-ken, Japan, assignor to Murata Manufacturing Co., Ltd., Kyoto, Japan

Filed Oct. 10, 1997, Appl. No. 948,862
Claims priority, application Japan, Oct. 22, 1996, 8-279073
Int. Cl.[7] H02H *3/22*
U.S. Cl. 361—119 **19 Claims**



1. A protection device for a communication system having a subscriber side and a circuit side adjacent each other, said protection device comprising:

protection circuit part entirely within said subscriber side serving to protect protection-requiring devices within said circuit side against an abnormal electrical condition occurring inside said subscriber side, said protection circuit including overcurrent-protecting elements, said overcurrent-protecting elements including at least thermistors having positive temperature characteristic or protection resistors; and

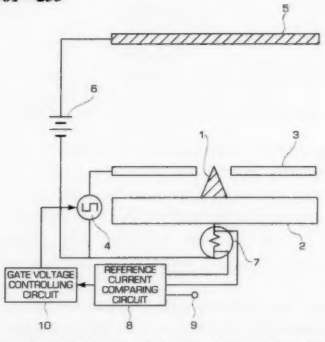
trimmable resistors which are within said circuit side and are connected between said protection circuit part and said protection-requiring devices for being trimmed such that resistance values of series connections of said trimmable resistors and said overcurrent-protecting elements can be changed to specified values.

6,040,973

METHOD OF DRIVING A FIELD EMISSION COLD CATHODE DEVICE AND A FIELD EMISSION COLD CATHODE ELECTRON GUN

Akihiko Okamoto, and Fuminori Ito, both of Tokyo, Japan, assignors to NEC Corporaiton, Tokyo, Japan

Filed Jan. 28, 1998, Appl. No. 14,577
Claims priority, application Japan, Jan. 28, 1997, 9-013923
Int. Cl.[7] G09G *3/10*
U.S. Cl. 361—235 **9 Claims**



1. A method of driving a field emission cold cathode device comprising the step of:

applying a positive voltage with reference to OV to a gate electrode disposed near an emitter; and

applying a negative voltage with reference to OV to the gate electrode at a predetermined time alternately with said positive voltage;

establishing said negative voltage in order to satisfy the relationship:

$V_f < V_r$

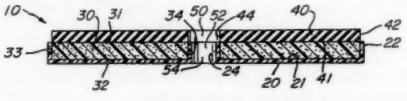
where V_f represents the absolute value of said positive voltage and V_r the absolute value of said negative voltage, wherein said alternatively applied positive and negative voltages maintain a substantially constant emission current from said emitter.

6,040,974

CAPACITOR COVER

Steven A. Rubin, Sharon, Mass., assignor to Universal Products, Inc., Brockton, Mass.

Filed Jul. 19, 1994, Appl. No. 277,330
Int. Cl.[7] H01G *9/10*
U.S. Cl. 361—519 **28 Claims**



1. A capacitor cover for closing an open end of a capacitor containing electrolyte, comprising:

an elastomeric outer layer having an inner surface and a first aperture,

a rigid middle layer having an outer surface, an inner surface, a peripheral surface, a second aperture and an annular surface defining said second aperture,

a polypropylene inner layer having an outer surface, a peripheral skirt, a third aperture and an annular skirt disposed around said third aperture,

said inner surface of said elastomeric outer layer being in contact with said outer surface of said rigid middle layer and said inner surface of said rigid middle layer being in contact with said outer surface of said polypropylene inner layer,

said first, second and third apertures disposed so as to allow passage of a terminal through said capacitor cover,

said peripheral skirt extending sufficiently to prevent said electrolyte of said capacitor from coming into contact with said peripheral surface of said rigid middle layer, and

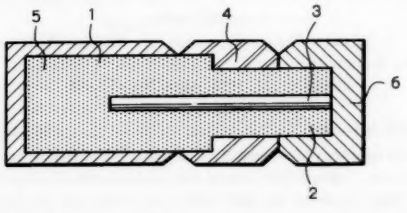
said annular skirt extending into said second aperture sufficiently to prevent said electrolyte of said capacitor from coming into contact with said annular surface of said rigid middle layer.

6,040,975

TANTALUM POWDER AND SOLID ELECTROLYTIC CAPACITOR USING THE SAME

Kazuya Mimura, Tokyo, Japan, assignor to NEC Corporation, Tokyo, Japan

Filed Jun. 26, 1998, Appl. No. 105,482
Claims priority, application Japan, Jun. 30, 1997, 9-173660
Int. Cl.[7] H01G *9/042*
U.S. Cl. 361—523 **4 Claims**



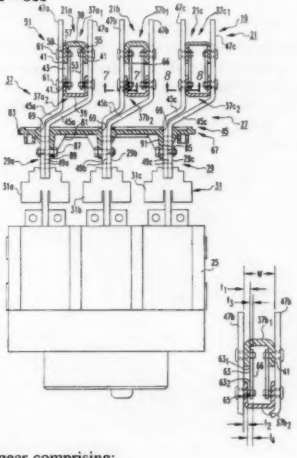
2. In a solid electrolytic capacitor, an anode body is produced by sintering tantalum powder consisting of raw powder having a CV value greater than 40,000 μF FV/g inclusive and cohered powder having a grain size ranging from 40 μm to 200 μm and added to said raw powder in an amount of 2 wt % to 5 wt %.

6,040,976

SWITCHGEAR CONDUCTORS AND MOUNTING ARRANGEMENTS THEREFOR

Rodney William Bruner, and William Edward Wilkie, II, both of Fletcher, N.C., assignors to Eaton Corporation, Cleveland, Ohio

Filed Nov. 9, 1998, Appl. No. 188,721
Int. Cl.[7] H02B *1/20*
U.S. Cl. 361—611 **16 Claims**



1. Switchgear comprising:

a cabinet;

at least one electrical apparatus mounted in said cabinet;

a set of risers vertically mounted in said cabinet and each comprising a pair of confronting electrically conductive U-channels;

stab members; and

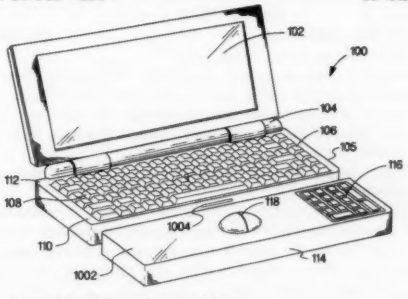
mounting means mounting said stab members to project laterally from at least some of said risers in alignment for engagement with said at least one electrical apparatus to electrically connect said at least one electrical apparatus to said at least some risers.

6,040,977

PALM REST FOR A KEYBOARD OR A PORTABLE COMPUTER HAVING A NUMERIC KEYPAD

Cary J. Hoffer, Albany, Oreg., assignor to Hewlett-Packard Company, Palo Alto, Calif.

Filed Oct. 30, 1998, Appl. No. 183,067
Int. Cl.[7] G06F *1/16*
U.S. Cl. 361—680 **23 Claims**



1. A portable computer, comprising:

a base having a keyboard on an upper surface and having a front portion and a rear portion;

a display connected to said base;

a palm rest disposed across said front portion of said base, said palm rest having a top surface and an inner surface, wherein said palmrest is detachably connected to said base through a connection device; and

said palm rest further comprising a numeric keypad in communication with the computer through said connection device.

6,040,978

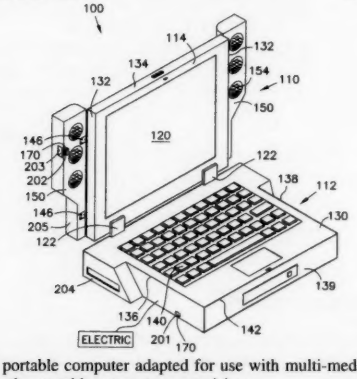
PORTABLE COMPUTER HAVING FOLDING SPEAKERS

Julian A. Q. Spencer, Vermillion, S. Dak., assignor to Gateway 2000, Inc., North Sioux City, S. Dak.

Filed Nov. 26, 1997, Appl. No. 978,909

Int. Cl.[7] **G06F** *1/16;* **H05K** *7/16*

U.S. Cl. 361—683 **12 Claims**



1. A portable computer adapted for use with multi-media applications, the portable computer comprising:

a computer body having a front portion and two side surfaces;

a processor and a memory encompassed by the computer body;

a display rotatably coupled with the computer body;

at least one speaker panel coupled proximate to the display;

at least one audio output device disposed within the at least one speaker panel; and

an opening device operatively coupled with a at least one speaker panel and the computer body for moving the at least one speaker panel from a closed position to an open position.

6,040,979

COMPUTER HAVING MODULE BAY WITH VARIABLE INSERTION OPENING SIZE

Steven S. Homer, Cypress, Tex., assignor to Compaq Computer Corporation, Houston, Tex.

Filed Feb. 18, 1998, Appl. No. 25,411

Int. Cl.[7] **G06F** *1/16*

U.S. Cl. 361—683 **13 Claims**

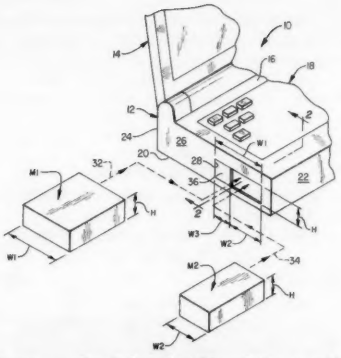
1. Electronic apparatus comprising:

a housing having an internal area and a wall opening inwardly through which a device may be operatively inserted into said internal area; electronic circuitry operatively disposed within said housing and being electronically mateable with the inserted device; and

a single closure member carried by said housing at said wall opening and being:

(1) resiliently biased toward a first position in which said closure member blocks only a portion of said wall opening and leaves an unblocked portion of said wall opening constituting a major portion and essentially the entire remainder thereof; and

(2) inwardly deflectable to a second position by a device operatively inserted through said wall opening and having a cross-sectional area greater than the unblocked area of said wall opening,



said closure member being pivotable relative to said housing between said first and second positions.

8. A portable computer comprising:

a base housing having an exterior wall section in which a module insertion opening is formed, and an internal bay area adapted to interchangeably receive first and second modular devices inserted inwardly through said module insertion opening, the first modular device having a cross-sectional area greater than that of the second modular device;

electronic circuitry operatively disposed within said bay area and being electronically mateable with the inserted first and second modular devices; and

a single closure member carried by said base housing at said module insertion opening for movement relative to said base housing between:

a first position in which said closure member extends across and blocks only a first portion of said module insertion opening and leaves unblocked a second major portion thereof, which constitutes essentially the entire remainder of said module insertion opening, through which the second modular device may be inserted into said bay area, and

a second position in which, in response to insertion of the first modular device through said module insertion opening into said bay area, said closure member is deflected away from said first portion of said module insertion opening; and

a biasing structure operative to resiliently bias said closure member toward said first position thereof,

said closure member being pivotable relative to said base housing between said first and second positions.

6,040,980

DISK DRIVE TO CHASSIS MOUNTING APPARATUS AND METHOD

Greg P. Johnson, Boise, Id., assignor to Micron Electronics, Inc., Nampa, Id.

Filed Oct. 21, 1998, Appl. No. 177,698

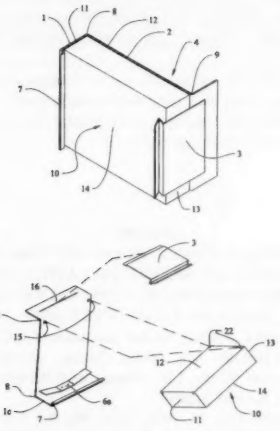
Int. Cl.[7] **H05K** *5/00;7/00*

U.S. Cl. 361—685 **30 Claims**

1. An apparatus for mounting a disk drive, the disk drive having a first side, a second side, a third side, and a fourth side, the first side being opposite the third side and the second side being opposite the fourth side, the first side having a first hole and the second side having a second hole, the apparatus comprising:

a first member having a first shear connector for engaging the first hole;

a second member, coupled to said first member; and



a deformable member with surfaces to engage the third and fourth sides of the disk drive,

said deformable member coupled to said second member.

6,040,981

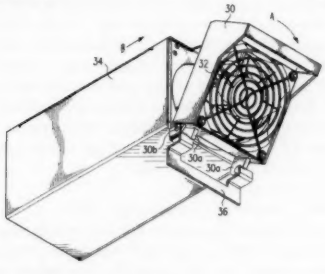
METHOD AND APPARATUS FOR A POWER SUPPLY CAM WITH INTEGRATED COOLING FAN

Ty Schmitt, Round Rock, and Vibora Sim, Pflugerville, both of Tex., assignors to Dell USA, L.P., Round Rock, Tex.

Filed Jan. 26, 1999, Appl. No. 237,635

Int. Cl.[7] **H05K** *7/20*

U.S. Cl. 361—695 **19 Claims**



1. A computer system comprising:

a chassis,

a power supply for mounting in the chassis,

a fan for cooling the power supply, and

a camming handle for supporting the fan, wherein the camming handle is connected to the power supply and is moveable between an open and a closed position, the camming handle including a portion for engaging the chassis, wherein movement of the camming handle to the closed position causes the power supply to be translated to an engaged position relative to the chassis and causes the fan to be aligned into a cooling position relative to the power supply.

6,040,982

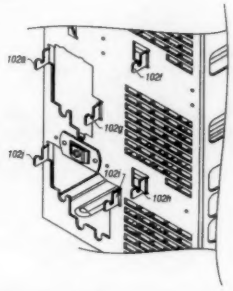
ELECTRONIC SYSTEM IMPLEMENTING REDUNDANT AND NONREDUNDANT POWER SUPPLY CONFIGURATIONS

Jerry D. Gandre; Steven L. Sands; R. Steven Mills, and Arthur Lopez, all of Austin, Tex., assignors to Dell USA, L.P., Round Rock, Tex.

Filed Oct. 16, 1997, Appl. No. 951,798

Int. Cl.[7] **G06F** *1/16;* **H05K** *7/20*

U.S. Cl. 361—724 **40 Claims**



16. An apparatus comprising:

a chassis having a support frame that includes attachment features which interchangeably receive: (i) a connector assembly which connects to a first power supply in a nonredundant power supply configuration and (ii) a current sharing circuit board which connects to a plurality of power supplies in a multiple power supply configuration.

6,040,983

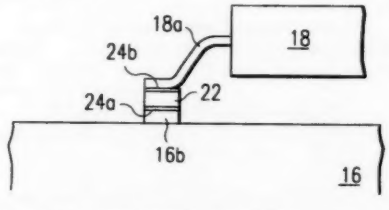
VERTICAL PASSIVE COMPONENTS FOR SURFACE MOUNT ASSEMBLY

Daniel Baudouin, Missouri City; Ernest J. Russell, Richmond, and Jeffrey W. Janzen, Missouri City, all of Tex., assignors to Texas Instruments Incorporated, Dallas, Tex.

Provisional application No. 60/043,101, Apr. 16, 1997. This application Mar. 13, 1998, Appl. No. 41,902.

Int. Cl.[7] **H05K** *7/02*

U.S. Cl. 361—760 **4 Claims**



1. A surface mounted assembly, comprising:

a printed wiring board having a solder pad on a surface thereof;

an active integrated circuit device having a lead finger disposed over the solder pad; and

a passive device having a first end and a second end that is disposed between the solder pad and the lead finger with the first end attached to the solder pad on the surface of the printed wiring board and the second end attached to the lead finger of the active integrated circuit device.

6,040,984

PRINTED CIRCUIT BOARD WITH OPPOSED BONDING SHELVES FOR SEMICONDUCTOR CHIP WIRE BONDING AT DIFFERENT LEVELS

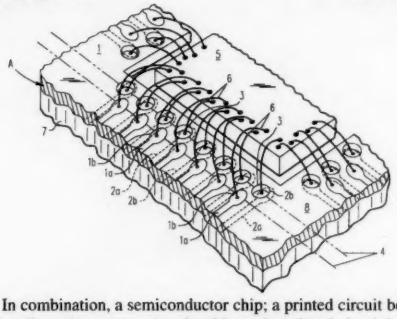
Tadashi Hirakawa, Osaka, Japan, assignor to Fuji Machinery Mfg. & Electronics Co., Ltd., Osaka, Japan

Filed Feb. 26, 1997, Appl. No. 805,175

Claims priority, application Japan, Feb. 27, 1996, 8-067258

Int. Cl.[7] H05K *7/02*

U.S. Cl. 361—777 **21 Claims**



1. In combination, a semiconductor chip; a printed circuit board; and bonding wires connecting the chip to the printed circuit board; said printed circuit board comprising a base material, a series of conductive traces of conductive foil on both sides of the base material, the traces on a first surface of the base material forming a first bonding shelf having first bonding pads, the traces on an opposite second surface of the base material forming a second bonding shelf having second bonding pads, said first and second bonding pads being located in rows adjacent to each other separated by said base material, a series of openings in said base material adjacent to said first bonding pads and each leading to a respective one of said second bonding pads on said second bonding shelf, and wherein the bonding wires are connectable directly from the chip to said first bonding pads on said first bonding shelf and through said openings to said second bonding pads on said second bonding shelf.

6,040,985

CIRCUIT BOARD HAVING GENERAL PURPOSE REGION AND PROGRAMMABLE REGION

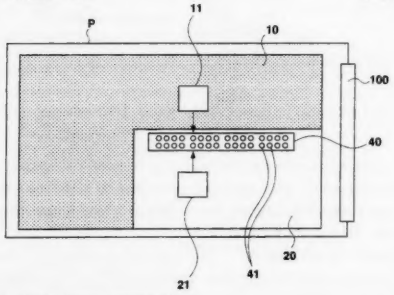
Masayuki Arai, Tokyo, and Seiji Kobayashi, Kanagawa, both of Japan, assignors to Sony Corporation, Japan

Filed Oct. 22, 1997, Appl. No. 955,495

Claims priority, application Japan, Oct. 23, 1996, P08-299365

Int. Cl.[7] H05K *7/06*

U.S. Cl. 361—780 **6 Claims**



1. A circuit board, comprising:

a general purpose region in which a general-purpose electrical part is mounted; and

a programmable region in which a programmable digital electrical part is mounted, said general-purpose region and said programmable region being provided on the same board, wherein

an interface means for electrically connecting said programmable region and said general-purpose region is disposed at the boundary area between said programmable region and said general-purpose region.

6,040,986

NON-CONTACT POWER TRANSMITTING DEVICE HAVING SIMPLIFIED SELF-OSCILLATION FEEDBACK LOOP WHICH INTERRUPTS POWER TRANSMISSION WHEN NO LOAD IS PRESENT

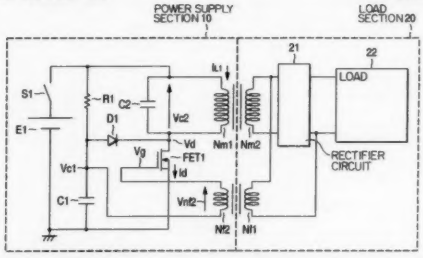
Hiroshi Sakamoto, 6-388-3, Tsuboi, Kumamoto-shi, kumamoto, Japan, and Hideaki Abe, Osaka, Japan, assignors to Matsushita Electric Works, Ltd., Osaka, and Hiroshi Sakamoto, Kumamoto, both of Japan

Filed Nov. 27, 1998, Appl. No. 200,474

Claims priority, application Japan, Dec. 9, 1997, 9-339004

Int. Cl.[7] H02M *3/335*

U.S. Cl. 363—20 **5 Claims**



1. A non-contact power transmitting device comprising:

(A) a power supplying section comprising:

a voltage source;

a start resistor connected to said voltage source;

a first capacitor connected to said voltage source;

a power transmitting primary coil;

a signal transmitting secondary coil which is not inductively coupled to said power transmitting primary coil; and

a switching element having a control terminal, wherein, said start resistor and said first capacitor apply a bias voltage to said control terminal of said switching element, and when the bias voltage applied to said control terminal becomes higher than a threshold voltage, said switching element switches a current from said voltage source to said power transmitting primary coil; and

(B) a load section comprising:

a power transmitting secondary coil; and

a signal transmitting primary coil being electrically and magnetically coupled to said power transmitting secondary coil,

wherein, when said load section is attached to said power supplying section, said power transmitting primary coil and said power transmitting secondary coil are magnetically coupled to each other, so that power is transmitted from said power supplying section to said load section by electromagnetic induction,

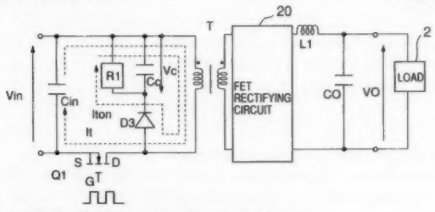
said signal transmitting secondary coil is magnetically coupled to said signal transmitting primary coil and electrically coupled to said control terminal as a feedback coil, and

said power transmitting primary coil, said power transmitting secondary coil, said signal transmitting primary coil, and said signal transmitting secondary coil form a feedback loop.

6,040,987
DC-DC CONVERTER UNIT

Kenji Kudo; Kohji Kuwabara; Shigeharu Yamashita; Kazutoshi Fuchigami, all of Kawasaki, and Norikazu Katsuyama, Fukuoka, all of Japan, assignors to Fujitsu Limited, Kanagawa, Japan

Filed Apr. 1, 1998, Appl. No. 53,300
Claims priority, application Japan, Jul. 16, 1997, 9-190873
Int. Cl.[7] H02M *3/335*
U.S. Cl. 363—21 **7 Claims**



1. A DC—DC converter unit comprising:

a power conversion transformer;

a switching device switching a DC voltage supplied to a primary winding of said power conversion transformer;

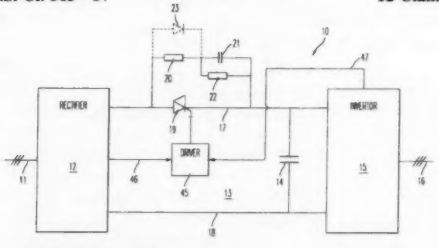
a synchronous rectifying circuit rectifying a AC voltage generated on a secondary winding of said power conversion transformer in synchronization with the switched DC voltage supplied to said primary winding of said power conversion transformer; and

a reset circuit for resetting excitation energy stored in said power conversion transformer by an on-operation of said switching device, a voltage generated in said primary winding of said power conversion transformer having a square waveform when said switching device is turned off.

6,040,988
CONVERTER WITH DC VOLTAGE INTERMEDIATE CIRCUIT AND METHOD FOR OPERATING SUCH A CONVERTER

Jochen Rees, Waldshut, and Jürgen Steinke, Albbruck, both of Germany, assignors to Asea Brown Boveri AG, Baden, Switzerland

Filed Aug. 25, 1998, Appl. No. 139,125
Claims priority, application Germany, Aug. 25, 1997, 197 36 903
Int. Cl.[7] H02M *5/45;7/122*
U.S. Cl. 363—37 **12 Claims**



1. A converter comprising:

a rectifier circuit having an AC voltage input and a DC voltage output and configured to be connected to a power supply system;

an invertor circuit having a DC voltage input and an AC voltage output;

a DC voltage intermediate circuit arranged between the DC voltage output of the rectifier circuit and the DC voltage input of the inverter circuit; and

two connecting lines, leading from the DC voltage output of the rectifier circuit to the DC voltage input of the invertor circuit,

wherein the invertor comprises a three-point inverter with a center tap.

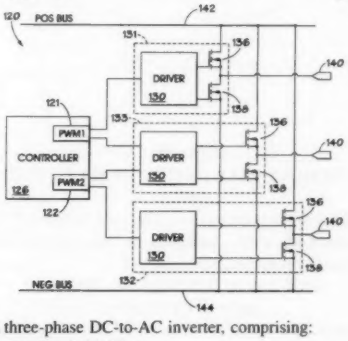
wherein intermediate circuit capacitors are respectively arranged between the center tap and each of the connecting lines, and

wherein in order to protect the converter in the event of a short circuit, first controllable semiconductor switches are arranged in each of the connecting lines between the DC voltage output of the rectifier circuit and a respective intermediate circuit capacitor.

6,040,989
DEVICE AND METHOD FOR GENERATING THREE-PHASE SINE WAVES USING TWO PULSE-WIDTH MODULATORS

J. Stephen Thorn, Florissant, and Arthur E. Woodward, Manchester, both of Mo., assignors to Emerson Electric Co, St. Louis, Mo.

Filed May 6, 1999, Appl. No. 306,614
Int. Cl.[7] H02M *1/12*
U.S. Cl. 363—41 **20 Claims**



15. A three-phase DC-to-AC inverter, comprising:

first, second and third legs;

a first PWM generator operable to provide an output to the first inverter leg during first and second 120° segments of a 360° electrical cycle, and provide an output to the third inverter leg during a third 120° segment; and

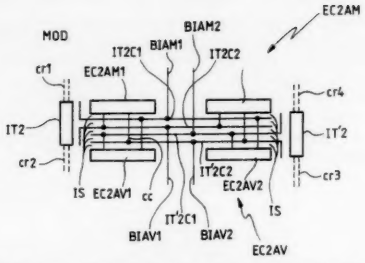
a second PWM generator operable to provide an output to the third inverter leg during the first 120° segment, and provide an output to the second inverter leg during the second and third 120° segments.

6,040,990
PRACTICAL STRUCTURE FOR MAKING A MULTILEVEL CONVERTER

Jacques Courault, Veneux les Sablons, France, assignor to Alstom, Paris, France

Filed Mar. 15, 1999, Appl. No. 267,369
Claims priority, application France, Mar. 16, 1998, 98 03189
Int. Cl.[7] H02M *3/18*
U.S. Cl. 363—59 **8 Claims**

1. A multilevel converter structure made up of cells in cascade, each intermediate cell containing two switches, with one pole of each of the two switches forming part of a pair of upstream poles and the other pole of each of the switches forming part of a pair of downstream poles, the pair of downstream poles of an upstream cell being connected to the pair of upstream poles of a downstream cell, the converter structure also having a respective capacitor for each cell, each capacitor being connected between the two poles constituting the pair of downstream poles of its cell, wherein said converter structure is made up of modules, among which at least an intermediate module contains an upstream capacitor element, in



addition to two switches corresponding to the switches of an intermediate cell, the capacitance of said capacitor element being a fraction of the capacitance of the cell capacitor of said upstream cell, while a module upstream from said intermediate module contains a downstream capacitor element whose capacitance is a second fraction of the capacitance of the cell capacitor of said upstream cell.

6,040,991

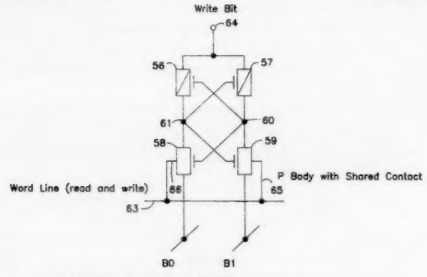
SRAM MEMORY CELL HAVING REDUCED SURFACE AREA

John J. Ellis-Monaghan, Grand Isle, and Wilbur D. Pricer, Charlotte, both of Vt., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Jan. 4, 1999, Appl. No. 225,074

Int. Cl.[7] G11C *11/00*

U.S. Cl. 365—154 **23 Claims**



1. A static RAM cell comprising:

first pair of transistors, each of said transistors including a source, a drain, a gate and a body contact for controlling conduction of a respective transistor;

a second pair of transistors having drain connections connected to drain connections of said first pair of transistors, and having source connections connected together, each of said pairs of transistors having gate connections cross coupled to drains of an opposite transistor of a respective pair of transistors to form a bistable latch;

a pair of complementary bit lines connected to the source connections of said first pair of transistors having said body contact;

a word line connected to the body contact of each transistor having said body contact; and

a write terminal connected to said source connections of said second pair of transistors.

6,040,992

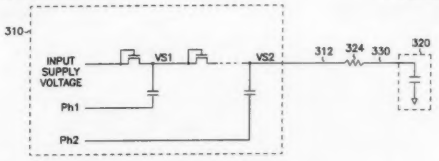
INTEGRATED CIRCUIT CHARGE COUPLING CIRCUIT

Christophe J. Chevallier, Palo Alto, Calif., assignor to Micron Technology, Inc., Boise, Id.

Continuation of application No. 09/001,793, Dec. 31, 1997, Pat. No. 5,949,708. This application Jul. 12, 1999, Appl. No. 351,940.

Int. Cl.[7] G11C *11/34*

U.S. Cl. 365—183 **16 Claims**



1. A flash memory device comprising:

a connection for receiving a supply voltage which is below approximately 3.6 volts during normal operations;

an array of non-volatile memory cells comprising a plurality of substantially capacitive word lines for accessing the memory cells;

a charge pump for producing an output voltage selectively coupled to the plurality of word lines, the charge pump comprising a plurality of serially connected transistors configured to operate as diodes and a plurality of pump capacitors, one of the pump capacitors is coupled to an output connection of the charge pump; and

a coupling resistor circuit, having no diodes or transistors, connected between the output connection of the charge pump and one of the word lines.

6,040,993

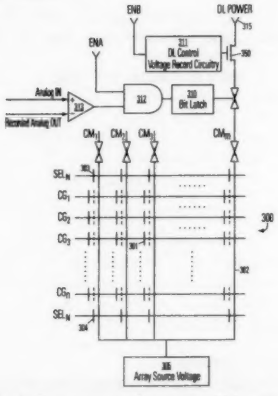
METHOD FOR PROGRAMMING AN ANALOG/MULTI-LEVEL FLASH EEPROM

Chia-Hsing Chen, I-Lan Hsian, and Mam-Tsung Wang, Hsinchu, both of Taiwan, assignors to Macronix International Co., Ltd., Hsinchu, Taiwan

Filed Feb. 23, 1998, Appl. No. 28,229

Int. Cl.[7] G11C *7/00*

U.S. Cl. 365—185.03 **33 Claims**



1. A method for programming a multi-level floating gate memory cell, comprising the steps of:

searching a program data-line voltage of the cell and ascertaining that said program data-line voltage is less than a first program verification margin for each data-line of the cell by using a first number of program pulse shots having a first pulse width and a second number of program pulse shots having a second pulse width and recording the program data-line voltage of the cell;

using the recorded program data-line voltage for each bit-line and page programming the cell using a third number of program pulse shots having a third pulse width until the cell has less than a second program verification margin;

determining whether the cell is programmed within the second program verification margin; and if not

iteratively applying another program retry pulse to the cell and determining whether the cell is programmed, until the cell is programmed within the second program verification margin or a maximum number, M, of retries is made;

using the recorded data-line voltage for each bit-line and page programming the cell using a fourth number of program pulses having a fourth pulse width until the cell has less than a third program verification margin;

determining whether the cell is programmed within the third program verification margin; and if not

iteratively applying another program retry pulse to the cell and determining whether the cell is programmed, until the cell is programmed within the third program verification margin or a maximum number, N, of retries is made.

6,040,994

METHOD FOR WRITING IN AN ELECTRICALLY MODIFIABLE NON-VOLATILE MEMORY

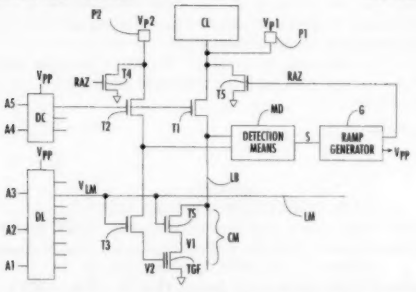
David Naura, Aix en Provence, France, assignor to STMicroelectronics S.A., Gentilly, France

Filed Oct. 27, 1998, Appl. No. 179,621

Claims priority, application France, Oct. 28, 1997, 97 13740

Int. Cl.[7] G11C *16/00*

U.S. Cl. 365—185.18 **34 Claims**



17. An electrically modifiable non-volatile memory device comprising:

an array of memory cells that are read addressable and write addressable byword lines and bit lines, each memory cell comprising a selection transistor and a floating gate transistor series-connected with the selection transistor between a bit line and ground; and

a voltage generator for the simultaneous generation of a first voltage signal for selecting a memory cell and a second voltage signal when the selected memory cell is to be erased, the first voltage signal being applied to the word line connected to the memory cell to be selected and the second voltage signal being applied to a gate of the floating-gate transistor, the two voltage signals each comprising a rising phase, a voltage plateau and a voltage drop;

said voltage generator further comprising means for holding a duration of the voltage plateau of the first voltage signal for a time t1 measured from a starting point of the rising phase, which is greater than a corresponding duration time t2 for the second voltage signal.

6,040,995

METHOD OF OPERATING A STORAGE CELL ARRANGEMENT

Hans Reisinger, Grünwald, Germany; Ulrike Grüning, Hopewell Junction, N.Y.; Hermann Wendt, Grasbrunn, Germany; Reinhard Stengl, Stadtbergen, Germany; Volker Lehmann, München, Germany; Josef Willer, Riemerling, Germany; Martin Franosch, München, Germany; Herbert Schäfer, Höhenkirchen-Siegertsbrunn, Germany; Wolfgang Krautschneider, Hohenthann, Germany; Franz Hofmann, München, Germany, and Thomas Böhm, Berlin, Germany, assignors to Siemens Aktiengesellschaft, Munich, Germany

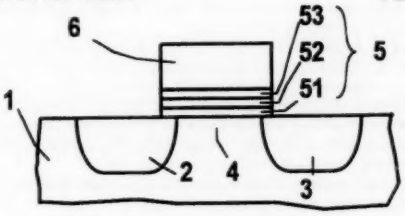
PCT No. PCT/DE97/01601, § 371 Date Jan. 28, 1999, § 102(e) Date Jan. 28, 1999, PCT Pub. No. WO98/06140, PCT Pub. Date Feb. 12, 1998

PCT Filed Jul. 29, 1997, Appl. No. 230,614

Claims priority, application Germany, Aug. 1, 1996, 196 31 155

Int. Cl.[7] H01L *27/02*

U.S. Cl. 365—185.18 **4 Claims**



1. A method for operating a memory cell arrangement, comprising the steps of:

using MOS transistors each having a dielectric triple layer with a first silicon oxide layer, a silicon nitride layer and a second silicon oxide layer as gate dielectric, as memory cells, the first silicon oxide layer and the second silicon oxide layer being respectively at least 3 nm thick;

applying, for writing a first logical value into one of the memory cells, a first charge amount onto the gate dielectric by Fowler-Nordheim tunneling, said first charge amount being stored in the gate dielectric thereby effecting a first cutoff voltage value of the MOS transistor;

applying for writing a second logical value into one of the memory cells, a second charge amount onto the gate dielectric by Fowler-Nordheim tunneling, said second charge amount being stored in the gate dielectric thereby effecting a second cutoff voltage value of the MOS transistor;

applying, for readout of digital information from one of the memory cells, a read voltage to the gate electrode of the memory cell, said read voltage lying between the first cutoff voltage value and the second cutoff voltage value, the read voltage being evaluated as to whether a current flows through the MOS transistor or not.

CONSTANT CURRENT PROGRAMMING WAVEFORMS FOR NON-VOLATILE MEMORIES

Sik On Kong, Singapore, Singapore, assignor to Chartered Semiconductor Manufacturing, Ltd., Singapore, Singapore

Filed Nov. 16, 1998, Appl. No. 192,337

Int. Cl.[7] G11C *16/04*

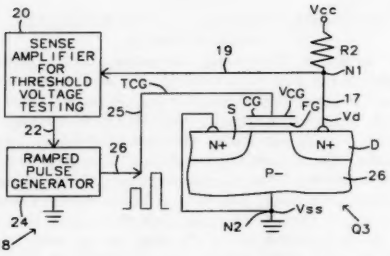
U.S. Cl. 365—185.19 **20 Claims**

11. An EEPROM memory device comprising:

a substrate on which a gate electrode stack is formed on a doped silicon semiconductor material, said gate electrode stack including a tunnel oxide layer,

a floating gate electrode and a control gate electrode,

a dielectric layer between said floating gate electrode and said control gate electrode,



a source region and a drain region formed in said substrate self-aligned with said stack, said source region being at a source voltage V_S,

a supply voltage V_{cc} being connected through a resistor to said drain region and said source region being connected to ground voltage V_{ss},

said drain region being at a drain voltage V_D and said substrate being at a substrate voltage V_{Sub},

means for writing data to said floating gate electrode by applying an upwardly stepwise increasing control gate voltage V_{CG1} waveform to said control gate electrode of said EEPROM device with a voltage ramp having a substantially constant tunneling current into said floating gate electrode, wherein said substantially constant tunnelling current is substantially constant with respect to time,

means for providing measurements of said drain voltage V_D with a voltage sensing testing device, and

means for adjusting said upwardly stepwise increasing control gate voltage as a function of said measurements of said drain voltage V_D,

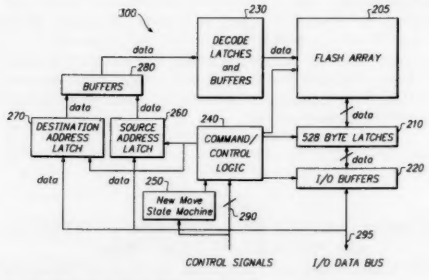
whereby programming speed and the number of write/erase cycles is increased.

6,040,997

FLASH MEMORY LEVELING ARCHITECTURE HAVING NO EXTERNAL LATCH

Petro Estakhri, Pleasanton, Calif., assignor to Lexar Media, Inc., Fremont, Calif.

Filed Mar. 25, 1998, Appl. No. 47,798
Int. Cl.[7] G11C *11/34*
U.S. Cl. 365—185.33 **15 Claims**



1. A flash memory system comprising:

a. a flash array for storing data;

b. a plurality of internal latches coupled to the flash array for temporarily holding the data;

c. a controller coupled to the flash array and the plurality of internal latches configured to transfer the data stored in a source address of the flash array to the plurality of internal latches and then directly transferring the data, to a destination address in the flash array without utilizing an external memory device, wherein the external memory device is external from the flash memory system; and

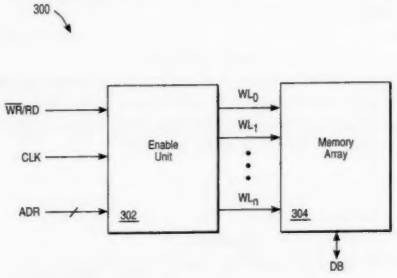
d. a locator device configured to search within the flash array for a free memory block for use as the destination address.

6,040,998

MEMORY ACTIVATION DEVICES AND METHODS

Chih-Ta Star Sung, Princeton, N.J.; Venkat Mattela, San Jose, Calif.; Muhammad Afsar, San Diego, Calif.; Balraj Singh, and Chih-Teng Hung, both of San Jose, Calif., assignors to Siemens Aktiengesellschaft, Munich, Germany

Filed Aug. 11, 1998, Appl. No. 132,559
Int. Cl.[7] G11C *7/00;8/00*
U.S. Cl. 365—194 **21 Claims**



1. A memory device comprising:

an enable unit arranged to receive a plurality of address signals and a clock signal and to output an activation signal, at least one of the address signals being characterized by a worst case delay relative to a first transition of the clock signal, the enable unit being further arranged to generate an enable signal which follows the first transition of the clock signal by at least about the worst case delay and which occurs before a next transition of the clock signal, the enable signal being for controlling the activation signal; and

a memory array arranged to receive the activation signal such that a memory location corresponding to the activation signal is activated.

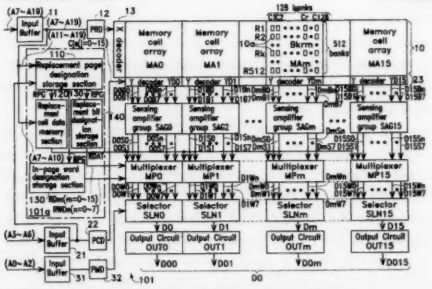
SEMICONDUCTOR MEMORY DEVICE

Yasuhiro Hotta, Nara, and Shuichiro Kouchi, Tenri, both of Japan, assignors to Sharp Kabushiki Kaisha, Osaka, Japan

Filed Oct. 20, 1997, Appl. No. 954,174
Claims priority, application Japan, Oct. 24, 1996, 8-282767
Int. Cl.[7] G11C *7/00;8/00*
U.S. Cl. 365—200 **10 Claims**



1. A semiconductor memory device, comprising:

a main memory section for storing data, the main memory section including a plurality of memory cells arranged in a matrix;

a redundant memory section including a replacement cell data memory section for storing replacement cell data to replace

cell data in a prescribed memory cell in the main memory section, and a control signal generation section for generating a control signal for data replacement based on an input address;

a memory cell selection section for simultaneously selecting prescribed cells as a plurality of memory cells corresponding to a prescribed page in the main memory section based on the input address;

a sensing amplification section for simultaneously sensing the cell data corresponding to the selected plurality of memory cells as page data;

a data replacement section for receiving the replacement cell data and the control signal from the redundant memory section and also receiving the page data from the sensing amplification device; when the page data includes cell data which needs to be replaced, outputting replacement page data after replacing the cell data with the replacement cell data based on the control signal; and when the page data includes no cell data which needs to be replaced, outputting the page data with no processing based on the control signal; and

a data selection section for sequentially switching and outputting the corresponding data from the page data output from the data replacement section based on the input address,

wherein a supply of the replacement cell data and the control signal from the redundant memory section to the data replacement section is performed in a time period from the time when the input address is determined until the time when the page data to be output from the sensing amplification section is determined.

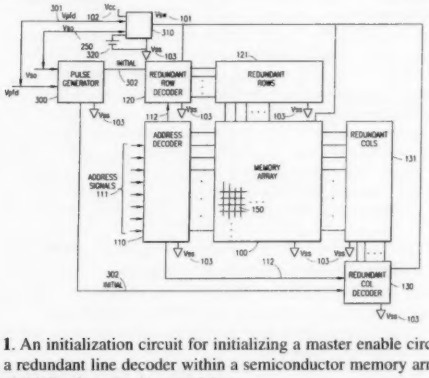
INITIALIZATION FOR FUSE CONTROL

David C. McClure, Carrollton, and Tom Youssef, Dallas, both of Tex., assignors to STMicroelectronics, Inc., Carrollton, Tex.

Filed Oct. 30, 1998, Appl. No. 183,840
Int. Cl.[7] G11C *7/00*
U.S. Cl. 365—200 **16 Claims**



1. An initialization circuit for initializing a master enable circuit in a redundant line decoder within a semiconductor memory array, the initialization circuit comprising:

voltage sensing and switching circuit for determining that a predetermined voltage level has been reached and for multiplexing a plurality of power sources to a single power bus for the semiconductor memory array, and

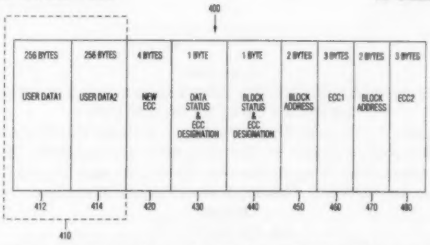
a pulse generation circuit for generating an initialization pulse responsive to the predetermined voltage level being reached, the initialization pulse for initializing the master enable circuit to a known state in order to minimize undesirable currents within the semiconductor memory array, said master enable circuit being connected to said single power bus.

6,041,001

METHOD OF INCREASING DATA RELIABILITY OF A FLASH MEMORY DEVICE WITHOUT COMPROMISING COMPATIBILITY

Petro Estakhri, Pleasanton, Calif., assignor to Lexar Media, Inc., Fremont, Calif.

Filed Feb. 25, 1999, Appl. No. 258,163
Int. Cl.[7] G11C *7/00*
U.S. Cl. 365—200 **41 Claims**



17. A controller for increasing the data reliability of a memory device without compromising compatibility, the controller comprising:

a. means for decoding a predetermined bit located in a predetermined location within the memory device, the predetermined bit holding a data reliability procedure code; and

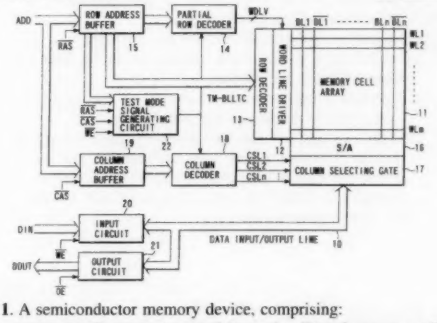
b. means for performing a data reliability procedure corresponding to the data reliability procedure code on a data bit, the means for performing the data reliability procedure being coupled to the means for decoding the predetermined bit.

6,041,002

SEMICONDUCTOR MEMORY DEVICE AND METHOD OF TESTING THE SAME

Hiroshi Maejima, Tokyo, Japan, assignor to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Nov. 20, 1998, Appl. No. 196,192
Claims priority, application Japan, Nov. 21, 1997, 9-321199
Int. Cl.[7] G11C *7/00*
U.S. Cl. 365—201 **10 Claims**



1. A semiconductor memory device, comprising:

a memory cell array structured by a plurality of memory cells disposed in a row and column matrix shape, each memory cell being connected to a bit line and a word line;

a row decoder for selecting one word line from said plurality of word lines based on an address signal from outside;

a non-selective state setting circuit for setting all of said plurality of word lines to a non-selective state according to test mode signal;

a column decoder for selecting a column from which data is to be read and into which data is to be written, from a plurality of columns within said memory cell array based on the address signal from outside;

a data input and output line used for data input and output between said memory cell array and an external terminal and for being connected to a bit line of a selected column;

a selective-state setting circuit for setting all of said plurality of columns within said memory cell array to a selective-state according to said test mode signal; and

test mode signal generating circuit for generating said test mode signal in test mode for testing a leakage of a charge held in a memory cell.

6,041,003

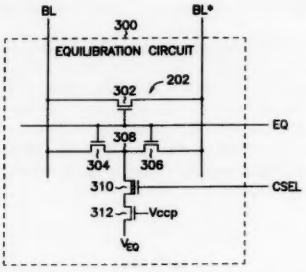
CIRCUIT AND METHOD FOR MEMORY DEVICE WITH DEFECT CURRENT ISOLATION

Stephen L. Casper; David Pinney, and Brent Keeth, all of Boise, Id., assignors to Micron Technology, Inc., Boise, Id.

Continuation of application No. 08/911,667, Aug. 14, 1997, Pat. No. 5,896,334. This application Feb. 26, 1999, Appl. No. 261,607.

Int. Cl.[7] **G11C** *7/00*

U.S. Cl. 365—202 **16 Claims**



1. A memory device comprising:

an array of word lines and complementary bit line pairs;

a number of memory cells that are each addressably coupled to a word line and a bit line of a complementary bit line pair;

a row decoder and a column decoder that are coupled to the array so as to select a memory cell;

a number of sense amplifiers, each coupled to a complementary bit line pair;

an equilibration voltage source; and

wherein each complementary bit line pair includes:

an equilibration circuit that is coupled to the bit lines of the complementary bit line pair,

a depletion mode transistor that couples the equilibration voltage source to the equilibration circuit; and

wherein a gate of the depletion mode transistor is coupled to receive a control signal from the column decoder that selectively applies a negative voltage to the depletion mode transistor to isolate the equilibration voltage source from the equilibration circuit.

SEMICONDUCTOR MEMORY DEVICE

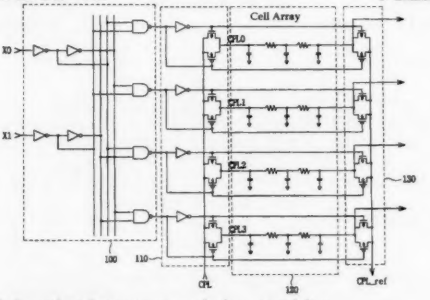
Seung Hyun Yi, Seoul, and Jae Whan Kim, Kyungki-Do, both of Rep. of Korea, assignors to Hyundai Electronics Industries Co., Ltd., Kyungki-do, Rep. of Korea

Filed Jun. 29, 1999, Appl. No. 342,105

Claims priority, application Rep. of Korea, Jun. 30, 1998, 98-25993

Int. Cl.[7] **G11C** *13/00*

U.S. Cl. 365—207 **6 Claims**



6. A semiconductor memory device comprising:

(A) a cell plate line driver circuit using a plurality of potentials to stabilize a potential of a cell plate line comprising:

a high voltage application section for applying a high voltage to said cell plate line;

an internal voltage application section for applying an internal voltage to said cell plate line;

a voltage comparison section for comparing a reference cell plate line potential and a potential of an internal voltage and for outputing to said each voltage application section; and

a control section for controlling the operation of said each section; and

(B) a decoder circuit comprising:

a selection section for selectively applying to a cell of which a word line is enabled a cell plate line voltage inputted from said cell plate line driver circuit; and

an output section for inputting a reference cell plate line voltage to a voltage comparison section of said cell plate line driver if said cell plate line voltage applied through said selection section is shifted to said reference cell plate line voltage through a cell array.

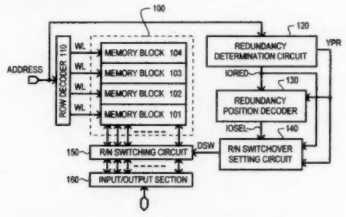
SEMICONDUCTOR MEMORY DEVICE

Tomohiro Tsuchiya, Tokyo, Japan, assignor to NEC Corporation, Tokyo, Japan

Filed Mar. 3, 1999, Appl. No. 261,701
Claims priority, application Japan, Mar. 4, 1998, 10-051933
Int. Cl.[7] G11C *13/00*
U.S. Cl. 365—210 **21 Claims**



1. A semiconductor memory device, comprising:

a plurality of normal cell arrays, each including a plurality of memory cells;

at least one redundancy cell array that includes a plurality of memory cells;

a plurality of memory blocks, each including a plurality of normal cell arrays and at least one redundancy cell array;

a redundancy determination circuit for storing redundancy selection information and defective position information, the redundancy selection information indicating if a normal cell array within a memory block is to be replaced by a redundancy cell array, the defective position information indicating a position of a normal cell array that is to be bypassed by using a redundancy cell array;

a switchover setting circuit having a plurality of setting circuits, each setting circuit having a first switching circuit disposed between a first terminal and an associated second terminal, the first terminal of selected setting circuits being coupled to the second terminal of an adjacent setting circuit, at least one of the first terminals being a lowest terminal that is coupled to a second logic level, and at least one of the second terminals being a highest terminal that is coupled to a redundancy selection information output terminal, the first switching circuit forming a conducting path or a non-conducting path between their first terminals and their associated second terminals in response to defective position information, the second terminals of the setting circuits providing switching signals; and

a switching circuit for selecting one of at least two bit lines according to the switching signals output from the of the switchover setting circuit and connecting the selected bit line to an input/output section.

6,041,007

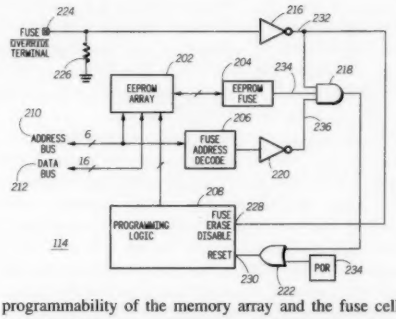
DEVICE WITH PROGRAMMABLE MEMORY AND METHOD OF PROGRAMMING

William Roeckner, Carpentersville, Ill., assignor to Motorola, Inc., Schaumburg, Ill.

Filed Feb. 2, 1998, Appl. No. 17,393
Int. Cl.[7] G11C *7/00*
U.S. Cl. 365—225.7 **23 Claims**

1. A device comprising:

a semiconductor die having a memory array with a fuse cell having an output terminal providing a fuse signal indicative of



programmability of the memory array and the fuse cell, the fuse signal having a programming-enable logical state and a programming-disable logical state;

a fuse override terminal for receiving a fuse override signal; and

programming logic operatively coupled to the memory array for enabling and disabling programming of the memory array and the fuse cell, wherein when the output terminal of the fuse cell provides the programming-enable logical state the programming logic enables erasing and writing data to the memory array and the fuse cell, when the output terminal of the fuse cell provides the programming-disable logical state the programming logic disables erasing and writing data to the memory array and the fuse cell, and when the output terminal of the fuse cell provides the programming-disable logical state, and the fuse override signal is applied to the fuse override terminal, the programming logic enables erasing and writing data to the memory array and the fuse cell.

1. A method for addressing a memory array having N rows of memory devices with different page sizes, the method comprising:

generating a memory address corresponding to one of the N rows of memory devices; and

selecting a device bank address corresponding to a device size and a device page size of the one of the N rows of memory devices.

6,041,017

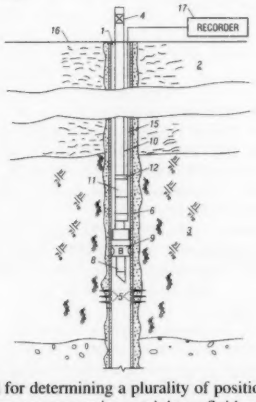
METHOD FOR PRODUCING IMAGES OF RESERVOIR BOUNDARIES

Fred L. Goldsberry, 3222 Candleknoll, Spring, Tex. 77388, assignor to Fred L. Goldsberry, Spring, Tex.

Provisional application No. 60/023,207, Aug. 5, 1996. This application Aug. 5, 1997, Appl. No. 906,671.

Int. Cl.[7] G01V *1/36*

U.S. Cl. 367—38 **26 Claims**



1. A method for determining a plurality of positions of a boundary of a subterranean reservoir containing a fluid under a pressure, comprising:

(a) obtaining over a time interval a pressure of the fluid in a well penetrating the reservoir;

(b) determining a slope of the pressure of the fluid as a function of time;

(c) detecting a plurality of times "t_i" corresponding to an abrupt change in the slope of the pressure as a function of time; and

(d) determining a plurality of ranges "d_i" of influence of the well as a function of the abrupt change.

6,041,018

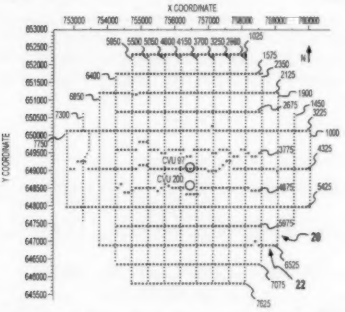
METHOD FOR CORRECTING AMPLITUDE AND PHASE DIFFERENCES BETWEEN TIME-LAPSE SEISMIC SURVEYS

Steven L. Roche, Sugarland, Tex., assignor to Colorado School of Mines, Golden, Colo.

Provisional application No. 60/065,222, Nov. 13, 1997. This application Nov. 13, 1998, Appl. No. 191,567.

Int. Cl.[7] G01V *1/28*

U.S. Cl. 367—46 **12 Claims**



1. A method for processing: (I) a first seismic image of a sub-surface volume of interest that has a first trace and was produced at a first time, and (ii) a second seismic image of substantially the same sub-surface volume that has a second trace and was produced at a second time that followed said first time by a span of time during which there was likely to be a change in the sub-surface volume of interest, to produce a time-lapse image of the sub-surface volume of interest with reduced noise, the first and second traces forming a common trace pair, the method comprising:

cross-correlating the common trace pair to produce a correlation wavelet;

processing said correlation wavelet to identify differences between the first seismic image and the second seismic image;

decomposing said differences into a plurality of composite differences; and

using at least one of said plurality of composite differences to reduce noise in a time lapse image.

6,041,019

FUSING CONTACT DATA FOR BEST-ESTIMATE SOLUTION

Neil A. Jackson, North Kingstown, R.I.; John T. Williamson, Kailua, Hi.; Francis J. Frantz, Fairfax, Va.; Patrick B. Ryll, Portsmouth, R.I., and Hyman A. Greenbaum, Westwood, Mass., assignors to The United States of America as represented by the Secretary of the Navy, Washington, D.C.

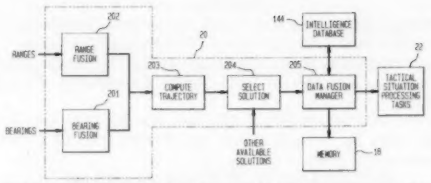
Filed Jul. 7, 1997, Appl. No. 896,527

Int. Cl.[7] G01S *3/80;15/00*

U.S. Cl. 367—124 **6 Claims**

1. A method of determining a best-estimate solution to a moving contact using a plurality of trackers, said method comprising the steps of:

providing bearing-to-contact data and range-to-contact data from each of said plurality of trackers;



applying an averaging function to said bearing-to-contact data to determine weighted-average bearing data and an associated standard deviation for each tracker of said plurality of trackers;

applying said averaging function to said range-to-contact data to determine weighted-average range data;

generating a computed solution to said moving contact using said weighted average bearing data from a best tracker and said weighted-average range data, said best tracker being the tracker having the lowest said associated standard deviation and wherein said computed solution includes heading and speed of said moving contact;

providing a plurality of independently generated solutions to said moving contact; and

determining a root mean square (RMS) error in terms of bearing for each of said computed solution and said plurality of independently generated solutions, wherein one of said computed solution and said plurality of independently generated solutions producing the lowest said RMS error is said best-estimate solution.

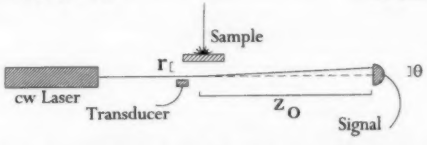
GAS-COUPLED LASER ACOUSTIC DETECTION

James N. Caron; James B. Mehl, and Karl V. Steiner, all of Newark, Del., assignors to University of Delaware, Newark, Del.

Filed Apr. 21, 1997, Appl. No. 840,968

Int. Cl.[7] H04R *14/00*

U.S. Cl. 367—149 **13 Claims**



1. A non-contacting method of detecting and measuring ultrasonic waves in solid materials comprising the following steps:

a) generating an ultrasonic wave in a solid material that is in contact with a gas so as to cause said solid material to generate an acoustic field in said gas;

b) passing a light beam through said gas and said acoustic field and in a direction which will cause said light beam to hit one or more sensors after said light beam has passed through said gas and said acoustic field without said light beam hitting any surface of said solid material, said acoustic field causing a deflection of said light beam as said light beam passes through said gas and said acoustic field; and

c) measuring the deflection of said light beam with said one or more sensors.

6,041,021

ELECTRONICALLY CONTROLLED MECHANICAL TIMEPIECE AND CONTROL METHOD THEREFOR

Osamu Shinkawa, Suwa, and Kunio Koike, Matsumoto, both of Japan, assignors to Seiko Epson Corporation, Tokyo, Japan

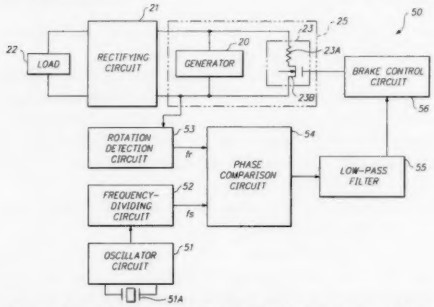
PCT No. PCT/JP98/04395, § 371 Date Jun. 24, 1999, § 102(e) Date Jun. 24, 1999, PCT Pub. No. WO99/17172, PCT Pub. Date Apr. 8, 1999

PCT Filed Sep. 30, 1998, Appl. No. 319,048

Claims priority, application Japan, Sep. 30, 1997, 9-265204

Int. Cl.[7] G04B *1/00;* **G04C** *3/00*

U.S. Cl. 368—64 **8 Claims**



1. An electronically controlled mechanical timepiece comprising:

a mechanical energy source;

a wheel train bridge;

a generator driven by said mechanical energy source and connected to said mechanical energy source by said wheel train bridge, said generator generating induced electric power for supplying electric energy;

a brake circuit that brakes said generator in response to a braking control signal;

pointers connected to said wheel train bridge;

and a rotation control circuit that controls said brake circuit to control the rotation cycle of said generator;

wherein said rotation control circuit comprises:

a rotation detection circuit that generates a rotation signal of said generator;

a target-signal generating circuit that generates a target signal corresponding to a target number of revolutions;

a phase-difference compensating circuit that detects a phase difference between said rotation signal output from said rotation detection circuit, and said target signal output from said target-signal generating circuit, and outputs a phase-difference compensation signal that is input to said brake circuit as said braking control signal.

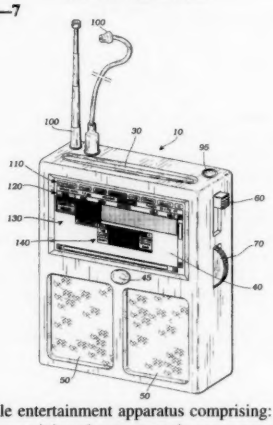
PORTABLE DIGITAL RADIO AND COMPACT DISK PLAYER

Cynthia Lakhansingh, 401 W. 47th St., Apt 12, New York, N.Y. 10036

Filed Mar. 29, 1999, Appl. No. 280,238

Int. Cl.[7] H04H *9/00*

U.S. Cl. 369—7 **7 Claims**



1. A portable entertainment apparatus comprising:

a means for receiving electromagnetic wave energy signals and for converting said signals into digital data signals;

a means for reading a compact disk;

a touch sense screen means for video information display and selection using menu graphics;

a means for producing an audio output;

a read and write means for digital data storage using a compact disk;

a data processing program, the data processing program stored in the digital data storage means;

a means for processing signals in accordance with the data processing program;

the energy signals receiving means, compact disk reading and writing means, touch sense means, audio output means, and data storage means interconnected with an electronic circuit enabled for receiving, storing, organizing and outputting audio and video information in accordance with manual selec-

tions through the touch sense video information display and selection means as guided by the data processing program;

a touch sense keyboard is enabled by the monitor for manual input of titles under which recorded material may be saved; and

a search capability is enabled for searching on single or multiple words or parts of words to retrieve said digital data without the necessity for recalling exact titles.

6,041,024

SIGNAL REPRODUCING APPARATUS UTILIZING DISPLACEMENT OF MAGNETIC WALL

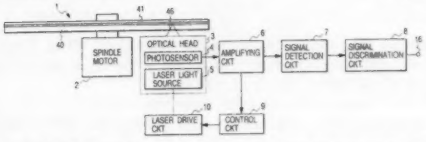
Kazuyoshi Ishii, Tokyo, Japan, assignor to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Sep. 16, 1997, Appl. No. 931,363

Claims priority, application Japan, Sep. 18, 1996, 8-246258

Int. Cl.[7] G11B *11/00*

U.S. Cl. 369—13 **12 Claims**



1. A signal reproducing apparatus for reproducing a micro mark by causing a magnetic wall to be displaced on a magnetic recording medium, said apparatus comprising:

heating means which applies a partial temperature distribution onto the medium and is adapted to move relative to the medium;

reproducing means which detects a magnetization direction on the medium and is adapted to move relative to the medium; and

means for controlling said heating means so as to form such a temperature distribution as to separate, with respect to time, an occurrence of a first magnetic wall displacement from the front side of a temperature peak position in the temperature distribution toward the temperature peak position and an occurrence of a second magnetic wall displacement from the backside of the temperature peak position toward the temperature peak position.

6,041,025

DATA DISK INCLUDING SUPPLEMENTARY INFORMATION ENABLING RETRIEVAL OF RELATED INFORMATION FROM ANOTHER STORAGE MEDIUM

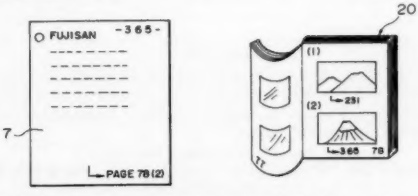
Norio Ohga, and Yoshitaka Ukita, both of Tokyo, Japan, assignors to Sony Corporation, Tokyo, Japan

Division of application No. 08/691,334, Aug. 2, 1996, Pat. No. 5,930,208. This application Aug. 6, 1997, Appl. No. 906,702.

Claims priority, application Japan, Aug. 9, 1995, 7-222753

Int. Cl.[7] G09B *3/00*

U.S. Cl. 369—30 **5 Claims**



1. An information reproduction system including an electronic storage medium and at least one paper storage medium, the information reproduction system including:

article data including character information and supplementary information recorded on the electronic storage medium, the supplementary information representing the location at which information related to said article data is recorded in the paper storage medium; and

index information for retrieving said article data.

6,041,026

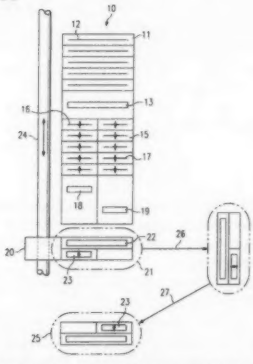
STORAGE AND RETRIEVAL LIBRARY WITH SIDE-BY-SIDE STORAGE CELLS

Jerry Walter Hammar; John Edward Kulakowski; Rodney Jerome Means, and Chi-Hung Dang, all of Tucson, Ariz., assignors to International Business Machines Corporation, Armonk, N.Y.

Division of application No. 08/852,302, May 7, 1997, Pat. No. 5,933,396. This application Feb. 25, 1999, Appl. No. 257,056.

Int. Cl.[7] G11B *17/22;15/68*

U.S. Cl. 369—36 **4 Claims**



1. A method for storing and retrieving multi-sized media, comprising large sized media and small sized media, in at least one column of storage cells, comprising full width storage cells and side-by-side storage cells, and by a media picker having a first gripper for accessing large sized media and a second gripper for accessing small sized media, and positionable in one orientation and in an opposed orientation, comprising the steps of:

storing said small sized media in one side of said column of side-by-side storage cells in a first orientation, said storage cells of said one side of said column having one type of address;

storing said small sized media in the other side of said column of side-by-side storage cells in a second orientation, said storage cells of said other side of said column having another type of address;

storing said large sized media in said full width storage cells, said full width storage cells having a third type of address;

determining that an address of a storage cell to be accessed is said third type of address, operating said media picker to position said first gripper for accessing said large sized media in said full width storage cells;

determining that an address of a storage cell to be accessed is said one type of address, operating said media picker to position said second gripper in said one orientation for accessing said small sized media in said one side of said column of side-by-side storage cells in said first orientation; and

determining that an address of a storage cell to be accessed is said another type of address, operating said media picker to position said second gripper in said opposed orientation for accessing said small sized media in said other side of said column of side-by-side storage cells in said second orientation.

OPTICAL PICKUP FOR USING DISKS EACH HAVING A DIFFERENT THICKNESS

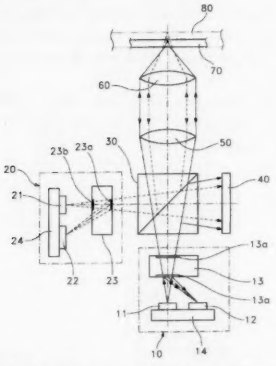
Jin-hwan Kim, and Min-ho Jang, both of Kyonggi-do, Rep. of Korea, assignors to Samsung Electronics Co., Ltd., Kyungki-do, Rep. of Korea

Filed Sep. 16, 1997, Appl. No. 931,288

Claims priority, application Rep. of Korea, Sep. 16, 1996, 96-40179

Int. Cl.[7] **G11B** *7/00;* **G02B** *5/32*

U.S. Cl. 369—44.24 **10 Claims**



1. An optical pickup for use with disks each having a different thickness, comprising:

first and second optical modules, said first and second optical modules comprising:

first and second light sources, respectively, for generating light each having a different wavelength;

first and second detecting means, respectively, for each receiving reflected light from said disks which each have a different thickness, said first and second detecting means for detecting electrical signals;

an objective lens for collecting light radiated from said first and second light sources and focusing said light on said disks each having a different thickness;

optical path control means for controlling an optical path so that the light radiated from said first and second light sources can be incident on said objective lens; and

means for adjusting a radiation angle of said first and second light sources using said first and second optical modules to restrict the effective numerical aperture of said objective lens.

DYNAMIC ADJUSTMENT OF DISK-DRIVE PICKUP SIGNALS

Thomas A. Quan, Mt. View, and John L. Grimsley, Los Altos, both of Calif., assignors to Oak Technology, Inc., Sunnyvale, Calif.

Provisional application No. 60/043,495, Apr. 11, 1997. This application Aug. 22, 1997, Appl. No. 917,582.

Int. Cl.[7] **G11B** *7/00*

U.S. Cl. 369—44.34 **20 Claims**

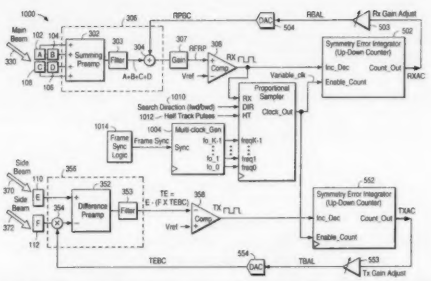
1. A circuit comprising:

a summing junction that receives a first signal;

a comparator for generating a second signal having a variable period based upon said first signal;

a first up-down counter whose count direction is controlled by said second signal, said first up-down counter generating a correction bias signal;

a proportional sampler providing a variable sampling strobe to said first up-down counter, said sampling strobe operable to adjust frequency of count operation in said first up-down counter based upon achieving a desired number of counts within approximately said variable period; and



a feedback loop for returning said correction bias signal to said summing junction.

DISC APPARATUS

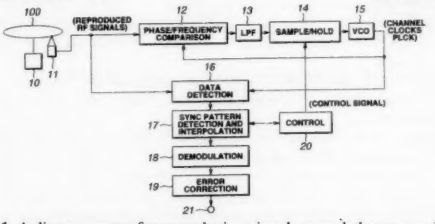
Michihiko Iida; Tetsuji Kawashima; Shoji Sato, all of Kanagawa, and Shozo Masuda, Tokyo, all of Japan, assignors to Sony Corporation, Tokyo, Japan

Filed Feb. 26, 1998, Appl. No. 32,500

Claims priority, application Japan, Feb. 28, 1997, P09-046671

Int. Cl.[7] **G11B** *7/00*

U.S. Cl. 369—50 **10 Claims**



1. A disc apparatus for reproducing signals recorded on a rewritable disc-shaped recording medium, comprising:

signal read-out means for reading out signals recorded on the disc-shaped recording medium;

clock signal generating means for generating clock signals based on a comparison error signal between the read-out signal and the generated clock signals;

synchronization signal detection means for detecting synchronization signals from the read-out signal;

control means for predicting the timing a signal read-out position of the signal read-out means reaches a low-reliability area at a specified position of the disc-shaped recording medium based on a recording format and for generating control signals directly before the predicted timing; and

clock signal holding means for holding the comparison error signal entering said clock signal generating means based on said control signals.

OPTICAL DISK RECORDING/REPRODUCING DEVICE WITH ECCENTRIC AND INCLINE CHUCK CONTROL

Takao Ohmi, Kamakura, Japan, assignor to Kabushiki Kaisha Toshiba, Kawasaki, Japan

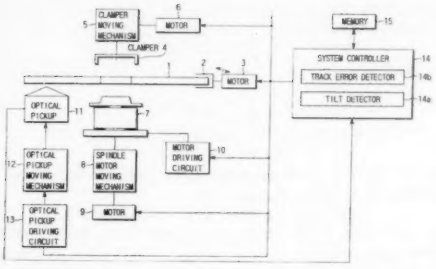
Filed Sep. 17, 1997, Appl. No. 932,123

Claims priority, application Japan, Sep. 18, 1996, 8-246429

Int. Cl.[7] **G11B** *7/00*

U.S. Cl. 369—54 **19 Claims**

1. An optical disk device which records information on or reproduces recording information from an optical disk by use of optical head while the optical disk is chucked on a disk rotating mechanism and rotated, said optical disk device comprising:



detecting means for detecting a tilt angle of the optical disk as it rotates;

determining means for determining whether the tilt angle detected by said detecting means is set within a permissible range; and

control means for re-executing the chucking operation on the optical disk when said determining means determines that the tilt angle exceeds the permissible range,

wherein, upon determining that the tilt angle exceeds the permissible range, said control means causes the optical disk to be released from the disk rotating mechanism, adjusts the disk rotating mechanism, and causes the optical disk to be re-chucked.

OPTICAL DISC RECORDING/REPRODUCTION APPARATUS AND METHOD

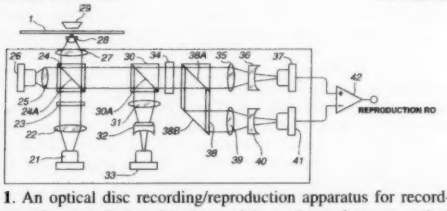
Isao Ichimura, Kanagawa; Fumisada Maeda; Kenji Yamamoto, both of Tokyo; Kiyoshi Ohsato, Chiba; Toshio Watanabe, and Akira Suzuki, both of Kanagawa, all of Japan, assignors to Sony Corporation, Japan

Filed Dec. 19, 1997, Appl. No. 994,455

Claims priority, application Japan, Dec. 20, 1996, P08-340904

Int. Cl.[7] G11B *7/00*

U.S. Cl. 369—112 **11 Claims**



1. An optical disc recording/reproduction apparatus for recording and/or reproducing data by applying a beam from an optical head unit through a substrate of an optical disc onto/from a recording layer of the optical disc, wherein said substrate of said optical disc has a thickness of 0.3 mm or below, and said optical head unit comprises:

an objective lens for converging an incident beam and emitting the beam toward said optical disc;

a forward lens for converging the beam introduced through said objective lens and applying the beam to said optical disc;

a lens holder in which said objective lens and said forward lens are fixed; and

an actuator for driving said objective lens and said forward lens as a unitary block and controlling at least focusing,

said objective lens and said forward lens having (1) a total numerical aperture of 0.8 or above, (2) a center position shift tolerance of ±80 μm, (3) a distance between the objective lens and the forward lens of 25 μm or less, and (4) inclination angles less than 0.4°.

6,041,032

DISK CHANGER WITH TRAYS MOVABLE BETWEEN RETAINING AND DRAWN-OUT POSITIONS

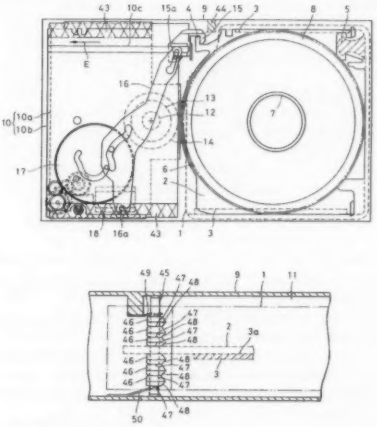
Nobuo Ishida; Jun Togashi; Tomomichi Kimura; Kiyoshi Morikawa; Yoshihumi Nakayama; Hiroshi Akiyama; Tatsuya Yanagisawa, and Takashi Ota, all of Kawagoe, Japan, assignors to Pioneer Electronic Corp., Japan

Filed Jun. 18, 1997, Appl. No. 877,805

Claims priority, application Japan, Jun. 19, 1996, 8-178549

Int. Cl.[7] G11B *17/26*

U.S. Cl. 369—191 **22 Claims**



1. A disk changer comprising:

a disk retaining means for retaining a plurality of trays in respective retaining positions, on each of which trays a disk can be loaded, in a manner that said trays can be drawn out from their respective retaining positions;

a guiding means which is disposed to correspond to said retaining positions, for guiding said trays in a process of drawing out said trays or a process of putting back said trays;

a tray moving means for drawing out a tray selected from said plurality of trays retained in said retaining means and for putting back said selected tray to said retaining position; and

a driving means for driving a disk moved by said selected tray drawn out by said tray moving means;

wherein said guiding means elastically holds said selected tray when said selected tray is being drawn out by said tray moving means and after said selected tray has been drawn out, and is operative to prevent other ones of said trays from being drawn out when said selected tray is being drawn out.

DISK HOLDING DEVICE

Kensei Otsubo, Kasuga, and Hideo Yamaguchi, Fukuoka, both of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Osaka, Japan

Filed Dec. 16, 1997, Appl. No. 991,539

Claims priority, application Japan, Dec. 18, 1996, 8-337895; Jul. 4, 1997, 9-179373

Int. Cl.[7] G11B *17/028*

U.S. Cl. 369—271 **41 Claims**

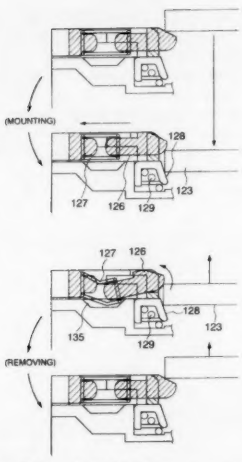
1. A disk holding device for holding a disk by being passed through a center hole portion of the disk, said device comprising:

a plurality of claw-like holding means for engaging with the center hole portion of the disk to hold the disk;

first urging means for urging said claw-like holding means in a radial direction of the disk;

center support means for receiving (i) said claw-like holding means such that said claw-like holding means are slidable in the radial direction of the disk and (ii) said first urging means;

disk alignment means having an alignment slanting portion for engaging with the center hole portion of the disk to align the



center of the disk, said disk alignment means being slidable relative to said center support means in a disk-loading and a disk-unloading direction;

second urging means for urging said disk alignment means in the disk-unloading direction; and

rotary disk means for supporting the disk thereon, wherein:

said disk alignment means and said center support means are arranged coaxially with respect to a rotation shaft of said rotary disk means.

6,041,034

SPREAD SPECTRUM COMMUNICATION SYSTEM

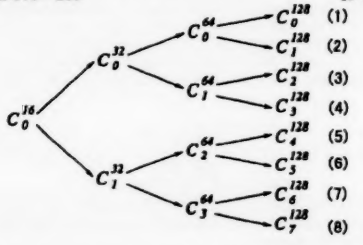
Hidenobu Fukumasa; Yasuyuki Oishi; Kazuo Nagatani, and Hajime Hamada, all of Kawasaki, Japan, assignors to Fujitsu Limited, Kanagawa, Japan

Filed Sep. 30, 1997, Appl. No. 940,479

Claims priority, application Japan, Dec. 20, 1996, 8-342235

Int. Cl.[7] **H04B** *7/216;7/212;1/38*

U.S. Cl. 370—203 **19 Claims**



1. A method for generating code division multiple access data from data having different rates by a direct spread spectrum, said method comprising the steps of:

combining an orthogonal code and a reversed orthogonal code obtained by inverting the orthogonal code, for each of orthogonal code sequence structured by an m-sequence thereby to generate a first sequence of orthogonal codes;

combining two of the orthogonal code for each of orthogonal code sequences structured by the m-sequence thereby to generate a second sequence of orthogonal codes;

combining two of the reversed orthogonal code for each of orthogonal code sequences structured by the m-sequence thereby to generate a third sequence of orthogonal codes; and

generating another orthogonal code having twice a code length of the orthogonal code from the first, second and third sequence of orthogonal codes; and

multiplying the generated orthogonal code and a different m-sequence, together.

6,041,035

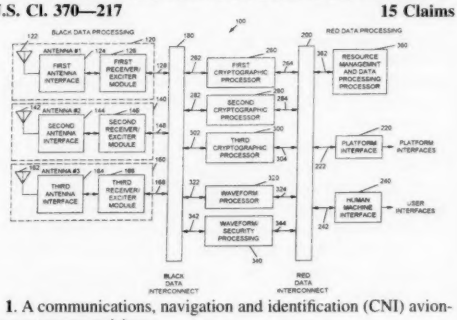
OPEN SYSTEM MODULAR ELECTRONICS ARCHITECTURE

John R. Thedens, Central City, Iowa, assignor to Rockwell Collins, Inc., Cedar Rapids, Iowa

Filed Jun. 30, 1997, Appl. No. 885,482

Int. Cl.[7] **G01R** *31/08;* **G06F** *11/00;* **G08C** *15/00;* **H01H** *67/00*

U.S. Cl. 370—217 **15 Claims**



1. A communications, navigation and identification (CNI) avionics system comprising:

a first integrated sensor performing a first CNI function;

a second integrated sensor performing a second CNI function, wherein the first CNI function has a priority higher than a priority of the second CNI function;

a first interconnect coupled to each of the first integrated sensor and the second integrated sensor, the first interconnect carrying signals to and from the first and second integrated sensors;

a plurality of system assets;

a second interconnect coupled to each of the plurality of system assets, the second interconnect carrying signals to and from the plurality of system assets;

a first communication thread coupling and carrying signals between the first integrated sensor and a corresponding one of the plurality of system assets, wherein the first communication thread includes the first interconnect, a first cryptographic processor and the second interconnect;

a second communication thread coupling and carrying signals between the second integrated sensor and a corresponding one of the plurality of system assets, wherein the second communication thread includes the first interconnect, a second cryptographic processor and the second interconnect; and

means for automatically reassigning the second cryptographic processor to the first communication thread if the first cryptographic processor malfunctions such that the first CNI function having a previously assigned higher priority than the second CNI function is still performed.

6,041,036

DUAL RECEIVE, DUAL TRANSMIT FAULT TOLERANT NETWORK ARRANGEMENT AND PACKET HANDLING METHOD

Young Sik Baek; Sang Man Lee, and Hun Kang, all of Daejoen, Rep. of Korea, assignors to Electronics and Telecommunications Research Institute, Daejeon, Rep. of Korea

Filed Dec. 12, 1997, Appl. No. 990,047

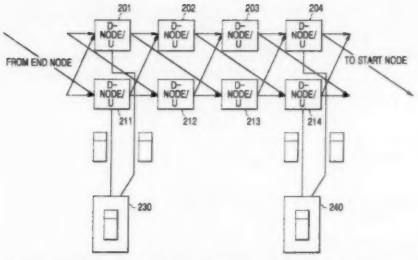
Claims priority, application Rep. of Korea, May 8, 1997, 97-17716

Int. Cl.[7] **H04J** *1/16;3/14;* **H04L** *1/00;12/26*

U.S. Cl. 370—222 **3 Claims**

1. A fault tolerant network arrangement using a dual cross path, for real-time switching, comprising:

multiple nodes constitutes a ring, each of which is composed of a upper-level dual receive/transmit node (D-node/U) and



lower-level dual receive/transmit node (D-node/L), each of the nodes having two input ports and two output ports,

wherein one of the output ports of the nth D-node/U is coupled to one of the input ports of the (n+1)th D-node/U, the other output port of the nth D-node/U is coupled to one of the input ports of the (n+2)th D-node/L, one of the output ports of the nth D-node/L is coupled to one of the input ports of the (n+1)th D-node/L, and the other input port of the nth D-node/L is coupled to the other input port of the (n+1)th D-node/U, each of the nodes receiving two packets, selecting one of them, abandoning the other one, duplicating the selected one, and transmitting the duplicated packets through the two output ports.

6,041,037

ATM VIRTUAL PATH SWITCHING NODE

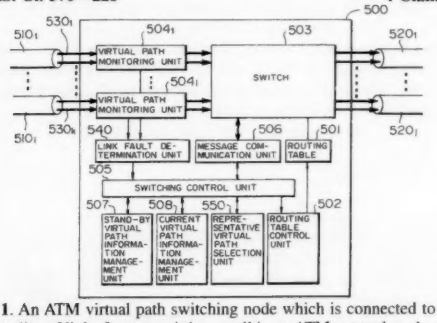
Makoto Nishio, and Hiromitsu Watanabe, both of Tokyo, Japan, assignors to NEC Corporation, Japan

Filed Aug. 18, 1997, Appl. No. 912,739

Claims priority, application Japan, Aug. 19, 1996, 8-217255

Int. Cl.[7] G01R *31/08;* **G06F** *11/00*

U.S. Cl. 370—228 **4 Claims**



1. An ATM virtual path switching node which is connected to a plurality of links for transmitting a cell in an ATM network and can switch a current virtual path set in each of said plurality of links in advance and used to provide a service to a stand-by virtual path set in advance for detour when a fault occurs in said ATM network, comprising:

a switch for switching said current virtual path and said stand-by virtual path;

a routing table which is referred to when said current virtual path and said stand-by virtual path are to be switched by said switch;

a routing table control unit for rewriting said routing table;

a virtual path monitoring unit for monitoring a fault in said current virtual path in units of links;

a link fault determination unit for, upon being notified of a faulty current virtual path by said virtual path monitoring unit, comparing the number of faulty current virtual paths notified in units of links with a predetermined threshold value, said link fault determination unit determining, when the number of faulty current virtual paths is equal to or larger than the threshold value, that a fault has occurred in said link, and determining, when the number of faulty current virtual paths is smaller than the threshold value, that a fault has occurred in said current virtual path notified from said virtual path monitoring unit;

a current virtual path information management unit for managing correspondence between said current virtual path having, as one switching terminal, a self ATM virtual path switching node and said plurality of links in said ATM network;

a stand-by virtual path information management unit for managing correspondence between said current virtual path and said stand-by virtual path;

a message communication unit for transmitting/receiving a fault notification signal representing the fault in said current virtual path, a fault notification signal representing the fault in said link, and a switching control signal for designating switching from said current virtual path to said stand-by virtual path to/from another ATM virtual path switching node via said link; and

a switching control unit connected to said link fault determination unit, said current virtual path information management unit, said stand-by virtual path information management unit, said routing table control unit, and said message communication unit to control switching from said current virtual path to said stand-by virtual path.

PACKET SWITCHING DEVICE AND CELL TRANSFER CONTROL METHOD

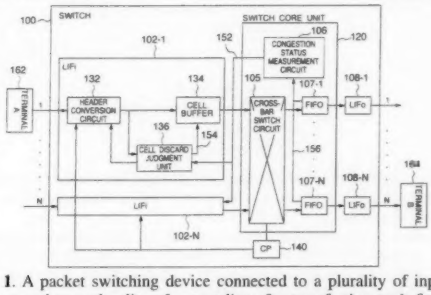
Takeshi Aimoto, Sagamihara, Japan, assignor to Hitachi, Ltd., Tokyo, Japan

Filed Jan. 27, 1997, Appl. No. 788,416

Claims priority, application Japan, Jan. 29, 1996, 8-012514

Int. Cl.[7] G01R *31/08*

U.S. Cl. 370—229 **17 Claims**



1. A packet switching device connected to a plurality of input lines and to a plurality of output lines for transferring each fixed length packet, or cell inputted from each input line to any output line determined by cell header information, comprising:

switch means having a plurality of input ports and a plurality of output ports for transferring a cell inputted from each input port to any output port determined by cell header information;

plural input line interfaces, each connected between one of said input ports and an input line;

plural output line interfaces, each connected between one of said output ports and an output line;

a call control unit connected to said switch means and each of said input line interfaces for transmitting and receiving a call control cell, respectively, to and from said switch means, and for transmitting control information including header rewrite information to each of said input interfaces; and

congestion monitor means for detecting a congestion status of output cells on each of said output ports and notifying each of said input line interfaces of a detected congestion status as congestion status information,

wherein said call control unit includes:

means, operative when setting up a connection belonging to a particular traffic class which does not make bandwidth reservation, for notifying said input line interface connected to a connection setup requester terminal of identification information on said connection and control information including traffic class information from a control message

from said calling unit and sub-class information indicating a priority related to cell discarding, and

each of said input line interfaces includes cell discard control means for selectively discarding user cells belonging to said particular traffic class received from each input line after the connection is set up, in conformity with a predetermined discard condition determined by a congestion status at a destination output port of said user cell revealed from said congestion status information and the priority related to cell discard notified from said call control unit.

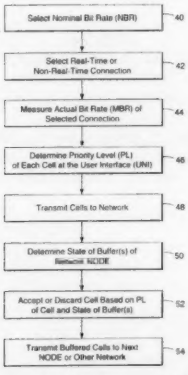
SYSTEM AND METHOD FOR DETERMINING NETWORK BANDWIDTH AVAILABILITY USING PRIORITY LEVEL FEEDBACK

Matti Kalevi Kilkki, Espoo, and Jussi Pekka Olavi Ruutu, Helsinki, both of Finland, assignors to Nokia Telecommunications, OY, Espoo, Finland

Filed Mar. 20, 1997, Appl. No. 821,222

Int. Cl.[7] **G06F** *11/00;* **H04L** *12/56*

U.S. Cl. 370—230 **19 Claims**



Select Nominal Bit Rate (NBR)
40
Select Real-Time or Non-Real-Time Connection
42
Measure Actual Bit Rate (MBR) of Selected Connection
44
Determine Priority Level (PL) of Each Cell at the User Interface (UNI)
46
Transmit Cells to Network
48
Determine State of Buffer(s) of Network NODE
50
Accept or Discard Cell Based on PL of Cell and State of Buffer(s)
52
Transmit Buffered Cells to Next NODE or Other Network
54

1. A method of acquiring load information for a network connection defined between a source unit and a destination unit, comprising:

determining a threshold priority level for each network node defined along the network connection, the threshold priority level being used when accepting or discarding information elements received by each node;

computing a worst-case threshold priority level using the threshold priority levels determined for the nodes;

transmitting a status cell along the network connection:

maintaining a record of the worst-case threshold priority level by storing in the status cell information indicative of the worst-case threshold priority level; and

providing the worst-case threshold priority level to the source unit.

LARGE-SCALE SERVICE-RATE REGULATORS FOR ATM SWITCHING

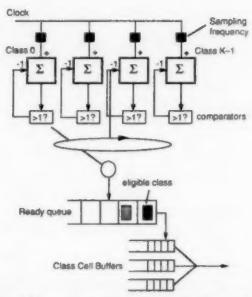
Maged E. Beshai, Stittsville, and Stacy W. Nichols, Kanata, both of Canada, assignors to Nortel Networks Corporation, Montreal, Canada

Filed Apr. 7, 1997, Appl. No. 827,882

Int. Cl.[7] **G01R** *31/08;* **G06F** *11/00;* **H04J** *3/16;3/22*

U.S. Cl. 370—232 **19 Claims**

1. In an ATM network, a method of regulating telecommunications traffic that is classified in two or more classes of connections by service rates in which class cell buffers are sampled for transmission downstream comprising steps of:



counting cyclic time in units of cell transfer period, the cyclic time being expressed in a k-bit word and the counting cycle of length 2^k cell periods being longer than the sampling interval of any class;

initializing class accumulators by sampling intervals for the classes, each sampling interval being expressed as an m-bit word, m being larger than k, the most-significant k bits of 854 m bits representing an integer multiple of a cell period and the remaining (m−k) bits representing a fraction of a cell period;

declaring a class eligible for service when the value of the most-significant k bits of its accumulator equals the cyclic time

adding class' sampling interval to the content of the class accumulator when a class is declared eligible for service; and

performing the above steps in parallel for all classes so that each class may be declared eligible for service independently from other classes.

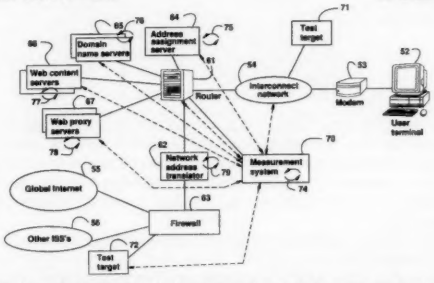
METHOD AND SYSTEM FOR MANAGING DATA SERVICE SYSTEMS

Srinivas Ramanathan, 655 S. Farioaks Ave., Sunnyvale, Calif. 94086; Edward H. Perry, 484 Franklin St., Mountain View, Calif. 94041, and Tai Jin, 1900 Parkwood Dr., San Mateo, Calif. 94403

Filed Apr. 15, 1997, Appl. No. 838,117

Int. Cl.[7] **H04J** *3/14*

U.S. Cl. 370—241 **30 Claims**



1. A method of determining status of a module among a plurality of modules of a data service system, the method comprising:

(A) collecting measurements from at least one measurement route that involves the module;

(B) analyzing interdependencies of the measurements to determine the status of the module, wherein the step (B) further comprises

(I) determining the status of the module if only one measurement route involves the module;

(II) if two or more measurement routes involve the module, then correlating the measurements based on their interdependencies.

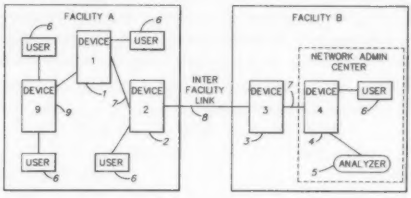
REMOTE PORT MIRRORING SYSTEM AND METHOD THEREOF

Richard Bussiere, Manchester, N.H., assignor to Cabletron Systems, Inc., Rochester, N.H.

Filed May 27, 1997, Appl. No. 863,806
Int. Cl.[7] H04J *3/14;* **H04L** *12/56*
U.S. Cl. 370—245 **17 Claims**



1. A method of remote monitoring of a device port in a connectionless communications network having a plurality of IEEE 802 compliant devices coupled together, the method comprising steps of:

selecting a first port of a first device to be monitored and from which to mirror MAC frame packets;

selecting a second port of the first device to which to mirror the MAC frame packets;

selecting a first port of a second device remotely located from the first device and connected to said connectionless communications network, said first and second devices being IEEE 802 compliant devices;

selecting a second port of the second device and connecting an analyzer to the second port of the second device;

mirroring the MAC frame packets from the first port of the first device to the second port of the first device;

encapsulating the MAC frame packets of the first port of the first device by appending an IEEE 802 MAC header including an address of the second port of the second device;

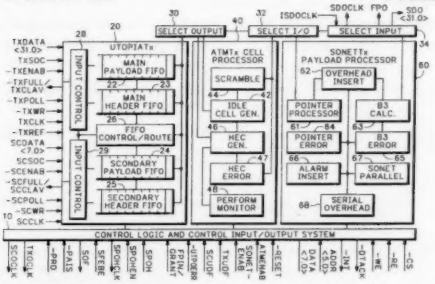
sending the encapsulated MAC frame packets through the connectionless communications network to a remote location of the second device; and

monitoring the first port of the first device by the MAC frame packets received at the second port of the second device by employing said analyzer.

6,041,043
SONET PATH/ATM PHYSICAL LAYER TRANSMIT/RECEIVE PROCESSOR

Claude Denton, Portland; Donald C. Kirkpatrick, and Samuel J. Peters, both of Beaverton, all of Oreg., assignors to Tektronix, Inc., Wilsonville, Oreg.

Filed Oct. 25, 1996, Appl. No. 736,074
Int. Cl.[7] H04L *12/56*
U.S. Cl. 370—254 **4 Claims**



4. A SONET path/ATM physical layer transmit/receive processor comprising:

an interface having a first side for coupling to a source/destination of data in 32-bit and 8-bit formats and a second side;

an ATM cell processor for processing ATM physical layer data having a first side and a second side;

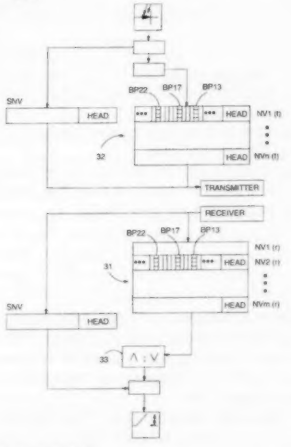
a SONET payload processor for processing SONET frame data having a first side and a second side; and

a plurality of selectors coupled in series so that an output from one is an input to the next one in the series with the first in series also being coupled between the second side of the interface and the first side of the ATM cell processor, the next in series also being coupled between the second side of the ATM cell processor and the first side of the SONET payload processor, and the next again in series also being coupled between the second side of the SONET payload processor and a transmission medium so as to configure a data path between the source/destination and the transmission medium through or around the ATM cell processor and/or the SONET payload processor according to input commands.

6,041,044
CONTROL NETWORK AND CONFIGURATION METHOD THEREFOR

Jörg O. Seiffert, Aidlingen, Germany, and Daniel F. Widmer, Langnau, Switzerland, assignors to International Business Machines Corporation, Armonk, N.Y.

PCT No. PCT/EP95/00191, § 371 Date Jul. 17, 1997, § 102(e) Date Jul. 17, 1997, PCT Pub. No. WO96/22644, PCT Pub. Date Jul. 25, 1996
PCT Filed Jan. 19, 1995, Appl. No. 875,817
Int. Cl.[7] H04J *1/16*
U.S. Cl. 370—254 **7 Claims**



1. Apparatus comprising:

a modem which exchanges data over a transmission medium;

a sensor element;

a configurable converter operatively interconnecting said modem and said sensor element and converting output of said sensor element into digital data which indicates whether a value measured by said sensor element satisfies a condition or not and which in to be transmitted via said transmission medium by said modem; and =p1 a memory which stores externally provided configuration data for use by said configurable converter in performing the conversion, the configuration data being derived from externally provided control condition data referring to said sensor element.

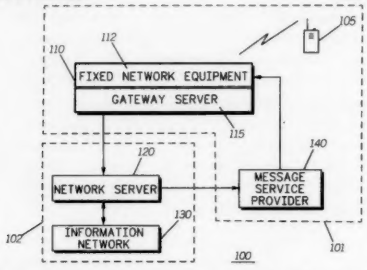
METHOD FOR ACCESSING AN INFORMATION NETWORK FROM A RADIO COMMUNICATION SYSTEM

Steven S. Alterman, Davie; Mauricio E. Sanchez, Pembroke Pines, and Audrey Longhurst, Weston, all of Fla., assignors to Motorola, Inc., Schaumburg, Ill.

Filed Feb. 3, 1997, Appl. No. 794,560
Int. Cl.[7] H04L *12/46*
U.S. Cl. 370—313 **18 Claims**



1. In a radio communication system, a method for accessing an information network comprising the steps of:

providing gateway equipment with an interface to an external server having access to the information network;

at a two-way radio device operating within the radio communication system:

processing a request for data from the information network;

obtaining a request code identifying data for retrieval from the information network;

transmitting the request code on a wireless communication channel;

at the gateway equipment:

receiving the request code on the wireless communication channel;

determining that the request code corresponds to the information network;

transmitting a request message to the external server, which request message is derived in part from request code and which includes an identifier for the two-way radio device;

at the external server:

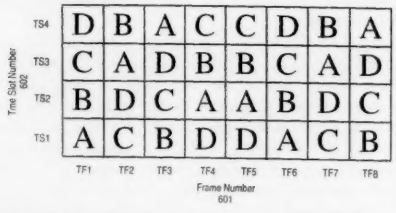
retrieving data from the information network corresponding to the request message; and

communicating the data retrieved to the two-way radio device using the identifier using a service that provides one-way access to the two-way radio device.

6,041,046
CYCLIC TIME HOPPING IN TIME DIVISION MULTIPLE ACCESS COMMUNICATION SYSTEM

Logan Scott, Breckenridge, and Claude M. Williams, Colorado Springs, both of Colo., assignors to Omnipoint Corporation, Colorado Springs, Colo.

Filed Jul. 14, 1995, Appl. No. 502,514
Int. Cl.[7] H04J *3/16*
U.S. Cl. 370—319 **17 Claims**



1. A method for communicating comprising the steps of:

generating a plurality of continuous time frames, dividing each of said time frames into a plurality of time slots;

generating, using a root pattern based algorithm, a random pattern; and

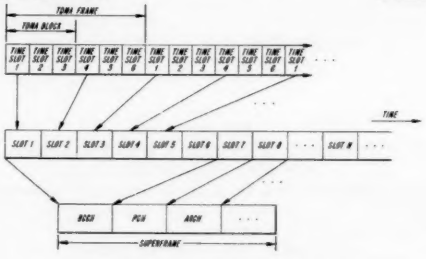
transmitting, from a user station to a base station, in a selected time slot of said plurality of time slots in said each time frame according to said random pattern;

wherein said random pattern is generated by a modulo-n operation on said root pattern and an initial time slot assignment whereby another user station cannot occupy said selected time slot simultaneously in any given time frame within a cellular region.

6,041,047
DIGITAL CONTROL CHANNELS HAVING LOGICAL CHANNELS SUPPORTING BROADCAST SMS

John W. Diachina, Garner, N.C.; Bengt Persson, Djursholm, Sweden; Alex K. Raith, Durham, and Anthony J. Sammarco, Garner, both of N.C., assignors to Telefonaktiebolaget LM Ericsson, Stockholm, Sweden

Continuation-in-part of application No. 08/147,254, Nov. 1, 1993, Pat. No. 5,603,081, and a continuation-in-part of application No. 07/956,640, Oct. 5, 1992, Pat. No. 5,404,355, and a continuation of application No. 08/482,754, Jun. 7, 1995, Pat. No. 5,768,276, which is a continuation-in-part of application No. 08/331,703, Oct. 31, 1994, Pat. No. 5,604,744. This application May 11, 1998, Appl. No. 75,203.
Int. Cl.[7] H04B *7/212*
U.S. Cl. 370—347 **8 Claims**



1. A method of transmitting information in a radiocommunication system comprising the steps of:

grouping the information into a plurality of successive time slots on a radio carrier signal, wherein the information includes special messages;

grouping the time slots into a plurality of successive superframes;

designating one or more time slots of each of the successive superframes as a logical special message channel;

grouping the one or more time slots of the logical special message channel into a plurality of successive special messaging superframes;

grouping said special messages as a plurality of logical subchannels, wherein each sub-channel comprises at least a portion of one or more superframes of said plurality of special messaging superframes;

selectively ordering said sub-channels; and

transmitting said sub-channels in said selected order over said logical special message channel.

6,041,048

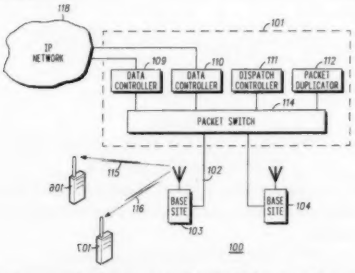
METHOD FOR PROVIDING INFORMATION PACKETS FROM A PACKET SWITCHING NETWORK TO A BASE SITE AND CORRESPONDING COMMUNICATION SYSTEM

Paul M. Erickson, Palatine, and Timothy J. Spets, Algonquin, both of Ill., assignors to Motorola, Inc., Schaumburg, Ill.

Filed Jun. 12, 1998, Appl. No. 96,635

Int. Cl.[7] **H04J** *3/24;* **H04Q** *7/00*

U.S. Cl. 370—349 **16 Claims**



1. In a communication system that includes a packet switching network and a base site, the packet switching network supporting a plurality of communication services, a method for providing information packets associated with a first communication service and information packets associated with a second communication service to the base site, the method comprising the steps of:

providing a communication link between the packet switching network and the base site, wherein the communication link has a bandwidth that is substantially equal to an aggregate bandwidth of radio communication resources supported by the base site;

determining at least one attribute of the first communication service and at least one characteristic of the second communication service;

determining that a first attribute of the first communication service is more critical than the at least one characteristic of the second communication service;

modifying the at least one characteristic of the second communication service based on the first attribute of the first communication service to produce at least one modified characteristic;

conveying, via the communication link, the information packets associated with the first communication service and the information packets associated with the second communication service to the base site based on the first attribute of the first communication service;

wherein the first communication service comprises voice service and wherein the first attribute of the first communication service comprises tolerance to time delay variability;

wherein the second communication service comprises packet data and wherein the at least one characteristic of the second communication service comprises packet size and packet rate;

wherein the information packets associated with the second communication service comprise a group of data packets and wherein the step of modifying comprises the steps of:

dividing each data packet of the group of data packets into a respective plurality of data blocks; and

delaying at least one data block of the respective plurality of data blocks to thereby reduce the packet rate.

6,041,049

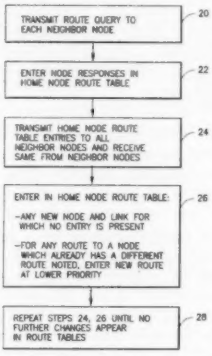
METHOD AND APPARATUS FOR DETERMINING A ROUTING TABLE FOR EACH NODE IN A DISTRIBUTED NODAL SYSTEM

James T. Brady, San Jose, Calif., assignor to International Business Machines Corporation, Armonk, N.Y.

Filed May 6, 1997, Appl. No. 852,019

Int. Cl.[7] **H04J** *1/16*

U.S. Cl. 370—351 **7 Claims**



TRANSMIT ROUTE QUERY TO EACH NEIGHBOR NODE
20
ENTER NODE RESPONSES IN HOME NODE ROUTE TABLE
22
TRANSMIT HOME NODE ROUTE TABLE ENTRIES TO ALL NEIGHBOR NODES AND RECEIVE SAME FROM NEIGHBOR NODES
24
ENTER IN HOME NODE ROUTE TABLE:
-ANY NEW NODE AND LINK FOR WHICH NO ENTRY IS PRESENT
-FOR ANY ROUTE TO A NODE WHICH ALREADY HAS A DIFFERENT ROUTE NOTED, ENTER NEW ROUTE AT LOWER PRIORITY
26
REPEAT STEPS 24, 26 UNTIL NO FURTHER CHANGES APPEAR IN ROUTE TABLES
28

1. A method for enabling each node in a multi-nodal system to construct a route table to all other nodes in the multi-nodal system, each node being either a home node or a neighbor node which is positioned one link away from a home node, each home node performing the method comprising the steps of:

a) transmitting a query to all immediate neighbor nodes, said query inquiring into an identity of each said neighbor node;

b) recording in a route table, responses received from each said neighbor node, each said response identifying a neighbor node at a terminus of a link;

c) transferring to each said neighbor node, route table entries from the home node's route table and receiving route table entries from each said neighbor node; and

d) for each route entry to a destination node indicated by a route table entry received from a said neighbor node:

1) ignoring said each route entry to said destination node if an identical link route is already present that corresponds to said destination node in the route table of the home node;

2) entering a new route entry to said neighbor node if a route to said destination node is not present in the route table of the home node, and

3) if said each route entry to said destination node indicates a route to a node for which there is already a different route entry in the route table of the home node, placing a further route entry to said neighbor node in the table of said home node as a lesser priority route to said destination node.

CELL SELECTOR METHOD AND APPARATUS FOR USE IN TIME DIVISION MULTIPLEXERS AND SWITCHES

Ray W. Sanders, Los Angles, Calif., assignor to Circuit Path Network Systems Corporation, Los Angeles, Calif.

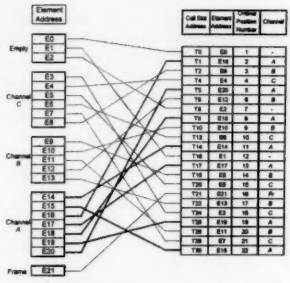
Continuation of application No. 08/606,391, Feb. 23, 1996, abandoned, which is a continuation of application No. 08/538,839, Oct. 4, 1995, Pat. No. 5,502,723, which is a continuation of application No. 08/239,204, May 6, 1994, abandoned. This application Jan. 9, 1997, Appl. No. 783,217.

Int. Cl.[7] **H04J** *3/24*

U.S. Cl. 370—352 **9 Claims**

1. A method for allocating cell slots comprising a frame to one or more channels of a transmission medium, the number of cell slots F comprising the frame being equal to any integer number, said method comprising the steps of:

arbitrarily assigning disjoint subsets of a contiguous range of F element addresses to each of the one or more channels, each



of the subsets comprising a number of the F element addresses equal to the number of the cell slots to be allocated to the channel to which the subset is assigned; and

transforming each of the range of F contiguous element addresses into one of F unique cell slot addresses on a one-to-one basis, wherein each of the F cell slot addresses connotes a relative cell slot position for one of the F cell slots within the frame, and whereby the cell slot addresses derived from said transformation of the element addresses of each assigned subset connote the relative position of cell slots allocated to the channel to which each subset is assigned.

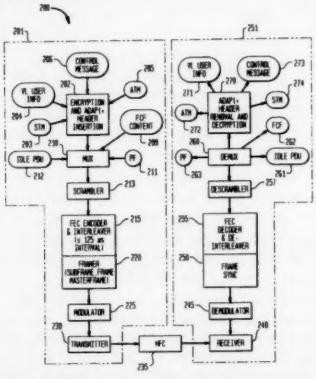
METHOD AND APPARATUS ENABLING MULTIPLE ACCESS FOR MULTIPLE SERVICES AND MULTIPLE TRANSMISSION MODES OVER A BROADBAND COMMUNICATION NETWORK UTILIZING AN ADAPTIVE DIGITAL ACCESS PROTOCOL

Bharat Tarachand Doshi, Holmdel; Subrahmanyam Dravida, Freehold; George John Kustka, Marlboro; Peter D. Magill, Freehold, all of N.J.; Curtis A. Siller, Andover, Mass., and Kotikalapudi Sriram, Marlboro, N.J., assignors to Lucent Technologies, Inc., Murray Hill, N.J.

Provisional application No. 60/019,776, Jun. 14, 1996. This application Apr. 3, 1997, Appl. No. 832,255.

Int. Cl.[7] **H04L** *12/66*

U.S. Cl. 370—352 **44 Claims**



1. A method for transmission of synchronous transfer mode (STM) payloads, asynchronous transfer mode (ATM) payloads, and asynchronous variable length (VL) payloads over a bi-directional broadband communications network having a source and a destination, said method comprising the steps of:

dividing said transmission into a series of successive time subframes;

partitioning each of said time subframes into at least a first region, a second region, and a third region;

demarcating a first boundary between said first region and said second region;

demarcating a second boundary between said second region and said third region;

allocating at least one time slot within said first region for transmission of said STM payloads whenever said STM payloads are queued at said source for transmission to said destination;

designating said second region for transmission of said ATM payloads, wherein an individual ATM cell of said ATM payload is allowed to cross successive second region boundaries; and designating said third region for transmission of said asynchronous VL payloads;

wherein an individual VL data unit of said VL payload is allowed to cross successive third region boundaries.

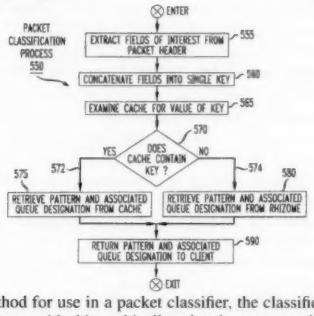
TECHNIQUE FOR EFFICIENTLY CLASSIFYING PACKETS USING A TRIE-INDEXED HIERARCHY FOREST THAT ACCOMMODATES WILDCARDS

John R. Douceur, Bellevue; Ofer Bar, Newcastle, and Yoram Bernet, Seattle, all of Wash., assignors to Microsfot Corporation, Redmond, Wash.

Filed Sep. 18, 1997, Appl. No. 933,476

Int. Cl.[7] **H04L** *12/28;* **G06F** *17/30;15/16*

U.S. Cl. 370—389 **53 Claims**



1. A method for use in a packet classifier, the classifier having a data structure with hierarchically-related pattern values stored therein, said pattern values having wildcards therein; wherein the data structure has a search trie and a hierarchy forest, the search trie being formed of a plurality of branch nodes organized into a binary search trie extending from a root node therein to said hierarchy forest, the hierarchy forest having a plurality of pattern nodes, each having a different corresponding one of the pattern values associated therewith, and at least one hierarchy of pattern nodes with associated pattern values of increasing generality; the method comprising the steps of:

forming a key in response to information contained in a portion of the packet;

traversing along a path through the search trie in order to reach one of the pattern nodes in said hierarchy forest, the path being defined by the key and pivot bit values associated with ones of said branch nodes;

determining whether the key either matches or is subsumed by a pattern value stored in said one pattern node or in a different one of pattern nodes situated at an increasingly higher level of a hierarchy containing said one pattern node, so as to locate a desired one of the pattern values, stored in the hierarchy, that either identically matches or most specifically subsumes the key; and

if the key identically matches or is subsumed by the desired one pattern value:

accessing a stored classification associated with said desired one pattern value; and

returning the stored classification for the packet.

This patent is subject to a terminal disclaimer.
Int. Cl.[7] H04J *3/24*
U.S. Cl. 370—395 **8 Claims**

1. A communication system for transporting compressed digital video data between a plurality of video information providers VIPs and video information users VIUs comprising:

a first hub receiving a first ATM cell stream carrying compressed broadcast digital video from the video information providers, the first hub comprising:

(1) a first transport multiplexer that receives the first ATM cell stream, and repackets selected ATM cells from said received first ATM cell stream into MPEG format data units assigned PID values based on the VPI/VCI value of the selected ATM cells, the first transport multiplexer outputting a first broadband data stream of the MPEG format data units carrying the compressed broadcast digital video and a first narrowband data stream,

(2) a quadrature amplitude modulation QAM modulator for modulating the first broadband data stream into at least one Intermediate Frequency analog IF channel having a prescribed bandwidth,

(3) an RF upconverter upconverting the IF analog channel and outputting the upconverted IF analog channel as an RF channel,

(4) a QPSK modulator configured for modulating the first narrowband data stream into first modulated narrowband data signals, and

(5) an RF combiner combining the RF channel carrying the first broadband data stream and the first modulated narrowband data signals into a first combined RF signal, the RF combiner outputting the first combined RF signal onto an optical fiber;

an ATM backbone carrying a second ATM cell stream carrying compressed interactive digital video from the video information providers;

a second hub receiving the second ATM cell stream from the ATM backbone and the first combined RF signal, the second hub comprising:

(1) a second transport multiplexer that receives the second ATM cell stream, and repackets selected ATM cells from said received second ATM cell stream into MPEG format data units having assigned PID values based on the VPI/VCI value of the selected ATM cells, the second transport multiplexer outputting a second broadband data stream of the MPEG format data units carrying the compressed interactive digital video and a second narrowband data stream,

(2) a second quadrature amplitude modulation QAM modulator for modulating the second broadband data stream into at least one secondary Intermediate Frequency IF analog channel having a second prescribed bandwidth,

(3) a second RF upconverter upconverting the secondary IF analog channel and outputting the upconverted secondary IF analog channel as a second RF channel, and

(4) a second QPSK modulator configured for modulating the second narrowband data stream into second modulated narrowband data signals; and

a hybrid fiber coaxial transmission network coupled to the second hub and supplying the first combined RF signal, the second RF channel, and second modulated narrowband data signals to the VIUs.

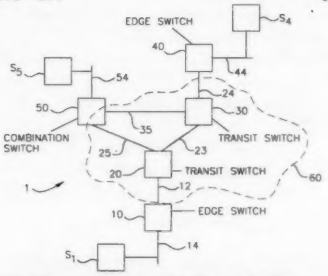
SELF-CONFIGURING ATM NETWORK

Geoffrey C. Stone, Malibu, Calif., assignor to Xylan Corporation, Calabasas, Calif.

Filed Mar. 24, 1997, Appl. No. 823,078
Int. Cl.[7] H04L *12/28*
U.S. Cl. 370—397 **30 Claims**



1. A method for sharing topology information in a self-configuring ATM network, comprising:

interconnecting n switches, where n is an integer greater than two;

on a first of said n switches, receiving a first set of topology messages from a set of neighboring switches, said first set of topology messages encoded with related pairs of switch identifiers and path cost information for particular ones of said n switches;

on said first switch, after receiving said first set of topology messages, generating and forwarding a second set of topology messages to said set of neighboring switches, said second set of topology messages encoded with related pairs of switch identifiers, VLAN information and path cost information for particular ones of said n switches, including at least related pairs of switch identifiers and path cost information for said first switch and said particular ones of said n switches included in said first set of topology messages.

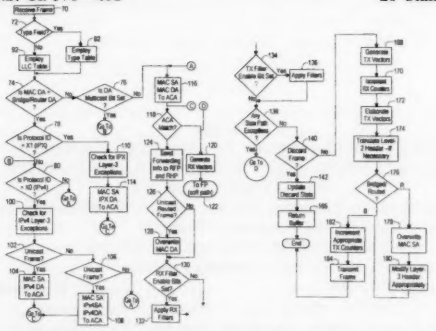
HARDWARE FILTERING METHOD AND APPARATUS

John A. Flanders, Ashland; David C. Ready, Westwood; Steven Van Seters, Stow; Leonard Schwartz, Bedford, and William D. Townsend, Groton, all of Mass., assignors to 3Com Corporation, Santa Clara, Calif.

Filed Sep. 11, 1997, Appl. No. 928,882
Int. Cl.[7] H04J *3/02;3/24*
U.S. Cl. 370—401 **20 Claims**



1. Apparatus for facilitating processing of a data unit in a bridge/router device, comprising:

at least one input port operative to receive the data unit;

a received frame circuit operative to determine whether a source address in the header of the data unit matches at least one address in a cache, and further operative to determine whether

a destination address in the header of the data unit matches at least one address in the cache, and to provide a first indication in the event that the source address matches at least one address in the cache and the destination address matches at least one address in the cache, and to otherwise provide a second indication;

at least one filter logic circuit, operative to examine, responsive to the first indication, a header portion of the data unit to determine whether the data unit is in a first predetermined category and to filter the data unit if the data unit is determined to be in the first predetermined category, the at least one filter logic circuit including at least one filter logic circuit selected from the group consisting of a Protocol Type filter, a Port Group filter, a Media Access Control Address Group filter, a non-unicast traffic filter and a Combination filter; and

a microprocessor, operative to execute, responsive to the second indication, software that determines whether the data unit is in a second predetermined category and that filters the data unit if the data unit is determined to be in a second predetermined category.

6,041,059

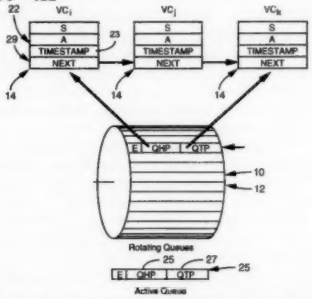
TIME-WHEEL ATM CELL SCHEDULING

Alexander Joffe, Palo Alto, and Ari Birger, Sunnyvale, both of Calif., assignors to MMC Networks, Inc., Sunnyvale, Calif.

Filed Apr. 25, 1997, Appl. No. 845,710

Int. Cl.[7] **H04L** *12/28;12/56*

U.S. Cl. 370—412 **11 Claims**



1. A method of operating a cell scheduler for asynchronous time mode transfer of virtual channel entries at predetermined cell transmission time intervals, the cell scheduler comprising a plurality of queues of a first type, at least one queue of a second type, and means for transferring virtual channel entries among the first and the second queue, the method comprising at each interval:

iteratively selecting one of the queues of the first type;

if the selected queue has at least one entry, transferring all entries of the first type from the selected queue to a queue of the second type;

if the queue of the second type has at least one entry, transmitting an entry at a head of the queue of the second type, the entry at the head of the queue of the second type having a step;

if a period of time elapsed since the entry at the head of the queue of the second type was last transmitted is less than the step of the entry at the head of the queue of the second type, appending said entry at the head of the queue of the second type to a tail of one of the queues of the first type; and

if a period of time elapsed since the entry at the head of the queue of the second type was last transmitted is not less than the step of the entry at the head of the queue of the second type, appending the entry at the head of the queue of the second type to a tail of the queue of the second type.

6,041,060

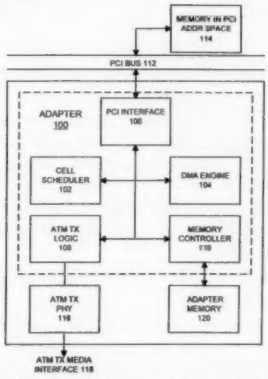
COMMUNICATIONS CELL SCHEDULER AND SCHEDULING METHOD FOR PROVIDING PERIODIC ACTIVITIES

Philip Lynn Leichty, Rochester, and Albert Alfonse Slane, Oronoco, both of Minn., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Apr. 30, 1997, Appl. No. 846,565

Int. Cl.[7] **H04L** *12/28;12/56*

U.S. Cl. 370—412 **14 Claims**



1. A scheduling method for providing periodic activities and predetermined events comprising the steps of:

enqueuing a timer descriptor to a cell scheduler timing wheel;

providing said timer descriptor with predetermined fields including a flag field indicating a relative or absolute timer type;

identifying a timer expiration for said timer descriptor;

fetching an address for a DMA descriptor from said timer descriptor, and

enqueuing said DMA descriptor to a DMA engine to execute said DMA descriptor.

6,041,061

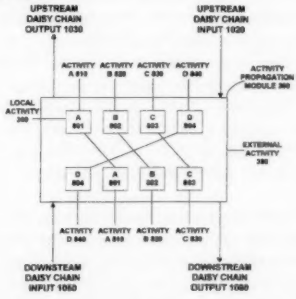
INTERNAL ARBITER FOR A REPEATER IN A COMPUTER NETWORK

Ming-Chang Su, Hsinchu, Taiwan, assignor to Macronix International Co., Ltd., Hsinchu, Taiwan

Filed Jan. 31, 1997, Appl. No. 794,279

Int. Cl.[7] **H04L** *12/43*

U.S. Cl. 370—461 **6 Claims**



1. An internal arbitration module for a repeater in a computer network, comprising:

a plurality of activity inputs, including a local activity input, indicating activity on a local repeater, and other activity inputs, indicating activity on other repeaters;

a plurality of activity outputs, wherein each activity output is coupled to a corresponding activity input;

at least one daisy chain input;

at least one daisy chain output, which is asserted when any of said at least one daisy chain input and said plurality of activity inputs are asserted; and

an external activity output, indicating activity on external repeaters, which is asserted when any of said at least one daisy chain input and other activity inputs are asserted.

6,041,062

HIGH-SPEED SYNCHRONOUS MULTIPLEXING APPARATUS

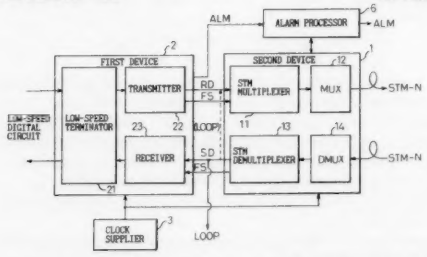
Seiichi Yamato; Noboru Kamei; Kazuyoshi Okuma; Katsumi Sugawa; Hironori Kadota, and Tomoyuki Sakata, all of Fukuoka, Japan, assignors to Fujitsu Limited, Kanagawa, Japan

Filed Jun. 13, 1997, Appl. No. 874,358

Claims priority, application Japan, Jun. 13, 1996, 8-152080; Jun. 11, 1997, 9-153961

Int. Cl.[7] **G01R** *31/08;* **G06F** *11/00;* **G08C** *15/00;* **H04J** *3/16*

U.S. Cl. 370—465 **35 Claims**



1. A high-speed synchronous multiplexing apparatus having a first communication device connected to and accommodating a low-speed digital circuit and a second communication device connected to a high-speed synchronous multiplexing circuit, comprising:

clock supply means for supplying a reference clock signal, which sets a communication rate, to each of the first and second communication devices;

alarm processing means for separately detecting faults from the first communication device and second communication devices and performing respective alarm proceedings;

a first communication device for receiving data from the low-speed digital circuit, preparing serial low-speed data from the received data in synchronization with the reference clock signal, and transmitting the serial low-speed data with a frame signal to the second communication device via separated data and frame signal lines, and for receiving serial low-speed data with a frame signal from the second communication device and sending the received data to the low-speed digital circuit; and

the second communication device for receiving the serial low-speed data with a frame signal from the first communication device and sending the received data as a high-speed synchronous multiplexed signal to the high-speed synchronous multiplexing circuit, and for receiving a high-speed synchronous multiplexed signal from the high-speed synchronous multiplexing circuit, preparing serial low-speed data from the high-speed synchronous multiplexed signal in synchronization with the reference clock signal, and transmitting the low-speed serial data with a frame signal to the first communication device via separated data and frame signal lines.

6,041,063

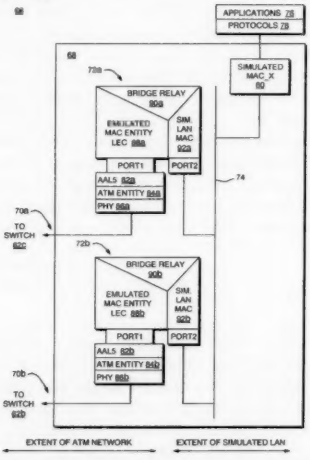
HIGH AVAILABILITY, SCALEABLE BANDWIDTH, MULTIPORT ATM-EMULATED LAN INTERFACE

Lars Povlsen, Dragoer; Erling Skjoldborg, Lyngby, and Tomasz Jerzy Goldman, Hellerup, all of Denmark, assignors to Olicom A/S, Denmark

Filed Sep. 16, 1997, Appl. No. 931,555

Int. Cl.[7] **H04J** *3/16;* **H04L** *12/28*

U.S. Cl. 370—465 **15 Claims**



1. Apparatus for providing local area network (LAN) emulated communication between an asynchronous transfer mode (ATM) network and a host, said apparatus comprising:

a plurality of network interface cards each of which has a port connected in communicating relationship with said ATM network, each of said cards having an associated LAN emulation client (LEC), and a single, common media access control (MAC) address assigned to said host; and

a controller for directing communications between said LECs and a simulated MAC entity associated with said host, said controller operable to dynamically select one or more of said LECs for receiving frames from said ATM network, filtering frames received by said LECs so as to prevent duplicate frames from being passed to said simulated MAC entity, and causing frames received from said simulated MAC entity to be passed to one or more selected LECs for transmission to said ATM network.

6,041,064

VOICE SERVER MODULE FOR ATM SWITCH

James Patrick Kurdzo, Watertown, and Robert Alan Zakrzewski, Meriden, both of Conn., assignors to General DataComm, Inc., Middlebury, Conn.

Filed Jan. 29, 1998, Appl. No. 15,303

Int. Cl.[7] **H04L** *12/66*

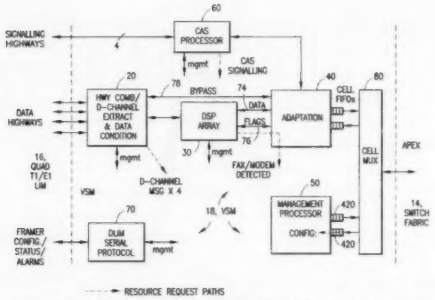
U.S. Cl. 370—466 **14 Claims**

1. A module for an ATM switch, comprising:

a) interface means for receiving telecommunications data, said telecommunications data including voice data and non-voice data;

b) voice data processing means coupled to said interface means, said voice data processing means for receiving said voice data, and for processing said voice data and not said non-voice data so as to conduct at least one of echo cancellation on and data encoding of said voice data; and

c) adaptation processing means coupled to said voice data processing means and coupled by a bus to said interface means, said adaptation processing means for receiving said non-voice data via said bus, for processing said non-voice data so that said non-voice data conforms to an AAL1-type format, for receiving said voice data from said voice data processing



means, and for processing said voice data so that said voice data conforms to an AAL2-type format.

6,041,065

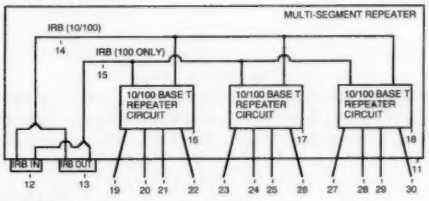
FLEXIBLE MULTI-FREQUENCY REPEATER

Bruce W. Melvin, Roseville, Calif., assignor to Hewlett-Packard Company, Palo Alto, Calif.

Filed Aug. 13, 1997, Appl. No. 910,652

Int. Cl.[7] **A61K** *9/20;9/22;9/16*

U.S. Cl. 370—492 **17 Claims**



1. A multi-segment repeater comprising:

a first inter-repeater bus;

a second inter-repeater bus; and,

a first repeater circuit, coupled to the first inter-repeater bus and the second inter-repeater bus, comprising:

a 10 megabit repeater core,

a first 100 megabit repeater core,

a second 100 megabit repeater core,

a selector for selecting whether the 10 megabit repeater core is to be connected to the first inter-repeater bus and whether the first 100 megabit repeater core is to be connected to the first inter-repeater bus, and

connection means for connecting the second 100 megabit repeater core to the second inter-repeater bus, wherein the 10 megabit repeater core is not connectable to the second inter-repeater bus.

6,041,066

METHOD OF SYNCHRONIZATION STATUS MESSAGE PROCESSING IN TRANSMISSION APPARATUS

Seiji Meki; Shunji Yamada, both of Kanagawa, and Junichi Moriyama, Kawasaki, all of Japan, assignors to Fujitsu Limited, Kanagawa, Japan

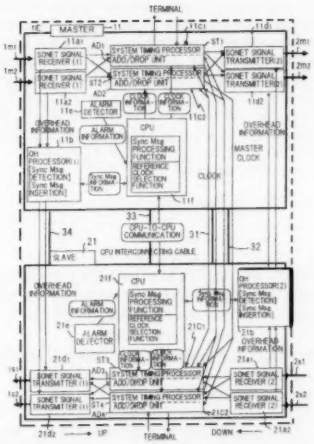
Filed Feb. 12, 1998, Appl. No. 22,429

Claims priority, application Japan, Jan. 9, 1997, 9-235759

Int. Cl.[7] **H04J** *3/06*

U.S. Cl. 370—512 **12 Claims**

1. A method of synchronization status message processing in a transmission apparatus equipped with a plurality of units to which main signals are input for subjecting these main signals to predetermined processing and then transmitting the main signals, one of these units being a master unit and the others being slave units, the master unit deciding, as a master clock, a clock extracted from a main signal into which a synchronization status message indicative



of best quality level has been inserted from among synchronization status messages inserted into the main signals input to each of the units, each unit executing signal processing in synchronization with this master clock, the method comprising the steps of:

connecting the master unit and the slave units by a clock cable which sends and receives a clock and a processor interconnecting cable for communication between processors provided in the master unit and the slave units;

identifying, in each slave unit, a synchronization status message that has been inserted into a main signal input from a line and notifying the master unit of this synchronization status message via the processor interconnecting cable; and

obtaining, in the master unit, a synchronization status message indicating best quality level using synchronization status messages acquired from the master units and synchronization status messages acquired from the slave units, and adopting, as a master clock, a clock extracted from a main signal in which the synchronization status message obtained has been inserted.

6,041,067

DEVICE FOR SYNCHRONIZING DATA PROCESSING

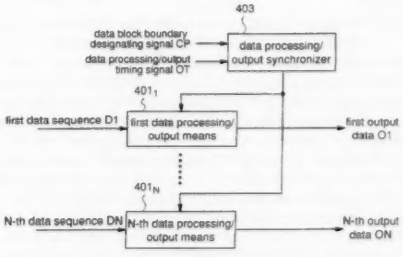
Hiroki Takamori, Osakasi, and Takayuki Morisige, Ujisi, both of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Japan

Filed Oct. 3, 1997, Appl. No. 943,198

Claims priority, application Japan, Oct. 4, 1996, 8-264301

Int. Cl.[7] **H04J** *3/06*

U.S. Cl. 370—514 **34 Claims**



1. A device for synchronizing data processing, receiving N (N=integer, $1 \leqq N$) pieces of data sequences, each sequence comprising plural data blocks, said device comprising:

N data processing/output means, each means for processing data included in an input data sequence and outputting processed data, according to synchronous information; and

means of synchronizing data processing/output, which updates a reference of synchronization, according to a data block boundary designating information that shows boundaries of data blocks constituting N pieces of data sequences, and outputs the synchronous information to the N data processing/output means, according to data processing/output timings of the N pieces of data sequences, so that the N data processing/output means are synchronized with each other and process and output data in the respective data sequences in correct timings along the temporal order.

6,041,068

METHOD AND APPARATUS FOR MULTIPLEXING AND TRANSMITTING AUTONOMOUSLY/INTRA CODED PICTURES ALONG WITH THE MAIN OR I, P, B PICTURES/VIDEO

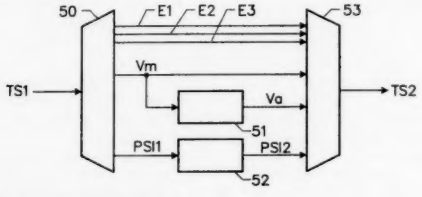
Jürgen F. Rosengren; Ronald W. J. J. Saeijs, and Eric H. J. Persoon, all of Eindhoven, Netherlands, assignors to U.S. Philips Corporation, New York, N.Y.

Continuation of application No. 08/422,378, Apr. 14, 1995, abandoned. This application Aug. 11, 1997, Appl. No. 909,144.

Claims priority, application European Pat. Off., Apr. 15, 1994, 94201053

Int. Cl.[7] **H04J** *3/02;* **H04N** *7/12;9/74;5/445*

U.S. Cl. 370—538 **22 Claims**



1. A transmitter comprising:

means for generating a main elementary video stream that includes autonomously encoded pictures and predictively encoded pictures;

means for selecting from the main elementary video stream only the autonomously encoded pictures;

means for arranging the autonomously encoded pictures to generate an ancillary elementary video stream;

means for multiplexing the main elementary video stream and the ancillary elementary video stream to generate a transport stream; and,

means for transmitting the transport stream wherein the transport stream is transmitted over a transmission channel to a receiver that is located remotely from the transmitter.

6,041,069

LASER DEVICE TUNED BY FORMING A REFRACTIVE INDEX GRATING IN OPTICAL FIBER

Raman Kashyap, and Jonathan Richard Armitage, both of Ipswich, United Kingdom, assignors to British Telecommunications public limited company, London, United Kingdom

Continuation of application No. 08/609,485, Mar. 1, 1996, abandoned, which is a continuation of application No. 08/263,749, Jun. 22, 1994, abandoned, which is a division of application No. 07/940,960, Nov. 3, 1992, Pat. No. 5,377,288. This application Jun. 18, 1997, Appl. No. 877,997.

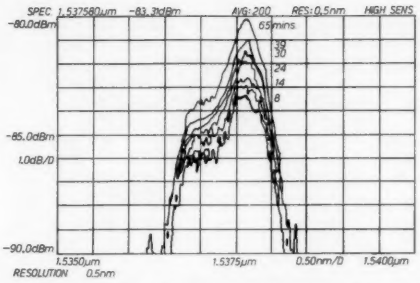
Claims priority, application United Kingdom, Apr. 6, 1990, 9007912

Int. Cl.[7] **H01S** *3/30*

U.S. Cl. 372—6 **10 Claims**

1. A rare earth doped fibre laser including first and second fibres, the first optical fibre including a laser-active rare-earth dopant, and

the second optical fibre being photosensitive to enable a refractive index grating to be recorded therein and being optically coupled to the first fiber, said second optical fibre including a reflector comprising a refractive index grating formed in its core, the grating having been formed by exposing the second fibre to a first spatially periodic pattern of optical radiation such that said first pattern becomes recorded in the core of the second fibre, the spatial periodic pattern having been configured such that the laser operates with a selected predetermined wavelength with an extremely narrow bandwidth, determined by the spatially periodic pattern, and is selectively tunable for extremely narrow bandwidth operation at a different wavelength by exposing the second fibre to a second spatially periodic pattern of optical radiation such that said second pattern becomes recorded in the core.



6,041,070

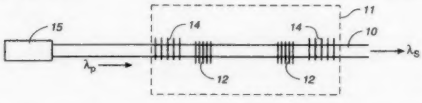
RESONANT PUMPED SHORT CAVITY FIBER LASER

Thomas L. Koch, Holmdel, N.J., and Robert Waarts, Fremont, Calif., assignors to SDL, Inc., San Jose, Calif.

Filed Nov. 14, 1997, Appl. No. 970,745

Int. Cl.[7] **H01S** *3/07*

U.S. Cl. 372—6 **73 Claims**



1. An optical source for generating a predetermined optical signal comprising a predetermined signal wavelength, the source comprising:

an optical gain medium;

a pump resonator that establishes a resonant cavity for optical energy at a pump wavelength suitable for optically pumping the gain medium, the resonant cavity including the gain medium; and

an optical pump source external to the resonant cavity that directs optical energy at the pump wavelength into the resonant cavity.

6,041,071

ELECTRO-OPTICALLY TUNABLE EXTERNAL CAVITY MIRROR FOR A NARROW LINEWIDTH SEMICONDUCTOR LASER

Parviz Tayebati, Watertown, Mass., assignor to CoreTek, Inc., Burlington, Mass.

Provisional application No. 60/004,620, Sep. 29, 1995, Provisional application No. 60/004,940, Oct. 4, 1995. This application Sep. 27, 1996, Appl. No. 726,049.

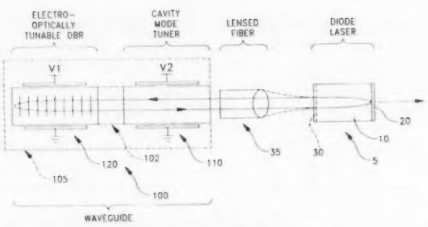
Int. Cl.[7] **H01S** *3/03*

U.S. Cl. 372—64 **26 Claims**

1. A tunable external cavity waveguide device, said waveguide device comprising:

a ferroelectric electro-optical substrate;

a waveguide formed in said substrate;



a distributed Bragg reflector (DBR) disposed adjacent a portion of said waveguide; and

means for applying a voltage difference across said distributed Bragg reflector,

wherein said substrate has an index of refraction, wherein said waveguide is formed in said substrate by inducing a strain field within said substrate, and wherein said strain field forms graduated variations in the index of refraction of said substrate without altering the chemical composition of said substrate.

6,041,072

APPARATUS FOR STABILIZING MULTIPLE LASER SOURCES AND THEIR APPLICATION

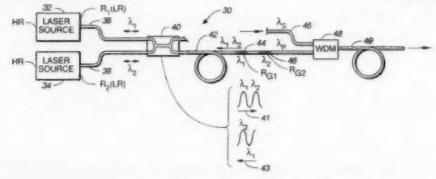
Brian F. Ventrudo, and Peter G. Berrang, both of Victoria, Canada, assignors to SDL, Inc., San Jose, Calif.

Continuation of application No. 08/773,016, Dec. 24, 1996, Pat. No. 5,841,797, which is a continuation-in-part of application No. 08/415,129, Mar. 30, 1995, Pat. No. 5,589,684, which is a continuation-in-part of application No. 08/267,785, Jun. 28, 1994, Pat. No. 5,485,481. This application May 19, 1998, Appl. No. 81,528.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] H01S *3/10*

U.S. Cl. 372—102 **43 Claims**



1. Apparatus for providing a stable laser pump source comprising:

a plurality of semiconductor laser pump sources having respective lasing cavities capable of lasing within a narrow bandwidth of wavelengths and providing spectral beam outputs at their respective laser exit facets at least one of which having distinguishable optical characteristics from one another;

an optical element to optically combine said beam outputs into a single beam output;

an optical fiber coupled to receive said single beam output;

at least one fiber grating formed in said apparatus, said at least one fiber grating having a reflectivity band for reflecting a portion of either of said spectral beam outputs or of said single beam back into at least one of said laser pump sources for providing a small portion of selected wavelengths within a gain bandwidth of said at least one of laser pump sources suppressing the magnitude of intensity noise in said single beam output.

6,041,073

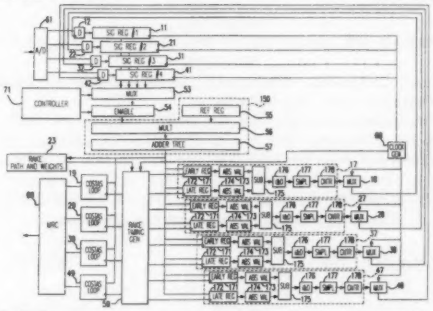
MULTI-CLOCK MATCHED FILTER FOR RECEIVING SIGNALS WITH MULTIPATH

Sorin Davidovici, Oceanpoint; Jimmy Cuong Tran, Jackson, and Emmanuel Kanterakis, North Brunswick, all of N.J., assignors to Golden Bridge Technology, Inc., West Long Branch, N.J.

Filed Sep. 18, 1998, Appl. No. 157,300

Int. Cl.[7] H04B *1/69*

U.S. Cl. 375—148 **12 Claims**



1. An improvement, to a spread-spectrum receiver, for receiving, in a multipath environment, a spread-spectrum signal having data spread by a chip-sequence signal, with each chip of the chip-sequence signal having a chip duration, with the spread-spectrum signal arriving from a plurality of paths from the multipath environment, comprising:

a clock-signal generator for generating a clock signal, with the clock signal, during a chip duration, having a plurality of phases, with a number of phases of the plurality of phases at least equal to a number of paths of the plurality of paths;

an analog-to-digital converter for sampling the spread-spectrum signal to generate, during the chip duration, a plurality of chip samples, with a number of chip samples in the plurality of chip samples at least equal to the number of phases in the plurality of phases, said analog-to-digital converter, responsive to each chip sample of the plurality of chip samples, for converting each chip sample to a digital-chip sample, thereby generating a plurality of digital-chip samples;

a plurality of signal registers, coupled to said analog-to-digital converter, for storing the plurality of digital-chip samples;

a plurality of gates, coupled between said plurality of signal registers, respectively, and said analog-to-digital converter, each of said plurality of gates responsive to a set of phase signals, respectively, from a multiplicity of sets of phase signals, for passing a respective number of the plurality of digital-chip samples into a respective signal register of the plurality of signal registers;

a signal-register multiplexer, coupled to each of the plurality of signal registers, said signal-register multiplexer responsive to a register-select signal, for selecting a respective signal register from the plurality of signal registers;

a matched filter, coupled to said signal-register multiplexer, and having an impulse response matched to the spread-spectrum signal, for detecting an early portion, a punctual portion and a late portion of each chip embedded in the spread-spectrum signal for each path of the plurality of paths, respectively;

a RAKE-timing generator for generating a plurality of path-select signals corresponding to the plurality of paths from the multipath environment;

a plurality of delay-locked-loop (DLL) path-tracking circuits, with each DLL path-tracking circuit responsive to a respective path-select signal of the plurality of path-select signals, for gating the early portion and the late portion, corresponding to a respective path, of a detected spread-spectrum signal, into the respective DLL path-tracking circuit, and for generating a DLL signal of a plurality of DLL signals; and

a plurality of DLL multiplexers coupled to said clock-signal generator, to said plurality of DLL path-tracking circuits, and to said plurality of gates, respectively, each DLL multiplexer

of said plurality of DLL multiplexers, responsive to a respective DLL signal from a respective DLL path-tracking circuit, for passing a respective set of phases of the plurality of phases from said clock-signal generator to a respective gate of said plurality of gates, with said plurality of DLL multiplexers thereby generating a multiplicity of sets of phase signals, respectively.

SPREAD SPECTRUM PULSE POSITION MODULATION SYSTEM

Masaru Nakamura, Edahigashi, Japan, assignor to Ricoh Company, Ltd., Tokyo, Japan

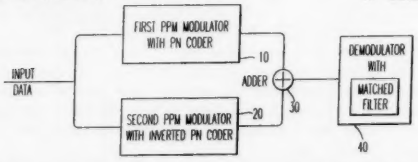
Continuation of application No. 08/878,903, Jun. 19, 1997, Pat. No. 5,884,134, which is a continuation of application No. 08/862,647, May 23, 1997. This application Jan. 14, 1999, Appl. No. 229,896.

Claims priority, application Japan, May 24, 1996, 8-151917

This patent is subject to a terminal disclaimer.

Int. Cl.[7] H04B *1/69*

U.S. Cl. 375—200 **69 Claims**



1. A spread spectrum pulse position modulation/demodulation system receiving an input signal including frames, comprising:

a first pulse position modulator modulating each frame by inserting a first pseudo noise code into a selected slot of each frame according to the input signal to generate a first spread spectrum pulse position modulating signal;

a second pulse position modulator modulating each frame by inserting a second pseudo noise code into a selected slot of each frame according to the input signal to generate a second spread spectrum pulse position modulating signal, wherein the second pseudo noise code is an inversion of the first pseudo noise code;

an adder adding together the first and second spread spectrum pulse position modulating signals to generate a third spectrum pulse position modulating signal as a base band signal;

a demodulator receiving the third spread spectrum pulse position modulating signal and demodulating the third spread spectrum pulse position modulating signal, the demodulator including only one matched filter to output a first pulse signal corresponding to the first spread spectrum pulse position modulating signal and to output a second pulse signal corresponding to the second spread spectrum pulse position modulating signal.

SSB FTD Test Diagram

1. A system for determining the transmission response of a device under test (DUT), the DUT is a frequency translation device (FTD), the system comprising steps of,

measuring a first frequency response of the DUT coupled through a filter with a first test device (TD**1**), the TD**1** is an FTD, one of the coupled DUT and TD**1** is an up converter FTD and the other one of the coupled DUT and TD**1** is a down converter FTD, the filter having a filter response,

measuring a second frequency response of the DUT coupled through the filter with a second test device (TD**2**), the TD**2** is an FTD, one of the coupled DUT and TD**2** is an up converter FTD and the other one of the coupled DUT and TD**2** is a down converter FTD,

measuring a third frequency response of the TD**1** coupled through the filter with the TD**2**, one of the coupled TD**1** and TD**2** is an up converter FTD and the other one of the coupled TD**1** and TD**2** is a down converter FTD, one of the TD**1** FTD and TD**2** FTD has a reciprocal up converter and down converter frequency response, the one FTD is an up converter during one of the first, second, or third measurements and is a down converter during another one of the first, second, or third measurements,

removing the filter response from the first, second, and third frequency response, and

calculating the transmission response of the DUT from the first, second, and third frequency responses.

METHOD FOR SIMPLIFYING BIT MATCHED MOTION ESTIMATION

Sailesh Krishna Rao, Colts Neck, N.J., assignor to Level One Communications, Inc., Sacramento, Calif.

Provisional application No. 60/041,535, Mar. 25, 1997. This application Aug. 28, 1997, Appl. No. 924,065.

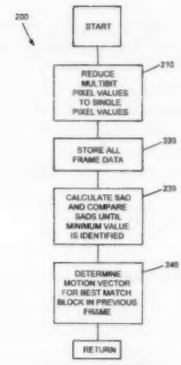
Int. Cl.[7] **H04N** *7/36*

U.S. Cl. 375—240 **11 Claims**

1. A method for performing motion estimation, comprising:

converting multibit pixel values of frames to single bit pixel values;

storing a previous frame of single bit pixel values and a reference frame of single bit pixel values;



comparing a sum-of-absolute differences of pixel values between the reference frame and a block in a search area within the previous frame to find a best match block in the previous frame;

calculating a motion vector representing the difference between the reference block and the best matched block in the previous frame; and

wherein the step of converting multibit pixel values of frames to single bit pixel values further comprises the step of thresholding the value of a reference pixel with respect to a low-pass filtered average value around the reference pixel, and the value of the reference pixel is substituted by the average value of the neighboring pixels.

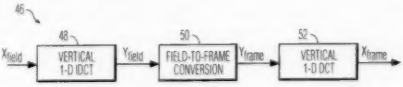
FIELD/FRAME CONVERSION OF DCT DOMAIN MIXED FIELD/FRAME MODE MACROBLOCKS USING 1-DIMENSIONAL DCT/IDCT

Changhoon Yim, Edison, N.J., assignor to Thomson Consumer Electronics, Inc., Indianapolis, Ind.

Filed Jun. 30, 1998, Appl. No. 108,005

Int. Cl.[7] **H04N** *7/30*

U.S. Cl. 375—240 **2 Claims**



1. A method of performing field/frame conversion of DCT domain mixed field/frame mode macroblocks comprising the steps of:

a) performing a vertical 1-D IDCT on the DCT domain mixed field/frame mode macroblock according to a first relationship $Y=S^{-1}X=S'X$ to obtain a horizontal 1-D DCT domain macroblock;

b) performing field/frame conversion on said horizontal 1-D DCT domain macroblock utilizing a second relationship $Y_{frame}(2\ m,n)=Y_{field}(m,n)$, with $0 \leqq m \leqq 7$, and a third relationship $Y_{frame}(2\ m+1,n)=Y_{field}(m+8,n)$, with $0 \leqq m \leqq 7$; and

c) performing a vertical 1-D DCT on the field/frame converted horizontal 1-D DCT domain macroblock according to a fourth relationship $X=SY$ to obtain a 2-D DCT domain macroblock.

SIGNAL PROCESSING SYSTEM AND METHOD FOR DIGITALLY MIXING A PLURALITY OF ANALOG INPUT SIGNALS

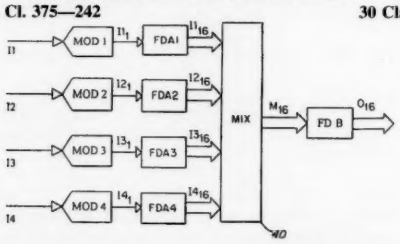
Christian Fraisse, Grenoble, France, assignor to SGS-Thomson Microelectronics S.A., Gentilly, France

Filed Dec. 26, 1996, Appl. No. 773,170

Claims priority, application France, Dec. 29, 1995, 95 15861

Int. Cl.[7] **H04B** *14/04;14/06;* **H03M** *1/00;3/00*

U.S. Cl. 375—242 **30 Claims**



9. A method of signal processing, comprising the steps of:

(A) modulating at least two analog signals to produce a high frequency oversampled digital signal for each of the at least two analog signals;

(B) digitally filtering using a first decimation filter each high frequency oversampled digital signal, to produce intermediate frequency oversampled multiple bit signals;

(C) digitally mixing the intermediate frequency oversampled signals to produce a mixed signal at an intermediate frequency; and

(D) digitally filtering using a second decimation filter the mixed signal, to produce a final digital output signal, at a frequency suitable for representing the at least two analog signals.

6,041,081

CDMA TRANSMITTER HAVING A VARIABLE GAIN CIRCUIT INSERTED BETWEEN A TRANSMITTER MIXER AND A TRANSMITTER ANTENNA

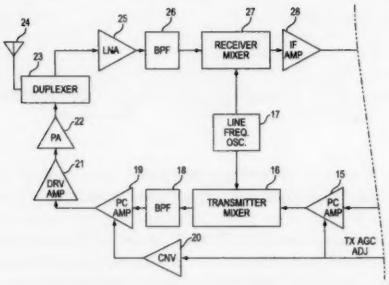
Waho O, and Tsutomu Katsuyama, both of Tokyo, Japan, assignors to Oki Electric Industry Co., Ltd., Tokyo, Japan

Filed Mar. 19, 1997, Appl. No. 820,994

Claims priority, application Japan, Mar. 26, 1996, 8-069900

Int. Cl.[7] **H04L** *25/03*

U.S. Cl. 375—297 **11 Claims**



1. A CDMA (code division multiple access) transmitter for transmitting a first signal at an RF (radio frequency) frequency under first limitations on a spurious emission level at a first RF output power and second limitations on a spurious emission level at a second RF output power smaller than the first RF output power by a predetermined amount, the first RF output power being a maximum RF output power of said transmitter, the second limitations being severer than the first limitations, said CDMA transmitter comprising:

a transmitter mixer for mixing a second signal to be transmitted with a local oscillation signal to produce the first signal at the RF frequency;

a transmitter antenna for radiating the first signal at the RF frequency;

a power control circuit having a variable first gain responsive to a power control signal for supplying said transmitter antenna with the first signal produced from said transmitter mixer and the first gain, the power control signal corresponding to an RF power level at which the first signal is to be radiated by said transmitter antenna; and

a power control amplifier connected to an input side of said transmitter mixer and having a variable second gain responsive to the power control signal for amplifying the second signal with the second gain to provide said transmitter mixer with the amplified second signal;

said power control circuit varying the first gain in response to the power control signal so as to maximize the first gain based upon the power control signal.

DIGITAL AMPLITUDE MODULATION AMPLIFIER AND TELEVISION BROADCASTING MACHINE

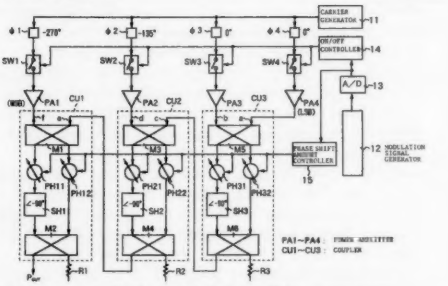
Haruo Takeda; Yukio Tatsumi; Ikuji Fujitani; Takuya Shioda; Tomofumi Yoshimi; Tomohiko Sugimoto, and Kazuhisa Haeiwa, all of Tokyo, Japan, assignors to NEC Corporation, and Nippon Hoso Kyokai, both of Japan

Filed Sep. 4, 1997, Appl. No. 923,323

Claims priority, application Japan, Sep. 6, 1996, 8-257666; Sep. 6, 1996, 8-257667

Int. Cl.[7] **H03C** *1/52*

U.S. Cl. 375—300 **15 Claims**



1. A digital amplitude modulation amplifier, comprising:

an A/D converter for converting an analog modulation signal into a digital signal of a predetermined quantization bit number;

a plural number of power amplifiers equal to the quantization bit number of the digital signal for C class operating with amplification degrees weighted for the individual bits;

selectively inputting means for selectively inputting a carrier to said plural number of power amplifiers in accordance with values of the individual bits of the digital signal;

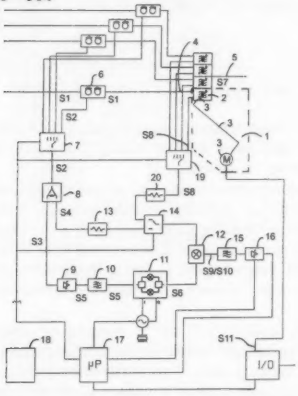
coupling means for power composing, for all bits, output signals of those of said plural number of power amplifiers which are allocated to lower bits and output signals of those of said plural number of power amplifiers which are allocated to the other upper bits while controlling the phases of both of the output signals based on an external input phase control signal, further power composing, for all of the bits, the power composed signals while controlling the phases of the power composed signals based on the output signals of those of said power amplifiers which are allocated to the upper bits and the external input phase control signal and outputting an amplitude modulated wave from the last stage; and

phase controlling means for receiving the digital signal as an input signal and generating and supplying the external input phase control signal to said coupling means.

6,041,083
METHOD AND SYSTEM FOR TUNING RESONANCE MODULES

Lennart Larsson, Akersberga, and Rolf Folkesson, Brottby, both of Sweden, assignors to Allgon Ab, Akersberga, Sweden

Filed Jul. 9, 1997, Appl. No. 890,215
Claims priority, application Sweden, Jul. 10, 1996, 9602740
Int. Cl.[7] H03K *7/06*
U.S. Cl. 375—304 **8 Claims**



1. A method for tuning at least one tunable resonance module in a radio base station, said resonance module having tuning means, a transmitter connection, and an antenna connection, said method comprising the steps of:

(a) mixing an input signal, originating from a transmitter signal present on the transmitter connection, with a low-frequency signal so as to generate a single side band signal,

(b) mixing with the single side band signal an output signal being offset in phase from the input signal by a relative first phase difference dependent on a present tuning of the resonance module, said output signal being one in a group consisting of: a signal originating from an antenna signal present on the antenna connection, and a signal probed within the resonance module,

(c) mixing the single side band signal with a signal originating from the transmitter signal on the transmitter connection,

(d) comparing, at a frequency range about that of the low-frequency signal, mixing products resulting from steps (b) and (c), respectively, so as to determine a relative second phase difference between the input and output signals, and

(e) operating, based on said second phase difference, the tuning means to tune the resonance module to a frequency of the transmitter signal present on the transmitter connection, so as to adjust said second phase difference to a predetermined value.

6,041,084
CIRCUIT FOR OPTIMAL SIGNAL SLICING IN A BINARY RECEIVER

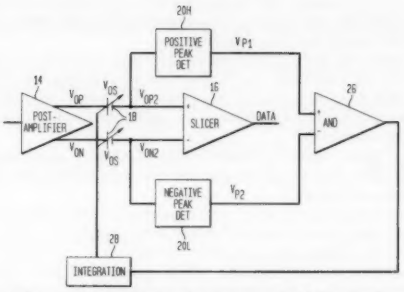
Krishnaswamy Nagaraj, Somerville, N.J., assignor to Lucent Technologies, Inc., Holmdel, N.J.

Filed Aug. 15, 1997, Appl. No. 911,231
Int. Cl.[7] H04L *25/06*
U.S. Cl. 375—317 **9 Claims**

1. A circuit for amplitude slicing an electrical voltage signal to obtain binary type information comprising:

a slicer to receive said voltage signal and to slice said signal to generate a binary signal related to a midpoint of the voltage signal applied to said slicer, said midpoint being at a predetermined voltage level;

first and second peak detectors to receive said voltage signal and produce a respective output related to the positive and negative peaks of said voltage signal;



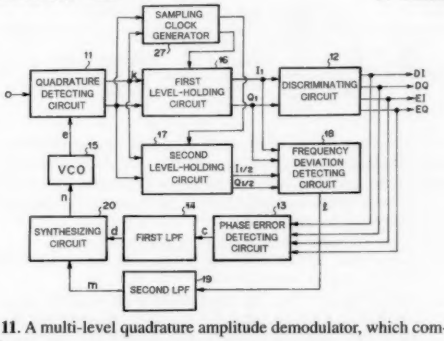
an offset circuit to receive the outputs of said first and second peak detectors and to produce an offset voltage from a differential of said outputs of said first and second peak detectors; and

a combiner circuit which combines said voltage signal with said offset voltage to maintain the midpoint of the amplitude of said voltage signal received by said slicer at said predetermined voltage level.

6,041,085
CARRIER REGENERATING CIRCUIT, MULTI-LEVEL QUADRATURE AMPLITUDE DEMODULATOR, AND METHOD OF DETECTING FREQUENCY DEVIATION

Makoto Anzai, Tokyo, Japan, assignor to NEC Corporation, Tokyo, Japan

Filed Nov. 4, 1997, Appl. No. 963,620
Claims priority, application Japan, Nov. 22, 1996, 8-312149
Int. Cl.[7] H04L *27/14;27/06*
U.S. Cl. 375—326 **17 Claims**



11. A multi-level quadrature amplitude demodulator, which comprises:

quadrature detecting means which demodulates a multi-level quadrature amplitude modulated signal using a regenerated carrier to generate an in-phase component and a quadrature component,

first level-holding means which samples and holds said in-phase component and said quadrature component at an aperture of eye patterns of said in-phase component and said quadrature component to generate and output a current in-phase component and a current quadrature component,

second level-holding means which samples and holds said in-phase component and said quadrature component at a middle point of said aperture to generate and output a half-delayed in-phase component and a half-delayed quadrature component,

sampling clock generating means which generates sampling clocks of said first level-holding means and said second level-holding means,

discriminating means which discriminates said current in-phase component and said quadrature component to generate two main signals and two error signals,

frequency deviation calculating means which calculates a semi frequency deviation signal based on said current in-phase component, said current quadrature component, said half-delayed in-phase component, and said half-delayed quadrature component,

phase error calculating means which calculates a phase error signal by logically processing said two main signals and said two error signals,

synthesizing means which synthesizes said semi frequency deviation signal and said phase error signal to generates control voltage, and

a voltage controlled oscillator which outputs said regenerated carrier having a frequency which is controlled by said control voltage.

6,041,086

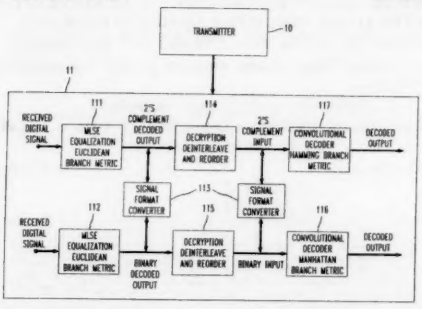
SIGNAL DECODING FOR EITHER MANHATTAN OR HAMMING METRIC BASED VITERBI DECODERS

Thomas W. Baker, North Whitehall Township, Pa., and Mohammed S. Mobin, Old Bridge, N.J., assignors to Lucent Technologies Inc., Murray Hill, N.Y.

Filed Apr. 4, 1996, Appl. No. 628,073

Int. Cl.[7] H04L *27/06*

U.S. Cl. 375—341 **24 Claims**



18. Apparatus for decoding a digital signal carrying predetermined information represented in one of several different number systems with a decoder that decodes said digital signal based on a metric scheme requiring said digital signal to be represented in a first number system, comprising:

a receiver for receiving said digital signal;

a signal format converter for converting said digital signal to said first number system; and

a decoder for decoding the predetermined information represented by said digital signal that has been converted into said first number system in a single pass through said decoder to provide the decoded predetermined information.

6,041,087

INFORMATION RECEIVING SYSTEM AND AN INFORMATION RECEIVING METHOD USING SUCH A SYSTEM

Nobuya Inamori, Yokkaichi, Japan, assignor to Sumitomo Wiring Systems, Ltd., Japan

Filed Sep. 9, 1997, Appl. No. 925,802

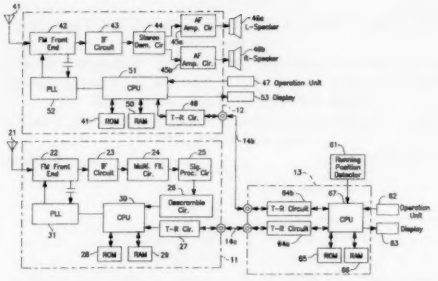
Claims priority, application Japan, Sep. 13, 1996, 8-243166

Int. Cl.[7] H03D *1/06*

U.S. Cl. 375—348 **3 Claims**

1. An information receiving system, comprising:

a first information receiver, the first information receiver being an FM multiplex receiver for receiving a first information radio wave, the first information radio wave being an FM multiplex broadcast radio wave including traffic information, the first information receiver having first tuning means for setting tuning frequencies,



a second information receiver, the second information receiver being a radio for receiving a second information radio wave, the second information radio wave being an FM radio broadcast radio wave, the second information receiver having second tuning means for setting tuning frequencies, and

a control unit for controlling the first and second information receivers,

wherein the control unit has a function of discriminating whether the second information receiver is on and controlling the first tuning means of the first information receiver for avoiding setting a tuning frequency of the first information receiver to a specified prohibited frequency in the case that the first and second information receivers are simultaneously on.

6,041,088

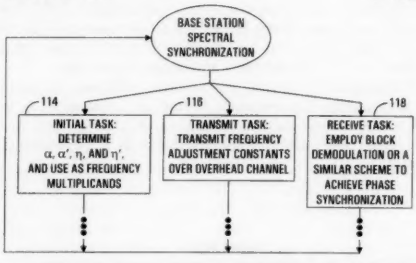
RAPID SYNCHRONIZATION FOR COMMUNICATION SYSTEMS

Ronald D. McCallister, Scottsdale, Ariz., assignor to Sicom, Inc., Scottsdale, Ariz.

Continuation-in-part of application No. 08/740,016, Oct. 23, 1996. This application Jun. 10, 1998, Appl. No. 95,357.

Int. Cl.[7] H04L *7/00*

U.S. Cl. 375—358 **24 Claims**



BASE STATION SPECTRAL SYNCHRONIZATION
114
INITIAL TASK: DETERMINE α, α', η, AND η', AND USE AS FREQUENCY MULTIPLICANDS
116
TRANSMIT TASK: TRANSMIT FREQUENCY ADJUSTMENT CONSTANTS OVER OVERHEAD CHANNEL
118
RECEIVE TASK: EMPLOY BLOCK DEMODULATION OR A SIMILAR SCHEME TO ACHIEVE PHASE SYNCHRONIZATION

1. A method for rapid frequency synchronization of a reverse channel signal to a base station receiving frequency which is proportional to η times a base station reference frequency, where η is a first value, said method comprising the steps of:

transmitting a forward channel signal from a base station, said forward channel signal exhibiting a base station transmitting frequency which is proportional to α times said base station reference frequency, where α is a second value;

calculating, at said subscriber unit, a frequency multiplicand which is proportional to η and inversely proportional to α;

generating a subscriber unit transmitting frequency in response to said frequency multiplicand; and

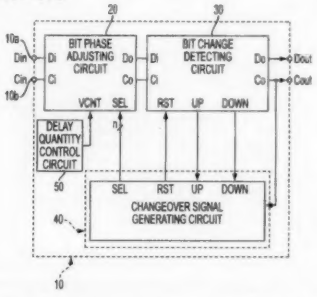
transmitting said reverse channel signal from said subscriber unit, said reverse channel signal exhibiting said subscriber unit transmitting frequency.

6,041,089

BIT PHASE SYNCHRONIZING METHOD AND BIT PHASE SYNCHRONIZING CIRCUIT

Koichi Yokomizo, Tokyo, Japan, assignor to Oki Electric Industry Co., Ltd., Tokyo, Japan

Filed Jan. 23, 1997, Appl. No. 788,862
Claims priority, application Japan, Jul. 10, 1996, 8-180928
Int. Cl.[7] H04L *7/02*
U.S. Cl. 375—371 **16 Claims**



1. A method for attaining bit phase synchronization, comprising the steps of:

generating a control voltage with a control voltage generating circuit that includes a voltage control oscillator, said voltage control oscillator receiving said control voltage,

inputting input data into a first delay gate group composed of plural delay gates which are connected in series to one another and which have signal delay quantities, each of the delay gates including a transistor and an inverter connected in series with the transistor between a power source and ground, the transistor having a gate which receives said control voltage,

selecting either said input data or delayed data related to said input data and obtained from one of the delay gates in said first delay gate group and outputting the selected data,

inputting said selected data into a second delay gate group composed of N delay gates (where N is an integer satisfying $N \geqq 2$),

generating a bit change detecting signal for showing whether or not a change in logic level (also called a bit change) of output data from a pth-stage delay gate of said second delay gate group has happened within a specified time before and after a judgement time, by judging at the same time controlled by a reference clock signal whether or not output data of the pth-stage delay gate (where p is an integer satisfying $1 \leqq p \leqq N$) of said second delay gate group and output data of at least the (p−1)th-stage delay gate (where in case of p=1, the (p−1)th-stage delay gate is considered to be the input point of the second delay gate group) coincide in logic level with each other, and whether or not output data of said pth-stage delay gate and output data of at least the (p+1)th-stage delay gate coincide in logic level with each other,

synchronizing said input data in phase with said reference clock signal by changing the selected data that is currently being outputted to another selected data according to said bit change detecting signal, and outputting the changed selected data, and

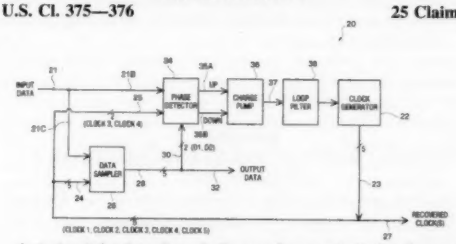
controlling the delay gates of said first delay gate group so as to compensate for variations in the signal delay quantities of these delay gates, by varying said control voltage received by the gates of the transistors within a predetermined range to thereby vary the current available to the inverters, the predetermined range being such that the transistors do not come to be off.

6,041,090

DATA SAMPLING AND RECOVER IN A PHASE-LOCKED LOOP (PLL)

Dao-Long Chen, Fort Collins, Colo., assignor to LSI Logic Corporation, Milpitas, Calif.

Continuation of application No. 08/513,055, Aug. 9, 1995, abandoned. This application Nov. 14, 1997, Appl. No. 962,890.
Int. Cl.[7] H03D *3/24*
U.S. Cl. 375—376 **25 Claims**



1. A circuit for detecting whether a reference clock signal, one of n phase-shifted adjacent clock signals, of a phase-locked loop (PLL) is aligned with incoming data, comprising:

a data sampler for sampling bits of the incoming data with each of the adjacent clock signals, wherein a first of the adjacent clock signals clocks said bits **0**, **0**+*n*, **0**+**2***n*, . . . , and a second of the adjacent clock signals clocks said bits **1**, **1**+*n*, **1**+**2***n*, . . . , where n is an odd integer.

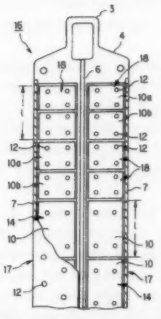
CONTROL ROD FOR NUCLEAR REACTOR

Makoto Ueda, Yokohama; Shigenori Shiga, Fujisawa; Satoko Tajima, and Hideki Morishita, both of Yokohama, all of Japan, assignors to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Aug. 4, 1997, Appl. No. 906,243
Claims priority, application Japan, Aug. 8, 1996, 8-209925
Int. Cl.[7] G21C *7/00;7/113*
U.S. Cl. 376—327 **3 Claims**



1. A control rod for a nuclear reactor, comprising:

a center structural member; and

a plurality of wings each including

a sheath member of long plate structure having a U-shaped cross section having an opening which is secured to the center structural member,

a front end structural member secured to a front end side of the wing viewed from a wing inserting direction in a reactor core,

a terminal end structural member secured to a terminal end side of the wing viewed from the wing inserting direction in the reactor core,

a plurality of neutron absorbing elements each having a plate structure accommodated in each of said sheaths in a row in a longitudinal direction thereof and each being formed of one or more neutron absorbing plates, and

a plurality of load supporting members for supporting weights of the neutron absorbing elements,

wherein respective lengths in the sheath longitudinal direction of the neutron absorbing elements closer to the front end structural member are smaller than respective lengths in the sheath longitudinal direction of the neutron absorber elements further from the front end structural member, and the neutron absorbing elements are supported to the U-shaped sheath by the load supporting members to thereby reduce a local load applied to the U-shaped sheath.

6,041,092

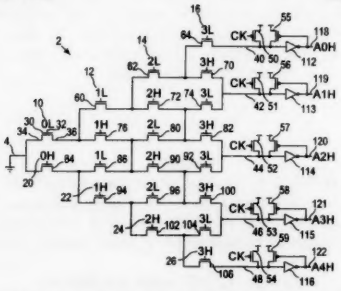
DIGITAL CIRCUIT TO COUNT LIKE SIGNALS IN A DATA WORD

Li C. Tsai, and Richard M. Blumberg, both of Fort Collins, Colo., assignors to Hewlett-Packard Company, Palo Alto, Calif.

Filed Oct. 30, 1998, Appl. No. 183,311

Int. Cl.[7] G06M *3/00*

U.S. Cl. 377—1 **23 Claims**



1. A method of manufacturing a device for counting a number of like signals in a plurality of data bits, comprising:

a) providing a first plurality of signal paths comprising a true signal path and a complementary signal path for each of N data bits;

b) providing a first plurality of transfer gates, each of the first plurality of transfer gates comprising two terminals and a control input, whereby application of a signal to the control input of a given one of the first plurality of transfer gates enables opening and closing of a connection between the two terminals of the given one of the first plurality of transfer gates;

c) interconnecting a first signal source to a first plurality of one-hot outputs via the first plurality of transfer gates by forming a first plurality of series paths between the first signal source and the first plurality of one-hot outputs, each of the first plurality of series paths comprising a subset of the first plurality of transfer gates which are connected via their terminals; and

d) connecting ones of the first plurality of signal paths to ones of the control inputs of the first plurality of transfer gates by:

i) connecting a different one of the first plurality of signal paths to the control input of each transfer gate forming a given one of the first plurality of series paths;

ii) connecting a different subset of the first plurality of signal paths to the control inputs of transfer gates in each series path of the first plurality of series paths; and

iii) connecting a same ratio of true signal paths for the N data bits to complementary signal paths for the N data bits to the control inputs of transfer gates in each series path of the first plurality of series paths which interconnects the first signal source to a given one of the first plurality of one-hot outputs.

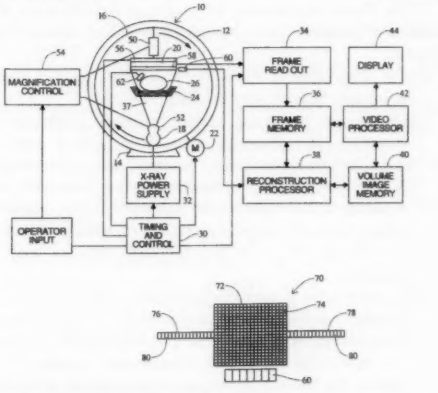
METHOD AND APPARATUS FOR ACQUIRING VOLUMETRIC IMAGE DATA USING FLAT PANEL MATRIX IMAGE RECEPTOR

Pieter Gerhard Roos, Bainbridge; Andrew J. Ivan, Aurora, and Rodney A. Mattson, Mentor, all of Ohio, assignors to Picker International, Inc., Highland Heights, Ohio

Filed Apr. 6, 1998, Appl. No. 55,607
Int. Cl.[7] G01N *23/04;* **A61B** *6/03*
U.S. Cl. 378—62 **27 Claims**



1. A diagnostic imaging apparatus comprising:

a gantry which supports an x-ray tube and a flat plate x-ray detector for rotation about an examination region with the x-ray tube and the flat plate detector disposed across the examination region from each other;

a motor assembly for selectively rotating the x-ray tube and the flat plate detector around the examination region;

a read out device for reading out a two dimensional array of data values from the flat plate detector, each data value being indicative of radiation attenuation along one of a plurality of diverging rays extending between the x-ray source and a sub-region of the flat plate detector;

a reconstruction processor for reconstructing the data values read out during rotation of the x-ray tube and the flat plate detector around the examination region into a volumetric image representation;

a video processor for (i) formatting the read out data values into appropriate format for display on a video monitor as a projection image and (ii) reformatting selective portions of volumetric image data into appropriate format for display on the monitor; and

an optical reset device for saturating the flat plate x-ray detector after data values have been read out of the flat plate x-ray detector by the read out device.

X-RAY REFLECTOMETER

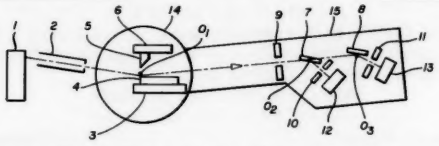
Alexander G. Touryanski; Alexander V. Vinogradov, and Igor V. Pirshin, all of X-Ray Optics Group, P.N. Lebedev Physical Institute, Leninsky Prospekt, 53, Moscow, Russian Federation, 117924

Filed Feb. 2, 1998, Appl. No. 20,583

Claims priority, application Russian Federation, Feb. 3, 1997, 971016153

Int. Cl.[7] G01N *23/20*

U.S. Cl. 378—70 **13 Claims**



1. An X-ray reflectometer for analyzing characteristics of a material utilizing reflected radiation, the X-ray reflectometer comprising:

(A) an X-ray radiation source, the source being adapted to emit an incident beam of polychromatic radiation;

(B) a base, the base being adapted to support a material, the material being supported in the incident beam of polychromatic radiation, wherein the material reflects the incident beam of polychromatic radiation producing a reflected beam of polychromatic radiation, the base further being adapted to rotate, wherein the angular position of the material relative to the incident beam of polychromatic radiation may be adjusted;

(C) a support, the support being adapted to rotate relative to the material, wherein devices attached to the support may be positioned in the reflected beam of polychromatic radiation;

(D) at least a first and second monochromator attached to the support, the first and second monochromators being positionable in the reflected beam of polychromatic radiation, the first and second monochromators being adapted to produce a monochromatic beam of radiation when positioned in a polychromatic beam of radiation; and

(E) at least a first and second detector attached to the support, the first detector being positionable in the beam of monochromatic radiation produced by the first monochromators, the second detector being positionable in the beam of monochromatic radiation produced by the second monochromator, the first and second detectors being adapted to detect monochromatic radiation.

6,041,099

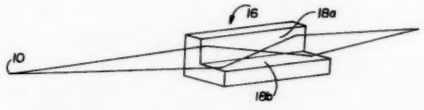
SINGLE CORNER KIRKPATRICK-BAEZ BEAM CONDITIONING OPTIC ASSEMBLY

George Gutman, Birmingham; Licai Jiang, and Boris Verman, both of Troy, all of Mich., assignors to Osmic, Inc., Troy, Mich.

Filed Feb. 19, 1998, Appl. No. 26,385

Int. Cl.[7] G21K *1/06*

U.S. Cl. 378—85 **20 Claims**



1. An x-ray directing system comprising:

a Kirkpatrick-Baez side-by-side optic which redirects x-rays, wherein said Kirkpatrick-Baez side-by-side optic has multilayer Bragg x-ray reflective surfaces.

6,041,100

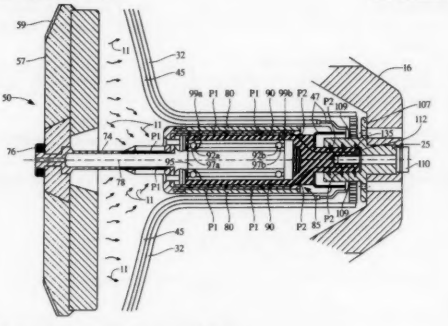
COOLING DEVICE FOR X-RAY TUBE BEARING ASSEMBLY

Lester D. Miller, Hudson, Ohio; Mark S. Maska, Palatine, and Andrew R. Kaczmarek, Jr., Compton, both of Ill., assignors to Picker International, Inc., Cleveland, Ohio

Filed Apr. 21, 1998, Appl. No. 63,073

Int. Cl.[7] H01J *35/10*

U.S. Cl. 378—141 **24 Claims**



1. An x-ray apparatus comprising:

a housing filled with a cooling medium;

an x-ray tube disposed within the housing and surrounded by the cooling medium, the x-ray tube including:

an envelope defining an evacuated chamber;

a cathode assembly disposed in the envelope, said cathode assembly including a filament which emits electrons when heated;

an anode assembly disposed in the envelope, the anode assembly defining a target for intercepting the electrons such that collision between the electrons and the anode assembly generate x-rays from an anode focal spot; and

a bearing assembly rotatably supporting the anode assembly; and

means for providing a direct thermal connection between the bearing assembly and the cooling medium.

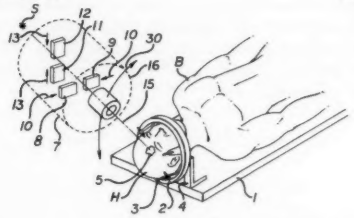
6,041,101
JAW AND CIRCULAR COLLIMATOR

Hanne M. Kooy, Newton; Fred L. Hacker, Brookline, and Marc R. Bellerive, Boston, all of Mass., assignors to Radionics, Inc., Burlington, Mass.

Continuation of application No. 08/736,792, Oct. 25, 1996. This application Aug. 17, 1998, Appl. No. 135,199. This patent is subject to a terminal disclaimer.

Int. Cl.[7] **G21K** *1/02*

U.S. Cl. 378—147 **4 Claims**



1. A collimator system for a treatment planning machine which delivers a beam comprising:

a. a circular collimator which defines a circular aperture for said beam, said circular aperture being positionally fixed with respect to said beam; and

b. at least one collimator jaw that can be moved into the projection of said circular aperture with respect to said beam so as to eclipse a portion of said beam before it enters said circular aperture;

whereby the combined beam aperture of said circular collimator and said collimator jaw deviates from a circular aperture by the degree that said collimator jaw intersects said projection of said circular aperture with respect to said beam; and

c. a conformal treatment planning system in cooperation with said circular collimator and said at least one collimator jaw to configure said circular collimator and said at least one collimator jaw with respect to a target volume based on input data from a scanner.

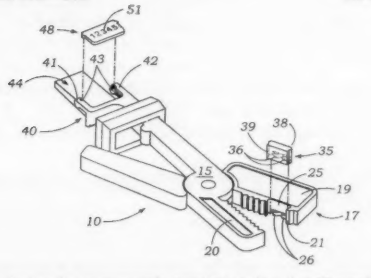
6,041,102
DATA-IMPRINTED DENTAL RADIOGRAPH DEVICE AND PROCESS

Kenneth M. Francsis, 975 E. Nerge Rd., Roselle, Ill. 60172

Filed Apr. 8, 1998, Appl. No. 57,241

Int. Cl.[7] **A61B** *6/14*

U.S. Cl. 378—165 **14 Claims**



1. A device for permanently imprinting dental radiographs with variable, predetermined data comprising:

means for temporarily and re-usably securing radiographic film intra-orally for examination of a tooth or teeth; and

means adjustably and removably associated with the securing means for positioning radio-opaque data-carrying means in proximal relation to said film;

whereby said film is permanently imprinted with said predetermined data.

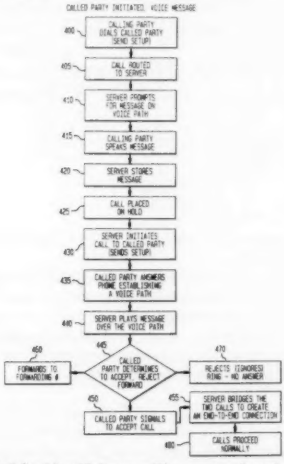
6,041,103
INTERACTIVE CALL IDENTIFICATION

Thomas F. La Porta, New York, N.Y., and Arun N. Netravali, Westfield, N.J., assignors to Lucent Technologies, Inc., Murray Hill, N.J.

Filed Apr. 16, 1996, Appl. No. 632,860

Int. Cl.[7] **H04M** *1/64;11/00;3/42*

U.S. Cl. 379—67.1 **48 Claims**



1. A method for identifying a calling party of a telephone call to a called party, the method comprising the steps of:

receiving said telephone call over a first telephone connection from said calling party, said telephone call directed to a telephone number of said called party dialed by said calling party;

determining whether said telephone number is a subscriber's telephone number or whether said calling party has entered an activation code with the dialed telephone number;

prompting said calling party to enter a message in both of the following situations:

a) when the telephone number is a subscriber's telephone number; and

b) when the calling party has entered an activation code with the dialed telephone number;

receiving said message over said first telephone connection from said calling party, said message containing user-user information, including an identification of said calling party;

establishing a second telephone connection to a called party in response to receiving said message;

sending said message over said second telephone connection to said called party;

receiving a call processing input over said second telephone connection from said called party; and

bridging said first telephone connection to said second telephone connection thereby establishing an end-to-end connection from said calling party to said called party, if said call processing input represents an instruction to accept the call.

6,041,104
METHOD AND SYSTEM FOR ORDERING A TELECOMMUNICATION SERVICE

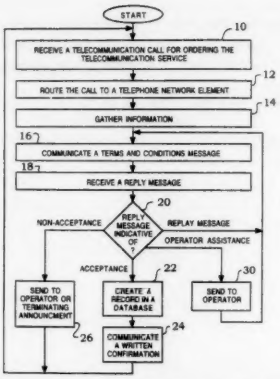
Marc Ira Lipton, Lincolnshire, and Gregory John Dunny, St. Charles, both of Ill., assignors to Ameritech Corporation, Hoffman Estates, Ill.

Filed Oct. 1, 1997, Appl. No. 942,342

Int. Cl.[7] **H04M** *1/64;11/00*

U.S. Cl. 379—67.1 **17 Claims**

1. A method of providing a session for ordering a telecommunication service, the method comprising the steps of:



receiving a telecommunication call for ordering the telecommunication service;

communicating a prerecorded terms and conditions contract message for the telecommunication service to an individual ordering the telecommunication service, the prerecorded terms and conditions contract message communicated to the individual during the telecommunication call and after the individual has indicated the telecommunication service being ordered;

receiving a reply message to the terms and conditions contract message from the individual, the reply message received during the telecommunication call, the reply message including a spoken message indicative of acceptance of the terms and conditions contract; and

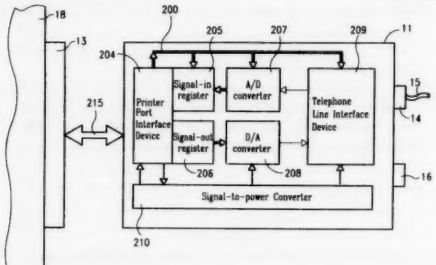
creating and maintaining a record of the session in a database, the record including a recorded audio representation of at least a portion of the telecommunication call which documents that the individual has affirmatively accepted the terms and conditions contract.

6,041,105

ADAPTER CIRCUITRY FOR COMPUTERS TO SUPPORT COMPUTER TELEPHONY

Chung-Yu Wu, Hsinchu, and Ching-Piao Su, Taipei, both of Taiwan, assignors to Umax Data Systems Inc., Hsinchu, Taiwan

Filed Sep. 1, 1998, Appl. No. 144,438
Int. Cl.[7] H04M *11/00*
U.S. Cl. 379—93.05 **17 Claims**



1. An external adapter circuitry for communicating a host computer with a telephone line, comprising:

telephone line interfacing means for receiving a signal-in from a telephone line and transmitting a signal-out to said telephone line;

A/D converting means for receiving said signal-in and outputting a digitized signal-in;

first storing means for latching said digitized signal-in;

printer port interfacing means for transmitting said digitized signal-in to said host computer and receiving a digitized signal-out from said host computer in response to a control signal;

second storing means for latching said digitized signal-out from said printer port interfacing means;

D/A converting means for inputting said digitized signal-out and outputting an analog signal-out; and

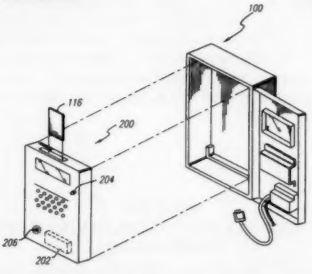
signal-to-power converting means for providing a high voltage converted from high voltage signals from a printer port of said host computer to said telephone line interfacing means, said A/D converting means, said first storing means, said printer port interfacing means, said second storing means, and said D/A converting means.

6,041,106

ACCESS CONTROL APPARATUS FOR USE WITH BUILDINGS, GATED PROPERTIES AND THE LIKE

Alex Parsadayan, and Walter Parsadayan, both of Laguna Niguel, Calif., assignors to Elite Entry Phone Corp., Lake Forest, Calif.

Continuation-in-part of application No. 08/681,615, Jul. 29, 1996. This application Jan. 15, 1997, Appl. No. 783,566.
Int. Cl.[7] H04M *11/00*
U.S. Cl. 379—102.06 **31 Claims**



25. A method of operating an access system, comprising the steps of:

providing an access control apparatus including a housing having a plurality of keys, an electronic communication device within the housing operably connected to a telephone system and to the outer keys, a microphone operably connected to the communication device, and a speaker operably connected to the communication device;

providing at least one peripheral device associated with a lockable entrance;

operably connecting the access control apparatus to the peripheral device;

operably connecting the access control apparatus to a telephone system;

establishing contact with the peripheral device from a remote location by way of the access control device; and

performing a service operation concerning the peripheral device from the remote location with the access control device;

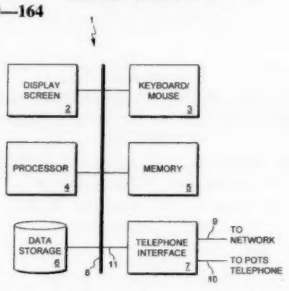
wherein the step of performing a service operation concerning the peripheral device comprises receiving information transmitted by the peripheral device concerning the status of the peripheral device at the remote location by way of the access control apparatus.

6,041,107

TELEPHONE EXTENSION SWITCH HOOK STATE DETECTION SYSTEM

Eric A. Jones, Glendale, and Greig R. Detering, Phoenix, both of Ariz., assignors to AG Communication Systems Corporation, Phoenix, Ariz.

Filed Apr. 30, 1998, Appl. No. 70,058
Int. Cl.[7] H04M *1/00*
U.S. Cl. 379—164 **11 Claims**



1. In a computer system, a system for detecting an off-hook extension phone for use in a local loop, comprising:

a data access arrangement operated to connect said detecting system to said local loop;

means to generate an analog signal on said local loop;

means to extract said analog generated signal from the local loop signal;

means to measure the amplitude of said extracted signal; and

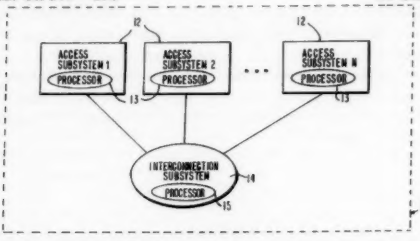
means to compare the amplitude of said extracted signal to a predetermined threshold amplitude value and to signal to said computer system if said amplitude of said extracted signal is less than said threshold amplitude value.

6,041,108

METHOD AND APPARATUS FOR INTELLIGENT NETWORK CALL HANDLING IN A TELEPHONE EXCHANGE

John Brewster, Middletown, and Mehmet Ulema, Redo Bank, both of N.J., assignors to Daewoo Telecom, Ltd., Inchon, Rep. of Korea

Filed Jun. 3, 1997, Appl. No. 868,459
Int. Cl.[7] H04M *3/00*
U.S. Cl. 379—196 **24 Claims**



1. A method for filtering calls in a switch system, the switch system including at least two access subsystems and at least one interconnection subsystem comprising the steps of:

storing a list of active filtering criteria in each of said at least two access subsystems;

receiving an incoming call at at least one access subsystem of said at least two access subsystems;

determining whether the incoming call matches any of the active criteria stored in the at least one access subsystem;

applying a filtering method associated with a matched active filtering criteria if the incoming call matches any one of the active filtering criteria:

determining whether a call should be blocked as a function of said filtering method; and

causing said access subsystem to block the incoming call if it is determined to block the incoming call as a function of the filtering method;

storing a list of active filtering criteria in each of said at least two access subsystems;

storing a filter method associated with each of the active filtering criteria in the interconnection subsystem;

inputting a change to the interconnection subsystem to the list of active filtering criteria and broadcasting the change to each access subsystem; and

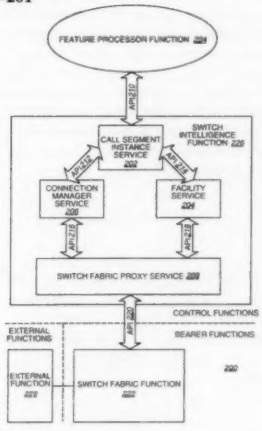
storing the change in the list of active filtering criteria in each of said at least two access subsystems.

6,041,109

TELECOMMUNICATIONS SYSTEM HAVING SEPARATE SWITCH INTELLIGENCE AND SWITCH FABRIC

Douglas Ross Cardy, Plano; Ken Rambo, Dallas, and Carol Waller, Allen, all of Tex., assignors to MCI Communications Corporation, Washington, D.C.

Filed Dec. 29, 1995, Appl. No. 580,712
Int. Cl.[7] H04M *7/00;3/00*
U.S. Cl. 379—201 **8 Claims**



1. An apparatus for decentralizing communication services in a telecommunications system, comprising:

a switch fabric which provides bearer functions;

a switch intelligence which provides control functions for said switch fabric, said switch intelligence logically separated from said switch fabric;

a switch fabric proxy service for providing a normalized interface between said switch fabric and said switch intelligence for all communications involving said switch fabric by interfacing to said switch fabric with any one of a plurality of application program interfaces and interfacing to said switch intelligence with a uniform application program interface; and

feature processor, said feature processor executing at least one telecommunications function, for interacting with said switch intelligence to thereby provide said telecommunications feature.

6,041,110

METHOD AND APPARATUS FOR PROVIDING A TELECOMMUNICATIONS SERVICE

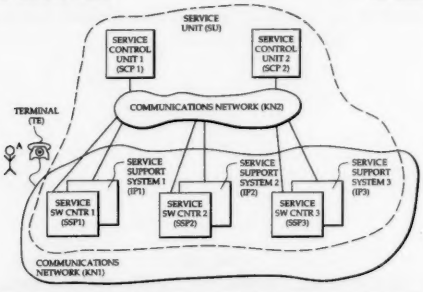
Wolfgang Lautenschlager, Weissach-Flacht, and Uwe Stahl, Leonberg, both of Germany, assignors to Alcatel, Paris, France

Filed Jun. 27, 1997, Appl. No. 883,891

Claims priority, application Germany, Jun. 28, 1996, 196 26 131

Int. Cl.[7] H04M *3/42*

U.S. Cl. 379—201 **18 Claims**



SERVICE UNIT (SU)
SERVICE CONTROL UNIT 1 (SCP 1)
SERVICE CONTROL UNIT 2 (SCP 2)
COMMUNICATIONS NETWORK (KN2)
TERMINAL (TE)
SERVICE SUPPORT SYSTEM 1 (IP1)
SERVICE SUPPORT SYSTEM 2 (IP2)
SERVICE SUPPORT SYSTEM 3 (IP3)
SERVICE SW CNTR 1 (SSP1)
SERVICE SW CNTR 2 (SSP2)
SERVICE SW CNTR 3 (SSP3)
COMMUNICATIONS NETWORK (KN1)

10. A service-providing system (SU) including part of a communications network (**KN1**), comprising at least one service logic (**SL1** to **SL3**) serving to provide a telecommunications service, a receiving unit (**KOM4**) for receiving a service request (**REQ1**) over the communications network (**KN1**) from a terminal (TE) requesting a telecommunications service, and a control unit (**CONTR1**, **CONTR3**) designed to activate the service logic or a service-specific one (**SL1**) of the service logics, characterized in that the service-providing system (SU) further comprises a load unit (LOAD) for loading a service-specific control program (PRO) into the requesting terminal (TE) upon receipt of the service request (**REQ1**), and that the activated service logic (**SL1**) is for cooperating with the service-specific control program (PRO) in the terminal (TE) in providing the telecommunications service, the cooperation in providing the telecommunications service carried out by an exchange of messages between the terminal (TE) and the service-providing system (SU).

6,041,111

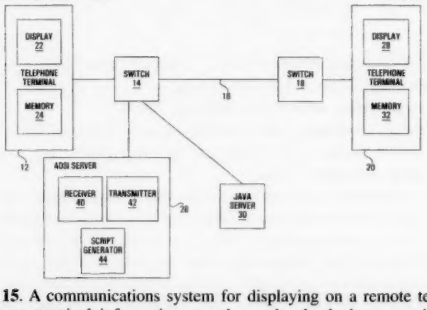
REMOTE TELEPHONE DATA ACCESS AND DISPLAY

Brian R. Shelton, Kanata, Canada, assignor to Nortel Networks Corporation, Montreal, Canada

Filed Dec. 1, 1997, Appl. No. 980,762

Int. Cl.[7] H04M *3/42*

U.S. Cl. 379—201 **16 Claims**



15. A communications system for displaying on a remote telephone terminal information stored at a local telephone terminal comprising:

(a) means for generating a request for information at a remote telephone terminal;

(b) means for transmitting said request to a network element;

(c) means for transmitting a script from said nework element to a local telephone terminal in response to said request;

(d) means for transmitting information from said local telephone terminal to said remote telephone terminal in response to said script; and

(e) means for displaying said information at said remote telephone terminal.

6,041,112

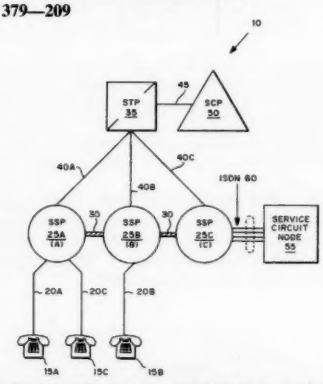
METHOD FOR TRANSFERRING SWITCH-BASED INFORMATION TO AN EXTERNAL NETWORK ELEMENT

Dale W. Malik, Dunwoody, Ga., assignor to BellSouth Intellectual Property Corporation, Wilmington, Del.

Filed Dec. 2, 1997, Appl. No. 982,652

Int. Cl.[7] H04M *3/48*

U.S. Cl. 379—209 **4 Claims**



1. In a telecommunications network including a switch functionally connected to a service control point (SCP), a method for storing automatic recall-related information in said SCP, said method comprising:

generating a packet indicating that a communication in association with a subscriber line functionally connected to said switch has gone unanswered;

sending said packet to said SCP;

in response to receiving said packet, causing said SCP to extract said automatic recall-related information from said packet; and

storing a directory number of a first subscriber terminal unit, a time stamp of said communication, and a privacy indicator of said automatic recall-related information of said communication at said SCP.

6,041,113

INTERFACE METHOD PERFORMED BY MODEM BETWEEN BASE STATION AND CONTROL STATION

Hyung-Taeg Ryoo, Kwacheon, Rep. of Korea, assignor to Samsung Electronics Co., Ltd, Rep. of Korea

Filed Dec. 11, 1997, Appl. No. 988,573

Claims priority, application Rep. of Korea, Feb. 18, 1997, 97-4847

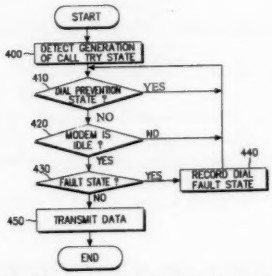
Int. Cl.[7] H04M *3/42*

U.S. Cl. 379—209 **13 Claims**

1. An interface method performed by a modem between a base station and a control station, comprising the steps of:

(a) detecting the generation of call try;

(b) checking whether or not a dial prevention state is generated;



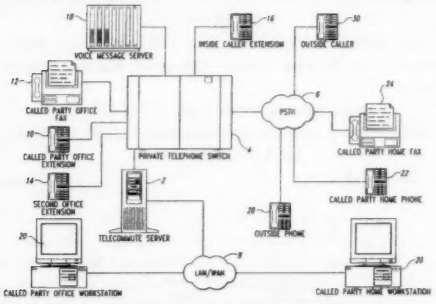
(c) checking a state of the modem when the dial prevention state was generated; and

(d) retrying the call in response to the state of the modem.

6,041,114
TELECOMMUTE SERVER

Kevin L. Chestnut, Seattle, Wash., assignor to Active Voice Corporation, Seattle, Wash.

Filed Mar. 27, 1997, Appl. No. 825,206
Int. Cl.[7] H04M *3/42*
U.S. Cl. 379—211 **41 Claims**



1. A method for managing a telecommunications system in which call forwarding is determined by whether a computer terminal is logged into a computer network, comprising:

a) receiving a call on a telephone system which is coupled to a computer network;

b) determining with a server the identity of a called party to whom said call should be directed;

c) identifying with the server one of a plurality of network logon devices associated with said called party that is logged-on to said computer network;

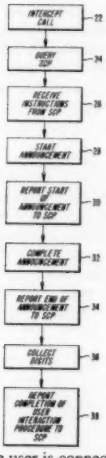
d) identifying with the server a telephone number associated with said logged-on network logon device; and

e) forwarding the call to said telephone number, the forwarded call bypassing the server.

6,041,115
USER INTERACTION PROCEDURE

Bart Jellema, Rijen; René Peeren; Louise Croughan, both of Osterhart, and Freek Aben, Rykevoort, all of Netherlands, assignors to Telefonaktiebolaget LM Ericsson, Stockholm, Sweden

Filed Jul. 17, 1997, Appl. No. 895,836
Claims priority, application United Kingdom, Jul. 19, 1996, 9615151
Int. Cl.[7] H04M *7/00;1/64;11/00;3/42*
U.S. Cl. 379—230 **9 Claims**

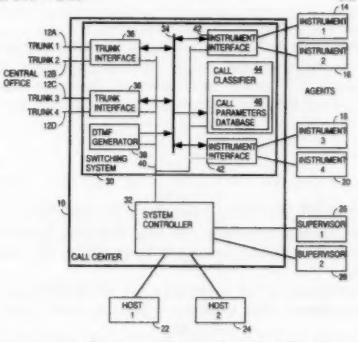


1. A method of handling a user interaction procedure during a telephone call, in a network including a switching point and a control point, in which the user is connected to the switching point and the switching point is connected to the control point, the user interaction procedure including a plurality of stages during which messages are sent from the switching point to a user, and from the user to the switching point, but not from the control point to the switching point, the method comprising sending at least one report from the switching point to the control point during the user interaction procedure.

6,041,116
METHOD AND APPARATUS FOR CONTROLLING OUTBOUND CALLS

John D. Meyers, Arlington, Tex., assignor to Aspect Telecommunications Corporation, San Jose, Calif.

Filed May 5, 1997, Appl. No. 850,990
Int. Cl.[7] H04M *3/00*
U.S. Cl. 379—244 **31 Claims**



1. An apparatus for processing outbound calls, the apparatus comprising:

a system controller to control placement of an outbound call to a called number, wherein the called number has an associated country;

a storage mechanism to store a plurality of sets of call classification parameters, wherein each set of call classification parameters is associated with a particular country and is indicative of a set of outbound call results for outbound calls to the particular country, the set of outbound call results including at least one answered result and at least one unanswered result; and

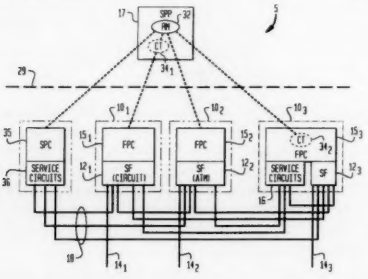
a call classifier coupled to the system controller, wherein the call classifier is to generate an outbound call result for the outbound call based on call classification parameters associated

with the country associated with the called number, the generated outbound call result being either an answered result, indicating that the outbound call was answered, or an unanswered result, indicating that the call was not answered.

6,041,117
DISTRIBUTED NETWORK CONTROL AND FABRIC APPLICATION INTERFACE

Frank J. Androski, Freehold; Nancy Binowski, Bridgewater; James Ehlinger, Colts Neck; Jerry Allen Robinson, Middletown, and Daniel Sheinbein, Elizabeth, all of N.J., assignors to AT&T Corp, New York, N.Y.

Filed Feb. 28, 1997, Appl. No. 808,298
Int. Cl.[7] H04M *3/00;7/00*
U.S. Cl. 379—268 **27 Claims**



1. A telecommunication network that includes a plurality of switching systems, each including a switching fabric for performing call connection processes and a control mechanism for the switching fabric, the improvement comprising:

at least one switch processing platform coupled to each of the switching systems for performing at least one of a call processing, service processing, signal message processing, address translation and routing functions, and for controlling call connection processes performed by the switching fabrics by

a) receiving a request for call processing, and

b) responsive to the call processing request, distributing at least one command to at least one switching system through its control mechanism to command said one switching fabric to perform said call connection process.

6,041,118
ARCHITECTURE FOR TELEPHONE SET

Alan Dean Michel, Nobleville, and Eric Williams, Indianapolis, both of Ind., assignors to Lucent Technologies Inc., Murray Hill, N.J.

Continuation-in-part of application No. 08/363,454, Dec. 22, 1994, abandoned. This application Jan. 22, 1997, Appl. No. 787,487.
Int. Cl.[7] H04M *1/00*
U.S. Cl. 379—391 **7 Claims**

1. A communication apparatus, comprising:

a) a telephone, in which a signal path runs between

i) a handset, which produces and receives analog signals, and

ii) an input, which is connectable to an analog telephone line;

b) a digital signal processor (DSP), interconnected in the signal path, for communicating with both the input and the handset;

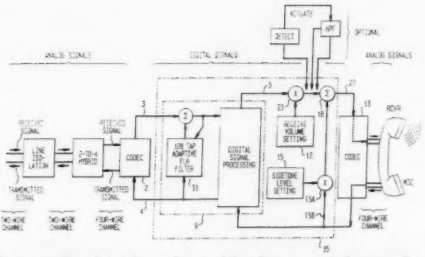
c) interfaces, for interfacing between

i) the telephone line and the DSP, and

ii) the DSP and the handset;

d) a digital high-pass filter, for boosting high frequencies in received signals;

e) means for adjusting volume of signals produced by the receiver; and

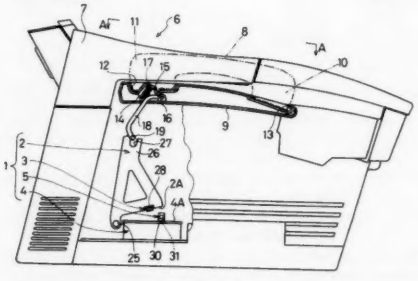


f) means for detecting when said volume exceeds a predetermined level and, in response, activating said high-pass filter.

6,041,119
HANDSET DETECTION DEVICE FOR USE IN TELEPHONES

Hiroyuki Kato, and Masahiko Sasa, both of Nagoya, Japan, assignors to Brother Kogyo Kabushiki Kaisha, Nagoya, Japan

Filed Apr. 24, 1998, Appl. No. 65,513
Claims priority, application Japan, May 6, 1997, 9-115422
Int. Cl.[7] H04M *1/00*
U.S. Cl. 379—424 **15 Claims**



1. A handset detection device for use in telephones provided with a handset and a handset holding base, for detecting the handset at a point of time whereat the handset is placed on the handset holding base, the handset detection device comprising:

a movable member which moves in a predetermined direction upon a placement of the handset on the handset holding base;

a stopper member for stopping the movable member by coming into contact with a contact portion of the movable member, the stopper member being disposed below the movable member;

a detector for detecting the movable member stopped by the stopper member to detect the placement of the handset on the handset holding base, the detector being disposed on the stopper member; and

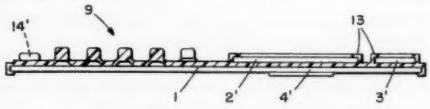
an elastic member for reducing a moving speed of the movable member before it is stopped by the stopper member coming into contact with the contact portion of the movable member, the elastic member being disposed in a vicinity of the contact portion of the movable member.

6,041,120

INSTALLATION AND ASSEMBLY HOLDING MAT FOR A TELEPHONE

Jari Olkkola, Salo, Finland, assignor to Nokia Mobile Phones Limited, Espoo, Finland

Continuation of application No. 08/529,018, Sep. 15, 1995, abandoned. This application Jun. 13, 1997, Appl. No. 874,800.
Claims priority, application Finland, Sep. 16, 1994, 944300
Int. Cl.[7] H04M *1/00*
U.S. Cl. 379—433 **15 Claims**



1. In a hand telephone having a body, a printed circuit board located inside the body, and at least one electrical component electrically connected to the printed circuit board, the body having an aperture proximate the component, wherein the improvement comprises:

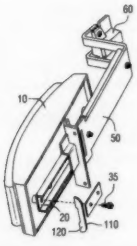
a one-piece mat located inside the body, the mat having the printed circuit board fixedly connected onto a first side of the mat and the electrical component located in a hole in the mat at an opposite second side of the mat, wherein the mat is securely mounted between two parts of the body and forms a sealing packing between the two parts of the body.

6,041,121

HANDSET ACCESS MECHANISM AND METHOD

Vinh Hew Diep, Milpitas, and Najibullah Naikal, Union City, both of Calif., assignors to Harris Corporation, Melbourne, Fla.

Filed Jun. 30, 1997, Appl. No. 885,839
Int. Cl.[7] H04M *1/00*
U.S. Cl. 379—446 **18 Claims**



1. A latching access mechanism for a telephone comprising:

an upper slide for attachment to a telephone base;

a latch mounted on alternatively supporting said upper slide in either a first retracted position or in a second extended position;

lower slide for engaging and slidably supporting said upper slide;

a mounting bracket secured to said lower slide;

a latching mechanism attached on said mounting bracket,

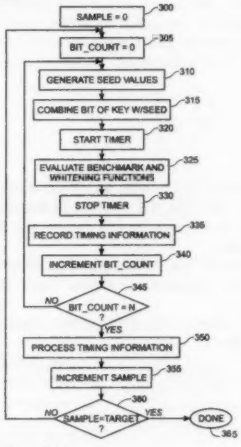
wherein said upper slide is engaged by and may slidably travel along said lower slide so that said latch may be mated with said latching mechanism in the retracted or extended position.

6,041,122

METHOD AND APPARATUS FOR HIDING CRYTOGRAPHIC KEYS UTILIZING AUTOCORRELATION TIMING ENCODING AND COMPUTATION

Gary L. Graunke, Beaverton, and David W. Aucsmith, Portland, both of Oreg., assignors to Intel Corporation, Santa Clara, Calif.

Filed Feb. 27, 1998, Appl. No. 32,594
Int. Cl.[7] H04L *9/00*
U.S. Cl. 380—21 **56 Claims**



1. A method comprising:

generating a plurality of timing statistics based on an amount of time required to evaluate a particular function given a known input for a series of computations used in deriving the cryptographic key:

deriving the cryptographic key in a bitwise fashion based, at least in part, on a comparison of the generated timing statistics and timing statistics stored in the electronic device to determine whether bits of a derived cryptographic key correspond to bits in the cryptographic key; and

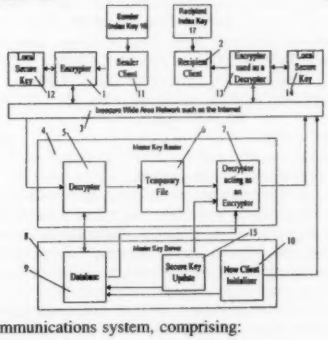
using a subset of the derived cryptographic key for authentication prior to complete derivation of the cryptographic key.

6,041,123

CENTRALIZED SECURE COMMUNICATIONS SYSTEM

Bryan Colvin, Sr., San Jose, Calif., assignor to Allsoft Distributing Incorporated, San Jose, Calif.

Filed Jul. 1, 1996, Appl. No. 673,122
Int. Cl.[7] H04L *9/00*
U.S. Cl. 380—49 **14 Claims**



1. A communications system, comprising:

a transmitting client and a receiving client, each client having an associated secure key and an encryptor/decryptor for encrypting and decrypting messages using the secure key; and

a master key router remotely disposed from the transmitting client and the receiving client having a decryptor for decrypting messages encrypted with the secure key of the transmitting client, and having au encryptor for encrypting messages with the secure key of the receiving client;

wherein messages between the transmitting client and the receiving client pass through the master key router, and wherein the master key router is configured to decrypt the message using the secure key of the sending client and a unique algorithm associated with the sending client and encrypt the message using the secure key of the receiving client and a unique algorithm associated with the receiving client.

6,041,124

RADIO COMMUNICATION SYSTEM AND METHOD AND MOBILE COMMUNICATION TERMINAL DEVICE

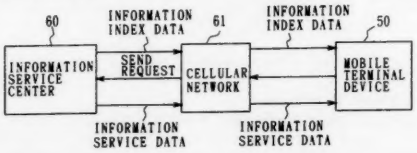
Takehiro Sugita, Kanagawa, Japan, assignor to Sony Corporation, Tokyo, Japan

Filed Dec. 18, 1996, Appl. No. 769,003

Claims priority, application Japan, Dec. 19, 1995, P07-349356

Int. Cl.[7] **H04L** *9/00;* **H04B** *1/69;* **H04J** *13/02*

U.S. Cl. 380—270 **27 Claims**



22. A radio communication system for enabling radio communications between a base station unit and a mobile communication terminal device using a code division multiple access method, including means for transmitting requested information different from speech information from said base station unit to said mobile communication terminal device,

said base station unit including means for transmitting update data corresponding to said requested information to said mobile communication terminal device, and

said mobile communication terminal device including means for determining whether said requested information has been updated.

6,041,125

ACTIVE ACOUSTIC WALL

Masaharu Nishimura; Keizo Ohnishi; Chiaki Yasuda; Shinichiro Kajii, all of Takasago, Japan; William P. Patrick, and Anthony C. Zander, both of East Hartford, Conn., assignors to Mitsubishi Jukogyo Kabushiki Kaishal, Tokyo, Japan, and United Technologies Corporation, Conn.

Filed Dec. 19, 1996, Appl. No. 769,381

Claims priority, application Japan, Aug. 15, 1996, 8-215685

Int. Cl.[7] **A61F** *11/06*

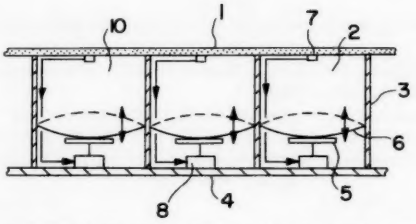
U.S. Cl. 381—71.4 **32 Claims**

1. An active acoustic wall for absorbing sound waves across a broadband frequency range, comprising:

a perforated plate comprising at least one selected from the group consisting of a perforated member and a porous material, said perforated plate having a front side and a back side;

a back wall spaced from said back side of said perforated plate such that a space is formed between said back side of said perforated plate and said back wall;

a plurality of partition plates dividing said space between said perforated plate and said back wall into a plurality of sections;



oscillation plates provided within each of said sections, respectively;

driving units for driving said oscillation plates;

two sound pressure detectors provided within each of said sections providing first and second signals; and

a signal processing unit connected with said sound pressure detectors and said driving units, receiving each of said first and second signals, calculating the impedance of each of said sections, comparing the impedance to a predetermined value, and providing an output signal to each of said driving units such that each of said oscillation plates oscillates and creates an impedance which approximates said predetermined value.

6,041,126

NOISE CANCELLATION SYSTEM

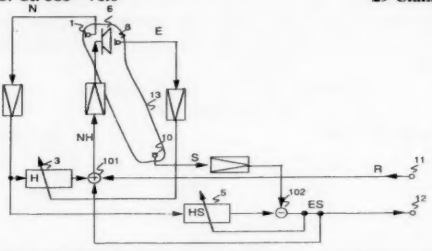
Kenichi Terai, Shijyonawate, and Hiroyuki Hashimoto, Daito, both of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Osaka, Japan

Filed Jul. 24, 1996, Appl. No. 685,573

Claims priority, application Japan, Jul. 24, 1995, 7-187467

Int. Cl.[7] **A61F** *11/06*

U.S. Cl. 381—71.6 **29 Claims**



10. A noise cancellation system having a mouth position and an ear position, and comprising:

noise detecting means for detecting noise,

a talking microphone installed near the mouth position,

a speaker installed near the ear position,

filter means connected to the noise detecting means,

adding/subtracting means for adding or subtracting by using an output of the talking microphone and an output of the filter means, and sending out the result to a talking signal output terminal, and

voice detecting means for detecting a voice signal from the output signal from the talking microphone,

wherein the filter means receives the detected noise, and a coefficient of the filter means is updated by using the added or subtracted result directly from the adding/subtracting means,

the coefficient of the filter means is not updated when the voice detecting means has detected the voice signal, and

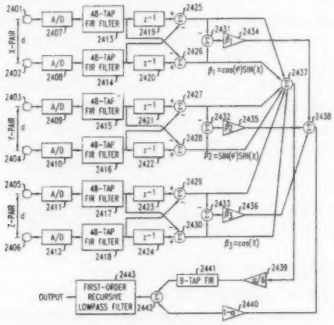
the signal to be sent to the talking signal output terminal is also substantially sent to the speaker.

6,041,127

STEERABLE AND VARIABLE FIRST-ORDER DIFFERENTIAL MICROPHONE ARRAY

Gary Wayne Elko, Summit, N.J., assignor to Lucent Technologies Inc., Murray Hill, N.J.

Filed Apr. 3, 1997, Appl. No. 832,553
Int. Cl.[7] H04R *3/00*
U.S. Cl. 381—92 **26 Claims**



1. A microphone array operating over a given audio frequency range, the microphone array comprising:

a plurality of individual pressure-sensitive microphones which generate a corresponding plurality of individual microphone output signals, each individual pressure-sensitive microphone having a substantially omnidirectional response pattern, the plurality of individual microphones comprising three or more individual microphones arranged in an N-dimensional spatial arrangement where N>1, the spatial arrangement locating each of said individual microphones at a distance from each of the other individual microphones which is smaller than a minimum acoustic wavelength defined by said audio frequency range of operation; and

a processor adapted to compute a plurality of difference signals and an omni signal having a substantially omnidirectional response pattern, each difference signal comprising an algebraic difference between two of said individual microphone output signals corresponding to a pair of said individual microphones, the omni signal having an amplitude and a phase and comprising an additive aggregation of two or more of said individual microphone output signals, the processor further adapted to selectively weight each of said plurality of difference signals and said omni signal, and to produce a microphone array output signal based upon a combination of said selectively weighted difference signals and said selectively weighted omni signal, such that the microphone array output signal thereby has a steerable response pattern having an orientation of maximum reception based upon said selective weighting of said plurality of difference signals and said omni signal.

6,041,128

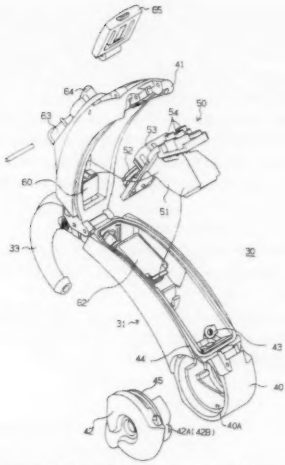
BATTERY RECEIVING CHAMBER AND HEARING AID

Yoshiyuki Narisawa, and Toshiyuki Araki, both of Tokyo, Japan, assignors to Rion Kabushiki Kaisha, Tokyo, Japan

Filed Jan. 30, 1995, Appl. No. 380,553
Claims priority, application Japan, Jan. 31, 1994, 6-027389; Feb. 4, 1994, 6-033063; Feb. 4, 1994, 6-033160
This patent is subject to a terminal disclaimer.
Int. Cl.[7] H04R *25/00*
U.S. Cl. 381—322 **7 Claims**

4. A waterproof externally worn hearing aid, comprising:

a concave part provided in a first side face of a case, wherein said case is formed in a curvature shape as a whole and said first side face of said case touches skin of a user when said hearing aid is worn;



an air vent provided in a bottom face of said concave part for communicating with the interior of said case and the exterior of said case;

waterproof means being disposed so as to block said air vent, for supplying air from the outside of said case to the interior of said case through said air vent, and for preventing invasion of moisture from the outside of said case through said air vent; and

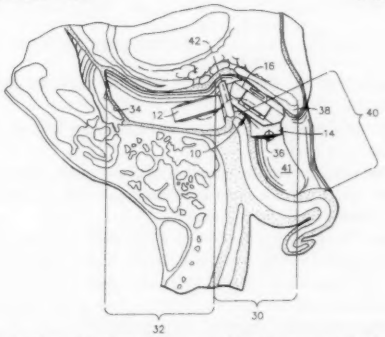
a slot extending from said concave part to a second side face of said case on said hearing aid, wherein said second side face of said case of said hearing aid does not touch skin of the user when said hearing aid is worn.

6,041,129

HEARING APPARATUS

Roger A. Adelman, 957 Riverwatch Dr., Villa Hills, Ky. 41017-3769

Continuation of application No. 08/303,161, Sep. 8, 1994, abandoned. This application Jan. 18, 1996, Appl. No. 599,445.
Int. Cl.[7] H04R *25/00*
U.S. Cl. 381—328 **3 Claims**



1. A hearing aid adapted for use with a human ear having an external sound collecting surface and an auditory canal, the canal having a tympanic membrane at its innermost terminus, a bony canal portion extending outward from the tympanic membrane to an anatomical position where the canal continues as a cartilaginous part, said cartilaginous part having a S-shaped sigmoid portion and an outermost canal entrance portion, the sigmoid portion being anatomically deep relative to the entrance portion, the entrance portion extending to a tragus, said canal entrance portion providing

access to the auditory canal for airborne sound, said canal entrance being opposite to a conchal bowl which collects and aims sound that has been captured by the external sound collecting surface toward said canal entrance portion, the hearing aid comprising:

(a) a microphone for receiving airborne sound, said microphone being placed within the auditory canal and being positioned anatomically deep relative to both the tragus and the outermost entrance to the external auditory canal with its receiving surface facing the conchal bowl, said microphone being operative to produce electrical signals in response to the airborne sound waves it receives;

(b) an electronic circuit operative to produce a processed output signal in response to the electrical signals produced by the microphone; and

(c) a speaker positioned in the external auditory canal responsive to the output signal of the electronic circuit for converting the output signal into sound waves.

6,041,130

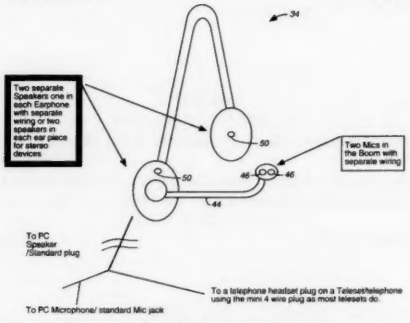
HEADSET WITH MULTIPLE CONNECTIONS

Raymond G. Goss, Austin, Tex., assignor to MCI Communications Corporation, Washington, D.C.

Filed Jun. 23, 1998, Appl. No. 103,114

Int. Cl.[7] **H04R** *25/00*

U.S. Cl. 381—374 **6 Claims**



34
Two separate Speakers one in each Earphone with separate wiring or two speakers in each ear piece for stereo devices

50
46
46
Two Mics in the Boom with separate wiring
44
To PC Speaker /Standard plug
To a telephone headset plug on a Telesetitelephone using the mini 4 wire plug as most telesets do.
To PC Microphone/ standard Mic jack

1. A headset for communicating with two separate devices, comprising:

a mounting member for mounting and holding the headset on the head of a wearer;

at least a first speaker for receiving input communication signals and converting the input communication signals to audible communications for the wearer;

means for connecting the speaker to the mounting member for holding the speaker adjacent to an ear of the wearer;

first and second microphones for receiving audible communications from the wearer and converting said audible communications to output communication signals;

a boom member connecting the microphones to the mounting member for holding the microphones adjacent to the mouth of the wearer; and

a signal conducting circuit for transmitting input communication signals from at least the first device to the first speaker, and for transmitting output communications from the first and second microphones to the first and second devices respectively.

6,041,131

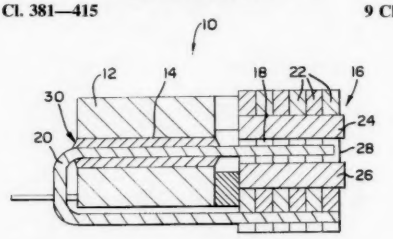
SHOCK RESISTANT ELECTROACOUSTIC TRANSDUCER

Dennis Ray Kirchhoefer, Plainfield; Thomas Edward Miller, Arlington Heights, and Paris Tsangaris, Naperville, all of Ill., assignors to Knowles Electronics, Inc., Itasca, Ill.

Filed Jul. 9, 1997, Appl. No. 890,075

Int. Cl.[7] **H04R** *1/00*

U.S. Cl. 381—415 **9 Claims**



1. A hearing aid transducer comprising:

a coil defining an elongated tunnel;

a magnet structure defining an elongated gap in axial alignment with the tunnel;

an armature aperture including the tunnel within the coil and the gap within the magnet structure;

an armature extending through the armature apertures; and

a fluid with a viscosity greater than air within at least a portion of the armature aperture and at least partially maintained therein by capillary attraction.

6,041,132

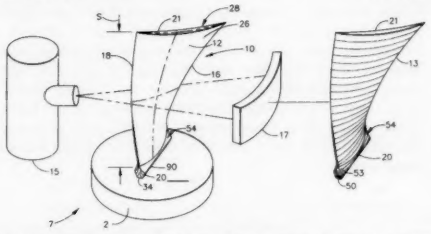
COMPUTED TOMOGRAPHY INSPECTION OF COMPOSITE PLY STRUCTURE

Ralph G. Isaacs, Cincinnati, and Joseph M. Portaz, Hamilton, both of Ohio, assignors to General Electric Company, Cincinnati, Ohio

Filed Jul. 29, 1997, Appl. No. 902,565

Int. Cl.[7] **G06K** *9/00;* **A61B** *6/00*

U.S. Cl. 382—100 **20 Claims**



1. A computerized method for displaying an image of a subject ply of a subject object made of a composite material, said method comprising the steps of:

(a) generate and store a reference model of a subject object made of a composite material having a plurality of actual plies, said reference model comprising at least one reference ply in a Non-Euclidian coordinate system and corresponding Euclidian coordinates;

(b) three-dimensionally X-ray scan the subject object and use computed tomography (CT) to produce subject multiple slice data comprising subject CT slices that are substantially normal to the actual plies of the subject object;

(c) transform points of the reference ply to a Euclidian coordinate system of the subject object and register the points to the subject object; and

(d) determine intensity values of transformed and registered points in the Euclidian coordinate system from at least some of the slice data in the vicinity of the transformed points.

6,041,133

METHOD AND APPARATUS FOR FINGERPRINT MATCHING USING TRANSFORMATION PARAMETER CLUSTERING BASED ON LOCAL FEATURE CORRESPONDENCES

Andrea Califano, New York, N.Y.; Scott Eric Colville, Madison, Wis., and Robert Steven Germain, Tuckahoe, N.Y., assignors to International Business Machines Corporation, Armonk, N.Y.

1. In a system wherein at least one fingerprint image is stored in a database, a method for generating and storing data characterizing said fingerprint image, the method comprising the steps of:

identifying a plurality of feature points in said fingerprint image, wherein said feature points are derived from singularities in ridge patterns in said fingerprint image;

grouping said plurality of feature points into a first plurality of subsets, wherein each subset is associated with a predetermined number K of feature points, wherein K is an integer in the range K>3;

for at least one subset of said first plurality of subsets of feature points,

generating an entry comprising an identifier that identifies said fingerprint image,

generating a key that corresponds to said at least one subset of feature points, wherein said key characterizes said fingerprint image in the vicinity of said at least one subset of feature points wherein said key is based upon at least one of:

ridge count data which represents a ridge count between pairs of feature points in said at least one subset of feature points,

distance data which represents distance between pairs of feature points in said at least one subset of feature points, and

ridge angle data which represents local direction of a ridge associated with feature points in said at least one subset of feature points; and

storing said entry in a memory, wherein said key is associated with said entry.

6,041,134

ERGONOMIC FINGERPRINT READER HOUSING

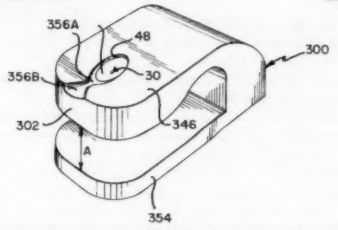
John Michael Merjanian, Burlington, Mass., assignor to The National Registry, Inc., St. Petersburg, Fla.

Continuation of application No. 08/836,242, filed as application No. PCT/US95/14374, Oct. 28, 1995, Pat. No. 5,920,642. This application Feb. 10, 1999, Appl. No. 248,063.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **G06K** *9/00*

U.S. Cl. 382—126 **20 Claims**



1. A housing for a fingerprint acquisition device, comprising:

a platen having a platen surface adapted to be contacted by a digit of a person's hand, and

first and second surfaces,

the first surface having an aperture therethrough, the platen being disposed within the housing and the platen surface being in register with the aperture,

the second surface being displaced from the first surface to provide a grasping surface,

the housing being shaped to orient the digit relative to the platen to ensure a firm grip of the housing and also being shaped such that the second surface contacts four digits of the user's hand while a chosen, fifth digit is positioned on the platen in the first surface.

FAST INTERACTIVE OFF-LINE PROCESSING METHOD FOR RADIOGRAPHIC IMAGES

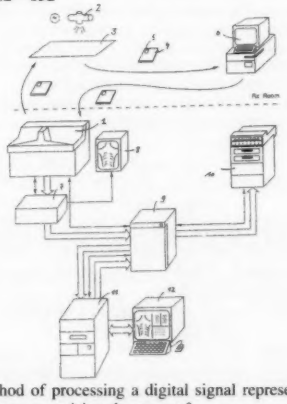
Tom Guido Buytaert, Nieuwelei 58, B-2640 Mortsel; Stefan Clemens Van de Velde, Steenbergdstraat 8, B 1982 Elewijt, and Pieter Paul Vuylsteke, Quinten Matsijslei 3, B 2640 Mortsel, all of Belgium

Continuation-in-part of application No. 08/643,556, May 6, 1996, which is a continuation of application No. 08/083,914, Jun. 28, 1993, Pat. No. 5,546,473. This application Nov. 6, 1997, Appl. No. 965,577.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **G06K** *9/00*

U.S. Cl. 382—132 **14 Claims**



1. A method of processing a digital signal representation of an original image comprising the steps of:

1)—applying a decomposition transformation to said image to transform it into a decomposed image comprising a sequence of detail images at multiple successively lower spatial resolution levels and a residual image at a still lower resolution level, wherein each detail image represents the amount of local variation of pixel values within said original image at the resolution level of the detail image and wherein a residual image is an approximation of said original image with omission of all variations comprised in said detail images,

2)—storing said detail images and said residual image into a memory,

3)—retrieving from said memory detail images up to a predetermined resolution level among said multiple resolution levels, and said residual image,

4)—processing retrieved detail images in accordance with a set of processing parameters,

5)—generating a reconstructed image by applying the inverse of the decomposition transformation to the images processed in step 4 and to the residual image,

6)—displaying said reconstructed image and evaluating it,

7)—amending the numerical values of said processing parameters based on the result of said evaluation and repeating method steps 3 to 6 until the result of said evaluation satisfies an operator.

RADICAL DEFINITION AND DICTIONARY CREATION FOR A HANDWRITING RECOGNITION SYSTEM

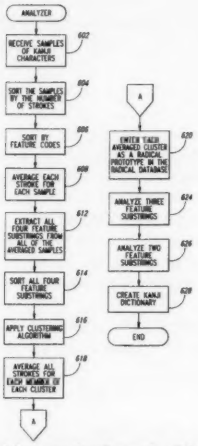
Michael Van Kleeck, Seattle, Wash., assignor to Microsoft Corporation, Redmond, Wash.

Filed Aug. 25, 1995, Appl. No. 519,425

Int. Cl.[7] G06K *9/72*

U.S. Cl. 382—185 **24 Claims**

1. A method in a computer system for identifying radicals for a plurality of Kanji characters, each of the plurality of Kanji characters comprising at least one radical, the method comprising:



receiving handwriting samples for each of the plurality of Kanji characters, each handwriting sample comprising at least one stroke;

grouping the handwriting samples for each of the plurality of Kanji characters by the number of strokes within each handwriting sample;

categorizing each stroke of each handwriting sample based on the shape of the stroke;

averaging the handwriting samples within each group that have the same categorization of strokes;

determining characteristics common to two or more of the averaged samples;

identifying the characteristics common to two or more of the averaged samples as radicals;

storing the identified radicals into the computer system; and

mapping each of the plurality of Kanji characters onto the at least one radical that comprises the Kanji character.

6,041,138

METHOD AND DEVICE FOR EXTRACTING FEATURES FROM GRAY-SCALE IMAGE AND GENERATING BOUNDARIES OF DOCUMENT ELEMENTS

Hirobumi Nishida, Yokohama, Japan, assignor to Ricoh Company, Ltd., Tokyo, Japan

Filed Jul. 17, 1997, Appl. No. 896,142

Claims priority, application Japan, Aug. 5, 1996, 8-206268

Int. Cl.[7] G06K *9/62*

U.S. Cl. 382—197 **13 Claims**

1. A method of extracting features from a gray-scale image, said method comprising the steps of:

a) generating polygons which approximate a curved surface represented by said gray-scale image;

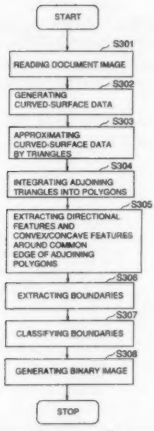
b) extracting features with respect to common edges of adjoining polygons; and

c) generating boundaries of document elements based on said features,

wherein said step b) comprises the steps of

b1) cutting said surface by a horizontal plane to generate intersection lines between said horizontal plane and said polygons around each one of said common edges,

b2) extracting directional features with respect to each one of said common edges based on said intersection lines, and



b3) extracting convex/concave features with respect to each one of said common edges based on said intersection lines.

CHARACTER RECOGNITION MACHINE UTILIZING LANGUAGE PROCESSING

Hiroshi Yamamoto, Katano; Hisao Niwa, Osaka; Yoshihiro Kojima, Kobe; Susumu Maruno, Osaka; Kazuhiro Kayashima, Hirakata; Toshiyuki Kouda, Nara; Hidetsugu Maekawa, Hirakata; Satoru Ito, Katano, and Yasuharu Shimeki, Suita, all of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Osaka, Japan

Continuation of application No. 08/125,658, Sep. 23, 1993, abandoned. This application Aug. 10, 1995, Appl. No. 513,294.

Claims priority, application Japan, Sep. 28, 1992, 4-257801; Dec. 10, 1992, 4-330169; Dec. 10, 1992, 4-330170; Mar. 12, 1993, 5-051918; Sep. 7, 1993, 5-221766

Int. Cl.[7] G06K *9/68*

U.S. Cl. 382—231 **7 Claims**

1. A character recognition machine having a language processing portion capable of processing language, said language processing portion comprising:

a character string image storage portion for storing an image input;

a word search portion for receiving a set of candidate characters and determining a set of candidate words, using a word dictionary, based on a degree of similarity between the candidate characters and the characters in various character positions in the character string image;

a phrase search portion for finding candidate phrases from the set of candidate words, using a grammatical dictionary;

a phrase evaluating value-calculating portion for calculating correctness of each phrase in terms of vocabulary and grammar;

a phrase-selecting portion for selecting one phrase, based on evaluating values of phrases, and producing a modified character string;

a character recognition portion for recognizing a portion of a character image corresponding to one character and producing a set of character categories and their degrees of similarity; and

a candidate character comparator portion which compares a character category having a maximum degree of similarity and applied from said character recognition portion with said corresponding modified character string and, when said character category differs from said modified character string, produces both a modified character category and a character position corresponding to the modified character category as additional learning characters to said character recognition portion.

6,041,142

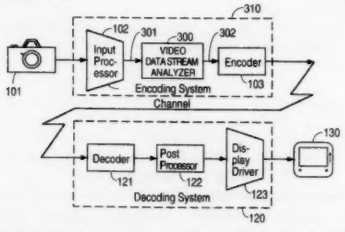
ANALYZER AND METHODS FOR DETECTING AND PROCESSING VIDEO DATA TYPES IN A VIDEO DATA STREAM

R. Padmanabha Rao, Sunnyvale, and Amanda L. Chin, Fremont, both of Calif., assignors to General Instrument Corporation, Horsham, Pa.

Division of application No. 08/162,511, Dec. 2, 1993, Pat. No. 5,828,786. This application Apr. 8, 1996, Appl. No. 630,089.

Int. Cl.[7] G06K *9/36*

U.S. Cl. 382—232 **10 Claims**



1. A method for improving encoding efficiency of a video data stream, said method comprising the steps of:

analyzing each frame in said video data stream to detect frames that include a mid-frame edit in real time, wherein said mid-frame edit comprises odd and even parity fields that belong to different scenes, wherein said different scenes differ in video two and frame rate;

dropping a first field in a frame in which a mid-frame edit was detected in real time; and

replacing said first field with a second field in said frame in which a mid-frame edit was detected in real time thereby eliminating an abrupt change in activity with said frame and so improving encoding efficiency.

6,041,143

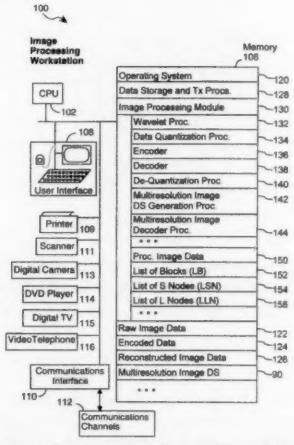
MULTIRESOLUTION COMPRESSED IMAGE MANAGEMENT SYSTEM AND METHOD

Charles K. Chui, Menlo Park, and Lefan Zhang, Sunnyvale, both of Calif., assignors to Teralogic Incorporated, Mountain View, Calif.

Filed Apr. 14, 1998, Appl. No. 60,398

Int. Cl.[7] G06K *9/36*

U.S. Cl. 382—232 **22 Claims**



1. Image processing apparatus, for use in conjunction with an image display device, the image processing apparatus comprising:

a memory device for storing data, including a first image data structure, the first image data structure including a first array of wavelet transform coefficients corresponding to a full resolution image;

a data processor coupled to the memory device;

a multiresolution image management procedure, executable by the data processor, including instructions for generating an image at any of a plurality of selectable resolution levels, the instructions including:

image reconstruction instructions for applying an inverse wavelet or wavelet-like transform to a specified set of image data so as to generate image data for displaying a corresponding image on the image display device; and

image data extraction instructions, for use when an image resolution level lower than full resolution is selected, wherein the image data extraction instructions generate a second image data structure from the first image data structure by extracting a subset of the wavelet transform coefficients from the first array and storing the extracted subset in a second array in the second image data structure;

wherein the image reconstruction instructions operate on the second image data structure when an image resolution level lower than full resolution is selected and operate on the first image data structure when a full image resolution is selected.

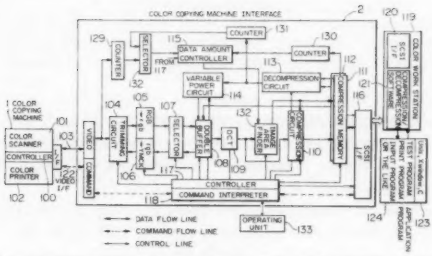
1. An image processing apparatus comprising:

input means for inputting non-compressed image data for each of a plurality of pixels:



first counter means for counting a first total amount of non-compressed image data which has been input by said input means and outputting a first counted value representing the first total amount, wherein the first total amount of the non-compressed image data is independent of the spatial characteristics of the non-compressed image data;

compression means for compressing the non-compressed image data input by said input means, wherein the compression is controlled in accordance with a controllable parameter that controls a compression ratio, said compression means including orthogonal transforming means for transforming the image data into orthogonal transformed coefficients and quantizing means for quantizing the orthogonal transformed coefficients based on the controllable parameter;

second counter means for counting a second total amount of compressed image data which has been compressed by said compression means from the input image data and outputting a second counted value representing the second total amount; and

control means for controlling the parameter used by said compression means in accordance with the first and second counted values.

DEVICE AND METHOD FOR SMOOTHING PICTURE SIGNAL, DEVICE AND METHOD FOR ENCODING PICTURE AND DEVICE AND METHOD FOR DECODING PICTURE

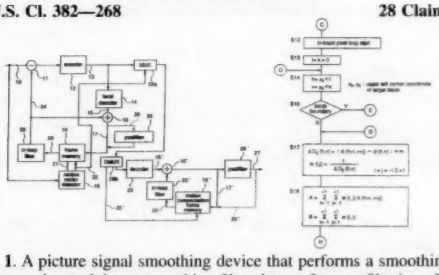
Takaaki Hayashi, Fukuoka, and Minoru Etoh, Katano, both of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Japan

Continuation-in-part of application No. 08/742,909, Nov. 1, 1996, abandoned. This application Jul. 15, 1998, Appl. No. 115,907.

Claims priority, application Japan, Nov. 2, 1995, 7-285838; Nov. 5, 1996, 8-292447

Int. Cl.[7] **G06K** *9/40;9/36*

U.S. Cl. 382—268 **28 Claims**



1. A picture signal smoothing device that performs a smoothing process by applying a smoothing filter that performs a filtering of a sampled and digitized picture signal by weighted mean of a target pixel and its surrounding pixels, including:

means for detecting a difference between the target pixel and the surrounding pixels;

means for taking an absolute value that represents a magnitude of the difference;

means for adding a non-negative value to the absolute value that represents a magnitude of the difference thus detected, wherein said non-negative value is equal for all surrounding pixels;

means for taking an inverse number of the value after the adding and thereby generating a weighting factor;

means for multiplying a value after taking of the inverse number, and the surrounding pixels value together;

means for taking a sum (A) of a plurality of values after the multiplying;

means for taking a sum (B) of a plurality of weighting factors alone;

means for normalizing the sum (A) by dividing the same by the sum (B) of the weighting factors; and

means for smoothing the target pixel in accordance with the normalized sum (A).

IMAGE READING APPARATUS FOR READING BOOK-LIKE DOCUMENTS

Koichi Kamon, Takatsuki, and Shinya Matsuda, Kyoto, both of Japan, assignors to Minolta Co., Ltd., Osaka, Japan

Filed Feb. 9, 1996, Appl. No. 599,380

Claims priority, application Japan, Feb. 14, 1995, 7-050467

Int. Cl.[7] **G06K** *9/40*

U.S. Cl. 382—274 **22 Claims**

21. An image reader for reading a book document placed on a document platen in a face upward condition, said image reader comprising:

a shading reference panel provided beside the document platen,

an image reading device for reading the book document and the shading reference panel, and for outputting image data,

first detecting means for detecting a height distribution of the book document, said height distribution comprising a plurality of vertical height measurements of a document surface above the platen,

second detecting means for detecting an illuminance irregularity in accordance with the image data corresponding to the shading reference panel,

calculating means for calculating shading correction data based on analysis of an elevation difference between the shading reference panel and the document surface and the illuminance irregularity corresponding to the shading reference panel, and

shading correction means for correcting an illuminance irregularity of the image data corresponding to the book document in accordance with the shading correction data.

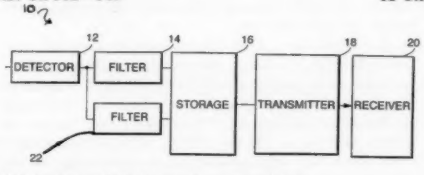
CONTENT-BASED INDEXING OF IMAGES BY CODING LEVELS DEFINED AS A FUNCTION OF REDUCED ENTROPY

Donald C. Mead, Carlsbad, Calif., assignor to Hughes Electronics Corporation, El Segundo, Calif.

Filed Oct. 15, 1996, Appl. No. 732,803

Int. Cl.[7] **G06K** *9/54;9/60*

U.S. Cl. 382—305 **12 Claims**



12. An image indexing system comprising:

indexing by retrieving a selected image feature in a class of compressed data images according to image content based on hierarchical compression transform basis functions, the func-

tion being selected as a function of identifying a reduced Eigenvalue pattern for said class;

viewing selected individual sub-images according to a low frequency sub-image content; and

decoding a selected image by reversing the hierarchical compression, adding a residual image and displaying the resulting selected image as a lossless reproduction of said selected image.

6,041,148

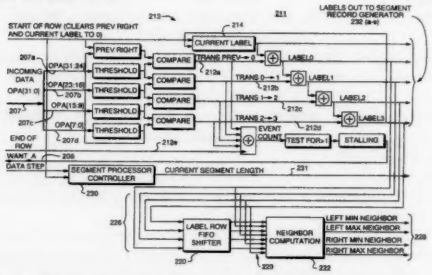
SYSTEM AND METHOD FOR EXTRACTING IMAGE DATA

Michael J. Wilt, Windham, N.H., assignor to Acuity Imaging, LLC, Nashua, N.H.

Continuation-in-part of application No. 08/953,772, Oct. 17, 1997. This application Feb. 19, 1998, Appl. No. 25,937.

Int. Cl.[7] **G06K** *9/56*

U.S. Cl. 382—308 **13 Claims**



1. A data extraction system comprising:

at least one data storage memory for storing data formatted into a plurality of data samples, each of said plurality of data samples having multiple bits;

a data extraction processor, for receiving said data from said data storage memory one processor word at a time, wherein a processor word includes at least two of said data samples, for simultaneously processing said at least two of said data samples in each said processor word, and for generating at least one result record containing information extracted from said data samples in at least one said processor word, said data extraction processor comprising a segmentation processor including:

a label computation engine, coupled to said data flow controller, for simultaneously receiving said data samples in each said processor word, for identifying transitions between said data samples and generating transition bit signals for each potential transition, and for computing a label code for each said potential transition using said transition bit signals;

a label row FIFO shifter, coupled to said label computation engine, for receiving and storing said label code for each said potential transition;

a neighborhood computation unit, coupled to said label computation engine and to said label row FIFO shifter, for receiving current row labels from said label computation engine and previous row labels from said label row FIFO shifter, and for computing connecting relationships to segments in a previous row;

a segment processor controller, coupled to said data flow controller, for providing a current segment length; and

a segment record generator, coupled to said label computation engine, said segment processor controller and said neighborhood computation unit, for receiving said current row labels, said current segment length, and information about said connecting relationships, and for generating at least one segment record for each transition event; and

a data flow controller, coupled between said at least one data storage memory and said data extraction processor, for controlling the flow of processor words into said data extraction processor and the flow of said result records out of said data extraction processor.

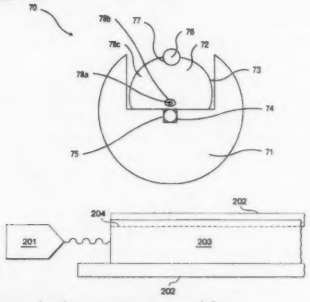
GROOVED OPTICAL FIBER FOR USE WITH AN ELECTRODE AND A METHOD FOR MAKING SAME

Thomas D. Monte, Lockport, Ill., assignor to KVH Industries, Inc., Middletown, R.I.

Continuation of application No. 08/611,172, Mar. 5, 1996, Pat. No. 5,768,462. This application Jun. 16, 1998, Appl. No. 97,958.

Int. Cl.[7] **G02B** *6/02*

U.S. Cl. 385—2 **3 Claims**



1. A communications system, comprising:

a transmitter, for generating optical signals;

an electrode for applying voltage; and

an optical fiber having refractive properties which change in response to an applied voltage and having a groove for receiving the electrode.

6,041,150

MULTIPASS CAVITY SENSOR FOR MEASURING A TISSUE-EQUIVALENT RADIATION DOSE

Friedrich Wolfgang Hasing, Jülich; Frank Pfeiffer, Nürnberg, and Harald Büker, Jülich, all of Germany, assignors to Forschungszentrum Julich GmbH, Julich, Germany

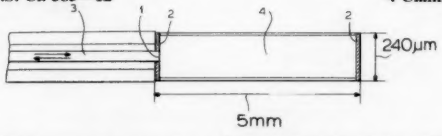
PCT No. PCT/DE96/02321, § 371 Date Jun. 1, 1998, § 102(e) Date Jun. 1, 1998, PCT Pub. No. WO97/21112, PCT Pub. Date Jun. 12, 1997

PCT Filed Dec. 2, 1996, Appl. No. 77,819

Claims priority, application Germany, Dec. 2, 1995, 195 45 060

Int. Cl.[7] **G02B** *6/00*

U.S. Cl. 385—12 **4 Claims**



1. A sensor for measuring a tissue-equivalent radiation dose, comprising:

an elongated radiation-sensitive light waveguide disposed in an ionizing radiation field;

mirrors on opposite ends of said waveguide for multiple back and forth reflections of light from end to end within said waveguide whereby said waveguide forms a multipath cavity for light in said waveguide; and

means for coupling light into and out of said waveguide.

6,041,151

ALL OPTICAL SWITCH

David Mendlovic, Petach Tikva, and Dan M. Marom, Tel Aviv, both of Israel, assignors to Ramot University Authority for Applied Research & Industrial Development Ltd., Tel Aviv, Israel

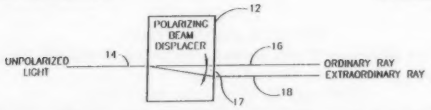
PCT No. PCT/IL96/00079, § 371 Date Feb. 17, 1998, § 102(e) Date Feb. 17, 1998, PCT Pub. No. WO97/09536, PCT Pub. Date Mar. 13, 1997

PCT Filed Aug. 12, 1996, Appl. No. 11,706

Claims priority, application Israel, Aug. 25, 1995, 115075

Int. Cl.[7] **G02B** *6/26*

U.S. Cl. 385—16 **13 Claims**



1. An optical switch for switching first and second input beams linearly polarized in the same direction, comprising:

a first half wave plate optically coupled to the second input beam, said first half wave plate for rotating the polarization of light incident thereto 90 degrees:

a first polarizing beam displacer optically coupled to the first input beam and the output of said first half wave plate, said first polarizing beam displacer for refracting the first input beam and the output of said first half wave plate to produce a combined beam, the first input beam and the output of said first half wave plate incident to said first polarizing beam displacer displaced from each other a predetermined distance;

a controllable half wave gate having a gate input port, a gate output port, a control input, a passive state and an active state, said controllable half wave gate in said passive state passing said combined beam incident to said gate input port through to said gate output port whereby the polarization of said combined beam is unchanged, said controllable half wave gate in said active state passing said combined beam incident through to said gate input port through to said gate output port whereby the polarization of said combined beam is rotated 90 degrees, a control signal present at said control input causing said controllable half wave gate to switch between said passive and said active states, said gate including a ferroelectric liquid crystal shutter,

a second polarization beam displacer optically coupled to said gate output port, said second polarization beam displacer for refracting light incident thereto into first and second refracted output beams displaced from each other a predetermined distance upon exiting said second polarization beam displacer; and

a second half wave plate optically coupled to said second refracted out beam, said second refracted output beam, said second half wave plate for rotating the polarization of light incident thereto 90 degrees.

6,041,152

MULTI-CHANNEL FIBER OPTIC COMMUNICATIONS SYSTEM AND MULTIPLEXER/DEMULTIPLEXER ARRANGEMENT THEREFOR

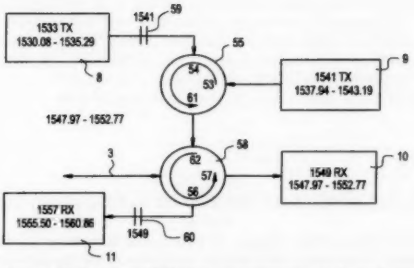
Timothy Edward Clark, Lisle, Ill., assignor to Amphenol Corporation, Wallingford, Conn.

Filed Sep. 2, 1997, Appl. No. 921,797

Int. Cl.[7] **G02B** *6/28;* **H04J** *14/02*

U.S. Cl. 385—24 **19 Claims**

1. In a multiple channel communications system including an optical fiber transmission line and at least two cascaded wavelength division multiplexing components at each end of the transmission line, the improvement wherein said at least two wavelength division multiplexing components at each end of the transmission line is coupled to the transmission line via combiners, at least one of said combiners at one end of the transmission line being arranged to multiplex groups of signals from said cascaded



wavelength division multiplexing components, each said group forming a different set of channels, and at least one of said combiners at said second end of the transmission line being arranged to demultiplex said groups of different wavelength signals received over the transmission line from said cascaded wavelength division multiplexing components and distribute the demultiplexed groups to at least two of the cascaded wavelength division multiplexing components at said second end of the transmission line,

wherein said combiners are bi-directional combiners, and at least one of said multiplexing components at each end of the transmission line is a cascaded multiple channel multiplexer, and at least one of said multiplexing components at each end of the transmission line is a cascaded multiple channel demultiplexer.

wherein said cascaded multiple channel multiplexer comprises:

a plurality of Mach-Zehnder interferometer units, each unit comprising a pair of 50/50 fiber optic couplers connected by a pair of Bragg gratings and three functional ports including two multi-channel input/output ports, and one single channel input port, said Bragg gratings being tuned to a wavelength of the single channel input port;

means for connecting a plurality of transmitters respectively to said single channel input ports;

means for connecting input/output ports of adjacent said interferometer units in a cascade configuration; and

a common output port on a last of said cascaded interferometer units, said common output port of each multiplexer being connected to a different input port of one of the combiners.

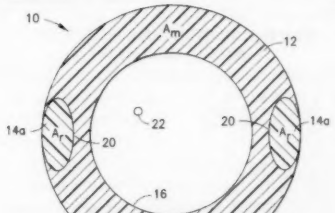
CONTINUOUS COMPOSITE REINFORCED BUFFER TUBES FOR OPTICAL FIBER CABLES

Houching M. Yang, Conover, N.C., assignor to Alcatel, Paris, France

Filed Jul. 1, 1998, Appl. No. 108,683

Int. Cl.[7] **G02B** *6/44*

U.S. Cl. 385—109 **20 Claims**



20. An optical fiber cable, comprising:

a composite reinforced buffer tube comprising an extruded elongated thermoplastic matrix having a plurality of elongated, substantially continuous, reinforcements incorporated therein along its length between its inside and outside walls, the

continuous reinforcements being co-extruded with the elongated thermoplastic matrix and bonded to the matrix at interface regions therebetween, wherein the reinforcements have a higher flexural modulus than the thermoplastic matrix, and wherein the reinforcements have a coefficient of thermal expansion less than the thermoplastic matrix; and

at least one optical fiber disposed in the buffer tube.

6,041,154

IMAGE FIBER AND METHOD OF FABRICATING THE SAME

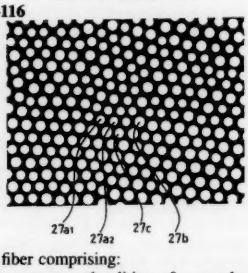
Katsuya Ono, Hino; Masaru Shiraiwa, and Kimihiko Nishioka, both of Hachioji, all of Japan, assignors to Olympus Optical Co., Ltd., Tokyo, Japan

Continuation of application No. 08/418,690, Apr. 7, 1995, abandoned. This application Jan. 27, 1998, Appl. No. 14,165.

Claims priority, application Japan, Apr. 8, 1994, 6-070764; Jul. 28, 1994, 6-176779; Sep. 5, 1994, 6-095107; Feb. 7, 1995, 7-019319

Int. Cl.[7] G02B *6/06*

U.S. Cl. 385—116 **12 Claims**



1. An image fiber comprising:

at least three separate pluralities of cores having respective different sectional shapes and respective equal sectional areas; and

a common cladding containing said separate pluralities of cores,

wherein said separate pluralities of cores are arrayed so that any core included in one of said separate pluralities of cores is adjacent to a core included in a remaining one of said separate pluralities of cores,

each core of at least 50% of said separate pluralities of cores is prevented from being adjacent to cores of a same plurality of cores among which said each core belongs,

wherein said each core is a portion of said image fiber that transmits light.

6,041,155

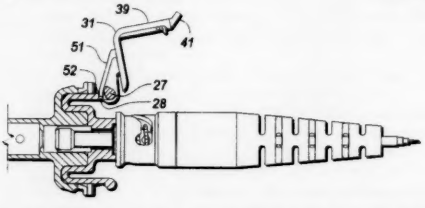
UNIVERSAL DUST COVER

David C. Anderson, St. Louis, Mo., and Daniel Lee Stephenson, Lilburn, Ga., assignors to Lucent Technologies Inc., Murray Hill, N.J.

Filed Dec. 10, 1997, Appl. No. 988,520

Int. Cl.[7] G02B *6/00*

U.S. Cl. 385—139 **18 Claims**



1. In combination, a coupling adapter and a dust cover wherein said adapter comprises a connector receptacle, said combination comprising:

a dust cover member having a front surface adapted to cover said receptacle;

a pivot member, said pivot member having a cam member thereon;

first and second spaced pivot arms extending toward said pivot member, each of said pivot arms having a distal end having means for pivotably engaging said pivot member; and

a spring arm extending between said dust cover and said cam member having a distal end adapted to bear against said cam member.

6,041,156

OPTICAL CONNECTION

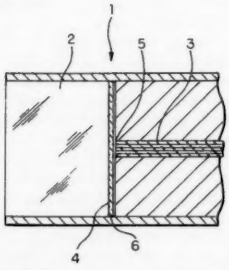
Walter Heitmann, Gross-Bieberau, Germany, assignor to Deutsche Telekom AG, Bonn, Germany

Filed Aug. 28, 1998, Appl. No. 143,132

Claims priority, application Germany, Aug. 28, 1997, 197 37 498

Int. Cl.[7] G02B *6/00*

U.S. Cl. 385—139 **10 Claims**



1. An optical connection for use in an optical fiber system having an operating wavelength, the optical connection comprising:

at least one optical fiber having an end face and an optical fiber hardness;

an optical window having a surface disposed opposite the optical fiber end face; and

a thin, absorption-free protective coating at the optical window surface, the protective coating having a hardness greater than the optical fiber hardness and having an optical thickness small compared to the operating wavelength.

ENVIRONMENTALLY SENSITIVE COMPOSITIONS OF MATTER BASED ON 3H-FLUOREN-3-YLIDENES AND PROCESS FOR MAKING SAME

Frederick James Goetz, 2320 Lighthouse La., Wilmington, Del. 19810

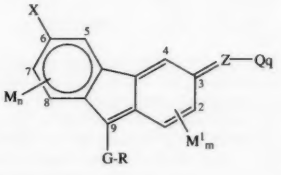
Provisional application No. 60/032,280, Dec. 3, 1996. This application Nov. 28, 1997, Appl. No. 980,446.

Int. Cl.[7] G02B *6/00;5/23*

U.S. Cl. 385—141 **2 Claims**

1. A 3H-fluoren-3-ylidene compound having structure 1:

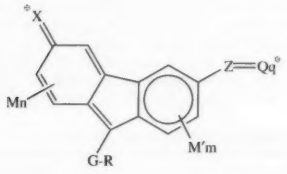
1



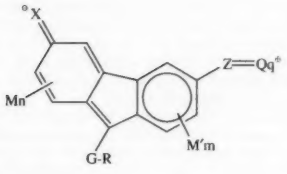
where

said structure may be represented as such or as electrically bipolar materially equivalent canonical structures 1D and 1A;

1D



1A

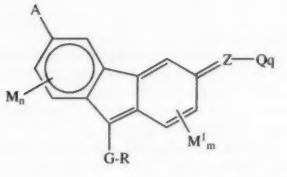


X- may be either D- or A-;

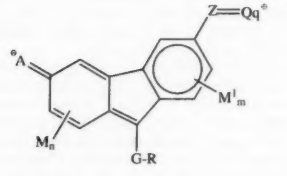
D- may be an electron-donating group J;

D- comprises D^1=Z- in structures 1D-a, 2A-a, or 2D-a, corresponding to $0D^1$-Z= in resonance canonical structures 1D-b, 2A-b, 2D-b, or D^2=C- in structures 1D-a, 2A-a, or 2D-a, corresponding to $0D^2$-C= in resonance canonical structures 1D-b, 2A-b, or 2D-b;

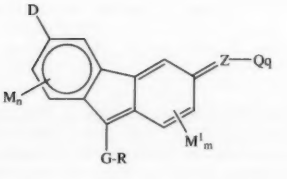
1A-a



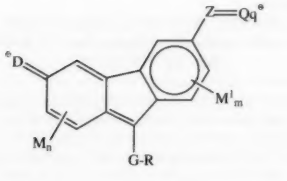
1A-b



1D-a

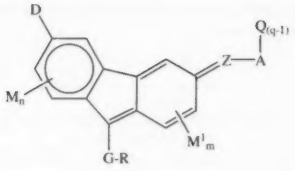


1D-b

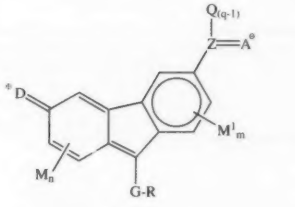


-continued

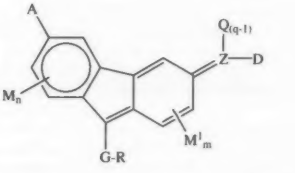
2A-a



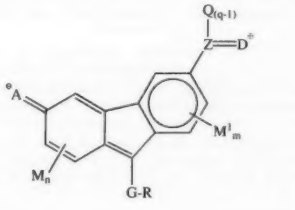
2A-b



2D-a



2D-b



where

D^1 and D^2 are substituted or unsubstituted unsaturated heterocyclic organic ring systems having one to (a−1) members being at least one electron donating heteroatom having one or two lone electron pairs being bonded to a carbon or to a heteroatom of the ring system and being J or L;

Z is N, P, As, Sb, Bi or C, Si, Ge being substituted or unsubstituted, the substituents being J, L, R^1, R^2, G-R, Q, T, Y, or R*;

Z^1 and Z^2 each independently have the same definition as Z;

D^2=C- in structures 1D-a, 2A-a, or 2D-a, corresponding to $0D^2$-C= in resonance canonical structures 1D-b, 2A-b, or 2D-b, is a substituted or unsubstituted aromatic carbocyclic or substituted aromatic heterocyclic ring system,

where C of D^2=C- or $0D^2$-C= is a member of the ring system having b members and c J substituents,

where c is zero to (b−1) and each J substituent is the same or different, D^2=C- or $0D^2$-C= further having from zero to (b−c) additional substituents, the additional substituents being R^1, R^2, G-R^3,G-Q, G-T, G-Y, G-R*, Q, T,Y, or R*;

A- is an electron withdrawing L group;

where

L = is 
L^1 independently has the same definition as L;

where J is an electron-donating group —R, R^1, R^2, R^3, $(CH_2)_n$—R^1, —S—R^1, —O—R^1, —N(R^1)(R^2), -G-R^1, —$(CH_2)_n$-G-R^1, —S-G-R^1, —O-G-R^1, —N(-G-R^1)(-G-R^2), —O—O—R^1, —O—O-G-R^1,—S—S—R^1,—S—S-G-R^1; J^1 is —$(CH_2)_n$—R^1, —S—R^1,—O—R^1 or —N(R^1)(R^2); J^2, J^3, and J^4 each independently have the same definition

L^2 is  ; L^3 is  ; and

L^4 is  ; where

L^2 is a possible representation of 
where A^1 and A^2 are independently each an electron-withdrawing L group or A^1 and A^2 together may form a substituted or unsubstituted ring system when the L group contains a R substituent, where R and the substituents for the A^1-A^2 ring system are independently J, L, R^1, R^2, G-R, Q, T, Y, or R*;

G is a diradical comprising substituted or unsubstituted —$(CH{=}CH)_n$—; n is an integer from 1 to 10, substituted or unsubstituted —$(CH_2)_w$—; w is an integer from 1 to 22, a substituted or unsubstituted aromatic ring system of 6 to 16 carbons or a substituted or unsubstituted aromatic heterocyclic ring system of 5 to 14 members in the ring system, the members being carbon and 1 to (g–1) heteroatoms; g is the number of members in the heterocyclic ring system, the heteroatoms being one or more of N, P, O, S, Se, or Te; G substituents being J^1 or L^1 with 6 being the maximum number of substituents;

R^1 and R^2 are independently H, F, Cl, Br, I, Q, T,Y alkyl of 1 to 22 carbons, cycloalkyl of 3 to 22 carbons, a substituted or unsubstituted aromatic ring system of 6 to 16 carbons or a substituted or unsubstituted aromatic heterocyclic ring system of 5 to 14 members in the ring system, the members being carbon atoms and 1 to (h–1) heteroatoms; h is the number of members in the heterocyclic ring system, the heteroatoms being one or more of N, P, O, S, Se, or Te; R^1 or R^2 substituents being J^1 or L^1 with 7 being the maximum number of substituents;

R^3 is H,F,Cl, Br, I, Q, T, Y alkyl of 1 to 22 carbons or cycloalkyl of 3 to 22 carbons;

R* is a chemically reactive group being carbonyl halides of 1 to 2 carbons; sulfonyl halides of 0 to 20 carbons; sulfinyl halides of 0 to 20 carbons; phosphoryl halides of 0 to 20 carbons; imidyl halides of 1 to 21 carbons; alkyl halides of 1 to 31 carbons; α-haloesters of 1 to 31 carbons; α-haloketones of 1 to 31 carbons; aryl halides of 6 to 32 carbons; heterocyclyl halides of 1 to 22 carbons and 1 to 21 heteroatoms one or more of which may be N, P, O, S, Se, and Te; cycloalkyl halides of 2 to 32 carbons. In addition, such reactive R* groups may be reactive unsaturated groups, such as, isocyanates; isothiocyanates; ketenes; olefines; acetylenes, allenes; ketones; α,β-diones; α,β,γ-triones; imines; α,β-diimines; azides; carbodimides; unsaturated ketones, esters, sulfonones, sulfonamides, and sulfonates; and carbon double bonded to heteroatoms, such as, P, S, Se, and Te; alcohols of 1 to 21 carbons; carboxylic acids of 1 to 21 carbons; sulfonic acids of 0 to 20 carbons; carboxamides of 1 to 21 carbons; sulfonamides of 0 to 20 carbons; amines of 1 to 30 carbons; aryl groups of 6 to 36 carbons; heteroaryl groups of 1 to 22 carbons and 1 to 21 heteroatoms one or more of which may be N, P, O, S, Se, or Te; mercaptans of 0 to 21 carbons; phosphates; alkali metals, such as, Li, Na, K, Rb, and Cs; alkaline earth metals, such as, Be, Mg, Ca, Sr, and Ba; transition metals; and metals of the B-group of the periodic table;

Q is a A,D, electron lone pair, or T group;

T is a polymerizable group being an a, b, unsaturated carbonyl of 4 to 26 carbons, vinyl ether of 3 to 25 carbons, carboxylic acid of 2 to 23 carbons, ester of 3 to 45 carbons, alcohol of 1 to 22 carbons, isocyanate of 1 to 22 carbons, isothiocyanate of 1 to 22 carbons, amine of 1 to 44 carbons, 1-substituted or 1,1-substituted alkylene of 2 to 44 carbons, polymerizable group of 1 to 44 carbons containing a nucleophilically replaceable group of zero to 22 carbons, where T substituents being G-Y, G-Q, and G-R*;

Y is a polymerization-initiating group being an α,β-dione of 2 to 22 carbons; an azoalkane of 1 to 21 carbons; an alkylperoxide of 1 to 21 carbons, a hydroperoxide of 0 to 20 carbons; a peroxide ester of 1 to 21 carbons; a persulfonate of 0 to 20 carbons; an α,β-disulfone of 0 to 20 carbons; an ester of 1 to 21 carbons; an ether of 1 to 21 carbons; an alcohol of 1 to 21 carbons; an amine of 1 to 41 carbons; a sulfonic acid of 0 to 20 carbons; a carboxamide of 1 to 21 carbons; an acid methyl of structure —CHA^1A^2 of 1 to 31 carbons; a substituted cyclopropane of 3 to 23 carbons; a substituted cyclobutane of 4 to 24 carbons; a substituted iodonium group of 1 to 31 carbons; a substituted sulfonium group of 2 to 42 carbons; Y Substituents on the polymerization-initiating group being J, L, R^1, R^2, G-R, G-Q, G-T, G-R*, Q, T, or R*;

M and M^1 are independently substituents of type J, L, R^1, R^2, Q, T, Y, G-R, G-Q, G-T, G-R*, and G-Y M substituents are n wherein n is in the range 0 to 3 and the number of M substituents is m where m is in the range 0 to 3;

M and M' are a carbocyclic or heterocylic ring system fused to positions 7 to 8 of structure 1 wherein the carbocyclic ring system is of 6 to 46 carbons and wherein the heterocyclic ring system is of 2 to 32 carbons and which may include up to 20 heteroatoms including one or more of: N, P, O, N, S, Se, Te, or I; M^1 may also be independently a carbocyclic or heterocyclic ring system fused to the positions 1 to 2 of structure 1 wherein the carbocyclic ring system is of 6 to 46 carbons and wherein the heterocyclic ring system is of 2 to 32 carbons and which may include up to 20 heteroatoms including one or more of: N, P, O, N, S, Se, Te, or I;

M and/or M^1 are independently -G- groups which connect directly proximal substituents of structure 1 including the X substituent at position 6, 5 and 7 and/or substituents upon these positions; the Z and/or Q substituents at positions 1, 2, 3, 4, 5, 6 or 7 and/or substituents upon these positions; where -G groups may be then independently substituted with substituents of type J, L, R', R^2, Q, R*, T, Y, G^1-R, G^1-Q, G^1-T, G^1-Y and G^1-R*, where G^1 has the same definition as G.

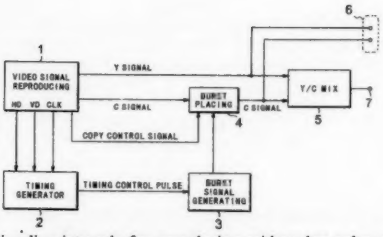
COPY PROTECTION BY INSERTING A PHASE-SHIFTED COLOR BURST SIGNAL INTO THE BURST INTERVAL OF AN ANALOG COLOR VIDEO SIGNAL

Hideo Sato, Tokyo, Japan, assignor to Sony Corporation, Tokyo, Japan

Filed Oct. 18, 1996, Appl. No. 733,431
Claims priority, application Japan, Oct. 27, 1995, 7-303494
Int. Cl.[7] H04N *5/76*
U.S. Cl. 386—1 **47 Claims**

1. A method of allowing a direct reproduction of an analog color video signal and preventing said analog color video signal from being satisfactorily recorded and reproduced by an analog video recorder, wherein said analog color video signal includes a color burst signal of reference phase located in a burst interval in



respective line intervals for reproducing said analog color video signal, said method comprising the steps of:

generating a phase-shifted color burst signal which undergoes a time-axis expansion when recorded and reproduced by said analog video recorder; and

inserting said phase-shifted color burst signal in a predetermined location for a predetermined duration in an area of said burst interval of reference phase such that said phase-shifted color burst signal does not significantly interfere with the direct reproduction of said color analog video signal based on the color burst interval of reference phase and said time-axis expansion of said phase-shifted color burst signal significantly interferes with the color burst signal of reference phase thereby inhibiting the reproduction of the recorded analog color video signal when recorded and reproduced by said analog video recorder.

TELECOMMUNICATIONS DEVICE HAVING A REMOTE CONTROLLER

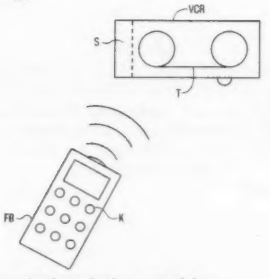
Hans-Joachim Platte, Hemmingen, Germany, assignor to Deutsche Thomson-Brandt GmbH, Villingen-Schwenningen, Germany

Filed Jun. 4, 1996, Appl. No. 658,138

Claims priority, application Germany, Jul. 11, 1995, 195 25 226

Int. Cl.[7] **H04N** *5/76*

U.S. Cl. 386—46 **5 Claims**



1. Telecommunications device comprising:

a circuit arrangement for distinguishing between information and program sections of a transmission in a program channel, wherein said circuit arrangement classifies said transmission of said program channel into a first type of a desired transmission and into a second type of additional information, said circuit arrangement evaluating a plurality of parameters to decide whether said first type of a desired transmission or said second type of additional information is being transmitted; and

a remote controller having a button which, when operated, causes said circuit arrangement to correct a previous transmission classification which is inappropriate or undesired from the point of view of a user, wherein said circuit arrangement works out again decisions that have taken place in a time period shortly before said button is operated and relate to said previous transmission classification with the aim of correction, defines a closest probable time for the decision for the preceding changeover between said two types in this time period as a new changeover time, and redefines parameters on which future transmission classification is based by matching the parameters to conditions of said new changeover time.

METHOD AND APPARATUS FOR PICTURE ENCODING AND DECODING

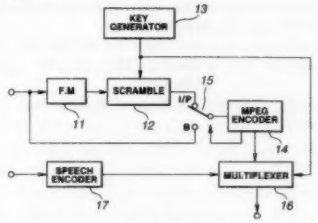
Yoichi Yagasaki, and Katsumi Tahara, both of Kanagawa, Japan, assignors to Sony Corporation, Tokyo, Japan

Filed Jun. 19, 1997, Appl. No. 879,038

Claims priority, application Japan, Jun. 21, 1996, 8-162236

Int. Cl.[7] **H04N** *5/91*

U.S. Cl. 386—94 **12 Claims**



1. A picture encoding method of encoding an input picture signal by an MPEG encoding method, comprising:

adding at least a set of invalid macro-blocks on a peripheral portion of a picture represented by the input picture signal;

outputting a signal identifying the position of the at least one set of added macro-blocks;

scrambling the picture signal by varying the position of the at least one set of macro-blocks responsive to a sequence;

MPEG encoding the scrambled picture signal; and

multiplexing the MPEG encoded picture signal with the position identifying signal.

INPUT-OUTPUT CIRCUIT, RECORDING APPARATUS AND REPRODUCTION APPARATUS FOR DIGITAL VIDEO SIGNAL

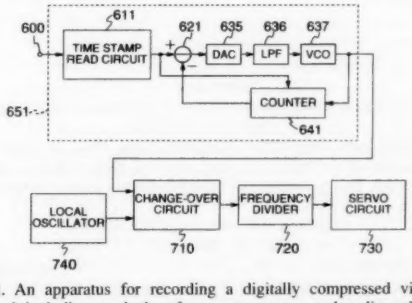
Hiroo Okamoto; Kyoichi Hosokawa; Hitoaki Owashi, all of Yokohama; Hiroaki Tachibana, Chigasaki, and Takaharu Noguchi, Yokohama, all of Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Division of application No. 08/547,662, Oct. 24, 1995, abandoned. This application Nov. 18, 1997, Appl. No. 972,457.

Claims priority, application Japan, Oct. 28, 1994, 6-264874; Jun. 7, 1995, 7-140294

Int. Cl.[7] **H04N** *5/76*

U.S. Cl. 386—112 **10 Claims**



1. An apparatus for recording a digitally compressed video signal including a clock reference to restore a decoding clock signal on a magnetic recording medium by means of a rotary head,

said digitally compressed video signal being an intermittent input signal in packet form including a time stamp for the packet, comprising:

means for generating a reference signal for controlling the rotation of the rotary head in phase with the time stamp; and

means for controlling the rotation of said rotary head on the basis of the reference signal generated from said generating means.

6,041,162

METHOD FOR RECORDING VIDEO SIGNALS BY STORING DIGITAL VIDEO DATA INTO DCT BLOCKS FOR A DIGITAL VCR

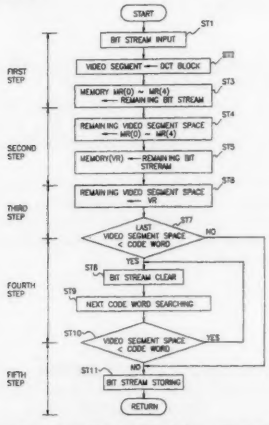
Byeongho Choi, Jeonrabook-Do, Rep. of Korea, assignor to LG Electronics Inc., Seoul, Rep. of Korea

Continuation-in-part of application No. 08/492,700, Jun. 20, 1995, abandoned. This application May 21, 1997, Appl. No. 859,841.

Claims priority, application Rep. of Korea, Jun. 24, 1994, 94/14631

Int. Cl.[7] H04N *5/76*

U.S. Cl. 386—124 **14 Claims**



1. In a video data recording method for a digital video cassette tape reorder, wherein bit streams of video data are initially stored in video segments having remaining spaces, portions of the bit streams which are not initially stored in the video segments being sequentially stored in a memory as remaining bit streams, said video segments with a size of a remaining bit stream;

repeating a comparing step until a remaining bit stream having a size which is not larger than the size of the last remaining space of the video segments is found; and

storing the remaining bit stream found in said repeating step in the last remaining space of the video segments.

6,041,163

APPARATUS FOR CONTROLLING A PUMP MOTOR OF A FORKLIFT TRUCK

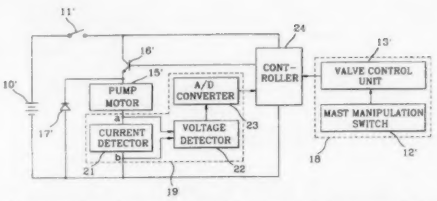
Wesley Robert Cherry, Jr., Mayfield Heights, Ohio, assignor to Daewoo Heavy Industries Ltd., Incheon, Rep. of Korea, and Daewoo Heavy Industries America Corporation, Carlstadt, N.J.

Filed Apr. 23, 1998, Appl. No. 64,854

Int. Cl.[7] H02P *5/17*

U.S. Cl. 388—811 **4 Claims**

1. An apparatus for controlling a pump motor of a forklift truck through the use of a driving transistor connected between a battery and the pump motor, comprising:



a) current detection means for detecting electric current flowing through the pump motor, the current detection means including,

(i) a shunt for sensing the current flowing through the pump motor to generate a first voltage signal, the shunt having a first terminal connected to the pump motor and a second terminal coupled to the battery,

(ii) means for amplifying the first voltage signal to a predetermined level to produce a second voltage signal, and

(iii) means for converting the second voltage signal to a current detection signal, the amplifying means includes: an operational amplifier with inverted and non-inverted input terminals, each connected to the first and second terminals of the shunt, and an output terminal; gain decision means having a first resistor connected between the inverted input terminal of the amplifier and the first terminal of the shunt, a second resistor connected between the inverted input terminal and the output terminal of the amplifier, a third resistor connected between the non-inverted input terminal of the amplifier and the second terminal of the shunt, and a fourth resistor connected to the inverted input terminal; and bias means for providing a bias voltage signal via the fourth resistor to the operational amplifier; and

b) control means responsive to the current detection signal for determining load condition of the pump motor to apply a varying control signal to the driving transistor so that a varying amount of electric current can be fed to the pump motor in proportion to the load exerting on the pump motor.

6,041,164

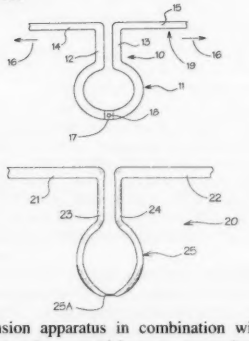
EXPANSION AND MOUNTING APPARATUS FOR INFRARED RADIANT ENERGY SOURCE

David V. Hofius, Sr., 235 Pierce Ave., Sharpsville, Pa. 15150, and Mark W. Hofius, 429 Line St., Sharpsville, Pa. 16150

Filed Nov. 4, 1998, Appl. No. 185,819

Int. Cl.[7] H05B *3/00*

U.S. Cl. 392—407 **12 Claims**



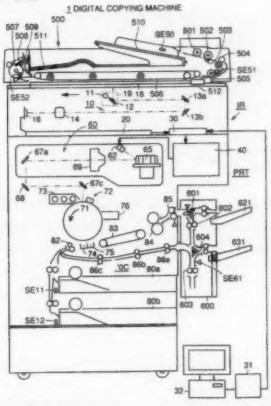
1. An expansion apparatus in combination with an infrared energy radiation wire comprising; an expansion loop formed within a portion of said infrared energy radiation wire, said loop having oppositely disposed contoured end portions within the loop, means for interconnecting said contoured end portions to one another within the loop.

6,041,165

IMAGE FORMING APPARATUS CAPABLE OF FORMING AN IMAGE AT A PLURALITY OF RESOLUTIONS

Takeshi Morikawa, Okazaki, Japan, assignor to Minolta Co., Ltd., Osaka, Japan

Filed Sep. 30, 1997, Appl. No. 941,523
Claims priority, application Japan, Mar. 12, 1997, 9-057686
Int. Cl.[7] G06K *15/00*
U.S. Cl. 395—102 **10 Claims**



1. An image forming apparatus capable of image formation according to a print mode at different printing resolutions for a plurality of applications, comprising:

a resolution switching controller which controls switching of a printing resolution in response to switching between each of said plurality of applications; and

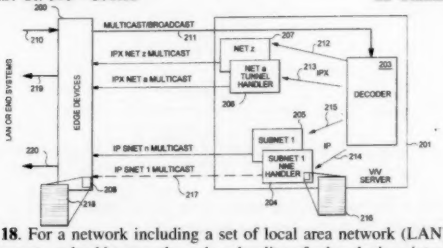
a timing controller which sets a timing of said switching of said printing resolution for said resolution switching controller according to said print mode.

6,041,166

VIRTUAL NETWORK ARCHITECTURE FOR CONNECTIONLESS LAN BACKBONE

John H. Hart, Saratoga, and W. Paul Sherer, Sunnyvale, both of Calif., assignors to 3Com Corp., Santa Clara, Calif.

Continuation-in-part of application No. 08/502,835, Jul. 14, 1995, Pat. No. 5,752,003. This application Jul. 15, 1996, Appl. No. 683,570.
Int. Cl.[7] G06F *15/16*
U.S. Cl. 395—200.68 **22 Claims**



18. For a network including a set of local area network (LAN) segments, a backbone path, and a plurality of edge devices interconnecting the set of LAN segments with the backbone path, the LAN segments interconnected as a virtual LAN, a server for managing traffic in the network, the server coupled to the backbone path, the server comprising:

resources on the server that receive a multidestination packet from an edge device, the multidestination packet having a multidestination address of a layer associated with a LAN;

a decoder that determines a logical network of the multidestination packet in response to a network protocol of the multidestination packet, wherein the logical network has membership less than the virtual LAN;

modules including modules associated with respective logical networks; and

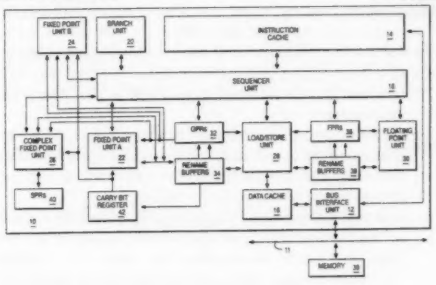
resources that pass the multidestination packet to a module among the modules, the module associated with the logical network, the module tunneling the multidestination packet to an agent on a particular edge device, on which the agent forwards the packet out ports from which members of the logical network can be reached.

6,041,167

METHOD AND SYSTEM FOR REORDERING INSTRUCTIONS AFTER DISPATCH IN A PROCESSING SYSTEM

Seungyoon Peter Song, Austin, Tex., assignor to International Business Machines Corporation, Armonk, N.Y.

Continuation of application No. 08/220,993, Mar. 31, 1994, abandoned. This application Jul. 27, 1995, Appl. No. 508,121.
Int. Cl.[7] G06F *9/00*
U.S. Cl. 395—390 **21 Claims**



1. A processing system, comprising:

sequencer circuitry for initiating a plurality of processing stages of first, second and third instructions, said second instruction being an execution serialized instruction;

execution circuitry coupled to said sequencer circuitry; and

dispatch circuitry coupled to said execution circuitry for:

finishing a dispatch processing stage of said first instruction so that said first instruction is dispatched to said execution circuitry;

in response to finishing said dispatch processing stage of said first instruction, finishing a dispatch processing stage of a second instruction so that said second instruction is dispatched to said execution circuitry; and

in response to finishing said dispatch processing stage of said second instruction, finishing a dispatch processing stage of a third instruction so that said third instruction is dispatched to said execution circuitry; and

said execution circuitry being operable to reorder an execution sequence of said first, second and third instructions subsequent to said first, second and third instructions being dispatched to said execution circuitry and to initiate an execution processing stage of said dispatched third instruction prior to initiating an execution processing stage of said dispatched second instruction.

6,041,168

HIGH-SPEED DELAY VERIFICATION APPARATUS AND METHOD THEREFOR

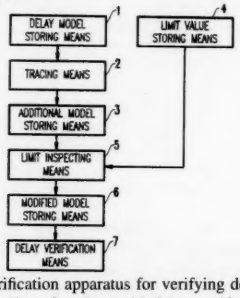
Takumi Hasegawa, Tokyo, Japan, assignor to NEC Corporation, Tokyo, Japan

Filed Dec. 20, 1996, Appl. No. 771,247

Claims priority, application Japan, Dec. 27, 1995, 7-340069

Int. Cl.[7] G06F *17/50*

U.S. Cl. 395—500.07 **20 Claims**



1. A delay verification apparatus for verifying delay of a circuit including a plurality of nodes, said delay verification apparatus comprising:

tracing means for respectively calculating, for each node of said circuit, a first delay time from each node to a starting point within said circuit and a second delay time from each node to an ending point within said circuit based on contents of a circuit model; and

limit inspecting means, to produce a modified circuit model to be verified, for following steps of:

a first deleting operation of deleting a node from the contents of a circuit model, said node having a sum of the first delay time and the second delay time which is less than a first predetermined value;

a second deleting operation of deleting a node from the contents of the circuit model, said node having a sum of the first delay time and the second delay time which is greater than a second predetermined value; and

a third deleting operation of deleting a node from the contents of the circuit model, said node having a sum of the first delay time and the second delay time which is less than the first predetermined value and greater than the second predetermined value, the second predetermined value being less than the first predetermined value.

6,041,169

METHOD AND APPARATUS FOR PERFORMING INTEGRATED CIRCUIT TIMING INCLUDING NOISE

Thomas C. Brennan, Rochester, Minn., assignor to International Business Machines Corporation, Armonk, N.Y.

Filed Aug. 21, 1997, Appl. No. 915,941

Int. Cl.[7] G06F *13/50*

U.S. Cl. 395—500.07 **12 Claims**

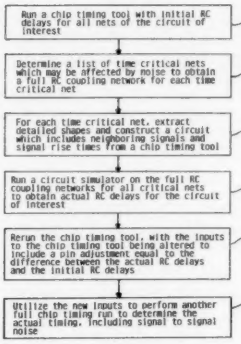
1. A method of performing timing analysis on an integrated circuit, comprising the steps of:

running a high level chip timing tool with initial RC delays for all nets of the integrated circuit;

determining a list of time-critical nets from a timing report and obtaining a full RC coupling network for each time-critical net;

running a detailed circuit simulator on the full RC coupling network for each time-critical net to obtain actual RC delays for each time-critical net;

determining a delta time for each time-critical net, based on a difference between the initial RC delay and the corresponding actual RC delay for each time-critical net; and



Run a chip timing tool with initial RC delays for all nets of the circuit of interest
202
Determine a list of time critical nets which may be affected by noise to obtain a full RC coupling network for each time critical net
204
For each time critical net, extract detailed shapes and construct a circuit which includes neighboring signals and signal rise times from a chip timing tool
206
Run a circuit simulator on the full RC coupling networks for all critical nets to obtain actual RC delays for the circuit of interest
208
Rerun the chip timing tool, with the inputs to the chip timing tool being altered to include a pin adjustment equal to the difference between the actual RC delays and the initial RC delays
210
Utilize the new inputs to perform another full chip timing run to determine the actual timing, including signal to signal noise
212

rerunning the high level chip timing tool, including the delta time for each time-critical net to obtain a timing analysis of the integrated circuit which accounts for signal to signal noise.

6,041,170

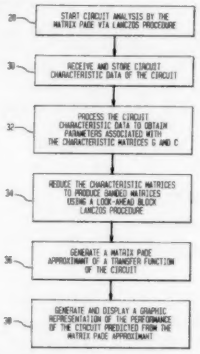
APPARATUS AND METHOD FOR ANALYZING PASSIVE CIRCUITS USING REDUCED-ORDER MODELING OF LARGE LINEAR SUBCIRCUITS

Peter Feldmann, Short Hills, and Roland W. Freund, New Providence, both of N.J., assignors to Lucent Technologies, Inc., Murray Hill, N.J.

Filed Jul. 31, 1997, Appl. No. 904,233

Int. Cl.[7] G06F *17/50*

U.S. Cl. 395—500.23 **34 Claims**



START CIRCUIT ANALYSIS BY THE MATRIX PADE VIA LANCZOS PROCEDURE
28
RECEIVE AND STORE CIRCUIT CHARACTERISTIC DATA OF THE CIRCUIT
30
PROCESS THE CIRCUIT CHARACTERISTIC DATA TO OBTAIN PARAMETERS ASSOCIATED WITH THE CHARACTERISTIC MATRICES G AND C
32
REDUCE THE CHARACTERISTIC MATRICES TO PRODUCE BANDED MATRICES USING A LOOK-AHEAD BLOCK LANCZOS PROCEDURE
34
GENERATE A MATRIX PADE APPROXIMANT OF A TRANSFER FUNCTION OF THE CIRCUIT
36
GENERATE AND DISPLAY A GRAPHIC REPRESENTATION OF THE PERFORMANCE OF THE CIRCUIT PREDICTED FROM THE MATRIX PADE APPROXIMANT
38

24. A method for generating a frequency response signal of a circuit, the method comprising the steps of:

providing circuit characteristic data associated with the circuit;

generating characteristic matrix data associated with the circuit characteristic data representing parameters associated with characteristic matrices of the circuit characteristic data;

generating a symmetric matrix transfer function data relating to a matrix transfer function associated with the characteristic matrix data; and

generating the frequency response signal in response to the matrix transfer function data.

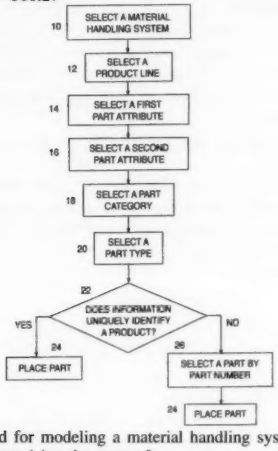
6,041,171
METHOD AND APPARATUS FOR MODELING MATERIAL HANDLING SYSTEMS

Dennis R. Blaisdell, W. Bloomfield; Bruce W. Mattison, South Lyon; Robert C. Farthing, Fenton, and Michelle A. Sarosy, Troy, all of Mich., assignors to Jervis B. Webb Company, Farmington Hills, Mich.

Provisional application No. 60/055,198, Aug. 11, 1997. This application Sep. 30, 1997, Appl. No. 941,211.

Int. Cl.[7] **G06F** *9/455*

U.S. Cl. 395—500.27 **50 Claims**



1. A method for modeling a material handling system in three dimensions comprising the steps of:

providing at least one memory means;

storing in digital form in said at least one memory means a set of instructions for designing and displaying a model of a fluid flow network comprising a plurality of fluid flow elements;

storing in digital form in said at least one memory means a catalog of material handling system elements and rules for connecting said elements;

providing a computer operatively connected to said at least one memory means;

selecting a first material handling system element from said catalog;

selecting a second material handling system element from said catalog;

entering data into said computer including the identity of said first and second selected elements;

executing said set of instructions on said data to display said first and second selected elements connected in accordance with said rules.

6,041,172
MULTIPLE SCALE SIGNAL PROCESSING AND CONTROL SYSTEM

Sunil C. Shah, Mountain View; Pradeep Pandey, San Jose, and Mark A. Erickson, Sunnyvale, all of Calif., assignors to Voyan Technology, Santa Clara, Calif.

Filed Nov. 26, 1997, Appl. No. 980,041

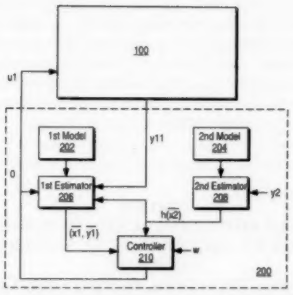
Int. Cl.[7] **G06F** *9/455*

U.S. Cl. 395—500.27 **28 Claims**

1. A method of processing signals generated from a first physical system comprising the steps of:

a) creating a first dynamic model of the first physical system, the first dynamic model being created at a first time scale that consists of a first set of parameters, a first set of states and a first set of inputs;

b) creating a second dynamic model of the first physical system, the second dynamic model being created at a second time scale that consists of a second set of parameters, a second set



of states and a second set of inputs, at least one of the first set of parameters in the first dynamic model being computed from the second set of states in the second dynamic model;

c) creating a second estimator to produce estimates of the second set of states using the second dynamic model, measurements from the first physical system at the second time scale; and

d) creating a first estimator to produce estimates of the first set of states using the first dynamic model, measurements from the first physical system at the first time scale, and the estimates from the second estimator.

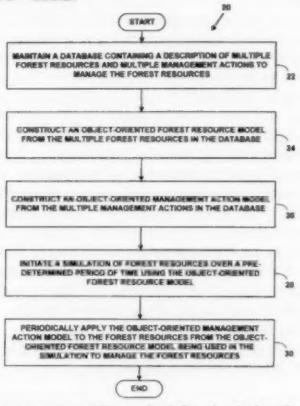
6,041,173
METHOD AND SYSTEM FOR SIMULATING FOREST MANAGEMENT

Richard T. Howard, Portland, Oreg., assignor to Assisi Software Corporation, Portland, Oreg.

Continuation of application No. 08/970,364, Nov. 14, 1997, Pat. No. 5,963,733, Provisional application No. 60/031,826, Nov. 26, 1996. This application Mar. 26, 1999, Appl. No. 280,141.

Int. Cl.[7] **G06G** *7/48*

U.S. Cl. 395—500.27 **9 Claims**



START
20
MAINTAIN A DATABASE CONTAINING A DESCRIPTION OF MULTIPLE FOREST RESOURCES AND MULTIPLE MANAGEMENT ACTIONS TO MANAGE THE FOREST RESOURCES
22
CONSTRUCT AN OBJECT-ORIENTED FOREST RESOURCE MODEL FROM THE MULTIPLE FOREST RESOURCES IN THE DATABASE
24
CONSTRUCT AN OBJECT-ORIENTED MANAGEMENT ACTION MODEL FROM THE MULTIPLE MANAGEMENT ACTIONS IN THE DATABASE
26
INITIATE A SIMULATION OF FOREST RESOURCES OVER A PRE-DETERMINED PERIOD OF TIME USING THE OBJECT-ORIENTED FOREST RESOURCE MODEL
28
PERIODICALLY APPLY THE OBJECT-ORIENTED MANAGEMENT ACTION MODEL TO THE FOREST RESOURCES FROM THE OBJECT-ORIENTED FOREST RESOURCE MODEL BEING USED IN THE SIMULATION TO MANAGE THE FOREST RESOURCES
30
END

1. A computer executable method for simulating forest management, comprising the steps of:

selecting a plurality of TreeClass object-oriented objects to be used with a Stand object-oriented object;

assigning the plurality of TreeClass object-oriented objects to a specific simulated stand within a Stand object-oriented object;

creating a stand model for simulating growing a plurality of simulated trees with the assigned TreeClass object-oriented objects in the specific simulated stand for the Stand object-oriented object;

adding the stand model to an Ownership object-oriented object; and

adding the Ownership object-oriented object with the stand model to an Organization object-oriented object; and

adding the stand model and the Organization object-oriented object to a database, wherein a plurality of stand models and a plurality of Organization object-oriented objects from the database are used to construct an object-oriented forest resource model that is used to make comparisons among a plurality of different Organizations with a plurality of different simulated stand models.

6,041,174

METHOD OF SIMULATING OXIDATION ENHANCED DIFFUSION BY SOLVING PARTIAL DIFFERENTIAL EQUATION

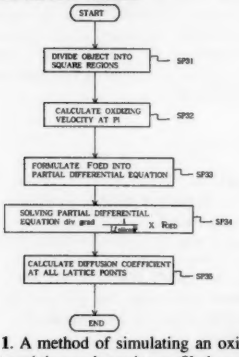
Yutaka Akiyama, Tokyo, Japan, assignor to NEC Corporation, Tokyo, Japan

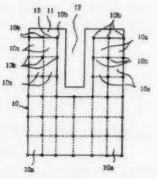
Filed May 28, 1998, Appl. No. 84,912

Claims priority, application Japan, May 29, 1997, 9-139995

Int. Cl.[7] G06F *17/50*

U.S. Cl. 395—500.33 **6 Claims**





1. A method of simulating an oxidation enhanced diffusion for determining an impurity profile in a semiconductor structure, comprising the steps of:

a) preparing a semiconductor structure having a first region of oxidizable material and a second region of oxide;

b) virtually dividing said first region into a plurality of sub-regions;

c) calculating an oxidizing velocity at a boundary between said first region and said second region;

d) formulating an enhanced velocity of diffusion coefficient into a partial differential equation under boundary conditions containing said oxidizing velocity, said enhanced velocity of diffusion coefficient varying a diffusion coefficient in said first region depending upon a length from said boundary;

e) solving said partial differential equation through a conversion into a discrete representation so as to determine said enhanced velocity of diffusion coefficient at nodes in said first region;

f) calculating a variation of a diffusion coefficient on the basis of said enhanced velocity of diffusion coefficient;

g) calculating said diffusion coefficient; and

h) determining an impurity profile in the semiconductor structure based on the diffusion coefficient.

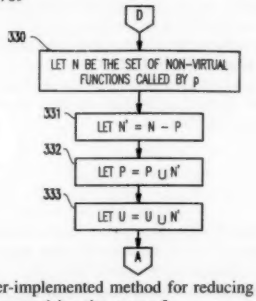
OBJECT ORIENTED DISPATCH OPTIMIZATION

David Francis Bacon, New York; Mark N. Wegman, and Frank Kenneth Zadeck, both of Ossining, all of N.Y., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Oct. 3, 1996, Appl. No. 723,058
Int. Cl.[7] G06F *13/00*
U.S. Cl. 395—709 **2 Claims**



2. A computer-implemented method for reducing an object oriented program, comprising the steps of:

identifying initial members of a set of live methods and procedures within said program, said initial members comprising methods and procedures that by definition in the program must be executed when the program is run;

identifying initial members of a set of live classes within said program, said initial members comprising classes that must be created when the program is run, based on said initial set of live methods and procedures;

identifying an additional set of live methods and procedures, comprising the additional methods and procedures reachable from the live methods and procedures within said set of live methods and procedures, and adding said additional set to said set of live methods and procedures;

identifying an additional set of live classes, comprising the additional classes potentially creatable by said identified set of additional live methods and procedures;

repeating said steps of identifying an additional set of live methods and procedures and of identifying an additional set of live classes until no further methods or procedures are added to said set of live methods and procedures; and

removing methods and procedures not identified as live.

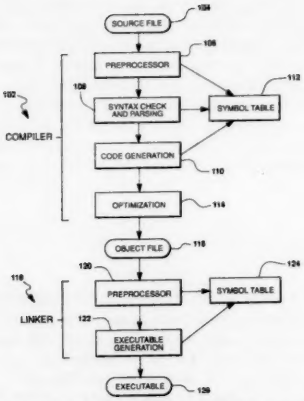
6,041,180

SYSTEM AND METHOD FOR OPTIMIZING TEMPLATE OBJECT FILES

Michael Albert Perks, Austin, and Mark Alvin Sehorne, Round Rock, both of Tex., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Apr. 28, 1997, Appl. No. 848,629
Int. Cl.[7] G06F *9/45*
U.S. Cl. 395—709 **27 Claims**

1. A method of generating an executable program, comprising the steps of:



compiling one or more source files to generate an object file for each source file, wherein said compiling step includes the step of adding a comment record to each object file;

searching each object file to determine if there are one or more repeated sets of instructions; and

linking the object files together to create an executable module, wherein the executable module contains one copy of each repeated set of instructions.

6,041,181

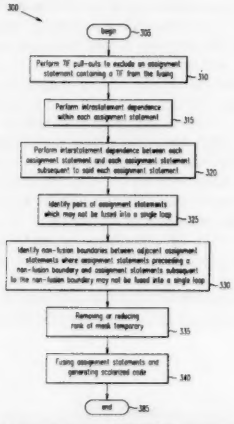
METHOD OF, SYSTEM FOR, AND COMPUTER PROGRAM PRODUCT FOR PROVIDING QUICK FUSION IN WHERE CONSTRUCTS

Dz Ching Ju, Sunnyvale; John Shek-Luen Ng, San Jose, both of Calif., and Vivek Sarkar, Newton, Mass., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Jul. 23, 1997, Appl. No. 899,359

Int. Cl.[7] G06F *9/45*

U.S. Cl. 395—709 **24 Claims**



300
loop
305
Perform 'IF' pull-outs to exclude an assignment statement containing a 'IF' from the loop
310
Perform intrastatement dependence within each assignment statement
315
Perform interstatement dependence between each assignment statement and each assignment statement subsequent to said each assignment statement
320
Identify pairs of assignment statements which may not be fused into a single loop
325
Identify non-fusion boundaries between adjacent assignment statements where assignment statements preceding a non-fusion boundary and assignment statements subsequent to the non-fusion boundary may not be fused into a single loop
330
Removing or reducing rank of mask temporary
335
Fusing assignment statements and generating scalarized code
340
end
345

1. A method of translating a WHERE construct, containing a plurality of assignment statements, in a source program, said method comprising the steps of:

identifying a first subset of the plurality of assignment statements, the first subset comprising a pair of assignment statements which may not be fused into a single loop, by storing an indication of the pair of assignment statements in a three dimensional data structure, wherein:

a first dimension corresponds to a first assignment statement of the pair of assignment statements;

a second dimension corresponds to a second assignment statement of the pair of assignment statements;

a third dimension corresponds to a loop level at which the pair of assignment statements may not be fused into a single loop; and

the indication is indexed by the first assignment statement, the second assignment statement, and the loop level;

responsive to the identifying of the first subset, identifying a second subset of the plurality of assignment statements which may be fused into a single loop; and

responsive to the identifying of the second subset, fusing the second subset of the plurality of assignment statements into a single loop.

AUTOMATIC INVOCATION OF COMPUTATIONAL RESOURCES WITHOUT USER INTERVENTION

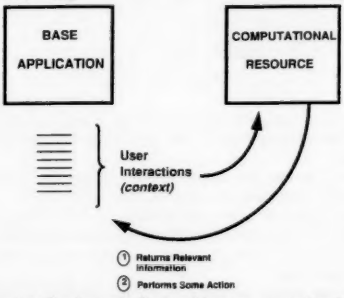
Peter Hart, Menlo Park, and Jamey Graham, San Jose, both of Calif., assignors to Ricoh Company Ltd, Tokyo, Japan, and Ricoh Corporation, Menlo Park, Calif.

Continuation of application No. 08/034,458, Mar. 19, 1993, Pat. No. 5,546,502. This application May 24, 1996, Appl. No. 653,601.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] G06F *9/445*

U.S. Cl. 395—712 **44 Claims**



1. A system for dynamically invoking a computational resource for a user comprising:

means for operating for the user a base application such that the computational resource is external to the base application;

means for receiving into the base application a series of user interactions which establish a context; and

means for in response to the series of user interactions dynamically instructing, responsive to the context, the computational resource to perform selected computational operations, said system integrated within a single computer.

6,041,183

REMOTE MAINTENANCE SYSTEM AND METHOD FOR COMPUTER PERIPHERALS

Takeshi Hayafune, Hiratsuka; Kouichiro Maemura, Isehara, and Takahito Miura, Kawasaki, all of Japan, assignors to Ricoh Company, Ltd., Tokyo, Japan

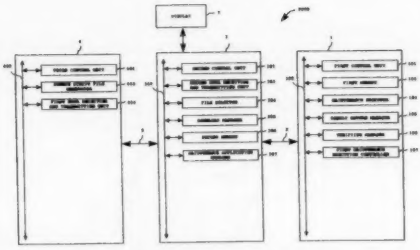
Filed Sep. 17, 1997, Appl. No. 932,210

Claims priority, application Japan, Sep. 17, 1996, 8-244366

Int. Cl.[7] G06F *9/445*

U.S. Cl. 395—712 **130 Claims**

125. A computer for performing remote maintenance on a computer peripheral, the computer peripheral coupled to the computer and including a first memory for storing maintenance data including identification information for identifying the computer peripheral and programmed parameters for adjusting an operating condition of the computer peripheral, the computer communicating information from a remote maintenance provider's site to the computer peripheral, said computer comprising:



a data receiver and transmitter for receiving a source script file sent from the remote maintenance provider's site and for transmitting data to said at least one computer peripheral;

a selector for selecting an instruction for a model of said computer peripheral connected to said computer from among instructions included in said source script file and for generating a model-specific script file including said selected instruction;

a second memory for storing said model-specific script file;

a download manager for downloading said model-specific script file including said selected instruction into said second memory; and

maintenance application executor for executing at an arbitrary time a maintenance application for transmitting said downloaded model-specific script file to said computer peripheral after said model-specific script file is downloaded into said second memory.

6,041,184

CAMERA HAVING A VISUAL LINE DETECTION DEVICE

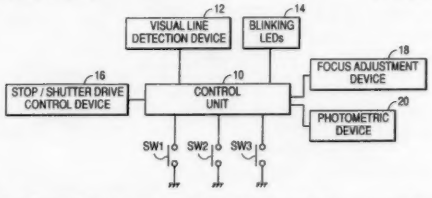
Hideya Inoue, Yokohama, and Masami Takemoto, Urawa, both of Japan, assignors to Nikon Corporation, Tokyo, Japan

Continuation of application No. 08/691,382, Aug. 2, 1996, abandoned, which is a continuation of application No. 08/305,740, Sep. 14, 1994, abandoned, which is a continuation of application No. 08/141,994, Oct. 28, 1993, abandoned. This application Mar. 19, 1997, Appl. No. 820,548.

Claims priority, application Japan, Oct. 30, 1992, 4-293379

Int. Cl.[7] G03B *17/00*

U.S. Cl. 396—51 **68 Claims**



1. A camera having a visual line detection device, comprising:

an input unit to input calibration information related to an eye of a photographer;

a calculation unit to calculate a visual line of the photographer based upon the calibration information and a state of the eye of the photographer;

a setting unit to set photographic conditions based upon the calculated visual line;

a photographic unit to execute photographic processes in response to a release operation; and

a priority operation execution unit to actuate the photographic unit when a release operation is performed during input of calibration information.

6,041,185

CAMERA WITH REMOTE-CONTROL PHOTOGRAPHY AND STROBOSCOPIC PHOTOGRAPHY FUNCTION

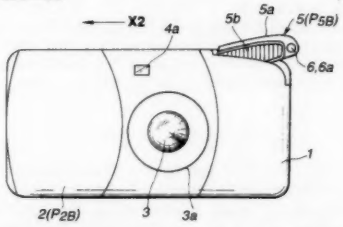
Tatsuya Suzuki, Tokyo, Japan, assignor to Olympus Optical Co., Ltd., Japan

Filed Jan. 27, 1999, Appl. No. 238,276

Claims priority, application Japan, Jan. 28, 1998, 10-016183

Int. Cl.[7] G03B *15/03*

U.S. Cl. 396—56 **7 Claims**



1. A camera with a remote-control photography function, comprising:

a strobe light unit having a strobe light mounted in a side thereof; and

a light receiving unit, mounted in said strobe light unit, for receiving remote-control light signals.

6,041,186

FINDER SYSTEM

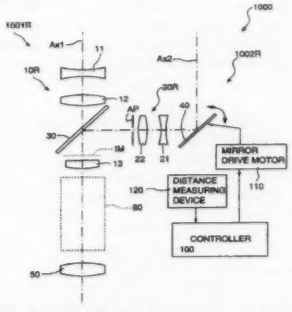
Takayuki Sensui, Tokyo, Japan, assignor to Asahi Kogaku Kogyo Kabushiki Kaish, Tokyo, Japan

Filed May 27, 1998, Appl. No. 84,735

Claims priority, application Japan, May 27, 1997, 9-152974; May 27, 1997, 9-152975; May 27, 1997, 9-152976; May 27, 1997, 9-152977; May 27, 1997, 9-152978; May 27, 1997, 9-152979

Int. Cl.[7] G03B *13/04;13/16;13/36*

U.S. Cl. 396—80 **58 Claims**



1. A finder system provided in a camera separately from a photographing optical system, comprising:

a first objective optical system for forming a first image of an object, said first image being a real image;

a second objective optical system for forming a second image of said object, said second image being a real image, said first and second objective optical systems being spaced from each other by a predetermined base length;

a light combining element that combines light passing through said first objective optical system and a part of light passing through said second objective optical system to superimpose a part of said second image with said first image within a field of view;

an erecting optical system for erecting said first image and said part of said second image combined by said light combining element;

an eyepiece optical system that directs light passing through said light combining element toward an eye of an observer;

a light deflecting device that deflects a path of light emerging from said second objective optical system to change degree of coincidence of said part of said second image with respect to said first image along a direction of said base length;

a passive distance measuring device for detecting a distance to said object, the passive distance measuring device including a pair of imaging lenses having optical axes that extend in parallel, optical paths of said pair of imaging lenses being different than optical paths of the first and second objective optical systems; and

a controller which controls said light deflecting device such that said part of said second image and said first image of an object which is located at said distance detected by said active distance measuring device coincide with each other.

6,041,187

POWER TRANSMISSION APPARATUS

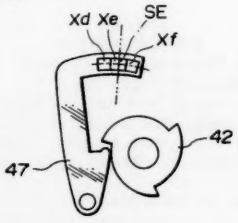
Yoichiro Okumura, Hino; Michio Nagai, Hamura; Hiroshi Terada, Mitaka, and Atsushi Maruyama, Machida, all of Japan, assignors to Olympus Optical Co., Ltd.

Division of application No. 08/234,662, Apr. 28, 1994, abandoned. This application Dec. 2, 1996, Appl. No. 759,033.

Claims priority, application Japan, Apr. 30, 1993, H5-128029; Apr. 30, 1993, H5-128030; Apr. 30, 1993, H5-128031; May 19, 1993, H5-117184

Int. Cl.[7] **G03B** *1/18*

U.S. Cl. 396—132 **1 Claim**



1. A clutch mechanism comprising:

a planetary gear for transmitting power of a driving source;

an engaging element for regulating revolution of said planetary gear at a plurality of predetermined engaging positions;

detecting means for detecting a position of said engaging element; and

a section to be detected provided on said engaging element, for providing a unique output value to said detecting means, only when said planetary gear is in an initial position which output value is different from output values obtained at a plurality of engaging positions of said planetary gear other than said initial position;

said section to be detected comprising a region which has at least one of three different transmissivities,

three different reflectance factors and three different distances to be detected, with respect to a detecting portion of said detecting means to thereby identify a position of the engaging means.

6,041,188

MULTI-POSITION FLASH WITH SHUTTER ACTUATOR OPERABLE IN EACH POSITION ON COMPACT CAMERA

Robert G. Capurso, Bergen, N.Y., assignor to Eastman Kodak Company, Rochester, N.Y.

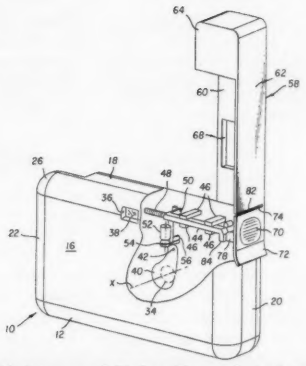
Filed May 13, 1998, Appl. No. 78,068

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **G03B** *15/03;17/38;* **H04N** *5/225*

U.S. Cl. 396—178 **11 Claims**

11. A method of actuating a shutter blade to uncover a taking lens in order to take a picture in a camera having a dual position



flash pivotable between a folded position against a housing and an unfolded position extending from the housing, comprising the steps of:

moving the flash to its folded position;

manually depressing a shutter actuator on the flash, for actuation of the shutter blade with the flash in the folded position;

moving the flash to its unfolded position; and

manually depressing the shutter actuator on the flash, for actuation of the shutter blade with the flash in the unfolded position.

6,041,189

CAMERA SYSTEM, CAMERA AND CAMERA-ACCESSORY

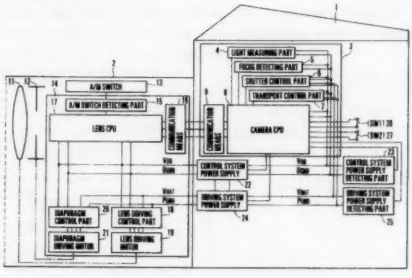
Kazuhiro Izukawa, Misato, Japan, assignor to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Aug. 4, 1998, Appl. No. 128,650

Claims priority, application Japan, Aug. 25, 1997, 9-241689; Sep. 11, 1997, 9-247038

Int. Cl.[7] **G03B** *7/26*

U.S. Cl. 396—277 **38 Claims**



1. A camera system composed of a camera capable of containing a battery therein and an accessory capable of being detachably mounted on said camera and being supplied with electric power from said camera, communication being possible between communication means of said camera and communication means of said accessory, said accessory, upon receiving an instruction from said camera, performing an operation according to the received instruction, said camera system comprising:

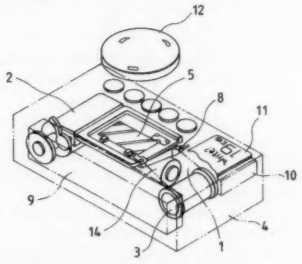
a circuit which sends an instruction designating a value corresponding to electric power usable by said accessory from said camera to said accessory, to decide a working power or voltage usable in said accessory selected from among a plurality of working powers or voltages.

6,041,190

IMAGE DISPLAY APPARATUS

Hiroshi Kikuchi, Zushi, and Takayuki Tsuboi, Yokohama, both of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Filed May 30, 1997, Appl. No. 866,860
Claims priority, application Japan, Jun. 4, 1996, 8-162453
Int. Cl.[7] G03B *21/00;* **G02B** *27/02*
U.S. Cl. 396—284 **26 Claims**



1. An image display apparatus for displaying an image recorded on a film, comprising:

a) a spatial light modulation device which can maintain a recorded image in a non-energization state;

b) an illumination device for illuminating said spatial light modulation device with light;

c) a moving mechanism for moving said spatial light modulation device and said illumination device to one of a first state in which said film is located between said spatial light modulation device and said illumination device and a second state in which said film is not located between said spatial light modulation device and said illumination device; and

d) a control circuit for moving said spatial light modulation device and said illumination device to said first state when an image recorded on said film is to be recorded on said spatial light modulation device, and moving said spatial light modulation device and said illumination device to said second state when said spatial light modulation device on which the image is recorded is to be observed.

6,041,191

PHOTOGRAPHIC CAMERA SYSTEM

Takahiko Saito, Kanagawa; Akira Nakanishi, Tokyo; Shunzi Obayashi, Tokyo; Kyoji Genda, Tokyo, and Hideki Toshikage, Saitama, all of Japan, assignors to Sony Corporation, Tokyo, Japan

Division of application No. 08/958,839, Oct. 28, 1997, Pat. No. 5,978,067, which is a division of application No. 08/645,030, May 15, 1996, Pat. No. 5,721,991, which is a division of application No. 08/426,113, Apr. 20, 1995, Pat. No. 5,570,147, which is a division of application No. 08/333,593, Nov. 2, 1994, Pat. No. 5,625,430, which is a continuation of application No. 08/026,415, Mar. 4, 1993, abandoned. This application Apr. 21, 1999, Appl. No. 295,863.
Claims priority, application Japan, Mar. 17, 1992, 4-060684; Mar. 23, 1992, 4-065304
This patent is subject to a terminal disclaimer.
Int. Cl.[7] G03B *17/24*
U.S. Cl. 396—311 **8 Claims**

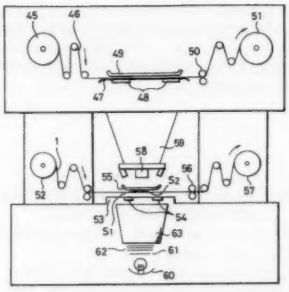
1. A photographic film printer for printing an image in an exposure area of a processed photographic film onto photosensitive paper, the photographic printer comprising:

a printer body;

a light source and a variable-width mask for exposing the photosensitive paper;

film feed means disposed on the printer body for feeding the processed photographic film;

detecting means disposed on the printer body for non-mechanically detecting in a marginal area of the processed photographic film a frame number signal and an aspect signal to be used in printing the image;



control means disposed on the printer body and connected to the film feed means for controlling driving of the processed photographic film and for judging whether the detected aspect signal is correct or not; and

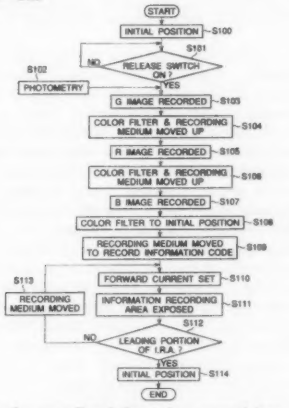
printing means disposed on the printer body for varying an opening width of the variable-width mask used to expose the image in the exposure area of the processed photographic film on the photosensitive paper based on the judged aspect signal.

6,041,192

INFORMATION RECORDING DEVICE

Yasuhiro Yamamoto, Tokyo, Japan, assignor to Asahi Kogaku Kogyo Kabushiki Kaisha, Tokyo, Japan

Filed Mar. 31, 1997, Appl. No. 829,186
Claims priority, application Japan, Apr. 2, 1996, 8-104534
Int. Cl.[7] G03B *17/24;17/48;29/00*
U.S. Cl. 396—315 **13 Claims**



1. A device for recording information, comprising:

an electro-developing recording medium by which an image formed thereon is electronically developed, said electro-developing recording medium having an image recording area, in which an object image is recorded, said image recording area comprising a primary image recording area for each of a plurality of primary color images and an information recording area, in which information other than said object image is recorded;

a positioning mark recording processor that records positioning marks for each of said primary image recording areas in said information recording area, and records information related to an object image in said information recording area, said positioning marks being adapted for adjusting a relative position of each of said primary color images said related information being recorded by repeatedly turning ON and OFF a light beam emitted by a light source; and

a moving mechanism that moves one of said electro-developing recording medium and a light source in a predetermined direction, said positioning mark recording processor recording said related information while said one of said electro-developing recording medium and said light source is moved by said moving mechanism.

6,041,193

REAL-IMAGE ZOOM FINDER WITH ROTATIONALLY ASYMMETRIC SURFACE

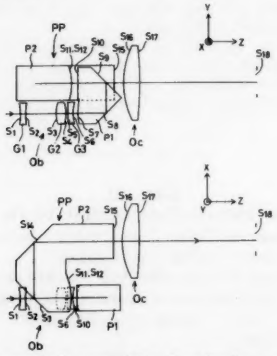
Norihiko Aoki, Iino-machi, Japan, assignor to Olympus Optical Co., Ltd., Tokyo, Japan

Filed Jul. 17, 1998, Appl. No. 118,383

Claims priority, application Japan, Jul. 18, 1997, 9-194254

Int. Cl.[7] G03B *17/10*

U.S. Cl. 396—379 **23 Claims**



1. A real-image finder comprising, in order from an object side thereof:

an objective optical system having a positive refracting power;

an image-inverting optical system having a reflecting surface, said image-inverting optical system erecting an intermediate image formed by said objective optical system; and

an ocular optical system having a positive refracting power;

wherein said objective optical system includes, in order from an object side thereof, a first lens unit having a negative refracting power, a second lens unit having a positive refracting power, and a third lens unit having one of a positive refracting power and a negative refracting power,

wherein when zooming from a wide-angle end to a telephoto end is performed, a spacing between each pair of lens units among said first, second and third lens units is changed, and

wherein said reflecting surface of said image-inverting optical system is arranged in a form of a curved reflecting mirror having an optical power and having a rotationally asymmetric surface configuration that corrects decentration aberrations produced by said curved reflecting mirror.

6,041,194

POSITION ADJUSTING DEVICE

Yasuhiro Yamamoto, Tokyo, Japan, assignor to Asahi Kogaku Kogyo Kabushiki Kaisha, Tokyo, Japan

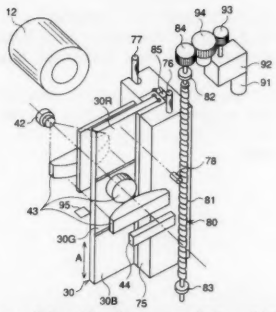
Filed Apr. 17, 1997, Appl. No. 842,876

Claims priority, application Japan, Apr. 18, 1996, P08-121110

Int. Cl.[7] G03B *19/00*

U.S. Cl. 396—429 **20 Claims**

1. A device for adjusting a position of an electro-developing recording medium in which an object image formed by a photographing optical system is electronically developed, said electro-developing recording medium having a plurality of recording areas in which color images corresponding to said object image are



sequentially recorded, said color images being obtained by color separating a color image into a plurality of primary color images, said device comprising:

a recording medium moving mechanism which moves said electro-developing recording medium to a position where one of said recording areas is positioned in an optical path of the photographing optical system; and

an adjusting mechanism which adjusts a position of said electro-developing recording medium so that a relative position of each of said color images formed by said photographing optical system with respect to each of said recording areas is substantially the same.

6,041,195

CAMERA CAPABLE OF VIDEO AND FILM SHOOTING HAVING OPTICAL VIEWFINDER

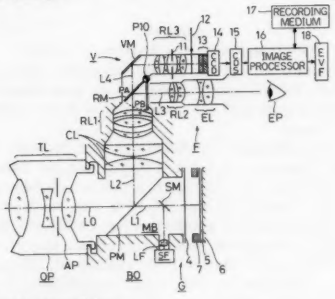
Tsutomu Honda, Sakai; Hiroyuki Matsumoto, Wakayama, and Tatsuya Suzuki, Kawachinagano, all of Japan, assignors to Minolta Co., Ltd., Osaka, Japan

Filed Jul. 24, 1997, Appl. No. 899,800

Claims priority, application Japan, Jul. 24, 1996, 8-194651; Jul. 24, 1996, 8-194657

Int. Cl.[7] G03B *17/48;19/00;29/00*

U.S. Cl. 396—429 **7 Claims**



1. A camera comprising,

a switching member for switching a subsequent path of a light flux having passed through a taking lens between a direction in which the light flux continues to travel as a first light flux and another direction in which the light flux continues to travel as a second light flux;

a light flux splitting member for splitting said second light flux into a third light flux and a fourth light flux;

a first shooting system that performs shooting by receiving one of said first, third, and fourth light fluxes;

a second shooting system that performs shooting by receiving one of said first, third, and fourth light fluxes except the one that is directed to said first shooting system; and

a viewfinder optical system that receives one of said first, third, and fourth light fluxes except the ones that are directed to said first and second shooting systems.

6,041,196

DEVELOPER DETECTING APPARATUS FOR DETECTING THE POSITION OF AN UPPER SURFACE OF DEVELOPER CONTAINED IN A CONTAINER AND PROCESS CARTRIDGE COMPRISING SUCH APPARATUS

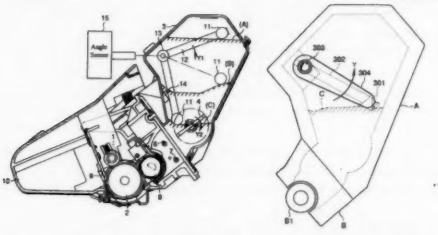
Takao Nakagawa, Numazu, and Tadayuki Tsuda, Susono, both of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Oct. 26, 1998, Appl. No. 178,502

Claims priority, application Japan, Oct. 27, 1997, 9-293967; Oct. 29, 1997, 9-296983; Dec. 11, 1997, 9-341705

Int. Cl.[7] G03G *15/08*

U.S. Cl. 399—27 **17 Claims**



12. An apparatus for detecting an amount of developer, including:

a detection member for detecting a position of an upper surface of developer contained in a developer container, wherein a leading end of said detection member is substantially in the form of a triangular column.

6,041,197

CHARGING DEVICE

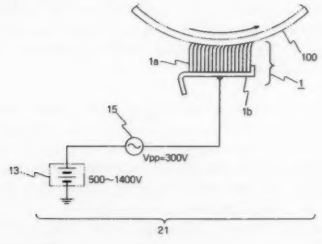
Mabumi Kashihara, Niigata, Japan, assignor to NEC Corporation, Japan

Filed Jan. 28, 1999, Appl. No. 239,397

Claims priority, application Japan, Jan. 30, 1998, 10-018733

Int. Cl.[7] G03G *15/02*

U.S. Cl. 399—50 **10 Claims**



1. A charging device comprising:

an electric charger that is in contact with an electrostatic latent image carrier and applies a predetermined voltage to said electrostatic latent image carrier; and

a power source consisting of a DC power source and an AC power source for applying a DC voltage in combination with an AC voltage to said electric charger,

wherein said AC voltage has a frequency corresponding to a level of half-tone of a latent image to be formed on said electrostatic latent image carrier.

6,041,198

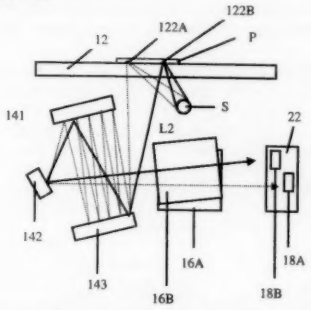
DUAL RESOLUTION SCANNER

Philip L. Chen, E. Rolling Hills, Calif., assignor to Avision Inc., Hsin-Chu, Taiwan

Filed Jun. 24, 1998, Appl. No. 104,246

Int. Cl.[7] G03G *15/043;15/04*

U.S. Cl. 399—51 **9 Claims**



1. A dual resolution scanner for scanning a document, comprising

a frame for housing said scanner;

a light source for focusing a light beam on said document at one of two spots,

a first spot of said two spots being closer to said light source and more focused than a second spot of said two spots;

a first set of sensors for sensing first light ray reflected from said first spot;

a second set of sensors for sensing second light ray reflected from said second spot and displaced from said first set of sensors and

means for advancing and scanning said document at a slower speed when said first spot is focused than when said second spot is focused.

6,041,199

IMAGE FORMATION APPARATUS WITH SHEET STACKING CONTROL FEATURE

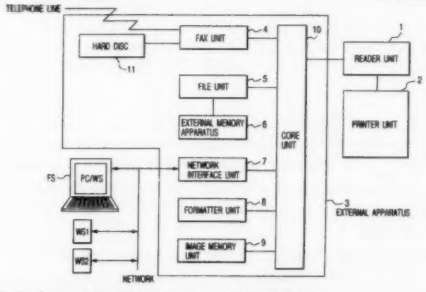
Yoshimasa Kashimada, Yokohama, Japan, assignor to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Dec. 19, 1997, Appl. No. 994,432

Claims priority, application Japan, Dec. 25, 1996, 8-357411

Int. Cl.[7] G03G *15/00;* **H04N** *1/00*

U.S. Cl. 399—82 **11 Claims**



1. An image formation apparatus comprising:

input means for inputting an image and instructions from an external apparatus connected to said image formation apparatus;

image formation means for forming the image, inputted by said input means, on a sheet;

stacking means for stacking the sheets on which the images have been formed by said image formation means on a stacking unit;

detection means for detecting that a stacked sheet is present on said stacking unit; and

control means for inhibiting the sheet stacking onto said stacking means if said input means does not input the instructions and said detection means detects the stacked sheet, and allowing the sheet stacking onto said stacking unit on which the sheet has already been stacked, if said input means inputs the instructions and said detection means detects the stacked sheet.

6,041,200

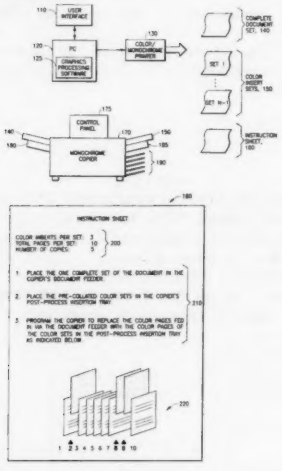
METHOD AND APPARATUS FOR SPLIT PRINTING OF COLOR AND MONOCHROME DOCUMENTS

William H. Glass, Edina; Mark Lokhorst, Eden Prairie; Philip A. Lodwick, Richfield, and Loren Schoenzeit, Orono, all of Minn., assignors to Electronics for Imaging, Inc., Foster City, Calif.

Filed Mar. 8, 1999, Appl. No. 264,287

Int. Cl.[7] G03G *15/00;21/00*

U.S. Cl. 399—82 **15 Claims**



1. A method for providing N sets of documents using a printer and a copier, where $N \geqq 1$, and each set of documents includes a first type of sheets, and a second type of sheets provided in a particular sequence in relation to the first type of sheets, comprising the steps of:

printing a first complete document set, including the first and second types of sheets;

printing N−1 insert sets of the second type of sheets;

printing an instruction sheet indicating the particular sequence;

positioning the first complete document set in a document feeder of the copier;

positioning the N−1 insert sets in a post-process insertion tray of the copier; and

programming the copier according to the instruction sheet to identify the particular sequence.

6,041,201

APPARATUS FOR FILTERING SOLVENT OF LIQUID ELECTROPHOTOGRAPHIC PRINTER

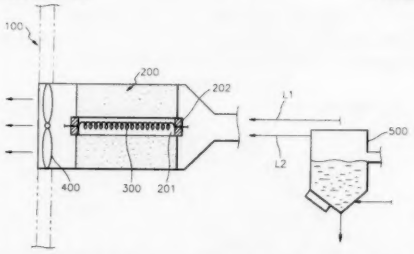
Jong-Woo Kim, Yongin, Rep. of Korea, assignor to Samsung Electronics Co., Ltd., Kyungki-do, Rep. of Korea

Filed Mar. 5, 1999, Appl. No. 262,847

Claims priority, application Rep. of Korea, Mar. 6, 1998, 98-7521

Int. Cl.[7] G03G *21/20*

U.S. Cl. 399—93 **4 Claims**



1. An apparatus for filtering a solvent of a liquid electrophotographic printer, said apparatus comprising:

an exhaust fan for exhausting air inside a main body of said printer to the outside thereof;

a platinum catalyst filter installed on a flow route of air exhausted by said exhaust fan for filtering solvent included in the exhausted air; and

a heater for selectively heating said platinum catalyst filter, wherein a hollow cylinder is formed in said platinum catalyst filter and said heater is installed in said hollow cylinder.

6,041,202

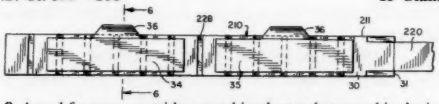
SEAL FOR TONER CARTRIDGE

Lester Cornelius, 47-00 33rd St., Long Island City, N.Y. 11101

Provisional application No. 60/091,226, Jul. 6, 1998. This application Jul. 6, 1999, Appl. No. 347,722.

Int. Cl.[7] G03G *15/08*

U.S. Cl. 399—106 **15 Claims**



9. A seal for toner cartridges used in electrophotographic devices comprising a strip of fibrous non-woven material having a principal axis in which the fibers are axially aligned and lightly fused within a synthetic resinous film; said strip including transversely oriented areas of relatively greater fusion at periodic intervals along said principal axis.

6,041,203

PROCESS UNIT, PHOTOSENSITIVE MEMBER CARTRIDGE, DEVELOPER CARTRIDGE, AND IMAGE FORMING APPARATUS

Tsutomu Suzuki, Nagoya; Shougo Sato, Seto, and Yasushi Okabe, Nagoya, all of Japan, assignors to Brother Kogyo Kabushiki Kaisha, Nagoya, Japan

Filed Mar. 31, 1999, Appl. No. 281,948

Claims priority, application Japan, Feb. 26, 1999, 11-050232

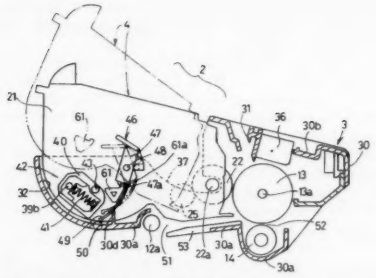
Int. Cl.[7] G03G *15/00;21/18*

U.S. Cl. 399—111 **29 Claims**

1. A process unit for use with developer, comprising:

a photosensitive member cartridge having a photosensitive member on which an electrostatic latent image is formed and an accommodating portion;

a developer cartridge having a developing roller that supplies the developer to the photosensitive member, the developer car-



tridge is separate from and fittingly set into an accommodating portion of the photosensitive member cartridge;

an urging device provided at the photosensitive member cartridge so as to urge the developing roller relative to the photosensitive member; and

an action-receiving portion provided at the developer cartridge so as to communicate with the urging device.

6,041,204

COLOR IMAGE FORMING APPARATUS WITH AN ORGANIC PHOTOCONDUCTOR

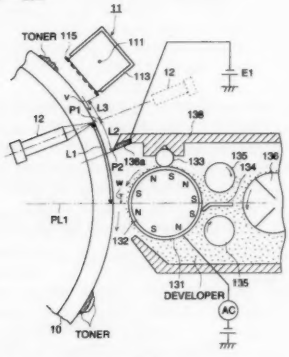
Satoshi Haneda; Hiroyuki Tokimatsu; Masahiro Onodera, and Shuta Hamada, all of Hachioji, Japan, assignors to Konica Corporation, Tokyo, Japan

Filed Dec. 30, 1998, Appl. No. 223,701

Claims priority, application Japan, Jan. 7, 1998, 10-001494; Jan. 21, 1998, 10-009603

Int. Cl.[7] **G03G** *15/00*

U.S. Cl. 399—159 **9 Claims**



1. A color image forming apparatus, comprising:

an image forming member having a rotatable peripheral surface on which an organic photoconductor is provided;

plural sets of charging means, imagewise exposure means, and developing means, the charging means charging the peripheral surface of the image forming member, the imagewise exposure means imagewise exposing a portion of the peripheral surface at an imagewise exposing position so as to form a latent image and the developing means developing the image at a developing position so as to form a toner image on the peripheral surface;

wherein each set of the plural sets is provided separately from other sets around the peripheral surface of the image forming member so that plural color component images are formed one after another by the plural sets and are superimposed so as to form a color image on the peripheral surface during a single rotation of the peripheral surface, and

wherein the developing means has a casing and the imagewise exposure means and the developing means of each set are arranged such that the portion on the peripheral surface located at the imagewise exposing position moves into the casing of the developing means before the electric-potential of the portion is lowered to half of **V1** (**V1/2**), where **V1** is the electric potential on the peripheral surface located at the imagewise exposing position.

IMAGE PROCESSING APPARATUS FOR LAYING OUT PLURALITY OF IMAGES IN CONFORMITY WITH IMAGE ORIENTATION

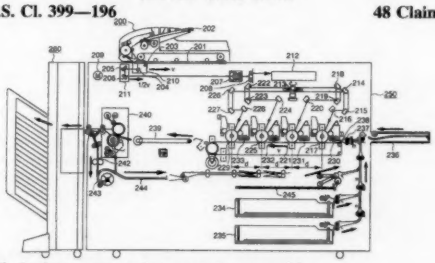
Masahiro Funada, and Yukari Toda, both of Yokohama, Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Jun. 24, 1997, Appl. No. 881,274

Claims priority, application Japan, Jun. 25, 1996, 8-164632; Jun. 28, 1996, 8-169912

Int. Cl.[7] **G03G** *21/00*

U.S. Cl. 399—196 **48 Claims**



1. An image processing apparatus comprising:

input means for inputting a document image;

first detecting means for detecting orientation of the document image that has been input by said input means;

second detecting means for detecting size of the document image that has been input by said input means; and

image processing means for reducing the document image that has been input by said input means, at a magnification according to detection results obtained by said first and second detecting means, and arranging a plurality of document images as a single image.

6,041,206

SQUEEZE ROLLER ELEVATING APPARATUS OF LIQUID ELECTROPHOTOGRAPHIC PRINTER

woo-yong Park, Suwon, Rep. of Korea, assignor to Samsung Electronics Co., Ltd., Kyungki-do, Rep. of Korea

Filed May 7, 1999, Appl. No. 307,029

Claims priority, application Rep. of Korea, May 8, 1998, 98-16505; Sep. 15, 1998, 98-37925

Int. Cl.[7] **G03G** *15/10*

U.S. Cl. 399—249 **2 Claims**

1. A squeeze roller elevating apparatus of a liquid electrophotographic printer for selectively pressing a photoreceptor belt, which is installed at a belt frame for circulation, by elevating a squeeze roller, said apparatus comprising:

a housing fixed at the belt frame;

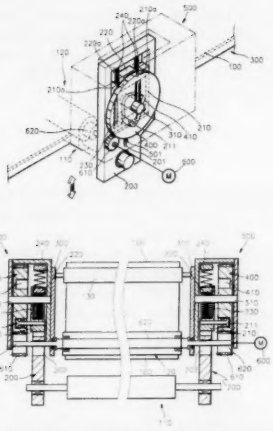
a squeeze frame installed in said housing and operative to elevatingly support the squeeze roller;

a first elevating member installed at said squeeze frame for elevating movement;

a second elevating member installed at said squeeze frame for elevating movement by being interlocked with the elevating movement of said first elevating member and moving said squeeze frame upward so that the squeeze roller presses the photoreceptor belt while ascending;

a first spring coupling said first elevating member and said second elevating member to be interlocked with one another;

a second spring coupling said second elevating member and said squeeze frame to be interlocked with one another; and



an elevator which elevates said first elevating member.

6,041,207

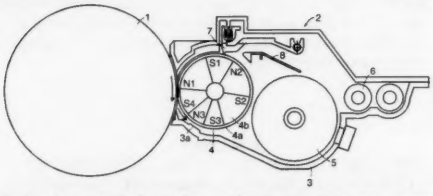
APPARATUS FOR CONTROLLING THE MOVEMENT OF MAGNETIZED DEVELOPER MATERIAL IN A LATENT, ELECTROSTATIC IMAGE DEVELOPING DEVICED

Yasuyuki Ishiguro, Higashiosaka; Yoshiaki Sanada, Ikoma; Toshihiko Takaya, Yamatokoriyama; Takahiko Kimura; Masatoshi Kaneshige, both of Ikoma, and Shuuhei Yamamoto, Yamatokoriyama, all of Japan, assignors to Sharp Kabushiki Kaisha, Osaka, Japan

Filed Aug. 26, 1998, Appl. No. 140,704

Int. Cl.[7] G03G *15/09*

U.S. Cl. 399—275 **7 Claims**



1. An electrostatic latent image developing apparatus comprising:

a developer tank defining an interior adapted for containing toner particles and magnetized carrier particles, and for imparting an electrostatic charge to at least some of said toner particles;

a hollow, cylindrical developing sleeve, said developing sleeve being rotatably drivable about its longitudinal axis in a first direction, and defining an outer surface in communication with said interior of said developer tank at, at least a first location;

an electrostatic latent image bearing member defining a surface adapted to have an electrostatic latent image formed thereon, said surface being closely spaced to said outer surface of said developer sleeve at a second location substantially opposite to said first location;

a stationary magnet fixedly disposed inside said rotatable developing sleeve, said magnet defining a number of magnetic poles circumferentially spaced about the longitudinal axis of said developing sleeve;

said magnetic poles including:

a developing magnetic pole having a first polarity located substantially adjacent to said second location;

a developer separating magnetic pole and a developer sucking magnetic pole both having the same second polarity, opposite to said first polarity, located circumferentially adjacent to one another, with said developer sucking magnetic pole being located downstream in said first direction from said developer separating magnetic pole substantially adjacent to said first location;

a first even number of intermediate magnetic poles of alternating polarities located in circumferentially spaced relation to one another between said developing magnetic pole and said separating magnetic pole such that the polarity of said first even number of intermediate magnetic poles alternates between said second polarity and said first polarity in said first direction between said developing magnetic pole and said developer separating magnetic pole, and

a second even number of intermediate magnetic poles of alternating polarity located in circumferentially spaced relation to one another such that the polarity of said second even number of magnetic poles alternates between said first polarity and said second polarity in said first direction between said sucking magnetic pole and said developing magnetic pole; and

a doctor element for limiting the thickness of said layer of developer layer carried by said sleeve, wherein said doctor element is adapted to interact with a of developer located on said developer sleeve approximately midway between a pair of said second even number of alternating polarity magnetic poles located between said developer sucking magnetic pole and said developing magnetic pole;

wherein the speed of rotation of said developer sleeve, and the spacing, magnitude and direction of the magnetic force provided by said magnetic poles are selected such that (1) the rise of developer magnetically adhered to said surface of said developing sleeve is small between adjacent magnetic poles; (2) said developer undergoes a chain-like rotation on said surface of said developer sleeve upon passing each of said magnetic poles; (3) toner is transferred from said developer on the surface of said developer sleeve to said latent image bearing member at said second location when said latent image bearing member has an electrostatic image formed thereon; and (4) the area of said developer having the weakest charge abuts said developer sleeve surface in the vicinity of said developer separating magnetic pole.

6,041,208

METHOD AND ARRANGEMENT FOR RETRIEVING/SUPPLYING DEVELOPING MATERIAL IN ELECTROPHOTOGRAPHY FORMING APPARATUS

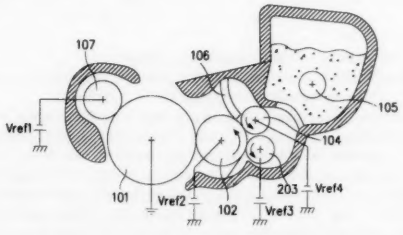
Bong-Hwan Choi, Suwon, Rep. of Korea, assignor to SamSung Electronics Co., Ltd., Kyungki-do, Rep. of Korea

Filed Apr. 7, 1998, Appl. No. 55,922

Claims priority, application Rep. of Korea, Apr. 7, 1997, 97-12638

Int. Cl.[7] G03G *15/08*

U.S. Cl. 399—281 **15 Claims**



1. A method for retrieving and supplying developing material in an electrophotography forming apparatus which includes a developing roller, a retrieval roller and a supply roller, said method comprising the steps of:

rotating said retrieval roller adjacent to said developing roller in a direction identical to a direction of rotation of said developing roller; and

applying voltages to said developing roller, said retrieval roller and said supply roller according to following expression:

Vr>Vd>Vs

where

Vr is the voltage applied to the retrieval roller,

Vd is the voltage applied to the developing roller, and

Vs is the voltage applied to the supply roller.

6,041,209

CHARGING MEMBER HAVING AN ELASTOMERIC MEMBER INCLUDING AN ELASTOMERIC MATERIAL HAVING A DOUBLE OXIDE

Jun Murata, Kawagoe, Japan, assignor to Canon Kabushiki Kaisha, Tokyo, Japan

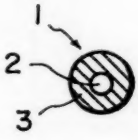
Continuation of application No. 08/208,038, Mar. 9, 1994, Pat. No. 5,757,508, which is a continuation of application No. 07/492,583, Mar. 13, 1990, abandoned. This application Apr. 24, 1998, Appl. No. 63,725.

Claims priority, application Japan, Mar. 14, 1989, 1-061336

This patent is subject to a terminal disclaimer.

Int. Cl.[7] G03G *15/02;15/16*

U.S. Cl. 399—313 **36 Claims**



1. A charging member comprising an elastomeric member comprising an elastomeric material, the elastomeric material having a double oxide contained therein, said double oxide being a solid solution compound of oxides of at least two different metals formed by crystal lattice substitution, wherein said at least two different metals have different valences, whereby said double oxide has an electroconductivity that is larger than that of either one of said oxides of at least two different metals when not in solution.

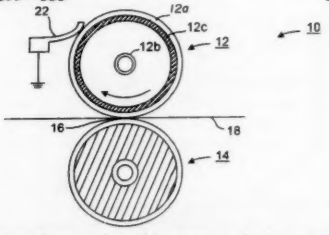
ELECTROSTATIC CHARGE-SUPPRESSING FUSER ROLLER

Jiann H. Chen, Fairport; Robert A. Lancaster, Hilton, both of N.Y.; Andy H. Tsou, Houston, Tex., and Charles C. Anderson, Penfield, N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.

Continuation-in-part of application No. 09/123,204, Jul. 27, 1998, abandoned. This application Jun. 17, 1999, Appl. No. 335,371.

Int. Cl.[7] G03G *15/20*

U.S. Cl. 399—333 **11 Claims**



1. A toner fuser roller with suppressed electrostatic charge build-up for fixing a toner image to a receiver comprising:

(a) a core; and

(b) an overcoat layer formed over the core and defining the surface that contacts the receiver, such overcoat layer including electrically conductive fine powder having a weight percentage between about 30 to 80 weight percent so as to make the overcoat layer electrically conductive and suppress electrostatic charge build-up and improve thermal conductivity.

6,041,211

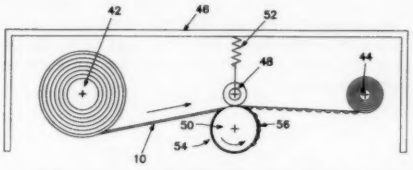
CLEANING ASSEMBLY FOR CRITICAL IMAGE SURFACES IN PRINTER DEVICES AND METHOD OF USING SAME

Alex R. Hobson, Elkton, Md.; F. Michael J. McCollam, Fife, United Kingdom, and Beth P. Powell, Elkton, Md., assignors to W. L. Gore & Associates, Inc., Newark, Del.

Filed Jun. 6, 1996, Appl. No. 659,600

Int. Cl.[7] G03G *21/00;15/20*

U.S. Cl. 399—352 **17 Claims**



1. A cleaning assembly for mounting in a printer device employing at least one critical image surface, comprising:

an assembly consisting essentially of an expanded polytetrafluoroethylene (PTFE) membrane exhibiting a node and fibril structure and in the absence of a release agent and a means for contacting at least a portion of the expanded PTFE membrane with the critical image surface; and

means for moving at least one of the assembly and the critical image surface relative to each other, whereby during said moving contaminates on the critical image surface are transferred to the assembly and held by the expanded PTFE membrane.

6,041,212

TONER REPLENISHING DEVICE OF IMAGE FORMING MACHINE AND TONER CARTRIDGE FOR USE THEREIN

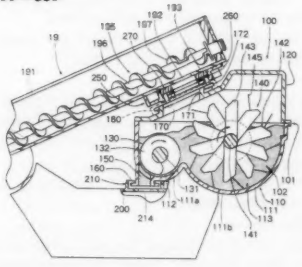
Mitsuharu Okada, Osaka, Japan, assignor to Mita Industrial Co., Ltd., Osaka, Japan

Filed Oct. 26, 1998, Appl. No. 178,535

Claims priority, application Japan, Nov. 6, 1997, 9-304330

Int. Cl.[7] G03G *21/00*

U.S. Cl. 399—359 **8 Claims**



1. A toner replenishing device of an image forming machine comprising a photoconductor drum rotatably disposed in a machine housing, a developing device for applying toner to an electrostatic latent image formed on a circumferential surface of the photoconductor drum to develop it to a toner image, a cleaning device for removing remaining toner adhering to the circumferential surface of the photoconductor drum, recycle toner carrier means for carrying remaining toner removed by the cleaning device, and a toner cartridge accommodating toner to be fed to the developing device,

said toner cartridge being adapted to be detachably mounted in the machine housing; wherein

the toner cartridge comprises a container body having a toner transport passage, and toner transporter means disposed in the toner transport passage for transporting toner from one end portion toward the other end portion of the toner transport passage while agitating the toner along the toner transport passage, and the container body has a toner discharge port provided at the other end portion of the toner transport passage, and a recycle toner entry port provided at the one end portion of the toner transport passage; and

when the toner cartridge is mounted at a predetermined position, the toner discharge port is positioned opposite a toner feed port provided in the developing device, while the recycle toner entry port is positioned opposite a recycle toner drop port provided in the recycle toner carrier means, and wherein

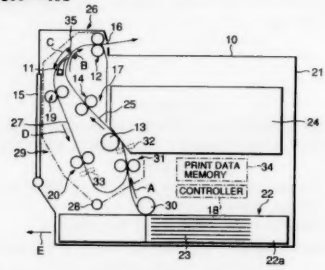
a toner agitation passage parallel to the toner transport passage is formed in the container body of the toner cartridge, and toner agitator means for moving toner toward the toner transport passage while agitating it is disposed in the toner agitation passage.

6,041,213

COMPACT IMAGE FORMING APPARATUS CAPABLE OF SMOOTH DOUBLE SIDE PRINTING IN A SHORT TIME

Kenzo Yanagi, Niigata, Japan, assignor to NEC Corporation, Japan

Filed Nov. 30, 1998, Appl. No. 203,197
Claims priority, application Japan, Nov. 28, 1997, 9-328538
Int. Cl.[7] G03G *15/00*
U.S. Cl. 399—401 **4 Claims**



1. An image forming apparatus comprising:

storage means for storing inputted printing data;

printing means for printing a recording paper based on the printing data stored in said storing means;

first waiting means;

first feeding means for feeding said recording paper after printing to said first waiting means, said first waiting means causing said recording paper to wait at said waiting means for a first waiting period;

paper reversing means for reversing the recording paper waiting at said first waiting means;

second waiting means;

second feeding means for feeding the reversed recording paper from said paper reversing means to said second waiting means, said second waiting means causing the recording paper sent from said paper reversing means to wait at said second waiting means for a second waiting period and then feeding the reversed recording paper to said printing means; and

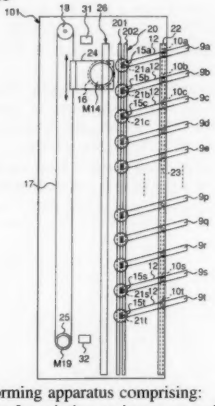
control means which reads and expands printing data for two pages succeeding the page printed on said preceding recording paper into a printable state after said recording paper has left said printing means for said first waiting means.

6,041,214

IMAGE FORMING APPARATUS CAPABLE OF IMPROVING EASE OF USE IN MAIL BIN MODE

Teruhiko Fujikura; Naoyoshi Kinoshita, both of Aichi-Ken; Makoto Fujii, Itami; Kenji Matsuhara, and Munehiro Natsume, both of Toyokawa, all of Japan, assignors to Minolta Co., Ltd., Osaka, Japan

Filed Jan. 19, 1999, Appl. No. 232,996
Claims priority, application Japan, Jan. 19, 1998, 10-007680
Int. Cl.[7] G03G *15/00*
U.S. Cl. 399—403 **19 Claims**



1. An image forming apparatus comprising:

a printer section for printing an image on a sheet;

a sorter having a plurality of bins onto which a sheet printed with the image by the printer section is discharged;

a receiving section for receiving a print job transmitted externally, the print job including information indicating the number of pages of the image to be printed and the bin onto which the sheet printed with the image is to be discharged; and

a controller for increasing a sheet accommodating capacity of said bin onto which the sheet is to be discharged when the number of pages of the print job received by said receiving section is greater than a specified number.

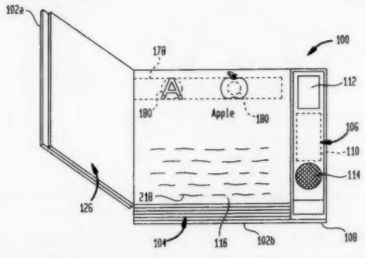
METHOD FOR MAKING AN ELECTRONIC BOOK FOR PRODUCING AUDIBLE SOUNDS IN RESPONSE TO VISUAL INDICIA

Richard Maddrell, Barrington, Ill., and Thomas L. Maser, Mequon, Wis., assignors to Publications International, Ltd., Lincolnwood, Ill.

Division of application No. 08/723,681, Sep. 30, 1996, Pat. No. 5,803,748. This application Mar. 31, 1998, Appl. No. 52,832.
Int. Cl.[7] G09B *5/00*
U.S. Cl. 434—317 **44 Claims**



1. A method for making an electronic book comprising the steps of: forming a plurality of leaves providing pages of said book; providing an internal passageway within at least one of said leaves having an opening thereinto; forming a switch circuit on a common

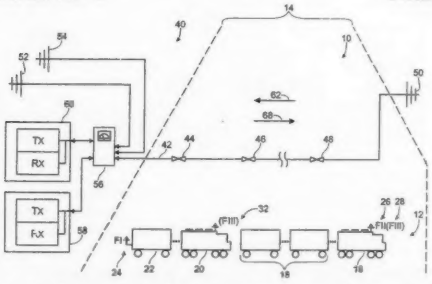
substrate having a first segment including at least one switch and a second segment including at least one conductive path in electrical connection with said at least one switch, said at least one switch including first and second spaced apart elements; arranging said first and second elements to overlie one another; inserting said first segment having said at least one switch into said passageway through said opening with said second segment having said at least one conductive path being external of said passageway so that said first and second elements create an electrical connection therebetween in response to pressure applied to said at least one leaf overlying one of said first and second elements.

6,041,216

RADIO COMMUNICATION SYSTEM FOR USE IN TUNNELS

Mark D. Rose, Corvallis, Oreg., and Robert W. Haining, Farnham, United Kingdom, assignors to Tunnel Radio of America, Inc., Corvallis, Oreg.

Filed Jan. 7, 1998, Appl. No. 4,057
Int. Cl.[7] **H04B** *1/60;15/00*
U.S. Cl. 455—9 **5 Claims**



1. A radio communications system for use by trains in a tunnel, comprising:

an antenna subsystem for receiving and sending RF signals, including:

a surface antenna located beyond the tunnel portals thereof at either end thereof;

a radiating coaxial cable located in and along the length of the tunnel;

plural bi-directional, in-line amplifiers disposed along the length of said Radiating coaxial cable at predetermined intervals for amplifying RF signals therein;

a monitoring repeater and a control repeater, and an interface for joining said monitoring repeater and said control repeater to said Radiating coaxial cable, wherein said interface corrects RF levels as said RF signals are received by said Radiating coaxial cable;

a monitoring subsystem, including:

an EOT device for sending a first status signal at a first predetermined interval and for receiving a second status signal;

a HOT device for sending said second status signal at a second predetermined interval and for receiving said first status signal, wherein said antenna subsystem receives and transmits said first and second status signals when the train is at least partially in the tunnel; and

a control subsystem, including:

a control encoder located in a control train engine for encoding control input signals for said engine;

a control transmitter for transmitting a control signal generated from the encoded control input signal;

a control receiver located in a controlled train engine for receiving said control signal; and

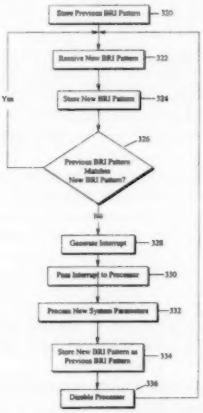
a control decoder for decoding said control signal into a control input signal for controlling said controlled engine.

6,041,217

PERSONAL HANDYPHONE SYSTEM HARDWARE CHECKING OF BROADCASTING RECEPTION INDICATION

Varenka Martin; Denis Archambaud, both of Antibes; Patrick Feyfant, Toulon; Philippe Gaglione, Mandelieu; Satoshi Yoshida, Nice; Laurent Winckel, and Oliver Weigelt, both of Antibes, all of France, assignors to VLSI Technology, Inc., San Jose, Calif.

Filed Jul. 29, 1997, Appl. No. 902,091
Int. Cl.[7] **H04B** *7/00*
U.S. Cl. 455—38.3 **18 Claims**



1. A circuit arrangement for checking paging information transmitted in a personal handyphone system to a portable station, and for selectively activating a processor to analyze new system parameters transmitted in a broadcast control channel, the paging information including a broadcasting reception indication pattern, the circuit arrangement comprising:

a first memory portion for holding a previous broadcasting reception indication pattern;

an interrupt generator coupled to the first memory portion and the processor, the interrupt generator adapted to compare the previous broadcasting reception indication pattern with a current broadcasting reception indication pattern and to generate an interrupt when the current broadcasting reception indication pattern differs from the previous broadcasting reception indication pattern, the processor, in response to the interrupt, processing new system parameters corresponding to the current broadcasting reception indication pattern.

6,041,218

DEVICE AND METHOD FOR FACILITATING SELECTION OF A SELECTIVE CALLING RECEIVER RADIO AREA

Kazuhiro Kudoh, Shizuoka, Japan, assignor to NEC Corporation, Tokyo, Japan

Filed Jun. 5, 1997, Appl. No. 869,907
Claims priority, application Japan, Jun. 12, 1996, 8-150835
Int. Cl.[7] **H04B** *7/00*
U.S. Cl. 455—38.4 **3 Claims**

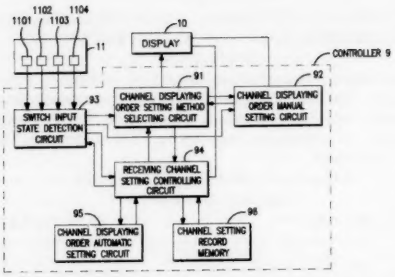
1. A selective calling receiver comprising:

a tuning circuit for tuning a receiving frequency;

a display for describing radio areas, each of which is associated with a particular receiving frequency;

a scrolling circuit for scrolling the described radio areas on the display and for changing a scrolling order of the described radio areas; and

a setting circuit, operated by a user of the receiver, for selecting one of the radio areas and its respective receiving frequency



based on said display, and for setting the selected radio area and receiving frequency at said tuning circuit,

wherein said scrolling circuit comprises a deciding circuit for changing said scrolling order so that the selected radio area and associated receiving frequency has a priority in the scrolling order, and

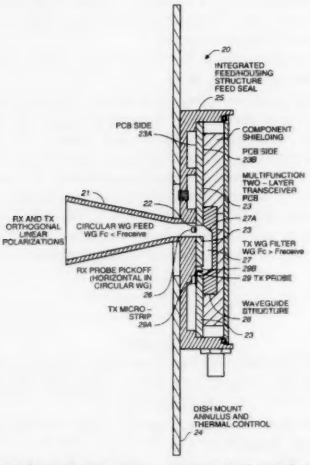
wherein said deciding circuit comprises an automatic deciding circuit for deciding said scrolling order based on a past setting of a receiving frequency.

6,041,219

INTEGRATED ORTHOGONAL MODE TRANSDUCER/ FILTER DESIGN FOR MICROWAVE FREQUENCY-DOMAIN

Dean F. Peterson, Groton, Mass., assignor to Wytec, Incorporated, Santa Clara, Calif.

Filed Oct. 1, 1998, Appl. No. 164,574
Int. Cl.[7] H04B *1/40*
U.S. Cl. 455—81 **9 Claims**



1. A transceiver apparatus on a printed circuit board (PCB) comprising:

a first probe for being excited with received signals in a first frequency range and coupling said received signals to receive circuitry, said first probe oriented in a first position;

a second probe coupled to transmit circuitry for generating, through excitation, transmit signals in a second frequency range, said second probe oriented orthogonal to said first probe such that said transmit signals are polarized essentially orthogonally with respect to said receive signals;

an enclosed waveguide structure positioned between said first and second probes, said enclosed waveguide structure having first and second ends, a top closed portion, and a bottom open portion, said bottom open portion being fixedly attached to said PCB so as to form an enclosed waveguide area;

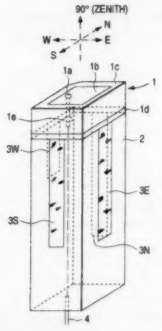
wherein said first end of said enclosed waveguide structure is positioned over an opening in said PCB and one of said first and second probes is positioned at said opening, said other one of said first and second probes is positioned at said second end of said enclosed waveguide structure, and said enclosed waveguide structure provides frequency isolation between said transmit and received signals.

6,041,220

PORTABLE RADIO COMMUNICATION APPARATUS

Akihiro Suguro, Yokohama, Japan, assignor to Kyocera Corporation, Kyoto, Japan

Filed Jul. 24, 1997, Appl. No. 924,202
Claims priority, application Japan, Jul. 25, 1996, 8-196035
Int. Cl.[7] H04B *1/38*
U.S. Cl. 455—90 **5 Claims**



1. A portable radio communication apparatus comprising:

a case body; and

an antenna device having a surface on which radiation of an output of said antenna device is suppressed in at least one direction, the antenna device including a plurality of directionally related linear radiating elements, at least one of which is altered relative to the others to achieve the suppression in at least one direction;

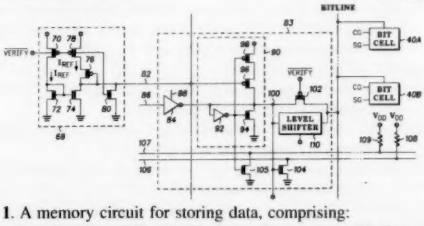
wherein said antenna device is attached to said case body so that the radiation-output-suppressed surface of said antenna device is arranged to face an user side at the time of talking.

6,041,221

CIRCUIT AND METHOD FOR VERIFYING DATA OF A WIRELESS COMMUNICATIONS DEVICE

James S. Caravella, Chandler; David F. Mietus, Phoenix, and Jeremy W. Moore, Chandler, all of Ariz., assignors to Motorola, Inc., Schaumburg, Ill.

Filed May 21, 1997, Appl. No. 859,898
Int. Cl.[7] H04Q *7/20*
U.S. Cl. 455—186.1 **19 Claims**



1. A memory circuit for storing data, comprising:

a first plurality of bit cells having a first common bit line; and

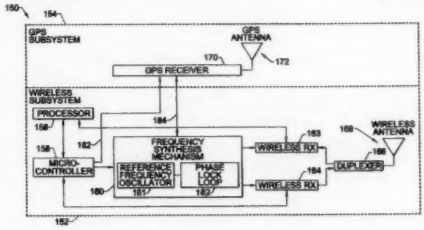
a first latch having an output for providing a reference current which is compensated for supply voltage variation to the first common bit line when the first latch is set to a first state to verify a programming state of one of the first plurality of bit cells, wherein the first latch switches to a second state and discontinues providing the reference current when the one of the first plurality of bit cells sinks the reference current.

6,041,222

SYSTEMS AND METHODS FOR SHARING REFERENCE FREQUENCY SIGNALS WITHIN A WIRELESS MOBILE TERMINAL BETWEEN A WIRELESS TRANSCEIVER AND A GLOBAL POSITIONING SYSTEM RECEIVER

Robert Ray Horton, Apex, and William O. Camp, Jr., Chapel Hill, both of N.C., assignors to Ericsson Inc., Research Triangle Park, N.C.

Filed Sep. 8, 1997, Appl. No. 925,566
Int. Cl.[7] H04B *1/40*
U.S. Cl. 455—255 **20 Claims**



1. A wireless mobile terminal for a wireless communications system, comprising:

a wireless transceiver; and

a global positioning system (GPS) receiver that shares a reference oscillator signal with said wireless transceiver, comprising:

a multiplier that multiplies the reference oscillator signal by a first integer to produce a first GPS local oscillator signal;

a first mixer that is responsive to the first GPS local oscillator signal and a GPS satellite signal and generates a first output signal having an intermediate frequency;

a first divider that divides the reference oscillator signal by a second integer to produce a second GPS local oscillator signal;

a second mixer that is responsive to the first output signal and the second GPS local oscillator signal and generates a second output signal used by the GPS receiver for signal processing; and

a second divider that divides the reference oscillator signal by a third integer to produce a third GPS local oscillator signal used in signal processing by the GPS receiver.

6,041,223

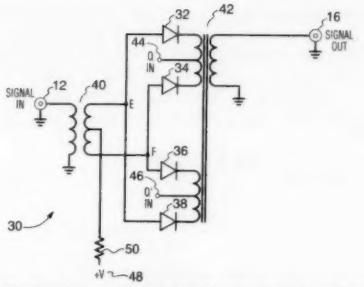
HIGH LEVEL DIODE MIXER

Robert McLaren Thomas, Nepean, Canada, assignor to Nortel Networks Corporation, Montreal, Canada

Filed Mar. 26, 1998, Appl. No. 48,072
Int. Cl.[7] H04B *1/26*
U.S. Cl. 455—326 **17 Claims**

1. A double balanced mixer circuit for mixing a first input signal with a second input signal oscillating between a positive voltage and a zero voltage at a higher frequency than said first signal, and providing an output signal comprising said first input signal modulated at the frequency of said second input signal, said double balanced mixer circuit comprising:

a first solid state switching means for receiving said first input signal and said second input signal and transmitting said output signal, responsive to said second input signal having an amplitude of zero volts by being forward-biased, and coupling said first input signal to said output signal;



a second solid state switching means for receiving said first input signal and said second input signal and transmitting said output signal, responsive to a complement of said second input signal having an amplitude of zero volts by being forward-biased, and coupling an inversion of said first input signal to said output signal; and

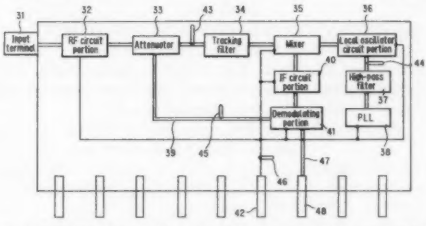
means for electrically interconnecting said first solid state switching means with said second solid state switching means so that either one of said first or said second solid state switching means being in a forward-bias state provides a low voltage potential to the other of said solid state switching means against which said other of said solid state switching means becomes reversed-bias with respect to said positive voltage.

6,041,224

DBS TUNER FOR SATELLITE BROADCASTING RECEIVERS

Yasuhiro Wada, Takatsuki, Japan, assignor to Sharp Kabushiki Kaisha, Osaka, Japan

Filed Mar. 26, 1997, Appl. No. 824,123
Claims priority, application Japan, Apr. 26, 1996, 8-107243
Int. Cl.[7] H04B *1/26;1/10*
U.S. Cl. 455—327 **19 Claims**



1. A receiver for a direct broadcasting satellite transmission comprising:

an attenuating filter including a microstrip transmission line having an open-ended load terminations directly projecting from the transmission line the load terminations having different lengths including a shorter length tuned to a third harmonic of a locally generated signal and a longer length tuned to a second harmonic of the locally generated signal;

a tuner assembly for receiving an input signal at an input terminal, the tuner assembly providing a radio frequency path for the input signal, wherein the attenuating filter is coupled into said radio frequency path;

a phase-locking circuit; and

a local oscillator coupled to the phase-locking circuit, the attenuating filter being provided in the radio frequency transmission path for the locally generated signal from the local oscillator to the phase-locking circuit to attenuate leakage of the second and the third harmonic of the locally generated signal associated with the input terminal.

6,041,225

MONITOR CONTROL CIRCUIT USING WIRELESS HEADPHONES AND METHOD THEREFOR

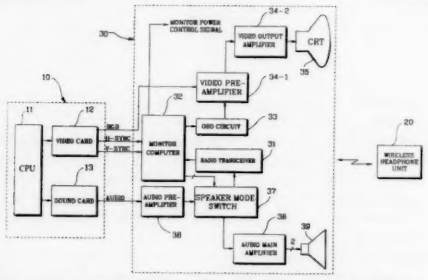
Sung-Gon Jung, Kyunki-do, Rep. of Korea, assignor to Sam-Sung Electronics Co., Ltd., Suwon, Rep. of Korea

Filed Oct. 28, 1997, Appl. No. 959,067

Claims priority, application Rep. of Korea, Oct. 28, 1996, 96-49290

Int. Cl.[7] H04B *1/06*

U.S. Cl. 455—352 **13 Claims**



1. A circuit for controlling a computer monitor receiving a speaker input signal, said circuit comprising:

wireless headphones for outputting a first control signal based on a user input command;

a radio transceiver for generating a second control signal based on the first control signal from said wireless headphones;

a first microcomputer for generating a switching control signal according to the second control signal from said radio transceiver; and

switching means for receiving the speaker input signal and selectively outputting the received speaker input signal to said radio transceiver as a controlled audio signal for transmission to said wireless headphones or to an audio amplifier in said monitor for driving a speaker, according to the switching control signal from said first microcomputer.

6,041,226

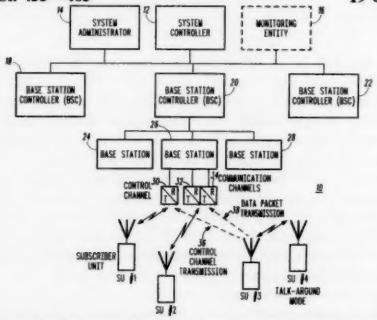
METHOD AND APPARATUS FOR MONITORING SUBSCRIBER TALK-AROUND USAGE

John P. Skoro, III, Plano, Tex.; Brian K. Bunkenburg, Glen Ellyn, and Mark L. Shaughnessy, Algonquin, both of Ill., assignors to Motorola, Inc., Schaumburg, Ill.

Filed Oct. 9, 1997, Appl. No. 947,590

Int. Cl.[7] H04Q *7/20*

U.S. Cl. 455—405 **19 Claims**



1. A method for monitoring subscriber talk-around usage, the method comprising the steps of:

detecting selection of talk-around mode for a subscriber unit;

providing an indication of the selection of the talk-around mode to a monitoring entity; and

determining, by the monitoring entity, usage of the talk-around mode by the subscriber unit by monitoring at least one of: elapsed time of the usage of the talk-around mode, quantity of transmissions initiated while in the talk-around mode, and time of day of the usage of the talk-around mode.

6,041,227

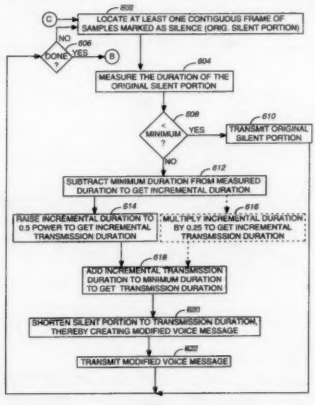
METHOD AND APPARATUS FOR REDUCING TRANSMISSION TIME REQUIRED TO COMMUNICATE A SILENT PORTION OF A VOICE MESSAGE

Terence Edward Sumner, Azle, Tex., assignor to Motorola, Inc., Schaumburg, Ill.

Filed Aug. 27, 1997, Appl. No. 921,638

Int. Cl.[7] H04Q *7/20*

U.S. Cl. 455—412 **18 Claims**



LOCATE AT LEAST ONE CONTIGUOUS FRAME OF SAMPLES MARKED AS SILENCE (ORIG. SILENT PORTION)
DONE?
NO
YES
MEASURE THE DURATION OF THE ORIGINAL SILENT PORTION
< MINIMUM ?
YES
NO
TRANSMIT ORIGINAL SILENT PORTION
SUBTRACT MINIMUM DURATION FROM MEASURED DURATION TO GET INCREMENTAL DURATION
RAISE INCREMENTAL DURATION TO 0.5 POWER TO GET INCREMENTAL TRANSMISSION DURATION
MULTIPLY INCREMENTAL DURATION BY 0.25 TO GET INCREMENTAL TRANSMISSION DURATION
ADD INCREMENTAL TRANSMISSION DURATION TO MINIMUM DURATION TO GET TRANSMISSION DURATION
SHORTEN SILENT PORTION TO TRANSMISSION DURATION, THEREBY CREATING MODIFIED VOICE MESSAGE
TRANSMIT MODIFIED VOICE MESSAGE

1. A method for reducing a transmission time required for communicating an original silent portion of an original voice message in a wireless voice messaging system, the original silent portion having an original duration, the method comprising the steps of:

processing the original voice message to detect the original silent portion and to measure the original duration;

creating a modified voice message, when the original duration is not less than a predetermined minimum duration that can be reliably detected by a subscriber unit, by replacing the original silent portion with a modified silent portion having a transmission duration equal to a sum of an incremental transmission duration and the predetermined minimum duration, wherein the incremental transmission duration is mathematically derived from an incremental duration and is shorter than the incremental duration, and wherein the incremental duration is equal to the original duration less the predetermined minimum duration; and

transmitting the modified voice message by the wireless voice messaging system to improve transmission efficiency by utilizing a greater compression ratio for speech pauses than is possible for voiced and unvoiced speech.

OPEN 'PLUG AND PLAY' O AND M ARCHITECTURE FOR A RADIO BASE STATION

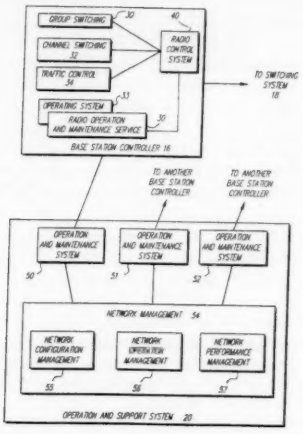
Håkan Niska; Bo Kvarnström, both of Linköping, and Jan Oom, Rimforsa, all of Sweden, assignors to Telefonaktiebolaget LM Ericsson, Stockholm, Sweden

Filed Oct. 27, 1997, Appl. No. 958,337

Int. Cl.[7] H04B *7/00*

U.S. Cl. 455—419 **25 Claims**

7. A base station, comprising:



a base station resource infrastructure management layer for administration of the base station software and hardware infrastructure;

a base station abstract resource management layer having its own element management operating system based on an abstract information model identifying operational capabilities of the base station software and hardware infrastructure, wherein said information model is independent of any format of said base station software and hardware infrastructure; and

a site capabilities application for creating the abstract information model based on the base station software and hardware infrastructure.

TRANSFERRING INFORMATION

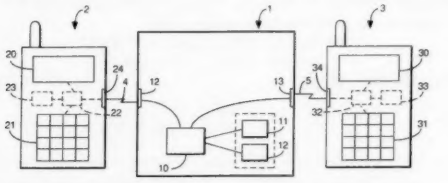
Clive Nathan Turner, Turku, Finland, assignor to Nokia Mobile Phones, Ltd., Salo, Finland

Filed Feb. 6, 1997, Appl. No. 796,139

Claims priority, application United Kingdom, Feb. 9, 1996, 9602662

Int. Cl.[7] **H04Q** *7/90*

U.S. Cl. 455—420 **14 Claims**



1. Apparatus for transferring information from a first radio telephone to a second radio telephone, comprising:

first communication means for communicating with the first radio telephone;

second communication means for communicating with the second radio telephone; and

data transfer means for communicating between the first and second communication means and operable under the control of the second radio telephone for reading information from the first radio telephone and transmitting that information to the second radio telephone, wherein the data transfer means includes telephone comparison means for reading type information from the first and second radio telephones and inhibiting transfer of information between the radio telephones if the type information is incompatible.

6,041,230

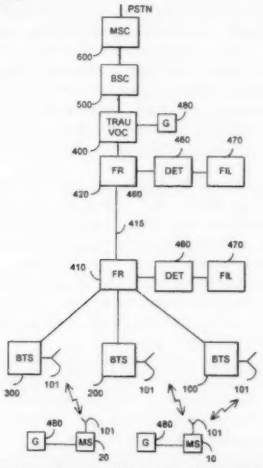
TRANSMISSION METHOD AND A CELLULAR RADIO SYSTEM

Mikko Siira, Oulu, Finland, assignor to Nokia Telecommunications Oy, Espoo, Finland

Filed Mar. 13, 1997, Appl. No. 816,520

Int. Cl.[7] **H04Q** *7/20;* **H04B** *1/38;* **H04M** *1/00;* **H04S** *3/17*

U.S. Cl. 455—422 **17 Claims**



1. A transmission method used in a cellular radio system during discontinuous transmission when there are pauses in the transmission, which are detected, the cellular radio system comprising at least one base station and vocoder which communicate with each other via a transmission path and which transmit a signal to each other, the method comprising:

receiving a signal;

encoding the received signal which at least partly consists of spare bits; and

filtering off spare bits from the signal to be transmitted to the transmission path prior to transmitting the signal, wherein a signal is transmitted that comprises only non-spare bits.

6,041,231

MOBILE COMMUNICATION SYSTEM WITH ROAMING FUNCTION

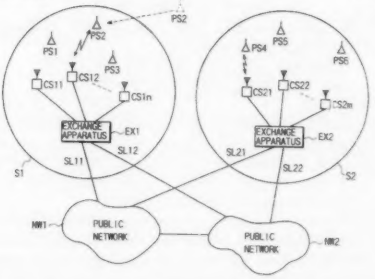
Hirokazu Suzuki, Yamato, Japan, assignor to Kabushiki Kaisha Toshiba, Kanagawa, Japan

Filed Jul. 2, 1997, Appl. No. 887,409

Claims priority, application Japan, Jul. 3, 1996, 8-173811

Int. Cl.[7] **H04Q** *7/20*

U.S. Cl. 455—422 **32 Claims**



1. A mobile communication system which comprises a plurality of base stations distributed in a service area, a terminal device connected to one of said base stations via a radio channel, and a

radio control apparatus which accommodates said plurality of base stations and systematically controls said system,

wherein said radio control apparatus comprises:

monitoring means for monitoring whether or not a temporary use registration request that requests temporary use registration for said system is received from said terminal device;

setting means for, when said monitoring means detects that the temporary use registration request is received, setting first terminal identification information to be used by a request source terminal device in said system, said request source terminal device originally belonging to said at least one different mobile communications system;

request response means for supplying use permission information including the first terminal identification information set by said setting means to the request source terminal device;

first storage means for storing the first terminal identification information set by said setting means in correspondence with second terminal identification information used in the another system to which the request source terminal device originally belongs;

first control means for executing subsequent call origination/termination control associated with the request source terminal device on the basis of the information stored in said first storage means; and

means for continuously broadcasting, from the base station, message information indicating if a permission of the temporary use registration is to be supplied to the terminal device which is not registered in said system, and

wherein said terminal device comprises:

request transmission means for transmitting the temporary use registration request to said radio control apparatus, said request transmission means receiving the message information and checking based on the message information if the temporary use registration request is permitted, and transmitting the temporary use registration request to said radio control apparatus only when it is determined that the temporary use registration request is permitted;

second storage means for, when the use permission information is supplied from said radio control apparatus in response to the transmitted temporary use registration request, storing the first terminal identification information included in the use permission information together with a system identification number of said system; and

second control means for executing subsequent call origination/termination control of an own terminal device in said system on the basis of the information stored in said second storage means, said own terminal device originally belonging to said system.

6,041,232

AGGREGATION OF SHAPED DIRECTIONAL RECEIVING ANTENNA ARRAY FOR IMPROVED LOCATION INFORMATION

Earle Willis Jennings, III, San Jose, Calif., assignor to SC-Wireless Inc., San Jose, Calif.

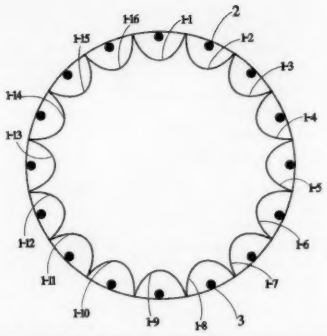
Filed Dec. 23, 1997, Appl. No. 997,155

Int. Cl.[7] **H04Q** *7/00;21/00;* **H04B** *1/40*

U.S. Cl. 455—422 **21 Claims**

21. A communications device for use with users transmitting in a communication medium with user transmissions characterized by time-propagation displacement and location displacement as a function of a user location relative to a communications device location, the communications device comprising,

an antenna collection including two or more directional antennae where each antenna is defined by a base location vector, an attenuation function having a contour map and an antenna orientation direction vector lying in the contour map and where each antenna connects to an antenna interface circuit having time steps which generates quantities over time intervals based upon received user transmissions and wherein the



contour map for one of the directional antennae overlaps the contour map of another one of the directional antennae whereby the received user transmission at said two or more antennae are linearly related,

said antenna collection having said two or more directional antennae with base location vectors proximate to a common boundary of a shape in two or more dimensions,

said antenna collection having a collection center wherein the base location vector for each of said antenna is a distance from said collection center which is small compared with the distance traveled by user transmissions propagating in the communications medium within the time step of the antenna interface sampling circuitry and wherein the antenna orientation direction vector for each of said antenna has a location measure in one or more dimensions relative to the antenna collection center,

one or more information processors receiving the antenna generated quantities for each time step of the interface circuit for each of the antennae to provide discrete time-propagation displacements and discrete location displacements, and said information processors transforming a linear combination of said discrete time-propagation displacements and said discrete location displacements to form transformed combinations providing user location information.

6,041,233

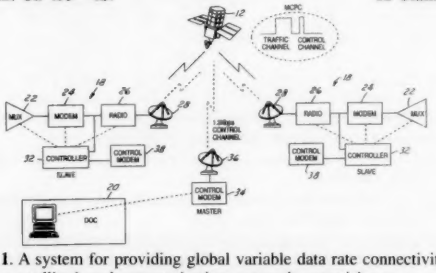
METHOD AND SYSTEM FOR PROVIDING GLOBAL VARIABLE DATA RATE CONNECTIVITY IN A SATELLITE-BASED COMMUNICATIONS NETWORK

Ronald F. Rosati, El Segundo, Calif., assignor to Hughes Electronics Corporation, El Segundo, Calif.

Filed Sep. 12, 1997, Appl. No. 928,886

Int. Cl.[7] **H04B** *7/185;7/204*

U.S. Cl. 455—427 **12 Claims**



1. A system for providing global variable data rate connectivity in a satellite-based communications network comprising:

communications satellites for transmitting and receiving signals in a plurality of coverage areas; and

user terminals for transmitting and receiving signals to and from the satellites;

wherein a first set of the user terminals located in one of the plurality of coverage areas and associated with one of the

communications satellites has a variable bandwidth associated therewith based on the collective bandwidth requirements of each of the first set of user terminals;

wherein each of the first set of user terminals has a variable terminal bandwidth associated therewith which varies in response to a bandwidth request from each of the first set of user terminals;

the system further comprising a ground facility for controlling the variable bandwidth and the variable terminal bandwidth of the first set of user terminals in response to the bandwidth request;

wherein the first set of user terminals includes a plurality of pairs of user terminals and wherein each of the user terminals include a controller for receiving controlling signals and for transmitting monitoring signals, wherein the controller of a first one of each of the pairs receives the signals from the ground facility and the controller of a second one of each of the pairs receives the signals from the first one.

6,041,234

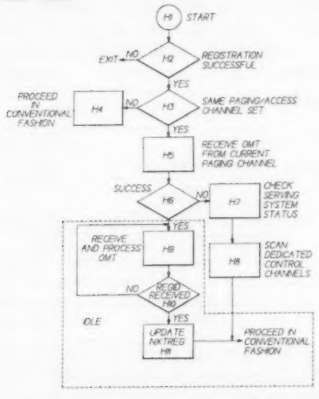
METHOD AND APPARATUS FOR REGISTERING A RADIO TELEPHONE SUBSCRIBER UNIT WHEREIN THE SUBSCRIBER UNIT REMAINS TUNED TO THE REGISTERING CHANNEL AFTER SUCCESSFUL REGISTRATION

Markku Tapio Oksanen, Salo, Finland; Juha Peranto, Irving, Tex., and Martti Ensio Vuorio, Halikko, Finland, assignors to Nokia Mobile Phones Limited, Salo, Finland

Filed Apr. 25, 1996, Appl. No. 637,407

Int. Cl.[7] H04Q *7/22*

U.S. Cl. 455—434 **20 Claims**



1. A method for operating a radio telephone subscriber unit to register with a cellular system, comprising the steps of:

determining from registration-related information that is received from the cellular system that the subscriber unit must register with the cellular system;

transmitting the registration message to the cellular system on a selected channel;

determining that the registration message was accepted by the cellular system as a successful registration; and

during initialization operations invoked after the successful registration, and for a case where the channel on which the registration message is sent is also in a paging channel set, remaining tuned to the selected channel, without rescanning for a dedicated control channel or for a paging channel, until a receipt of next registration-related information from the cellular system.

6,041,235

HANDOVER METHOD AND ARRANGEMENT FOR A MOBILE COMMUNICATION SYSTEM

Risto Aalto, Riihimäki, Finland, assignor to Nokia Telecommunications Oy, Espoo, Finland

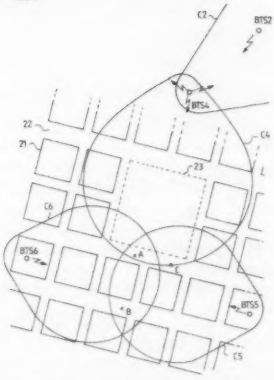
PCT No. PCT/FI95/00210, § 371 Date Oct. 15, 1996, § 102(e) Date Oct. 15, 1996, PCT Pub. No. WO95/28808, PCT Pub. Date Oct. 26, 1995

PCT Filed Apr. 12, 1995, Appl. No. 727,656

Claims priority, application Finland, Apr. 15, 1994, 941779

Int. Cl.[7] H04Q *7/22*

U.S. Cl. 455—437 **13 Claims**



1. A handover method, said handover method comprising:

measuring at a mobile station at least a reception level of a signal of a serving cell;

measuring at a mobile station a reception level of signals from a limited number of cells adjacent to said serving cell;

detecting a need for handover;

selecting with the aid of measurements at least one adjacent cell as a candidate cell for handover;

assigning, from said adjacent cells to be measured, to at least one candidate cell, one or more reference cells possessing a signal profile similar to that of a more remote cell which is a potential source of co-channel or adjacent channel interference in the respective candidate cell, but which is not directly measurable by said mobile station in said serving cell;

estimating an interference level caused by at least one other cell in said at least one candidate cell, if said at least one other cell is a potential source of interference in said candidate cell; and

utilizing said estimated interference level as an additional criterion for selection of a target cell for handover so that a possibility of handover to a cell with a high interference level is diminished.

6,041,236

METHOD AND APPARATUS FOR MINIMIZING THE NUMBER OF SAMPLES NEEDED TO DETERMINE CELL AREA COVERAGE RELIABILITY IN A RADIOTELEPHONE SYSTEM

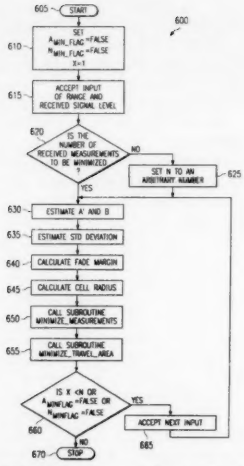
Charles P. Bernardin, and Meng F. Yee, both of Richardson, Tex., assignors to Nortel Networks Corporation, Richardson, Tex.

Provisional application No. 60/023,948, Aug. 9, 1996. This application Dec. 18, 1996, Appl. No. 769,690.

Int. Cl.[7] H04Q *7/22*

U.S. Cl. 455—446 **18 Claims**

1. A method of determining, with a predetermined maximum RF coverage area inaccuracy ΔF_a and with a minimum number of signal power value measurements, the radius R of a cell of a wireless communication system, said wireless communication including a base station transmitter, said method comprising the steps of:



600
605 START
610 SET A_MIN_FLAG =FALSE, B_MIN_FLAG =FALSE, X=1
615 ACCEPT INPUT OF RANGE AND RECEIVED SIGNAL LEVEL
620 IS THE NUMBER OF RECEIVED MEASUREMENTS TO BE MINIMIZED
NO
625 SET N TO AN ARBITRARY NUMBER
YES
630 ESTIMATE A' AND B
635 ESTIMATE STD DEVIATION
640 CALCULATE FADE MARGIN
645 CALCULATE CELL RADIUS
650 CALL SUBROUTINE MINIMIZE_MEASUREMENTS
655 CALL SUBROUTINE MINIMIZE_TRAVEL_AREA
660 IS X <N OR A_MINFLAG =FALSE OR B_MINFLAG =FALSE
YES
685 ACCEPT NEXT INPUT
NO
670 STOP

a) measuring RF signal power value at a location a distance r from said transmitter;

b) estimating said radius R based upon said measured signal power values;

c) computing an RF coverage area inaccuracy ΔF_u based upon said measured signal power values; and,

d) repeating steps a) through c) at different locations until ΔF_u is equal to or less than said predetermined maximum RF coverage area inaccuracy.

6,041,237

METHOD OF CHANNEL ALLOCATION

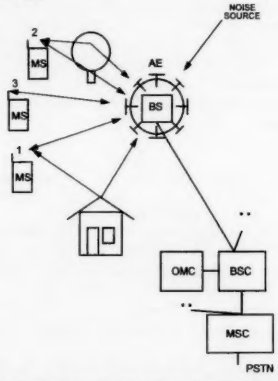
Christof Farsakh, Munich, Germany, assignor to Siemens Aktiengesellschaft, Munich, Germany

Filed Apr. 2, 1998, Appl. No. 53,963

Claims priority, application Germany, Apr. 2, 1997, 197 13 666

Int. Cl.[7] **H04B** *7/212;* **H04Q** *7/20*

U.S. Cl. 455—450 **7 Claims**



1. A method of channel allocation for a K^{th} communication connection via a radio interface in a mobile communication system with spatial subscriber separation comprising the steps of:

providing at least $K_{ges}-1$ communication connections in L channels for management via the radio interface;

allowing K–1 communication connections in each channel, wherein l=1 . . . L;

determining spatial covariance matrices $C_1^{(l)}, \ldots, C_{K-1}^{(l)}$ for the existing K– 1 communication connections;

determining noise values $N_1^{(l)}, \ldots, N_{K-1}^{(l)}$ for the existing K–1 communication connections;

determining an anticipated noise value for the K^{th} communication connection;

determining an anticipated spatial covariance matrix $C_k^{(l)}$ for the K^{th} communication connection;

determining an anticipated noise value $N_K^{(l)}$ for the K^{th} communication connection;

determining an anticipated downlink transmission power $P^{(l)}$ for the l^{th} channel with K communication connections in order to adhere to a required signal-to-noise ratio criterion;

determining a decision value $c^{(l)}$ from a relationship of the anticipated downlink transmission power $P^{(l)}$ for the channel l and a reference transmission power $(\tilde{P}^{(l)})$; and

allocating the channel l having the lowest decision value $c^{(l)}$ to the K^{th} communication connection.

6,041,238

CHANNEL ASSIGNMENT METHOD IN MOBILE COMMUNICATIONS SYSTEM

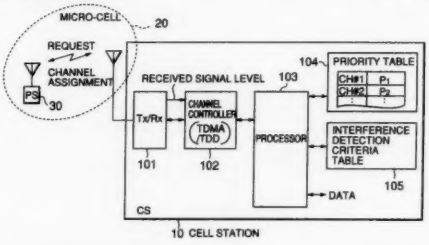
Katsumi Tanoue, Tokyo, Japan, assignor to NEC Corporation, Tokyo, Japan

Filed Jun. 29, 1998, Appl. No. 106,258

Claims priority, application Japan, Jun. 30, 1997, 9-174330

Int. Cl.[7] **H04J** *3/12;* **H04B** *1/00;* **H04L** *12/28*

U.S. Cl. 455—452 **14 Claims**



1. A method for dynamically assigning a communication channel to a mobile station in each base station of TDMA/TDD (Time Division Multiple Access/Time Division Duplex) communications system, comprising the steps of:

a) receiving a control signal from the mobile station;

b) determining an interference detection criterion depending on a signal strength of the control signal;

c) selecting a channel from a plurality of predetermined channels;

d) determining whether interference occurs in a selected transmitting time slot relative to the interference detection criterion in a selected channel;

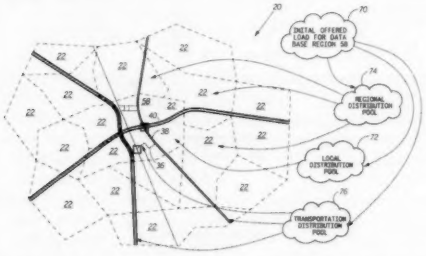
e) determining whether interference occurs in a selected receiving time slot relative to a predetermined interference detection criterion in the selected channel; and

f) assigning the selected channel as a communication channel to the mobile station when it is determined that no interference occurs in the selected transmitting and receiving time slots.

6,041,239
METHOD AND APPARATUS FOR DISTRIBUTING OFFERED LOAD IN A WIRELESS COMMUNICATIONS SYSTEM

John Douglas Reed, Arlington, and Jack Anthony Smith, Haltom City, both of Tex., assignors to Motorola, Inc., Schaumburg, Ill.

Filed Jul. 18, 1997, Appl. No. 896,576
Int. Cl.[7] H04Q *7/20;7/22*
U.S. Cl. 455—453 **27 Claims**



INITIAL OFFERED LOAD FOR DATA BASE REGION 50
REGIONAL DISTRIBUTION POOL
LOCAL DISTRIBUTION POOL
TRANSPORTATION DISTRIBUTION POOL

1. A method in a wireless communications system service area model for calculating and locating an offered load, the method comprising the steps of:

selecting a population database that describes a population in database regions in the wireless communications system service area;

selecting a transportation database that describes transportation arteries in the wireless communications system service area;

calculating an initial offered load for each database region;

allocating a portion of each of the initial offered loads to a transportation distribution pool;

distributing the offered load of the transportation distribution pool over the transportation arteries; and

accounting for allocation of offered loads to the transportation distribution pool, and for distribution of offered load in the transportation distribution pool over transportation arteries in each database region, wherein a database region offered load is calculated for each database region.

CLEAR CHANNEL SELECTION SYSTEM FOR A CORDLESS TELEPHONE

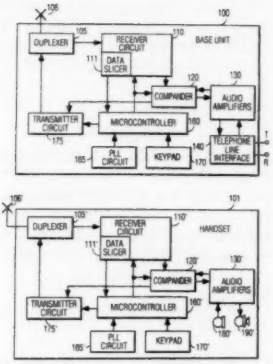
Dennis Ronald McCarthy, Syracuse; John Mark Fossaceca, Baldwinville, and Maneck Behram Kapadia, Liverpool, all of N.Y., assignors to Thomson Consumer Electronics Inc., Indianapolis, Ind.

Continuation of application No. 08/491,102, Jun. 16, 1995, abandoned, which is a continuation of application No. 08/353,583, Dec. 8, 1994, abandoned, which is a continuation of application No. 08/177,670, Jan. 5, 1994, abandoned. This application Mar. 10, 1997, Appl. No. 814,622.
Int. Cl.[7] H04Q *7/32*
U.S. Cl. 455—464 **9 Claims**

8. A cordless telephone set exhibiting an off-hook state for enabling communication via an external telephone network, and an on-hook state, said cordless telephone set comprising:

a base unit and a handunit operating on one of a plurality of cordless telephone channels, each of said cordless telephone channels providing for communication between said handunit and said base unit via a base unit transmission frequency and a handunit transmission frequency;

a monitoring circuit located in said base unit or said handunit for monitoring, during said on-hook state, the frequency content of a baseband signal derived from a respective one of said base unit transmission frequency or said handunit transmission frequency for producing an output signal indicative of said one cordless telephone channel being occupied or noisy;



said monitoring circuit having a threshold of detection of a first value in said on-hook state and of a second value, higher than said first value, in said off-hook state;

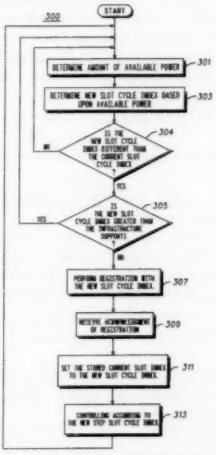
said monitoring circuit of said base unit and said monitoring circuit of said handunit operating in said off-hook mode for detecting baseband digital control signals;

said cordless telephone set, in response to said output signal, causing said base unit and said handunit to change to a second cordless telephone channel.

6,041,241
APPARATUS AND METHOD FOR BALANCING POWER SAVINGS AND CALL SET UP TIME IN A WIRELESS COMMUNICATION DEVICE

William Daniel Willey, Arlington Heights, Ill., assignor to Motorola, Inc., Schaumburg, Ill.

Filed Mar. 3, 1997, Appl. No. 810,718
Int. Cl.[7] H04B *1/38*
U.S. Cl. 455—574 **4 Claims**



START
DETERMINE AMOUNT OF AVAILABLE POWER
DETERMINE NEW SLOT CYCLE INDEX BASED UPON AVAILABLE POWER
IS THE NEW SLOT CYCLE INDEX DIFFERENT THAN THE CURRENT SLOT CYCLE INDEX
IS THE NEW SLOT CYCLE INDEX GREATER THAN THE INFRASTRUCTURE SUPPORTS
PERFORM REGISTRATION WITH THE NEW SLOT CYCLE INDEX
RECEIVE ACKNOWLEDGEMENT OF REGISTRATION
SET THE STORED CURRENT SLOT INDEX TO THE NEW SLOT CYCLE INDEX
CONTROLLING ACCORDING TO THE NEW SLOT CYCLE INDEX

3. A method of balancing power savings and call setup time comprising the steps of:

a) determining an amount of power available to a wireless communication device;

b) determining a new slot cycle index according to the amount of power available to the wireless communication device;

c) determining if the new slot cycle index is greater than a maximum slot cycle index; and

d) if the new slot cycle index is not greater than the maximum slot cycle index, controlling the wireless communication device according to the new slot cycle index.

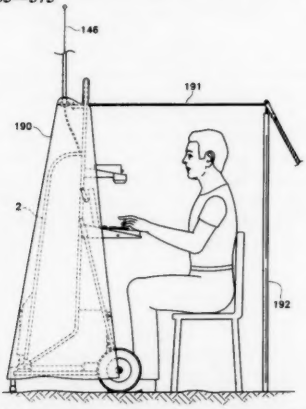
PORTABLE EMERGENCY RESPONSE COMMUNICATIONS SYSTEM AND METHOD

Steve M. Coulthard, P.O. Box 871830, Wasilla, Ak. 99687

Provisional application No. 60/020,039, Jun. 21, 1996, Provisional application No. 60/034,138, Dec. 30, 1996. This application Jun. 16, 1997, Appl. No. 876,257.

Int. Cl.[7] **H04Q** *7/20*

U.S. Cl. 455—575 **38 Claims**



1. A portable emergency response communications system comprising:

a. a power system comprising:

i. a battery condition indicator;

ii. a master power switch;

iii. at least one portable DC battery containing DC power;

iv. circuitry adapted to deliver said DC power;

v. an impact resistant case adapted to withstand a substantial impact load to protect said DC battery;

b. a frame adapted to support said power system comprising:

i. a power system support;

ii. a holding element adapted to hold said power system to said frame;

iii. a first upright member rotatably connected to said power system support;

iv. a second upright member rotatably connected to said power system support;

v. at least one frame securing element adapted to secure said first upright member with said second upright member in at least a raised first position and a lowered second position;

vi. at least one radio support shelf adapted to support at least one radio and mounted to said frame; and

vii. at least one antenna mount connected to said frame and adapted for a radio;

c. a light adapted to illuminate at least a portion of said frame;

d. at least one radio connection port comprising:

i. a latching multi-pronged port;

ii. a weather shield cover, and

iii. an orientation element;

e. a battery charger responsive to said frame;

f. a DC to AC inverter; and

g. a mobile element connected to said frame adapted to enable movement of said frame with said power system

wherein said power system, said frame, said light, said radio connection ports, said battery charger, said inverter, and said mobile element combine to form an impact resistant, portable emergency response communications system.

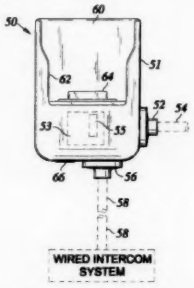
PERSONAL COMMUNICATIONS UNIT

Steven Frederic Davidson, Skoki; Kim David Vollendorf, Cary; Michael Frank DiCicco, Carol Stream; Stuart John Collar, Algonquin, and Jeffrey Jay Stone, North Barrington, all of Ill., assignors to Northrop Grumman Corporation, Los Angeles, Calif.

Filed May 15, 1998, Appl. No. 79,655

Int. Cl.[7] **H04B** *1/38*

U.S. Cl. 455—575 **19 Claims**



1. A personal communications unit for facilitating both wired and wireless communications with a wired intercom system, the personal communications unit comprising:

a) a headset cable for connection to a variety of headsets;

b) an intercom connection cable placeable in electrical communication with the headset and placeable in electrical communication with the wired intercom system;

c) a radio transceiver which is placeable into electrical communication with the headset;

d) a switching circuit configured to place the intercom connection cable in electrical communication with the headset when the intercom connection cable is in electrical communication with the wired intercom system, and to place the radio transceiver in electrical communication with the headset when the intercom connection cable is not in electrical communication with the headset; and

e) wherein wired communications with the wired intercom system are facilitated when the intercom connection cable is in electrical communication with the wired intercom system, and wireless communications with the wired intercom system are facilitated when the intercom connection cable is not in electrical communication with the wired intercom system.

RADIO COMMUNICATION APPARATUS HAVING A PLURALITY OF IDENTIFICATION CODES

Kazuyasu Yamane, Hamura; Takeya Oikawa, Ome, and Tomohiro Niimi, Fussa, all of Japan, assignors to Casio Computer Co., Ltd., Tokyo, Japan

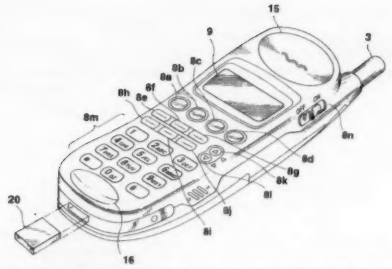
Division of application No. 08/827,399, Mar. 27, 1997, which is a continuation of application No. 08/458,788, Jun. 2, 1995, abandoned. This application Aug. 5, 1998, Appl. No. 129,718. Claims priority, application Japan, Jun. 30, 1994, 6-149055

Int. Cl.[7] **H04B** *1/38*

U.S. Cl. 455—575 **36 Claims**

1. A radio communication apparatus for performing communication within a plurality of communication networks, each communication network having at least one base station, said radio communication apparatus having a plurality of identification codes including at least a first identification code assigned to said radio communication apparatus in a first communication network and a second identification code assigned to said radio communication apparatus in a second communication network different from said first communication network, said radio communication apparatus comprising:

fixed storing means for storing some of the plurality of identification codes;



detachable storing means for storing a remainder of the plurality of identification codes;

means for receiving an incoming calling signal which includes any of said plurality of identification codes and which is transmitted from any base station of any one of said plurality of communication networks;

means for designating one of said plurality of identification codes stored in said fixed storing means and said detachable storing means; and

means for transmitting an outgoing calling signal via at least one of the at least one base station of the communication network to which the designated identification code is assigned, and

wherein all parts of the radio communication apparatus, including a mount portion for detachably mounting said detachable storing means, are integrated and housed in a common housing.

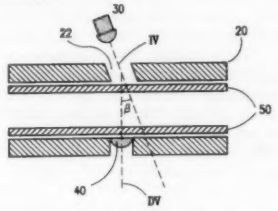
SINGLE LIGHT SENSOR OPTICAL PROBE FOR MONITORING BLOOD PARAMETERS AND CARDIOVASCULAR MEASUREMENTS

Nikolai M. Krivitski, and Dimitry M. Starostin, both of Ithaca, N.Y., assignors to Transonic Systems, Inc., Ithaca, N.Y.

Filed Oct. 14, 1997, Appl. No. 950,244

Int. Cl.[7] **A61B** *5/00*

U.S. Cl. 600—322 **15 Claims**



10. A method for measuring blood parameters in a blood system having a vascular portion, the method comprising:

(a) connecting an extracorporeal portion to the vascular portion at an upstream end and connecting the extracorporeal portion to the vascular portion at a downstream end, the extracorporeal portion including a light transmissive section;

(b) introducing an indicator bolus upstream of an optical sensor in the extracorporeal portion;

(c) determining a photometric property of diluted blood in the extracorporeal portion; and

(d) determining a blood characteristic corresponding to the diluted photometric property of the blood.

6,041,247

NON-INVASIVE OPTICAL MEASURING SENSOR AND MEASURING METHOD

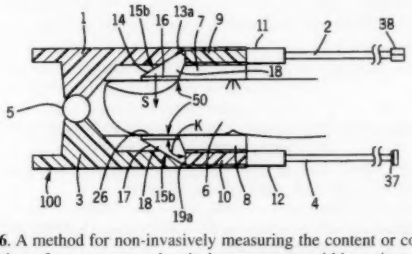
Kurt P. Weckstrom, Espoo, and Kimmo J. Ristolainen, Helsinki, both of Finland, assignors to Instrumentarium Corp, Helsinki, Finland

Continuation-in-part of application No. 08/757,270, Nov. 29, 1996, abandoned. This application Dec. 9, 1998, Appl. No. 208,171.

Claims priority, application Finland, Nov. 29, 1995, 955758

Int. Cl.[7] **A61B** *5/00*

U.S. Cl. 600—323 **41 Claims**



36. A method for non-invasively measuring the content or composition of one or more chemical components within a tissue or body portion, said method comprising the steps of:

emitting radiation having at least two wavelengths suitable for carrying out the measurement;

applying the radiation to a surface of a selected portion of the patient's body;

detecting radiation from a surface of the selected portion of the patient's body, the radiation evincing a property of the received radiation indicative of the chemical component;

providing a signal indicative of the chemical component content or composition; and

subjecting the radiation at a point outside the selected portion of the patient's body to diffusive reflection by applying the

radiation to a surface having diffuse reflection properties approaching those of a Lambertian surface so that generally uniform scattering of the radiation by the diffusively reflective surface predominates.

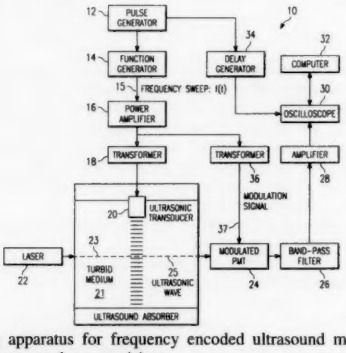
METHOD AND APPARATUS FOR FREQUENCY ENCODED ULTRASOUND-MODULATED OPTICAL TOMOGRAPHY OF DENSE TURBID MEDIA

Lihong Wang, College Station, Tex., assignor to The Texas A&M University System, College Station, Tex.

Provisional application No. 60/045,918, May 7, 1997. This application Oct. 22, 1997, Appl. No. 955,671.

Int. Cl.[7] **A61B** *5/00*

U.S. Cl. 600—407 **28 Claims**



1. An apparatus for frequency encoded ultrasound modulated optical tomography comprising:

a function generator operable to produce a frequency sweep signal;

an ultrasonic transducer coupled to the function generator and operable to produce an ultrasonic wave in a turbid medium in response to the frequency sweep signal;

a laser, located outside the turbid medium and operable to send a coherent beam of light into the turbid medium;

a photo multiplier tube located outside the turbid medium and operable to detect light from the laser that has traveled through the turbid medium and that has been modulated by the ultrasonic wave; and

an oscilloscope operable to display the output of the photo multiplier tube wherein differences in the oscilloscope display is indicative of an abnormality in the turbid medium.

6,041,249

DEVICE FOR MAKING A GUIDE PATH FOR AN INSTRUMENT ON A PATIENT

Judith Regn, Nuremburg, Germany, assignor to Siemens Aktiengesellschaft, Munich, Germany

Filed Mar. 4, 1998, Appl. No. 34,565

Claims priority, application Germany, Mar. 13, 1997, 197 10 493; Jan. 16, 1998, 198 01 446

Int. Cl.[7] **A61B** *6/00*

U.S. Cl. 600—429 **4 Claims**

1. A device for use with a tomography apparatus, said device marking a guide path on a patient for an instrument, said device comprising:

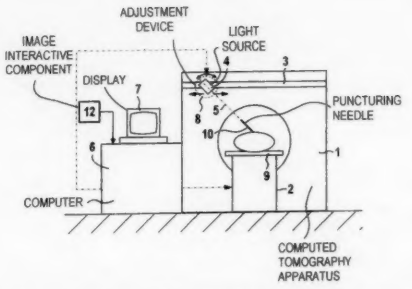
means for producing a planning image of a slice of a patient;

a single light source which emits only a single laser line beam;

means for mounting said light source and for positioning said light source relative to the patient;

a table on which the patient is supported; and

means for defining, in said planning image, a guide path proceeding intracorporeally into the patient for an interventional



instrument and means for automatically displacing at least ne of said light source, via said means for mounting, and said table for positioning said laser line beam relative to said patient so that said laser line beam is co-linear with the guide path defined in said planning image so that said laser line beam forms a visual guide for conducting an interventional procedure.

6,041,250

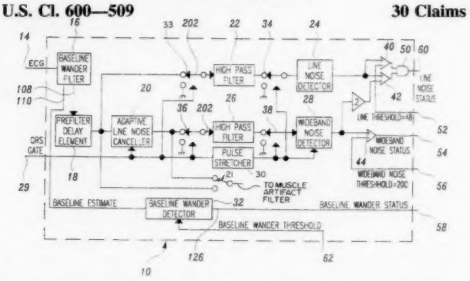
ADAPTIVE LINE NOISE CANCELER AND DETECTOR FOR ECG SIGNALS

Victor M. dePinto, Kirkland, Wash., assignor to Quinton Instruments Company, Bothell, Wash.

Provisional application No. 60/047,253, May 21, 1997. This application May 20, 1998, Appl. No. 81,890.

Int. Cl.[7] **A61B** *5/402*

U.S. Cl. 600—509 **30 Claims**



16. A device for detecting and removing noise from an ECG signal comprising:

an ECG signal input for receiving an ECG signal from a patient;

an ECG gate signal which has a portion of said ECG signal blanked from a point in time just prior to the onset of the QRS portion of said ECG signal and ending at a point in time just after the end of the QRS portion;

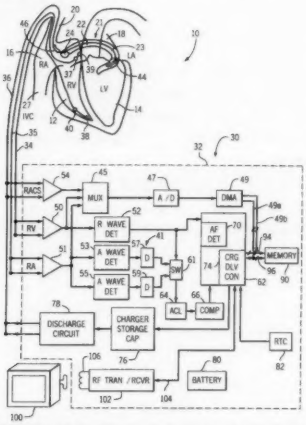
a filter connected to said ECG input for removing contamination from said ECG signal; and

an adaptive line noise canceler for removing line noise from said ECG signal wherein said adaptive line noise canceler receives said ECG signal and said ECG gate signal and adjusts to said ECG signal from said ECG input to remove varying amounts of said line noise from said ECG signal.

6,041,251
SYSTEM AND METHOD FOR DETECTING ATRIAL EVENTS OF A HEART

Jaeho Kim, Redmond, and Joseph M. Bocek, Seattle, both of Wash., assignors to Cardiac Pacemakers, Inc., Minneapolis, Minn.

Filed Jul. 1, 1998, Appl. No. 108,898
Int. Cl.[7] A61B *5/046*
U.S. Cl. 600—518 **9 Claims**



9. A method of detecting atrial events of a heart, the method including the steps of:

sensing atrial activity of the heart;

sensing ventricular activity of the heart;

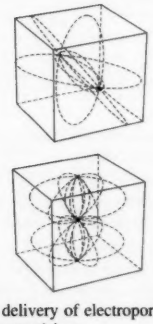
detecting R waves from the sensed ventricular activity; and

detecting A waves from the sensed atrial activity with a first threshold and detecting A waves from the sensed atrial activity with a second threshold higher than the first threshold during detected R waves.

6,041,252
DRUG DELIVERY SYSTEM AND METHOD

Jeffrey P. Walker, San Diego, and Robert M. Bernard, Rancho Santa Fe, both of Calif., assignors to Ichor Medical Systems Inc., San Diego, Calif.

Filed Jun. 7, 1995, Appl. No. 476,714
Int. Cl.[7] A61N *1/30*
U.S. Cl. 604—20 **12 Claims**



1. A system for the delivery of electroporation-inducing electrical fields to a patient comprising:

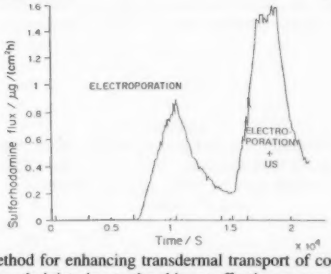
a plurality of electrodes adapted to be located within a predetermined three-dimensional space in a patient, said electrodes arranged to provide at least one reference electrode in electrically--conductive communication with at least two geometrically-oriented satellite electrodes; and

electrical pulse generating means for generating electroporation-inducing electrical fields incorporating control means connected to at least three of said plurality of electrodes said control means capable of varying the number and order of electrodes that participate in each pulse delivered by said pulse generating means such that a pulse many be delivered to at least said reference electrode and at least two of said satellite electrodes simultaneously.

6,041,253
EFFECT OF ELECTRIC FIELD AND ULTRASOUND FOR TRANSDERMAL DRUG DELIVERY

Joseph Kost, Omer, Israel; Uwe Pliquett, Leipzig, Germany; Samir S. Mitragotri, Somerville, Mass.; Robert S. Langer, Newton, Mass., and James C. Weaver, Sudbury, Mass., assignors to Massachusetts Institute of Technology, Cambridge, Mass.

Continuation-in-part of application No. 08/574,377, Dec. 18, 1995. This application Apr. 1, 1996, Appl. No. 626,021.
Int. Cl.[7] A61N *1/30*
U.S. Cl. 604—20 **10 Claims**



1. A method for enhancing transdermal transport of compounds comprising administering to the skin an effective amount of ultrasound at a frequency of less than 2.5 MHz to permeabilize the skin followed by an enhancer selected from the group consisting of electroporation, vacuum or mechanical pressure.

6,041,254
H-BRIDGE CIRCUIT FOR GENERATING A HIGH-ENERGY BIPHASIC WAVEFORM IN AN EXTERNAL DEFIBRILLATOR AND FURTHER INCLUDING A PROTECTIVE COMPONENT THAT HAS BOTH INDUCTIVE AND RESISTIVE PROPERTIES

Joseph L. Sullivan; Lawrence A. Borschowa, and Richard C. Nova, all of Kirkland, Wash., assignors to Physio-Control Manufacturing Corporation, Redmond, Wash.

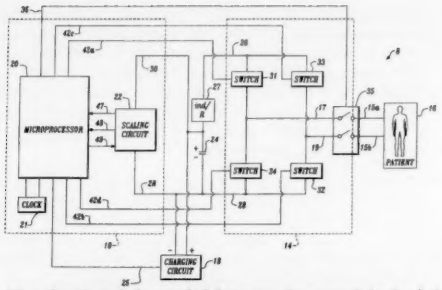
Continuation-in-part of application No. 08/811,833, Mar. 5, 1997, Pat. No. 5,824,017. This application Mar. 5, 1998, Appl. No. 35,690.
This patent is subject to a terminal disclaimer.
Int. Cl.[7] A61N *1/39*
U.S. Cl. 607—5 **20 Claims**

1. An output circuit and a resistive component in an external defibrillator with a control circuit for switchably coupling an energy storage capacitor storing at least approximately 200 joules of energy and having a first lead and a second lead with a first and second electrode coupled to a patient in order to conduct the energy stored in the energy storage capacitor to the patient, the output circuit being coupled to the energy storage capacitor by a circuit path, the output circuit and resistive component comprising:

(a) a first switch coupled between the first lead of the energy storage capacitor and the first electrode;

(b) a second switch coupled between the second lead of the energy storage capacitor and the second electrode;

(c) a third switch coupled between the first lead of the energy storage capacitor and the second electrode;



(d) a fourth switch coupled between the second lead of the energy storage capacitor and the first electrode;

(e) the resistive component coupled within the circuit path between the energy storage capacitor and the output circuit, the resistive component limiting the current flow between the energy storage capacitor and the output circuit; and

(f) the second and third switches placed by the control circuit in a conducting state during an internal energy dump operation to shunt energy from the energy storage capacitor, the current through the second and third switches during the internal energy dump operation being limited by the resistive component.

6,041,255

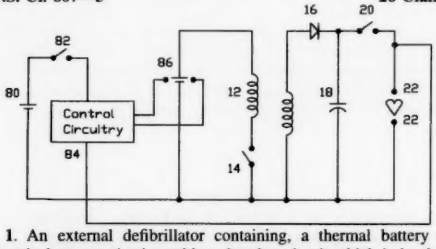
DISPOSABLE EXTERNAL DEFIBRILLATOR

Mark W. Kroll, 2056 Shoreline Dr., Orono, Minn. 55391

Filed Apr. 16, 1998, Appl. No. 61,755

Int. Cl.[7] A61N *1/39*

U.S. Cl. 607—5 **20 Claims**



1. An external defibrillator containing, a thermal battery in electrical communication with a charging circuit which is in electrical communication with a capacitor, output circuitry connected to the capacitor and to electrode connections, control circuitry connected to the battery, charging circuit, output circuit and electrodes such that the control circuitry, once sensing a pathologic arrhythmia through the electrodes, will allow the thermal battery to charge the capacitor through the charging circuitry and deliver a shock from the capacitor to the electrode connections.

6,041,256

DEVICE FOR THE TRANSVENOUS CARDIOVERSION OF ATRIAL FIBRILLATION OR ATRIAL FLUTTER

Ulrich Michel, Kaiserslautern, Germany, assignor to Cardiac Pacemakers, Inc., St. Paul, Minn.

Continuation of application No. 08/807,519, Feb. 27, 1997, Pat. No. 5,913,887. This application Jun. 9, 1999, Appl. No. 328,336.

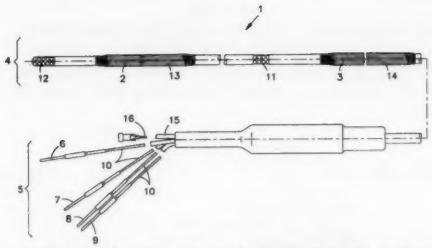
Claims priority, application Germany, Mar. 1, 1996, 296 03 805 U

Int. Cl.[7] A61N *1/39*

U.S. Cl. 607—5 **19 Claims**

1. A method, comprising:

implanting a transvenous catheter in an atrial position, where the transvenous catheter induces at least two defibrillation coil



electrodes and at least one sensing ring electrode positioned between the at least two defibrillation coil electrodes;

monitoring a first cardiac potential between the at least one sensing ring electrode and one of the at least two defibrillation coil electrodes;

analyzing the first cardiac potential for the occurrence of an atrial arrhythmia; and

delivering atrial defibrillation energy after the atrial arrhythmia occurs.

6,041,257

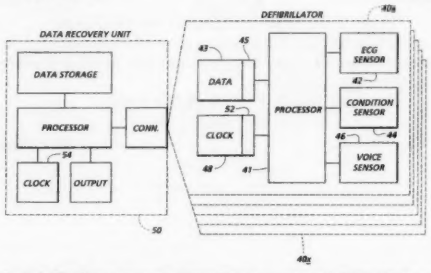
METHOD OF USING A MEASURING INSTRUMENT AND DATA GATHERING SYSTEM

Ian G MacDuff, Bothell; Daniel J Powers, and Clinton S Cole, both of Issaquah, all of Wash., assignors to Heartstream, Seattle, Wash.

Division of application No. 09/075,999, May 11, 1998, which is a continuation-in-part of application No. 08/649,414, May 16, 1996, Pat. No. 5,749,913, which is a continuation-in-part of application No. 08/314,395, Sep. 28, 1994, Pat. No. 5,549,115. This application Jul. 19, 1999, Appl. No. 358,134.

Int. Cl.[7] A61N *1/39*

U.S. Cl. 607—5 **1 Claim**



1. A defibrillator system comprising an external defibrillator and a main data recovery unit, wherein,

the defibrillator comprises electrodes, an energy source and a controller, the controller comprising an ECG signal analyzer and a clock for associating time information with an ECG signal, communication hardware for communication to the main data recovery unit, and means for local actuation of the defibrillator to deliver an electrical pulse from the energy source to the electrodes,

the main data recovery unit having communication hardware for receiving information from the defibrillator,

wherein the defibrillator collects information and then transmits the information to the main data recovery unit for error analysis using a mathematical model.

6,041,258

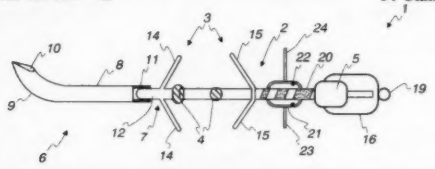
MEDICAL STIMULATION

Valerio Cigaina, Treviso, Italy, and David Jenkins, Bennington, N.J., assignors to Transneuronix, Inc., Mount Arlington, N.J.

Continuation-in-part of application No. PCT/US98/10402, May 21, 1998. This application Jul. 27, 1998, Appl. No. 122,832.

Int. Cl.[7] A61N *1/05;1/36*

U.S. Cl. 607—40 **14 Claims**



1. An implant device adapted for electrostimulation or electrical monitoring of tissue to be treated within the endo-abdominal cavity, said implant device comprising (1) an elongated body having a distal end and a proximal end, (2) a penetration mechanism at the distal end of the elongated body to penetrate the tissue to be treated, (3) a quick release connecting mechanism adjacent to the penetration mechanism, (4) a first and second sets of flexible tines adjacent and proximal to the quick release connecting mechanism to secure the implant device to the tissue to be treated wherein the first and second sets of tines are spaced apart along the elongated body a distance sufficient to span the tissue such that the first set of tines are located between the quick release connecting mechanism and the second set of tines, (5) at least two electric poles located between the two sets of flexible tines, (6) an electrical connection terminal at the proximal end of the elongated body for connection to a power source, and (7) a relatively hard, elongated handle having a proximal end and a distal end which can be attached to the proximal end of the elongated body;

wherein the two or more electric poles are electrically connected to electrical connection terminal; wherein the quick release connecting mechanism is effective to separate the penetration device from the elongated body once the implant device is properly positioned in the endo-abdominal cavity; wherein the distal end of the handle is adapted for attachment to the proximal end of the elongated body and the proximal end of the handle has grasping means whereby the handle can be grasped and manipulated using forceps; and wherein the handle can be easily separated from the proximal end of the elongated body at a desired time.

6,041,259

EXTERNALLY WORN MEDICAL DEVICE

Poonam Agarwala, New Brighton, and Andrzej M. Malewicz, New Hope, both of Minn., assignors to Empi, Inc., St. Paul, Minn.

Filed Dec. 12, 1997, Appl. No. 990,080

Int. Cl.[7] A61N *1/00*

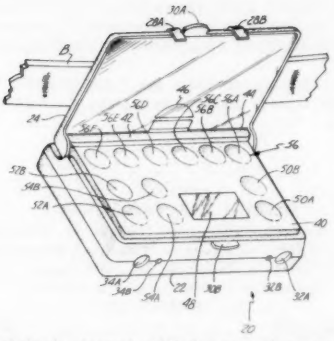
U.S. Cl. 607—46 **4 Claims**

1. A transcutaneous electrical nerve stimulation (TENS) device which is connected to TENS electrodes applied to a patient, which is worn by a patient and which allows the patient to control pain treatment while storing information used to evaluate the effectiveness of the pain treatment: the TENS device comprising:

a case;

a control panel including a display and a plurality of inputs, the control panel being mounted on the case wherein the plurality of inputs include intensity control inputs which allow the patient to regulate intensity of treatment being administered, pre-programmed selection inputs which allow the patient to select from a number of pre-programmed treatment regimens, and a pain intensity scale which allows the patient to input a level of perceived pain;

a plurality of output terminals at a surface of the case for connection to TENS electrodes;



electrical circuitry housed within the case and connected to the control panel, the inputs and the output terminals for controlling electrical stimulation supplied to the output terminals based upon a regimen and an intensity selected, and for storing data relating to pain levels;

a cover pivotally connected to the case;

a clip on the cover for attaching the cover to a patient's clothing so that the cover is generally vertical;

a latch for holding the case in a closed position adjacent the cover with the control panel generally vertical and located between the case and the cover, the latch being releasable to allow the case to pivot to a first open position in which the control panel is generally horizontal and is viewable and accessible by the patient; and

a stop element on the case which engages the cover to define the first open position.

METHOD AND APPARATUS FOR ENDOMETRIAL ABLATION

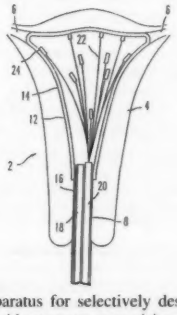
Roger A. Stern, Cupertino; Vincent N. Sullivan, and Robert L. Marion, both of San Jose, all of Calif., assignors to Vesta Medical, Inc., Boulder, Colo.

Continuation of application No. 08/046,683, Apr. 14, 1993, Pat. No. 5,443,470, which is a continuation-in-part of application No. 07/877,567, May 1, 1992, Pat. No. 5,277,201. This application Jun. 7, 1995, Appl. No. 481,940.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] A61N *5/00*

U.S. Cl. 607—98 **14 Claims**



1. An ablation apparatus for selectively destroying tissue of a hollow body organ, said apparatus comprising:

an electroconductive, expandable electrode means for effecting electrical contact with an inner surface of the organ, said expandable electrode means being a bladder provided with a plurality of separate electrodes on a surface of the bladder;

a plurality of temperature sensors, wherein a temperature sensor is associated with each electrode and is mounted in close proximity to its associated electrode;

a radio frequency power means connected to said expandable electrode means for selectively providing power to said electrodes to heat said tissue by passing current through the tissue; and

control means for controlling the power means to heat the selected tissue to a uniform temperature of at least 45° C.

6,041,261

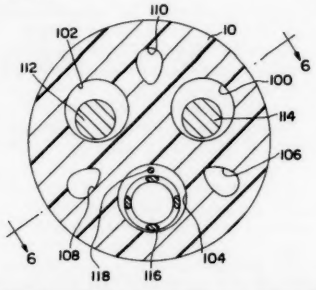
MEDICAL ELECTRICAL LEAD

David D. Verness, Forest Lake; George M. Huepenbecker, Vadnais Heights, and Dale A. Wahlstrom, Plymouth, all of Minn., assignors to Medtronic, Inc., Minneapolis, Minn.

Filed Apr. 21, 1997, Appl. No. 843,763

Int. Cl.[7] A61N *1/04*

U.S. Cl. 607—122 **35 Claims**



1. An implanted medical lead comprising an elongated lead body having an elongated lumen therein;

an elongated coiled conductor defining an internal lumen and mounted within the lumen of the lead body;

a stranded conductor, extending along the length of the lead body and coupled electrically to the coiled conductor at a first location and a second location distal to and spaced from the first location, said stranded conductor located outside of said internal lumen of said coiled conductor for a distance extending along said lead body.

6,041,262

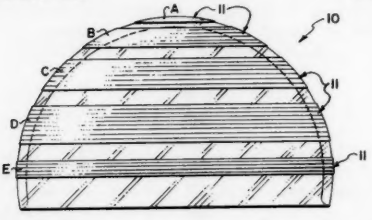
HAIR REGROWTH METHOD AND APPARATUS

Douglas S. Beder, Vancouver, Canada, assignor to 314613 B.C. Ltd., Vancouver, Canada

Filed Apr. 1, 1996, Appl. No. 631,654

Int. Cl.[7] A61N *1/00*

U.S. Cl. 607—139 **4 Claims**



1. An electrode array for a hair regrowth apparatus, said apparatus comprising voltage pulse generator means for electrical coupling to said electrode array for application thereto of a low voltage pulse train having a pulse repetition frequency, and frequency selector means for electrical coupling to said voltage pulse generator means for varying said pulse repetition frequency of said pulse train, said electrode array comprising a plurality of concentric electrically conductive rings applied to an outer surface of an electrically insulating liner insertable within a hood positionable over a subject's head.

6,041,263

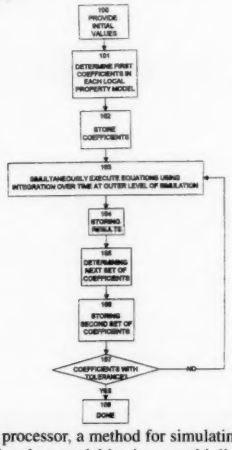
METHOD AND APPARATUS FOR SIMULATING AND OPTIMIZING A PLANT MODEL

Joseph F. Boston, Bedford, Mass., and Ian Boys, Letchworth Herts, United Kingdom, assignors to Aspen Technology, Inc., Cambridge, Mass.

Provisional application No. 60/027,730, Oct. 1, 1996. This application Oct. 1, 1997, Appl. No. 997,056.

Int. Cl.[7] G05B *13/04;13/02;17/02*

U.S. Cl. 700—32 **5 Claims**



1. In a digital processor, a method for simulating and optimizing a plant model, the plant model having a multiplicity of equipment models for a desired processing plant and a multiplicity of local property models for the material components within the plant, comprising the steps of:

a) providing a set of initial values for each unknown variable in the plant model in a data storage area;

b) determining by the digital processor a first set of coefficients in each local property model based on the set of initial values;

c) storing the coefficients in the data storage area;

d) executing simultaneously, in an outer level routine of a simulation routine, by the digital processor, a single, unchanging set of equations representing the equipment models and local property models, wherein said single set of equations is based upon a calculation of integration over time and includes a complementarity flash formulation, and wherein said single set of equations is simultaneously valid in all regions of a solution regardless of the state of the solution, by using the first set of coefficients to determine a second set of values for the plant model;

e) storing the second set of values for the plant model in the data storage area;

f) determining by the digital processor a second set of coefficients in each set of local property model; and

g) storing the second set of coefficients in the data storage area.

6,041,264

DEADBAND CONTROL ASSISTANT ELIMINATING OFFSET FROM SETPOINT

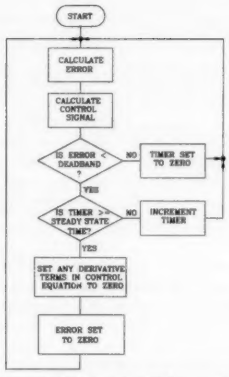
Richard A. Wruck, Mt. Prospect, and Gideon Shavit, Highland Park, both of Ill., assignors to Honeywell Inc., Minneapolis, Minn.

Filed Jan. 27, 1997, Appl. No. 789,732

Int. Cl.[7] G05B *13/02*

U.S. Cl. 700—40 **25 Claims**

1. An apparatus for eliminating oscillation in a process during a quasi-steady-state condition, the process being controlled using a normal control device during normal conditions by control signals determined using a control equation, the control equation depending on an error in a measured process output to produce the control



signals and the error defined by the difference between the measured process output, and a desired process output, comprising:

means for determining existence of the quasi-steady-state condition in the process, and;

means for selecting a fixed control signal once the quasi-steady-state condition exists, the quasi-steady-state condition being determined by defining a deadband range around the desired process output, the quasi-steady-state condition being determined to exist when the measured process output enters the deadband range and stays in the deadband range for a predetermined amount of time.

6,041,265

OPERATIONAL CONTROL DEVICE AND METHOD FOR AN IMAGE PROCESSING APPARATUS

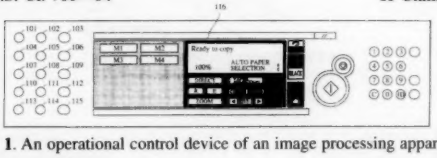
Akio Suzuki, Tokyo; Ei Yamamoto; Toshiyuki Kitamura, both of Yokohama, and Hiroyoshi Yoshida, Fujisawa, all of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Mar. 15, 1995, Appl. No. 404,563

Claims priority, application Japan, Mar. 16, 1994, 6-045897

Int. Cl.[7] G05B *19/00*

U.S. Cl. 700—84 **11 Claims**



1. An operational control device of an image processing apparatus comprising:

display means;

first display control means for controlling display of a screen for adjusting a single group of color-balance data, which has a plurality of adjustment values for each color component, on said display means,

input means for manually inputting adjustment values of a single group of color-balance data in a condition that said screen is displayed by said first display means;

memory means for storing plural groups of color-balance data;

second display control means for concurrently controlling display of each of said plural groups of color-balance data stored in said memory means on said display means, differently from the screen displayed by said first display control means; and

selection means for selecting the color-balance of the desired group from among said plural groups of color-balance data displayed on said display means.

6,041,266

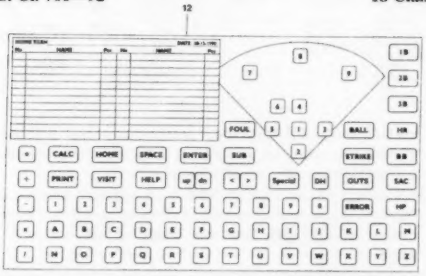
BASEBALL SCOREKEEPER

Danny L. Nickerson, 17636 Teklanika Dr., Eagle River, Ak. 99577

Filed Jan. 14, 1992, Appl. No. 820,261

Int. Cl.[7] G06F *15/28*

U.S. Cl. 700—92 **18 Claims**



1. An electronic baseball scorekeeper, for keeping the score of a real baseball game played by real players on a field, comprising:

a plurality of field position manually operable elements each of which elements is dedicated to a given field position,

a plurality of event manually operable elements each of which elements is dedicated to a single type of game event;

a plurality of manually operable alphabet elements for entry of a list of player names by operating different ones of said alphabet elements for the different letters of the alphabet, respectively, that are entered;

storage means for storing said list of player names, events and statistics;

display means for display of events, said list of player names and statistics,

processor means, including said storage means, and having a first mode for accepting said list of player names from said alphabet elements, a second mode for providing said list to said display, a third mode for entering data from said field position elements and said event elements into said processor means, a fourth mode for calculating statistics including the score and a fifth mode for providing statistical information to said display,

said processor means advancing from player to player on said list as necessary to cause at least a part of said event data and at least a part of said field position data to be provided to said processor means as related to the proper player on said list.

TO STEP 418

9. A computer system for verifying the design of an integrated circuit (IC) package in an IC assembly, the computer system including one or more processors and a memory containing:

a) physical interface data indicative of a physical interface between an IC die to be included in the IC assembly and the package, wherein the physical interface data includes

i) a set of die connector location data indicative of the physical location of a set of electrical conductors associated with the IC die, and

ii) a set of package connector location data indicative of the physical location of a first set of electrical conductors associated with the package;

b) a first set of signal interface data indicative of a signal interface between the IC die and the package, wherein the first set of signal interface data includes

i) a set of die connector signal data indicative of signals associated with each of the set of electrical conductors associated with the IC die, and

ii) a first set of package connector signal data indicative of signals associated with each of the first set of electrical conductors associated with the package;

c) a second set of signal interface data indicative of a signal interface between the package and a socket to be used with the IC assembly, wherein the second set of signal interface data includes

i) a second set of package connector signal data indicative of signals associated with a second set of electrical conductors associated with the package, and

ii) a set of socket connector signal data indicative of signals associated with a set of electrical conductors associated with the socket; and

d) a plurality of instructions which when executed by the one or more processors cause the one or more processors to perform the steps of

i) verify a physical interface between the IC die and the package,

ii) verify a signal interface between the IC die and the package, and

iii) verify a signal interface between the package and the socket.

AUTOMATIC RECIPE ADJUST AND DOWNLOAD BASED ON PROCESS CONTROL WINDOW

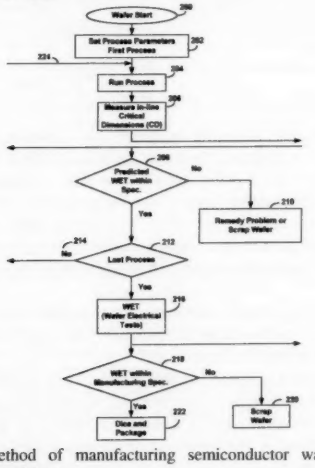
Paul J. Steffan, Elk Grove, and Ming Chun Chen, Milpitas, both of Calif., assignors to Advanced Micro Devices, Inc., Sunnyvale, Calif.

Filed Dec. 5, 1997, Appl. No. 985,470

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **H01L** *21/66;* **G06F** *19/00*

U.S. Cl. 700—121 **3 Claims**



1. A method of manufacturing semiconductor wafers, the method comprising:

starting a wafer lot in a first process of a manufacturing process;

setting process parameters for the first process and running the first process;

measuring in-line critical dimensions after completion of the first process and determining a set of predicted wafer electrical test measurement;

comparing the set of predicted wafer electrical test measurements with a set of target wafer electrical test measurements and determining a set of optimized process parameters for equipment for a next process;

comparing the set of optimized process parameters for the next process with a set of equipment characteristics and adjusting a set of process parameters for the next process; and

downloading the adjusted set of process parameters into the equipment for the next process.

6,041,271

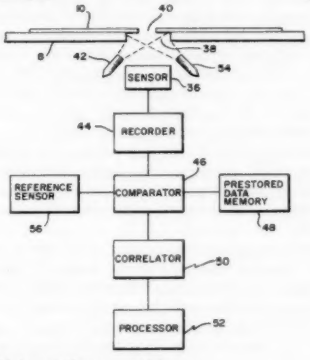
APPARATUS TO DETERMINE THE OPERATIONAL EFFECTIVENESS OF A MACHINE TOOL AND METHOD THEREFOR

Mikko Lindstrom, Streamwood, Ill., assignor to Finn-Power International, Inc., Schaumburg, Ill.

Filed Oct. 10, 1991, Appl. No. 773,319

Int. Cl.[7] **G06F** *19/00*

U.S. Cl. 700—175 **35 Claims**



1. A machining station, comprising:

a frame;

a turret rotatably and movably coupled to said frame;

a worktable positioned relative to said turret and onto which a worksheet is placed;

at least one tool means mounted to said turret, said tool means effective for making openings on said worksheet;

means positioned proximately to said tool means to detect each successive opening, if any, made by said tool means on said worksheet; and

control means for either stopping the operation of said machining station or rotating said turret to replace said tool means with another tool means when said detect means fails to detect any such successive opening on said worksheet.

6,041,272

DESULFURIZATION PROCESS FOR FLUE GASES

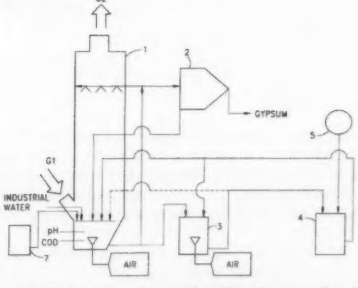
Hideyuki Michiki; Hisashi Miyakawa, and Kozo Ohsaki, all of Chiba, Japan, assignors to Toyo Engineering Corporation, Tokyo, Japan

Filed Jun. 12, 1998, Appl. No. 97,114

Claims priority, application Japan, Jun. 24, 1997, 9-167469; Mar. 19, 1998, 10-070335

Int. Cl.[7] **G05B** *1/00*

U.S. Cl. 700—266 **16 Claims**



1. A method for removing sulfur dioxide out of a flue gas containing sulfur dioxide, comprising the steps of:

(a) desulfurizing a flue gas containing sulfur dioxide by contacting the flue gas with a desulfurizing liquid containing magnesium components in a desulfurization column, wherein the

sulfur dioxide is absorbed, in the form of magnesium salts including magnesium sulfite and magnesium bisulfite, by the desulfurizing liquid;

(b) oxidizing with an oxygen-containing gas the desulfurization reaction liquid containing magnesium salts discharged from the desulfurization column, in an oxidation vessel, wherein the magnesium salts are converted to magnesium sulfate and sulfuric acids;

(c) neutralizing with a basic calcium compound in a double decomposition vessel the oxidized liquid containing the magnesium sulfate and sulfuric acid discharged from the oxidation vessel, wherein gypsum and magnesium hydroxide are formed in the oxidized liquid which is in the form of a slurry;

(d) recycling the slurry containing gypsum and magnesium hydroxide to the desulfurization and optionally to the oxidation vessel, wherein the magnesium hydroxide is used as a desulfurizing agent in step (a), wherein the desulfurization reaction liquid comprises magnesium hydroxide, gypsum, magnesium sulfite, magnesium bisufite, sulfuric acid, and magnesium sulfate, wherein sulfite ions and calcium ions are present;

(e) separating gypsum from at least either the desulfurization reaction liquid discharged from the desulfurization column or the oxidized liquid discharged from the oxidation vessel; and

(f) measuring the flow and composition of the flue gas introduced into the desulfurization column in step (a) and the flow of the desulfurization reaction liquid discharged from the desulfurization column to estimate subsequent values of pH and magnesium sulfate concentration of the desulfurization reaction liquid in the desulfurization column;

(g) comparing the estimated subsequent values with predetermined constant target values to determine discrepancies; and

(h) conducting at least one of (i), (ii), or (iii) to minimize the discrepancies:

(i) controlling the flow of the slurry in step (c) fed to the double decomposition vessel;

(ii) controlling the flow of the recycling slurry in step (d);

(iii) adding magnesium hydroxide to the desulfurization column in step (a).

6,041,273

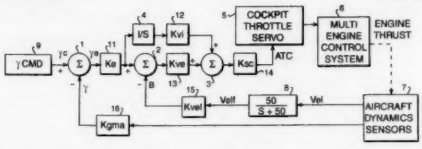
EMERGENCY CONTROL AIRCRAFT SYSTEM USING THRUST MODULATION

John J. Burken, Tehachapi, and Frank W. Burcham, Jr., Lancaster, both of Calif., assignors to The United States of America as represented by the Administrator of the National Aeronautics and Space Administration, Washington, D.C.

Filed Jul. 1, 1997, Appl. No. 886,656

Int. Cl.[7] B64C *19/00*

U.S. Cl. 701—3 **9 Claims**



1. An emergency control servo system for using thrust modulation for longitudinal control of a multiengine aircraft having a throttle servo for control of all engines in unison, comprising

means for independently entering a flightpath angle command to be maintained and producing a flightpath angle command signal γc,

means for continually sensing said aircraft flightpath angle and producing a flightpath angle signal γ,

means for producing a flightpath error signal γe as a fiction of the difference between said flightpath angle command γc and said sensed aircraft flightpath angle γ,

means for forming a limited integral as a function of said error signal and

means for adding said integral to said error signal for producing an output control signal for said throttle servo, thereby to adjust thrust of said engines to reduce said error signal γe toward zero.

POSITIONAL DEVIATION DETECTING DEVICE FOR A MOBILE BODY AND POSITION CORRECTING APPARATUS FOR A WORKING MACHINE MOUNTED ON A MOBILE BODY

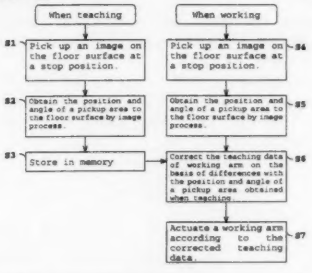
Masanori Onishi; Masanao Murata; Yutaka Nakai; Katsumi Yasuda; Tsukasa Sugino; Susumu Nakagawa, all of Ise, and Kouji Miura, Toyohashi, all of Japan, assignors to Shinko Electric Co., Ltd., Tokyo, Japan

Filed Apr. 21, 1998, Appl. No. 63,409

Claims priority, application Japan, Apr. 21, 1997, 9-103301; Dec. 9, 1997, 9-338529; Dec. 9, 1997, 9-338530; Jan. 23, 1998, 10-011311; Feb. 18, 1998, 10-036064

Int. Cl.[7] G05D *1/00*

U.S. Cl. 701—26 **31 Claims**



When teaching
When working
S1
Pick up an image on the floor surface at a stop position.
S4
Pick up an image on the floor surface at a stop position.
S2
Obtain the position and angle of a pickup area to the floor surface by image process.
S5
Obtain the position and angle of a pickup area to the floor surface by image process.
S3
Store in memory
S6
Correct the teaching data of working arm on the basis of differences with the position and angle of a pickup area obtained when teaching
S7
Actuate a working arm according to the corrected teaching data.

1. A position correcting apparatus for a working machine mounted on a mobile body for stopping said mobile body at a predetermined work position on a floor with a regular pattern formed thereon, and allowing said working machine to perform a predetermined operation according to teaching data, previously prepared and given to said working machine with said mobile body stopped at a reference stop position at said work position, comprising:

image pickup means, provided on said mobile body side at a position near said floor, for picking up an image on said floor where said mobile body stops;

reference picked image acquiring means for, at a time of giving said teaching data to said working machine, for acquiring a reference picked image including an image of said regular pattern and an image of a identification mark provided on said floor in vicinity of said predetermined work position, both acquired by said image pickup means with said mobile body stopped at said reference stop position of said work position;

on-pause picked image acquiring means for acquiring an on-pause picked image including images of said regular pattern and said identification mark acquired by said image pickup means at a stop position of said mobile body when stopped; and

teaching data correction means for comparing said regular pattern in said reference picked image, obtained by said reference picked image acquiring means, with said regular pattern in said on-pause picked image, obtained by said on-pause picked image acquiring means, based on a position of said identification mark, and correcting said teaching data of said working machine based on a result of the comparison.

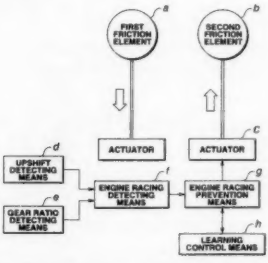
AUTOMATIC TRANSMISSION UPSHIFT CONTROL APPARATUS

Masahiro Takiguchi, Shizuoka, Japan, assignor to Jatco Corporation, Fuji, Japan

Filed Dec. 15, 1997, Appl. No. 990,844
Claims priority, application Japan, Dec. 19, 1996, 8-339229
This patent is subject to a terminal disclaimer.
Int. Cl.[7] B60K *28/16;* **F16H** *61/08*
U.S. Cl. 701—55 **9 Claims**



1. An upshift control apparatus for use in an automatic transmission having an input shaft drivingly coupled to an engine and first and second torque transmitting elements operable on fluid pressure between engaged and released conditions for controlling at least the fluid pressure to the second element to an initial value to engage the second element to effect an upshift from a current gear ratio to a higher target gear ratio while releasing the first element without the use of a one-way clutch to release the first element while synchronizing rotation, comprising:

means for detecting an upshift in the transmission;

means for detecting the gear ratio changing during the upshift;

means operable after the upshift is detected for detecting engine racing when the detected gear ratio is equal to or greater than a threshold value greater than a gear ratio existing before the upshift; and

engine racing prevention means for increasing the fluid pressure supplied to the second element to prevent the engine racing when the engine racing is detected at an early stage of the upshift before an inertia phase of the upshift.

6,041,276
DEVICE FOR CONTROLLING A STARTING PROCEDURE

Thomas John, Alitzheim; Thomas Kuhn, Bad Kissingen, and Wolfgang Nehse, Reichling/Ludenhausen, all of Germany, assignors to Mannesman Sachs AG, Schweinfurt, and BMW AG, München, both of Germany

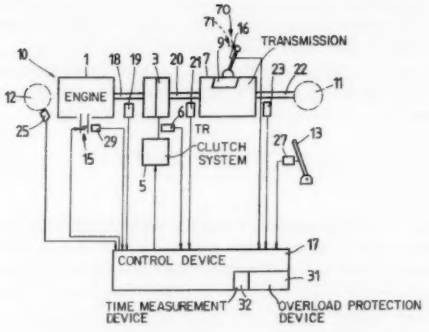
Filed Dec. 18, 1997, Appl. No. 992,981
Claims priority, application Germany, Dec. 21, 1996, 196 53 855
Int. Cl.[7] F16D *48/08*
U.S. Cl. 701—67 **22 Claims**

1. A device for controlling a starting procedure of a motor vehicle by controlling an automatic friction clutch of the motor vehicle, comprising:

a controller operatively connected for receiving signals from an engine shaft speed sensor, a vehicle speed sensor, a transmission shaft speed sensor, a transmission output shaft speed sensor, and an accelerator pedal position sensor;

a racing start device operatively connected to said controller for generating a racing start desire signal and a starting time point signal in response to an input from a user of the motor vehicle;

said controller operatively connected to an engine of said motor vehicle for producing an engine speed above a minimum engine speed threshold value in response to said racing start desire signal; and

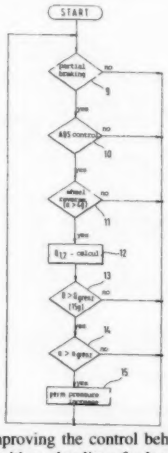


said controller operatively connected to the automatic friction clutch for controlling the automatic friction clutch to produce a first slip of the drive wheels of the motor vehicle and to produce a second slip of the automatic friction clutch in response to said starting time point signal, said controller also operatively connected to the automatic friction clutch for controlling a magnitude of said first slip in response to a speed of the motor vehicle during said starting procedure.

6,041,277
METHOD OF IMPROVING THE CONTROL CHARACTERISTICS OF AN ANTILOCKING SYSTEM (ABS)

Ivica Batistic, Frankfurt am Main, and Robert Schmidt, Rennerod, both of Germany, assignors to ITT Maufacturing Enterprises, Inc., Wilmington, Del.

PCT No. PCT/EP96/02950, § 371 Date Aug. 7, 1998, § 102(e) Date Aug. 7, 1998, PCT Pub. No. WO97/08030, PCT Pub. Date Mar. 6, 1997
PCT Filed Apr. 7, 1996, Appl. No. 11,824
Int. Cl.[7] B60T *8/00*
U.S. Cl. 701—71 **5 Claims**



1. A method of improving the control behavior of an anti-lock system of a vehicle with a plurality of wheels, each wheel being equipped with a wheel brake with an individually contolable braking pressure, wherein the rotational behavior of the individual vehicle wheels is measured and a vehicle reference speed is produced by logically combining the measured quantities, the vehicle reference speed being used as a reference quantity to determine the wheel slip and other control quantities and as a reference quantity for braking pressure control or braking pressure modulation, wherein, upon the commencement of an anti-lock control operation including a brake pressure reduction subsequent to an uncontrolled

braking operation, and upon the occurrence of an acceleration of at least one controlled wheel which is in excess of a predetermined limit value, a quotient Q is produced of a maximum brake slip λ_{max} of the wheel during the anti-lock brake operation and the duration Δt of pressure reduction until the wheel reaccelerates, according to the relation

$$Q_{1,2} = k * \frac{\lambda \max}{\Delta t} = \frac{(v_{REF} - V_{R1,2})\max}{\Delta t}$$

and the exceeding of a predetermined limit value of this quotient is assessed as an indicator of single disturbances, and wherein, upon detection of such a single disturbance, the braking pressure on the wheel where the single disturbance occurred is increased until the wheel deceleration falls short of a predetermined limit value.

6,041,278

METHOD OF TRIGGERING A DETERMINATION OF THE COMPOSITION OF FUEL IN A FLEXIBLE FUELED VEHICLE

Jerry Kennie, Canton; Yi Cheng, Jackson; Mark E. Hope; Shean Huff, both of Ann Arbor; Robert J. Nankee, II, Canton; Mary Joyce, Farmington Hills; Dennis A. Krozek, Novi; Richard K. Moote, Ann Arbor; Roland T. Richardson, Detroit; William D. Rotramel, Plymouth, and Gary L. Seitz, Chelsea, all of Mich., assignors to Chrysler Corporation, Auburn Hills, Mich.

Filed Oct. 29, 1997, Appl. No. 958,403

Int. Cl.[7] G01M *15/00*

U.S. Cl. 701—103 **5 Claims**

1. A method of triggering a fuel composition learning system in a flexible fueled vehicle comprising:

detecting a group of fuel parameters, said group consisting of additional fuel added to a tank of said vehicle, a fuel level in said tank dropping below a predetermined level, a failure of a fuel level sensor, and an indicia of a composition of said fuel;

testing a detected value of one of said group of fuel parameters against known threshold criteria; and

triggering said fuel composition learning system if said detected value of said one of said group differs from said threshold criteria by a preselected amount.

6,041,279

FUEL METERING CONTROL SYSTEM FOR INTERNAL COMBUSTION ENGINE

Hidetaka Maki; Shusuke Akazaki, and Toshiaki Hirota, all of Wako, Japan, assignors to Honda Giken Kogyo Kabushiki Kaisha, Tokyo, Japan

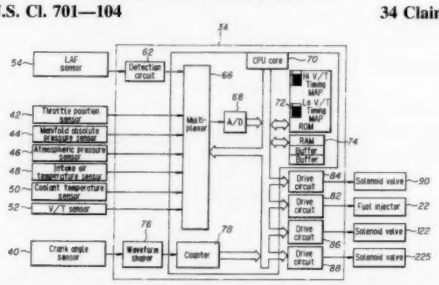
Filed Dec. 29, 1995, Appl. No. 580,592

Claims priority, application Japan, Feb. 25, 1995, 7-061652

This patent is subject to a terminal disclaimer.

Int. Cl.[7] G06G *7/70;* **F02M** *23/00*

U.S. Cl. 701—104 **34 Claims**



1. A system for controlling fuel metering for a multi-cylinder internal combustion engine, said engine having an exhaust system, said system comprising:

(a) an air/fuel ratio sensor located in the exhaust system of the engine;

(b) engine operating condition detecting means for detecting engine operating conditions including at least engine speed and engine load;

(c) fuel injection quantity determining means coupled to said operating condition detecting means, for determining a quantity of fuel injection for individual cylinders based on at least the detected engine operating conditions;

(d) fuel injector means coupled to said fuel injection quantity determining means, for injecting fuel in the individual cylinders of the engine based on the determined quantity of fuel injection; and

(e) a feedback loop means having an adaptive controller means and an adaptation mechanism means, coupled to an input of the adaptive controller means for establishing controller means parameters, said adaptive controller means correcting the quantity of fuel injection to bring a controlled variable based on at least an output of said air/fuel ratio sensor to a desired value, wherein:

said feedback loop means includes discriminating means for discriminating, based on the controller means parameters, whether the adaptive controller means operates stably.

GPS CAR NAVIGATION SYSTEM

Sanjai Kohli, Manhattan Beach, and Steven Chen, Cerritos, both of Calif., assignors to SiRF Technology, Inc., Santa Clara, Calif.

Provisional application No. 60/013,514, Mar. 15, 1996. This application Apr. 25, 1996, Appl. No. 637,537.

Int. Cl.[7] G06G *7/78;* **G01S** *5/00*

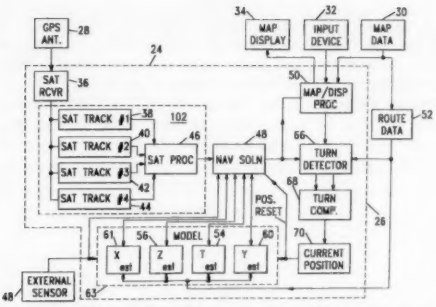
U.S. Cl. 701—201 **5 Claims**

1. A method of updating GPS position information for a vehicle navigating on roadways, comprising the steps of:

estimating the location of a vehicle along a predetermined track from the signals from a single GPS satellite;

deriving an indication that the vehicle has made a turn at a particular point along a predetermined track;

comparing the turn indication with stored navigation data to select data related to one or more predicted turns at or near the particular point;



comparing the turn indication with the predicted turn data to verify that the indicated turn corresponds to the predicted turn; and

updating the estimated position of the vehicle along the track to indicate that the vehicle was at the predicted turn location at a time corresponding to the turn indication.

6,041,281

INFORMATION GUIDANCE SYSTEM BASED ON STRUCTURE CONFIGURATION MAP

Mitsuhiro Nimura; Seiji Hayashi; Yasunobu Ito, and Keizo Inoue, all of Anjo, Japan, assignors to Aisin AW Co., Ltd.

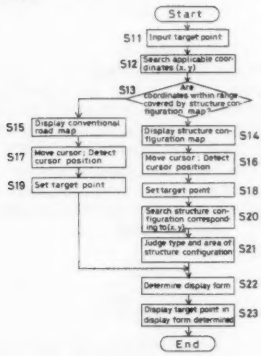
Continuation of application No. 08/739,323, Oct. 29, 1996, Pat. No. 5,890,088. This application Feb. 5, 1999, Appl. No. 244,885.

Claims priority, application Japan, Oct. 31, 1995, 7-284256; Oct. 31, 1995, 7-284257; Oct. 31, 1995, 7-284258

This patent is subject to a terminal disclaimer.

Int. Cl.[7] G06G *7/78*

U.S. Cl. 701—211 **7 Claims**



1. A guidance system for providing guidance information based on a structure configuration map, comprising:

storage means for storing data including structure configuration map information including configurational data for structures in the form of rows of coordinates, each row of coordinates representing a structural configuration of an individual structure, said structures including buildings and other facilities, and for storing structure information relating to the structures;

structure configuration map display control means for depicting and displaying a structure configuration map showing structural configurations of the buildings and other facilities based on the structure configuration map information stored in said storage means;

input means for setting a target point;

detecting means for detecting coordinates for the target point set by operation of said input means;

searching means for searching for a structure including the coordinates of the target point detected by said detecting means; and

display form chance means for emphasizing display of the structure, which includes the coordinates of the target point, on the displayed structure configuration map.

6,041,282

SEISMIC CABLE AND METHOD OF MAKING THE SAME

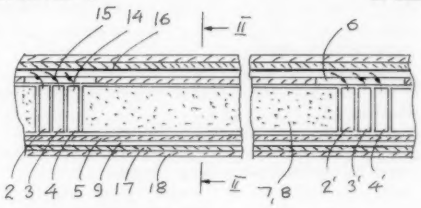
Jørn Wardeberg, Billingstad, and Anton Marius Knudsen, Son, both of Norway, assignors to Alcatel, Paris, France

Filed May 26, 1998, Appl. No. 84,743

Claims priority, application Norway, Jun. 9, 1997, 972635

Int. Cl.[7] G01V *1/16*

U.S. Cl. 702—1 **10 Claims**



1. Seismic cable comprising:

(a) a central tube defined by a tube wall having at least one longitudinal slit therein;

(b) a plurality of seismic sensor devices arranged at intervals within the central tube;

(c) a plurality of elongated electrical/optical elements arranged externally of the central tube; and

(d) interconnections between the sensor devices and the elongated elements are arranged externally of the tube via the at least one longitudinal slit in the tube wall.

6,041,283

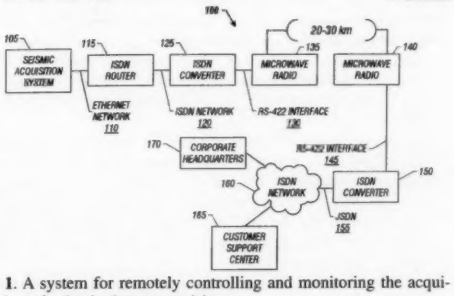
REMOTE CONTROL SYSTEM FOR SEISMIC ACQUISITION

Axel M. Sigmar, Sugar Land; James W. Iseli, Allen; Jozsef Szalay, Austin; Janos Haide, Austin, and Andras A. Feszthammer, Austin, all of Tex., assignors to Input/Output, Inc., Stafford, Tex.

Provisional application No. 60/095,704, Aug. 7, 1998. This application Sep. 11, 1998, Appl. No. 151,260.

Int. Cl.[7] G06F *19/00*

U.S. Cl. 702—16 **9 Claims**



1. A system for remotely controlling and monitoring the acquisition of seismic data, comprising:

a remote seismic data acquisition system adapted to control the acquisition of seismic data;

a network communications interface operably coupled to the seismic data acquisition system;

an integrated services digital network router operably coupled to the network communications interface;

a first integrated services digital network communications interface operably coupled to the integrated services digital network router;

a first integrated services digital network converter operably coupled to the first integrated services digital network communications interface;

a first communications interface operably coupled to the integrated services digital network converter;

a first microwave transceiver operably coupled to the first communications interface;

a second microwave transceiver operably coupled to the first microwave transceiver;

a second communications interface operably coupled to the second microwave transceiver;

a second integrated services digital network converter operably coupled to the second communications interface;

a second integrated services digital network communications interface operably coupled to the second integrated services digital network converter;

an integrated services digital network operably coupled to the second integrated services digital network communications interface; and

a local customer support center operably coupled to the integrated services digital network adapted to control the operation of the seismic data acquisition system.

6,041,284

APPARATUS AND METHOD FOR DETERMINING COORDINATES OF A DESIGNATED POINT

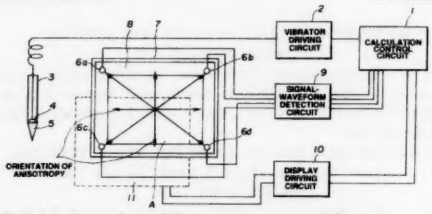
Yuichiro Yoshimura, Kamakura; Atsushi Tanaka, Yamato; Ryozo Yanagisawa, Inzai; Katsuyuki Kobayashi, and Hajime Sato, both of Yokohama, all of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Jun. 20, 1997, Appl. No. 879,603

Claims priority, application Japan, Jun. 25, 1996, 8-164465

Int. Cl.[7] G08C *21/00*

U.S. Cl. 702—56 **22 Claims**



1. A coordinate determining apparatus, comprising:

a vibration transmission plate having anisotropic properties such that vibrations from a vibration generation source applied to said vibration transmission plate propagate through said vibration transmission plate with differing vibration transmission velocities depending on a direction of transmission of vibration;

a plurality of vibration detection means for detecting vibrations transmitted through said vibration transmission plate; and

determination means for determining coordinates of the vibration generation source by measuring time periods of propagation of vibrations through said vibration transmission plate from the vibration generation source to one or more of said vibration detection means,

wherein said vibration transmission plate and said plurality of vibration detection means are provided such that bisectors of angles made by two line segments each connecting two opposing vibration detection means from among the plurality of vibration detection means coincide with orthogonal axes of anisotropy of said vibration transmission plate.

6,041,285

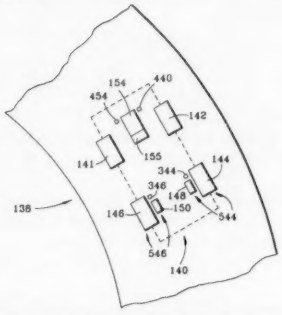
AC MOTORIZED WHEEL CONTROL SYSTEM

Henry Todd Young, North East; Frederick Gaylord Beach, Erie, both of Pa., and James Price Roman, Nashotah, Wis., assignors to General Electric Company, Erie, Pa.

Division of application No. 08/923,484, Sep. 4, 1997, Pat. No. 5,939,846. This application Nov. 13, 1998, Appl. No. 192,080.

Int. Cl.[7] H02P *1/54*

U.S. Cl. 702—113 **11 Claims**



1. A method for determining a maximum amount of available horsepower in a drive system including two AC motorized wheels, the method comprising:

sensing an engine speed;

using the speed to determine a nominal amount of available horsepower;

obtaining an actual engine load status signal;

applying a desired load status signal and the actual engine load status signal to a proportional-integral regulator;

using the nominal amount of available horsepower and an output signal of the proportional-integral regulator to determine the maximum amount of available horsepower.

6,041,286

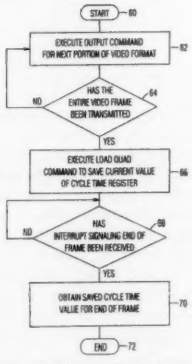
APPARATUS FOR AND METHOD OF ACCURATELY OBTAINING THE CYCLE TIME OF COMPLETION OF TRANSMISSION OF VIDEO FRAMES WITHIN AN ISOCHRONOUS STREAM OF DATA TRANSMITTED OVER AN IEEE 1394 SERIAL BUS NETWORK

Larry L. White, San Jose, Calif., assignor to Sony Corporation, Tokyo, Japan, and Sony Electronics, Inc., Park Ridge, N.J.

Filed Oct. 21, 1997, Appl. No. 957,965

Int. Cl.[7] G06F *11/34*

U.S. Cl. 702—176 **19 Claims**



17. A method of transmitting a video frame of data comprising the steps of:

a. transmitting the video frame;

b. executing a command to obtain a time value corresponding to completion of transmission of a last portion of the video frame;

c. recording the time value corresponding to completion of transmission of the last portion of the video frame within a command structure of the command;

d. waiting for an interrupt signal confirming completion of transmission of the last portion of the video frame; and

e. obtaining the time value from the command structure when the interrupt signal is received.

6,041,287

SYSTEM ARCHITECTURE FOR ON-LINE MACHINE DIAGNOSTICS

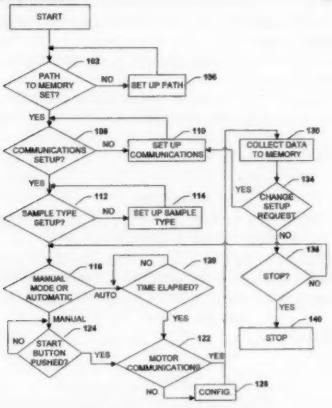
Carl J. Dister, North Olmsted, and Frederick M. Discenzo, Brecksville, both of Ohio, assignors to Reliance Electric Industrial Company, Cleveland, Ohio

Continuation-in-part of application No. 08/745,167, Nov. 7, 1996, Pat. No. 5,917,428, and application No. 08/988,177, Dec. 10, 1997. This application May 6, 1998, Appl. No. 73,505.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] G01F *1/56*

U.S. Cl. 702—182 **36 Claims**



1. A machine diagnostic system, including:

a host computer for determining a health state of a machine, the host computer being operatively coupled to a network backbone;

a machine diagnostic module adapted to be integrally mounted to a machine, the machine diagnostic module being operatively coupled to the network backbone, the machine diagnostic module collecting data relating to operation of the machine;

a system architecture including a software based analysis layer, the analysis layer providing for preprocessing of the machine data, the analysis layer being operative to facilitate determining positive sequence and negative sequence relating to the machine;

wherein the host computer analyzes the preprocessed data in making a determination as to the health state of the machine.

1. A method for evaluating pieces of building infrastructure equipment, comprising the steps of:

(a) storing, in a data base, for each piece of equipment, a record containing an associated identification, and an operating tolerance specification, designating an acceptable range of operating parameters;

(b) selecting said each piece of said infrastructure equipment for evaluation by retrieving from said data base said identification and corresponding operating tolerance specification for said each piece of equipment;

(c) evaluating said selected piece of equipment by conducting a test of current operating parameters to determine if said selected equipment piece has each of its operating parameters within the specified acceptable range, and if not, then

(i.) assessing what impact said selected piece of equipment has on the distribution network when said selected piece of equipment has at least one operating parameter outside the specified acceptable range;

(ii.) taking corrective action on said selected piece of equipment in accordance with the impact; otherwise,

(d) selecting another of said pieces of equipment; and

(e) repeating steps (a)–(d) until said equipment pieces have been selected.

METHOD AND DEVICE FOR A DATA MANAGEMENT SYSTEM WHICH IS CAPABLE OF CALIBRATION

Peter Schimitzek, Geilenkirchen, Germany, assignor to CSB-System Software-Entwicklung & Unternehmensberatung GmbH, Geilenkirchen, Germany

PCT No. PCT/DE95/01235, § 371 Date Mar. 21, 1997, § 102(e) Date Mar. 21, 1997, PCT Pub. No. WO96/09523, PCT Pub. Date Mar. 28, 1996

PCT Filed Sep. 7, 1995, Appl. No. 817,036

Claims priority, application Germany, Sep. 23, 1994, 44 33 913; Sep. 23, 1994, 94 15 398 U; Mar. 17, 1995, 195 09 775

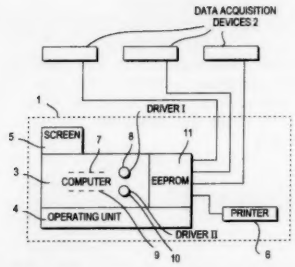
Int. Cl.[7] F25B *49/02*

U.S. Cl. 702—187 **12 Claims**

1. A method of acquiring, calibrating and storing measured weight data in a secure manner and of acquiring and storing other non-calibratable measured data for display and processing, said method comprising the steps of:

a) providing a plurality of calibratable weight data acquisition devices (**2**) and at least one non-calibratable data acquisition device (**2**) for non-calibratable data other than weight;

b) providing an approved calibrating device (**1**) in non-interacting dialogue with each of said data acquisition devices (**2**), wherein said approved calibrating device (**1**) comprises a computer (**3**) including a first driver (**1,8**), a second driver (**11,10**), a monitor (**5**), a memory and an EEPROM card (**11**);



c) triggering the data acquisition devices (**2**) to obtain measured weight data and non-calibratable data besides weight;

d) providing the measured weight data and non-calibratable data with references by means of the first driver (**I**,**8**), the second driver (**II**,**10**) and the EEPROM card (**11**) during transfer by the approved calibrating device (**1**);

e) calibrating the measured weight data to obtain calibrated measured weight data;

f) buffer-storing the calibrated measured weight data and the non-calibrated data in a manipulation-proof and non-erasable form on said EEPROM card (**11**); and

g) transferring the buffered calibrated weight data from the EEPROM card (**11**) to said memory of the computer (**3**);

whereby said buffered calibrated weight data is available for retrieval at any time in any order and current measured weight data and current non-calibratable data from said data acquisition devices (**2**) are retrievable in any order by said computer for display on said monitor (**5**).

METHOD OF ADAPTIVELY ADJUSTING THE COEFFICIENTS OF A DIGITAL FILTER IN AN ECHO CANCELLER

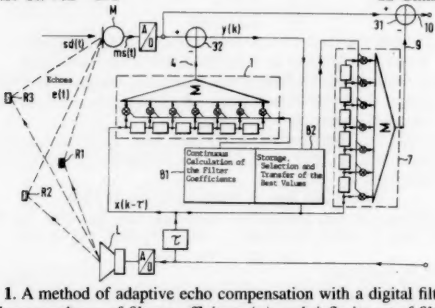
Hans Jürgen Matt, Remseck; Michael Walker, Baltmannsweiler, and Uwe Ackermann, Freiberg, all of Germany, assignors to Alcatel, Paris, France

Filed Nov. 13, 1997, Appl. No. 969,735

Claims priority, application Germany, Nov. 15, 1996, 196 47 276

Int. Cl.[7] **H04B** *3/20*

U.S. Cl. 702—191 **12 Claims**



1. A method of adaptive echo compensation with a digital filter whose number n of filter coefficients (c_j), or briefly its set of filter coefficients (C(j)), is calculated in accordance with the Normalized-Least-Mean-Square algorithm, in a transmission system in which a coupling occurs between a signal path in the receiving direction and a signal path in the transmitting direction, characterized in that

the set of filter coefficients (C(j)) is compared to an envelope curve (H(j)),

an error measurement (F(j)) is calculated from the variation between the values of the set of filter coefficients (C(j)) and those provided by the envelope curve (H(j)),

only the set of filter coefficients (C(j)) in which the error measurement (F(j)) drops below a threshold value is used further to adjust the digital filter.

6,041,291

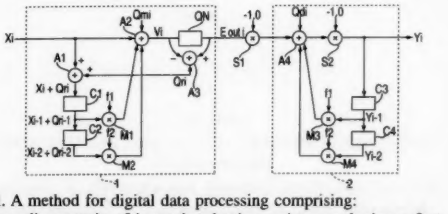
DIGITAL DATA PROCESSING CIRCUIT AND DIGITAL DATA PROCESSING METHOD

Motohiro Yamazaki, Kawasaki; Shuichi Ando, Matsudo, and Akira Toyama, Chigasaki, all of Japan, assignors to Nippon Precision Circuits, Inc., Tokyo, Japan

Filed Jul. 17, 1998, Appl. No. 118,249

Int. Cl.[7] **G06F** *17/10*

U.S. Cl. 702—191 **14 Claims**



1. A method for digital data processing comprising:

encoding a train of input data having a sign, employing a first filtering operation, quantization processing and addition of a quantization noise, said first filtering operation associated with first truncation noise, said first truncation noise caused by the multiplication by one or more filter coefficients;

inverting said sign of output data following encoding;

decoding said output data subjected to said encoding, employing a second filtering operation, said second filtering operation associated with second truncation noise, said second truncation noise caused by the multiplication by one or more filter coefficients; and

correcting the inverted sign of the data to said original sign of the data;

whereby said first and second truncation noises caused by the respective filtering operations are offset.

6,041,292

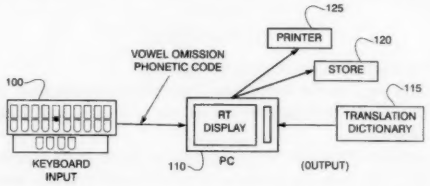
REAL TIME STENOGRAPHIC SYSTEM UTILIZING VOWEL OMISSION PRINCIPLE

Carol Jochim, 3234 E. Corrine Dr., Phoenix, Ariz. 85032

Provisional application No. 60/010,063, Jan. 16, 1996. This application Jan. 15, 1997, Appl. No. 783,271.

Int. Cl.[7] **G06F** *17/28*

U.S. Cl. 704—3 **15 Claims**



SCHEMATIC OF STENO SYSTEM

1. A real time, spelling-independent stenographic system comprising:

(a) input means having a keyboard for generating electronic data representing the shorthand strokes;

(b) storage means for storing the electronic data;

(c) a translation dictionary of the steno strokes and the corresponding English text in which "uh" vowel sounds and unemphasized "eh" and "ih" vowel sounds preceding final side consonants are omitted from medial and ending strokes; and

(d) means for comparing the electronic data and the translation dictionary and converting the steno strokes to English text.

6,041,293

DOCUMENT PROCESSING METHOD AND APPARATUS THEREFOR FOR TRANSLATING KEYWORDS ACCORDING TO A MEANING OF EXTRACTED WORDS

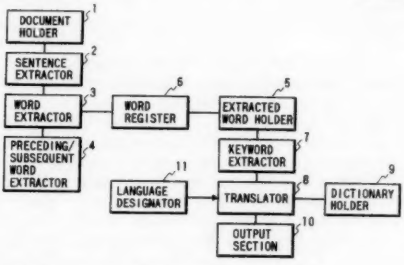
Shogo Shibata, Kawasaki; Minoru Fujita; Yuji Ikeda, both of Yokohama; Takaya Ueda, Kawasaki; Fumiaki Itoh, and Makoto Hirota, both of Yokohama, all of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Filed May 29, 1996, Appl. No. 657,042

Claims priority, application Japan, May 31, 1995, 7-134226

Int. Cl.[7] G06F *17/28*

U.S. Cl. 704—4 **18 Claims**



1. A document processing apparatus comprising:

first word extracting means for extracting a first word from document data;

preceding/subsequent word extracting means for extracting, from the document data, a second word that is one of a preceding word and a subsequent word of the first word;

keyword extracting means for extracting a keyword of the document data, based on a frequency of occurrence of the first word, wherein said keyword extracting means includes word counting means for counting a number of occurrences of each word, other than unnecessary words which are pre-excluded from being keywords, in the document data, said keyword extracting means extracting a word having a high number of occurrences, counted by said word counting means, as the keyword; and

translation means for translating the keyword into a predetermined language by referring to a dictionary in a process that considers a meaning of the first and second words existing together in the document data.

SIGNAL QUALITY DETERMINING DEVICE AND METHOD

John Gerard Beerends, The Hague, Netherlands, assignor to Koninklijke PTT Nederland N.V., Netherlands

PCT No. PCT/EP96/01143, § 371 Date Sep. 5, 1997, § 102(e) Date Sep. 5, 1997, PCT Pub. No. WO96/28950, PCT Pub. Date Sep. 19, 1996

PCT Filed Mar. 13, 1996, Appl. No. 913,039

Claims priority, application Netherlands, Mar. 15, 1995, 9500512

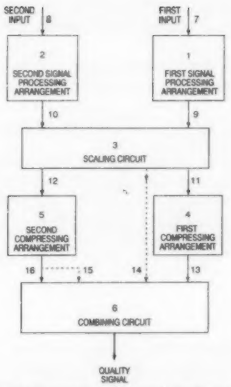
Int. Cl.[7] G01L *21/02;* **H04B** *15/00*

U.S. Cl. 704—203 **20 Claims**

12. A method for determining quality of an output signal generated by a signal processing circuit with respect to a reference signal, the method comprising the steps of:

generating a first signal parameter as a function of time and frequency in response to the output signal;

compressing the first signal parameter so as to yield a first compressed signal parameter;



generating a second compressed signal parameter in response to the reference signal;

determining a difference signal in response to the first and second compressed signal parameters;

reducing an amplitude of the difference signal by a predefined amount by either, in response to a sign of the difference signal, adding the predefined amount to the difference signal or subtracting the predefined amount therefrom, so as to yield a reduced difference signal; and

generating a quality signal by integrating the reduced difference signal with respect to time and frequency.

6,041,295

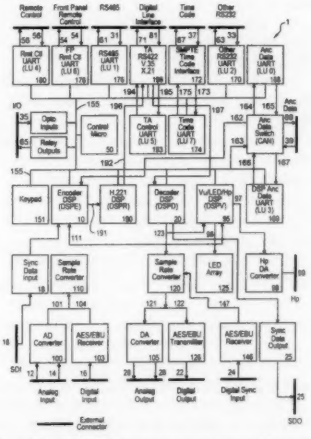
COMPARING CODEC INPUT/OUTPUT TO ADJUST PSYCHO-ACOUSTIC PARAMETERS

Larry W. Hinderks, Holmdel, N.J., assignor to Corporate Computer Systems, Holmdel, N.J.

Continuation of application No. 08/420,721, Apr. 10, 1995, and a continuation of application No. 08/419,200, Apr. 10, 1995. This application Apr. 10, 1996, Appl. No. 630,790.

Int. Cl.[7] G10L *19/00*

U.S. Cl. 704—206 **44 Claims**



1. An adjustable CODEC for compression and decompression of signals including:

an input for receiving an audio signal;

a parameter input unit cooperatively connected to an encoder for inputting and adjusting at least one parameter level of a plurality of pscho-acoustic parameter levels, said encoder containing a compression unit for compressing said signal

based on said parameter levels of said plurality of psycho-acoustic parameters to form a first compressed digital bit stream;

a decoder containing a decompression unit for decompressing a received compressed digital data bit stream to a decompressed signal;

an output connected to the decoder for outputting said decompressed signal; and

a comparing device for comparing the responses of said audio signal and said decompressed digital bit stream;

whereby the comparison provided by the comparing device may be the basis for adjusting said parameter level of said plurality of psycho-acoustic parameter levels.

6,041,296

METHOD OF DERIVING CHARACTERISTICS VALUES FROM A SPEECH SIGNAL

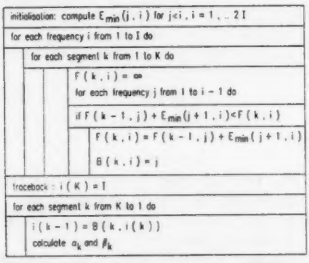
Lutz Welling, and Hermann Ney, both of Aachen, Germany, assignors to U.S. Philips Corporation, New York, N.Y.

Filed Apr. 21, 1997, Appl. No. 843,808

Claims priority, application Germany, Apr. 23, 1996, 196 16 103

Int. Cl.[7] **G10L** *1/00*

U.S. Cl. 704—209 **3 Claims**



initialization: compute $E_{min}(j,i)$ for $j<i$, $i = 1, \ldots 2I$
for each frequency i from 1 to I do
for each segment k from 1 to K do
$F(k,i) = \infty$
for each frequency j from 1 to i − 1 do
if $F(k-1,j) + E_{min}(j+1,i) < F(k,i)$
$F(k,i) = F(k-1,j) + E_{min}(j+1,i)$
$B(k,i) = j$
traceback : $i(K) = I$
for each segment k from K to 1 do
$i(k-1) = B(k, i(k))$
calculate a_k and β_k

1. A method of deriving characteristic values from a speech signal, comprising the steps of:

a) dividing a speech signal into periods of time;

b) forming a power density spectrum via discrete frequencies of the periods of time of the speech signal;

c) forming the first three autocorrelation coefficients for a predetermined first number K of consecutive segments of the power density spectrum;

d) forming an error value from autocorrelation coefficients for each segment and summing the error values of all segments;

e) repeating the formation of the autocorrelation coefficients and the error values for different boundarys between the segments and determining the optimum boundary frequencies at which the sum of the error values has a minimum;

f) deriving at least a characteristic value for each segment from the autocorrelation coefficients of the segments of the optimum boundary frequencies; and

g) processing the at least one characteristic value for each segment for speech recognition.

VOCODER FOR CODING SPEECH BY USING A CORRELATION BETWEEN SPECTRAL MAGNITUDES AND CANDIDATE EXCITATIONS

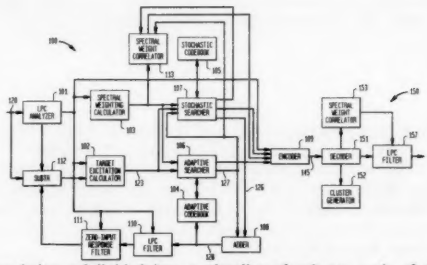
Randy G. Goldberg, Princeton, N.J., assignor to AT&T Corp, New York, N.Y.

Filed Mar. 10, 1997, Appl. No. 814,130

Int. Cl.[7] **G10L** *3/02;9/00*

U.S. Cl. 704—219 **20 Claims**

1. A method of encoding an input frame of speech based on a plurality of candidate excitations, the plurality of candidate excitations being subdivided into a plurality of subsets, each of the subsets including a predetermined amount of the plurality of candidate excitations, the method comprising the steps of:



a) determining a plurality of spectral weights based on the input frame of speech;

b) determining a target excitation based on the input frame of speech;

c) selecting from the plurality of candidate excitations the candidate excitation most closely matching the target excitation;

d) identifying the selected candidate excitation by a variable length index code having a data length based on the predetermined amount of candidate excitations included in the subset corresponding to the selected candidate excitation;

e) communicating a speech characterization code without communicating the selected candidate excitation, the speech characterization code including at least the variable length index code and the plurality of the spectral weights calculated in step a);

f) receiving the speech characterization code communicated in step e); and

g) determining, based on the plurality of spectral weights included in the speech characterization code, the subset of candidate excitations which includes the selected candidate excitation.

METHOD FOR SYNTHESIZING A FRAME OF A SPEECH SIGNAL WITH A COMPUTED STOCHASTIC EXCITATION PART

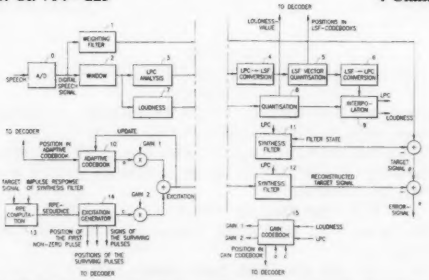
Udo Gortz, Bochum, Germany, assignor to Nokia Mobile Phones, Ltd., Espoo, Finland

Filed Oct. 8, 1997, Appl. No. 947,419

Claims priority, application Germany, Oct. 9, 1996, 196 41 619

Int. Cl.[7] **G10L** *9/04*

U.S. Cl. 704—223 **4 Claims**



1. Method for synthesizing a frame of a speech signal in a speech codec, in which a synthesis filter of a speech coder of the speech codec is supplied with an excitation vector consisting of an adaptive excitation part and a stochastic excitation part, which is taken from a previously calculated ideal Regular Pulse Excitation (RPE) sequence, comprising steps of:

a) determining a position of a first non-zero pulse in the ideal RPE sequence,

b) determining positions of a preselected number of strongest pulses in the ideal RPE sequence,

c) determining amplitudes of the preselected number of strongest pulses, and

d) determining signs of the preselected number of strongest pulses,

wherein the positions, amplitudes, and signs furthermore being transmitted to a speech decoder of the speech codec in order to produce the stochastic excitation part there as well.

Initial Model of Phoneme - Symbol A Posteriori Probability Calculating Neural Network
Context - Free Grammar (CFG)

1. An apparatus for calculating a posteriori probabilities of phoneme symbols, comprising:

feature extracting means for extracting speech feature parameters from a speech signal of an uttered speech sentence composed of an inputted character series; and

calculating means for calculating a a posteriori probability of a phoneme symbol of the speech signal, by using a bidirectional recurrent neural network,

wherein said bidirectional recurrent neural network comprises:

an input layer for receiving, as input signals, the speech feature parameters extracted by the feature extracting means and a plurality of hypothetical phoneme symbol series signals;

an intermediate layer of at least one layer having a plurality of units; and

an output layer for outputting a a posteriori probability of each phoneme symbol,

wherein said input layer comprises:

a first input neuron group having a plurality of units, for receiving, as input signals, a plurality of speech feature parameters and a plurality of phoneme symbol series signals;

a forward module; and

a backward module,

wherein said forward module has a forward-in-time feedback connection, and generates and outputs to said intermediate layer, a plurality of parameters of a timing delayed by a predetermined unit time from a plurality of parameters outputted from said first input neuron group, based on a plurality of speech feature parameters and a plurality of phoneme symbol series signals, and wherein said backward module has a backward-in-time feedback connection, and generates and outputs to said intermediate layer, a plurality of parameters of a timing inversely delayed by a predetermined unit timing from a plurality of parameters outputted from said first input neuron group, based on a plurality of speech feature parameters.

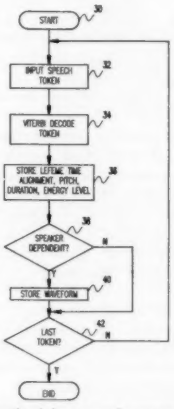
SYSTEM AND METHOD OF USING PRE-ENROLLED SPEECH SUB-UNITS FOR EFFICIENT SPEECH SYNTHESIS

Abraham Poovakunnel Ittycheriah, and Stephane Herman Maes, both of Danbury, Conn., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Mar. 21, 1997, Appl. No. 821,520

Int. Cl.[7] G10L *5/04*

U.S. Cl. 704—255 **14 Claims**



4. A method for synthesizing speech comprising the steps of:

inputting by a speaker a plurality of speech tokens comprising an enrolled vocabulary;

decoding each of said plurality of speech tokens into a plurality of lefemes associated with each of said plurality of speech tokens in said enrolled vocabulary, said lefemes comprising portions of phones in a given context;

storing instances of said plurality of lefemes as representative waveforms;

inputting a token to be recognized;

decoding said token to be recognized into a plurality of lefemes;

matching said lefemes of said token to be recognized to ones of said stored plurality of lefemes; and

concatenating ones of said stored plurality of representative waveforms to synthesize a recognized token in the speaker's voice.

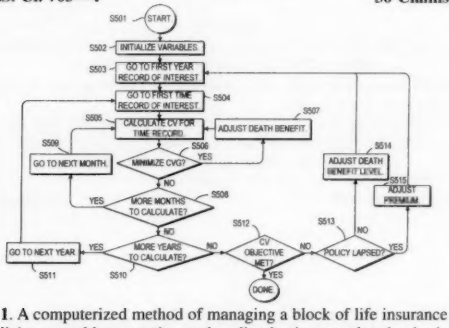
SYSTEM AND METHOD FOR CONTROLLING THE CASH VALUE GROWTH OF AN INSURANCE POLICY

Bennett S. Meyer, Elkins Park; William D. Chatfield, Downington, both of Pa.; Larry R. Sluder, Plano, and James W. Radosevich, Carrollton, both of Tex., assignors to Meyer-Chatfield, Inc., Jenkintown, Pa.

Filed Feb. 26, 1997, Appl. No. 806,780

Int. Cl.[7] G06F *17/60*

U.S. Cl. 705—4 **30 Claims**



1. A computerized method of managing a block of life insurance policies owned by an entity, each policy having a cash value basis and a plurality of terms associated therewith to control the change in cash value of the life insurance policy in relation to the basis of the life insurance policy, comprising:

accessing selected data having terms associated therewith, wherein said data is representative of the insurance policies;

calculating a first value from said data of the insurance policies for a predetermined point in time;

comparing said first value to a predetermined value at said predetermined point in time;

applying an adjustment to said comparison in accordance with a predetermined criteria; and

modifying at least one of said terms in accordance with said adjustment so that the cash value of the life insurance policies in relation to the basis of the life insurance policies is managed, and returning a managed flow of money to said entity as death benefits.

METHOD OF AND SYSTEM FOR DISTRIBUTING AND REDEEMING ELECTRONIC COUPONS

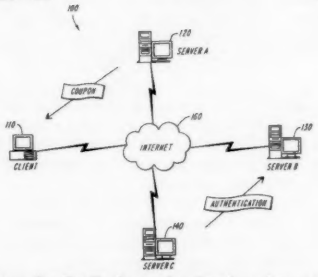
Raviv Laor, New York, N.Y., assignor to OneClip.com, Incorporated, Atlanta, Ga.

Continuation-in-part of application No. 09/160,748, Sep. 25, 1998. This application Dec. 23, 1998, Appl. No. 220,414.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] G06F *17/60*

U.S. Cl. 705—14 **28 Claims**



1. A system for distributing and redeeming electronic coupons comprising:

a first server system including a computer processor and associated memory, said first server system being connected by a communications channel to a client system, said first server system being adapted for transmitting an electronic coupon to said client system over said communications channel, without regard to predetermined client criteria;

said client system including a computer processor and associated memory, said client system being adapted for storing said electronic coupon in said memory; and,

a second server system connected to said communications channel, said second server system being adapted to establish a connection with said client system and for detecting said electronic coupon stored on said client system, said second server system further being adapted to redeem said electronic coupon.

6,041,310

METHOD AND SYSTEM FOR AUTOMOBILE TRANSACTIONS

H. Dean Green, Greensboro; George J. Salquero, High Point, and Lowell Lang, deceased, late of Greensboro, all of N.C., by Marilyn Lang, legal representative, assignors to Green Ford, Inc.

Filed Dec. 12, 1996, Appl. No. 764,541

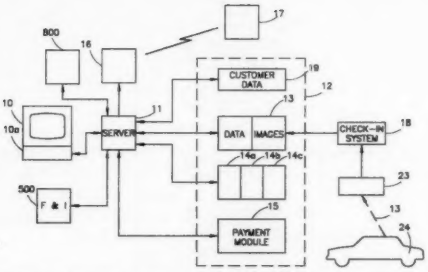
Int. Cl.[7] G06F *17/60*

U.S. Cl. 705—27 **32 Claims**

1. An on-site system for facilitating an automobile transaction for a customer comprising:

a) an input/display terminal adapted to form a multilevel customer query and to display responses thereto, the terminal including a terminal processor, wherein the terminal processor is adapted to create a link between the customer and a salesperson assigned to that customer;

b) a data server adapted to route a customer query from the input/display terminal to a storage device containing customer data, automobile inventory data, vehicle images, and video



files, wherein the storage device is adapted to communicate to the input/display device via the data server a selected inventory responsive to the customer query;

c) a communications device for making a customer-initiated contact with the linked sales person from the input/display terminal via the data server.

6,041,311

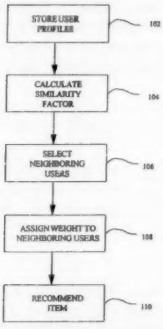
METHOD AND APPARATUS FOR ITEM RECOMMENDATION USING AUTOMATED COLLABORATIVE FILTERING

Alexander Chislenko; Yezdezard Z. Lashkari, both of Cambridge, and John E. McNulty, Burlington, all of Mass., assignors to Microsoft Corporation, Redmond, Wash.

Continuation-in-part of application No. 08/597,442, Feb. 2, 1996, abandoned, Provisional application No. 60/000,598, Jun. 30, 1995, Provisional application No. 60/008,458, Dec. 11, 1995. This application Jan. 28, 1997, Appl. No. 789,758.

Int. Cl.[7] G06F *17/30*

U.S. Cl. 705—27 **33 Claims**



1. A method for operating a machine to recommend an item to one of a plurality of users, the item not yet rated by the user, the method comprising the steps of:

(a) storing, using the machine, a user profile in a memory for each of the plurality of users, wherein at least one of the user profiles includes a plurality of values, one of the plurality of values representing a rating given to one of a plurality of items by the user and another of the plurality of values representing additional information;

(b) calculating, using the machine, for the user, a plurality of similarity factors responsive to both ratings given to items by the user and the additional information, each of the plurality of similarity factors representing a similarity between the user and another one of the plurality of users;

(c) selecting, using the machine, for the user, a plurality of neighboring users based on the similarity factors, the selecting step comprising the steps of, for each of the plurality of users:

(c1) comparing associated similarity factors for the user and each one of the plurality of users; and

(c2) choosing said each one of the plurality of users as one of the neighboring users if a difference between the associated similarity factors exceeds a predetermined threshold value;

(d) assigning, using the machine, a weight to each of the neighboring users; and

(e) recommending, using the machine, at least one of the plurality of items to the user based on the weights assigned to the plurality of neighboring users and ratings given to the plurality of items by the plurality of neighboring users.

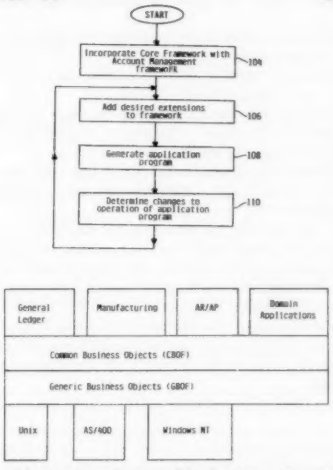
OBJECT ORIENTED TECHNOLOGY FRAMEWORK FOR ACCOUNTS RECEIVABLE AND ACCOUNTS PAYABLE

Matthew John Bickerton, Stratford, United Kingdom; Kathryn Ann Bohrer, Austin, Tex.; Emma Suzanne Hughes, Dudley, United Kingdom; Edward William Kenworthy, Stratford upon Avon, United Kingdom; Rupert Jeremy Musgrove, Alcester, United Kingdom; LindaMay Rose Patterson, Rochester, Minn.; Steven Porter, Shaw, United Kingdom; David Dennis Salt, Prestbury, United Kingdom, and Duncan Keith Scattergood, Boughton Hackett, United Kingdom, assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Mar. 28, 1997, Appl. No. 834,647

Int. Cl.[7] G06F *17/30;15/18*

U.S. Cl. 705—30 **35 Claims**



8. An object oriented extensible business financial ledger account management framework for use in a computer system having an operating system that supports an object oriented programming environment and includes a memory in which cooperating objects comprising object classes can be stored, the object oriented framework comprising a set of object oriented classes including at least one user-extensible class that a user of the framework can extend using object oriented principles of inheritance to define a business financial account management application, the framework comprising a Ledger Account Application category of cooperating objects that contain business financial accounts data and perform accounts receivables and accounts payable operations on the business financial accounts data, wherein the Ledger Account Application category of cooperating objects comprises an Account object class that specifies an account structure for containing accounts receivables, accounts payable, company identification, and business partner identification data to specify the business financial accounts data, the framework further comprising a Debt Management Items category of cooperating objects that reference transactions between a company and a business

partner and a Log Entry category of cooperating objects that identifies the transaction prior to a commit operation on the transaction.

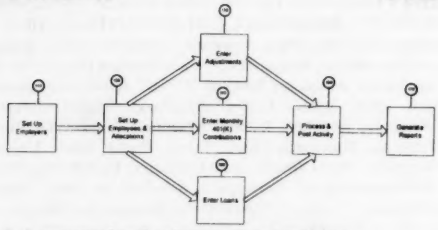
401K USER SOFTWARE

James A. Gilbert, 10600 Wilshire Blvd., #729, Los Angeles, Calif. 90024, and Manish Gupta, Beverly Hills, Calif., assignors to James A. Gilbert, Los Angeles, Calif.

Filed Jun. 29, 1998, Appl. No. 106,009

Int. Cl.[7] G06F *17/00*

U.S. Cl. 705—36 **31 Claims**



1. A computer-based retirement plan comprising:

a menu-based data input interface;

a plurality of main menu selections including any of: mutual fund information, management reports or employer information;

said mutual fund information including at least group and portfolio administration;

said management reports including at least one of: client list or commission administration;

said employer information including at least one of: report compilations, employee information, mutual fund choices, vesting schedules or monthly processing;

said employer information further comprising individual account number allocation per employee for each separate mutual fund choice, and

wherein said individual account number allocation enables one or more of: adding individual mutual fund choices separate from other employee choices, producing monthly reports for each individual without direct interaction with other employee accounts; producing direct access to mutual fund balances for an individual employee based only on the individual account number, or adding new mutual fund choices for individual employees without modification of other employee fund choices.

MULTIPLE ACCOUNT PORTABLE WIRELESS FINANCIAL MESSAGING UNIT

Walter Lee Davis, 5820 NW. 96 Dr., Parkland, Fla. 33076

Filed Dec. 22, 1997, Appl. No. 995,796

Int. Cl.[7] G06F *17/60*

U.S. Cl. 705—41 **34 Claims**

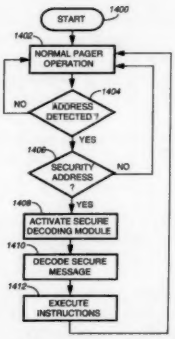
1. A portable secure financial messaging unit, comprising:

a receiver for receiving a radio frequency signal comprising a secure financial transaction message;

a selective call decoder coupled to the receiver, the selective call decoder comprising:

a memory that includes a plurality of unique selective call addresses each corresponding with a predetermined financial transaction type; and

an address correlator coupled to the memory, the address correlator operating to determine substantial coincidence between at least one of the plurality of unique selective call addresses and a received selective call address contained in the radio frequency signal and corresponding with the predetermined financial transaction type;



a financial transaction processor coupled to the selective call decoder, the financial transaction processor allowing the portable secure financial messaging unit to effect a secure financial transaction based at least in part on information contained in the secure financial transaction message; and

a main processor coupled to the financial transaction processor and the selective call decoder for controlling the receiver, selective call decoder, and financial transaction processor such that the portable secure financial messaging unit operates to perform the secure financial transaction.

AUTOMATED PAYMENT SYSTEM AND METHOD

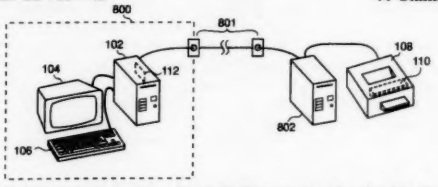
Robert E. Pollin, Germantown, Md., assignor to Autoscribe Corporation, Rockville, Md.

Division of application No. 08/625,295, Apr. 1, 1996, Pat. No. 5,727,249, which is a division of application No. 07/959,930, Oct. 15, 1992, Pat. No. 5,504,677. This application Jun. 19, 1997, Appl. No. 879,022.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] G06F *17/60*

U.S. Cl. 705—45 **44 Claims**



1. An automated system for generating a plurality of authorized drafts on financial accounts belonging to a plurality of payers, in payment of debts to a payee, comprising:

input means for performing an electronic information input process wherein a system operator contemporaneously enters information sufficient to identify a new payer previously unknown to the system and information specifying a draft to be generated on an account of that payer, said information including a financial institution identification number and an amount to be drafted from said payer's account;

an institutional database comprising financial institution identification information:

institution verification means associated with said input means for receiving said financial institution identification number and comparing said financial institution identification number to entries in said institutional database, wherein when said financial institution is found in the institutional database, the institution verification means retrieves identifying information about the institution and verifies the accuracy of said financial institution identification number, and wherein when said financial institution is not found in the institutional database, an error indication is generated; and

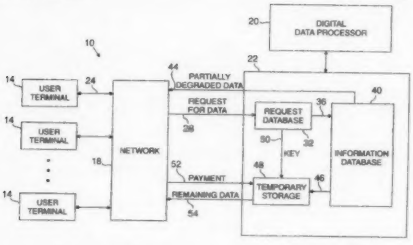
output means connected to said input means for receiving said information specifying a draft and generating a paper copy of said draft.

6,041,316

METHOD AND SYSTEM FOR ENSURING ROYALTY PAYMENTS FOR DATA DELIVERED OVER A NETWORK

Jonathon Brandon Allen, Mountainside, N.J., assignor to Lucent Technologies Inc., Murray Hill, N.J.

Filed Jul. 25, 1994, Appl. No. 280,039
Int. Cl.[7] H04L *9/32*
U.S. Cl. 705—52 **27 Claims**



3. A method of delivering data over a communication network, comprising the steps of:

generating a partially-degraded version of the data by altering a portion of the data to reduce its perceived quality when utilized;

providing the partially-degraded version of the data over the network to a customer at a user terminal connected to the network; and

providing a higher quality version of the data to the customer over the network if the customer is entitled to receive the higher quality version, said method further including the steps of:

receiving a request for the data from the customer at the user terminal;

retrieving the requested data from an information database;

partially degrading the data to produce the partially-degraded version;

transmitting the partially-degraded version to the customer over the communication network; and

determining whether the customer is entitled to receive the higher quality version of the data.

6,041,317

POSTAL SECURITY DEVICE INCORPORATING PERIODIC AND AUTOMATIC SELF IMPLEMENTATION OF PUBLIC/PRIVATE KEY PAIR

George Brookner, Norwalk, Conn., assignor to Ascom Hasler Mailing Systems, Inc., Shelton, Conn.

Provisional application No. 60/031,305, Nov. 19, 1996. This application Nov. 19, 1997, Appl. No. 974,028.
Int. Cl.[7] G06F *17/00*
U.S. Cl. 705—61 **14 Claims**

1. A postal security device comprising:

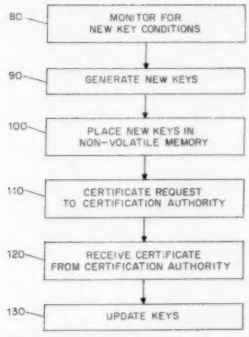
(a) means for determining if a new key pair should be generated in response to a predetermined criterion;

(b) means for generating a new key pair;

(c) non-volatile memory for storing said new key pair;

(d) means for requesting a certificate of authentication for a portion of said new key pair from a Certification Authority;

(e) means for receiving a certificate of authentication for said portion of said new key pair from said Certification Authority;



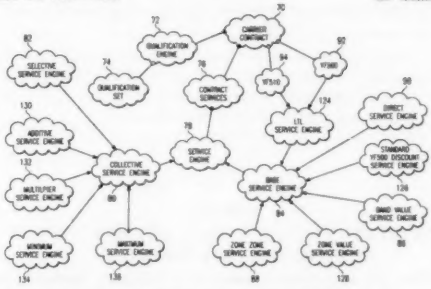
(f) means for updating said postal security device such that said new key pair will be henceforth used by said postal security device.

6,041,318

OBJECT ORIENTED RATING SYSTEM AND METHOD

Henrik Danford-Klein, Green Bay, and John Kring, Suamico, both of Wis., assignors to Schneider National, Inc., Green Bay, Wis.

Filed Aug. 4, 1997, Appl. No. 905,676
Int. Cl.[7] G06F *17/60*
U.S. Cl. 705—400 **29 Claims**



1. An object-oriented rating system, comprising:

at least one carrier contract object comprising an instance of a carrier contract class, the carrier contract object operable to receive a rating request and operable for use on a computer;

a qualification engine associated with the carrier contract object, the qualification engine operable to receive qualification data associated with the rating request and determine whether the carrier contract object is applicable to the rating request; and

a service engine operable to calculate a service rate in response to the rating request, the service engine comprising an instance of an object class that inherits, either directly or indirectly, from a base service engine object class.

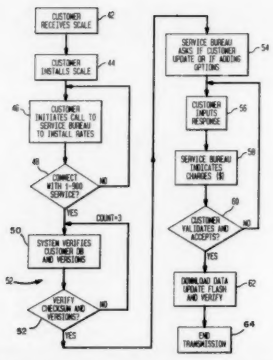
6,041,319

METHOD AND SYSTEM FOR TELEPHONE UPDATES OF POSTAL SCALES

Edward R. Bass, Trumbull; Konstantin G. Kodonas, Norwalk, and Vincent R. Weis, Sandy Hook, all of Conn., assignors to Pitney Bowes Inc., Stamford, Conn.

Filed Jul. 14, 1997, Appl. No. 892,116
Int. Cl.[7] G07B *17/00*
U.S. Cl. 705—409 **12 Claims**

1. In a system including a postal apparatus at a customer site for providing an output representative of a postal value pursuant to



postal regulations, and a service bureau at a remote location, the improvement comprising:

a method for providing updated postal information for storage in the postal apparatus upon change of the postal regulations, comprising the steps of:

(a) establishing a bi-directional connection between the postal apparatus and the service bureau via a communication medium;

(b) downloading the updated postal information to the postal apparatus via the bi-directional connection; and

(c) billing the customer site by using the bi-directional connection to provide billing information for the updated postal information provided thereto.

6,041,320

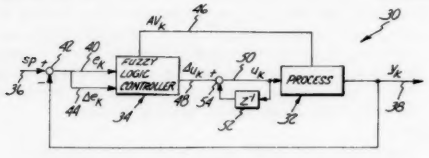
MULTI-REGION FUZZY LOGIC CONTROL SYSTEM WITH AUXILIARY VARIABLES

Si-Zhao Joe Qin, Austin, and Guy Thompson Borders, San Antonio, both of Tex., assignors to Fisher Controls International, Inc., Austin, Tex.

Filed Aug. 23, 1993, Appl. No. 110,506

Int. Cl.[7] G06F *15/18*

U.S. Cl. 706—1 **33 Claims**



1. A control system for controlling a non-linear process as a function of a process error signal, the non-linear process having a plurality of regions of operation, the control system comprising:

means for producing an auxiliary variable signals which is indicative of an instantaneous region of operation for the non-linear process, the instantaneous region of operation being one of the plurality of regions of operation; and

a fuzzy logic controller for producing a process control output signal for controlling the non-linear process in the instantaneous region of operation as a function of the process error signal and the auxiliary variable signal.

6,041,321

ELECTRONIC DEVICE FOR PERFORMING CONVOLUTION OPERATIONS

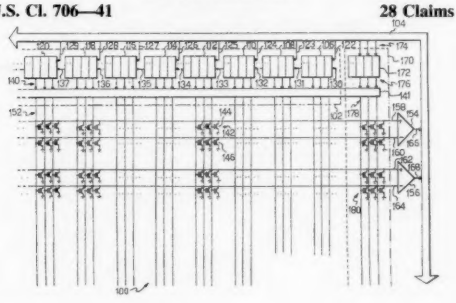
Vito Fabbrizio, Piacenza, Italy, and Alan Kramer, Berkeley, Calif., assignors to SGS-Thomson Microelectronics S.r.l., Agrate Brianza, Italy

Filed Oct. 10, 1997, Appl. No. 953,956

Claims priority, application European Pat. Off., Oct. 15, 1996, 96830525

Int. Cl.[7] G06F *15/18*

U.S. Cl. 706—41 **28 Claims**



1. An electronic device for performing a convolution operation between an original matrix and a mask matrix, comprising:

a plurality of shift registers each comprising a plurality of cells for receiving binary input values representative of the original matrix;

a matrix of synapses having a plurality of columns and at least one line for storing weights correlated with the mask matrix, the synapses of each column being connected to a corresponding cell to receive the binary value contained in the cell as an input and to output a weighted value dependent upon the product of the binary value and the weight stored, each synapse having a substantially zero conductance for a first binary value and a conductance correlated with the weight stored for a second binary value;

at least one neuron connected to the synapses of a corresponding line to receive a sum of the weighted values of the synapses of the corresponding line as an input and to output a binary result dependent upon the sum, each neuron comprising conductance-measurement means for generating the binary result in dependence on a total conductance of the synapses of the corresponding line;

wherein each synapse comprises a positive synapse and a negative synapse formed as memory cells which can store a positive weight and a negative weight, respectively; and wherein said conductance-measurement means generates the binary result in dependence on a comparison between a total conductance of the positive synapses and a total conductance of the negative synapses of the corresponding line; and

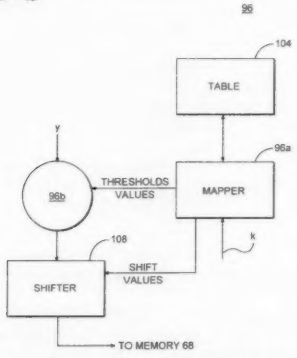
wherein each memory cell has a first terminal, a second terminal and a control terminal; wherein the first terminal of each memory cell is connected to a reference terminal; wherein the control terminals of the memory cells of each column are connected to the corresponding cells of the shift registers; wherein the second terminals of the memory cells providing the positive synapses and the negative synapses of each line are connected to a first input line and to a second input line to the corresponding neuron, respectively; and wherein the total conductance of the positive synapses and of the negative synapses of the line are substantially equal to the conductance of the first line and of the second line, respectively.

6,041,322

METHOD AND APPARATUS FOR PROCESSING DATA IN A NEURAL NETWORK

Wan-Yu Meng; Cheng-Kai Chang, both of Taipei; Hwai-Tsu Chang, Hsinchu; Fang-Ru Hsu, Hsinchu, and Ming-Rong Lee, Hsinchu, all of Taiwan, assignors to Industrial Technology Research Institute, Taiwan

Filed Apr. 18, 1997, Appl. No. 839,818
Int. Cl.[7] G06E *1/00;3/00*
U.S. Cl. 706—43 **7 Claims**



1. An apparatus for processing data in a neural network having a stored sample transfer function, comprising:

a receiver configured to receive at least one input value representing information to be processed by the network;

a threshold processor configured to determine threshold values indicating boundaries for application of the sample transfer function for a node, the threshold processor comprising:

a mapper configured to receive a value representing a specific transfer function for the node and map the received value to identify threshold values for the specific transfer function;

a generator configured to generate an intermediate value from the input value for the node; and

an output processor configured to determine an output value for the node based on the threshold values and the intermediate value in accordance with the sample transfer function.

6,041,323

INFORMATION SEARCH METHOD, INFORMATION SEARCH DEVICE, AND STORAGE MEDIUM FOR STORING AN INFORMATION SEARCH PROGRAM

Rie Kubota, Yokohama, Japan, assignor to International Business Machines Corporation, Armonk, N.Y.

Filed Apr. 17, 1997, Appl. No. 837,346
Claims priority, application Japan, Apr. 17, 1996, 8-095691
Int. Cl.[7] G06F *17/30*
U.S. Cl. 707—5 **19 Claims**

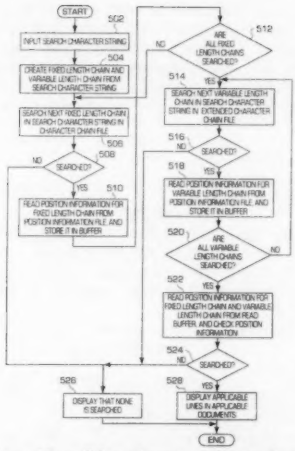
1. A method for identifying at least one unique character string in an input document which is input into a computer system, said computer system being operable to search one or more documents which are searchably stored in a storage medium, and said unique character string is used as a search string, the method comprising:

associating and managing position information for a position in said searchably stored documents where one or more partial comparison document character strings are extracted from said searchably stored documents;

extracting a partial input character string from said input document, and determining whether said partial input character string is a candidate character string;

identifying a partial comparison document character string which matches at least a part of said candidate character string with a predetermined similarity factor or higher;

identifying position data associated with said partial comparison document character string which matches with said predetermined similarity factor or higher; and



START
502
INPUT SEARCH CHARACTER STRING
504
CREATE FIXED LENGTH CHAIN AND VARIABLE LENGTH CHAIN FROM SEARCH CHARACTER STRING
SEARCH NEXT FIXED LENGTH CHAIN IN SEARCH CHARACTER STRING IN CHARACTER CHAIN FILE

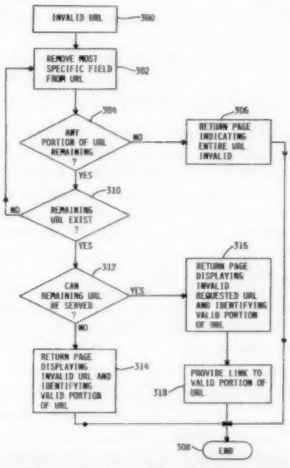
SYSTEM AND METHOD FOR IDENTIFYING VALID PORTION OF COMPUTER RESOURCE IDENTIFIER

Joel Ray Earl, Rochester; David John Goodman, Byron, and George Wayne Nation, Eyota, all of Minn., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Nov. 17, 1997, Appl. No. 972,106
Int. Cl.[7] G06F *17/30*
U.S. Cl. 707—9 **40 Claims**



31. A computing system for determining a valid portion of a desired Uniform Resource Locator (URL) used to access a targeted network resource, wherein the desired URL has been determined to be invalid, the computing system comprising:

(a) a client computer comprising:

(i) a user interface to allow a user to enter the desired URL; and

(ii) a display device to display the desired URL;

(b) a network server comprising:

(i) a memory configured to store a plurality of available URLs; and

(ii) a processor configured to identify the desired URL as an invalid URL, and to remove predefined portions of the invalid URL until a resulting modified URL is identified as a valid URL included within at least one of the available URLs.

6,041,325

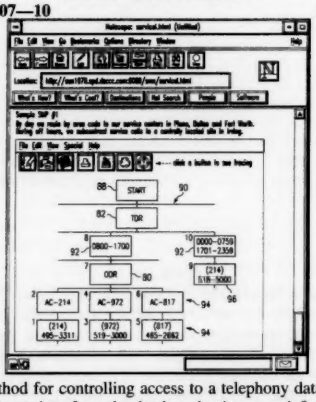
SYSTEM AND METHOD FOR CONTROLLING ACCESS TO A TELEPHONY DATABASE

Tasvir Shah, Irving; Mark A. Harrison, Fort Worth, and Matthew Bilbo, Bedford, all of Tex., assignors to Alcatel USA Sourcing, L.P., Plano, Tex.

Filed Oct. 9, 1997, Appl. No. 948,161

Int. Cl.[7] G06F *17/30;3/14*

U.S. Cl. 707—10 **33 Claims**



1. A method for controlling access to a telephony database with a graphical user interface, the database having a predefined schema for storing telephony data in the telephony database, the method comprising the steps of:

a) providing a logic analyzer, a schema query, a screen builder, and a screen interpreter;

b) generating executable code with the logic analyzer, the code for supporting interaction between the screen interpreter and the telephony database according to the schema query and the predefined schema;

c) using the schema query to direct the screen builder to assemble a screen for supporting the graphical user interface;

d) inserting the executable code into the screen assembled by the screen builder to create a service screen definition; and

e) providing the service screen definition to the screen interpreter to enable a graphical user interface for interacting with the telephony database;

f) providing direct access for a subscriber to the telephony database through the graphical user interface, the subscriber operable to enable or modify services represented in the telephony database without service operator or service provider assistance.

6,041,326

METHOD AND SYSTEM IN A COMPUTER NETWORK FOR AN INTELLIGENT SEARCH ENGINE

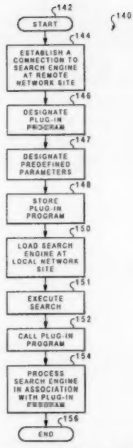
Hatim Yousef Amro, Austin, and John Paul Dodson, Pflugerville, both of Tex., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Nov. 14, 1997, Appl. No. 971,018

Int. Cl.[7] G06F *17/00*

U.S. Cl. 707—10 **12 Claims**

1. A method for enhanced on-line search processing in a distributed computer network which includes at least one on-line search



engine at a network site remote from a local network site, said method comprising the steps of:

designating an independent user-defined plug-in program to be stored at said local network site for limiting the scope of on-line data searches;

transmitting at least one search parameter from said local network site to said at least one on-line search engine at said network site remote from said local network site to initiate a search by said on-line search engine throughout said distributed computer network for data related to said at least one search parameter; and

automatically linking said independent user-defined plug-in program with said at least one search parameter such that a result of said search initiated throughout said distributed computer network will be filtered utilizing both said at least one search parameter and said independent user-defined plug-in program.

6,041,327

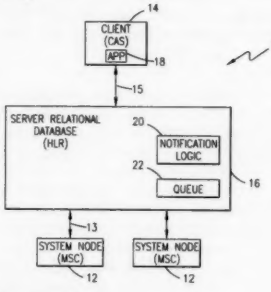
IMPLEMENTATION OF NOTIFICATION CAPABILITIES IN RELATIONAL DATABASES

Roch Glitho, Montreal, and Mario Banville, Pointe Claire, both of Canada, assignors to Telefonaktiebolaget LM Ericsson, Stockholm, Sweden

Filed Dec. 12, 1997, Appl. No. 989,944

Int. Cl.[7] G06F *17/30*

U.S. Cl. 707—10 **18 Claims**



1. A system, comprising:

a client; and

a server relational database including logic operating to monitor for accesses to the server relational database indicative of events of interest and generate notifications concerning those events of interest for communication to the client, said logic functioning to:

receive a first message from the client including an identification of events of interest to the client;

determine whether monitored accesses to the server relational database are indicative of the identified events of interest to the client;

receive a second message from the client requesting that the client be notified of any determined events of interest; and

send a notification to the client containing an identification of those determined events of interest.

6,041,328

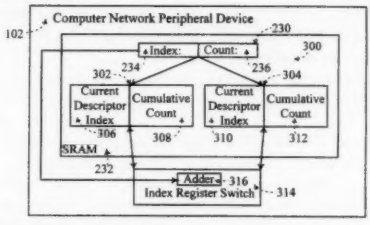
TRACKING AVAILABILITY OF ELEMENTS WITHIN A SHARED LIST OF ELEMENTS FROM AN INDEX AND COUNT MECHANISM

Ching Yu, Santa Clara, Calif., assignor to Advanced Micro Devices, Inc., Sunnyvale, Calif.

Filed Dec. 17, 1997, Appl. No. 992,619

Int. Cl.[7] G06F *17/30*

U.S. Cl. 707—10 **12 Claims**



9. A method for keeping track of elements, within a list of elements, that are available for processing by a given device from a plurality of entries of an index and count, the index indicating a starting element in the list that is available to the given device for processing and the count indicating a subsequent number of elements, from the starting element in the list, that are available to the given device for processing, the method including the steps of:

keeping track of a last element down the list that is available to the given device for processing and a current element in the list that is currently being processed by the given device, at a first register index, the current element through the last element in the list being available to the given device for processing;

keeping track of the last element and the current element, at a second index register;

controlling the given device to switch from using the first index register to using the second index register for keeping track of the last available element when the given device has been using the first index register for keeping track of the last available element and when the last available element wraps back over a beginning element in the list;

controlling the given device to switch from using the second index register to using the first index register for keeping track of the last available element when the given device has been using the second index register for keeping track of the last available element and when the last available element wraps back over the beginning element in the list;

controlling the given device to switch from using the first index register to using the second index register for keeping track of the current element that is currently being processed when the given device has been using the first index register for keeping track of the current element and when the current element kept track of by the first index register is a very last element in the list; and

controlling the given device to switch from using the second index register to using the first index register for keeping track of the current element that is currently being processed when the given device has been using the second index register for keeping track of the current element and when the current element kept track of by the second index register is the very last element in the list.

6,041,329

AUTOMATED MESSAGE PROCESSING SYSTEM CONFIGURED TO AUTOMATICALLY MANAGE INTRODUCTION OF REMOVABLE DATA STORAGE MEDIA INTO MEDIA LIBRARY

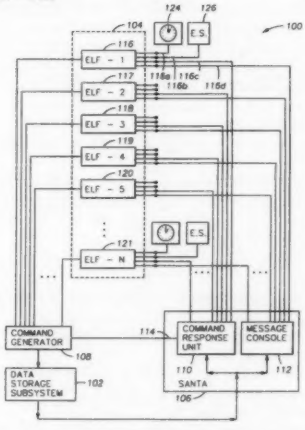
Gregory Tad Kishi, Oro Valley, Ariz., assignor to International Business Machines Corporation, Armonk, N.Y.

Filed May 29, 1997, Appl. No. 865,277

This patent is subject to a terminal disclaimer.

Int. Cl.[7] G06F *17/30*

U.S. Cl. 707—100 **51 Claims**



1. A method of receiving units of removable data storage media into a data storage subsystem comprising:

a library including:

multiple data storage media units;

multiple storage drives to removably receive and access the data storage media units;

a library manager coupled to the storage controller and the storage drives;

an input facility to receive media units into the library; and

a storage controller coupled to the library;

a machine-readable media directory accessible by at least one of the storage controller and the library manager, the media directory including information associating one or more of the media units with predetermined first and second categories;

an automated storage administrator coupled to the library manager and the storage controller;

said method comprising:

the automated storage administrator repeatedly sending requests to the data storage subsystem to enter a first media unit into the media directory under different categories;

the automated storage administrator ceasing the repeated sending or requests when a first one of the following occurs: requests have been sent to the subsystem under a predetermined number of categories, or the first media unit is successfully entered in the media directory;

if requests have been sent to the subsystem under a predetermined number of categories without successfully entering the first media unit into the media directory, the automated storage administrator sending a request to the catalog to obtain information stored therein representing the first media unit;

the subsystem sending the requested information, and in response, the automated storage administrator sending a request to the media directory to enter data including at least some of the requested information representative of the first media unit.

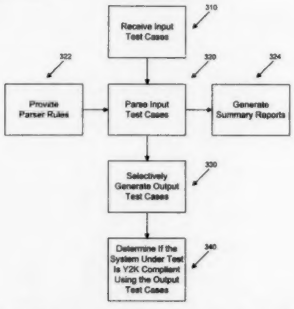
SYSTEM AND METHOD FOR GENERATING YEAR 2000 TEST CASES

David Carman, Highland Park; Siddhartha R. Dalal, Bridgewater; Ashish Jain, Morristown, and Nachimuthu Karunanithi, Wayne, all of N.J., assignors to Telecordia Technologies, Inc., Morristown, N.J.

Provisional application No. 60/053,645, Jul. 24, 1997. This application Jul. 20, 1998, Appl. No. 119,499.

Int. Cl.[7] G06F *17/30*

U.S. Cl. 707—101 **39 Claims**



1. A method of generating test cases for use in testing a system for Year 2000 compliance, comprising the steps of:

providing to a data processor one or more input test cases corresponding to the system;

identifying, according to a first set of predetermined criteria, one or more date dependent fields in each of the input test cases, using the data processor; and

selectively generating according to a second set of predetermined criteria one or more output test cases, using the data processor, wherein at least one of the date dependent fields in each of said output test cases includes a risky date from a set of risky dates.

6,041,331

AUTOMATIC EXTRACTION AND GRAPHIC VISUALIZATION SYSTEM AND METHOD

Michael L. Weiner, Webster, N.Y.; John Jacob Kolb V, Rowley, Mass., and Todd Chronis, Rochester, N.Y., assignors to Manning and Napier Information Services, LLC, Rochester, N.Y.

Provisional application No. 60/042,295, Apr. 1, 1997. This application Dec. 12, 1997, Appl. No. 989,832.

Int. Cl.[7] G06F *11/00*

U.S. Cl. 707—103 **11 Claims**

1. A method for analyzing and displaying thematic content of information contained in a plurality of documets in a computing system, said method comprising:

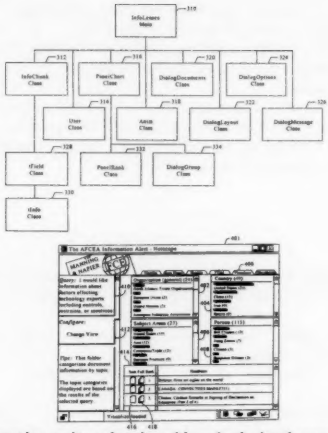
extracting one or more information units from a plurality of documents according to two or more instances of subject fields, including a first subject field and a second subject field, each information unit having a relationship to one or more of said subject fields;

displaying a plurality of panels, including a first panel and a second panel, each of said panels corresponding to each of said subject fields wherein said first panel comprises a visual representation of information units having a relationship with said fistr subject field and said second panel comprises a visual representation of information units having a relationship to said second subject field;

receiving an input, said input indicating a selection from one or more individual instances of filters;

applying individual instances of filters to the information units responsive to said input to produce a filtered set of information units; and

re-displaying said plurality of panels, wherein each of said plurality of panels comprises revised visual representations of



information units, wherein said revised visual representation exclusively includes only those information units in said filtered set of information units.

6,041,332

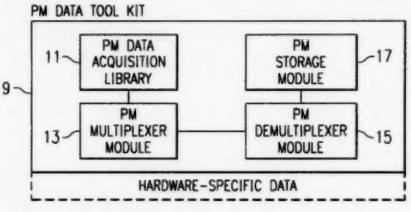
PRODUCT-INDEPENDENT PERFORMANCE MONITORING TOOL KIT

Daniel L. Miller, Dallas; Scott J. Haney, Allen, and Christopher J. Ouellette, McKinney, all of Tex., assignors to Alcatel USA Sourcing, L.P., Plano, Tex.

Filed Dec. 31, 1997, Appl. No. 1,321

Int. Cl.[7] G06F *17/30*

U.S. Cl. 707—104 **8 Claims**



1. A method for configuring software to monitor, generate, acquire, collect, store and analyze Performance Monitoring (PM) data from telecommunication equipment, comprising:

maintaining a library of product-independent PM data processing modules;

maintaining product-dependent data relating selected ones of the processing modules with each of a plurality of telecommunication equipment systems; and

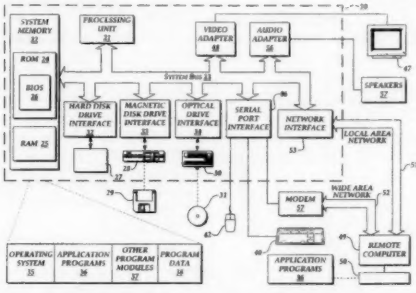
generating PM software corresponding to one or more of the telecommunication equipment systems by assembling the processing modules in accordance with the product-dependent data, wherein the library-maintaining step comprises maintaining a PM multiplexer module for packaging the PM data into a single byte stream for collection.

6,041,333

METHOD AND APPARATUS FOR AUTOMATICALLY UPDATING A DATA FILE FROM A NETWORK

Richard Bretschneider, San Jose; Burton Siu, Redwood Shores, and Imran Iqbal Qureshi, Sunnyvale, all of Calif., assignors to Microsoft Corporation, Redmond, Wash.

Filed Nov. 14, 1997, Appl. No. 970,216
Int. Cl.[7] G06F *17/30*
U.S. Cl. 707—203 **16 Claims**



1. A computer based method for updating a previously installed version of a local program file associated with an application program, comprising:

(a) receiving a command to launch the application program;

(b) in response to receiving the command to launch the application program, determining whether an update to a current version for the previously installed version of the local program file is advisable;

(c) when an affirmative selection of the current version of the program file is provided, retrieving the current version of the program file and automatically employing the current version of the program file to launch the application program; else

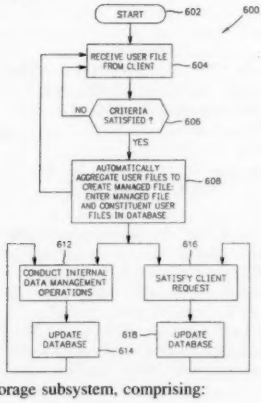
(d) automatically employing the previously installed version of the local program file to launch the application program.

6,041,334

STORAGE MANAGEMENT SYSTEM WITH FILE AGGREGATION SUPPORTING MULTIPLE AGGREGATED FILE COUNTERPARTS

David Maxwell Cannon, Tucson, Ariz., assignor to International Business Machines Corporation, Armonk, N.Y.

Division of application No. 08/960,627, Oct. 29, 1997, Pat. No. 5,983,239. This application Apr. 13, 1999, Appl. No. 291,263.
Int. Cl.[7] G06F *17/30*
U.S. Cl. 707—204 **6 Claims**



5. A data storage subsystem, comprising:

a storage including a source storage area and a target storage area, said storage containing one or more managed files each originally created with a contiguous aggregation of constituent user files;

a database, including a mapping table cross-referencing each managed file with its constituent user files and a corresponding location of each user file within the managed file;

a digital data processing apparatus coupled to the storage and the database;

wherein the digital data processing apparatus is programmed to perform a method for processing requests to access data in the storage, the method comprising:

receiving a request to backup a first managed file stored in the storage subsystem to a target storage area;

utilizing the mapping table to identify a user file occupying a predetermined position in the first managed file;

utilizing the mapping table to identify all managed files containing the identified user file;

if one or more managed files are identified in the target storage area, aborting the backup of the first managed file; and

if no managed files are identified in the target storage area, copying the first managed file to the target storage area.

6,041,335

METHOD OF ANNOTATING A PRIMARY IMAGE WITH AN IMAGE AND FOR TRANSMITTING THE ANNOTATED PRIMARY IMAGE

Charles R. Merritt, and Bonnie M. Merritt, both of 1116 Fairview Ave., San Jose, Calif. 95125

Filed Feb. 10, 1997, Appl. No. 798,519
Int. Cl.[7] G06F *17/00*
U.S. Cl. 707—512 **14 Claims**

Memo to Sam
I am sending the following request for a communications room for our department along with a firm out at the configuration of the room with existing equipment. Please comment on the request memo, equipment, equipment configuration, and the drawn message for the phone.
40
Capital Equipment Assessment Committee
32
In our pl for the coming year we are expanding our plans for communicating technical information with our customers. In order to maintain organization for the expanding responsibilities we would require space for the additional communication equipment. I understand that both 345 and 387 will be installed within the next month. Either room would suite our needs and we have configured our existing equipment as follows. Please contact me for additional information or your comment.

1. In a computing network comprising a plurality of computing systems with each computing system comprising display means for displaying an image, input means for data entry, data storage means, memory means, and an application program stored on the storage means, the program comprising means for capturing a selected portion of an image displayed on the display means for generating a primary image, means for generating a plurality of secondary images having distinguishable attributes, means for selecting at least one secondary image for positioning the secondary image on the generated primary image and for activating the secondary image, means for selecting desired secondary images positioned on the primary image for activating the secondary image for generating an annotatory data input and display region associated with the secondary image, the annotatory region for inputting annotatory data to annotate the primary image and for displaying annotatory data with an associated activated secondary image for viewing annotations to the primary image, means for selectively displaying and hiding annotatory regions so that the regions do not interfere with viewing the primary image, and means for selectively displaying and hiding secondary images

positioned on the primary image, a method of superimposing a secondary image on a primary image for annotating the primary image and for routing the primary image through the computing network, the method comprising the steps of:

(1) invoking the application program for running the program;

(2) generating a display image on the display means;

(3) capturing a selected portion of the display image to generate a primary image;

(4) repeating step (3) for generating desired additional primary images;

(5) selecting a desired secondary image;

(6) positioning the selected secondary image on the primary image;

(7) activating the secondary image for generating the annotatory data input and display region of the associated secondary image;

(8) inputting annotatory data into the annotatory region;

(9) deactivating the associated secondary image for closing the annotatory data region of the associated secondary image;

(10) deselecting the secondary image;

(11) repeating steps (5) through (10) for each desired annotation to the primary image;

(12) generating a routing list of a plurality of users including a first user and subsequent users for transmitting at least one primary image from the first user to subsequent users in a predetermined sequence;

(13) transmitting at least one primary image from the first user to the subsequent users in the sequence prescribed by the routing list;

(14) notifying each subsequent user upon receipt of at least one primary image transmitted from the first user;

(15) upon notification of receipt of at least one primary image, a subsequent user invoking the application program stored on their computer for running the program to perform the following steps;

(16) calling a received primary image into memory for displaying the image on the display means;

(17) selecting a desired secondary image positioned on the primary image for activating the secondary image;

(18) activating the selected secondary image for generating the associated annotatory data region for displaying annotatory data in the region, the annotatory data in the region representative of annotations from the first user;

(19) deactivating the secondary image for closing the associated annotatory data region of the secondary image for hiding the annotatory data;

(20) deselecting the secondary image;

(21) repeating steps (17) through (20) for displaying desired annotations input by the first user;

(22) selecting a desired secondary image;

(23) positioning the selected secondary image on the primary image for activating the secondary image and activating the image for generating the associated annotatory data region for displaying annotatory data in the region;

(24) inputting additional annotatory data into the annotatory region to append the data to the annotatory data input by the first user;

(25) deactivating the associated secondary image for closing the annotatory data region for hiding the annotatory data and appended annotatory data from the primary image;

(26) deselecting the secondary image;

(27) repeating steps (22) through (26) for each desired appended annotation to the primary image;

(28) repeating steps (5) through (10) for each desired new annotation to the primary image;

(29) repeating steps (16) through (28) for each primary image received by the user; and

(30) transmitting each received and annotated primary image to a subsequent next user prescribed by the routing list.

6,041,336

CIRCUIT ARRANGEMENT FOR ARITHMETIC COMBINATION OF AN ANALOG SIGNAL WITH A DIGITAL VALUE AND METHOD AND CIRCUIT ARRANGEMENT FOR DETERMINATION OF AN ANGLE

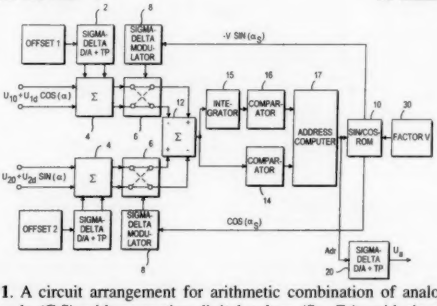
Siegbert Steinlechner, Leonberg, Germany, assignor to Robert Bosch GmbH, Stuttgart, Germany

Filed Apr. 22, 1999, Appl. No. 296,729

Claims priority, application Germany, Apr. 29, 1998, 198 19 069

Int. Cl.[7] **G06J** *1/00;* **G06F** *7/38*

U.S. Cl. 708—4 **14 Claims**



1. A circuit arrangement for arithmetic combination of analog signals (C,S) with respective digital values (Ss, Cs), said circuit arrangement comprising

respective controllable sign reversing means (**6**) for switching said analog signals (C,S) with changed or unchanged sign, each of said sign reversing means (**6**) having a control input; and

respective sigma-delta modulators (**8**) for controlling said sign reversing means (**6**), said sigma-delta modulators (**8**) including means for producing a sequence of discrete output signals from said respective digital values (Ss, Cs), wherein said discrete output signals are +1 or −1 respectively according to said digital values (Ss,Cs) and said discrete output signals of the respective sigma-delta modulators (**8**) are input to the control inputs of the respective sign reversing means (**6**);

whereby a value of +1 at one of said control inputs causes a switching of said analog signal (C,S) input to said sign reversing means having said one of said control inputs with unchanged sign and a value of −1 at one of said control inputs causes a switching of said analog signal (C,S) input to said sign reversing means having said one of said control inputs with changed sign, or vice versa, so that the time average values of respective output signals of said sign reversing means corresponds to the desired arithmetic combination of the analog signal (C) and the digital value (Ss) and of the analog signal (S) and digital value (Cs) respectively.

6,041,337

LINEAR FUNCTION GENERATOR METHOD WITH COUNTER FOR IMPLEMENTATION OF CONTROL SIGNALS IN DIGITAL LOGIC

Bruce Ernest Whittaker, Mission Viejo, Calif., assignor to Unisys Corporation, Blue Bell, Pa.

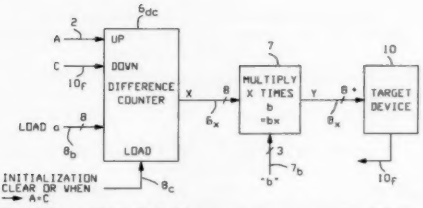
Filed Aug. 28, 1997, Appl. No. 980,358

Int. Cl.[7] **G06F** *17/11*

U.S. Cl. 708—274 **10 Claims**

1. A method for flexibly expanding a digital bus input signal with an efficient implementation for a linear function utilizing spare gates in a Programmable Logic Array or Field Programmable Gate Array for generating an output digital signal for controlling a target digital modules comprising the steps of:

(a) generating a difference signal Xd in an UP-DOWN counter module which represents the value of a source-setting pulse stream signal (A) reduced by a feedback pulse stream digital signal (C);



(b) adding a N-bit digital intercept parameter value "a" to said Xd signal to generate an N-bit digital signal, such that Xd+a=Xa.

(c) multiplying said N-bit digital signal Xa by a slope parameter "b" to develop an (N+q) bit digital output signal Y, where q represents the digital offset value in binary notation corresponding to the specific value of the slope parameter "b" such that bXa=Y and thus Y=bXd+ba.

6,041,338

INTERPOLATION FILTER SYSTEM

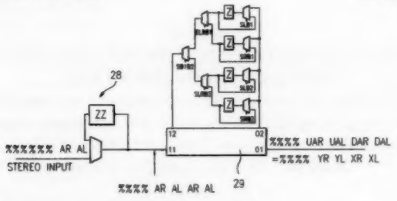
Dong-Hwan Han, Kyungki-do, Rep. of Korea, assignor to LG Semicon, Co., Ltd., Cheongju, Rep. of Korea

Filed Mar. 5, 1998, Appl. No. 35,016

Claims priority, application Rep. of Korea, May 6, 1997, 97-17319

Int. Cl.[7] **G06F** *17/10;17/17*

U.S. Cl. 708—313 **15 Claims**



1. A data interpolating filter, comprising:

a sample and hold part that samples and holds data, and that selectively provides the sampled and held data for at least two different channels; and

a wave digital filter that filters the sampled and held data from the sample and hold part to produce interpolated data.

6,041,339

EFFICIENT DECIMATION FILTERING

Xianggang Yu; Terry Lee Sculley, and Jeffrey Alan Niehaus, all of Austin, Tex., assignors to ESS Technology, Inc., Austin, Tex.

Filed Mar. 27, 1998, Appl. No. 49,604

Int. Cl.[7] **G06F** *17/10*

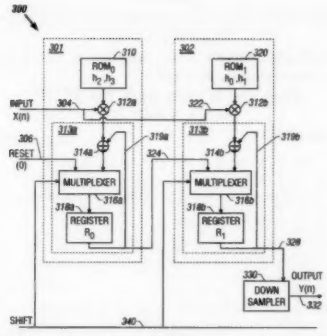
U.S. Cl. 708—313 **50 Claims**

1. An electronic circuit, comprising:

an input terminal operable to receive a series of input data samples at an input sampling rate;

at least one memory unit configured to store a specified set of digital filtering coefficients which are designed to perform a filtering operation on said input data samples; and

a plurality of signal processing stages each connected to said input terminal and said memory unit and configured to include a multiplier operable to multiply an iaput data sample by a selected coefficient in said memory unit, an accumulator connected to receive an output from said multiplier and configured to perform accumulations, and a register connected to receive accumulated data from said accumulator or data from



a source outside said processing stage and to feed said accumulated data back to said accumulator for a subsequent accumulation,

wherein said signal processing stages are further interconnected in series for shifting an accumulated result from one processing stage to a succeeding processing stage after a specified number of accumulations are completed in each processing stage in response to a shift command.

6,041,340

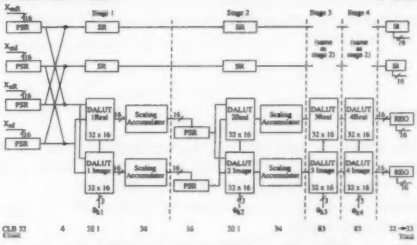
METHOD FOR CONFIGURING AN FPGA FOR LARGE FFTS AND OTHER VECTOR ROTATION COMPUTATIONS

Lester Mintzer, Santa Ana, Calif., assignor to Xilinx, Inc., San Jose, Calif.

Division of application No. 08/815,019, Mar. 14, 1997, Pat. No. 5,991,788. This application Dec. 15, 1998, Appl. No. 211,604.

Int. Cl.[7] **G06F** *15/00;7/52*

U.S. Cl. 708—403 **4 Claims**



1. A method of configuring a field programmable gate array (FPGA) for carrying out a fast Fourier transform (FFT) computation implemented by a complex multiplication $(X+jy)e^{-j\theta}$ which can be expressed as sums of transform partial products, each term having a trigonometric coefficient and sums and differences of real and imaginary input variables X and Y, the FPGA having an array of look-up-tables in respective logic blocks; the method comprising the steps of:

a) loading said look-up-tables with the arithmetic sums of said transform partial products;

b) applying said input variables to respective parallel-to-serial registers;

c) inputting sums and differences of serial register stored input variables as address inputs to the look-up-tables;

d) storing real and imaginary outputs of said look-up-tables in respective registers;

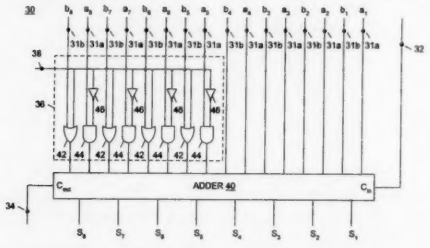
e) scaling and accumulating said outputs as a stare computational output; and

f) repeating steps a) through e) for a plurality of subsequent stages of progressively smaller increments of θ and transferring the computational output of each such stare to the next successive stage as the input thereto.

6,041,341
METHOD AND CIRCUIT FOR ADDING OPERANDS OF MULTIPLE SIZE

Eric W. Mahurin, Austin, Tex., assignor to Advanced Micro Devices, Inc., Sunnyvale, Calif.

Filed Apr. 8, 1998, Appl. No. 57,138
Int. Cl.[7] G06F *7/50*
U.S. Cl. 708—700 **15 Claims**

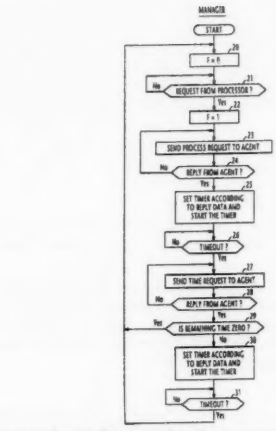


1. A method of adding operands comprising the steps:
inputting a first m bit operand into m least significant first inputs of an n bit adder, where n is greater than m;
inputting a second m bit operand into m least significant second inputs of the n bit adder;
inputting a first (n-m) bit operand into the (n-m) most significant first inputs of the n bit adder, wherein each bit of the first (n-m) bit operand represents logical zero;
inputting a second (n-m) bit operand into the most significant (n-m) second inputs of the n bit adder, wherein each bit of the second (n-m) bit operand represents logical one;
inputting a carry in bit into a carry input of the adder;
wherein the first m bit operand, second m bit operand, first (n-m) bit operand, the second (n-m) bit operand, and the carry in bit are all inputted into the n bit adder in parallel;
generating a set of n carry out bits;
generating an n bit output operand, and;
wherein the least significant m bits of the n bit output operand and the most significant carry out bit represent a result of adding the first m bit operand, the second m bit operand, and the carry in bit.

6,041,342
LOW TRAFFIC NETWORK MANAGEMENT METHOD USING ESTIMATED PROCESS EXECUTION TIME FOR MANAGER-AGENT SYNCHRONIZATION

Yasuhiro Yamaguchi, Tokyo, Japan, assignor to NEC Corporation, Tokyo, Japan

Filed Jul. 2, 1998, Appl. No. 109,874
Claims priority, application Japan, Jul. 2, 1997, 9-176254
Int. Cl.[7] G06F *17/00*
U.S. Cl. 709—202 **5 Claims**

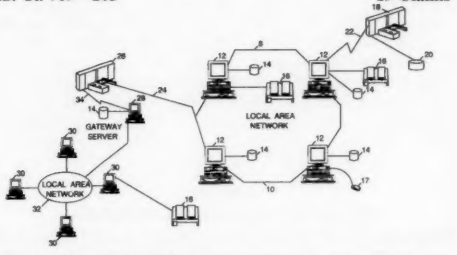


1. A management method for a communication network wherein a management station is connected to at least one agent station, comprising the steps of:
a) transmitting an execution request message from the management station to said agent station for requesting the agent station to execute a process;
b) responsive to the execution request message, estimating, at said agent station, a length of time taken to execute the process and transmitting a first reply message to the management station, indicating said length of time, and subsequently estimating a length of time remaining to execute said process;
c) setting a timer, at said management station, according to the length of time contained in the first reply message, starting the timer, and transmitting a time request message to the agent station when said timer expires;
d) responsive to the time request message, transmitting, from the agent station to the management station, a second reply message indicating the estimated length of remaining time; and
e) responsive to the second reply message, determining, at said management station, that the requested process has been executed if the second reply message indicates that the length of remaining time is zero, or setting the timer according to the second reply message if the length of remaining time is nonzero, starting the timer, and determining that the requested process has been executed when the timer expires.

6,041,343
METHOD AND SYSTEM FOR A HYBRID PEER-SERVER COMMUNICATIONS STRUCTURE

Binh Q. Nguyen; Richard J. Redpath, both of Cary, and Sandeep Kishan Singhal, Raleigh, all of N.C., assignors to International Business Machines Corp., Armonk, N.Y.

Filed Dec. 19, 1996, Appl. No. 769,564
Int. Cl.[7] G06F *13/00*
U.S. Cl. 709—203 **19 Claims**



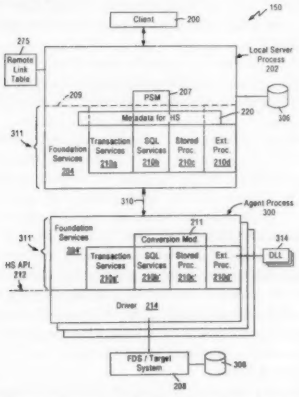
1. A method of increasing server capacity on a network computer system, comprising the steps of:
determining a total number of destination addresses that an individual client will directly communicate with so as to provide a peer address total;
assigning a plurality of destination addresses peer addresses with which the individual client communicates directly or server addresses corresponding to destination addresses handled by a server interconnected to the individual client on the network such that destination addresses are assigned as peer addresses until the peer address total is reached to thereby reduce a total number of destination addresses handled by the server by up to the peer address total;
wherein any destination addresses in excess of the peer address total are assigned as server addresses; and
communicating utilizing the peer addresses.

6,041,344

APPARATUS AND METHOD FOR PASSING STATEMENTS TO FOREIGN DATABASES BY USING A VIRTUAL PACKAGE

Roger Bodamer; Jacco Draaijer, both of Mountain View; Eric Voss, Foster City, and Raghu Mani, Mountain View, all of Calif., assignors to Oracle Corporation, Redwood Shores, Calif.

Filed Jun. 23, 1997, Appl. No. 880,325
Int. Cl.[7] G06F *15/16*
U.S. Cl. 709—203 **20 Claims**



14. A computer system configured to respond to a plurality of requests, comprising:

a local server process configured for:

receiving the requests, each of the requests including a respective statement that can be performed by a foreign database server and a reference to the database server, each respective statement including at least one operation necessary for execution that cannot be performed by the local server process; and

determining the operations necessary for execution of the respective statements; and

an agent process configured for:

collecting the statements included in the requests into a single call request for the foreign database server; and

sending the single call request to the foreign database server based on the corresponding reference in the statement;

wherein the local server process is further configured for receiving results from the foreign process generated in response to the single call request.

6,041,345

ACTIVE STREAM FORMAT FOR HOLDING MULTIPLE MEDIA STREAMS

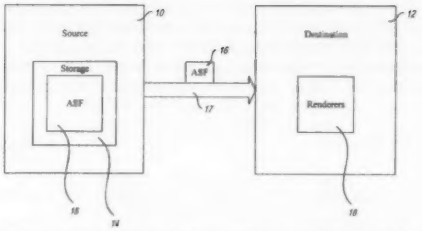
Steven P. Levi, Redmond; Mark D. VanAntwerp, Seattle; Craig M. Dowell, Redmond, and Chadd B. Knowlton, Bellevue, all of Wash., assignors to Microsoft Corporation, Redmond, Wash.

Provisional application No. 60/013,029, Mar. 8, 1996, Provisional application No. 60/028,789, Oct. 21, 1996. This application Mar. 7, 1997, Appl. No. 813,151.
Int. Cl.[7] G06F *17/50*
U.S. Cl. 709—217 **21 Claims**

1. In a computer system operable for connecting to a transport medium, a method of encapsulating multiple streams of data into an aggregated data stream to be transmitted on the transport medium comprising:

determining a packet size for the transport medium;

storing, on a storage device, at least one packet containing information about the aggregated data stream to form a header section in a logical structure that defines the aggregated data stream;



storing, on the storage device, packets containing samples of data from the multiple data streams to form a data section in the logical structure;

designating a portion of at least one packet in the data section for holding error correcting data; and

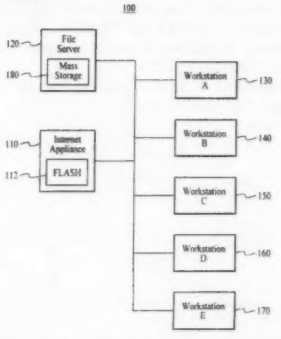
storing, on the storage device, error correcting data in the designated portion of the at least one packet in the data section, wherein the error correcting data identifies a corresponding error correcting method for each of the encapsulated data streams, and further wherein the aggregated data stream is stored on the storage device prior to receiving a request for transmission of the aggregated data stream on the transport medium from a destination computer.

6,041,346

METHOD AND SYSTEM FOR PROVIDING REMOTE STORAGE FOR AN INTERNET APPLIANCE

Ben W. Chen, and Bo Xiong, both of Fremont, Calif., assignors to Ateon Networks, Inc., Fremont, Calif.

Filed Oct. 17, 1997, Appl. No. 953,029
Int. Cl.[7] G06F *13/00*
U.S. Cl. 709—218 **40 Claims**



1. A system for providing access to a remote network comprising:

an internet appliance; and

a first component coupled with the internet appliance and having a mass storage device, a portion of the mass storage device being sharable with and mapped to the internet appliance;

wherein the internet appliance is capable of using any component that is coupled with the internet appliance and that includes the mass storage device as the first component.

6,041,347

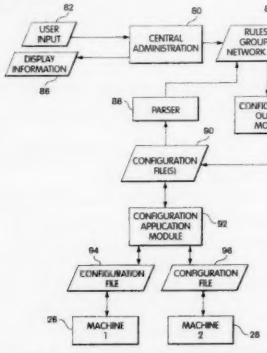
COMPUTER SYSTEM AND COMPUTER-IMPLEMENTED PROCESS FOR SIMULTANEOUS CONFIGURATION AND MONITORING OF A COMPUTER NETWORK

Bret Harsham, Newton, and Lalit Jain, Boston, both of Mass., assignors to Unified Access Communications, Boston, Mass.

Filed Oct. 24, 1997, Appl. No. 957,048

Int. Cl.[7] **G06F** *15/00;15/40;9/44*

U.S. Cl. 709—220 **26 Claims**



1. A computer implemented process for simultaneously configuring parameters of devices in a computer network, comprising the steps of:

defining a hierarchy of logical groups of objects corresponding to machines and groups of machines in the computer network;

defining rules associated with the objects, wherein a rule specifies a type of traffic, a communication protocol, and indication of whether the rule is associated with the object acting as a sender or as a receiver of information, wherein each object inherits all rules associated with each group in which it is a member;

processing the defined rules to produce a set of control parameters for machines in the computer network; and

applying the control parameters to machines in the computer network.

6,041,348

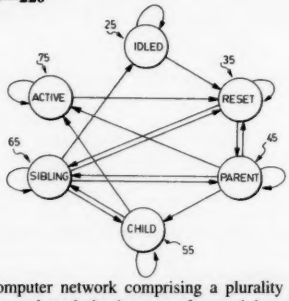
N-PORT ALGORITHM FOR DISABLING A NODE WITHIN A NETWORK DURING RESET

Michael B. Smith, Etobicoke, Canada, assignor to LSI Logic Corporation, Milpitas, Calif.

Filed Dec. 1, 1997, Appl. No. 982,263

Int. Cl.[7] **G06F** *13/00;15/00;11/00;1/24*

U.S. Cl. 709—220 **26 Claims**



1. In a computer network comprising a plurality of interconnected nodes, each node having ports for receiving and transmitting information to ports of other nodes, each port in each node having a port module associated therewith, each port module in a node having a priority in the node, each node in the network having a unique identifier which is transmitted by each node during reset of the computer network, a process for identifying which ports in one of the plurality of interconnected nodes can be disabled during reset of the network, said process comprising the steps of:

(a) for each port module in said one of the nodes, commencing with the port module having the highest priority in said one of the nodes;

(i) determining, between a predetermined unique identifier and a unique identifier being received by the port from other nodes, which unique identifier satisfies a first set of predetermined conditions;

(ii) transmitting, from the port to other nodes, the unique identifier which has been determined by the associated port module satisfies the first set of predetermined conditions for the port;

(iii) sending to the next highest priority port module in the node the unique identifier which has been determined by the port module to satisfy the first set of predetermined conditions;

(iv) determining, between the unique identifier sent from the higher priority port module of said one of the nodes and a unique identifier being received by the port associated with the next highest priority port module of said one of the nodes, which unique identifier satisfies the first set of predetermined conditions; and

(v) repeating steps (ii) to (iv) for each port module in said one of the nodes in the order of priority until each port of said one of the nodes is transmitting an identical unique identifier number that satisfies the first set of predetermined conditions, said identical unique identifier being transmitted by each port corresponding to a root node of the plurality of nodes;

(b) for each port that is receiving the identical unique identifier from the root node, disabling one of the ports receiving the identical unique identifier from the root node.

6,041,349

SYSTEM MANAGEMENT/NETWORK CORRESPONDENCE DISPLAY METHOD AND SYSTEM THEREFOR

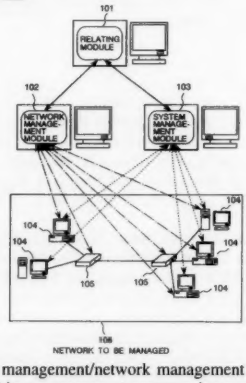
Kiminori Sugauchi, Yokohama; Toshiaki Hirata, Kashiwa; Kenya Nishiki, Fujisawa; Satoshi Miyazaki, Yamato; Keizo Mizuguchi, Naka-gun, and Shuji Fujino, Ebina, all of Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Filed Feb. 28, 1997, Appl. No. 808,916

Claims priority, application Japan, Feb. 29, 1996, 8-042454

Int. Cl.[7] **G06F** *13/00*

U.S. Cl. 709—223 **12 Claims**



1. A system management/network management correspondence display method in a management system using a network management module managing network resource information including network configuration, and a system management module managing system resource information including a client/server configuration of a computer network including a plurality of computers, comprising:

displaying a network management map for managing said computer network, or a client/server configuration map for managing said system;

designating a managed object on said network management map or on said client/server configuration map;

collecting an identifier of said managed object in a first module in said network management module and said system management module, based upon the management information which is managed by a second module in common with said first module, using said network management map or said system map;

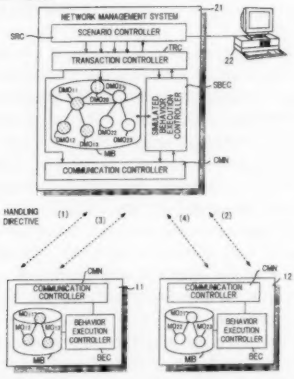
displaying said client/server configuration to which said managed object relates with at least one display symbol, when said second module is a client/server configuration module; and,

displaying said network configuration to which said managed object relates with at least one display symbol, when said second module is a network configuration module.

6,041,350
NETWORK MANAGEMENT SYSTEM BASED UPON MANAGED OBJECTS

Minoru Takimoto, Kawasaki, Japan, assignor to Fujitsu Limited, Kanagawa, Japan

Filed Mar. 16, 1998, Appl. No. 39,775
Claims priority, application Japan, Oct. 20, 1997, 9-287100
Int. Cl.[7] G06F *15/16*
U.S. Cl. 709—223 **7 Claims**



1. A network management system, which is connected to one or a plurality of network element management systems each connected to one or more network elements, for performing network management via these network element management systems, comprising:

a management information database for storing duplicate managed objects that are duplicates of a number of managed objects which are generated in order to manage states of network resources and managed in the network element management system;

a simulated behavior execution controller for simulating behavior of a managed object, which is executed in each network element management system, as behavior of a duplicate managed object that has been stored in said management information database;

a transaction controller for performing control to deliver a series of handling directives for a prescribed managed object managed in each of the network element management systems to said simulated behavior execution controller, cause modified content that is based upon simulated behaviors to be reflected in said management information database if the simulated behaviors with regard to all handling directives end normally, and discard modified content with regard to all managed objects so that this modified content will not be reflected in said management information database if there is even one handling directive that ends abnormally; and

a communication controller for delaying the series of handling directives for each of the network element management systems until all simulated behavior execution control ends normally.

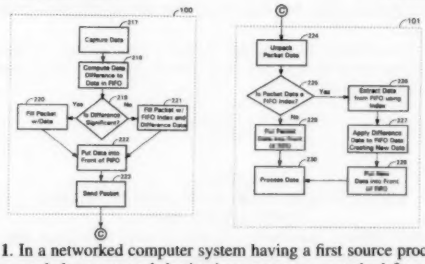
NETWORK TRAFFIC BY INSTRUCTION PACKET SIZE REDUCTION

Samuel P. Kho, Sunnyvale, Calif., assignor to Newmoon.Com, San Jose, Calif.

Filed Apr. 17, 1997, Appl. No. 843,919
Int. Cl.[7] G06F *13/00*
U.S. Cl. 709—224 **14 Claims**



Capture Data
Compute Data Difference to Data in FIFO
Is Difference Significant?
Fill Packet w/ Data
Fill Packet w/ FIFO Index and Difference Data
Put Data into Front of FIFO
Send Packet
Unpack Packet Data
Is Packet Data a FIFO Index?
Extract Data from FIFO using Index
Put Packet Data into Front of FIFO
Apply Difference Data to FIFO Data Creating New Data
Process Data
Put New Data into Front of FIFO

1. In a networked computer system having a first source processor coupled to a second destination processor, a method for processor communication comprising the steps of:

a first source processor sending an unrequested first instruction to a second processor;

the second destination processor monitoring and executing the first instruction;

the first source processor sending an unrequested second instruction representing the first instruction to the second destination processor, wherein the second instruction comprises an unaltered instruction or a short instruction depending on a difference determined by the first source processor by comparing the first instruction against data provided in a locally-accessible storage, the first instruction being sent by the first source processor to the second destination processor effectively on a non-repetitive basis; and

the second destination processor monitoring and executing the first instruction.

6,041,352
RESPONSE TIME MEASURING SYSTEM AND METHOD FOR DETERMINING AND ISOLATING TIME DELAYS WITHIN A NETWORK

Matt Burdick, San Jose, and Gigi Chu, Santa Clara, both of Calif., assignors to Hewlett-Packard Company, Palo Alto, Calif.

Filed Jan. 23, 1998, Appl. No. 12,543
Int. Cl.[7] G06F *11/14*
U.S. Cl. 709—224 **33 Claims**

17. A method, comprising the steps of:

(a) detecting a first signal at a first point within a network;

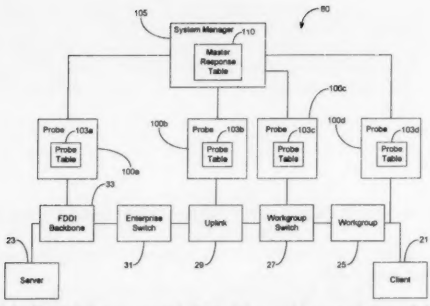
(b) detecting said first signal at a second point within said network;

(c) detecting a second signal at said first point within said network;

(d) detecting said second signal at said second point within said network;

(e) identifying said first signal as a request signal and said second signal as a response signal associated with said request signal; and

(f) determining a first time delay, said first time delay indicating an amount of time between steps (a) and (c);



(g) determining a second time delay, said second time delay indicating an amount of time between steps (b) and (d);

(h) comparing said first time delay with said second time delay; and

(i) automatically determining whether a data transfer problem exists between said first and second points based on said comparing step.

6,041,353

METHOD FOR SEARCHING FOR NETWORK CONNECTION PATH

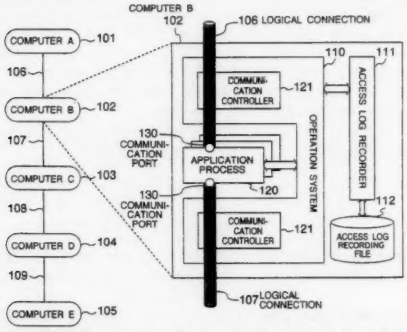
Toshiaki Hirata, Kashiwa; Akihiro Urano, Fujisawa; Shuji Fujino, Ebina; Mitsugu Yamada, Yokohama; Hidetomo Nakano, Fujisawa, all of Japan; Shinji Morita, Lexington, Mass., and Satoshi Miyazaki, Yamato, Japan, assignors to Hitachi, Ltd., and Hitachi Information Network, Ltd., both of Tokyo, Japan

Filed Apr. 21, 1998, Appl. No. 63,445

Claims priority, application Japan, Apr. 22, 1997, 9-104728

Int. Cl.[7] G06F *13/00*

U.S. Cl. 709—224 **21 Claims**



1. A method for searching for a network connecting path comprising the steps of:

issuing a search request from a computer which detected a search objective user to a first computer with which established a logical connection associated with the search objective user to require the first computer to perform searching operation;

selecting users who used a searched computer in a use time of the search objective user and issuing a search request to computers with which the searched computer established logical connections associated with the selected users to require the connection-established computers to perform a searching operation;

sequentially performing said search request over m candidates of a logical connection originator computer as a searched computer up to the m-th candidate computer; and

collecting in the respective computers the computer identifier of the searched computer and user identifiers of the selected users as search results sequentially obtained by the m computers while returning to the search objective user detection computer in an order opposite to the search request order.

6,041,354

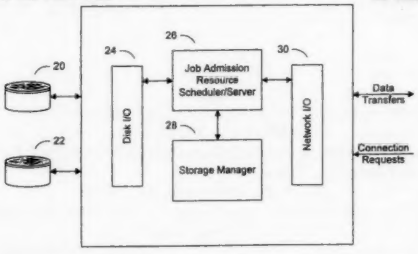
DYNAMIC HIERARCHICAL NETWORK RESOURCE SCHEDULING FOR CONTINUOUS MEDIA

Alexandros Biliris, Chatham; Bruce K. Hillyer, Colts Neck, and Euthimios Panagos, Plainfield, all of N.J., assignors to Lucent Technologies Inc., Murray Hill, N.J.

Filed Sep. 8, 1995, Appl. No. 525,937

Int. Cl.[7] G06F *13/14*

U.S. Cl. 709—226 **16 Claims**



1. A method of playing back continuous media data comprising the steps of:

performing job admission based on loading of a server;

performing hierarchically scheduling of a plurality of resources based on an estimate of consumption of a plurality of data streams from each of said plurality of resources with respect to available time during a single schedule cycle of a plurality of schedule cycles substantially ensuring completion of at least one of said plurality of data streams within a particular time frame of said single schedule cycle;

dynamically monitoring actual resource consumption to improve utilization of said plurality of resources with conservative admission at beginning of said single cycle and slack filling additional available time during said particular time frame of said single cycle;

degrading a first part of one of said plurality of data streams with respect to a second part of one of said plurality of data streams deemed less important according to an application specified prioritization policy of said server.

6,041,355

METHOD FOR TRANSFERRING DATA BETWEEN A NETWORK OF COMPUTERS DYNAMICALLY BASED ON TAG INFORMATION

James E. Toga, Portland, Oreg., assignor to Intel Corporation, Santa Clara, Calif.

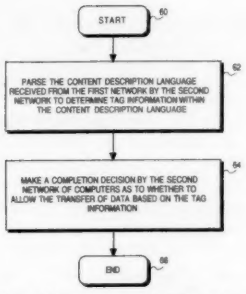
Filed Dec. 27, 1996, Appl. No. 773,602

Int. Cl.[7] G06F *13/00;15/16*

U.S. Cl. 709—227 **17 Claims**

1. A method of controlling transfer of data between a first network of computers and a second network of computers, the method comprising the steps of:

(a) parsing content description language received from the first network of computers by the second network of computers to determine current tag information within the content description language; and



START
60
PARSE THE CONTENT DESCRIPTION LANGUAGE RECEIVED FROM THE FIRST NETWORK BY THE SECOND NETWORK TO DETERMINE TAG INFORMATION WITHIN THE CONTENT DESCRIPTION LANGUAGE
62
MAKE A COMPLETION DECISION BY THE SECOND NETWORK OF COMPUTERS AS TO WHETHER TO ALLOW THE TRANSFER OF DATA BASED ON THE TAG INFORMATION
64
END
66

(b) dynamically making a completion decision by the second network of computers as to whether to allow the transfer of data based on the current tag information, wherein the completion decision is based upon a resource constraint of the second network of computers.

6,041,356

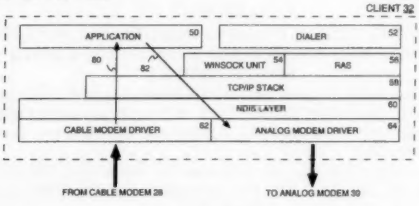
METHOD AND APPARATUS FOR DETECTING NETWORK TRAFFIC AND INITIATING A DIAL-UP CONNECTION USING SEPARATE UPSTREAM AND DOWNSTREAM DEVICES

Mannan Mohammed, Chandler, Ariz., assignor to Intel Corporation, Santa Clara, Calif.

Filed Mar. 31, 1997, Appl. No. 829,584

Int. Cl.[7] **G06F** *13/00;3/00;15/74*

U.S. Cl. 709—227 **12 Claims**



1. In a client having (i) an upstream device driver for controlling an upstream device which sends data to a server; (ii) a downstream device driver for controlling a downstream device which receives data from said server, said upstream device driver and said downstream device driver being separate drivers for separate devices; and (iii) a dialer application for establishing an upstream connection using said upstream device driver, a method for initiating a connection with said server in response to upstream traffic generated by an application in said client comprising the steps of:

receiving said upstream traffic in said downstream device driver, said downstream device driver being incapable of transmitting said upstream traffic;

constructing a dial packet in said downstream device driver in response to said upstream traffic;

transferring said dial packet from said downstream device driver to said dialer application; and,

issuing a call command to said upstream device driver.

6,041,357

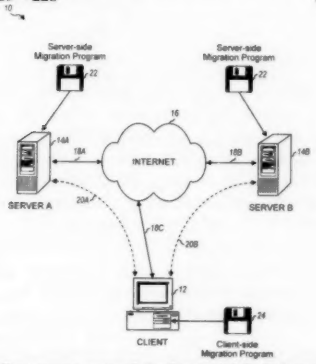
COMMON SESSION TOKEN SYSTEM AND PROTOCOL

Kevin Kunzelman, San Francisco, and Sterling Hutto, Sausalito, both of Calif., assignors to Electric Classified, Inc., San Francisco, Calif.

Filed Feb. 6, 1997, Appl. No. 796,260

Int. Cl.[7] **H04L** *9/00;* **G06F** *13/14*

U.S. Cl. 709—228 **13 Claims**



1. In a client-server network having multiple independent servers, a method of session migration from a session between a client and a first server to a session between the client and a second server;

establishing a current session between the client and the first server after the first server has verified that th e client is an authorized client of the first server;

sending a migration request from the client to the first server;

in response to the migration request generating a session token;

sending a session token from the first server to the client, wherein the session token uniquely identifies the current session between the client and the first server;

sending the session token from the client to the second server as a request to the second server for migration;

verifying, at the second server and from the session token, the identity of the client and the first server;

requesting, from the first server, data about the session, wherein the request is sent from the second server;

responding from the first server to the request for data by sending the requested data to the second server; and

if the client is an authorized client with respect to the second server, continuing the session with the second server in place of the first server.

6,041,358

METHOD FOR MAINTAINING VIRTUAL LOCAL AREA NETWORKS WITH MOBILE TERMINALS IN AN ATM NETWORK

Nen-Fu Huang; Yao-Tzung Wang, both of Hsinchu, and Trung-Pao Lin, Kaohsiung, all of Taiwan, assignors to Industrial Technology Research Inst., Hsinchu, Taiwan

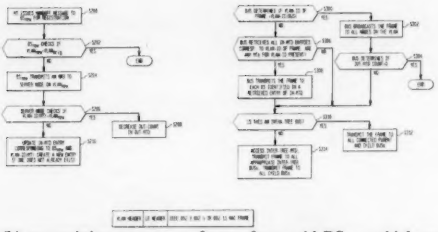
Filed Nov. 12, 1996, Appl. No. 747,696

Int. Cl.[7] **G06F** *13/00;* **H04B** *7/26;* **H04L** *12/66*

U.S. Cl. 709—238 **24 Claims**

1. In an asynchronous transfer mode (ATM) network, wherein a plurality of virtual local area network (VLAN) server nodes are connected by virtual channels into plural trees, wherein at least some of said VLANs comprise base stations (BSs) capable of providing packet communication for one or more mobile terminals (MTs), a method of tracking a location of each MT comprising the steps of:

(a) maintaining in an original BS (BS_{orig}) on an original VLAN ($VLAN_{orig}$) a record corresponding to each MT for which said BS_{orig} provides packet communication which record contains an identifier (VLAN-ID) of one of said VLANs which said MT is on (VLAN-ID(MT)),



(b) transmitting a message frame, from said BS_{orig} which currently provides packet communication for an MT, to a server node of said $VLAN_{orig}$, said message frame, containing said VLAN-ID(MT), a VLAN-ID of a new VLAN ($VLAN_{new}$) and an ATM address of said BS_{orig} (ATM(BS_{orig})),

(c1) if said MT is on said $VLAN_{orig}$, increasing said number of MTs on $VLAN_{orig}$ which have moved; and

(c) receiving said message frame at said server node of said $VLAN_{orig}$ and updating a mobility terminal membership tracking database (MTD) maintained at said server node to reflect said movement of said MT.

6,041,359

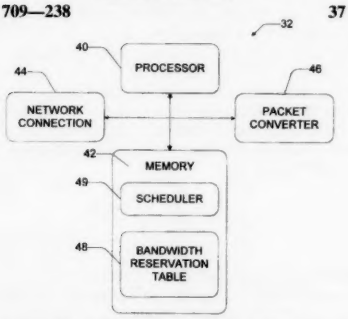
DATA DELIVERY SYSTEM AND METHOD FOR DELIVERING COMPUTER DATA OVER A BROADCAST NETWORK

Kenneth J. Birdwell, Bellevue, Wash., assignor to Microsoft Corporation, Redmond, Wash.

Filed Jun. 9, 1997, Appl. No. 871,655

Int. Cl.[7] G06F *15/16*

U.S. Cl. 709—238 **37 Claims**



17. In a network system having multiple content servers serving data to multiple clients over a distribution network with a bi-directional link and a unidirectional broadcast link, the content servers sending the data over the bi-directional link in a first format, a reservation computing unit comprising:

a network port to provide access to the bi-directional link of the distribution network, the network port receiving bandwidth reservation requests from the content servers requesting reservation of bandwidth on the data network;

a scheduler to schedule bandwidth reservations for the content servers in response to the requests;

a second port to provide access to the unidirectional broadcast link of the distribution network; and

a data format converter to convert the data from the first format into a second format for transmission over the unidirectional broadcast link of the distribution network.

6,041,360

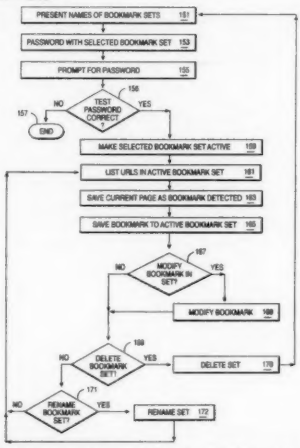
WEB BROWSER SUPPORT FOR DYNAMIC UPDATE OF BOOKMARKS

Maria Azua Himmel, and Herman Rodriguez, both of Austin, Tex., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Nov. 21, 1997, Appl. No. 976,266

Int. Cl.[7] G06F *17/30*

U.S. Cl. 709—245 **28 Claims**



1. A method for providing access to the Internet using bookmarks comprising the steps of:

storing a first bookmark in a bookmark store of a browser in a computer system, the first bookmark to a web page at a Uniform Resource Locator (URL);

setting a dynamic attribute for the first bookmark;

detecting a change in the URL incorporated in the first bookmark; and

automatically updating the URL in the first bookmark.

6,041,361

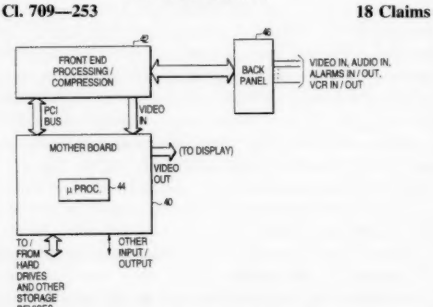
DIGITAL VIDEO RECORDER PROVIDING SEPARATE PIPELINING FOR ODD AND EVEN FIELDS FROM A SINGLE CAMERA

Charles Park Wilson, Santee; Gerhard Josef Winter, and David Ross MacCormack, both of San Diego, all of Calif., assignors to Sensormatic Electronics Corporation, Boca Raton, Fla.

Continuation-in-part of application No. 08/741,983, Oct. 31, 1996, Pat. No. 5,854,902. This application Apr. 29, 1998, Appl. No. 67,991.

Int. Cl.[7] H04N *9/79*

U.S. Cl. 709—253 **18 Claims**



1. Apparatus for storing video signals, comprising:

a first video camera;

a second video camera;

conversion means, connected to said video cameras, for selectively converting video signals generated by said video cameras into digital video signals;

storage means, connected to said conversion means, for storing said digital video signals; and

control means, connected to said conversion means and said storage means, for controlling said conversion means and said storage means; wherein:

said video cameras each generate video signals according to an interlaced video signal standard in which said cameras each alternately generate odd signal fields and even signal fields, said odd signal fields corresponding to odd-numbered horizontal scan lines of an image plane and said even signal fields corresponding to even-numbered horizontal scan lines of said image plane; and

said control means controls said conversion means and said storage means so that said storage means stores digital video signals representing both odd and even signal fields generated by said first video camera, and also stores only one of:

(a) digital video signals representing exclusively odd signal fields generated by said second video camera; and

(b) digital video signals representing exclusively even signal fields generated by said second video camera.

6,041,362

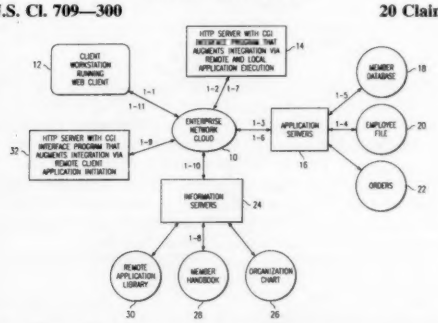
METHOD AND SYSTEM FOR INTEGRATING DISPARATE INFORMATION TECHNOLOGY APPLICATIONS AND PLATFORMS ACROSS AN ENTERPRISE

Randall F. Mears, Plano, and Brad L. Rucker, Allen, both of Tex., assignors to Electronics Data Systems Corporation, Plano, Tex.

Filed Oct. 20, 1995, Appl. No. 546,390

Int. Cl.[7] G06F *17/30*

U.S. Cl. 709—300 **20 Claims**



1. A system for connecting a web client to an enterprise network having a plurality of disparate applications and platforms, comprising:

a web client;

a predetermined information interface form for interfacing the web client with an enterprise network; and

an application server that connects the web client to the enterprise network, the application server operable to initiate the updating of information in a first disparate application in response to information received from a second disparate application.

6,041,363

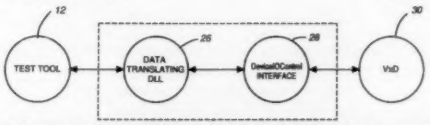
IMBEDDING VIRTUAL DEVICE DRIVER (VXD) CALLS IN A DYNAMIC LINK LIBRARY (DLL)

Daniel H. Schaffer, Colorado Springs, Colo., assignor to Sun Microsystems, Inc,, Palo Alto, Calif.

Filed Mar. 29, 1996, Appl. No. 622,886

Int. Cl.[7] G06F *15/163;9/00;9/46*

U.S. Cl. 709—301 **11 Claims**



1. Apparatus for accessing a virtual device driver in an operating system in a computer from a test tool calling program to perform and verify the performance of requested operations of the virtual device driver, wherein the test tool calling program does not support communication to and from a DeviceIOControl interface that provides an interface to the virtual device driver, the apparatus comprising:

a dynamic link library providing an interface to the calling program;

a DeviceIOControl interface providing an interface to the virtual device driver;

a connection connecting the dynamic link library to the DeviceIOControl interface;

a decoder module in the dynamic link library for decoding a request received from the calling program to perform a requested operation accessing the virtual device driver, the request having request data identifying the requested operation;

an acquisition module in the dynamic link library for acquiring an address of the virtual device driver from the operating system;

a setup module in the dynamic link library for configuring data parameters in accordance with the request, the data parameters enabling the dynamic link library to access the virtual device driver through the DeviceIOControl interface;

a calling module in the dynamic link library for calling the DeviceIOControl interface and for passing the data parameters, the acquired address, and the request data to the DeviceIOControl interface to enable the DeviceIOControl interface to request the virtual device driver to perform the requested operation;

a receiver in the DeviceIOControl interface for receiving from the virtual device driver a return value after the virtual device driver has performed the requested operation, the return value indicating the success or failure of the requested operation; and

a return module in the dynamic link library for receiving the return value from the DeviceIOControl interface and for passing the return value to the calling program.

6,041,364

METHOD AND SYSTEM FOR ADDING A DEVICE ENTRY TO A DEVICE TREE UPON DETECTING THE CONNECTION OF A DEVICE

Victor Lortz, and Stephen T. Chou, both of Beaverton, Oreg., assignors to Intel Corporation, Santa Clara, Calif.

Filed Dec. 19, 1996, Appl. No. 769,787

Int. Cl.[7] G06F *13/10*

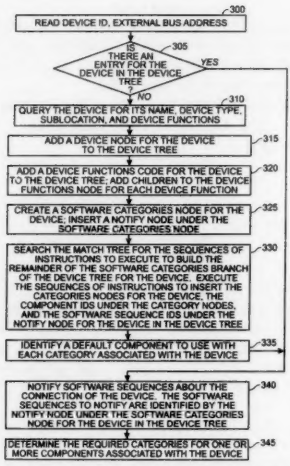
U.S. Cl. 709—301 **11 Claims**

1. A method comprising:

detecting a connection of a device;

searching a device tree to determine if said device has been connected for the first time;

if said device has been connected for the first time, adding a device entry for said device to said device tree, associating with said device entry in said device tree a device type and at least one device function;



READ DEVICE ID, EXTERNAL BUS ADDRESS
300
IS THERE AN ENTRY FOR THE DEVICE IN THE DEVICE TREE ?
305
YES
NO
QUERY THE DEVICE FOR ITS NAME, DEVICE TYPE, SUBLOCATION, AND DEVICE FUNCTIONS
310
ADD A DEVICE NODE FOR THE DEVICE TO THE DEVICE TREE
315
ADD A DEVICE FUNCTIONS CODE FOR THE DEVICE TO THE DEVICE TREE; ADD CHILDREN TO THE DEVICE FUNCTIONS NODE FOR EACH DEVICE FUNCTION
320
CREATE A SOFTWARE CATEGORIES NODE FOR THE DEVICE; INSERT A NOTIFY NODE UNDER THE SOFTWARE CATEGORIES NODE
325
SEARCH THE MATCH TREE FOR THE SEQUENCES OF INSTRUCTIONS TO EXECUTE TO BUILD THE REMAINDER OF THE SOFTWARE CATEGORIES BRANCH OF THE DEVICE TREE FOR THE DEVICE. EXECUTE THE SEQUENCES OF INSTRUCTIONS TO INSERT THE CATEGORIES NODES FOR THE DEVICE, THE COMPONENT IDS UNDER THE CATEGORY NODES, AND THE SOFTWARE SEQUENCE IDS UNDER THE NOTIFY NODE FOR THE DEVICE IN THE DEVICE TREE
330
IDENTIFY A DEFAULT COMPONENT TO USE WITH EACH CATEGORY ASSOCIATED WITH THE DEVICE
335
NOTIFY SOFTWARE SEQUENCES ABOUT THE CONNECTION OF THE DEVICE. THE SOFTWARE SEQUENCES TO NOTIFY ARE IDENTIFIED BY THE NOTIFY NODE UNDER THE SOFTWARE CATEGORIES NODE FOR THE DEVICE IN THE DEVICE TREE
340
DETERMINE THE REQUIRED CATEGORIES FOR ONE OR MORE COMPONENTS ASSOCIATED WITH THE DEVICE
345

searching a match tree using said device type and said device function to identify at least one first sequence of instructions to execute when said device is connected for the first time; and

executing said at least one first sequence of instructions to associate with said device in said device tree at least one software category.

6,041,365

APPARATUS AND METHOD FOR HIGH PERFORMANCE REMOTE APPLICATION GATEWAY SERVERS

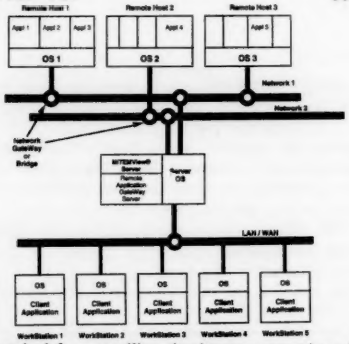
Aurel Kleinerman, 307 Waverly St. #5, Menlo Park, Calif. 94025

Continuation-in-part of application No. 08/542,863, Oct. 13, 1995, Pat. No. 5,734,871, which is a continuation of application No. 08/406,638, Mar. 20, 1995, abandoned, which is a continuation of application No. 08/261,764, Jun. 17, 1994, abandoned, which is a continuation of application No. 08/089,947, Jul. 12, 1993, abandoned, which is a continuation of application No. 07/549,889, Jul. 9, 1990, Pat. No. 5,228,137, which is a continuation-in-part of application No. 07/145,692, Jan. 15, 1988, abandoned, which is a continuation of application No. 06/792,424, Oct. 29, 1985, abandoned. This application Jun. 30, 1997, Appl. No. 885,141.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] G06F *15/00*

U.S. Cl. 709—302 **30 Claims**



1. A method for controlling simultaneous execution of one or more computer application programs in one or more host computer systems under control of a second computer system which may be remote from the one or more host computer systems, where said computer application programs may be dissimilar to each other, and said host computer systems may be dissimilar to each other, said host computer systems generating presentation information based on said application programs or on generic computer messages, or both, said method employing a programming framework for building customized gateways for said application programs;

said method comprising the steps of:

establishing a plurality of relevant selected parameters in said host computer presentation information;

said relevant selected parameters having a variable time of occurrence and context in said presentation information;

interpreting selected portions of said host computer systems' presentation information in said application program being executed; and

executing one or more of said application programs under the control of said second computer system through a customized gateway on the basis of said interpreted presentation information, said gateway utilizing an external object database to provide information for customizing said gateway.

6,041,366

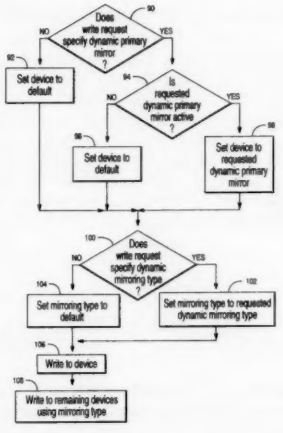
SYSTEM AND METHOD FOR DYNAMIC SPECIFICATION OF INPUT/OUTPUT ATTRIBUTES

John Maddalozzo, Jr.; Gerald Francis McBrearty, and Johnny Meng-Han Shieh, all of Austin, Tex., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Feb. 2, 1998, Appl. No. 19,566

Int. Cl.[7] G06F *13/00*

U.S. Cl. 710—5 **32 Claims**



1. A method for performing an I/O operation in a mirrored information handling system, comprising the steps of:

specifying a mirroring attribute;

if the specified mirroring attribute is available, performing the I/O operation according to the specified mirroring attribute; and

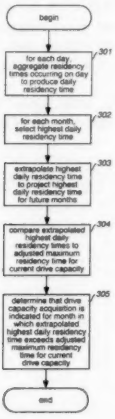
if the specified mirroring attribute is not available, performing the I/O operation according to default mirroring attributes.

6,041,367

FORECASTING RESOURCE REQUIREMENTS FOR A GROUP OF REMOVABLE MEDIA DEVICES BY MEASURING RESIDENCY TIME AND GENERATING MODEL

Richard L. Stuber, Colorado Springs, Colo., assignor to MCI Communications Corporation, Washington, D.C.

Filed Dec. 17, 1997, Appl. No. 992,384
Int. Cl.[7] G06F *13/10; G05B 13/04*
U.S. Cl. 710—18 **35 Claims**



begin
for each day, aggregate residency times occurring on day to produce daily residency time
301
for each month, select highest daily residency time
302
extrapolate highest daily residency time to project highest daily residency time for future months
303
compare extrapolated highest daily residency times to adjusted maximum residency time for current drive capacity
304
determine that drive capacity acquisition is indicated for month in which extrapolated highest daily residency time exceeds adjusted maximum residency time for current drive capacity
305
end

18. A method for forecasting resource requirements for removable media devices of a computer system, comprising the steps of:

collecting residency time data for the removable media devices of a computer system;

based upon the collected residency time data, calculating a maximum utilization of the removable media devices for a predetermined foregoing interval of time; and

based upon the calculated maximum utilization of the removable media devices for the predetermined foregoing interval of time, generating a model of future maximum residency time usable to forecast resource requirements for the removable media devices.

6,041,368

SYSTEM FOR OPERATING INPUT, PROCESSING AND OUTPUT UNITS IN PARALLEL AND USING DMA CIRCUIT FOR SUCCESSIVELY TRANSFERRING DATA THROUGH THE THREE UNITS VIA AN INTERNAL MEMORY

Fumio Nakatsuji, Kyoto; Toshinori Maeda, Neyagawa, and Hiroshi Kamiyama, Uji, all of Japan, assignors to Matsushita Electric Industrial, Co., Japan

Filed Apr. 2, 1998, Appl. No. 53,966
Claims priority, application Japan, Apr. 2, 1997, 9-083642
Int. Cl.[7] G06F *13/14*
U.S. Cl. 710—20 **14 Claims**

1. A data input-output device that performs operations on data input from a first device located outside thereof, and outputs the data to a second device located outside thereof comprising:

an input means for continually receiving data from the first device;

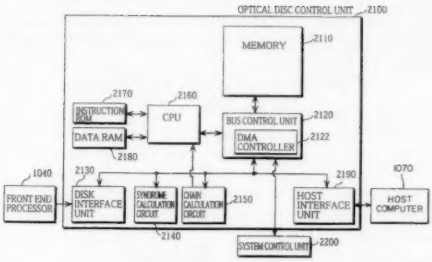
an operation means for performing an operation on the data;

an output means for outputting the data to the second device;

a memory for storing the data;

a memory bus for connecting the input means, the operation means, and the output means with the memory;

a first data transfer means for performing first DMA (direct memory access) transfer which transfers the data from the input means to the memory;



a second data transfer means for performing second DMA transfer which, when the first data transfer means has completed the first DMA transfer for a first predetermined amount of data, transfers the data that was stored by the first DMA transfer from an area in the memory to the operation means as the data for the operation;

a third data transfer means for performing third DMA transfer which, when the operation means has completed the operation for the first predetermined amount of data, transfers the data operated on by the operation means from the area in the memory to the output means; and

a data transfer control means for performing control so that at any given time, data transfer is performed by only one of the first data transfer means, the second data transfer means, and the third data transfer means, wherein

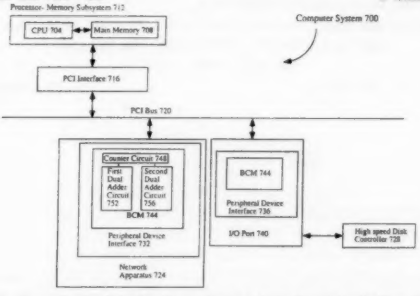
the input means, the operation means, and the output means operate independently in parallel.

6,041,369

REDUCING TWO VARIABLES IN ALTERNATE CLOCK CYCLES DURING DATA TRANSMISSION FOR MONITORING WHEN A DATA BURST IS CLOSE TO COMPLETION

John Watkins, Sunnyvale, Calif., assignor to Sun Microsystems, Inc., Mountain View, Calif.

Division of application No. 08/673,057, Jul. 1, 1996, Pat. No. 5,832,302. This application Jun. 9, 1998, Appl. No. 93,595.
Int. Cl.[7] G06F *12/00*
U.S. Cl. 710—35 **6 Claims**



1. A method of indicating when a data burst including data phases, is about to be completed, said method comprising the step of:

initializing a first variable and a second variable;

during data phase transmission, reducing said first variable by a number of bytes transmitted in two of said data phases every odd numbered clock cycle after initializing said first variable;

during said data phase transmission, reducing said second variable by the number of bytes transmitted in two of said data phases every even numbered clock cycle after initializing said second variable,

using said first variable and said second variable to determine when the data burst is completed.

6,041,370

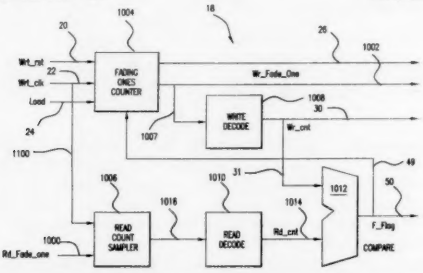
FIFO USING A FADING ONES COUNTER

Charles B. Guyt, Hillsboro, Oreg., assignor to Intel Corporation, Santa Clara, Calif.

Filed Dec. 8, 1997, Appl. No. 986,502

Int. Cl.[7] G06F *13/00*

U.S. Cl. 710—57 **21 Claims**



1. A method for determining a total number of data items stored in a FIFO, comprising the steps of:

encoding a current first count value by changing one of two adjacent bits within a bit field representing a previous first count value, with said adjacent bits both comprising a first value or said first value and a second value, and with all other bits in said bit field having said second value;

receiving a current second count value encoded by changing one of two adjacent bits within a bit field representing a previous second count value, with said adjacent bits both comprising said first value or said first value and said second value, and with all other bits in said bit field having said second value; and

comparing said current count values.

6,041,371

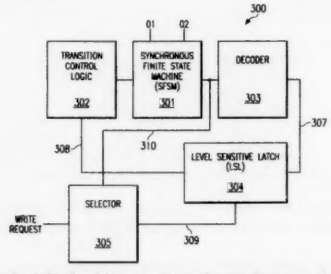
ASYNCHRONOUS INPUT/OUTPUT FOR INTEGRATED CIRCUITS THAT LATCHES EXTERNAL ASYNCHRONOUS SIGNAL IN FEEDBACK PATH OF STATE MACHINE

John D. Provence, Mesquite, Tex., assignor to Texas Instruments Incorporated, Dallas, Tex.

Provisional application No. 60/034,793, Dec. 19, 1996. This application Dec. 17, 1997, Appl. No. 992,698.

Int. Cl.[7] G06F *13/14*

U.S. Cl. 710—58 **16 Claims**



9. A method for latching an external asynchronous signal comprising the steps of:

providing a state machine having a first predefined state corresponding to an asynchronous latch state;

detecting when the state machine is in the first predefined state;

generating a asynchronous state signal when the first predefined state is detected;

inhibiting the state machine from changing from the first predefined state; and

in response to receiving the external asynchronous signal, feeding back the asynchronous state signal to the state machine to enable the state machine to change from the first predefined state.

6,041,372

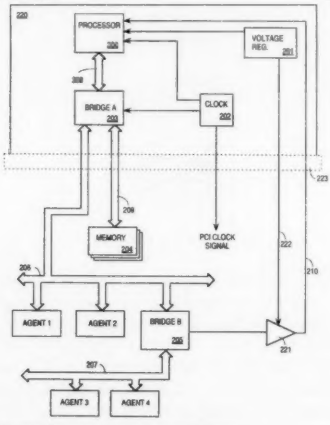
METHOD AND APPARATUS FOR PROVIDING A PROCESSOR MODULE FOR A COMPUTER SYSTEM

Frank P. Hart, Beaverton; Ravi Nagaraj, Hillsboro; James L. Noble, Portland, all of Oreg., and Neil W. Songer, Santa Clara, Calif., assignors to Intel Corporation, Santa Clara, Calif.

Filed Dec. 30, 1996, Appl. No. 774,515

Int. Cl.[7] G06F *13/10*; **H03K** *5/09*

U.S. Cl. 710—62 **14 Claims**



1. An electronic component comprising:

a circuit board;

an interface disposed on the circuit board to couple the circuit board to a peripheral subsystem via a socket;

a processor disposed on the circuit board to receive signals having a first voltage level;

a voltage regulator disposed on the circuit board to provide a processor voltage supply and a reference signal equal to the first voltage level;

a first signal line disposed on the circuit board and coupled to the interface to transmit to the peripheral subsystem the reference signal; and

a second signal line disposed on the circuit board and coupled to the interface to transmit from the peripheral subsystem to the circuit board a subsystem signal that has been converted to the first voltage level.

ENHANCED SCSI TRANSMITTER AND ADAPTER

Duc Pham, Cupertino, Calif., assignor to Diamond Multimedia Systems, Inc., Santa Clara, Calif.

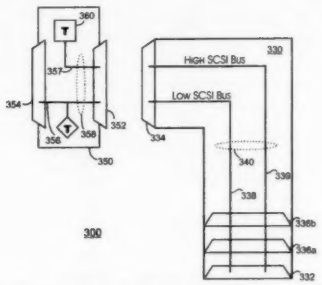
Filed May 23, 1997, Appl. No. 862,567

Int. Cl.[7] G06F *13/00*

U.S. Cl. 710—62 **16 Claims**

1. A kit having component parts capable of being assembled with a plurality of SCSI devices, including a SCSI host adapter card, to provide SCSI device interconnectability, wherein said SCSI host adapter card includes a first connector of a first width, said kit comprising:

(a) a cable, including a second connector adapted to be coupled to said first connector of said host adapter SCSI card, and a third connector of said first width; and



(b) a terminator-adapter, including a fourth connector adapted to be coupled to said third connector, a fifth connector of a second width, a first upper bus coupled to the fourth connector, a first lower bus coupled to the fourth connector and to the fifth connector, a first terminator coupled to the first upper bus, and a second terminator coupled to the first lower bus, said second terminator being a soft terminator that is automatically isolated from said first lower bus when a device is coupled to said fifth connector.

6,041,374

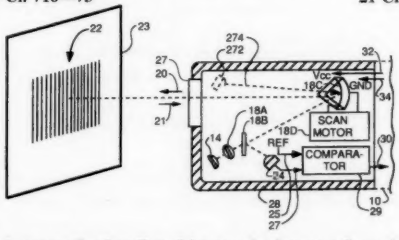
PCMCIA INTERFACE CARD FOR COUPLING INPUT DEVICES SUCH AS BARCODE SCANNING ENGINES TO PERSONAL DIGITAL ASSISTANTS AND PALMTOP COMPUTERS

Joel R. Postman, Santa Clara, Calif.; George B. Miller, Hingham, Mass., and Ronald C. Fish, Morgan Hill, Calif., assignors to PSC Inc.

Division of application No. 08/428,692, Apr. 25, 1995, Pat. No. 5,671,374, which is a continuation-in-part of application No. 08/236,630, Apr. 29, 1994, Pat. No. 5,664,231. This application Mar. 14, 1997, Appl. No. 815,006.

Int. Cl.[7] **G06K** *7/10;3/00;3/05*

U.S. Cl. 710—73 **21 Claims**



1. A process for decoding alphanumeric characters from electrical signals generated by an input device which generates output electrical signals encoding said alphanumeric characters and making said decoded alphanumeric characters available to a host computer, comprising:

storing data other than said alphanumeric characters in nonvolatile expansion memory on a PCMCIA card, hereafter sometimes referred to as a PC card, coupled to said host computer by a PCMCIA interface, said data being data needed by one or more application processes in execution on said host computer;

receiving at a PCMCIA card coupled to said host computer said output signals generated by said input device which encode said alphanumeric characters

decoding said output electrical signals into one or more alphanumeric characters on said PCMCIA card and storing the decoded alphanumeric character in a memory location on said PCMCIA card which is mapped into the Input/Output address space of zone **3** of the memory map of said PCMCIA card;

retrieving said decoded alphanumeric characters using I/O cycles of said host computer and a PCMCIA bus coupling said PCMCIA card to said host computer while allowing said data stored in said nonvolatile memory on said PCMCIA card to also be accessed by said host computer via memory cycles and said PCMCIA bus without having to reboot the host computer.

6,041,375

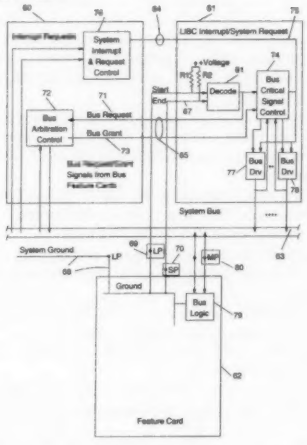
METHOD AND SYSTEM FOR ENABLING NONDISRUPTIVE LIVE INSERTION AND REMOVAL OF FEATURE CARDS IN A COMPUTER SYSTEM

Brian Mitchell Bass, Apex; James Allison Hubbard; Price Ward Oman, both of Raleigh, and Frank J. Pita, Cary, all of N.C., assignors to International Business Machines Corporation, Armonk, N.Y.

Continuation of application No. 08/826,789, Apr. 7, 1997, Pat. No. 5,964,855. This application May 28, 1999, Appl. No. 321,688.

Int. Cl.[7] **G06F** *13/00*

U.S. Cl. 710—103 **22 Claims**



1. A method of live-inserting pluggable units into an information processing system, said system having a processor, memory and at least one slot for accepting a pluggable unit, said processor, memory and slot being directly connected through a common bus, circuitry for detecting the insertion of said pluggable unit into said slot and a bus controller for controlling the operation of said bus, the method comprising the steps of:

identifying at least one down-level active control signal being transferred over said bus that, when asserted, produces a state on said bus in which no bus operations are being performed;

determining a start time and an end time associated with the insertion of said pluggable unit into said slot;

ceasing bus activity at least in a time interval between said start time and said end time; and

driving said down-level active control signal of said system bus to a low level at least in a time interval between said start time and said end time.

6,041,376

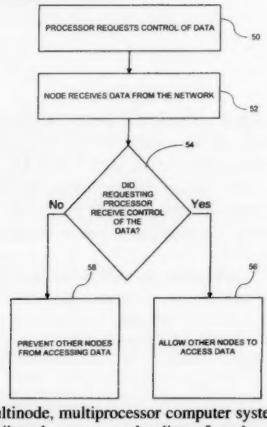
DISTRIBUTED SHARED MEMORY SYSTEM HAVING A FIRST NODE THAT PREVENTS OTHER NODES FROM ACCESSING REQUESTED DATA UNTIL A PROCESSOR ON THE FIRST NODE CONTROLS THE REQUESTED DATA

Bruce Michael Gilbert, Beaverton; Robert T. Joersz, Portland; Thomas D. Lovett, Portland, and Robert J. Safranek, Portland, all of Oreg., assignors to Sequent Computer Systems, Inc., Beaverton, Oreg.

Filed Apr. 24, 1997, Appl. No. 850,736

Int. Cl.[7] G06F *13/364*

U.S. Cl. 710—108 **23 Claims**



23. In a multinode, multiprocessor computer system with shared memory distributed across a plurality of nodes, a method of ensuring a requesting processor within a node obtains data that is requested, comprising:

using a processor in a first node, requesting access to data;

within the first node, issuing a response to the requesting processor for the requesting processor to retry its request for data at a later time;

from the first node, requesting the data be delivered to the first node from one of the other nodes in the system;

receiving the requested data in the first node;

once the requested data is received, issuing retry requests to other nodes that attempt to access the requested data on the first node;

using the requesting processor in the first node, retrying the request for access to the requested data;

within the first node, delivering the requested data to the requesting processor; and

after the processor has control of the requested data, allowing other nodes to access the requested data from the first node.

6,041,377

METHOD AND APPARATUS FOR DISTRIBUTING INTERRUPTS IN A SCALABLE SYMMETRIC MULTIPROCESSOR SYSTEM WITHOUT CHANGING THE BUS WIDTH OR BUS PROTOCOL

Dale J. Mayer, Houston; Sompong Paul Olarig; William F. Whiteman, both of Cypress, and David F. Heinrich, Tomball, all of Tex., assignors to Compaq Computer Corporation, Houston, Tex.

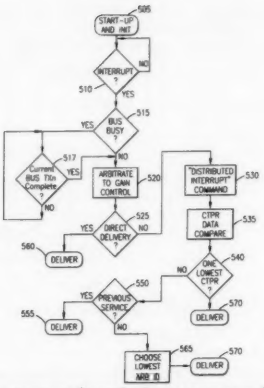
Continuation of application No. 08/699,912, Aug. 20, 1996. This application Feb. 2, 1999, Appl. No. 243,235.

Int. Cl.[7] G06F *13/00*

U.S. Cl. 710—113 **13 Claims**

1. A method for supporting multiple distributed interrupt controllers, designated as bus agents, in a symmetric multiprocessing system, said method comprising the steps of:

assigning a unique identification number to each bus agent;



receiving bus requests from the bus agents over four data lines in groups of four; and

granting bus ownership to a selected one of the requesting bus agents.

6,041,378

INTEGRATED CIRCUIT DEVICE AND METHOD OF COMMUNICATION THEREWITH

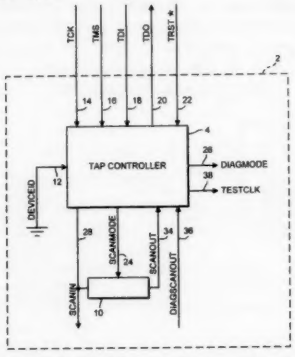
Robert Warren, Thornbury, United Kingdom, assignor to SGS-Thomson Microelectronics Limited, Almondsbury Bristol, United Kingdom

Filed Oct. 29, 1997, Appl. No. 960,187

Claims priority, application United Kingdom, Oct. 31, 1996, 9622685

Int. Cl.[7] G06F *11/00*

U.S. Cl. 710—127 **28 Claims**



1. A single chip integrated circuit device comprising:

an on-chip target processor;

an on-chip bus system having a first bit width and providing a parallel path between the target processor and a local memory said bus system having address lines, data lines and at least one read/write control line;

a message converter connected to the bus system by a first set of pins equal in number to the bit width of the bus system, the message converter having a second set of pins which are less in number than in the first set of pins;

a communication path connected to the second set of pins for communicating reduced pin data across the chip boundary;

wherein the message converter comprises:

control circuitry connected to the on-chip bus system;

reduced pin data receiving circuitry for receiving messages supplied from off chip via the communication path, decoding a message identifier of each message and causing the control circuitry to operate selectively the address lines,

data lines and read/write control line of the bus system in accordance with the message identifier to effect a memory access to the local memory without utilising the on-chip target processor; and

data transmit circuitry for formulating messages from information received from the bus system, allocating a message identifier to each message and transmitting messages off-chip in the form of reduced pin data.

6,041,379

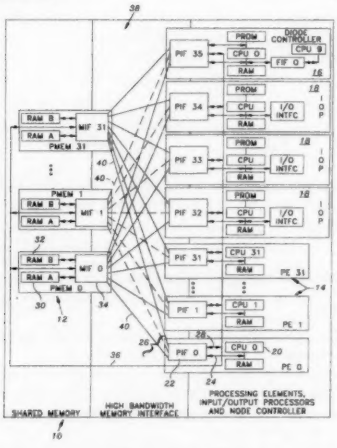
PROCESSOR INTERFACE FOR A DISTRIBUTED MEMORY ADDRESSING SYSTEM

Richard Alan Sher, Huntington, N.Y., assignor to Northrop Grumman Corporation, Los Angeles, Calif.

Filed Oct. 4, 1996, Appl. No. 726,117

Int. Cl.[7] G06F *13/00*

U.S. Cl. 710—129 **6 Claims**



1. An interface for interfacing a plurality of processors to each other and to a global memory in a non-blocking manner comprising:

a) said global memory including a plurality of memory elements;

b) said plurality of processors;

c) a node control bus;

d) said plurality of processor interfaces each connected to one of said plurality of processors and to said node control bus; and

e) a plurality of serial fixed-speed interconnections between said plurality of processor interfaces and said plurality of memory elements, one interconnection extending between each of said plurality of processor interfaces and each said memory element, said plurality of fixed-speed interconnections permitting the maximum speed of operation regardless of the serial interconnection selected;

f) said each of said plurality of processor interfaces providing a non-blocking bi-directional memory access between one of said plurality of processors and said global memory.

6,041,380

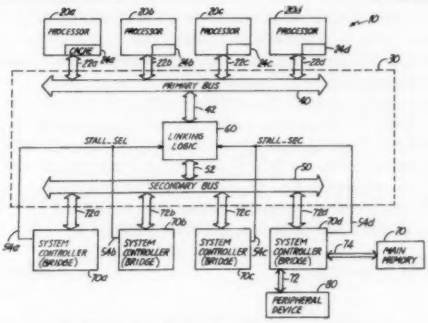
METHOD FOR INCREASING THE NUMBER OF DEVICES CAPABLE OF BEING OPERABLY CONNECTED TO A HOST BUS

Paul A. LaBerge, Shoreview, Minn., assignor to Micron Electronics, Inc., Nampa, Id.

Filed Jan. 21, 1998, Appl. No. 10,084

Int. Cl.[7] G06F *13/40;13/38*

U.S. Cl. 710—129 **13 Claims**



1. A method for operating a host bus, wherein the host bus comprises a first bus and a physically distinct second bus, and wherein at least one requesting agent is operably connected to the first bus and wherein at least one target agent is operably connected to the second bus, comprising:

(a) clocking the first bus at a first frequency;

(b) clocking the second bus at the first frequency; and

(c) providing signals to the second bus one and one half clock cycles after the signals have been provided to the first bus by the at least one requesting agent; and

(d) providing signals to the first bus one and one half clock cycles after the signals have been provided to the second bus by the at least one target agent.

6,041,381

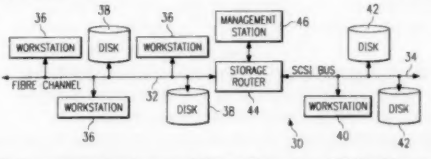
FIBRE CHANNEL TO SCSI ADDRESSING METHOD AND SYSTEM

Geoffrey B. Hoese, Austin, Tex., assignor to Crossroads Systems, Inc., Austin, Tex.

Filed Feb. 5, 1998, Appl. No. 19,448

Int. Cl.[7] G06F *13/00*

U.S. Cl. 710—129 **13 Claims**



1. A computer implemented Fibre Channel to SCSI addressing method, comprising:

maintaining a first table of Fibre Channel to SCSI bus routing information;

maintaining a second table of SCSI bus to Fibre Channel routing information;

receiving a cross bus transfer, wherein the cross-bus transfer is initiated by a device on a Fibre Channel or a SCSI bus, respectively, and further wherein the cross bus transfer is intended to be delivered to a target device associated with the SCSI bus or the Fibre Channel, respectively, and further wherein the cross bus transfer contains addressing information that specifies a target for the cross bus transfer; and

translating the addressing information by comparing the addressing information to either the first table or second table, respectively, such that the cross bus transfer can be delivered to the target.

6,041,382

PRINTING APPARATUS AND A METHOD THEREFOR, AND INFORMATION PROCESSING APPARATUS AND A METHOD THEREFOR

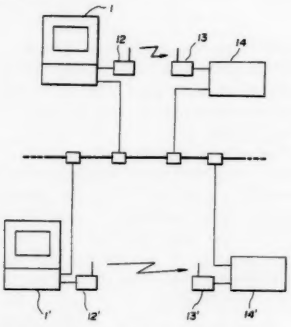
Yoshiaki Hirano, Kawagoe, Japan, assignor to Canon Kabushiki Kaisha, Tokyo, Japan

Division of application No. 08/856,000, May 14, 1997, Pat. No. 5,867,720, which is a continuation of application No. 08/755,132, Nov. 22, 1996, abandoned, which is a continuation of application No. 08/163,757, Dec. 9, 1993, abandoned. This application Dec. 10, 1998, Appl. No. 208,403.

Claims priority, application Japan, Dec. 14, 1992, 4-332751; Jun. 25, 1993, 5-177619; Nov. 18, 1993, 5-289357

Int. Cl.[7] G06F *13/00*

U.S. Cl. 710—131 **14 Claims**



1. Information outputting apparatus comprising:

output means for outputting information to an output apparatus using a wire system or a radio system;

determining means for determining whether information to be transmitted to said output apparatus is outputted using the wire system or the radio system; and

control means for controlling said output means by switching between the wire system and the radio system in accordance with a result of the determination.

6,041,383

ESTABLISHING CONTROL OF LOCK TOKEN FOR SHARED OBJECTS UPON APPROVAL MESSAGES FROM ALL OTHER PROCESSES

Jason Jeffords, Dover; Todd A. Crowley, Windham, and Roger Dev, Durham, all of N.H., assignors to Cabletron Systems, Inc., Rochester, N.H.

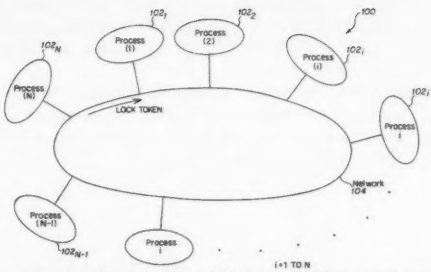
Filed Jul. 22, 1996, Appl. No. 681,040

Int. Cl.[7] G06F *13/37*

U.S. Cl. 710—200 **17 Claims**

1. A computer-implemented method of synchronizing a plurality of processes in a distributed system, the method comprising:

when a first process requires access to a shared object in an object-oriented programming environment, the first process establishing control of a transmittable lock token associated with the shared object and transmitting a message to each process of the plurality of processes indicating that the first process controls the lock token,



wherein the first process establishes control in response to receiving an object control approval message from each other process in the plurality of processes.

6,041,384

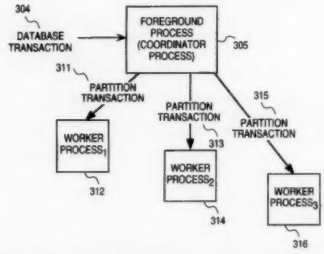
METHOD FOR MANAGING SHARED RESOURCES IN A MULTIPROCESSING COMPUTER SYSTEM

William H. Waddington, Foster City; Leng Leng Tan, Sunnyvale, and Patricia Grewell, San Mateo, all of Calif., assignors to Oracle Corporation, Redwoood Shores, Calif.

Filed May 30, 1997, Appl. No. 866,200

Int. Cl.[7] G06F *13/00*

U.S. Cl. 710—200 **23 Claims**



1. A method for managing shared resources in a multiprocessing computer system, said method comprising the computer-implemented steps of:

a coordinator process identifying resources to be operated upon by a plurality of worker processes;

the coordinator process acquiring locks from a lock manager to lock the resources on behalf of the plurality of worker processes such that the coordinator process is indicated to be a holder of the locks; and

the plurality of worker processes operating on the resources locked by the coordinator process without the plurality of worker processes acquiring locks to the resources.

6,041,385

METHOD AND APPARATUS FOR PROTECTING DATA USING LOCK VALUES IN A COMPUTER SYSTEM

Mark S. Shipman, Hillsboro; Orville H. Christeson, and Timothy E. W. Labatte, both of Portland, all of Oreg., assignors to Intel Corporation, Santa Clara, Calif.

Continuation of application No. 08/623,930, Mar. 28, 1996, Pat. No. 5,852,736. This application Oct. 14, 1998, Appl. No. 172,777.

This patent is subject to a terminal disclaimer.

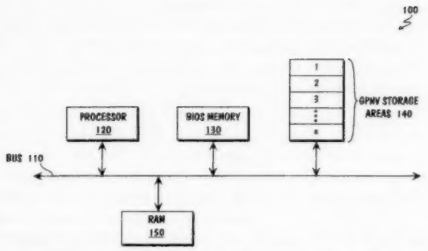
Int. Cl.[7] G06F *13/00*

U.S. Cl. 710—200 **37 Claims**

37. A computer system comprising:

a processor;

a first hardware-readable medium having stored therein a first plurality of instructions, the first plurality of instructions



including instructions which, when executed by the processor, cause the processor to perform the steps of:

(a) indicating that a nonvolatile storage area does not support locked accesses;

(b) receiving a request to perform a locked access write to the nonvolatile storage area;

(c) checking whether a lock value corresponding to the request is valid; and

(d) writing data corresponding to the request to the nonvolatile storage area if the lock value is valid; and,

a second hardware-readable medium having stored therein a second plurality of instructions, the second plurality of instructions including instructions which, when executed by the processor, cause the processor to perform the steps of:

(a) making a read request to read the nonvolatile storage area; and

(b) making a request to perform a locked access write to the nonvolatile storage area accompanied by a valid lock value, after the processor indicates that the nonvolatile storage area does not support locked accesses.

6,041,386

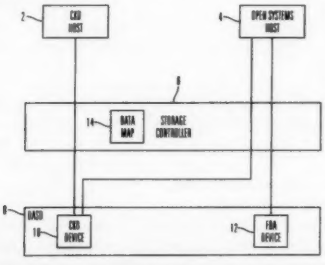
DATA SHARING BETWEEN SYSTEM USING DIFFERENT DATA STORAGE FORMATS

Keith Anthony Bello, Tucson, Ariz., assignor to International Business Machines Corporation, Armonk, N.Y.

Filed Feb. 10, 1998, Appl. No. 21,498

Int. Cl.[7] G06F *12/00*

U.S. Cl. 711—4 **28 Claims**



1. A method for extracting data from a device storing data in a first format, wherein the first format is comprised of a plurality of tracks, wherein each track has at least one data area, and wherein each data area is comprised of at least one addressable block of data, comprising the steps of:

(a) receiving a request from a host system for an address of a block of data in a second data format;

(b) determining a byte displacement value for the requested address;

(c) locating a data area in a track in the device having a byte displacement value less than the byte displacement value for the requested address;

(d) determining a byte location offset by subtracting the byte displacement value for the located data area from the byte displacement value for the requested address;

(e) determining a location in the located data area of a block of data at the byte location offset; and

(f) providing the host system with the located block of data.

6,041,387

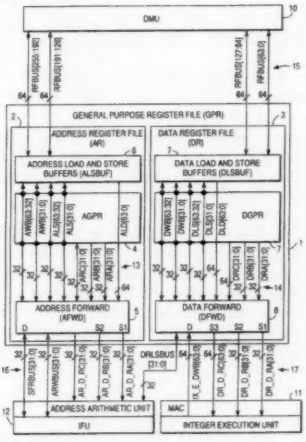
APPARATUS FOR READ/WRITE-ACCESS TO REGISTERS HAVING REGISTER FILE ARCHITECTURE IN A CENTRAL PROCESSING UNIT

Rod G. Fleck, Mountain View, and Roger D. Arnold, Sunnyvale, both of Calif., assignors to Siemens Aktiengesellschaft, Munich, Germany

Filed Sep. 12, 1997, Appl. No. 928,428

Int. Cl.[7] G06F *12/00*

U.S. Cl. 711—5 **11 Claims**



1. A data processing unit comprising:

a set of data registers and a set of address registers, each register having a width of n bits, and each set of data and address registers comprising even and odd data and address registers, respectively,

first address load and store buffers associated with said even address registers and second address load and store buffers associated with said odd address registers,

first data load and store buffers associated with said even data registers and second data load and store buffers associated with said odd data registers,

a bus having a plurality of bus lines comprising a width of 4n bits being connected to said first and second store buffers,

a data memory unit being connected to said bus, wherein 2n-bit data words and 2n-bit address words can be transferred from or to said memory to or from one of said even, one of said odd data registers, one of said even, and one of said odd address registers in parallel;

wherein each register has a plurality of ports and at least one of said bus lines is coupled in parallel to selected registers of said set of data registers;

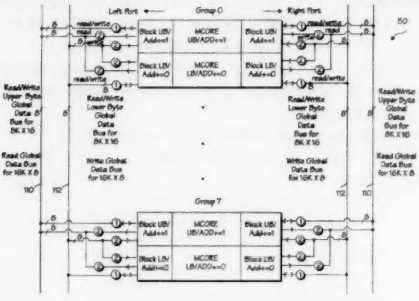
wherein each register comprises a memory cell having an input terminal and an output terminal, a plurality of tri-state buffers with inputs and outputs, said output terminal being connected to the inputs of said plurality of tri-state buffers;

wherein each register further comprises a plurality of transfer gates, said input terminal of said memory cell being connected to the outputs of said plurality of transfer gate.

6,041,388
CIRCUIT AND METHOD FOR CONTROLLING MEMORY DEPTH

Sudhaker Reddy Anumula, Starkville, Miss., and Ping Wu, Austin, Tex., assignors to Cypress Semiconductor Corporation, San Jose, Calif.

Provisional application No. 60/032,816, Dec. 11, 1996. This application Feb. 19, 1997, Appl. No. 804,025.
Int. Cl.[7] G06F *13/00*
U.S. Cl. 711—100 **19 Claims**



1. A circuit for controlling a memory depth, comprising:

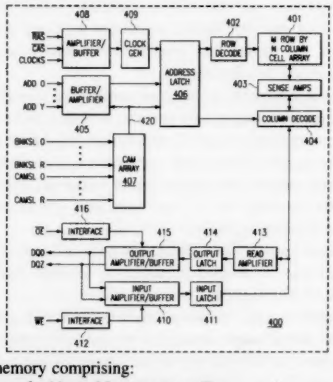
a memory array having (i) a fixed physical depth and (ii) a variable array depth selected from at least two members of the group consisting of xN bits, x(N+1) bits, 2x(N+1) bits, and (2x)N bits, where x and N are integers; and

control logic configured to (a) control read and/or write operations in said memory array and (b) recognize a first one of said array depths in response to one or more read and/or write control signal(s) and a first address comprising m bits, and a second one of said array depths in response to said one or more read and/or write control signal(s) and a second address comprising (m+1) bits, wherein (m+1)<2N and m is an integer.

6,041,389
MEMORY ARCHITECTURE USING CONTENT ADDRESSABLE MEMORY, AND SYSTEMS AND METHODS USING THE SAME

G. R. Mohan Rao, Dallas, Tex., assignor to E Cirrus Logic, Inc.

Filed Nov. 16, 1995, Appl. No. 559,379
Int. Cl.[7] G06F *12/00*
U.S. Cl. 711—108 **23 Claims**



1. A memory comprising:

an array of addressable memory cells;

addressing circuitry for accessing selected ones of said memory cells in response to received location address bits said address circuitry including a row decoder for selecting a row of said memory cells of said array in response to a row address and a column decoder for accessing selected cells along a said selected row in response to a column address;

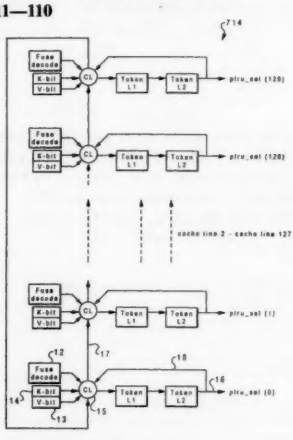
an address buffer for selectively passing said received address bits to said addressing circuitry; and

a content addressable memory cell including latching circuitry for storing a select bit associated with the array and an exclusive-NOR gate for comparing a received select bit with the stored select bit associated with said array, said exclusive-NOR gate having an output coupled to an enable line coupled to said address buffer for selectively enabling presentation of said address bits through said address buffer to said addressing circuitry for accessing addressed ones of said memory cells, said content addressable memory cell having a first input for receiving a signal to enable writing said stored select bit into said latching circuitry, and having one or more content inputs for receiving a bit to be stored.

6,041,390
TOKEN MECHANISM FOR CACHE-LINE REPLACEMENT WITHIN A CACHE MEMORY HAVING REDUNDANT CACHE LINES

Peichun Peter Liu; Rajinder Paul Singh, and Shih-Hsiung Steve Tung, all of Austin, Tex., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Dec. 23, 1996, Appl. No. 773,545
Int. Cl.[7] G06F *12/12*
U.S. Cl. 711—110 **14 Claims**



1. A cache memory, comprising:

a plurality of cache lines;

a plurality of token registers connected in a loop configuration, wherein each of said plurality of token registers is associated with a respective one of said plurality of cache lines;

a plurality of K-bit memory cells, wherein each of said plurality of K-bit memory cells is associated with a respective one of said plurality of cache lines;

a plurality of V-bit memory cells, wherein each of said plurality of V-bit memory cells is associated with a respective one of said plurality of cache lines; and

a token for indicating a candidate cache line for cache-line replacement, wherein said token resides within one of said plurality of token registers having its associated V-bit memory cell set to a first state, wherein said token moves to another one of said plurality of token registers when said associated V-bit memory cell changes to a second state, wherein said token skips a token register associated with a cache line when its associated K-bit memory cell is in a first state.

6,041,391

STORAGE DEVICE AND METHOD FOR DATA SHARING

Motohiro Kanda, Yokohama; Akira Yamamoto, Sagamihara; Toshio Nakano, Chigasaki, and Minoru Yoshida, Odawara, all of Japan, assignors to Hitachi, Ltd., Tokyo, Japan

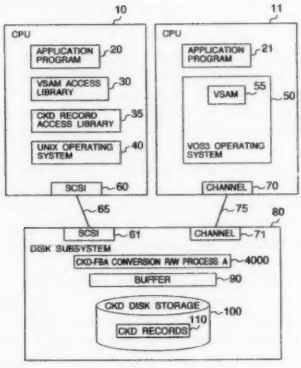
Continuation of application No. 09/256,472, Feb. 23, 1999, Pat. No. 5,983,317, which is a continuation of application No. 08/774,447, Dec. 30, 1996. This application May 21, 1999, Appl. No. 315,819.

Claims priority, application Japan, Jan. 19, 1996, 8-007136

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **G06F** *13/14*

U.S. Cl. 711—112 **4 Claims**



1. A computer system, comprising:

a first computer with a first channel interface;

a second computer with a first SCSI interface; and

a disk subsystem, storing count-key-data format data from the first computer in said disk subsystem, said disk subsystem including a second channel interface which is connected to the first channel interface of said first computer and a second SCSI interface which is connected to the first SCSI interface of said second computer,

wherein said first computer prepares dataset managing information which includes a plurality of data set location addresses corresponding to dataset names of the count-key-data format data, wherein each dataset location address is in a count-key-data format, and

wherein in said second computer, responsive to a disk access request from an application program identifying a dataset name, said second computer generates a block address from a dataset location address based on the dataset managing information, wherein the dataset location address corresponds to the dataset name identified by the disk access request, and sends the block address through the first SCSI interface to said disk subsystem.

6,041,392

DISK DRIVE DEVICE AND METHOD FOR CONTROLLING THE SAME

Atsushi Kanamaru, Sagamihara; Toshio Kakihara, Fujisawa; Yuhji Kigami, Yamato, and Takahiro Saitoh, Yokohama, all of Japan, assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Mar. 27, 1998, Appl. No. 49,680

Claims priority, application Japan, Mar. 27, 1997, 9-074949

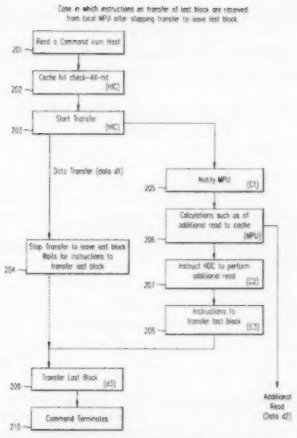
Int. Cl.[7] **G06F** *12/08*

U.S. Cl. 711—113 **5 Claims**

1. A method of controlling a read operation in a disk drive, comprising the steps of:

(a) receiving a read command;

(b) determining whether all data blocks requested by said read command are stored in a cache memory;



Zone in which instructions on transfer of last block are received from local MPU after stopping transfer to leave last block
Read a Command from Host
201
Cache hit check--All--hit (MC)
202
Start Transfer (MC)
203
Data Transfer (data d1)
Notify MPU (C1)
205
Calculations such as of additional read to cache (MPU)
206
Stop Transfer to leave last block Waits for instructions to transfer last block
204
Instruct HDC to perform additional read (C2)
207
Instructions to transfer last block (C3)
208
Transfer Last Block (d3)
209
Command Terminates
210
Additional Read (Data d2)

(c) if it is determined that all of said data blocks are stored in said cache memory, notifying a local microprocessor of the receipt of said read command and the all-hit status;

(d) transferring all of said data blocks except for at least a last one of said data blocks from said cache memory to an external host without any intervention from said local microprocessor; and

(e) transferring said at least said last one of said data blocks from said cache memory to said external host upon an instruction from said local microprocessor.

6,041,393

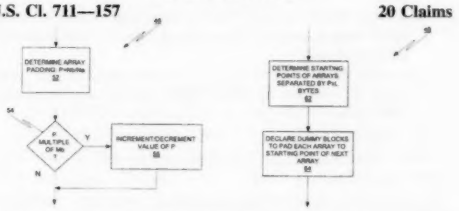
ARRAY PADDING FOR HIGHER MEMORY THROUGHPUT IN THE PRESENCE OF DIRTY MISSES

Wei Hsu, Cupertino, Calif., assignor to Hewlett-Packard Co., Palo Alto, Calif.

Filed Aug. 23, 1996, Appl. No. 704,218

Int. Cl.[7] **G06F** *12/06*

U.S. Cl. 711—157 **20 Claims**



1. A method of increasing memory throughput in a computer system which includes a CPU with a cache and an interleaved memory system, the method comprising:

determining a number of memory banks (Nb) in the memory system;

identifying a number of arrays (Na) in a loop in a program to be executed on the CPU;

determining a cache line size (Ls) of the cache;

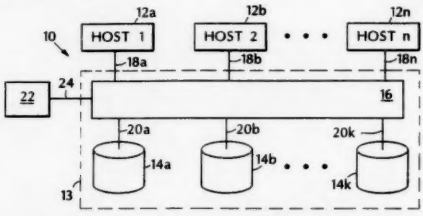
determining a spacing among a number of arrays to be stored in the memory system according to the number of memory banks (Nb), the number of arrays (Na) to be accessed in the loop, and the cache line size (Ls); and

padding the arrays by the array spacing.

6,041,394
DISK ARRAY WRITE PROTECTION AT THE SUB-UNIT LEVEL

Kenneth A. Halligan, Leominster, and Erez Ofer, Brookline, both of Mass., assignors to EMC Corporation, Hopkinton, Mass.

Filed Sep. 24, 1997, Appl. No. 935,458
Int. Cl.[7] G06F *13/14*
U.S. Cl. 711—166 **19 Claims**



11. In a system having a plurality of host computers and at least one mass storage device having a controller for accessing a plurality of logical volumes, at least one of said logical volumes being able to be written to by at least two of said hosts at different controller ports, a method for changing the write protect status of a said logical volume comprising the steps of

obtaining control of a write protect lock, in response to a host request, from a first host, for a change in write Protect status for at least one selected logical volume,

writing, in response to said first host, a write protect message to a logical volume memory location associate with each logical volume to be affected,

setting a flag message in a message memory location indicating a change in said logical volume memory location,

polling the message memory location for set flag messages,

writing, in response to a set flag message, in a local memory associated with the controller port associated with the requesting host, a status of at least all logical volumes accessible from said port,

preventing, at the controller, a host from writing to a protected logical volume as identified by data in a said controller's local memory, and

further wherein said request affects one of only a specified logical volume and all logical volumes which are accessible from the affected port, and

wherein said request includes one of the following modes:

a) no operation to be performed,

b) a write enable for all logical volumes seen from the port,

c) a write disable to effect all logical volume(s) seen from the port,

d) a write enable for all logical volumes seen from the port and a write disable for these logical volumes seen from any other port, and

e) a write disable for all logical volumes seen from the port and a write enable for these logical volumes seen from any other port.

6,041,395
SYSTEM AND METHOD FOR CHANGING PARTITION MAPPINGS TO LOGICAL DRIVES IN A COMPUTER MEMORY

Alan E. Beelitz, Austin, Tex., assignor to Dell USA, L.P., Round Rock, Tex.

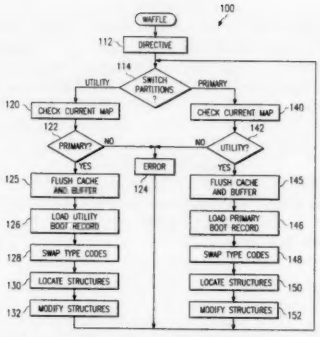
Filed Dec. 3, 1997, Appl. No. 984,386
Int. Cl.[7] G06F *12/00*
U.S. Cl. 711—173 **12 Claims**

1. A computer comprising:

at least one processor for running operating code;

at least one storage accessible by the processor, the storage being separated into at least two partitions;

the operating code for using a logical reference to the storage and including a table for mapping the logical reference to a first partition of the at least two partitions; and



a routine for dynamically switching, in response to a directive provided by a manufacturing process, the logical reference to a second partition of the at least two partitions by altering the table;

wherein the first and second partitions each include a type code and wherein the routine swaps the type of each partition when it changes the logical reference, so that the partition to which the logical reference is made has a type that is visible to the operating code and the other partition has a type that is not visible to the operating code,

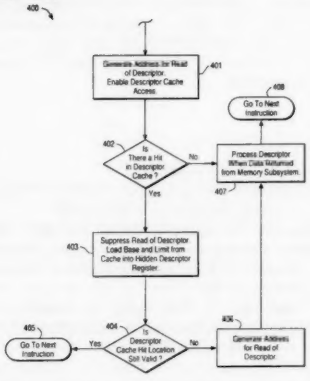
wherein the first and second partitions each include a status code and wherein the routine also swaps the status of each partition when it changes the logical reference, so that the partition to which the logical reference is made has an active status and the other partition does not have an active status, and

wherein after the routine alters the table, the processor may continue running the operating code without requiring the computer to reboot and when the operating code uses the logical reference to the storage, the operating code is mapped to the second partition.

6,041,396
SEGMENT DESCRIPTOR CACHE ADDRESSED BY PART OF THE PHYSICAL ADDRESS OF THE DESIRED DESCRIPTOR

Larry Widigen, Salinas, Calif., assignor to Advanced Micro Devices, Inc., Sunnyvale, Calif.

Filed Mar. 14, 1996, Appl. No. 615,912
Int. Cl.[7] G06F *12/08*
U.S. Cl. 711—206 **24 Claims**



1. In a microprocessor memory management system, a segment of a memory being specified by a segment descriptor, the segment descriptor being stored at a first physical address in a descriptor table held in the memory, a method of loading the segment

descriptor into a segment descriptor register in response to a segment selector load instruction specifying a selector, the method comprising:

forming a first part of the first physical address;

searching for the segment descriptor in a part of a descriptor cache, the descriptor cache including a plurality of entries, the part of the descriptor cache including one or more of the entries and being addressed by the first part of the first physical address; and

after the step of searching fails to find the segment descriptor in the descriptor cache, loading a second part of the first physical address into a first entry of a physical address cache, the physical address cache including a plurality of entries.

6,041,397

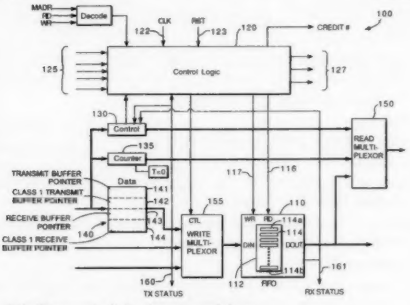
EFFICIENT TRANSMISSION BUFFER MANAGEMENT SYSTEM

Wayne Rickard, Oceanside; Peter Fiacco, Yorba Linda, and Vi Chau, Laguna Niguel, all of Calif., assignors to Emulex Corporation, Costa Mesa, Calif.

Division of application No. 08/484,592, Jun. 7, 1995, Pat. No. 5,860,149. This application Jan. 12, 1999, Appl. No. 229,464.

Int. Cl.[7] G06F *12/00*

U.S. Cl. 711—209 **4 Claims**



1. A buffer control device comprising:

(a) first and second transmit registers for transmitting data;

(b) first and second receive registers for receiving said data from said transmit registers;

(c) a first-in-first-out (FIFO) memory for storing a list of buffer pointers, said buffer pointers being assigned from a top of the FIFO memory and returned to a bottom of the FIFO memory;

(d) control logic coupled to said FIFO memory, said control logic assigning buffer pointers from said transmit registers, and moving buffer pointers from the transmit registers to the bottom of the first-in-first-out memory; and

(e) means for asserting a signal coupled with said control logic, said means asserting a signal if a buffer pointer is returned to the first transmit register or the first receive register but not if the buffer pointer is returned to the second transmit register or the second receive register.

6,041,398

MASSIVELY PARALLEL MULTIPLE-FOLDED CLUSTERED PROCESSOR MESH ARRAY

Gerald George Pechanek, Endwell; Stamatis Vassiliadis, Vestal, and Jose Guadalupe Delgado-Frias, Endwell, all of N.Y., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Jun. 26, 1992, Appl. No. 904,916

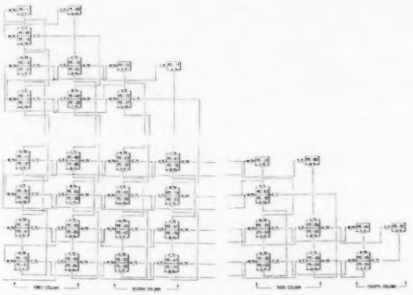
This patent is subject to a terminal disclaimer.

Int. Cl.[7] G06F *15/80*

U.S. Cl. 712—11 **7 Claims**

1. A triple-folded array parallel computing system comprising:

a plurality of processing elements (PEs) each coupled to a plurality of others of said PEs such that the plurality of PEs is



logically equivalent to at least a square two dimensional array configuration of PEs having an equal number of PE's as said computing system, for executing at least algorithms executable on the two dimensional array configuration;

each of the PEs comprising: a plurality of I/O ports for sending and receiving instructions and data to and from coupled ones of the PEs, means for executing instructions, and means for storing instructions and data;

a portion of the PEs paired by a first diagonal fold in said square array into a plurality of symmetric PEs forming a first fold mesh, the symmetric PEs each comprising a pair of a first PE and a second PE sharing each of said I/O ports as shared ports for sending and receiving instructions and data such that each of the pair of PEs communicates with PEs originally coupled to the first PE and with PEs originally coupled to the second PE of said pair of PEs, said pair of PEs including PE_{ij} and PE_{ji}, where i and j are column and row designators of a PE in said logically equivalent square two dimensional array configuration, and where i and j are positive non-equal integers;

a remaining portion of the PEs configured into a plurality of diagonal PEs, the diagonal PEs each coupled to two symmetric PEs each via one of said shared ports; and

said plurality of symmetric PEs and diagonal PEs grouped by consecutive second and third folds in said first fold mesh, into a plurality of clusters each comprising a plurality of PEs, a portion of the clusters each comprising four symmetric PEs and a remaining portion of the clusters each comprising two diagonal PEs, the plurality of clusters each comprising an additional coupling between a pair of previously uncoupled PEs.

6,041,399

VLIW SYSTEM WITH PREDICATED INSTRUCTION EXECUTION FOR INDIVIDUAL INSTRUCTION FIELDS

Koichi Terada, Yokohama; Keiji Kojima, Sagamihara; Yoshifumi Fujikawa, Hiroshima-ken; Tohru Nojiri, Tokyo, and Kiyokazu Nishioka, Odawara, all of Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Filed Jun. 27, 1997, Appl. No. 884,667

Claims priority, application Japan, Jul. 11, 1996, 8-182141

Int. Cl.[7] G06F *9/38*

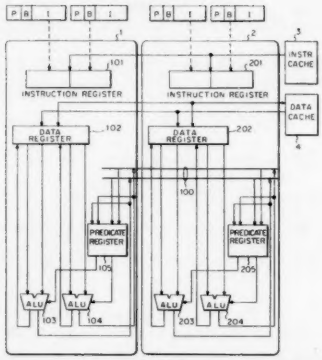
U.S. Cl. 712—24 **13 Claims**

1. A processing apparatus executing a plurality of instruction fields in one instruction word in parallel, comprising:

a plurality of registers provided corresponding to a plurality of instruction field groups, each instruction field group including:

at least one instruction field,

a circuit for storing values to a plurality of registers based on the result of an operation, and



an operation circuit for selecting whether an operation should be executed based on an evaluation of the values stored in said plurality of registers, said operation circuit having a register which is independent of the other registers in the other operation circuits, each of said independent registers being updated with a result of the evaluation.

6,041,400

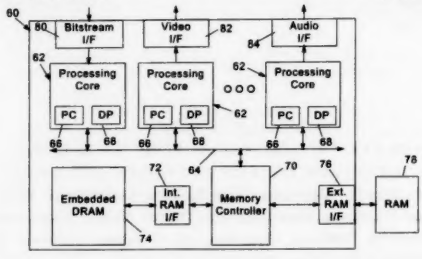
DISTRIBUTED EXTENSIBLE PROCESSING ARCHITECTURE FOR DIGITAL SIGNAL PROCESSING APPLICATIONS

Taner Ozcelik, Palo Alto; Shirish Gadre, and Yew-Koon Tan, both of San Jose, all of Calif., assignors to Sony Corporation, Tokyo, Japan, and Sony Electronics Inc., Park Ridge, N.J.

Filed Oct. 26, 1998, Appl. No. 179,147

Int. Cl.[7] G06F *19/00*

U.S. Cl. 712—35 **40 Claims**



1. An integrated circuit device circuit arrangement for processing multimedia data, the circuit arrangement comprising:

(a) a communications bus; and

(b) a plurality of processing cores coupled to one another over the communications bus, each processing core including:

(1) a hardwired datapath configured to perform a predetermined digital signal processing (DSP) operation; and

(2) a programmable controller coupled to the hardwired datapath, the programmable controller configured to execute a local computer program to control the operation of the hardwired datapath to process data received by the processing core over the communications bus.

6,041,401

COMPUTER SYSTEM THAT PLACES A CACHE MEMORY INTO LOW POWER MODE IN RESPONSE TO SPECIAL BUS CYCLES EXECUTED ON THE BUS

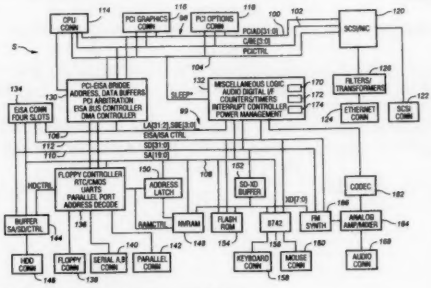
Jens K. Ramsey, Houston; Jeffrey C. Stevens, Spring; Michael E. Tubbs, Montgomery, and Charles J. Stancil, Tomball, all of Tex., assignors to Compaq Computer Corporation, Houston, Tex.

Continuation of application No. 08/703,927, Aug. 28, 1996, Pat. No. 5,813,022, which is a continuation of application No. 08/323,110, Oct. 14, 1994, abandoned. This application Feb. 27, 1998, Appl. No. 32,429.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] G06F *12/00*

U.S. Cl. 712—43 **5 Claims**



1. A computer system, comprising:

a bus;

a main memory array coupled to the bus;

a microprocessor coupled to the bus; and

a disk drive coupled to the microprocessor, the disk drive adapted to be spun down to save power:

wherein the microprocessor generates a special cycle responsive to the disk drive being spun down;

a circuit including:

a cache memory device coupled to the bus, the cache memory device having a chip select input;

a special cycle decoder coupled to the bus for asserting a first signal if the special cycle is detected; and

a chip selector coupled to the chip select input of the cache memory device, the chip select generator deasserting the chip select input if the first signal is asserted, wherein the cache memory device is placed into the low power state in response to the chip select signal being deasserted;

wherein the special cycle is a halt special cycle, and wherein the microprocessor generates the halt special cycle on the bus if the microprocessor executes a halt instruction, the halt instruction causing operation of the microprocessor to cease and to place the microprocessor into low power consumption mode.

6,041,402

DIRECT VECTORED LEGACY INSTRUCTION SET EMULATION

William J. Cannon, Centerville; David K. Remnant, Dayton; Paul D. Ward, Franklin, and Timothy R. Hoerig, Beavercreek, all of Ohio, assignors to TRW Inc., Redondo Beach, Calif.

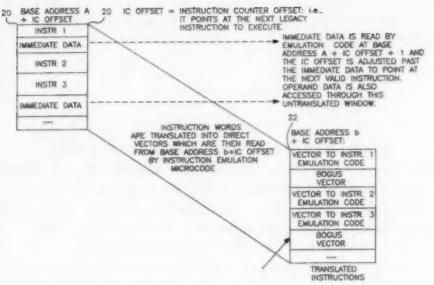
Filed Jan. 5, 1998, Appl. No. 2,960

Int. Cl.[7] G06F *9/30*

U.S. Cl. 712—200 **5 Claims**

1. An apparatus for emulating legacy instructions comprising:

means for emulating said legacy instructions, said emulating means including software routines for emulating said legacy instructions, the address of each software routine being identified by a vector;



20 BASE ADDRESS A + IC OFFSET
20 IC OFFSET = INSTRUCTION COUNTER OFFSET; i.e., IT POINTS AT THE NEXT LEGACY INSTRUCTION TO EXECUTE.
INSTR 1
IMMEDIATE DATA
INSTR 2
INSTR 3
IMMEDIATE DATA
IMMEDIATE DATA IS READ BY EMULATION CODE AT BASE ADDRESS A + IC OFFSET + 1 AND THE IC OFFSET IS ADJUSTED PAST THE IMMEDIATE DATA TO POINT AT THE NEXT VALID INSTRUCTION. OPERAND DATA IS ALSO ACCESSED THROUGH THIS UNTRANSLATED WINDOW.
22
BASE ADDRESS b + IC OFFSET:
INSTRUCTION WORDS ARE TRANSLATED INTO DIRECT VECTORS WHICH ARE THEN READ FROM BASE ADDRESS b+IC OFFSET BY INSTRUCTION EMULATION MICROCODE
VECTOR TO INSTR. 1 EMULATION CODE
BOGUS VECTOR
VECTOR TO INSTR. 2 EMULATION CODE
VECTOR TO INSTR. 3 EMULATION CODE
BOGUS VECTOR
TRANSLATED INSTRUCTIONS

means for translating said legacy instructions to direct vectors for said software routines for emulating said legacy instructions; and

means for fetching said direct vectors in response to requests for said legacy instructions.

6,041,403

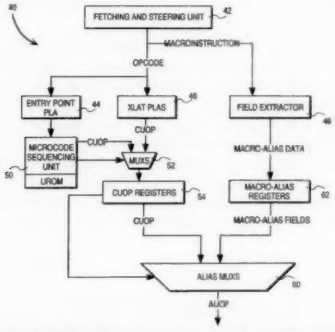
METHOD AND APPARATUS FOR GENERATING A MICROINSTRUCTION RESPONSIVE TO THE SPECIFICATION OF AN OPERAND, IN ADDITION TO A MICROINSTRUCTION BASED ON THE OPCODE, OF A MACROINSTRUCTION

Donald D. Parker, Beaverton; Darrell D. Boggs, Aloha, and Alan B. Kyker, Portland, all of Oreg., assignors to Intel Corporation, Santa Clara, Calif.

Filed Sep. 27, 1996, Appl. No. 721,900

Int. Cl.[7] **G06F** *9/28*

U.S. Cl. 712—210 **34 Claims**



1. A method of decoding a macroinstruction, the macroinstruction including an operational code (opcode) and a specification of an operand, the method comprising:

generating a first micro-instruction for execution by an execution unit of a processor, the first micro-instruction being generated responsive to an opcode of the macroinstruction; and

generating a second micro-instruction for execution by an execution unit of the processor as a micro-instruction distinct and separate from the first micro-instruction, the second micro-instruction being generated responsive to only the specification of the operand of the macroinstruction, wherein the specification of the operand requires an operand data shifting operation or a memory address calculation operation prior to execution of the first micro-instruction generated responsive to the opcode of the macroinstruction.

6,041,404

DUAL FUNCTION SYSTEM AND METHOD FOR SHUFFLING PACKED DATA ELEMENTS

Patrice Roussel, Portland; Srinivas Chennupaty, Oakland; Mike Cranford, Hillsboro, all of Oreg.; Mohammad Abdallah, Folsom, Calif.; Jim Coke, Shingle Springs, Calif., and Katherine Kong, Fair Oaks, Calif., assignors to Intel Corporation, Santa Clara, Calif.

Filed Mar. 31, 1998, Appl. No. 52,996

Int. Cl.[7] **G06F** *9/15*

U.S. Cl. 712—210 **24 Claims**

1. A computer system comprising:

a hardware unit to transmit data representing graphics to another computer or a display;

a processor coupled to the hardware unit; and

a storage device coupled to the processor and having stored therein an instruction, which when executed by the processor, causes the processor to at least,

access a first packed data operand having at least two data elements;

access a second packed data operand having at least two data elements;

select a first set of data elements from the first packed data operand;

copy each of the data elements in the first set to specified data fields located in the lower half of a destination operand;

select a second set of data elements from the second packed data operand; and

copy each of the data elements in the second set to specified data fields located in the upper half of the destination operand.

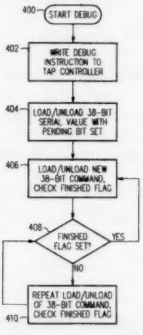
PARALLEL AND SERIAL DEBUG PORT ON A PROCESSOR

Daniel Mann, Austin, Tex., assignor to Advanced Micro Devices, Inc., Sunnyvale, Calif.

Provisional application No. 60/043,070, Apr. 8, 1997. This application Dec. 19, 1997, Appl. No. 994,518.

Int. Cl.[7] **G06F** *11/34;11/28*

U.S. Cl. 712—227 **14 Claims**



7. A method of sending and receiving debug information between a processor-based device and external debug equipment, comprising:

sending debug information serially to and from a serial debug port in the processor-based device;

providing a trace memory in said processor-based device, said trace memory storing information indicative of an order in which instructions are executed by said processor based device;

providing a parallel debug port formed of a plurality of pins configured to send and receive debug signals in parallel;

accessing one of a plurality of debug registers via one of said serial and parallel debug ports, said debug registers being accessible to both said serial debug port and said parallel debug port;

performing a debug operation in said processor-based device in response to signals received at one of said parallel and serial debug ports; and

communicating results of said debug operation from said processor-based device over one of said parallel and serial debug ports.

KEY DISTRIBUTION METHOD AND SYSTEM IN SECURE BROADCAST COMMUNICATION

Mototsugu Nishioka, Kawasaki; Hisashi Umeki, Yokohama, and Susumu Matsui, Machida, all of Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Filed Jun. 25, 1997, Appl. No. 882,339

Claims priority, application Japan, Jun. 28, 1996, 8-168975; Aug. 9, 1996, 8-210811; Aug. 19, 1996, 8-217050; Oct. 11, 1996, 8-269613

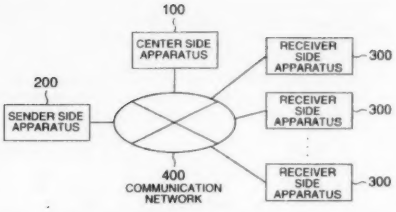
Int. Cl.[7] **H04K** *1/00*

U.S. Cl. 713—171 **42 Claims**

1. A key distribution system in which a sender and a plurality of receivers use individual key information generated beforehand by a key generator to share a common key information for performing a secure broadcast communication, wherein

(i) the key generator side is provided with:

means for generating confidential information of a receiver in association with a subset inclusive of at least two elements



of a first finite set **S1** on the basis of a space determined by a subset inclusive of at least two elements of a second finite set **S2**; and

means for distributing said confidential information to the receiver,

(ii) the sender side is provided with:

means for generating key distribution data corresponding to each element of said first finite set **S1**; and

communication means for making the multi-address transmission of said key distribution data,

and (iii) the receiver side is provided with:

storage means for storing said confidential information beforehand; and

means for calculating common key information K between the sender and the receiver from the stored confidential information for each receiver and the key distribution data.

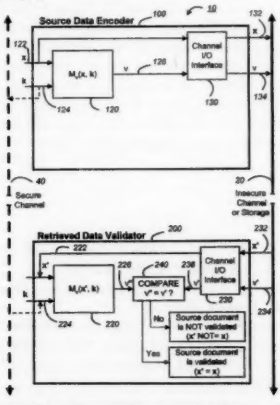
U.S. Cl. 713—176 **10 Claims**



1. In a system for a first entity to authenticate a second entity, said second entity claiming to be one previously been certified by issuance of a security token thereto, the system comprising:

a mapping shared between said first and second entities, said mapping dependent on at least first and second variables;

an authentication device of said first entity;

a transponder device of said second entity, and

wherein said authentication device of said first entity comprises:

means for receiving a certified copy of said security token;

means for deriving a specified value for the first variable of said mapping from said security token;

means for generating a specified value for the second variable of said mapping;

means for computing a first authentication code by evaluating said mapping at the respective specified value of the two variables;

means for transmitting the specified value for the second variable to said second entity; and

wherein said transponder device of said second entity comprises:

means for receiving a copy of said security token;

means for deriving the specified value for the first variable of said mapping from said security token;

means for receiving the specified value for the second variable from said first entity;

means for computing a second authentication code by applying said mapping evaluated at the respective specified value of the two variables; and

wherein said authentication device of said first entity further comprises:

means for receiving said second authentication code;

means for comparing said first and second authentication codes, thereby determining the authenticity of said second entity by whether or not the specified values of the first and second variables between said first and second entities are identical.

PERSONAL IDENTIFICATION FOB

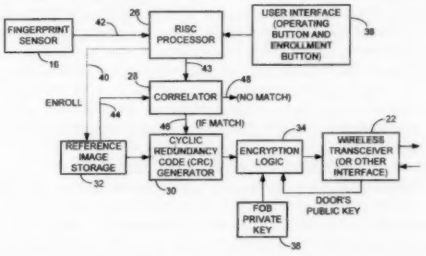
Shi-Ping Hsu, Pasadena, Calif.; James M. Ling, Great Falls, Va.; Arthur F. Messenger, and Bruce W. Evans, both of Redondo Beach, Calif., assignors to TRW Inc., Redondo Beach, Calif.

Filed Dec. 22, 1997, Appl. No. 995,267

This patent is subject to a terminal disclaimer.

Int. Cl.[7] **H04L** *9/10;9/30*

U.S. Cl. 713—186 **6 Claims**



1. A personal Identification fob for automatically verifying the identity of a user seeking to use the fob for access to a protected property, the fob comprising:

a sensor, for reading fingerprint data identifying a user seeking access to a protected property;

a memory for storing a reference fingerprint image of the user during an enrollment procedure and for holding the reference image for future use;

an image correlator, for comparing the stored reference image with a fingerprint image of the user seeking access, as obtained from the sensor, and for determining whether the two images match; and

means for securely communicating identity confirmation to a door that provides access to the protected property upon receipt of the identity confirmation, wherein the means for securely communicating identity confirmation includes

means for generating a numerical value from the stored reference fingerprint image, including means for generating a cyclic redundancy code from the stored reference fingerprint image,

encryption logic, for encrypting the numerical value, and

a transmitter for sending the encrypted numerical value to the door, together with user identification data,

wherein the door provides the desired access to the protected property upon confirming that the transmitted numerical value is the same as one previously provided by the user during a registration procedure.

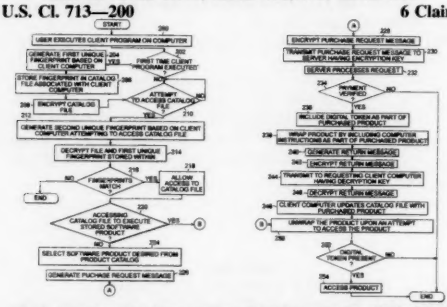
METHOD FOR DEFINING AND VERIFYING USER ACCESS RIGHTS TO A COMPUTER INFORMATION

Stuart Alan Wyatt, 24806 SE. Mirrormont Way, Issaquah, Wash. 98027

Filed Mar. 28, 1997, Appl. No. 827,548

Int. Cl.[7] G06F *13/00;* **H04L** *9/32;9/12;* **H04K** *1/00*

U.S. Cl. 713—200 **6 Claims**



1. A computer-implemented method for securing digital information to a first computing system received from a second computing system, the first and second computing systems each including one or more computing devices, the computer-implemented method comprising:

(a) requesting at least a portion of the digital information from the second computing system;

(b) transmitting the requested digital information from the second computing system to the first computing system, the requested digital information being wrapped with digital instructions recognizable by the first computing system; (c) electronically unwrapping the requested digital information at the first computing system in accordance with the digital instructions, wherein when unwrapped, the requested digital information is available for use by the first computing system; and

(d) storing a catalog file on the first computing system and electronically locking the catalog file to the first computing system by generating a first digital identifier uniquely corresponding to particular attributes of the first computing system and storing the first digital identifier as an associated portion of the catalog file, wherein the catalog file identifies the digital information available to be transmitted from the second computing system;

wherein

a determination is made as to whether the catalog file is validly located on a computing system by:

(a) generating a second digital identifier; and

(b) comparing the first digital identifier to the second digital identifier to determine whether the first digital identifier corresponds to the second digital identifier;

the first digital identifier is a function of the first computing system but is not a function of the requested digital information or the catalog file; and

said electronically unwrapping is performed upon an attempt to access the requested digital information by a computing system on which the requested digital information and the catalog file resides, said electronically unwrapping comprising:

(a) making said determination as to whether the catalog file is validly located on the computing system attempting to access the requested digital information;

(b) checking the catalog file for the presence of a product activation code corresponding to the requested digital information; and

(c) allowing access to the digital information only where the catalog file is validly located on the computing system attempting to access the requested digital information and the product activation code is present in the catalog file, wherein the product activation code is a function of the requested digital information but is not a function of the first computing system.

UNINTERRUPTIBLE POWER SUPPLY APPARATUS WHICH SUPPLIES GUARANTEED POWER TO ELECTRONIC APPARATUSES IN A SYSTEM

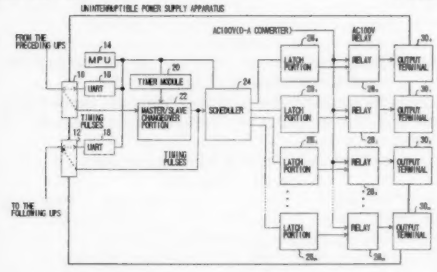
Kazuhito Kikuchi, Kawasaki, Japan, assignor to Fujitsu Limited, Kawasaki, Japan

Filed Jun. 6, 1997, Appl. No. 870,735

Claims priority, application Japan, Dec. 3, 1996, 8-322993

Int. Cl.[7] G06F *1/00*

U.S. Cl. 713—300 **8 Claims**



1. An uninterruptible power supply apparatus supplying power to electronic apparatuses, comprising:

a plurality of output terminals supplying power;

a timing holding unit holding timing information of a power supply start and/or stop of respective ones of said plurality of output terminals, said timing information being set independently for each of said plurality of output terminals; and

a timing pulse generating unit generating timing pulses for reading out the timing information from said timing holding unit,

wherein the power supply start and/or stop of each output terminal is performed based on the timing information read out from said timing holding unit and the timing information held by said timing holding unit is set by a user.

FIELD BUS ARRANGEMENT HAVING INDEPENDENT POWER CIRCUITS AND CONTROL CIRCUITS

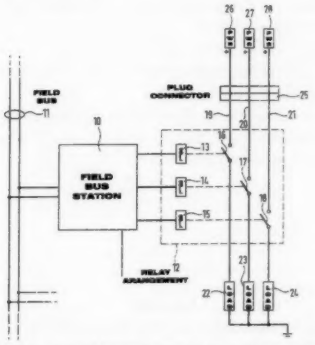
Karl-Heinz Förster, Commack, and Robert Conde, Coram, both of N.Y., assignors to Festo AG & Co, Esslingen, Germany

Filed Oct. 7, 1997, Appl. No. 946,400

Claims priority, application Germany, Oct. 11, 1996, 296 17 686 U

Int. Cl.[7] G06F *1/26;* **H02J** *13/00*

U.S. Cl. 713—300 **11 Claims**



1. A field bus arrangement comprising at least one field bus station adapted to be connected with a serial field bus, the field bus station capable of receiving instruction from the field bus and selectively generating a control output, and at least one load adapted to be controlled by way of the control output of the field bus station, wherein the at least one load is connected by way of a controlled switch with a power supply line provided in addition to lines of the field bus, wherein the power supply line is able to be switched on and switched off independently from the field bus station and the controlled switch is able to be selectively operated by the control output of the field bus station.

6,041,416

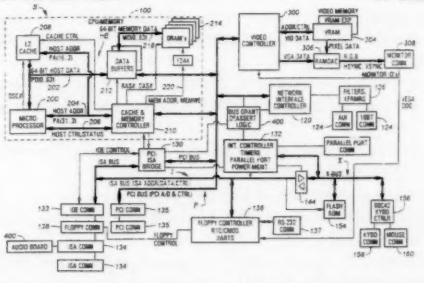
CIRCUIT FOR REDUCING AUDIO AMPLIFIER NOISE DURING POWERING ON AND OFF

Henry F. Lada, Jr., Cypress, Tex., assignor to Compaq Computer Corporation, Houston, Tex.

Continuation of application No. 08/818,346, Mar. 15, 1997, Pat. No. 5,794,057, which is a continuation of application No. 08/398,396, Mar. 3, 1995, Pat. No. 5,740,453. This application Mar. 9, 1998, Appl. No. 36,822.

Int. Cl.[7] G06F *13/00*

U.S. Cl. 713—330 **23 Claims**



1. An apparatus for controlling noise signals resulting from transients generated by the power-up or power-down of portions of a computer, said computer having a status signal indicative of the power state of the portions of the computer, the status signal being asserted to indicate power is being supplied to the portions and

being deasserted to indicate power is not being supplied to the portions, said apparatus comprising:

a power indicator having an input to receive the status signal and an output to provide a power indicator signal, the power indicator signal being asserted in response to the status signal being asserted and being deasserted a first delay time after the status signal is deasserted;

a mute indicator having an input to receive the status signal and an output to provide a mute indicator signal, the mute indicator signal being asserted in response to the status signal being deasserted and being deasserted a second delay time after the status signal is asserted;

an amplifier with a volume control input and a power supply input, said volume control input coupled to the output of said mute indicator; and

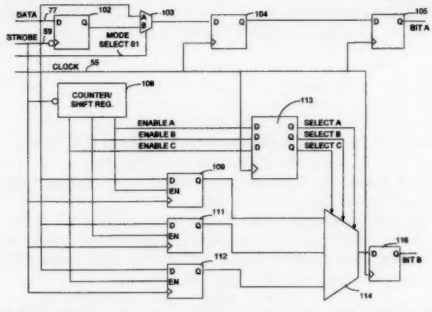
a power switch having a control input coupled to the output of said power indicator and an output coupled to said power supply input of said amplifier.

6,041,417

METHOD AND APPARATUS FOR SYNCHRONIZING DATA RECEIVED IN AN ACCELERATED GRAPHICS PORT OF A GRAPHICS MEMORY SYSTEM

Maynard D. Hammond, Lawrenceville, Ga., and James M. Dewey, Ft. Collins, Colo., assignors to Hewlett-Packard Company, Palo Alto, Calif.

Filed Jun. 4, 1998, Appl. No. 90,440
Int. Cl.[7] G06F *1/12*
U.S. Cl. 713—400 **23 Claims**



16. A method for synchronizing data with a clock signal, the clock signal having a clock cycle, wherein the data is being transmitted on the rising and falling edges of a strobe signal, the method comprising the steps of:

receiving data transmitted on the falling edge of a strobe signal and delaying the received data for a first predetermined delay period;

outputting the received data after the first predetermined delay period has ended;

detecting a rising edge of the strobe signal;

capturing the data transmitted on the detected rising edge of the strobe signal;

delaying the captured data for a second predetermined delay period; and

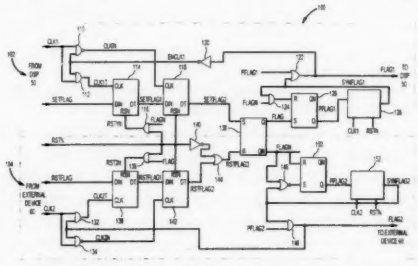
outputting the captured data after the second predetermined delay period has ended, wherein the data that is output after the first and second delay periods have passed is synchronized with the clock signal.

6,041,418

RACE FREE AND TECHNOLOGY INDEPENDENT FLAG GENERATING CIRCUITRY ASSOCIATED WITH TWO ASYNCHRONOUS CLOCKS

Feng Chen, Bethlehem; Ravi K. Kolagotla, Lansdale; Le T. Ly, Allentown; Jiancheng Mo, Allentown, and Hosahalli R. Srinivas, Allentown, all of Pa., assignors to Lucent Technologies, Inc., Murray Hill, N.J.

Filed Aug. 7, 1998, Appl. No. 131,373
Int. Cl.[7] G06F *1/12*
U.S. Cl. 713—400 **62 Claims**



1. A circuit for generating a control flag, said circuit comprising:

a first component connected to receive and be responsive to a first input signal, said first component generating a first flag signal representing said control flag to control a first device and generating a first output signal representing said first input signal;

a second component connected to receive and be responsive to a second input signal, said second component generating a second flag signal representing said control flag to control a second device and generating a second output signal representing said second input signal; and

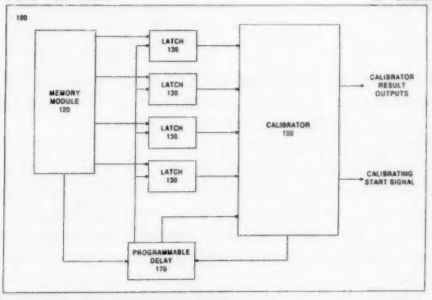
a third component connected to and responsive to said first and second output signals, said third component generating outputs connected to said first and second components, said outputs preventing said first and second flag signals from being generated by said first and second components at the same time.

6,041,419

PROGRAMMABLE DELAY TIMING CALIBRATOR FOR HIGH SPEED DATA INTERFACE

Chi-Jung Huang, Saratoga, and Ken Ming Li, Santa Clara, both of Calif., assignors to S3 Incorporated, Santa Clara, Calif.

Filed May 27, 1998, Appl. No. 85,984
Int. Cl.[7] G06F *1/12*
U.S. Cl. 713—401 **19 Claims**



1. A calibration system comprising:

a programmable delay module including a plurality of stages of delay for receiving a first signal and for transmitting a second signal, said second signal corresponding to the first signal

delayed by a delay value indicative of at least one of the plurality of stages of delay;

a latch that responds to the receipt of the second signal by sampling a third signal and transmitting a fourth signal; and

a result comparator, coupled to the latch, for comparing the third signal to the fourth signal, for responding to the fourth signal matching the third signal by transmitting a fifth signal having a first logic state and for responding to the fourth signal not matching the third signal by transmitting a fifth signal having a second logic state.

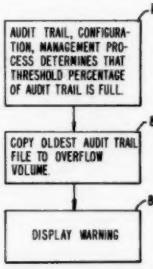
6,041,420
MULTI-VOLUME AUDIT TRAILS FOR FAULT TOLERANT COMPUTERS

Michael J. Skarpelos, San Jose; Robbert van der Linden, Scotts Valley; William J. Carley; James M. Lyon, both of San Jose, all of Calif., and Matthew C. McCline, Bellevue, Wash., assignors to Tandem Computers Incorporated, Cupertino, Calif.

Continuation of application No. 08/688,629, Jul. 29, 1996, Pat. No. 5,764,879, and a continuation-in-part of application No. 08/377,075, Jan. 23, 1995, Pat. No. 5,590,274. This application Mar. 3, 1998, Appl. No. 34,199.

Int. Cl.[7] **G06F** *11/34*

U.S. Cl. 714—7 **5 Claims**



800
AUDIT TRAIL, CONFIGURATION, MANAGEMENT PROCESS DETERMINES THAT THRESHOLD PERCENTAGE OF AUDIT TRAIL IS FULL.
802
COPY OLDEST AUDIT TRAIL FILE TO OVERFLOW VOLUME
804
DISPLAY WARNING

1. In a fault tolerant computer system having an audit generator, and a configuration management process that rotates storage of audit records generated by said audit generator through a trail of audit files stored on plural disk storage units, wherein after a selected audit file becomes full, audit records stored in the selected audit file are migrated to a long-term storage medium, leaving the selected audit file available to receive further audit trail records from said audit generator, a method for responding to excess generation of audit trail records comprising the steps of:

monitoring, using said configuration management process, filling of audit files of said trail with audit records and migration of audit files of said trail to said long-term storage medium; and

upon a first threshold percentage of audit files of said trail becoming full without having been migrated to said long-term storage medium, migrating at least one of said full unmigrated audit files to an overflow file on a selected one of the plural disk storage units.

6,041,421
STORAGE APPARATUS SYSTEM

Akira Yamamoto, Sagamihara, Japan, assignor to Hitachi, Ltd., Tokyo, Japan

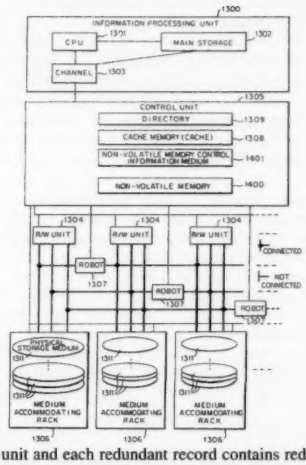
Filed Mar. 13, 1998, Appl. No. 41,785

Claims priority, application Japan, Mar. 14, 1997, 9-060506

Int. Cl.[7] **G06F** *11/00*

U.S. Cl. 714—7 **30 Claims**

21. A method of controlling a storage apparatus system which includes at least one storage medium group comprising a plurality of storage media for storing data records and redundant records, wherein each data record contains data accessed by an information



processing unit and each redundant record contains redundant data for recovering data contained in said data records, at least one spare storage media for storing data stored in a storage media incurring a failure and at least one medium accommodating rack comprising a plurality of accommodation units each accommodating one of said storage media or one of said spare storage media, said method comprising the steps of:

selecting, upon occurrence of a failure in any of said storage media of said storage medium group, one of said spare storage media for storing data stored in said storage media incurring a failure;

storing said data stored in said storage media incurring a failure in said selected spare storage media; and

restoring said selected spare storage media to an accommodation unit different from an accommodation unit originally occupied by said selected spare media upon completion of said storing step.

6,041,422
FAULT TOLERANT MEMORY SYSTEM

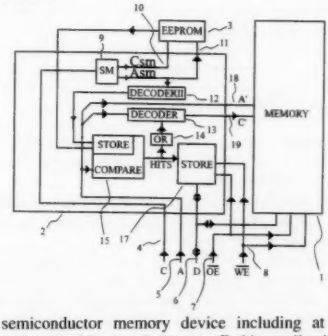
Alexander Roger Deas, Edinburgh, United Kingdom, assignor to Memory Corporation Technology Limited, United Kingdom

Continuation of application No. 08/525,586, filed as application No. PCT/GB94/00577, Mar. 21, 1994, abandoned. This application Oct. 24, 1997, Appl. No. 959,963.

Claims priority, application United Kingdom, Mar. 19, 1993, 9305801

Int. Cl.[7] **G06F** *11/20*

U.S. Cl. 714—8 **17 Claims**



1. A semiconductor memory device including at least one memory cell array chip, coupled to an off-chip application specific integrated circuit device (ASIC) (**2**), said ASIC including a redun-

dancy configuration comprising a redundancy memory cell array (**17**), a defective memory address storing circuit (**3**), an address comparing circuit and a redundancy memory cell selecting circuit (**21**,**22**,**14**), said ASIC further including associative storage means (**15**) having a plurality of storage elements each of which is coupled to a corresponding element in said redundancy memory cell array (**17**) and control means (**16**) for enabling or disabling said corresponding element according to whether an associated element in said at least one memory cell array chip is accessed or not, wherein:

said redundant memory cell array (**17**) comprises a plurality of substitute storage locations (**25**) mapped to corresponding defective locations in said at least one memory cell array chip, and said address comparing circuit comprises a plurality of comparators (**21**) each of which is arranged to compare a received address signal with a corresponding one of the addresses of the defective locations and which is coupled via a corresponding dedicated line to a corresponding one of the substitute storage locations (**25**) for enabling a read and/or write access to that substitute location and for disabling said at least one memory cell array chip if the compared addresses match; and

each of the storage elements of the associative storage means comprises a register means (**20**) for storing as a binary word the address of one of a plurality of defective locations in said at least one memory cell array chip and wherein each of the comparators is arranged individually to compare each of the bits stored in the register means with corresponding bits of the received address and to combine the results of the individual comparisons to provide a comparison result.

6,041,423

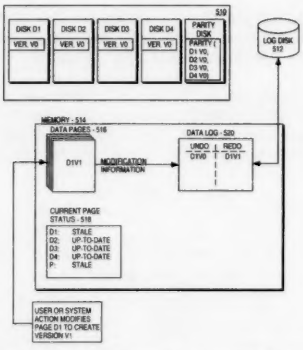
METHOD AND APPARATUS FOR USING UNDO/REDO LOGGING TO PERFORM ASYNCHRONOUS UPDATES OF PARITY AND DATA PAGES IN A REDUNDANT ARRAY DATA STORAGE ENVIRONMENT

Alex Tsukerman, Foster City, Calif., assignor to Oracle Corporation, Redwood Shores, Calif.

Filed Nov. 8, 1996, Appl. No. 747,064

Int. Cl.[7] **G06F** *11/00*

U.S. Cl. 714—19 **24 Claims**



1. A method of updating data in a redundant array storage system that includes a plurality of data pages and a corresponding parity page, the method comprising:

performing multiple modifications to the plurality of data pages;

deferring update of the parity page until after the multiple modifications have been performed;

updating the parity page in a single parity page update operation to bring the parity page up to date with the multiple modifications performed on the plurality of data pages, wherein updating the parity page in a single parity page update operation comprises updating the parity page based on most recent versions of each of the plurality of data pages;

retaining information in a data log for undoing the multiple modifications and for re-doing the multiple modifications;

detecting loss of one of the most recent versions of the plurality of data pages due to a system failure, the system failure occurring after one or more of the plurality of data pages in the redundant array storage system is updated to reflect the multiple modifications and before updating the parity page; and

regenerating the one of the most recent versions of the plurality of data pages based on the information in the data log and a stale version of the parity page.

6,041,424

METHOD OF ANALYZING SEMICONDUCTOR DEVICE OPERATION, METHOD OF ANALYZING SPECIFIC PHYSICAL PHENOMENA, AND APPARATUS FOR PERFORMING THESE METHODS

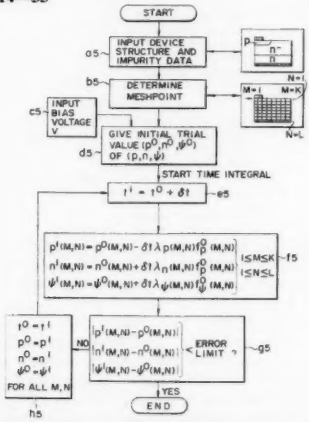
Mamoru Kurata, and Shin Nakamura, both of Tokyo, Japan, assignors to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Continuation of application No. 07/588,328, Sep. 26, 1990, abandoned. This application Nov. 30, 1992, Appl. No. 983,288.

Claims priority, application Japan, Sep. 29, 1989, 1-252189; Dec. 22, 1989, 1-331109; Mar. 2, 1990, 2-49484; Jul. 16, 1990, 2-187752

Int. Cl.[7] **G06F** *17/50*

U.S. Cl. 714—33 **18 Claims**



1. A method for modeling a semiconductor device by analyzing simultaneous equations consisting of electron- and hole-transport equations and Poisson's equation by means of a computer, said method comprising the steps of:

obtaining a representation of at least a structure and impurity concentrations of the semiconductor device;

rewriting the simultaneous equations to the following equations (a), (b), (c) containing time differential terms dp/dt, dn/dt, dψ/dt and sensitivity coefficients λ_p, λ_n, and λ_ψ:

$$dp/dt=-\lambda_p f_p \quad (a)$$

$$dn/dt=\lambda_n f_n \quad (b)$$

$$d\psi/dt=\lambda_\psi f_\psi \quad (c)$$

determining meshpoints (M,N) having spatial position dependency corresponding to the at least a structure and impurity concentrations of the semiconductor device;

transforming equations (a), (b) and (c) to the following equations (d), (e) and (f):

$$dp(M,N)/dt=-\lambda_p(M,N)f_p(M,N) \quad (d)$$

$$dn(M,N)/dt=\lambda_n(M,N)f_n(M,N) \quad (e)$$

$$d\psi(M,N)/dt=\lambda_{\psi}(M,N)f_{\psi}(M,N) \quad (f)$$

linearizing equations (d), (e) and (f), discreting the same with respect to time, and transforming the same to the following vector equation:

$$\begin{pmatrix}\delta p\\ \delta n\\ \delta\psi\end{pmatrix}_{i+dt} = A\begin{pmatrix}\delta p\\ \delta n\\ \delta\psi\end{pmatrix}_{i} \quad (g)$$

time-integrating equation (g) after obtaining such the sensitivity coefficients that an eigen value of an error propagation matrix A contained in equation (g) is less than 1, thereby solving the simultaneous equations; and

producing a model of said semiconductor device having physical values (p,n) at the respective meshpoints (M,N) obtained by using the solved simultaneous equations.

6,041,425

ERROR RECOVERY METHOD AND APPARATUS IN A COMPUTER SYSTEM

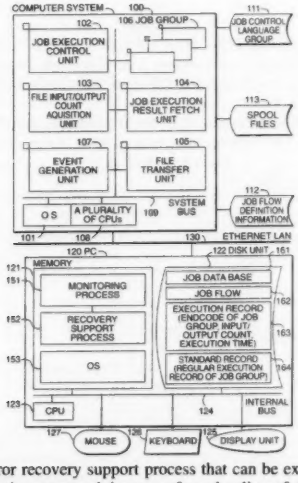
Motohide Kokunishi, Hachiouji; Hiromu Kato, Yokohama; Tsutomu Ito, Kanagawa, and Toshio Hirosawa, Machida, all of Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Filed Sep. 2, 1997, Appl. No. 921,572

Claims priority, application Japan, Sep. 3, 1996, 8-252487

Int. Cl.[7] G06F *11/277*

U.S. Cl. 714—37 **44 Claims**



12. An error recovery support process that can be executed in a recovery routine executed in one of a plurality of CPUs in a computer system, comprising:

executing a plurality of JOBs of a JOB group multiple times and storing an execution record for each JOB executed;

comparing the execution record of the JOB group when an error occurs with a regular execution record of the JOB group, the regular execution record being the execution record when the JOB group was executed normally;

detecting the cause of the error from said comparing;

storing an end code as the execution record for each execution of a JOB;

wherein said comparing compares the end code when the error occurs with the end code when no error occurs for JOBs of the JOB group and said detecting detects a JOB having a different end code as the cause of the error;

storing an execution time of each JOB as the execution record for the JOB;

wherein said comparing compares the execution time when the error occurs with the execution time when no error occurs for JOBs of the JOB group; and

wherein said detecting detects a JOB, whose execution time is out of a fixed minimum and maximum value of the execution time when no error occurs, as the cause of the error; and:

storing an input/output count as the execution record for each execution of a JOB;

wherein said comparing compares the input/output count when the error occurs with the input/output count without an error and

said detecting detects a JOB, whose input/output count is out of a fixed amount greater or less than the input/output count when no error occurs, as the cause of the error.

6,041,426

BUILT IN SELF TEST BIST FOR RAMS USING A JOHNSON COUNTER AS A SOURCE OF DATA

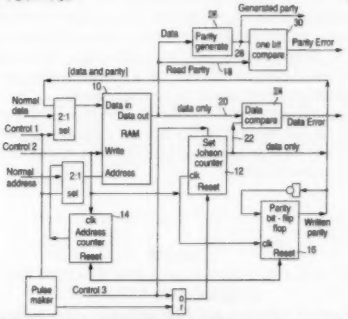
Fazal Ur Rehman Qureshi, San Jose, Calif., assignor to National Semiconductor Corporation, Santa Clara, Calif.

Continuation-in-part of application No. 08/502,574, Jul. 14, 1995, Pat. No. 5,689,466, which is a continuation-in-part of application No. 08/418,499, Apr. 7, 1995, abandoned. This application Oct. 24, 1997, Appl. No. 957,262.

This patent is subject to a terminal disclaimer.

Int. Cl.[7] G11C *29/00;7/00*

U.S. Cl. 714—719 **1 Claim**



1. A built in self test (BIST) method for testing an addressable circuit structure, the BIST method comprising:

providing a Johnson counter that provides its data output and its parity bit output as a data input to the addressable circuit structure;

initiating an address counter to count from zero to the full address range of the addressable circuit structure;

for each address provided by the address counter to the addressable memory structure, writing the data output and parity bit output from the Johnson counter to said address, reading the data and parity bit from said address, and comparing the data read from said address to the data and the parity bit read from the parity bit output of the Johnson counter; and written to said address

in the event there is a mismatch between the read data and the written data or between the read parity bit and the parity bit output, generating an interrupt signal.

6,041,427

SCAN TESTABLE CIRCUIT ARRANGEMENT

Paul S. Levy, Chandler, Ariz., assignor to VLSI Technology, San Jose, Calif.

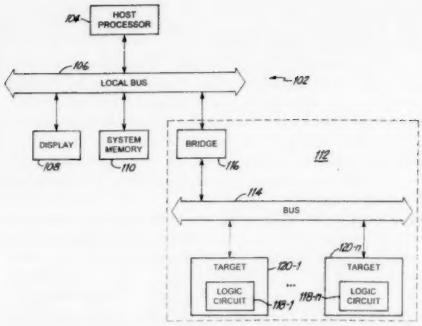
Filed Oct. 27, 1997, Appl. No. 958,530

Int. Cl.[7] G01R *31/28*

U.S. Cl. 714—724 **25 Claims**

1. A scan testable circuit arrangement, comprising:

a bus;



a plurality of logic circuits, each logic circuit having a plurality of scan test ports and a plurality input/output ports;

a first plurality of switches, each having a first terminal coupled to a predetermined signal line of the bus and a second terminal coupled to a respective one of the scan test ports of the logic circuits;

a second plurality of switches, each having a first terminal coupled to a predetermined signal line of the bus and a second terminal coupled to a respective one of input/output ports of the logic circuits;

a plurality of command decoders, coupled to the bus to receive bus commands and coupled to the gates of the first and second plurality of switches, configured and arranged to couple the scan test ports to the bus for a first operational mode responsive to a first set of the bus commands, and couple the input/output ports to the bus for a second operational mode responsive to a second set of commands and

a buffer circuit arranged to couple the bus to a local bus; and

a bypass circuit coupled to the bus and arranged to couple the bus to the local bus and bypass the buffer circuit during the first operational mode.

6,041,428

CONNECTION MATRIX FOR A MICROCONTROLLER EMULATION CHIP

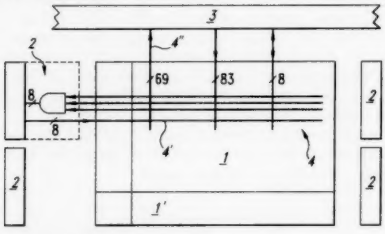
Sergio Pelagalli, Corsico, and Marco Losi, Milan, both of Italy, assignors to STMicroelectronics S.R.L., Agrate Brianza, Italy

Filed Mar. 5, 1998, Appl. No. 40,249

Claims priority, application European Pat. Off., Mar. 5, 1997, 97830097

Int. Cl.[7] G09R *31/28*

U.S. Cl. 714—734 **53 Claims**



1. A connection matrix for a microcontroller emulation chip, comprising comprising:

first and second MOS transistors connected in series with each other between first and second voltage references, and having their drain terminals in common to form a first internal circuit node;

third and fourth MOS transistors, also connected in series with each other between the first and second voltage references, and having their drain terminals in common to form a second internal circuit node, wherein said first and second transistors have their control terminals connected together and to the second internal circuit node, and said third and fourth transistors have their control terminals connected together and to the first internal circuit node;

fifth and sixth MOS transistors, respectively connected between first and second input terminals of the RAM cell and said first and second internal circuit nodes, and having respective control terminals connected to a third input terminal of the RAM cell;

at least one controlled switch connected between said first and second internal circuit nodes adapted to control said switch on/off, and provided with first and second connecting terminals between horizontal and vertical lines of the matrix;

special test cells connected to first and second testing terminals and comprising a first and second bypass switches connected between said first and second internal circuit nodes and the controlled switch of the special test cells;

a first buffer transistor connected between the first bypass switch and the second voltage reference and connected to the controlled switch of the test cell;

a second buffer transistor connected between the second internal circuit node and the second connecting terminal of the test cell and connected to the first test terminal;

a third buffer transistor connected between the first voltage reference and the controlled switch of the test cell and connected to the second testing terminal; and

a fourth buffer transistor connected between the first internal circuit node and the second connecting terminal and connected to the first testing terminal of the test cell.

6,041,429

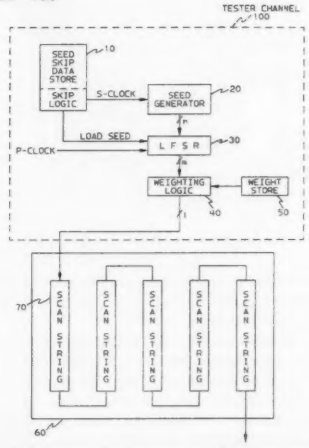
SYSTEM FOR TEST DATA STORAGE REDUCTION

Bernd Karl Ferdinand Koenemann, Hopewell Junction, N.Y., assignor to International Business Machines Corporation, Armonk, N.Y.

Continuation of application No. 07/534,600, Jun. 7, 1990, abandoned. This application Aug. 4, 1993, Appl. No. 101,641.

Int. Cl.[7] G06F *11/00*

U.S. Cl. 714—738 **4 Claims**



1. A circuit for generating sequences of test pattern bits, especially for application to large integrated circuit chips and systems designed with at least one scan path for testing, said circuit comprising:

pseudo-random pattern generator means including a plurality of register elements and a means for cycling said generator means so as to provide an output bit stream;

weighting means for receiving said output bit stream from said pattern generator and for generating bit sequences having a

selectively biased probability distribution of zeroes and ones in the bit sequences from said weighting means;

reseeding means for generating seed values to be loaded into the register elements within said pseudo-random pattern generator means at the beginning of new output bit streams; and

seed skipping means for causing said reseeding means to depart from a pre-established seed sequence by skipping over specified numbers of otherwise generated seed values.

6,041,430

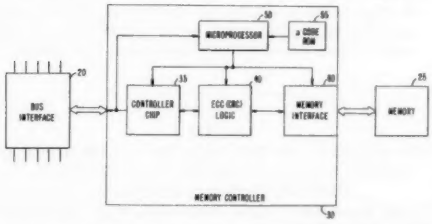
ERROR DETECTION AND CORRECTION CODE FOR DATA AND CHECK CODE FIELDS

Alan M. Yamauchi, Saratoga, Calif., assignor to Sun Microsystems, Inc., Palo Alto, Calif.

Filed Nov. 3, 1997, Appl. No. 963,501

Int. Cl.[7] **H03M** *13/00*

U.S. Cl. 714—752 **20 Claims**



1. A method of detecting errors in data, comprising the steps of:

a) generating a 9-bit check field for a 135-bit data field;

b) appending said check field to said data field so as to create a 144-bit cumulative data field;

c) transporting said cumulative data field to an agent;

d) generating a 9-bit syndrome (S[**8:0**]) for detecting errors using said cumulative data field; and

e) determining, based on said syndrome, whether said cumulative data field includes an error.

6,041,431

METHOD AND APPARATUS FOR PERFORMING ERROR CORRECTION CODE OPERATIONS

Arthur M. Goldstein, Santa Cruz, Calif., assignor to Adapter, Inc., Milpitas, Calif.

Filed Sep. 19, 1997, Appl. No. 933,568

Int. Cl.[7] **H03M** *13/00*

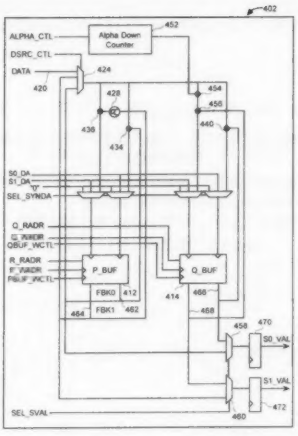
U.S. Cl. 714—784 **27 Claims**

1. A method for processing encoded data using error control coding comprising:

obtaining Q codewords and P codewords from a single pass through a codeword storage location, said P codewords and Q codewords defining a block of data bytes, wherein each of said P codewords includes data bytes defining a column in said block and wherein each of said Q codewords includes data bytes defining a diagonal in said block;

calculating Q partial syndromes for said diagonal Q codewords;

calculating P partial syndromes for said column P codewords; and



storing said Q partial syndromes and said P partial syndromes in a buffer separate from said codeword storage location.

6,041,432

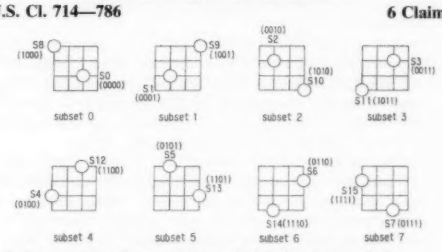
APPARATUS AND METHOD FOR DETECTING SIGNAL POINTS USING SIGNAL POINT-MAPPING

Tamotsu Ikeda, Tokyo, Japan, assignor to Sony Corporation, Tokyo, Japan

Division of application No. 08/394,507, Feb. 27, 1995, Pat. No. 5,717,706. This application Jan. 8, 1997, Appl. No. 780,347. Claims priority, application Japan, Mar. 4, 1994, 6-034328

Int. Cl.[7] **G06F** *11/10;* **H03M** *13/12*

U.S. Cl. 714—786 **6 Claims**



1. An apparatus for encoding a digital signal comprising:

encoding means for convolution encoding said digital signal, said encoded digital signal including a bit corresponding to parallel path information;

mapping means for mapping said encoded signal onto one of a plurality of predetermined signal points, said signal points being divided into a plurality of subsets, said plurality of subsets comprising at least two groups, each group having at least four subsets, each subset having at least first and second signal points arranged with respect to a reference point, wherein the first and second signal points of a first subset respectively correspond to the first and second signal points of a second subset when said first subset is rotated through an angle ϕ about said reference point, and a respective bit corresponding to respective parallel path information of the first signal point of said first subset being equal to a respective bit corresponding to respective parallel path information of the first signal point of said second subset and a respective bit corresponding to respective parallel path information of the second signal point of said first subset being equal to a respective bit corresponding to respective parallel path information of the second signal point of said second subset; and

modulating means for modulating the mapped signal.

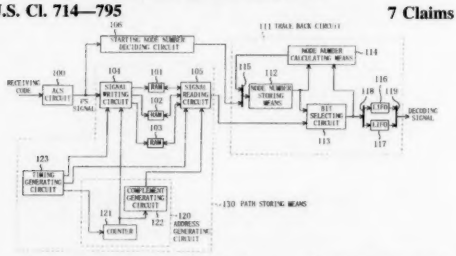
wherein the respective bit corresponding to respective parallel path information is the most significant bit of said digital signal.

6,041,433

VITERBI DECODER AND VITERBI DECODING METHOD

Takehiro Kamada, Osaka, Japan, assignor to Matsushita Electric Industrial Co., Ltd., Osaka, Japan

Filed Apr. 7, 1997, Appl. No. 833,483
Int. Cl.[7] H03M *13/00;13/12*
U.S. Cl. 714—795 **7 Claims**



1. A Viterbi decoder for decoding input received codes by a path trace technique wherein the constraint length of an encoder on the sending side is K and the trace-back length as a trace-back unit for decoding is m, each of said number K and said number m being a positive integer,

said Viterbi decoder comprising:

(a) an add-compare-select (ACS) circuit for accepting said received codes and for generating in response to each of said received codes a path select signal of $2^{(K-1)}$ bits, each of said $2^{(K-1)}$ bits corresponding to a respective node indicative of a state of said encoder;

(b) path storing means for storing m path select signals per unit from said ACS circuit;

(c) a starting node number deciding circuit for receiving m path select signals per unit from said ACS circuit and for determining, based on said m path select signals received, a starting node number for decoding which is a terminal node number through which a most likely path passes of a path select signal just before said m path select signals; and

(d) a trace-back circuit for receiving m path select signals from said path storing means and for sequentially performing trace-back operations on said m path select signals from a bit corresponding to said starting node number determined by said starting node number deciding circuit, for signal decoding;

wherein:

when m path select signals from said ACS circuit are written into said path storing means while a starting node number is determined by said starting node number deciding circuit, m path select signals, generated prior to said m path select signals, are read out in a sequence opposite to that in which said m select signals were written, and said m path select signals thus read are traced back by said trace-back circuit from a corresponding bit to said starting node number, and

said starting node number deciding circuit being provided with $2^{(K-1)}$ node deciding circuits corresponding to bits of a path select signal, i.e., nodes of said encoder;

each of said $2^{(K-1)}$ node deciding circuits including:

(a) node number calculating means for receiving a corresponding bit of a path select signal applied to said starting node number deciding circuit to the said node deciding circuit and for calculating a node number through which a path, which arrives at a corresponding node to said bit, passed in a path select signal just before said path select signal;

(b) node number storing means for storing a node number;

(c) first selecting means for receiving node numbers stored in said node number storing means of each of said node deciding circuits and for selecting a node number stored in a node number storing means of a node deciding circuit corresponding to a node number calculated by said node number calculating means; and

(d) second selecting means for selecting between a node number calculated by said node number calculating means and a node number selected by said first selecting means for forwarding to said node number storing means;

wherein:

when m path select signals are applied to said starting node number deciding circuit, said second selecting means selects, at the time when the first of said m path select signals is applied, a node number calculated by said node number calculating means while said second selecting means selects, at the time when the second to mth of said m path select signals are applied, a node number selected by said first selecting means, and after the mth of said m path select signals is applied said node number stored in said node number storing means becomes said starting node number.

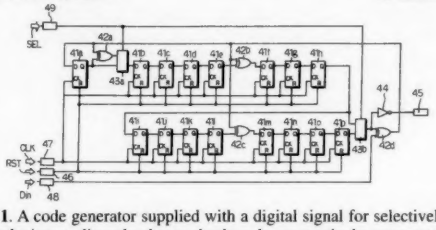
CODE GENERATOR FOR SELECTIVELY PRODUCING CYCLIC REDUNDANCY CHECK DATA CODES DIFFERENT IN DATA LENGTH

Yoshiyuki Kamishima, Tokyo, Japan, assignor to NEC Corporation, Tokyo, Japan

Filed Sep. 30, 1997, Appl. No. 941,320
Claims priority, application Japan, Oct. 9, 1996, 8-268046
Int. Cl.[7] H03M *13/00*
U.S. Cl. 714—807 **13 Claims**



1. A code generator supplied with a digital signal for selectively producing cyclic redundancy check codes respectively representative of cyclic redundancy check values through polynomials different from one another in degree, comprising:

a plurality of flip flop circuits equal in number to the maximum degree of said polynomials, and connected in cascade;

exclusive-OR gate means selectively inserted into the cascade connection of said plurality of flip flop circuits; and

multiplexing means selectively inserted into said cascade connection of said plurality of flip flop circuits, said exclusive-OR gate means and said multiplexing means forming a plurality of data paths selectively used for calculating said cyclic redundancy check values wherein each of said flip flop circuits consists only of a single flip flop.

Filed Feb. 12, 1999, Appl. No. 100,568

Term of patent 14 years

LOC (6) Cl. 12 - *15*

U.S. Cl. D12—147

421,734

EXTERIOR SURFACE CONFIGURATION OF A GRILL FOR A VEHICLE

Bruno Sacco, Sindelfingen, and Peter Pfeiffer, Boeblingen, both of Germany, assignors to DaimlerChrysler AG

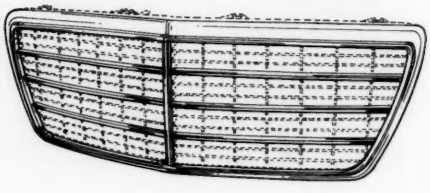
Filed May 25, 1999, Appl. No. 105,431

Claims priority, application Germany, Nov. 25, 1998, 498 11 626

Term of patent 14 years

LOC (6) Cl. 12 - *16*

U.S. Cl. D12—163



421,735

ALL TERRAIN WHEEL FOR A WHEELCHAIR

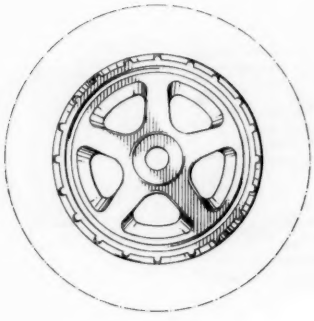
Brian Gagnon, 4311 NW. 64th Ave., Coral Springs, Fla. 33067

Filed Jan. 14, 1998, Appl. No. 82,069

Term of patent 14 years

LOC (6) Cl. 12 - *16*

U.S. Cl. D12—209



421,736

PICK-UP TRUCK LIGHTWEIGHT CARGO COVER

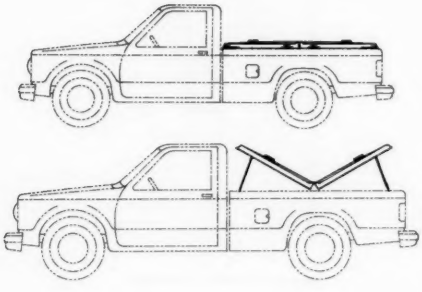
Donald E. Bogard, 22204 Dolphin Ct., Dearborn Heights, Mich. 48127

Filed Apr. 26, 1999, Appl. No. 103,919

Term of patent 14 years

LOC (6) Cl. 12 - *16*

U.S. Cl. D12—401



421,737

REAR CARRIER FOR AN OFF-ROAD VEHICLE

Hideyoshi Kosuge, Kakogawa; Takeshi Usui, Takasago; Kazuhiro Maeda, Akashi; Jiro Kitao, Kobe; Kazumasa Hisada, Akashi; Teruhito Momoi, Akashi, and Naoki Hashimoto, Akashi, all of Japan, assignors to Kawasaki Jukogyo Kabushiki Kaisha, Kobe, Japan

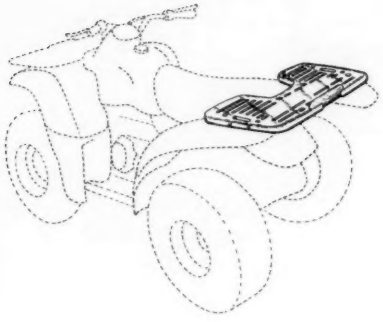
Filed Oct. 28, 1998, Appl. No. 95,659

Claims priority, application Japan, Apr. 28, 1998, 10-12334

Term of patent 14 years

LOC (6) Cl. 12 - *16*

U.S. Cl. D12—407



421,738

SPORTING GOODS INSERT FOR PICKUP STORAGE COMPARTMENT

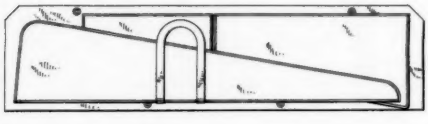
Stuart W. Gribble, 8253 Oxford Ct., Wichita, Kans. 67226, and Robert T. Hoffmann, 1220 Burning Tree Dr., Wichita, Kans. 67230

Filed Jul. 6, 1998, Appl. No. 90,288

Term of patent 14 years

LOC (6) Cl. 12 - *99*

U.S. Cl. D12—414.1



421,739

BATTERY LIFT HANDLE

Rodney Ivan Arthur, South Australia, Australia, assignor to Rope & Plastic Products Pty Ltd., South Australia, Australia

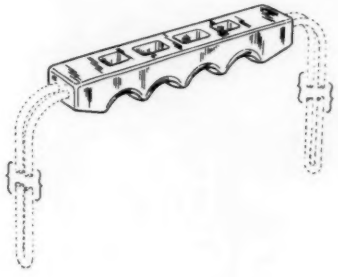
Filed Oct. 19, 1998, Appl. No. 95,224

Claims priority, application Australia, Apr. 17, 1998, 1079/1998

Term of patent 14 years

LOC (6) Cl. 13 - *02*

U.S. Cl. D13—119



421,740

BATTERY CLAMP

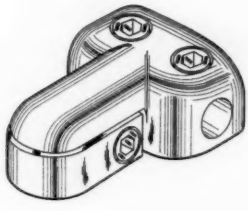
Keith A. Peterson, and Yasu Yamamoto, both of Portland, Oreg., assignors to Phoenix Gold International, Inc., Portland, Oreg.

Filed Nov. 2, 1998, Appl. No. 96,751

Term of patent 14 years

LOC (6) Cl. 13 - *03*

U.S. Cl. D13—120



421,741

SURGE PROTECTOR

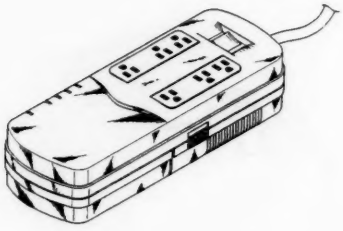
Ming Yu Lien, Hsin Tien, Taiwan, assignor to Sysgration Ltd., Taipei, Taiwan

Filed Jan. 6, 1999, Appl. No. 98,871

Term of patent 14 years

LOC (6) Cl. 13 - *03*

U.S. Cl. D13—139.8



421,742

JACK (OR PROTECTOR) FOR FEMALE CONNECTOR

Yoshikazu Katoh, Tokyo, Japan, assignor to Honda Tsushin Kogyo Co., Ltd., Tokyo, Japan

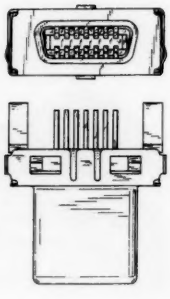
Filed Sep. 30, 1998, Appl. No. 94,336

Claims priority, application Japan, Mar. 31, 1998, 10-8918

Term of patent 14 years

LOC (6) Cl. 13 - *03*

U.S. Cl. D13—147



421,743

LENS FOR SEMICONDUCTOR ELEMENT

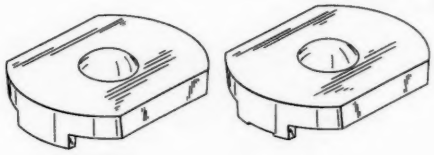
Kazuhiko Ueda, and Michio Koyama, both of Tokyo, Japan, assignors to Sony Corporation, Tokyo, Japan

Filed Mar. 19, 1997, Appl. No. 69,058

Term of patent 14 years

LOC (6) Cl. 13 - *03*

U.S. Cl. D13—182



421,744

ELECTRONIC CALCULATOR HAVING THE FUNCTIONS OF TELEPHONE BOOK, ADDRESS BOOK, CALENDAR, SCHEDULE BOOK AND MEMO BOOK

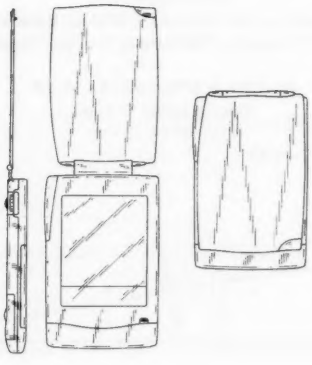
Junichi Ono, Kawasaki, Japan, assignor to Casio Keisanki Kabushiki Kaisha, Tokyo, Japan

Filed May 17, 1999, Appl. No. 105,031

Term of patent 14 years

LOC (6) Cl. 14 - *02*

U.S. Cl. D14—100



421,745

IMAGE SCANNER

Shinsuke Fujiwara; Satoru Takagi; Makoto Someya, all of Osaka-fu, and Masakatsu Takizawa, Tokyo, all of Japan, assignors to NEC Corporation, Tokyo, Japan

Filed Apr. 8, 1999, Appl. No. 103,088

Claims priority, application Japan, Oct. 13, 1998, 10-29519

Term of patent 14 years

LOC (6) Cl. 14 - *02*

U.S. Cl. D14—107

421,746

SCANNER BODY AND SCANNER COVER FRONT END PORTION

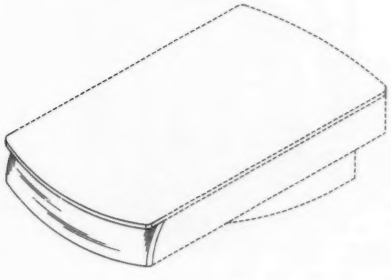
Modest Khovaylo, and James C. Dow, both of Fort Collins, Colo., assignors to Hewlett-Packard Company, Palo Alto, Calif.

Division of application No. 29/100,743, Feb. 17, 1999, which is a division of application No. 29/094,295, Sep. 29, 1998, Pat. No. Des. 410,444, which is a division of application No. 29/075,936, Aug. 28, 1997. This application Jul. 12, 1999, Appl. No. 107,788.

Term of patent 14 years

LOC (6) Cl. 14 - *02*

U.S. Cl. D14—107



421,747

IMAGE DISPLAY APPARATUS

Sakiko Takizawa, Kawasaki, Japan, assignor to Canon Kabushiki Kaisha, Tokyo, Japan

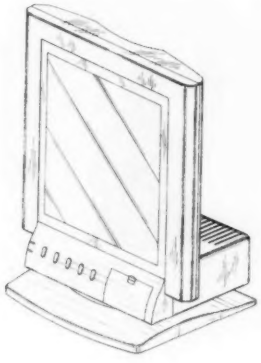
Filed Jan. 21, 1999, Appl. No. 99,418

Claims priority, application Japan, Jul. 22, 1998, 10-021003

Term of patent 14 years

LOC (6) Cl. 14 - *02*

U.S. Cl. D14—113



421,748

STORAGE DISK CARTRIDGE

Wayne A. Sumner, Ogden; David W. Griffith; Allen T. Bracken, both of Layton, all of Utah; Nicholas Brawne, San Francisco, and T. Greg Nguyen, San Jose, both of Calif., assignors to Iomega Corporation, Roy, Utah

Filed Oct. 27, 1997, Appl. No. 78,503

This patent is subject to a terminal disclaimer.

Term of patent 14 years

LOC (6) Cl. 14 - *02*

421,752

PORTABLE CD-PLAYER

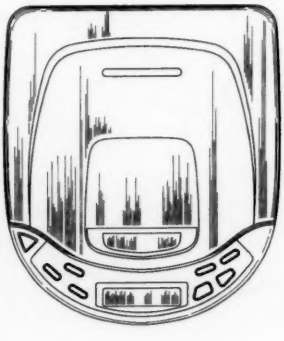
Josh Zeitman, Brooklyn, N.Y., assignor to Lenoxx Electronics Corp., Brooklyn, N.Y.

Filed Sep. 2, 1998, Appl. No. 93,078

Term of patent 14 years

LOC (6) Cl. 14 - *01*

U.S. Cl. D14—156



421,753

TAPE PLAYER

Daisuke Ishii, Tokyo, Japan, assignor to Sony Corporation, Tokyo, Japan

Continuation-in-part of application No. 29/065,287, Jan. 31, 1997, abandoned, application No. 29/065,286, Jan. 31, 1997, abandoned, and application No. 29/065,282, Jan. 31, 1997, abandoned. This application Oct. 10, 1997, Appl. No. 77,875.

Term of patent 14 years

LOC (6) Cl. 14 - *01*

U.S. Cl. D14—165

421,754

SPEAKER BOX

Masafumi Ito, and Shigeru Hasegawa, both of Musashino, Japan, assignors to Teac Corporation, Musashino, Japan

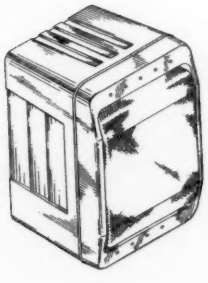
Filed Jun. 1, 1999, Appl. No. 105,841

Claims priority, application Japan, Dec. 3, 1998, 10-035054

Term of patent 14 years

LOC (6) Cl. 14 - *01*

U.S. Cl. D14—214



421,755

TELEPHONE HEADSET EAR HOOK

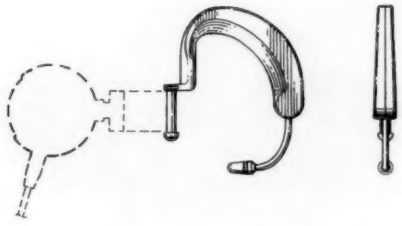
Matthew Pitel, Rogers, Minn., assignor to Unicon Incorporated, Minneapolis, Minn.

Filed Feb. 17, 1999, Appl. No. 100,711

Term of patent 14 years

LOC (6) Cl. 14 - *03*

U.S. Cl. D14—240



421,756

HAND-GRIP CORDLESS INFLATOR

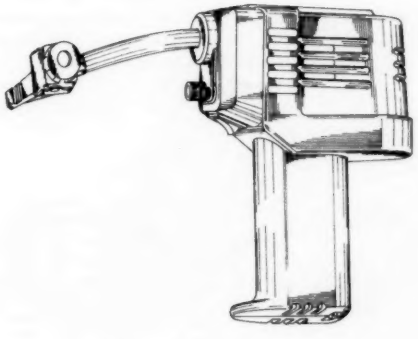
Robert L. Bonzer, 905 W. Amity Rd., Boise, Id. 83705

Filed Jul. 23, 1999, Appl. No. 108,324

Term of patent 14 years

LOC (6) Cl. 15 - *02*

U.S. Cl. D15—7



421,757

REFRIGERATOR DISPLAY UNIT

Osvaldo Felix Volonterio, 12 de Octubre 5726, -7600, Mar del Plata, Buenos Aires, Argentina

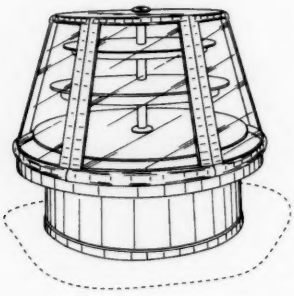
Filed Jan. 19, 1999, Appl. No. 99,328

Claims priority, application Argentina, Jul. 20, 1998, 65915

Term of patent 14 years

LOC (6) Cl. 15 - *07*

U.S. Cl. D15—81



421,758

HANDLE BREAK PROTECTOR

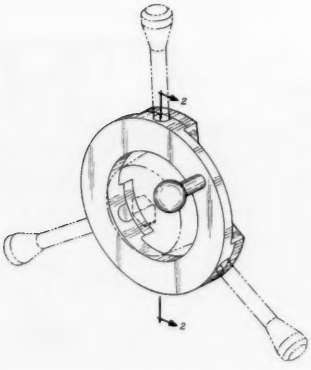
Faramarz Khaladj; Farhad Khalaj, and Steve Khalaj, all of 23161 Peralta Dr., Laguna Hills, Calif. 92653

Filed Jul. 14, 1999, Appl. No. 107,836

Term of patent 14 years

LOC (6) Cl. 15 - *09*

U.S. Cl. D15—142



421,759

WARMING TRAY FOR GLUE HEATING CARTRIDGES

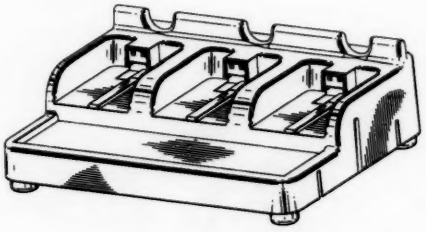
George Maayeh; Elias S. Maayeh, both of 2311 Chimney Hill Ct., Arlington, Tex. 76012, and Les Bokros, 8632 Timber Dr., Fort Worth, Tex. 76180

Filed Jan. 29, 1999, Appl. No. 99,857

Term of patent 14 years

LOC (6) Cl. 15 - *09*

U.S. Cl. D15—150



421,760

BINOCULAR HOOD

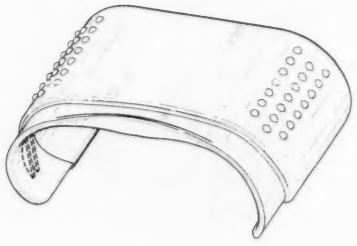
John E. Fleck, 33527 5th Pl. SW., Federal Way, Wash. 98023, assignor to John E. Fleck, Federal Way, Wash.

Continuation-in-part of application No. 29/094,418, Sep. 30, 1998, Pat. No. Des. 410,242, which is a continuation-in-part of application No. 29/088,542, May 27, 1998, Pat. No. Des. 409,638. This application Apr. 29, 1999, Appl. No. 104,178.

Term of patent 14 years

LOC (6) Cl. 16 - *06*

U.S. Cl. D16—133



421,761

CAMERA

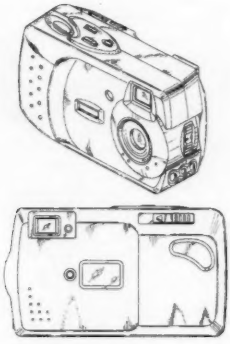
Chih-Hung Chang, Taichung, and Wen-Tsung Wang, Taichung Hsien, both of Taiwan, assignors to Largan Digital Co., Ltd., Taichung, Taiwan

Filed Jun. 29, 1999, Appl. No. 107,051

Term of patent 14 years

LOC (6) Cl. 16 - *01*

U.S. Cl. D16—209



421,762

PUCK SHAPED TRANSPARENCY VIEWER

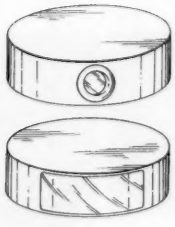
Brian E. Shirley; Brian T. Eichelberger, and Margaret A. Craig, all of Scottsdale, Ariz., assignors to Insight Imaging, Inc., Scottsdale, Ariz.

Filed Oct. 13, 1998, Appl. No. 94,916

Term of patent 14 years

LOC (6) Cl. 16 - *02*

U.S. Cl. D16—227



421,763

SPECTACLES

Colin Pickering, Puttenham, and James Barnaville, Farnham, both of United Kingdom, assignors to Inline UK Limited, Ockley, United Kingdom

Filed Nov. 19, 1998, Appl. No. 96,754

Claims priority, application United Kingdom, May 20, 1998, 2074811

Term of patent 14 years

LOC (6) Cl. 16 - *06*

U.S. Cl. D16—326

421,764

EYEWEAR FRONT

Kip Arnette, South Laguna Beach, Calif., assignor to Luxottica Leasing S.p.A., Agordo, Italy

Division of application No. 29/080,482, Dec. 10, 1997, Pat. No. Des. 411,560. This application Apr. 5, 1999, Appl. No. 102,934.

Term of patent 14 years

LOC (6) Cl. 16 - *06*

U.S. Cl. D16—326

421,765

GLASSES

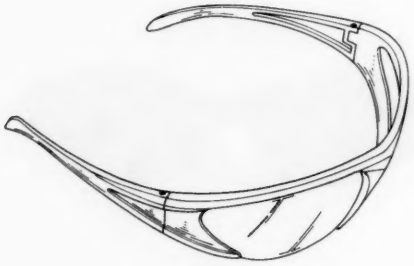
Wen-Hsing Hsu, 7th Fl., No. 50, Sec. 2, Chang-An E. Rd., Taipei, Taiwan

Filed Sep. 9, 1999, Appl. No. 110,585

Term of patent 14 years

LOC (6) Cl. 16 - *06*

U.S. Cl. D16—326



421,766

HEAD FOR STRINGED INSTRUMENTS

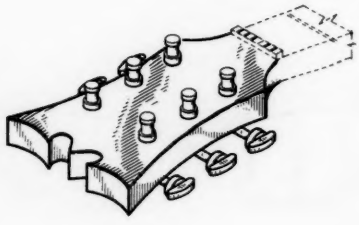
Eric A. Deyoe, 80 S. Broadway, Apt. #8, Denver, Colo. 80209

Filed Jan. 28, 1999, Appl. No. 99,762

Term of patent 14 years

LOC (6) Cl. 17 - *03*

U.S. Cl. D17—20



421,767

PHOTOCOPIER

Takashi Kusanagi, Akishima, Japan, assignor to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Apr. 27, 1999, Appl. No. 104,022

Claims priority, application Japan, Oct. 28, 1998, 10-31295

Term of patent 14 years

LOC (6) Cl. 16 - *03*

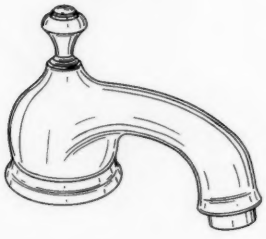
421,789

SPOUT

Wilfried Delker, Bridgewater, N.J., and Walter Schmitz, Bruch, Germany, assignors to American Standard Inc., Piscataway, N.J.

Filed Mar. 5, 1997, Appl. No. 67,163
Term of patent 14 years
LOC (6) Cl. 23 - *01*
U.S. Cl. D23—255



421,790

PULL-OUT SPOUT

Judd A. Lord, Carmel, Ind., assignor to Masco Corporation of Indiana, Indianapolis, Ind.

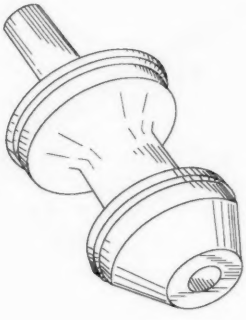
Filed Oct. 5, 1998, Appl. No. 94,546
This patent is subject to a terminal disclaimer.
Term of patent 14 years
LOC (6) Cl. 23 - *01*
U.S. Cl. D23—255

421,791

DOUBLE-SEATED CONTROL VALVE PLUG

Hideo Ohtani; Ryoji Okutsu, both of Kanagawa-Pref, and Ryuji Shinozaki, Tokyo, all of Japan, assignors to Yamatake-Honeywell Co., Ltd., Tokyo, Japan

Filed Jul. 10, 1997, Appl. No. 73,457
Term of patent 14 years
LOC (6) Cl. 23 - *01*
U.S. Cl. D23—260

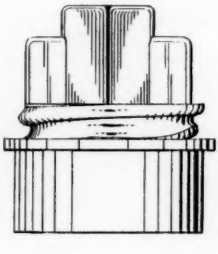


421,792

TWO PIECE MECHANICAL PLUG ASSEMBLY

Marc P. Bevacco, Corcoran, Minn., assignor to Cherne Industries Incorporated, Minneapolis, Minn.

Filed Dec. 16, 1998, Appl. No. 97,864
Term of patent 14 years
LOC (6) Cl. 23 - *01*
U.S. Cl. D23—260



421,793

WHIRLPOOL TUB

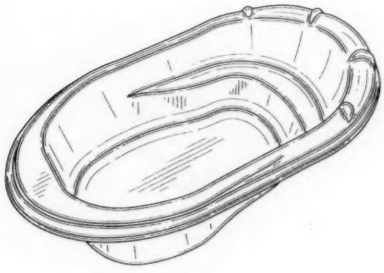
Sean W. Svendsen, Columbus, Ohio, assignor to American Standard Inc., Piscataway, N.J.

Filed Apr. 15, 1999, Appl. No. 103,511

Term of patent 14 years

LOC (6) Cl. 23 - *02*

U.S. Cl. D23—277



421,794

TOILET SEAT COVER

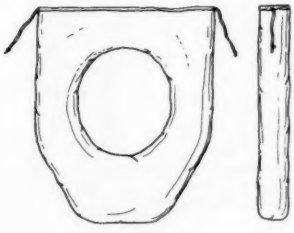
Arnette L Mc Gill, 2767 Augustine Ct., Deltona, Fla. 32738

Filed Oct. 29, 1998, Appl. No. 95,776

Term of patent 14 years

LOC (6) Cl. 23 - *01*

U.S. Cl. D23—311



421,795

GAS FIREPLACE FRONT

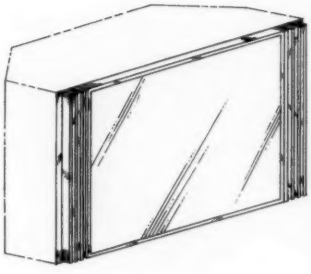
John T. French, Los Angeles; Raymond G. Smith, Pasadena, and Marcel De Jong, Yorba Linda, all of Calif., assignors to Superior Fireplace Company, Fullerton, Calif.

Division of application No. 29/061,216, Oct. 18, 1996, Pat. No. Des. 390,936. This application Jul. 3, 1997, Appl. No. 73,211.

Term of patent 14 years

LOC (6) Cl. 23 - *03*

U.S. Cl. D23—350



421,796

PORTABLE DISINFECTOR

Yoshihiro Sakurai, Tokyo, Japan, assignor to Kabushiki Kaisha Lucent, Tokyo, Japan

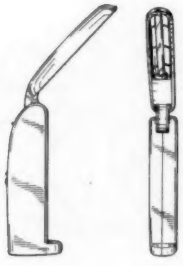
Filed Jun. 18, 1998, Appl. No. 89,558

Claims priority, application Japan, Dec. 19, 1997, 9-78753

Term of patent 14 years

LOC (6) Cl. 23 - *04*

U.S. Cl. D23—366



421,797

COMBINED CEILING FAN AND LIGHT FIXTURE

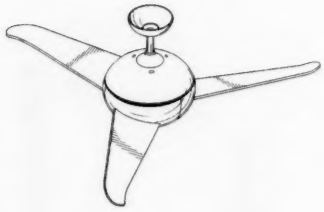
Ted P. Collmar, Corona, Calif., assignor to Great 2000 Enterprises, Inc., Corona, Calif.

Filed Feb. 11, 1999, Appl. No. 100,590

Term of patent 14 years

LOC (6) Cl. 23 - *04*

U.S. Cl. D23—377



421,798

RADIATING FAN

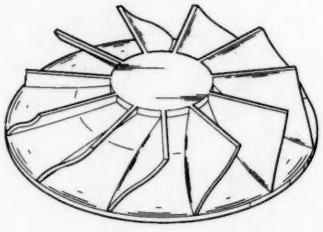
Te Liang, 4F, No.510, Ta Chin Street, Nan District, Tai Chung, Taiwan

Filed Aug. 11, 1999, Appl. No. 109,105

Term of patent 14 years

LOC (6) Cl. 23 - *04*

U.S. Cl. D23—379



421,799

COMBINED ADAPTOR COVER, BLADE IRONS, MOTOR HOUSING AND LIGHT FIXTURE UNIT FOR A CEILING FAN

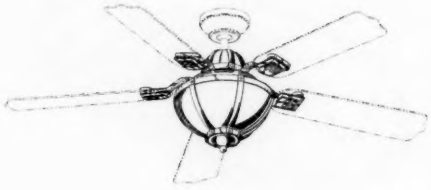
Bradford C. Zuege, Memphis, Tenn., assignor to Hunter Fan Company, Memphis, Tenn.

Filed Apr. 23, 1999, Appl. No. 103,888

Term of patent 14 years

LOC (6) Cl. 23 - *04*

U.S. Cl. D23—411



421,800

POWDER AND COMPRESSED-AIR INHALER

Arnaud Doat, Castres, France, assignor to Pierre Fabre Medicament, Boulogne, France

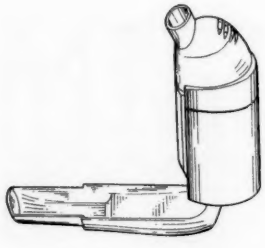
Filed Aug. 19, 1998, Appl. No. 92,536

Claims priority, application France, Feb. 19, 1998, 98 1067

Term of patent 14 years

LOC (6) Cl. 24 - *02*

U.S. Cl. D24—110

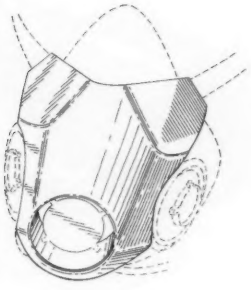


421,801

CARRIAGE FOR DROP-DOWN MASK ASSEMBLY

Gerald M. Brostrom, Burnsville, Minn., and David C. Byram, River Falls, Wis., assignors to 3M Innovative Properties Company, St. Paul, Minn.

Filed Oct. 3, 1997, Appl. No. 77,630
Term of patent 14 years
LOC (6) Cl. 29 - *02*
U.S. Cl. D24—110.1



421,802

DISPOSABLE ABSORBENT ARTICLE

Paul Theodore Van Gompel, Hortonville; Thomas Harold Roessler, Menasha; Jody Dorothy Suprise, Pine River; Robert Eugene Vogt, and Timothy James Blenke, both of Neenah, all of Wis., assignors to Kimberly-Clark Worldwide, Inc., Neenah, Wis.

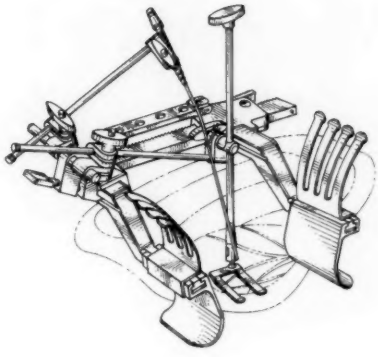
Filed Jun. 4, 1999, Appl. No. 106,013
Term of patent 14 years
LOC (6) Cl. 24 - *04*
U.S. Cl. D24—126

421,803

RETRACTOR FOR CORONARY ARTERY BYPASS SURGERY

Tibor B. Koros, and Gabriel J. Koros, both of 610 Flinn Ave., Moorpark, Calif. 93021

Filed Mar. 7, 1998, Appl. No. 84,672
Term of patent 14 years
LOC (6) Cl. 24 - *02*
U.S. Cl. D24—135



421,804

BABY PACIFIER

Richard E. Gill, 4575 Lakeside Dr., Reno, Nev. 89509

Filed Apr. 15, 1999, Appl. No. 103,530
Term of patent 14 years
LOC (6) Cl. 24 - *04*
U.S. Cl. D24—195

421,805

TRDS- AC STAR BEACH EROSION INHIBITOR

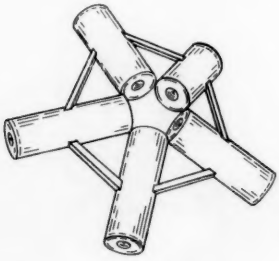
Darwin Aldis Salls, P.O. Box 770126, Ocala, Fla. 34477-0126

Filed Dec. 2, 1997, Appl. No. 80,350

Term of patent 14 years

LOC (6) Cl. 25 - *02*

U.S. Cl. D25—58



421,806

PAVING STONE

Torsten Graf; Andrea Graf, both of Dr.-Hugo-Bischoff-Strasse 10, Bad Dürkheim, Germany, 67098, and Gunter Biermann, Dahlienweg 6, Grünstadt, Germany, 67269

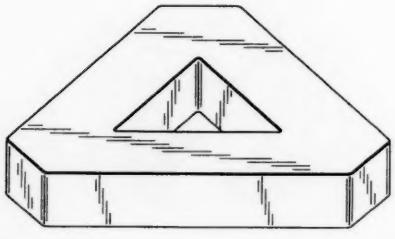
Filed Nov. 5, 1998, Appl. No. 96,123

Claims priority, application Germany, May 5, 1998, 98 04 397

Term of patent 14 years

LOC (6) Cl. 25 - *01*

U.S. Cl. D25—113



421,807

METAL PROFILE

Robert Cameron Reid, 41 Edward Bennett Dr., Cherrybrook, New South Wales, 2126, Australia

Filed Dec. 3, 1996, Appl. No. 63,251

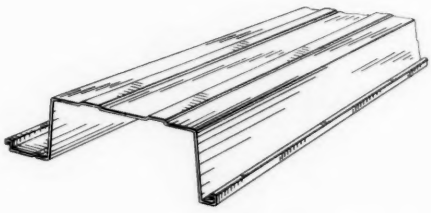
Claims priority, application Australia, Jun. 4, 1996, 1733/96

This patent is subject to a terminal disclaimer.

Term of patent 14 years

LOC (6) Cl. 25 - *01*

U.S. Cl. D25—125



421,808

DECK PLANK SUPPORT EXTRUSION

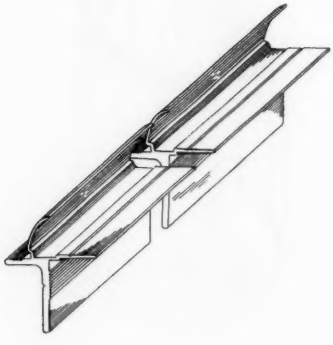
Michael T. Chaney, Middletown; Jonathan C. Hauberg, Beavercreek, and Paul A. Siudzinski, Springboro, all of Ohio, assignors to Dayton Technologies, Inc., Monroe, Ohio

Filed Jun. 10, 1999, Appl. No. 106,089

Term of patent 14 years

LOC (6) Cl. 25 - *01*

U.S. Cl. D25—125

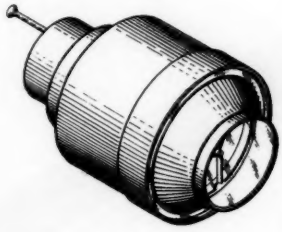


421,809

FOCUSED XENON LAMP

Roy D. Roberts, Hayward, Calif., assignor to ILC Technology, Inc., Sunnyvale, Calif.

Filed Dec. 22, 1998, Appl. No. 98,246
Term of patent 14 years
LOC (6) Cl. 26 - *05*
U.S. Cl. D26—24



421,810

FLAT TO SPIRAL LIGHT SET

Najeh Rahman, Monsey, N.Y., assignor to Minami International Co., Yonkers, N.Y.

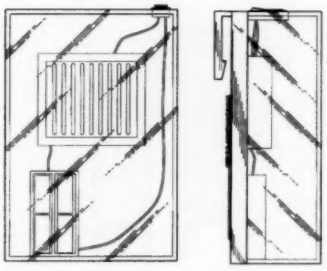
Filed Dec. 10, 1998, Appl. No. 97,719
Term of patent 14 years
LOC (6) Cl. 26 - *04*
U.S. Cl. D26—25

421,811

PURSE LIGHT

Leonidas Prepas, 13 Bridle Path, Nashua, N.H. 03061

Filed Aug. 19, 1999, Appl. No. 109,672
Term of patent 14 years
LOC (6) Cl. 26 - *02*
U.S. Cl. D26—37

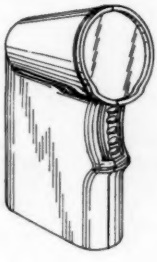


421,812

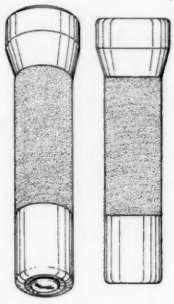
FLASHLIGHT

James U. Neyer, Middleton, Wis.; Tor H. Petterson, Rancho Palos Verdes, Calif.; Zoltan Pavlakovich, Woodland Hills, Calif.; Bret T. Huber, Cerritos, Calif., and Charles P. Davis, Torrance, Calif., assignors to Rayovac Corporation, Madison, Wis.

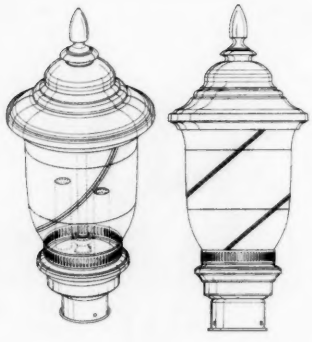
Filed Sep. 10, 1999, Appl. No. 110,712
Term of patent 14 years
LOC (6) Cl. 26 - *02*
U.S. Cl. D26—45



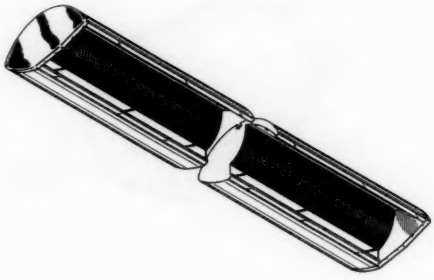
421,813
FLASHLIGHT
Kevin L. Parsons, Appleton, Wis., assignor to Armament Systems and Procedures, Inc., Appleton, Wis.
Filed Oct. 24, 1997, Appl. No. 78,939
Term of patent 14 years
LOC (6) Cl. 26 - *02*
U.S. Cl. D26—46



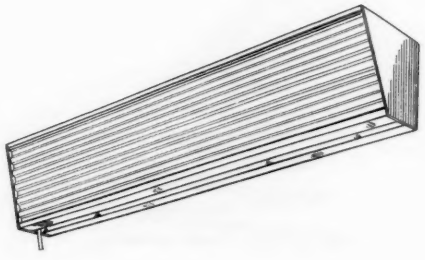
421,814
OUTDOOR LAMP
Leslie A. Meck, Fleetwood, and Rockwood T. Roberts, III, Shillington, both of Pa., assignors to Baldwin Hardware Corporation, Reading, Pa.
Filed Oct. 30, 1998, Appl. No. 95,819
Term of patent 14 years
LOC (6) Cl. 26 - *05*
U.S. Cl. D26—67



421,815
WALL WASH LUMINAIRE
Douglas J. Herst, Oakland, and Utkan Salman, Ross, both of Calif., assignors to Peerless Lighting Corporation, Berkeley, Calif.
Filed Jul. 29, 1996, Appl. No. 57,649
Term of patent 14 years
LOC (6) Cl. 26 - *05*
U.S. Cl. D26—76



421,816
MODULAR LIGHTING FIXTURE
Antonio Canton Gongora; Carlos Jesús Cruz Fernandez; José María Muñagorri Enriquez, and Juan Carlos Rayo Ortigüela, all of Madrid, Spain, assignors to Telefonica de Espana, S.A., Madrid, Spain
Filed Nov. 21, 1996, Appl. No. 62,704
Claims priority, application Spain, May 21, 1996, 137528
Term of patent 14 years
LOC (6) Cl. 26 - *05*
U.S. Cl. D26—76



421,817

HEADLAMP BEZEL FOR A MOTOR VEHICLE

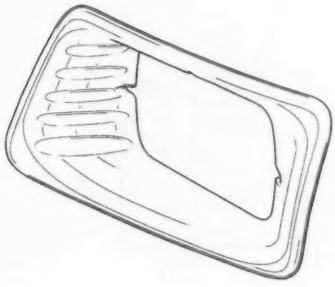
Eric N. Tucker, and John G. Myers, both of Denton, Tex., assignors to Paccar Inc, Bellevue, Wash.

Filed Jun. 3, 1999, Appl. No. 105,926

Term of patent 14 years

LOC (6) Cl. 26 - *99*

U.S. Cl. D26—139



421,818

HAIR TRIMMER

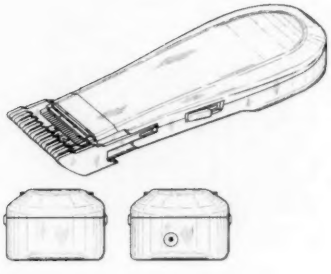
Jonathan N. Mandell, Hattiesburg, Miss., and Albert F. McGovern, Murfreesboro, Tenn., assignors to Sunbeam Products, Inc., Boca Raton, Fla.

Filed Dec. 20, 1996, Appl. No. 64,012

Term of patent 14 years

LOC (6) Cl. 28 - *03*

U.S. Cl. D28—53



421,819

LIPSTICK CASE

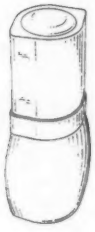
Kristina B. Heeter, Grand Rapids, Mich., and Thierry Francois DeBaschmakoff, Paris, France, assignors to Amway Corporation, Ada, Mich.

Filed Sep. 8, 1999, Appl. No. 110,506

Term of patent 14 years

LOC (6) Cl. 28 - *03*

U.S. Cl. D28—85



421,820

PROTECTIVE RESPIRATORY HELMET WITH REAR RECESS DESIGN

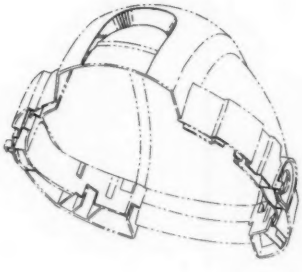
Brett R. Johnson, St. Paul, Minn., assignor to 3M Innovative Properties Company, St. Paul, Minn.

Filed Mar. 10, 1998, Appl. No. 84,759

Term of patent 14 years

LOC (6) Cl. 29 - *02*

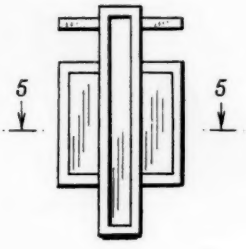
U.S. Cl. D29—122



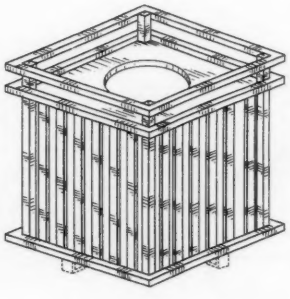
421,821
ANIMAL FEEDING DEVICE
Lee Kinjerski, 1399 Cty O, Forestville, Wis. 54213
Filed Aug. 20, 1998, Appl. No. 92,509
Term of patent 14 years
LOC (6) Cl. 30 - *07*
U.S. Cl. D30—121

421,822
ANIMAL TETHERING DEVICE
Rhonda D. Van Hale, Mora, Minn., assignor to T & L Nifty Products, Inc., Braham, Minn.
Filed May 11, 1999, Appl. No. 104,750
Term of patent 14 years
LOC (6) Cl. 30 - *09*
U.S. Cl. D30—154

421,823
COMBINED LITTER AND RECYCLING BIN
Richard Meier, New York, N.Y., assignor to More Group PLC, London, United Kingdom
Filed Oct. 20, 1998, Appl. No. 95,290
Claims priority, application United Kingdom, Apr. 17, 1997, 2064989
Term of patent 14 years
LOC (6) Cl. 09 - *09*
U.S. Cl. D34—1



421,824
SITE FURNITURE IN THE FORM OF A LITTER RECEPTACLE
Marcella Kaye Hornyak, Cabot, Pa., assignor to Keystone Ridge Designs, Inc., Butler, Pa.
Division of application No. 29/088,305, May 20, 1998, Pat. No. Des. 413,449. This application May 20, 1999, Appl. No. 105,218.
Term of patent 14 years
LOC (6) Cl. 09 - *09*
U.S. Cl. D34—1



421,825

CART

Laura McColskey, West Palm Beach; Ryan Mimick, Coral Springs, and Denise Tedaldi, Jupiter, all of Fla., assignors to Levenger Company, Delray Beach, Fla.

Filed May 25, 1999, Appl. No. 105,427

Term of patent 14 years

LOC (6) Cl. 12 - *02*

U.S. Cl. D34—24

421,826

LIGHT FIXTURE FOR AN ATM KIOSK OR SURROUND

Ernest R. Dallman, Zionsville, Ind., assignor to Dallman Industrial Corporation, Indianapolis, Ind.

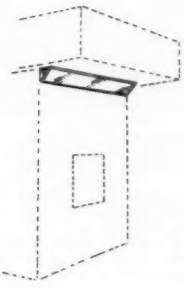
Continuation-in-part of application No. 08/996,421, Dec. 22, 1997, which is a continuation-in-part of application No. 29/047,266, Nov. 30, 1995, Pat. No. Des. 375,091, which is a continuation-in-part of application No. 29/030,929, Nov. 14, 1994, abandoned, which is a continuation-in-part of application No. 29/022,639, May 10, 1994, Pat. No. Des. 361,192.

This application Nov. 25, 1998, Appl. No. 96,983.

Term of patent 14 years

LOC (6) Cl. 99 - *00*

U.S. Cl. D99—43



LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 21st DAY OF MARCH, 2000

NOTE— Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

A. Monforts Textilmaschinen GmbH & Co.: *See*—
Pabst, Manfred, 6,038,750, Cl. 26-76.000.

A. O. Smith Corporation: *See*—
Peters, Richard E., 6,040,646, Cl. 310-71.000.
Warner, Mark W.; Drake, Steven D.; and Giardello, Michael A., 6,040,363, Cl. 523-214.000.

Aalto, Risto, to Nokia Telecommunications Oy. Handover method and arrangement for a mobile communication system. 6,041,235, Cl. 455-437.000.

AB Volvo: *See*—
Markström, Lars; Zander, Lennarth; Olofsson, Erik; and Norblad, Olof, 6,038,855, Cl. 60-323.000.

ABB Daimler-Benz Aktiengesellschaft: *See*—
Daberkow, Andreas; Krause, Ralf; Ott, Norbert; and Krouzilek, Rolf, 6,038,981, Cl. 105-168.000.

ABB Flexible Automation, Inc.: *See*—
Bauman, Thomas C., 6,039,375, Cl. 294-119.100.

ABB Research Ltd.: *See*—
Bakowski, Mietek; Gustafsson, Ulf; Rottner, Kurt; and Savage, Susan, 6,040,237, Cl. 438-521.000.
Ellison, Alex; Kordina, Olle; Gu, Chun-Yuan; Hallin, Christer; Janzen, Erik; and Tuominen, Marko, 6,039,812, Cl. 118-725.000.

Abbott, John D.; and Vassiliadis, Arthur, to Dove Systems, Inc. Arrangement for feeding abrasive dental powder. 6,039,567, Cl. 433-88.000.

Abbott Laboratories: *See*—
Graham, Alexandra E.; Thomas, Albert V.; and Yang, Rachel R. P., 6,040,440, Cl. 536-124.000.

Abdallah, Mohammad: *See*—
Roussel, Patrice; Chennupaty, Srinivas; Cranford, Mike; Abdallah, Mohammad; Coke, Jim; and Kong, Katherine, 6,041,404, Cl. 712-210.000.

Abe, Fumiyoshi: *See*—
Sakai, Seiichi; Yoshida, Teruyuki; and Abe, Fumiyoshi, 6,040,693, Cl. 324-210.000.

Abe, Hideaki: *See*—
Sakamoto, Hiroshi; and Abe, Hideaki, 6,040,986, Cl. 363-20.000.

Abe, Hiroshi; and Kurosawa, Motoharu, to Asahi Seiko Kebushiki Kaisha. Metal disc ejector. 6,039,166, Cl. 194-317.000.

Abe, Hiroshi: *See*—
Kurosawa, Motoharu; and Abe, Hiroshi, 6,039,643, Cl. 453-3.000.

Abé, Koichi: *See*—
Duck, Gary S.; Abé, Koichi; Ip, Joseph; Farries, Mark; and Colbourne, Paul, 6,040,932, Cl. 359-124.000.

Abe, Yasuo: *See*—
Ogawa, Yuji; Abe, Yasuo; and Inoue, Tamotsu, 6,038,950, Cl. 83-54.000.

Abe, Yoshiaki; and Hirota, Toshiharu, to Murata Manufacturing Co., Ltd. Chip thermistors and methods of making same. 6,040,755, Cl. 338-22.00R.

Aben, Freek: *See*—
Jellema, Bart; Peeren, René; Croughan, Louise; and Aben, Freek, 6,041,115, Cl. 379-230.000.

Able Industries Limited: *See*—
Gunn, Brian Leslie; Moore, James; and Hancocks, Michael Turley, 6,039,090, Cl. 141-17.000.

Aboca di Mercati Valentino & C. Societa Semplice: *See*—
Mercati, Valentino, 6,039,953, Cl. 424-195.100.

Abrams, Jack; Pearson, Timothy; and Gurak, Ronald, to Illinois Tool Works Inc. Inertial strap tensioning apparatus and method for strapping machine. 6,039,286, Cl. 242-564.400.

Abrams, Richard Stephen: *See*—
Swartz, Conrad Melton; and Abrams, Richard Stephen, 6,039,046, Cl. 128-859.000.

Aburaya, Kiyoji: *See*—
Takeuchi, Yoshiharu; Aburaya, Kiyoji; Yasu, Toshiharu; Tsubokawa, Masahiro; Sakai, Manabu; Aoshika, Shoji; and Narita, Tsutayoshi, 6,039,551, Cl. 418-88.000.

ACCO Brands, Inc.: *See*—
Mangler, Robert J., 6,039,354, Cl. 281-38.000.
Zeren, Greg; and Derman, Jay S., 6,038,891, Cl. 70-58.000.

Accusteel Ltd.: *See*—
Shlik, Oleg Eduardovich, 6,039,472, Cl. 374-117.000.

Acheson Industries, Inc.: *See*—
Kok, Douwe Marten; and Gankema, Harold, 6,040,278, Cl. 508-208.000.

Achter, Amy Michele; Balzar, Tammy Jo; and Fox, Donald George, to Kimberly-Clark Worldwide, Inc. Method of forming a tampon having a resilient member. 6,039,828, Cl. 156-217.000.

Ackel, Robin J.; Benoit, Douglas E.; Charland, Michael H.; and Faure, Thomas B., to International Business Machines Corporation. Plating process for x-ray mask fabrication. 6,039,858, Cl. 205-136.000.

Acker, Loren C.: *See*—
Taylor, Junius E.; and Acker, Loren C., 6,039,731, Cl. 606-34.000.

Ackermann, Uwe: *See*—
Matt, Hans Jürgen; Walker, Michael; and Ackermann, Uwe, 6,041,290, Cl. 702-191.000.

Active Voice Corporation: *See*—
Chestnut, Kevin L., 6,041,114, Cl. 379-211.000.

Acuity Imaging, LLC: *See*—
Wilt, Michael J., 6,041,148, Cl. 382-308.000.

Acuson Corporation: *See*—
Holley, Gregory L.; and Chandler, Paul E., 6,039,690, Cl. 600-440.000.
Rock, David A.; Schmitter, Paul; Castelnuovo, David; and Goebel, Clement James, III, 6,039,047, Cl. 128-897.000.

Adac Plastics, Inc.: *See*—
Lewis, Jimmie, 6,039,366, Cl. 292-352.000.

Adachi, Kazutaka; and Watanabe, Akira, to Nissan Motor Co., Ltd. Slip control system for torque converter. 6,039,675, Cl. 477-174.000.

Adair, Dennis W.; Johnson, Karl M.; and Kern, Earl R., to Oclassen Pharmaceuticals, Inc. Methods for treatment with compositions effective against acyclovir-resistant strains of herpes viruses. 6,040,298, Cl. 514-50.000.

Adamek, Thad R. Lidded insulator for a beverage container. 6,039,207, Cl. 220-739.000.

Adams, Jonathan Patrick: *See*—
Martin, Wallace Anthony; Adams, Jonathan Patrick; Andersen, Finn Thrige; Beaton, Stephen Robert; Christensen, Svend; Jensen, Allan G.; Kindt-Larsen, Ture; Lust, Victor; Walker, Craig William; and Wang, Daniel Tsu-Fang, 6,039,899, Cl. 264-1.360.

Adapter, Inc.: *See*—
Goldstein, Arthur M., 6,041,431, Cl. 714-784.000.

Adcock, Paul Leonard; Mitchell, Philip John; and Foster, Simon Edward, to Loughborough University of Technology. Electrolytic and fuel cell arrangements. 6,040,075, Cl. 429-32.000.

Addagarla, Sumanth; and Callis, Glenn E., to Chevron Chemical Company LLC. Lubricant composition suitable for direct fuel injected, crankcase-scavenged two-stroke cycle engines. 6,040,279, Cl. 508-437.000.

Adelman, Roger A. Hearing apparatus. 6,041,129, Cl. 381-328.000.

Adey, Robert; Dopp, Robert Brian; and Oltman, John Edward, to Rayovac Corporation. Metal-air cathode can, and electrochemical cell made therewith. 6,040,074, Cl. 429-27.000.

Adir Et Compagnie: *See*—
De Nanteuil, Guillaume; Portevin, Bernard; Bonnet, Jacqueline; and Fradin, Armel, 6,040,327, Cl. 514-394.000.

Advanced Corneal Systems: *See*—
Karageozian, Hampar L.; Karageozian, Vicken H.; Kenney, Maria Cristina; Gutierrez Flores, Jose Luis; Carpio Aragon, Gabriel Arturo; and Nesburn, Anthony B., 6,039,943, Cl. 424-94.620.

Advanced Micro Devices: *See*—
Wang, Fei; Foote, David K.; Cagan, Myron R.; and Gupta, Subhash, 6,040,619, Cl. 257-649.000.

Advanced Micro Devices, Inc.: *See*—
Capodieci, Luigi, 6,040,118, Cl. 430-328.000.
Fulford, H. James; and Gardner, Mark I., 6,040,602, Cl. 257-344.000.
Gardner, Mark I.; and Gilmer, Mark C., 6,040,207, Cl. 438-216.000.
Gardner, Mark I.; Kadosh, Daniel; and Duane, Michael P., 6,040,220, Cl. 438-286.000.
Green, Thomas S., 6,041,405, Cl. 712-213.000.
Ishida, Emi; Li, Xiao-Yu; and Mehta, Sunil D., 6,040,019, Cl. 427-526.000.
Kim, Unsoon; Liu, Yowjuang W.; and Sun, Yu, 6,040,597, Cl. 257-321.000.
Mahurin, Eric W., 6,041,341, Cl. 708-700.000.
Mann, Daniel, 6,041,406, Cl. 712-227.000.
Steffan, Paul J.; and Chen, Ming Chun, 6,041,270, Cl. 700-121.000.
Tain, Alexander C., 6,041,269, Cl. 700-121.000.
Widigen, Larry, 6,041,396, Cl. 711-206.000.
Wristers, Derick J.; Fulford, H. Jim; and Gardner, Mark I., 6,040,607, Cl. 257-389.000.
Yu, Ching, 6,041,328, Cl. 707-10.000.
Zika, Steven J.; and Hopper, C. Bradford, 6,040,912, Cl. 356-394.000.

Aerocrine AB: *See*—
Gustafsson, Lars Erik; Persson, Gunnar Magnus Severus; and Strömberg, Stefan Per Axel, 6,038,913, Cl. 73-23.300.

Aerodyne Research, Inc.: *See*—
Jayne, John T.; Worsnop, Douglas R.; and Kolb, Charles E., 6,040,574, Cl. 250-288.000.

Aeroquip Vickers, Inc.: *See*—
Garner, Frank; and Klamecki, Joseph, 6,039,570, Cl. 434-126.000.

Aerospace Corporation, The: *See*—
Clark, Christopher Joseph; Moulthrop, Andrew Alfred; Muha, Michael Steven; and Silva, Christopher Patrick, 6,041,077, Cl. 375-224.000.

Affymetrix, Inc.: *See*—
Lockhart, David J.; Brown, Eugene L.; Wong, Gordon G.; Chee, Mark S.; and Gingeras, Thomas R., 6,040,138, Cl. 435-6.000.
Winkler, James L.; Fodor, Stephen P. A.; Buchko, Christopher J.; Ross, Debra A.; Aldwin, Lois; and Modlin, Douglas N., 6,040,193, Cl. 436-180.000.

AFG Industries, Inc.: *See*—
Sanduja, Mohan L.; Horowitz, Carl; Thomas, Abraham; and Thottathil, Paul, 6,040,378, Cl. 524-588.000.

Afsar, Muhammad: *See*—
Sung, Chih-Ta Star; Mattela, Venkat; Afsar, Muhammad; Singh, Balraj; and Hung, Chih-Teng, 6,040,998, Cl. 365-194.000.

AG Communication Systems Corporation: *See*—
Jones, Eric A.; and Detering, Greig R., 6,041,107, Cl. 379-164.000.

Agalarov, Jafar; Nasibova, Ayten; and Nuriyev, Barat, to American University of Baku, The. Internal combustion engine with opposed pistons. 6,039,011, Cl. 123-51.0AA.

Agarwala, Poonam; and Malewicz, Andrzej M., to Empi, Inc. Externally worn medical device. 6,041,259, Cl. 607-46.000.

Agency of Industrial Science & Technology: *See*—
Chayahara, Akiyoshi; Horino, Yuji; Kinomura, Atsushi; Tsubouchi, Nobuteru; and Fujii, Kanenaga, 6,039,847, Cl. 204-192.110.
Hayashi, Yutaka; Kamiya, Masaaki; Kojima, Yoshikazu; and Takasu, Hiroaki, 6,040,200, Cl. 438-30.000.

Agent Systems, Inc.: *See*—
Waters, Brian G.; Stoltz, Gregory E.; and Maldanis, Algert J., 6,039,164, Cl. 194-206.000.

Agfa-Gevaert, N.V.: *See*—
Coppens, Paul; and Jonckheere, Marcus, 6,040,109, Cl. 430-204.000.
Van Damme, Marc; and Vermeersch, Joan, 6,040,113, Cl. 430-271.100.

Agfa Gevaert NV: *See*—
Fogel, Thomas; Göhmann, Jürgen; and Klaunzer, Norman, 6,040,122, Cl. 430-461.000.
Siegel, Jörg; Borst, Hans-Ulrich; Bell, Peter; Büscher, Ralf; Reif, Heinz; and Jung, Jürgen, 6,040,125, Cl. 430-506.000.

Agilent Technologies, Inc.: *See*—
Mauze, Ganapati R.; and Serikov, Vladimir, 6,038,922, Cl. 73-335.080.

Agner, Ivo, to Luk Fahrzeug-Hydraulik GmbH & Co. KG. Device for roll stabilization of a motor vehicle. 6,039,326, Cl. 280-5.506.

Agrawal, Anoop; Tonazzi, Juan Carlos Lopez; LeCompte, Robert Steven; Baertelin, Carl; and Fischer, Douglas Alan, to Donnelly Corporation. Chromogenic window assembly construction and other chromogenic devices. 6,039,390, Cl. 296-211.000.

Agricultural Building Holdings, Inc.: *See*—
Weikel, Charles W., 6,039,647, Cl. 460-114.000.

Ahlstrom Machinery Inc.: *See*—
Hernesniemi, Lasse, 6,039,841, Cl. 162-251.000.

Ahmad, Syed Sajid, to Micron Technology, Inc. Apparatus and method for controlling the depth of immersion of a semiconductor element in an exposed surface of a viscous fluid. 6,040,205, Cl. 438-118.000.

Ahmed, Fawad: *See*—
Honeycutt, Jeffrey W.; Gonzalez, Fernando; and Ahmed, Fawad, 6,040,208, Cl. 438-229.000.

Ahn, Soon Kil: *See*—
Hong, Chung, Il; Kim, Jung Woo; Lee, Sang Joon; Ahn, Soon Kil; Choi, Nam Song; Hong, Ryung Kee; Chun, Hyoung Sik; Moon, Seung Kee; and Lee, Hong Woo, 6,040,337, Cl. 514-475.000.

Ahuja, Sudhir R.; Korilis, Ioannis A.; and Varvarigou, Theodora A., to Lucent Technologies Inc. Technique for effectively managing resources in a network. 6,041,307, Cl. 705-8.000.

Aihara, Yasuhiko: *See*—
Hisano, Seiichi; Saito, Kazuhisa; Sano, Kazushi; Konno, Shinichi; Horikawa, Yoshichika; and Aihara, Yasuhiko, 6,040,043, Cl. 428-323.000.

Aimoto, Takeshi, to Hitachi, Ltd. Packet switching device and cell transfer control method. 6,041,038, Cl. 370-229.000.

Air Products and Chemicals, Inc.: *See*—
Van De Berg, Albert; and Fitzek, Doris, 6,040,385, Cl. 525-205.000.

Airaksinen, Maria Leena; and Catanzaro, Giorgio, to SGS-Thomson Microelectronics S.r.l. CMOS output buffer having a switchable bulk line. 6,040,711, Cl. 326-81.000.

Aird, Fraser: *See*—
Redei, Eva; Aird, Fraser; Rittenhouse, Peter A.; and McGivern, Robert F., 6,039,956, Cl. 424-198.100.

Aisenberg, Sol; Freedman, George; Hed, A. Ze'ev; and Pavelle, Richard, to Excel Dryer Inc. Hand dryer. 6,038,786, Cl. 34-267.000.

Aisin AW Co., Ltd.: *See*—
Maekawa, Kazuteru; Suzuki, Yukiyoshi; and Yanagikubo, Takeshi, 6,040,824, Cl. 345-173.000.
Mikami, Kazuhiro; Yamada, Kazuhito; and Nishiwaki, Jiro, 6,039,673, Cl. 477-93.000.
Nimura, Mitsuhiro; Hayashi, Seiji; Ito, Yasunobu; and Inoue, Keizo, 6,041,281, Cl. 701-211.000.

Aisin Seiki Kabushiki Kaisha: *See*—
Noguchi, Yuji, 6,039,016, Cl. 123-90.170.
Sato, Atsushi, 6,039,015, Cl. 123-90.170.
Tozu, Kenji; Itoh, Takayuki; Fukami, Masanobu; and Yokoyama, Satoshi, 6,039,411, Cl. 303-116.100.

Aiso, Fumiki, to NEC Corporation. Method for manufacturing silicon thin film conductive element. 6,040,236, Cl. 438-486.000.

Ajinomoto Co., Inc.: *See*—
Kojima, Hiroyuki; Ogawa, Yuri; Kawamura, Kazue; and Sano, Konosuke, 6,040,160, Cl. 435-115.000.
Shimoi, Yoichi; Tamura, Hideo; Okazaki, Masaomi; and Suganuma, Takao, 6,039,879, Cl. 210-641.000.

AJT & Associates, Inc.: *See*—
Teran, Alfredo J.; Derrick, John R., Jr.; Samad, Nidal A.; Willoughby, W. Todd; and Wood, Richard G., 6,039,874, Cl. 210-605.000.

Akada, Yasushige: *See*—
Yamamoto, Ichiro; Itoh, Manabu; Shimojo, Masato; Yumiya, Yasunobu; Mukaihira, Takafumi; and Akada, Yasushige, 6,040,331, Cl. 514-411.000.

Akashige, Etsushi: *See*—
Sobajima, Yoshihiro; Akashige, Etsushi; Fujii, Hironari; and Amano, Akira, 6,040,374, Cl. 524-451.000.

Akatsu, Hiroyuki, to International Business Machines Corporation. Wafer cleaning with dissolved gas concentration control. 6,039,055, Cl. 134-1.300.

Akazaki, Shusuke: *See*—
Maki, Hidetaka; Akazaki, Shusuke; and Hirota, Toshiaki, 6,041,279, Cl. 701-104.000.

Å kerlind, Jan, to CD Food Technology AB. Oven operation only upon detecting of an identification mark on a food or beverage container placed in the oven. 6,040,565, Cl. 219-705.000.

Akiba, Yuichi; and Ide, Masafumi, to Citizen Watch Co., Ltd. Method of manufacturing thin film diode. 6,040,201, Cl. 438-30.000.

Akiyama, Hiroshi: *See*—
Ishida, Nobuo; Togashi, Jun; Kimura, Tomomichi; Morikawa, Kiyoshi; Nakayama, Yoshihumi; Akiyama, Hiroshi; Yanagisawa, Tatsuya; and Ota, Takashi, 6,041,032, Cl. 369-191.000.

Akiyama, Noboru: *See*—
Shiina, Kazuhiro; Kawamoto, Koji; Miura, Masato; Ohura, Hitoshi; Ozeki, Shoichi; Akiyama, Noboru; Nunomura, Kuniboro; Nemoto, Minehiro; and Iwamura, Masahiro, 6,040,827, Cl. 345-208.000.

Akiyama, Yutaka, to NEC Corporation. Method of simulating oxidation enhanced diffusion by solving partial differential equation. 6,041,174, Cl. 395-500.330.

Ako, Satoshi: *See*—
Miwa, Minoru; Takeno, Akiyoshi; Koike, Toshihiro; Ako, Satoshi; and Sugiyama, Yasunori, 6,040,941, Cl. 359-443.000.

Akram, Salman; and Farnworth, Warren M., to Micron Technology, Inc. Non-oxidizing touch contact interconnect for semiconductor test systems and method of fabrication. 6,040,239, Cl. 438-612.000.

Akram, Salman, to Micron Technology, Inc. Multi-chip module employing a carrier substrate with micromachined alignment structures and method of forming. 6,040,618, Cl. 257-586.000.

Akram, Salman: *See*—
Hembree, David R.; Farnworth, Warren M.; Wood, Alan G.; Gochnour, Derek; and Akram, Salman, 6,040,702, Cl. 324-755.000.

Aktsionernoe Obschestvo Zakkytogo Tipa Nauchno-Tekhniches Koe Agentstvo "Intellekt": *See*—
Bashlov, Nikolai L.; Vul, Alexandr Y.; Kidalov, Sergei V.; Kozyrev, Sergei; Milenin, Vyacheslav M.; and Timofeev, Nikolai A., 6,040,658, Cl. 313-637.000.

Aktulga, Ender: *See*—
Demiryont, Hüyla; Parlar, Hüseyin; Ersoy, Ayse; and Aktulga, Ender, 6,040,939, Cl. 359-360.000.

Akutagawa Confectionery Co., Ltd.: *See*—
Akutagawa, Tokuji, 6,039,554, Cl. 425-130.000.

Akutagawa, Tokuji, to Akutagawa Confectionery Co., Ltd. Molding apparatus for producing solidified articles. 6,039,554, Cl. 425-130.000.

Akzo Nobel N.V.: *See*—
Sikkema, Doetze Jakob; and Reichwein, Adrianus Maria, 6,040,478, Cl. 562-424.000.
Skrabanja, Arnold Titus Philip; and Tully, Robert Edward, 6,040,301, Cl. 514-214.000.

Alab, LLC: *See*—
Burris, William Alan; and Prinsen, Philip M., 6,039,884, Cl. 210-760.000.

Albany International Corp.: *See*—
Gontarski, Christopher J.; Ogden, Steven D.; and Gannon, John J., Jr., 6,039,106, Cl. 160-201.000.

Albert Einstein College of Medicine of Yeshiva University: *See*—
DePinho, Ronald A., 6,040,425, Cl. 530-350.000.

Albert, Frank, to PMI Industries, Inc. Articulated bend limiter. 6,039,081, Cl. 138-120.000.

Albrecht, Klaus; Hoess, Werner; and Schikowsky, Hartmut, to Roehm GmbH Chemische Fabrik. Poly (meth) acrylamides with improved color stability under thermal stress. 6,040,387, Cl. 525-330.500.

Alcatel: *See*—
De Buyst, Jo; and Cardinaels, Jozef Renier Catharina, 6,040,527, Cl. 174-88.00C.
Ducellier, Thomas, 6,040,938, Cl. 359-344.000.
Goldstein, Léon; Leclerc, Denis; and Dagens, Béatrice, 6,040,246, Cl. 438-706.000.
Lautenschlager, Wolfgang; and Stahl, Uwe, 6,041,110, Cl. 379-201.000.
Matt, Hans Jürgen; Walker, Michael; and Ackermann, Uwe, 6,041,290, Cl. 702-191.000.
Wardeberg, Jørn; and Knudsen, Anton Marius, 6,041,282, Cl. 702-1.000.
Yang, Houching M., 6,041,153, Cl. 385-109.000.

Alcatel USA Sourcing, L.P.: *See*—
Melane, Marcus L.; Pisterzi, Michael J.; Mills, Edward G.; and Hargroves, Curtis L., 6,039,414, Cl. 312-205.000.
Miller, Daniel L.; Haney, Scott J.; and Ouellette, Christopher J., 6,041,332, Cl. 707-104.000.
Shah, Tasvir; Harrison, Mark A.; and Bilbo, Matthew, 6,041,325, Cl. 707-10.000.

Alcon Laboratories, Inc.: *See*—
Conrow, Raymond E., 6,040,468, Cl. 552-543.000.

Aldcroft, Derek; Bates, Sharron; and Earl, Graham James, to Crosfield Limited. Silica products and UV curable systems. 6,039,798, Cl. 106-272.000.

Aldridge, Donald; and Curtis, Nicholas J., to Lion Apparel, Inc. Lightweight firefighter garment with durable collar and wristlet material. 6,038,700, Cl. 2-81.000.

Aldwin, Lois: *See*—
Winkler, James L.; Fodor, Stephen P. A.; Buchko, Christopher J.; Ross, Debra A.; Aldwin, Lois; and Modlin, Douglas N., 6,040,193, Cl. 436-180.000.

Aleksic, Milivoje: *See*—
Wong, Daniel; and Aleksic, Milivoje, 6,040,837, Cl. 345-430.000.

Alexander, Jerry: *See*—
Strickland, Charles, 6,039,544, Cl. 417-53.000.

Alexandrov, Andrej Fedorovich: *See*—
Antonova, Tatijana Borisovna; Bougrov, Gleb Elmirovich; Kondranin, Sergey Gennadievich; Kralkina, Elena Alexandrovna; Pavlov, Vladimir Borisovich; Alexandrov, Andrej Fedorovich; and Rukhadze, Anri Amvrosievich, 6,040,547, Cl. 219-121.430.

Alexion Pharmaceuticals, Inc.: *See*—
Rollins, Scott; Rother, Russell P.; Matis, Louis A.; and Evans, Mark J., 6,040,428, Cl. 530-350.000.

Alfano, Donald E.: *See*—
Huynh, Quoi V.; Ngo, Sang T.; Judkins, Joseph James, III; and Alfano, Donald E., 6,040,668, Cl. 318-471.000.

Alfonso, Jorge; Elbon, Leonard R.; Franzoi, Eric A.; and Finnerty, Donald Wayne, to Formica Corporation. Particle filled resinous product of improved appearance. 6,040,045, Cl. 428-327.000.

Alfred Butler, Inc.: *See*—
Butler, Jerome, 6,038,751, Cl. 29-10.000.

Alfredo, Poloni, to Danieli & C. Officine Meccaniche SpA. High speed flying shears. 6,038,951, Cl. 83-105.000.

Algom, Avner: *See*—
Poreh, Illan; Algom, Avner; Vaindiner, Alexander; and Shpilberg, Ilya, 6,040,832, Cl. 345-340.000.

Alikhanov, Khallar Abdumuslimovich: *See*—
Golovistikov, Ivan Nikolaevich; Kacharava, Leonid Yazonovich; and Alikhanov, Khallar Abdumuslimovich, 6,040,187, Cl. 436-63.000.

Alimak AB: *See*—
Backman, Bo, 6,038,828, Cl. 52-588.100.

All Best Electronics Co., Ltd.: *See*—
Yang, George, 6,039,611, Cl. 439-701.000.

Allart, Bernard: *See*—
Mangano, Alain; Allart, Bernard; Bigo, Louis; Garczarek, Michel; Ethet, Yannick; Crave, Joël; and Peignon, Philippe, 6,038,859, Cl. 60-436.000.

Allegheny-Singer Research Institute: *See*—
Rabin, Yoed; Julian, Thomas Benjamin; and Wolmark, Norman, 6,039,730, Cl. 606-23.000.

Allelix Biopharmaceuticals, Inc.: *See*—
Kamboj, Rajender; Elliott, Candace E.; and Nutt, Stephen L., 6,040,175, Cl. 435-325.000.

Allen, Jonathon Brandon, to Lucent Technologies Inc. Method and system for ensuring royalty payments for data delivered over a network. 6,041,316, Cl. 705-52.000.

Allen, Loretta E.: *See*—
McIntyre, Dale F.; and Allen, Loretta E., 6,040,849, Cl. 347-214.000.

Allen, Michael P.; Ellsworth, Stoughton L.; Ensler, Lawrence M.; and Subramanian, Kumar, to First Medical, Inc. Blood separator system. 6,039,868, Cl. 210-232.000.

Allgon Ab: *See*—
Larsson, Lennart; and Folkesson, Rolf, 6,041,083, Cl. 375-304.000.

Allied Colloids Limited: *See*—
Symes, Kenneth Charles; and Mistry, Kishor Kumar, 6,039,900, Cl. 264-4.100.

AlliedSignal: *See*—
Olzak, Richard A., 6,040,526, Cl. 174-52.100.

AlliedSignal Inc.: *See*—
Khanna, Yash P.; Puterbuagh, Frank H., Jr.; Kuhn, William P.; and Schena, Martin J., 6,040,392, Cl. 525-432.000.
Liston, Laurence D. N.; Schoepf, Joseph L.; and Royalty, Charles Michael, 6,039,287, Cl. 244-54.000.
Nims, Robert A.; O'Brien, Patrick Lee; and Emerson, Terrence, 6,040,635, Cl. 290-52.000.

Alliger, Howard. Use of xanthan gum for gelling ClO_2 and related species. 6,039,934, Cl. 424-53.000.

Allsoft Distributing Incorporated: *See*—
Colvin, Bryan, Sr., 6,041,123, Cl. 380-49.000.

Allsop, Inc.: *See*—
Clausen, Eivind, 6,039,190, Cl. 211-40.000.

Alps Electric Co., Ltd.: *See*—
Matsuura, Takanobu, 6,039,477, Cl. 400-236.000.
Oguchi, Wataru, 6,039,587, Cl. 439-159.000.
Takeshita, Naoki; Kusano, Manabu; Sagawa, Fumihiko; and Nakagawa, Taizo, 6,040,529, Cl. 174-254.000.
Yeol, Oh Eui; Mitsumori, Kenichi; and Miyazawa, Satoshi, 6,039,815, Cl. 134-2.000.

Alstom: *See*—
Courault, Jacques, 6,040,990, Cl. 363-59.000.

Alt, Helmut G.: *See*—
Peifer, Bernd; Palackal, Syriac J.; Welch, M. Bruce; Alt, Helmut G.; and Schertl, Peter, 6,040,402, Cl. 526-160.000.

Altera Corporation: *See*—
Mejia, Manuel, 6,040,712, Cl. 326-82.000.

Alterman, Steven S.; Sanchez, Mauricio E.; and Longhurst, Audrey, to Motorola, Inc. Method for accessing an information network from a radio communication system. 6,041,045, Cl. 370-313.000.

Alton, Alfred J.; Beese, James P.; Ekmanis, Juris L.; Henne, Bruce J.; and Smith, William F., to Eastman Kodak Company. Photothermographic and thermographic films containing low levels of unsaturated fatty acid to prevent fog. 6,040,130, Cl. 430-617.000.

Alvarez, Jose M.: *See*—
Sanchez, Hector; Alvarez, Jose M.; Siegel, Joshua; and Nicoletta, Carmine, 6,040,729, Cl. 327-309.000.

Alvarez, William. Break-away lug nut positioner. 6,039,408, Cl. 301-111.000.

Alza Corporation: *See*—
Venkatraman, Subramanian S.; Murdock, Thomas O.; and Pudjijanto, Stephanus, 6,039,977, Cl. 424-486.000.

Amada Company, Limited: *See*—
Nagasawa, Tadahiko, 6,038,899, Cl. 72-14.800.

Amana Company, L.P.: *See*—
Pink, John J., 6,039,424, Cl. 312-405.100.

Amano, Akira: *See*—
Sobajima, Yoshihiro; Akashige, Etsushi; Fujii, Hironari; and Amano, Akira, 6,040,374, Cl. 524-451.000.

Amano, Kesayoshi: *See*—
Kakizaki, Yukio; Kiuchi, Toru; Amano, Kesayoshi; and Umatate, Toshikazu, 6,040,096, Cl. 430-5.000.

Amari, Takeyuki: *See*—
Kataoka, Ichiro; Aoki, Kunimitsu; Furuya, Yoshiyuki; Matsushita, Junichi; Nishiyama, Hiroshi; Nakajima, Katsutoshi; Norizuki, Akira; Murakami, Katsumi; and Amari, Takeyuki, 6,040,760, Cl. 340-425.500.

Amato, Domenick V.; and Gorton, Earl M., to PPG Industries Ohio, Inc. Stabilization of vinylidene chloride. 6,040,488, Cl. 570-264.000.

Amerasekera, E. Ajith: *See*—
Duvvury, Charvaka; Amerasekera, E. Ajith; and Ramaswamy, Sridhar, 6,040,968, Cl. 361-56.000.

American Home Products Corporation: *See*—
Franco, Rodrigo; Chen, Ai Ru Sun; and Shuey, David Joseph, 6,040,436, Cl. 536-23.100.

American Piledriving Equipment, Inc.: *See*—
White, John L., 6,039,508, Cl. 405-232.000.

American University of Baku, The: *See*—
Agalarov, Jafar; Nasibova, Ayten; and Nuriyev, Barat, 6,039,011, Cl. 123-51.0AA.

Ameritech Corporation: *See*—
Lipton, Marc Ira; and Dunny, Gregory John, 6,041,104, Cl. 379-67.100.

Amero, Willard F., Jr.; and Herrmann, John E., to Motorola, Inc. Adapter system. 6,039,608, Cl. 439-651.000.

Amersham Pharmacia Biotech AB: *See*—
Horn, Marcus J., 6,039,924, Cl. 422-67.000.

Amin-Salehi, Bahman: *See*—
Bigham, John A.; Little, Dave; Mihm, Edward C.; Sistanizadeh, Kamran; Amin-Salehi, Bahman; Jain, Alpna; Lightfoot, Regina; and Arthur, Ulric E., 6,041,056, Cl. 370-395.000.

Ammann, Klaus; and Bäther, Wolfgang, to Drager Sicherheitstechnik GmbH. Device and process for indicating the exhaustion of a filter. 6,040,777, Cl. 340-632.000.

Amos, David J.; and Stokes, Mitchell O., to Siemens Westinghouse Power Corporation. Main stage fuel mixer with premixing transition for dry low No_x (DLN) combustors. 6,038,861, Cl. 60-737.000.

Amos, Jay: *See*—
Raulerson, David A.; Amos, Jay; and Smith, Kevin D., 6,040,695, Cl. 324-240.000.

Amphenol Corporation: *See*—
Clark, Timothy Edward, 6,041,152, Cl. 385-24.000.

Amro, Hatim Yousef; and Dodson, John Paul, to International Business Machines Corporation. Method and system in a computer network for an intelligent search engine. 6,041,326, Cl. 707-10.000.

An, Suk Ku: *See*—
Cornell, Robert W.; and An, Suk Ku, 6,038,772, Cl. 30-233.000.

Analog Devices, Inc.: *See*—
Brokaw, A. Paul, 6,040,732, Cl. 327-408.000.
Ferguson, Paul F., Jr.; and Wilson, James, 6,040,793, Cl. 341-143.000.

Analytica of Branford, Inc.: *See*—
Whitehouse, Craig M.; and Andrien, Bruce A., Jr., 6,040,575, Cl. 250-288.000.

Anczykowski, Boris: *See*—
Cleveland, Jason P.; and Anczykowski, Boris, 6,038,916, Cl. 73-105.000.

Anderbouhr, Stéphanie; Schuster, Frédéric; Blanquet, Elisabeth; and Theret, Gérald, to Commissariat a L'Energie Atomique. Process for the preparation by chemical vapor deposition (CVD) of a Ti-A1-N based multilayer coating. 6,040,012, Cl. 427-255.391.

Andersen, Finn Thrige: *See*—
Martin, Wallace Anthony; Adams, Jonathan Patrick; Andersen, Finn Thrige; Beaton, Stephen Robert; Christensen, Svend; Jensen, Allan G.; Kindt-Larsen, Ture; Lust, Victor; Walker, Craig William; and Wang, Daniel Tsu-Fang, 6,039,899, Cl. 264-1.360.

Andersen, Knud Erik; Jørgensen, Tine Krogh; Hohlweg, Rolf; Fischer, Erik; Olsen, Uffe Bang; Polivka, Zdenek; Sindelar, Karel; and Valenta, Vladimir, to Novo Nordisk A/S. Tricycle substituted with azaheterocyclic carboxylic acids. 6,040,318, Cl. 514-329.000.

Andersen, Knud Erik: *See*—
Hohlweg, Rolf; Madsen, Peter; Jørgensen, Tine Krogh; Andersen, Knud Erik; Watson, Brett; Polivka, Zdenek; Konigova, Otylie; Kovandova, Martina; Silhánková, Alexandra; and Valenta, Vladimir, 6,040,302, Cl. 514-217.000.

Anderson, Charles C.: *See*—
Chen, Jiann H.; Lancaster, Robert A.; Tsou, Andy H.; and Anderson, Charles C., 6,041,210, Cl. 399-333.000.

Anderson, David C.; and Stephenson, Daniel Lee, to Lucent Technologies Inc. Universal dust cover. 6,041,155, Cl. 385-139.000.

Anderson, David K.; Chiu, John H.; McNary, Steven F.; Phyfe, Nicole M.; Turek, David G.; and Mylchreest, Donald G., to Combustion Engineering, Inc. Steam generator having an improved structural support system. 6,039,008, Cl. 122-510.000.

Anderson, David M.: *See*—
Rice, Douglas; Carozzi, Nadine; Anderson, David M.; Rajasekaran, Kanniah; Rangan, Thirumale S.; Yenofsky, Richard; and Lotstein, Richard, 6,040,504, Cl. 800-314.000.

Anderson, Michael E.: *See*—
Monroe, John W.; Smith, John J.; Kenyon, Stephen C.; and Anderson, Michael E., 6,040,843, Cl. 345-507.000.

Andersson, Russell L., to Lucent Technologies Inc. Method and apparatus for synchronizing video signals. 6,040,871, Cl. 348-510.000.

Ando, Shuichi: *See*—
Yamazaki, Motohiro; Ando, Shuichi; and Toyama, Akira, 6,041,291, Cl. 702-191.000.

Andoh, Tomio; Shibata, Shiro; and Marugame, Tomoyuki, to Toppan Printing Co., Ltd. Method and apparatus for forming transfer images and transfer drum used in the same. 6,039,480, Cl. 400-662.000.

Andresen, Bernhard H.: *See*—
Blake, Terence G. W.; Andresen, Bernhard H.; and Wall, Frederick G., 6,040,708, Cl. 326-33.000.

Andrews, John R.; Torpey, Peter A.; Burke, Cathie J.; and Freire, Eduardo M., to Xerox Corporation. Thermal ink-jet printhead with lateral thermal insulation for the heating elements. 6,039,436, Cl. 347-62.000.

Andrews, Malcolm John: *See*—
Mabry, Melinda Ann; Rumpf, Frederick Harry; Podobnik, Ivan Zlatko; Westveer, Scott Adrian; Morgan, Allan Clark; Chung, Bin; and Andrews, Malcolm John, 6,040,364, Cl. 523-318.000.

Andrien, Bruce A., Jr.: *See*—
Whitehouse, Craig M.; and Andrien, Bruce A., Jr., 6,040,575, Cl. 250-288.000.

Androski, Frank J.; Binowski, Nancy; Ehlinger, James; Robinson, Jerry Allen; and Sheinbein, Daniel, to AT&T Corp. Distributed network control and fabric application interface. 6,041,117, Cl. 379-268.000.

Angstwurm, Klemens: *See*—
Scholz, Peter; Weber, Jörg; and Angstwurm, Klemens, 6,040,336, Cl. 514-468.000.

Anscher, Joseph; and Capiello, Raymond, to National Molding Corporation. Pre-loadable cord lock. 6,038,746, Cl. 24-115.00G.

Antaya, Stephen: *See*—
Pereira, John; Machado, Manuel; and Antaya, Stephen, 6,039,616, Cl. 439-874.000.

Antaya Technologies Corporation: *See*—
Pereira, John; Machado, Manuel; and Antaya, Stephen, 6,039,616, Cl. 439-874.000.

Antcom Corp.: *See*—
Huynh, Son Huy; and Cheng, George, 6,040,805, Cl. 343-785.000.

Antel, Jochen: *See*—
David, Samuel; Antel, Jochen; Brueckner, Reinhard; Ziegler, Dieter; Eeckhout, Christian; Bielenberg, Gerhard-Wilhelm; and Peck, Michael, 6,040,303, Cl. 514-218.000.

Anthony, John Mark; Wallace, Robert M.; Wei, Yi; and Wilk, Glen, to Texas Instruments Incorporated. Method of forming a nano-rugged silicon-containing layer. 6,040,230, Cl. 438-398.000.

Antoine, Dominique; and Hantz, Dominique, to Seb S.A. Method for making an inductor. 6,038,760, Cl. 29-605.000.

Anton, Waifong Liew: *See*—
Page, Loretta Ann Grezzo; Spinelli, Harry Joseph; and Anton, Waifong Liew, 6,040,358, Cl. 523-161.000.

Antoni, Daniele: *See*—
Perrier, Eric; Antoni, Daniele; and Huc, Alain, 6,039,961, Cl. 424-401.000.

Antonova, Tatijana Borisovna; Bougrov, Gleb Elmirovich; Kondranin, Sergey Gennadievich; Kralkina, Elena Alexandrovna; Pavlov, Vladimir Borisovich; Alexandrov, Andrej Fedorovich; and Rukhadze, Anri Amvrosievich, to Plasma Tech Co., Ltd. Gas discharge device. 6,040,547, Cl. 219-121.430.

Anumula, Sudhaker Reddy; and Wu, Ping, to Cypress Semiconductor Corporation. Circuit and method for controlling memory depth. 6,041,388, Cl. 711-100.000.

AnySoft Ltd.: *See*—
Poreh, Illan; Algom, Avner; Vaindiner, Alexander; and Shpilberg, Ilya, 6,040,832, Cl. 345-340.000.

Anzai, Makoto, to NEC Corporation. Carrier regenerating circuit, multi-level quadrature amplitude demodulator, and method of detecting frequency deviation. 6,041,085, Cl. 375-326.000.

Anzaki, Toshiaki; and Ogino, Etsuo, to Nippon Sheet Glass Co., Ltd. Transparent electrically conductive film-attached substrate and display element using it. 6,040,056, Cl. 428-432.000.

Aoki, Kazuomi: *See*—
Fujii, Nobuhiko; Nakada, Mitsuyuki; and Aoki, Kazuomi, 6,040,377, Cl. 524-571.000.

Aoki, Kunimitsu: *See*—
Kataoka, Ichiro; Aoki, Kunimitsu; Furuya, Yoshiyuki; Matsushita, Junichi; Nishiyama, Hiroshi; Nakajima, Katsutoshi; Norizuki, Akira; Murakami, Katsumi; and Amari, Takeyuki, 6,040,760, Cl. 340-425.500.

Aoki, Nobuyuki: *See*—
Mitani, Masato; Nakajima, Kazuto; Kotani, Hiroyuki; Hokazono, Nobutaka; Naka, Hiroyuki; Yamaguchi, Akira; Ikeda, Junji; and Aoki, Nobuyuki, 6,040,016, Cl. 427-421.000.

Aoki, Norihiko, to Olympus Optical Co., Ltd. Real-image zoom finder with rotationally asymmetric surface. 6,041,193, Cl. 396-379.000.

Aoki, Noriyuki: *See*—
Iwata, Naohiro; Obana, Katsumi; Terashima, Hideyuki; and Aoki, Noriyuki, 6,040,919, Cl. 358-400.000.

Aono, Kiyomi: *See*—
Noguchi, Hiromichi; Sugitani, Hiroshi; Koizumi, Yutaka; Inamoto, Tadayoshi; Aono, Kiyomi; and Nakata, Yoshie, 6,040,002, Cl. 427-96.000.

Aoshika, Shoji: *See*—
Takeuchi, Yoshiharu; Aburaya, Kiyoji; Yasu, Toshiharu; Tsubokawa, Masahiro; Sakai, Manabu; Aoshika, Shoji; and Narita, Tsutayoshi, 6,039,551, Cl. 418-88.000.

Apollo Fire Detectors Limited: *See*—
Payne, Roger Dennis, 6,040,769, Cl. 340-506.000.

Appleton Papers, Inc.: *See*—
Haley, Tedford E., 6,038,834, Cl. 53-399.000.

Applied Materials, Inc.: *See*—
Chang, Mei; Wang, David N. K.; White, John M.; and Maydan, Dan, 6,040,022, Cl. 427-579.000.
Schmitt, John V.; and Marsh, Richard A., 6,038,919, Cl. 73-149.000.
Tanaka, Tsutomu; Kelkar, Mukul; Fairbairn, Kevin; Ponnekanti, Hari; and Cheung, David, 6,039,834, Cl. 156-345.000.
Yudovsky, Joseph; and Kori, Moris, 6,040,011, Cl. 427-255.280.

Appropriate Engineering and Manufacturing: *See*—
Ehlers, Jeffrey D.; and Sterner, Mark H., 6,040,503, Cl. 800-313.000.

Aptar Group, Inc.: *See*—
Dallas, Milton R., Jr.; and Randall, Jeffrey T., 6,039,224, Cl. 222-565.000.

Aquafine Corporation: *See*—
Ng, Tony; and Murphy, Mike, 6,039,460, Cl. 362-267.000.

Aquatrols Corporation of America, Inc.: *See*—
Kostka, Stanley J.; and Pan, Rennan, 6,039,966, Cl. 424-405.000.

Arai, Hatsuyuki; and Ikeyama, Yasushi, to Speedfam Co., Ltd. Polishing pad control method and apparatus. 6,040,244, Cl. 438-691.000.

Arai, Masayuki; and Kobayashi, Seiji, to Sony Corporation. Circuit board having general purpose region and programmable region. 6,040,985, Cl. 361-780.000.

Arai, Yasuyuki: *See*—
Morooka, Hisao; Miura, Takamitsu; Yamada, Hiroshi; Kurihara, Katsuki; Matsuse, Mitsutaka; and Arai, Yasuyuki, 6,040,520, Cl. 136-245.000.

Arakawa, Seiichi; Matsute, Masataka; and Kawate, Yasutoshi, to Sony Corporation. Guest-host liquid crystal display device and guest-host liquid crystal composition. 6,039,893, Cl. 252-299.010.

Araki, Mitsutoshi: *See*—
Tomita, Taku; Araki, Mitsutoshi; and Yasuda, Naoyuki, 6,039,071, Cl. 137-505.370.

Araki, Tomoaki: *See*—
Sato, Hisaaki; Kumagai, Masato; and Araki, Tomoaki, 6,039,027, Cl. 123-399.000.

Araki, Toshiyuki: *See*—
Narisawa, Yoshiyuki; and Araki, Toshiyuki, 6,041,128, Cl. 381-322.000.

Arangio, James D.: *See*—
Sciarretta, William A.; Setzco, Paul; and Arangio, James D., 6,039,580, Cl. 439-63.000.

Aratani, Sukekazu: *See*—
Matsuyama, Shigeru; Asuma, Hiroaki; Shimura, Masato; Tomita, Yoshifumi; and Aratani, Sukekazu, 6,040,887, Cl. 349-141.000.

Arch Development Corporation: *See*—
Brasitus, Thomas A.; Bissonnette, Bruce Marc; and Sitrin, Michael D., 6,040,300, Cl. 514-167.000.
Pottenger, Lawrence A.; and Draganich, Louis F., 6,039,764, Cl. 623-20.000.

Archambaud, Denis: *See*—
Martin, Varenka; Archambaud, Denis; Feyfant, Patrick; Gaglione, Philippe; Yoshida, Satoshi; Winckel, Laurent; and Weigelt, Oliver, 6,041,217, Cl. 455-38.300.

Archibald, Charles Andrew: *See*—
Gutierrez, Ernesto Jose; Archibald, Charles Andrew; Kachur, Christopher M.; and Brandon, Giles M., 6,038,871, Cl. 62-133.000.

Archuleta, Tom: *See*—
Calamur, Narasimhan; Carrera, Martin E.; Devlin, David J.; and Archuleta, Tom, 6,039,792, Cl. 95-45.000.

Argillier, Jean-Francois: *See*—
Audibert, Annie; Argillier, Jean-Francois; Bailey, Louise; and Reid, Paul I., 6,040,276, Cl. 507-214.000.

Ariga, Masato: *See*—
Kimura, Nobutake; Ariga, Masato; Yamakawa, Hirohito; Nakagawa, Yoshio; and Shimizu, Akio, 6,040,495, Cl. 800-8.000.

Arimori, Susumu; Seko, Masahiro; Tanaka, Masakazu; Monden, Noriko; and Yokota, Hideyuki, to Toyobo Co., Ltd. Biocompatible polymers. 6,040,415, Cl. 528-71.000.

Aritake, Hirokazu: *See*—

Hasegawa, Shinya; Kayashima, Shigeo; Maeda, Satoshi; and Aritake, Hirokazu, 6,040,929, Cl. 359-17.000.

Arjobex Limited: *See*—
Dalgleish, David Thomson; and Sands, Matthew Richard, 6,040,042, Cl. 428-308.400.

Armatron International, Inc.: *See*—
Cherry, James R.; and Raynus, Abel, 6,040,765, Cl. 340-436.000.

Armitage, Jonathan Richard: *See*—
Kashyap, Raman; and Armitage, Jonathan Richard, 6,041,069, Cl. 372-6.000.

Armor, Francis L. Leg operated trash barrel lid controller. 6,039,200, Cl. 220-263.000.

Arnold, Roger D.: *See*—
Fleck, Rod G.; and Arnold, Roger D., 6,041,387, Cl. 711-5.000.

Arp, Robert A.: *See*—
Fogarty, Terence M.; and Arp, Robert A., 6,039,712, Cl. 604-93.000.

Arrow Art Finishers, L.L.C.: *See*—
Smith, Michael J., 6,038,797, Cl. 40-312.000.

Arthur, Ulric E.: *See*—
Bigham, John A.; Little, Dave; Mihm, Edward C.; Sistanizadeh, Kamran; Amin-Salehi, Bahman; Jain, Alpna; Lightfoot, Regina; and Arthur, Ulric E., 6,041,056, Cl. 370-395.000.

Arzeno, Humberto B.: *See*—
Dvorak, Charles A.; Wren, Douglas L.; Fisher, Lawrence E.; Axt, Steven D.; Humphreys, Eric R.; Arzeno, Humberto B.; Beard, Colin C.; Nguyen, Sam Linh; Han, Yeun-Kwei; Roberts, Christopher R.; Lund, Jan P.; and Fatheree, Paul R., 6,040,446, Cl. 544-276.000.

Asahi Kasei Kogyo Kabushiki Kaisha: *See*—
Doi, Ichiro; and Tonomura, Shoichiro, 6,041,096, Cl. 378-48.000.
Yamamatsu, Setsuo; Yamaguchi, Tatsuo; and Yokota, Koshiro, 6,040,472, Cl. 560-210.000.

Asahi Kogaku Kogyo Kabushiki Kaish: *See*—
Sensui, Takayuki, 6,041,186, Cl. 396-80.000.

Asahi Kogaku Kogyo Kabushiki Kaisha: *See*—
Mitoh, Ayumi; and Hiraide, Tsuneo, 6,040,196, Cl. 436-518.000.
Oono, Masahiro; Iwanade, Hisao; Saitoh, Noboru; Sato, Koji; Shiba, Sukenori; Yoshida, Tatsuya; and Nagai, Nobuyuki, 6,040,677, Cl. 318-696.000.
Seo, Shuzo, 6,039,255, Cl. 235-462.350.
Yamamoto, Yasuhiro, 6,041,192, Cl. 396-315.000.
Yamamoto, Yasuhiro, 6,041,194, Cl. 396-429.000.

Asahi Seiko Kabushiki Kaisha: *See*—
Kurosawa, Motoharu; and Abe, Hiroshi, 6,039,643, Cl. 453-3.000.

Asahi Seiko Kebushiki Kaisha: *See*—
Abe, Hiroshi; and Kurosawa, Motoharu, 6,039,166, Cl. 194-317.000.

Asai, Toshiya; and Narita, Takato, to Sony Corporation. Coding method and recording and reproducing apparatus. 6,040,862, Cl. 348-409.000.

Asami, Shinya: *See*—
Koide, Norikatsu; Asami, Shinya; Umezaki, Junichi; Koike, Masayoshi; Yamasaki, Shiro; and Nagai, Seiji, 6,040,588, Cl. 257-15.000.

Asano, David K.: *See*—
Citron, Howard M.; Asano, David K.; Baietto, Henry R.; Chen, Sullivan S.; De Frondeville, Alexis W.; Hahn, Jeffrey H.; Probst, Thomas J., Jr.; Massucci, John E.; Costin, Dinu; and Peragine, Ralph E., 6,038,952, Cl. 83-605.000.

Asaoka, Takemitsu: *See*—
Takeda, Sunao; Kaneko, Yasushi; Tokizawa, Minoru; Eto, Hiromichi; Ishida, Kazuya; Maebashi, Kazunori; Matsumoto, Masaru; Asaoka, Takemitsu; and Sato, Susumu, 6,040,325, Cl. 514-383.000.

Asayama, Atsushi, to Canon Kabushiki Kaisha. Fluorescent lamp inverter apparatus. 6,040,662, Cl. 315-291.000.

ASC Incorporated: *See*—
Klein, George W., 6,038,819, Cl. 49-362.000.

Aschenbrenner, Kal: *See*—
Lysen, Heinrich; Aschenbrenner, Kal; and Letze, Thomas, 6,040,903, Cl. 356-153.000.

Ascom Hasler Mailing Systems, Inc.: *See*—
Brookner, George, 6,041,317, Cl. 705-61.000.

Asea Brown Boveri AG: *See*—
Frutschi, Hansulrich, 6,038,848, Cl. 60-39.050.
Keller, Jakob; Marlow, Paul; McMillan, Robin; and Valk, Martin, 6,038,863, Cl. 60-742.000.
Rees, Jochen; and Steinke, Jürgen, 6,040,988, Cl. 363-37.000.

Asec Manufacturing General Partnership: *See*—
Nunan, John G., 6,040,265, Cl. 502-242.000.

Asmo, Co., Ltd.: *See*—
Terai, Tadayoshi; Hitomi, Yoshinori; Okano, Masayuki; and Kinoshita, Kazutoshi, 6,038,728, Cl. 15-250.201.

Aspect Telecommunications Corporation: *See*—
Meyers, John D., 6,041,116, Cl. 379-244.000.

Aspen Technology, Inc.: *See*—
Boston, Joseph F.; and Boys, Ian, 6,041,263, Cl. 700-32.000.

Assisi Software Corporation: *See*—
Howard, Richard T., 6,041,173, Cl. 395-500.270.

Astra AB: *See*—
MacDonald, James, 6,040,314, Cl. 514-307.000.

Asulab S.A.: *See*—
Gueissaz, François, 6,040,748, Cl. 335-78.000.

Asuma, Hiroaki: *See*—
Matsuyama, Shigeru; Asuma, Hiroaki; Shimura, Masato; Tomita, Yoshifumi; and Aratani, Sukekazu, 6,040,887, Cl. 349-141.000.

AT&T Corp: *See*—
Androski, Frank J.; Binowski, Nancy; Ehlinger, James; Robinson, Jerry Allen; and Sheinbein, Daniel, 6,041,117, Cl. 379-268.000.
Goldberg, Randy G., 6,041,297, Cl. 704-219.000.

AT&T Corp.: *See*—
Ruffolo, Ralph A.; and Sinerchio, John A., 6,041,288, Cl. 702-184.000.

AT&T Wireless Services Inc.: *See*—
Holmes, David William James, 6,039,624, Cl. 445-403.000.

Ateon Networks, Inc.: *See*—
Chen, Ben W.; and Xiong, Bo, 6,041,346, Cl. 709-218.000.

ATI Technologies, Inc.: *See*—
Wong, Daniel; and Aleksic, Milivoje, 6,040,837, Cl. 345-430.000.

Atkinson, Michael R.: *See*—
Havens, Dale I.; and Atkinson, Michael R., 6,038,799, Cl. 40-505.000.

Atlantic Research Corporation: *See*—
Harrod, Charles E.; and Stephens, William D., 6,039,819, Cl. 149-19.200.

Atlantic Richfield Company: *See*—
Kennelly, Kevin; Gardiner, Ian; Noble, David; and Muliadiredja, Achmad R., 6,039,507, Cl. 405-227.000.
Stevenson, Mark D.; and Brady, Jerry L., 6,039,116, Cl. 166-263.000.

ATR Interpreting Telecommunications Research Laboratories: *See*—
Schuster, Mike; and Fukada, Toshiaki, 6,041,299, Cl. 704-232.000.

ATS Automation Tooling Systems Inc.: *See*—
Woerner, Klaus D.; and Sommers, Allen, 6,039,640, Cl. 451-460.000.

Atsumi, Shigeru; and Tanaka, Sumio, to Kabushiki Kaisha Toshiba. Nonvolatile semiconductor memory device having row decoder. 6,041,014, Cl. 365-230.060.

Atsumi, Shigeru: *See*—
Banba, Hironori; Shiga, Hitoshi; Atsumi, Shigeru; and Umezawa, Akira, 6,041,012, Cl. 365-226.000.
Umezawa, Akira; Atsumi, Shigeru; and Banba, Hironori, 6,041,011, Cl. 365-226.000.

Atsumi, Tetsuya: *See*—
Toyama, Yoshiharu; Kuroda, Akikazu; Kiyama, Tokuji; Kida, Sumio; Yoshida, Shunji; Yamamoto, Takashi; and Atsumi, Tetsuya, 6,039,809, Cl. 118-715.000.

Aubay, Eric: *See*—
Popoff, Christine; Nartey, Alwyn; Gabriel, Robert; and Aubay, Eric, 6,040,288, Cl. 510-466.000.

Aubry, Jean-Marie: *See*—
Lallier, Jean-Pierre; Marie, Patrick; Aubry, Jean-Marie; Marti, Marie-José; and Del Nero, Valérie, 6,040,285, Cl. 510-206.000.

Aucsmith, David W.: *See*—
Graunke, Gary L.; and Aucsmith, David W., 6,041,122, Cl. 380-21.000.

Auden Technology Mfg. Co., Ltd.: *See*—
Chang, Daniel, 6,039,459, Cl. 362-253.000.

Audibert, Annie; Argillier, Jean-Francois; Bailey, Louise; and Reid, Paul I., to Institut Francais Du Petrole. Process and water-base fluid utilizing hydrophobically modified cellulose derivatives as filtrate reducers. 6,040,276, Cl. 507-214.000.

Audiovox Corporation: *See*—
DiCroce, John R., 6,040,636, Cl. 307-10.100.

Ausimont S.p.A.: *See*—
Temtchenko, Tatiana; and Malavasi, Massimo, 6,040,414, Cl. 528-70.000.

Auslander, Judith D.: *See*—
Berson, William; and Auslander, Judith D., 6,039,257, Cl. 235-468.000.

Austin, Jack L. Steerable hand truck. 6,039,332, Cl. 280-47.170.

Auto Kabel Managementgesellschaft mbH: *See*—
Hentschel, Wolfgang, 6,038,765, Cl. 29-857.000.

Autodesk, Inc.: *See*—
Sahoo, Keshaba Chandra, 6,040,830, Cl. 345-335.000.

Autoimmune, Inc.: *See*—
Weiner, Howard L.; and Hafler, David A., 6,039,947, Cl. 424-184.100.

Automotive Systems Laboratory, Inc.: *See*—
Cech, Leonard S.; Sewell, Michael R.; Gillis, Edward J.; and Talley, David B., 6,039,345, Cl. 280-735.000.

Automotive Technologies International, Inc.: *See*—
Breed, David S.; Duvall, Wilbur E.; and Johnson, Wendell C., 6,039,139, Cl. 180-271.000.

Autoscribe Corporation: *See*—
Pollin, Robert E., 6,041,315, Cl. 705-45.000.

Auvergne, Cristophe: *See*—
Ishimori, Shozo; Yamaguchi, Masatoshi; Auvergne, Cristophe; and Leguillette, Bertrand, 6,038,840, Cl. 56-13.300.

Avery Dennison Corporation: *See*—
Freedman, Melvin S., 6,040,027, Cl. 428-40.100.

Aviron: *See*—
Spaete, Richard; and Cha, Tai-An, 6,040,170, Cl. 435-252.300.

Avision Inc.: *See*—
Chen, Philip L., 6,041,198, Cl. 399-51.000.

AVL Medical Instruments AG: *See*—
Schweiger, Gerd, 6,040,190, Cl. 436-164.000.

Awaji, Naoki: *See*—
Komiya, Satoshi; Awaji, Naoki; and Kashiwagi, Shunji, 6,040,198, Cl. 438-16.000.

Axt, Steven D.: *See*—
Dvorak, Charles A.; Wren, Douglas L.; Fisher, Lawrence E.; Axt, Steven D.; Humphreys, Eric R.; Arzeno, Humberto B.; Beard, Colin C.; Nguyen, Sam Linh; Han, Yeun-Kwei; Roberts, Christopher R.; Lund, Jan P.; and Fatheree, Paul R., 6,040,446, Cl. 544-276.000.

Aylward, Peter T.; Bourdelais, Robert P.; Haydock, Douglas N.; and Gula, Thaddeus S., to Eastman Kodak Company. Sheets having a microvoided layer of strength sufficient to prevent bend cracking in an imaging member. 6,040,036, Cl. 428-195.000.

Aylward, Peter T.; Bourdelais, Robert P.; Gula, Thaddeus S.; and Lu, Pang-Chia, to Eastman Kodak Company. Imaging element with biaxially oriented sheet with fluoropolymer. 6,040,124, Cl. 430-496.000.

Azuma, Masaki: *See*—
Sota, Akio; Okiura, Tomoo; and Azuma, Masaki, 6,039,782, Cl. 71-10.000.

B. Braun Celsa: *See*—
Forber, Simon John, 6,039,744, Cl. 606-108.000.

Baba, Seiji; and Endo, Takashi, to Densoken Co., Ltd. & Shoei Chemical Inc. Surface discharge element and a method of making the same. 6,040,055, Cl. 428-428.000.

Babcock & Wilcox Company, The: *See*—
Talley, Laroul J.; Yurek, Theodore F.; Ziegler, Douglas D.; and Robinson, Ross G., 6,038,902, Cl. 72-128.000.

Bach, Guenther; and Naumann, Heinz, to Komet Praezisionswerkzeuge Robert Breuning GmbH. Hardened workpiece finishing process. 6,039,634, Cl. 451-49.000.

Bach, Joseph: *See*—
Bach, Lanae E.; and Bach, Joseph, 6,039,219, Cl. 222-160.000.

Bach, Lanae E.; and Bach, Joseph. Liquid dispensing system for a refrigerator. 6,039,219, Cl. 222-160.000.

Backman, Bo, to Alimak AB. Wall module system. 6,038,828, Cl. 52-588.100.

Bacon, David Francis; Wegman, Mark N.; and Zadeck, Frank Kenneth, to International Business Machines Corporation. Object oriented dispatch optimization. 6,041,179, Cl. 395-709.000.

Baculy, Eric J., to Baculy, Eric J. Clamp fixtures. 6,039,313, Cl. 269-168.000.

Badami, Vivek Venugopal: *See*—
Chbat, Nicolas Wadih; and Badami, Vivek Venugopal, 6,038,724, Cl. 8-159.000.

Badehi, Pierre, to Shellcase Ltd. Methods and apparatus for producing integrated circuit devices. 6,040,235, Cl. 438-464.000.

Badiali, Roberto; Bertoli, Luciano; and Colomberotto, Giorgio, to Savio Macchine Tessili SpA. Method for joining textile yarns for restoring their continuity in a winding unit. 6,039,281, Cl. 242-475.500.

Badilla, Bernard. Double-sided massager. 6,039,703, Cl. 601-61.000.

Badillo, Connie M. Liquid soap applicator, and method. 6,039,491, Cl. 401-186.000.

Badini, Gabriele: *See*—
Gan, Joseph; Badini, Gabriele; and Hoffmann, Klaus E., 6,040,396, Cl. 525-502.000.

Baek, Young Sik; Lee, Sang Man; and Kang, Hun, to Electronics and Telecommunications Research Institute. Dual receive, dual transmit fault tolerant network arrangement and packet handling method. 6,041,036, Cl. 370-222.000.

Baertelin, Carl: *See*—
Agrawal, Anoop; Tonazzi, Juan Carlos Lopez; LeCompte, Robert Steven; Baertelin, Carl; and Fischer, Douglas Alan, 6,039,390, Cl. 296-211.000.

Baichwal, Anand R., to Edward Mendell Co., Inc. Sustained release excipient. 6,039,980, Cl. 424-500.000.

Baietto, Henry R.: *See*—
Citron, Howard M.; Asano, David K.; Baietto, Henry R.; Chen, Sullivan S.; De Frondeville, Alexis W.; Hahn, Jeffrey H.; Probst, Thomas J., Jr.; Massucci, John E.; Costin, Dinu; and Peragine, Ralph E., 6,038,952, Cl. 83-605.000.

Bailey, Brett M., to Caterpillar Inc. Exhaust gas recirculation method for an internal combustion engine. 6,038,860, Cl. 60-605.200.

Bailey, David A.: *See*—
Wie, Bong; Bailey, David A.; and Heiberg, Christopher J., 6,039,290, Cl. 244-165.000.

Bailey, David B.; Burberry, Mitchell S.; and Harris, Mark A., to Kodak Polychrome Graphics LLC. Processless planographic printing plate. 6,040,115, Cl. 430-303.000.

Bailey, Gary M., to Chrysler Corporation. Cargo tray for a motor vehicle. 6,039,378, Cl. 296-37.160.

Bailey, James A.; and Wilson, William B., to Lucent Technologies Inc. Charge-pump phase-locked loop with DC current source. 6,040,742, Cl. 331-2.000.

Bailey, Louise: *See*—
Audibert, Annie; Argillier, Jean-Francois; Bailey, Louise; and Reid, Paul I., 6,040,276, Cl. 507-214.000.

Baker, Ralph Thomas; Petrov, Viacheslav Alexandrovich; and Rao, Velliyurnott Mallikarjuna, to Du Pont de Nemours, E. I., and Company. Process for the manufacture of halocarbons. 6,040,487, Cl. 570-172.000.

Baker, Steve G.: *See*—
Quiachon, Dinah B.; Piplani, Alec A.; Baker, Steve G.; Williams, Ronald G.; Williams, Richard S.; Osborn, Kenneth L.; Layman, Ted W.; and Johansson, Peter K., 6,039,758, Cl. 623-1.000.

Baker, Thomas W.; and Mobin, Mohammed S., to Lucent Technologies Inc. Signal decoding for either Manhattan or Hamming metric based Viterbi decoders. 6,041,086, Cl. 375-341.000.

Bakowski, Mietek; Gustafsson, Ulf; Rottner, Kurt; and Savage, Susan, to ABB Research Ltd. Fabrication of a SiC semiconductor device comprising a pn junction with a voltage absorbing edge. 6,040,237, Cl. 438-521.000.

Bakshi, Amarjit S.; and Khatri, Lakho L., to Hunt Wesson, Inc. Reduced fat nut butter product and process for making the same. 6,039,999, Cl. 426-633.000.

Balch, Ernest Wayne: *See*—
Wojnarowski, Robert John; Rose, James Wilson; Balch, Ernest Wayne; Douglas, Leonard Richard; Downey, Evan Taylor; and Gdula, Michael, 6,040,226, Cl. 438-381.000.

Balch, Thomas C.: *See*—
Menovcik, Gregory G.; Balch, Thomas C.; Davis, Hilary P.; and Dudek, Paul, 6,040,360, Cl. 523-206.000.

Bald, Erhard: *See*—
Munoz-Baca, Julio Manuel; Bäumer, Klaus; and Bald, Erhard, 6,039,283, Cl. 242-534.000.

Baldwin-Japan Ltd.: *See*—
Hara, Akira; Onuma, Hiraku; Oyaizu, Hideo; Suzuki, Yuuichi; and Gasparrini, C. Robert, 6,038,731, Cl. 15-256.510.

Baldwin, Robert E.: *See*—
Marquis, Edward T.; and Baldwin, Robert E., 6,040,284, Cl. 510-201.000.

Balko, Jack E.: *See*—
Greene, Harold R.; Carder, David W.; and Balko, Jack E., 6,039,510, Cl. 406-21.000.

Balkovec, James M.; and Tse, Bruno, to Merck & Co., Inc. Sordarin derivatives. 6,040,463, Cl. 549-418.000.

Ballard Medical Products: *See*—
Perrault, James J.; and Rouns, Cameron G., 6,039,940, Cl. 424-78.060.

Ballmert, Bernd Jakob: *See*—
Field, Martin John; Ballmert, Bernd Jakob; Collins, Laurence Alexander; and Moran, Robert James, 6,039,034, Cl. 123-568.230.

Balousek, Andrew J., to Unisys Corporation. Misprint detection techniques. 6,039,429, Cl. 347-19.000.

Balzar, Tammy Jo: *See*—
Achter, Amy Michele; Balzar, Tammy Jo; and Fox, Donald George, 6,039,828, Cl. 156-217.000.

Ban, Takahisa: *See*—
Ban, Takashi; Hoshino, Tatsuyuki; Okabe, Takanori; and Ban, Takahisa, 6,039,007, Cl. 122-26.000.

Ban, Takashi; Hoshino, Tatsuyuki; Okabe, Takanori; and Ban, Takahisa, to Kabushiki Kaisha Toyoda Jidoshokki Seisakusho. Viscous fluid heater. 6,039,007, Cl. 122-26.000.

Ban, Takashi: *See*—
Okabe, Takanori; Ban, Takashi; Suzuki, Shigeru; and Hirose, Tatsuya, 6,039,264, Cl. 237-12.30R.

Banas, Christopher E.: *See*—
Edwin, Tarun J.; Hurry, Fariba; and Banas, Christopher E., 6,039,755, Cl. 623-1.000.

Banba, Hironori; Shiga, Hitoshi; Atsumi, Shigeru; and Umezawa, Akira, to Kabushiki Kaisha Toshiba. Semiconductor integrated circuit device having a booster circuit and a storage device. 6,041,012, Cl. 365-226.000.

Banba, Hironori: *See*—
Umezawa, Akira; Atsumi, Shigeru; and Banba, Hironori, 6,041,011, Cl. 365-226.000.

Bancroft, Frank Carter; and Fliss, Makiko, to Mount Sinai School of Medicine. Procedure for preparing gene expression libraries enriched for secretory protein genes. 6,040,144, Cl. 435-6.000.

Bando Chemical Industries, Ltd.: *See*—
Satoh, Hiroki; Taguchi, Yoshio; and Shoyama, Noriko, 6,040,035, Cl. 428-195.000.

Bando, Yumi; Okamura, Takumi; and Murata, Toshinori, to Hitachi, Ltd. Television signal receiving apparatus and method specification. 6,040,867, Cl. 348-423.000.

Bangs, William E.; Khoo, Chor San Heng; and Ko, Sandy, to Campbell Soup Company. Dietary food enhancement agent. 6,039,978, Cl. 424-489.000.

Bangs, William E.; Dibenedetto, Joseph D.; Friedberg, Joyce L.; Giordano, Denise A.; Glover, Judy M.; Khoo, Chor San Heng; Ko, Sandy; MacNair, R. David C.; Noar, Scott R.; Randazzi, John J., Jr.; Stoever, Harro; and Ziegler, Paula J., to Campbell Soup Company. Prepackaged therapeutic meal for treatment of diet-responsive conditions. 6,039,989, Cl. 426-106.000.

Banks, Alan James, to Ford Global Technologies, Inc. Method of mounting a suspension bumper. 6,038,756, Cl. 29-453.000.

Banks, Anthony William: *See*—
Hopkins, William Thomas; Riesland, David Henrik; and Banks, Anthony William, 6,040,778, Cl. 340-650.000.

Banks, Beverly L.; and Banks, Tony C. Drinking straw cleaning system. 6,039,490, Cl. 401-185.000.

Banks, Tony C.: *See*—
Banks, Beverly L.; and Banks, Tony C., 6,039,490, Cl. 401-185.000.

Banning, Jeffery H.: *See*—
Titterington, Donald R.; and Banning, Jeffery H., 6,039,794, Cl. 106-31.290.

Banno, Satoshi, to NEC Corporation. Radio signal receiving apparatus with audio signal receiving and reproducing function. 6,040,782, Cl. 340-825.250.

Bansemir, Horst, to Eurocopter Deutschland GmbH. Multi-blade rotor for a helicopter. 6,039,538, Cl. 416-134.00A.

Banville, Mario: *See*—
Glitho, Roch; and Banville, Mario, 6,041,327, Cl. 707-10.000.

Banyu Pharmaceutical Co Ltd: *See*—
Tsuchiya, Yoshimi; Nomoto, Takashi; Ohsawa, Hirokazu; Kawakami, Kumiko; Ohwaki, Kenji; and Nishikibe, Masaru, 6,040,449, Cl. 546-193.000.

Bao, Yang Ying: *See*—
Yasuda, Akio; Nito, Keiichi; Matsui, Eriko; Takanashi, Hidehiko; and Bao, Yang Ying, 6,040,884, Cl. 349-129.000.

Bar-Ilan University: *See*—
Rephaeli, Ada; and Nudelman, Abraham, 6,040,342, Cl. 514-548.000.
Bar, Ofer: *See*—
Douceur, John R.; Bar, Ofer; and Bernet, Yoram, 6,041,053, Cl. 370-389.000.
Barba, Dominique: *See*—
Delagnes, Philippe; and Barba, Dominique, 6,040,853, Cl. 348-128.000.
Barefoot, Byron G. Welding backpressure control apparatus. 6,039,240, Cl. 228-219.000.
Barito, Thomas R.: *See*—
Friedley, Vernon E.; and Barito, Thomas R., 6,039,550, Cl. 418-55.600.
Barker, Frederick H.: *See*—
Bittar, Joseph; Barker, Frederick H.; Cooney, Anthony; Perl, David I.; Peruggi, Richard E.; and Silverberg, Michael D., 6,038,980, Cl. 104-20.000.
Barker, John: *See*—
Botich, Michael J.; Halseth, Thor R.; and Barker, John, 6,039,713, Cl. 604-110.000.
Barlow, Yvonne Margaret; and Lang, Stephen Michael, to Smith & Nephew PLC. Wound dressing containing mammalian cells anchored on hydrophobic synthetic polymer film. 6,039,972, Cl. 424-445.000.
Barnard, Chris Wilhelm: *See*—
Khaleghi, Farideh; Solheim, Alan Glen; and Barnard, Chris Wilhelm, 6,040,933, Cl. 359-124.000.
Barnes, Austen. Decamberer. 6,038,904, Cl. 72-234.000.
Barnes, Clive: *See*—
Seddon, Mark Arthur; and Barnes, Clive, 6,039,493, Cl. 401-209.000.
Barnette, Wayne: *See*—
Manev, Vesselin; Faulkner, Titus; Barnette, Wayne; and Gao, Yuan, 6,040,089, Cl. 429-231.100.
Baron, Mark J., to Cowater International Inc. Sewage removal system. 6,038,710, Cl. 4-321.000.
Baron, Richard Carlton: *See*—
Hirt, Thomas; Baron, Richard Carlton; Lohmann, Dieter; and Meier, Wolfgang Peter, 6,039,913, Cl. 264-331.110.
Barr & Stroud Limited: *See*—
Robertson, John, 6,039,632, Cl. 451-41.000.
Barrette, Terrence R.: *See*—
Unger, Evan; McCreery, Thomas; Yellowhair, David; and Barrette, Terrence R., 6,039,557, Cl. 425-429.000.
Barrick Gold Corporation: *See*—
McMullen, Jacques; Tsu, Wilson; and Kargel, Reinhard, 6,039,789, Cl. 75-711.000.
Barth, James T., to Selkirk, Inc. Methods of fabricating a vent/intake system for a fuel-fired, direct vent heating appliance. 6,039,041, Cl. 126-85.00B.
Bartoli, Simone: *See*—
Villa, Corrado; Bettini, Luigi; and Bartoli, Simone, 6,040,734, Cl. 327-530.000.
BASF Aktiegesellschaft: *See*—
Knorr, Gottfried; Rotermund, Udo; Baum, Eva; Seifert, Holger; and Wiegmann, Werner, 6,040,349, Cl. 521-131.000.
BASF Aktiengesellschaft: *See*—
Ebel, Klaus; and Hähnle, Hans-Joachim, 6,040,420, Cl. 528-480.000.
Kast, Jürgen; Vossen, Marcus; von Deyn, Wolfgang; Engel, Stefan; Hill, Regina Luise; Kardorff, Uwe; Otten, Martina; Plath, Peter; Walter, Helmut; Westphalen, Karl-Otto; and Misslitz, Ulf, 6,040,274, Cl. 504-348.000.
Telser, Thomas; Huemmer, Wolfgang; and Kurtz, Karl-Rudolf, 6,040,116, Cl. 430-306.000.
Vogelbacher, Uwe Josef; Keil, Michael; Klintz, Ralf; Wahl, Josef; Wingert, Horst; König, Hartmann; Rack, Michael; Götz, Roland; and Teles, Joaquim Henrique, 6,040,458, Cl. 548-371.100.
BASF Corporation: *See*—
Fishback, Thomas L.; Heyman, Duane A.; Reichel, Curtis J.; and Jaglowski, Adam J., 6,040,413, Cl. 528-44.000.
Kent, Diane R.; Hoyt, Matthew B.; Ilg, Otto M.; and Queen, Morris K., 6,039,903, Cl. 264-40.100.
McGee, John D.; Campbell, Donald H.; and Rehfuss, John W., 6,040,062, Cl. 428-500.000.
Menovcik, Gregory G.; Balch, Thomas C.; Davis, Hilary P.; and Dudek, Paul, 6,040,360, Cl. 523-206.000.
Bashlov, Nikolai L.; Vul, Alexandr Y.; Kidalov, Sergei V.; Kozyrev, Sergei; Milenin, Vyacheslav M.; and Timofeev, Nikolai A., to Aktsionernoe Obschestvo Zakkytogo Tipa Nauchno-Tekhniches Koe Agentstvo "Intelleki". Discharge lamp with HO radicals as radiating additives. 6,040,658, Cl. 313-637.000.
Bass, Brian Mitchell; Hubbard, James Allison; Oman, Price Ward; and Pita, Frank J., to International Business Machines Corporation. Method and system for enabling nondisruptive live insertion and removal of feature cards in a computer system. 6,041,375, Cl. 710-103.000.
Bass, Edward R.; Kodonas, Konstantin G.; and Weis, Vincent R., to Pitney Bowes Inc. Method and system for telephone updates of postal scales. 6,041,319, Cl. 705-409.000.
Bass, Steven: *See*—
Garrard, Lisa J.; Henner, Dennis J.; Bass, Steven; Greene, Ronald; Lowman, Henry B.; Wells, James A.; and Matthews, David J., 6,040,136, Cl. 435-5.000.
Bassett, Michael L.; Batterton, Gregory W.; and Szadkowski, Andrzej P., to Eaton Corporation. Clutch friction disc balancing method. 6,039,163, Cl. 192-110.00R.
Batanist, Moisey. Motor vehicle. 6,039,134, Cl. 180-14.100.
Batcho, Andrew David; Manchand, Percy Sarwood; and Uskokovic, Milan Radoje, to Hoffmann-La Roche Inc.; and Syntex (U.S.A.). Synthesis of 3-epi vitamin D_3 metabolites and analogs. 6,040,461, Cl. 549-332.000.
Bates, Ray G., Jr.; Deweese, Robert M., Jr.; and Burns, John A., to Murray, Inc. Device for leveling a mower deck. 6,038,841, Cl. 56-15.800.
Bates, Sharron: *See*—
Aldcroft, Derek; Bates, Sharron; and Earl, Graham James, 6,039,798, Cl. 106-272.000.
Bäther, Wolfgang: *See*—
Ammann, Klaus; and Bäther, Wolfgang, 6,040,777, Cl. 340-632.000.
Batistic, Ivica; and Schmidt, Robert, to ITT Maufacturing Enterprises, Inc. Method of improving the control characteristics of an antilocking system (ABS). 6,041,277, Cl. 701-71.000.
Batlaw, Rajnish: *See*—
Harris, Philip G.; and Batlaw, Rajnish, 6,040,482, Cl. 564-443.000.
Batstone, Druce Barry: *See*—
Hatt, Raymond John; Wilson, David John; and Batstone, Druce Barry, 6,039,276, Cl. 241-30.000.
Batterton, Gregory W.: *See*—
Bassett, Michael L.; Batterton, Gregory W.; and Szadkowski, Andrzej P., 6,039,163, Cl. 192-110.00R.
Batts, Donald Herman; and Ulrich, Roger G., to Pharmacia & Upjohn Company. Method of treating psoriasis, arthritis and reducing the toxicity of cancer chemotherapy. 6,040,306, Cl. 514-236.800.
Baudouin, Daniel; Russell, Ernest J.; and Janzen, Jeffrey W., to Texas Instruments Incorporated. Vertical passive components for surface mount assembly. 6,040,983, Cl. 361-760.000.
Bauer, Barney J.; and Herberg, Arnold J., to TRW Vehicle Safety Systems Inc. Apparatus for pretensioning seat belt webbing. 6,039,353, Cl. 280-806.000.
Bauer, Chad David: *See*—
Kielar, Stanley John; Westercamp, Kenneth Lee; and Bauer, Chad David, 6,039,143, Cl. 180-412.000.
Bauer, Michael: *See*—
Krause, Werner; Maier, Franz-Karl; Bauer, Michael; Schuhmann Giampieri, Gabriele; Press, Wolf-Rudiger; and Muschik, Peter, 6,040,432, Cl. 534-16.000.
Baum, Eva: *See*—
Knorr, Gottfried; Rotermund, Udo; Baum, Eva; Seifert, Holger; and Wiegmann, Werner, 6,040,349, Cl. 521-131.000.
Bauman, Thomas C., to ABB Flexible Automation, Inc. Gripper assembly with integrated heat shield. 6,039,375, Cl. 294-119.100.
Bäumer, Klaus: *See*—
Munoz-Baca, Julio Manuel; Bäumer, Klaus; and Bald, Erhard, 6,039,283, Cl. 242-534.000.
Baumgarth, Manfred: *See*—
Häusler, Günther; Gericke, Rolf; Wurziger, Hanns; Baumgarth, Manfred; Lues, Inge; De Peyer, Jacques; and Bergmann, Rolf, 6,040,308, Cl. 514-253.000.
Bawolek, Edward J.: *See*—
McDaniel, Bart; Beiley, Mark A.; Clark, Lawrence T.; Hoffman, Eric J.; and Bawolek, Edward J., 6,040,592, Cl. 257-292.000.
Baxter Aktiengesellschaft: *See*—
Turecek, Peter; Schwarz, Hans-Peter; and Eibl, Johann, 6,039,945, Cl. 424-94.640.
Baxter International Inc.: *See*—
Carpentier, Alain; Guo, George X.; and Schreck, Stefan G., 6,039,759, Cl. 623-2.000.
Baxter, Linda C.: *See*—
Belokin, Paul; Belokin, Martin P.; Belokin, Norman P.; and Baxter, Linda C., 6,038,812, Cl. 47-41.010.
Bayer Aktiengesellschaft: *See*—

Beaton, Stephen Robert: *See*—
Martin, Wallace Anthony; Adams, Jonathan Patrick; Andersen, Finn Thrige; Beaton, Stephen Robert; Christensen, Svend; Jensen, Allan G.; Kindt-Larsen, Ture; Lust, Victor; Walker, Craig William; and Wang, Daniel Tsu-Fang, 6,039,899, Cl. 264-1.360.

Beaton, Timothy P., to Smith International, Inc. Directional drift and drill PDC drill bit. 6,039,131, Cl. 175-376.000.
Beaumont, François: *See—*
Tessier, Clément; Beaumont, François; and Turcotte, Pierre, 6,039,068, Cl. 137-377.000.
Bech, Lisbeth: *See—*
Lassen, Soren Flensted; Bech, Lisbeth; Ohmann, Anders; Breinholt, Jens; Fuglsang, Claus Crone; and Ostergaard, Peter Rahbek, 6,039,942, Cl. 424-94.600.
Beck, Matthew R., to Innovative Plastic Technology, Inc. Tamper-evident closure with abutment. 6,039,218, Cl. 222-153.060.
Becker, Erich, to Siemens Aktiengesellschaft. Method and device for determining the thickness of an electrically conductive layer. 6,040,694, Cl. 324-230.000.
Becker, Klaus; Staiger, Wolfgang; Jung, Matthias; and Heinemeyer, Peter, to Daimler - Benz Aktiengesellschaft. Cooling body having lugs. 6,039,114, Cl. 165-170.000.
Becton Dickinson and Company: *See—*
Miller, Henry F., 6,039,698, Cl. 600-576.000.
Septak, Michael, 6,040,182, Cl. 435-395.000.
Beder, Douglas S., to 314613 B.C. Ltd. Hair regrowth method and apparatus. 6,041,262, Cl. 607-139.000.
Bedja, Abdelkrim; Moser, Gregory C.; and King, Raymond P., to Cosco Management, Inc. Collapsible step stool with step movement guide system. 6,039,149, Cl. 182-20.000.
Beeche, Gregory L.; and Scrafford, Roy, to Beeche System, Corp. Mobile roof crane. 6,039,194, Cl. 212-301.000.
Beeche System, Corp.: *See—*
Beeche, Gregory L.; and Scrafford, Roy, 6,039,194, Cl. 212-301.000.
Beelitz, Alan E., to Dell USA, L.P. System and method for changing partition mappings to logical drives in a computer memory. 6,041,395, Cl. 711-173.000.
Beerends, John Gerard, to Koninklijke PTT Nederland N.V. Signal quality determining device and method. 6,041,294, Cl. 704-203.000.
Beerling, Tim, to Hewlett-Packard Company. Limiting propagation of thin film failures in an inkjet printhead. 6,039,438, Cl. 347-63.000.
Beers, Scott A.; Malloy, Elizabeth A.; Wachter, Michael P.; and Wu, Wei, to Ortho-McNeil Pharmaceutical, Inc. 2-substituted imidazoles useful in the treatment of inflammatory diseases. 6,040,320, Cl. 514-341.000.
Beese, James P.: *See—*
Alton, Alfred J.; Beese, James P.; Ekmanis, Juris L.; Henne, Bruce J.; and Smith, William F., 6,040,130, Cl. 430-617.000.
Beeteson, John: *See—*
Knox, Andrew; and Beeteson, John, 6,040,808, Cl. 345-13.000.
Beggs, William C. Electrically grounded land surface mounting for electrical equipment. 6,040,522, Cl. 174-7.000.
Behar, Emmanuel; and Werner, Alexander, to Institut Francais Du Petrole. Process and device intended for ultrafiltration of particles in fluids. 6,039,885, Cl. 210-767.000.
Behme, Klaus-Jürgen; Jansen, Rolf-Michael; and Zimmermann, Andreas, to Hoechst AG. Composite foams, processes for their preparation and their use. 6,040,375, Cl. 524-492.000.
Behr Industrietechnik GmbH & Co.: *See—*
Ruppel, Wolfgang; and Schmalzried, Guenther, 6,039,112, Cl. 165-109.100.
Beijaard, Barend Jacobus Emmanuel; Jacobs, Thomas Gerardus Maria; and Tiggeloven, Leonardus Jozephus Antonius, to Stork R.M.S. B.V. Machine frame for the meat processing industry and tube profile. 6,039,080, Cl. 138-115.000.
Beiley, Mark A.: *See—*
McDaniel, Bart; Beiley, Mark A.; Clark, Lawrence T.; Hoffman, Eric J.; and Bawolek, Edward J., 6,040,592, Cl. 257-292.000.
Beilin, Solomon I.: *See—*
Zhang, Lei; Chou, William; Peters, Michael G.; and Beilin, Solomon I., 6,039,889, Cl. 216-17.000.
Bekiarian, Paul Gregory, to Du Pont de Nemours, E. I., and Company. Base resistant fluorinated polymers. 6,040,405, Cl. 526-206.000.
Belimo Air Control (USA) Inc.: *See—*
Carlson, Bengt A.; and Buck, Werner A., 6,039,304, Cl. 251-209.000.
Bell Atlantic Network Services, Inc.: *See—*
Bigham, John A.; Little, Dave; Mihm, Edward C.; Sistanizadeh, Kamran; Amin-Salehi, Bahman; Jain, Alpna; Lightfoot, Regina; and Arthur, Ulric E., 6,041,056, Cl. 370-395.000.
Bell, Craig J., to Medcare Medical Group, Inc. Method and apparatus for sensing humidity in a patient with an artificial airway. 6,039,696, Cl. 600-532.000.
Bell, Douglas E.: *See—*
Carroll, Patrick; Schneider, Jon; and Bell, Douglas E., 6,040,195, Cl. 436-514.000.
Bell, Peter: *See—*
Siegel, Jörg; Borst, Hans-Ulrich; Bell, Peter; Büscher, Ralf; Reif, Heinz; and Jung, Jürgen, 6,040,125, Cl. 430-506.000.
Bell, Raymond Charles, to Procter & Gamble Company, The. Dual product pump dispenser with multi-outlet closure for product separation. 6,039,215, Cl. 222-137.000.
Bellali, Eddie: *See—*
Bertheau, Fernand; Maire, Patrick; Dostert, Bruno; and Bellali, Eddie, 6,039,045, Cl. 128-207.110.
Bellerive, Marc R.: *See—*
Kooy, Hanne M.; Hacker, Fred L.; and Bellerive, Marc R., 6,041,101, Cl. 378-147.000.
Belli, Remo D., to Remo, Inc. Drum counterhoop. 6,040,513, Cl. 84-411.00R.
Bello, Keith Anthony, to International Business Machines Corporation. Data sharing between system using different data storage formats. 6,041,386, Cl. 711-4.000.
Bello, Louis. Tow ball and shin protector. 6,039,339, Cl. 280-507.000.
BellSouth Intellectual Property Corporation: *See—*
Malik, Dale W., 6,041,112, Cl. 379-209.000.
Beloit Technologies, Inc.: *See—*
Wight, E. William, 6,039,843, Cl. 162-352.000.
Belokin, Martin P.: *See—*
Belokin, Paul; Belokin, Martin P.; Belokin, Norman P.; and Baxter, Linda C., 6,038,812, Cl. 47-41.010.
Belokin, Norman P.: *See—*
Belokin, Paul; Belokin, Martin P.; Belokin, Norman P.; and Baxter, Linda C., 6,038,812, Cl. 47-41.010.
Belokin, Paul; Belokin, Martin P.; Belokin, Norman P.; and Baxter, Linda C. Vase with support for display. 6,038,812, Cl. 47-41.010.
Benatti, Umberto: *See—*
De Flora, Antonio; Benatti, Umberto; and Giovine, Marco, 6,040,297, Cl. 514-47.000.
Benedetti, Luca: *See—*
Callegaro, Lanfranco; Romeo, Aurelio; and Benedetti, Luca, 6,039,970, Cl. 424-434.000.
Benedetto, Deborah: *See—*
Benedetto, John R.; Gillespie, William, Jr.; and Benedetto, Deborah, 6,038,970, Cl. 101-127.100.
Benedetto, John R.; Gillespie, William, Jr.; and Benedetto, Deborah, to Universal Screenprinting Systems, Inc. Screen printing machine registration system. 6,038,970, Cl. 101-127.100.
Benjamin, Karen Elizabeth; and Hyland, James Henry, to Whitaker Corporation, The. Switch for a card reader assembly. 6,039,599, Cl. 439-489.000.
Benner, Gerd, to Leo Elektronenmikroskopie GmbH. Energy filter, particularly for an electron microscope. 6,040,576, Cl. 250-305.000.
Bennett, Joseph C.: *See—*
Paul, Donald C.; Bennett, Joseph C.; Bettini, Joseph A.; and Gordon, Edward J., 6,039,579, Cl. 439-56.000.
Bennett, Patricia S.; Kenyon, Kenneth H.; Ekern, Ronald J.; Rose, Janna L.; and Wieser, Josie B., to Rayovac Corporation. Sodium polyacrylate gelling agent for zinc gelled anode. 6,040,088, Cl. 429-229.000.
Benoit, Douglas E.: *See—*
Ackel, Robin J.; Benoit, Douglas E.; Charland, Michael H.; and Faure, Thomas B., 6,039,858, Cl. 205-136.000.
Bensoussan, Alan: *See—*
Yu, Yu Long; and Bensoussan, Alan, 6,039,954, Cl. 424-195.100.
Benton, Kenneth Curtis: *See—*
Luebke, Gary; Benton, Kenneth Curtis; and Letuchy, Yakov A., 6,040,379, Cl. 524-734.000.
Berar, Andrei, to Credence Systems Corporation. Semiconductor tester system including test head supported by wafer prober frame. 6,040,700, Cl. 324-754.000.
Bereuter, Heinz; Bereuter, Thomas; Bereuter, Wolfgang; and Kohlhaupt, Ingrid, to Heinz Bereuter. Use alkali and/or triethanolamine salts of the alkanoylamidocarboxylic acids in metal working. 6,040,281, Cl. 508-508.000.
Bereuter, Thomas: *See—*
Bereuter, Heinz; Bereuter, Thomas; Bereuter, Wolfgang; and Kohlhaupt, Ingrid, 6,040,281, Cl. 508-508.000.
Bereuter, Wolfgang: *See—*
Bereuter, Heinz; Bereuter, Thomas; Bereuter, Wolfgang; and Kohlhaupt, Ingrid, 6,040,281, Cl. 508-508.000.
Berg, Gunnar. Radial fan wheel. 6,039,539, Cl. 416-186.00R.
Berg, Lloyd. Separation of 3-methyl-2-pentenal from n-butanol by azeotropic distillation. 6,039,846, Cl. 203-57.000.
Berg Technology, Inc.: *See—*
Clark, Stephen L.; Horchler, David C.; Stoner, Stuart C.; Pontius, Glenn J.; and Nailor, William K., III, 6,038,762, Cl. 29-739.000.
Berger, Rolf: *See—*
Stoll, Kurt; Berger, Rolf; and Gebauer, Günter, 6,039,358, Cl. 285-23.000.
Bergeron, Carey L.: *See—*
Bergeron, Stevie J.; and Bergeron, Carey L., 6,038,808, Cl. 43-53.500.
Bergeron, Stevie J.; and Bergeron, Carey L. Hook remover. 6,038,808, Cl. 43-53.500.
Bergheim, Olav B.: *See—*
Ildstad, Suzanne T.; and Bergheim, Olav B., 6,039,684, Cl. 600-1.000.
Bergmann, Ernest Eisenhardt, to Lucent Technologies, Inc. Polarization separator/combiner. 6,040,942, Cl. 359-487.000.
Bergmann, Rolf: *See—*
Häusler, Günther; Gericke, Rolf; Wurziger, Hanns; Baumgarth, Manfred; Lues, Inge; De Peyer, Jacques; and Bergmann, Rolf, 6,040,308, Cl. 514-253.000.
Bergstrom, Inc.: *See—*
Peiffer, Larry; Zeigler, Terry; and Guo, William G., 6,038,877, Cl. 62-244.000.
Bergum, Peter W.: *See—*
Vlasuk, George Phillip; Stanssens, Patrick Eric Hugo; Messens, Joris Hilda Lieven; Lauwereys, Marc Josef; LaRoche, Yves Rene; Jespers, Laurent Stephane; Gansemans, Yannick Georges Jozef; Moyle, Matthew; and Bergum, Peter W., 6,040,441, Cl. 536-252.000.
Beringer, Bernie. Bottle guide and fill seal structure for bottle filling machine. 6,038,833, Cl. 53-253.000.

Berkner, Kathleen L.; Petersen, Lars Christian; Hart, Charles E.; Hedner, Ulla; and Bregengaard, Claus, to ZymoGenetics, Inc.; and Novo Nordisk A/S. Modified Factor VII. 6,039,944, Cl. 424-94.640.

Berlien, Hans-Peter; Muller, Gerhard; Beuthan, Jürgen; and Philipp, Carsten, to Ceram Optec GmbH; and Huttinger Medizintechnik GmbH. Working shaft for photo-thermal therapy. 6,039,728, Cl. 606-15.000.

Bermbach, Rainer F.R.: *See*—
Croy, Clemens; and Bermbach, Rainer F.R., 6,040,829, Cl. 345-327.000.

Bernard, Gus; and Soaft, Jay, to Reflexite Corporation. Method for forming a retroreflective sheeting having a plurality of cells with multi-course, hatched patterned perimeters. 6,039,909, Cl. 264-220.000.

Bernard, Robert M.: *See*—
Walker, Jeffrey P.; and Bernard, Robert M., 6,041,252, Cl. 604-20.000.

Bernardin, Charles P.; and Yee, Meng F., to Nortel Networks Corporation. Method and apparatus for minimizing the number of samples needed to determine cell area coverage reliability in a radiotelephone system. 6,041,236, Cl. 455-446.000.

Bernet, Yoram: *See*—
Douceur, John R.; Bar, Ofer; and Bernet, Yoram, 6,041,053, Cl. 370-389.000.

Bernhard Mittelhäuser: *See*—
Schubert, Jan, 6,039,450, Cl. 359-872.000.

Bero, Joseph: *See*—
Delwiche, Christopher; Bero, Joseph; and Ginnow, Gregory, 6,038,972, Cl. 101-216.000.

Berrang, Peter G.: *See*—
Ventrudo, Brian F.; and Berrang, Peter G., 6,041,072, Cl. 372-102.000.

Berson, William; and Auslander, Judith D., to Pitney Bowes Inc. Postage metering system that utilizes secure invisible bar codes for postal verification. 6,039,257, Cl. 235-468.000.

Bertheau, Fernand; Maire, Patrick; Dostert, Bruno; and Bellali, Eddie, to Intertechnique. Head harness for respiratory mask. 6,039,045, Cl. 128-207.110.

Bertocchio, Rene; Lacroix, Eric; and Perdrieux, Sylvain, to Elf Atochem S.A. Process for the purification of pentafluoroethane by extractive distillation. 6,039,845, Cl. 203-57.000.

Bertola, Aldo; and Cassarino, Salvatore, to Pantochim S.A. High productivity process to produce maleic anhydride from n-butane. 6,040,460, Cl. 549-262.000.

Bertoli, Luciano: *See*—
Badiali, Roberto; Bertoli, Luciano; and Colomberotto, Giorgio, 6,039,281, Cl. 242-475.500.

Bertozzi, Giuliano: *See*—
Delaite, Emmanuel; Charlier, Jean; and Bertozzi, Giuliano, 6,040,348, Cl. 521-59.000.

Beshai, Maged E.; and Nichols, Stacy W., to Nortel Networks Corporation. Large-scale service-rate regulators for ATM switching. 6,041,040, Cl. 370-232.000.

Besser, Thomas E.: *See*—
Tarr, Phillip I.; Bilge, Sima S.; Besser, Thomas E.; and Vary, James C., Jr., 6,040,421, Cl. 530-300.000.

Besserer, Horst; Hartel, Marc; and Zachrai, Jürgen, to Rittal-Werk Rudolf Loh GmbH & Co. KG. Frame for a switchgear cabinet. 6,039,420, Cl. 312-265.100.

Bestfoods: *See*—
LeFlécher, René; and Robson, Peter, 6,039,994, Cl. 426-498.000.
Sekula, Bernard Charles; and Golden, Rosemary Antoinette, 6,039,998, Cl. 426-605.000.

Bettini, Joseph A.: *See*—
Paul, Donald C.; Bennett, Joseph C.; Bettini, Joseph A.; and Gordon, Edward J., 6,039,579, Cl. 439-56.000.

Bettini, Luigi: *See*—
Villa, Corrado; Bettini, Luigi; and Bartoli, Simone, 6,040,734, Cl. 327-530.000.

Beukema, Jack A., to Prince Corporation. Integrally molded switch lighting and electronics. 6,040,534, Cl. 200-5.00A.

Beuthan, Jürgen: *See*—
Berlien, Hans-Peter; Muller, Gerhard; Beuthan, Jürgen; and Philipp, Carsten, 6,039,728, Cl. 606-15.000.

Bhatnagar, Atul: *See*—
Sekharipuram, Venkateshwaran N.; Mecham, Beverly Sue; Bhatnagar, Atul; and McGrath, James E., 6,040,416, Cl. 528-168.000.

Bhatt, Sanjiv M.; Eggum, Shawn D.; and Olson, Wayne C., to Fluoroware, Inc. Composite transport carrier. 6,039,186, Cl. 206-711.000.

Biagiotti, Guglielmo, to Fabio Perini S.p.A. Device for unwinding reels of web material comprising a system for controlling the unwinding pressure. 6,039,285, Cl. 242-563.000.

Bickerton, Matthew John; Bohrer, Kathryn Ann; Hughes, Emma Suzanne; Kenworthy, Edward William; Musgrove, Rupert Jeremy; Patterson, LindaMay Rose; Porter, Steven; Salt, David Dennis; and Scattergood, Duncan Keith, to International Business Machines Corporation. Object oriented technology framework for accounts receivable and accounts payable. 6,041,312, Cl. 705-30.000.

Bicknell, William Hull: *See*—
Ramakrishnan, Sriram; Steigerwald, Robert Louis; and Bicknell, William Hull, 6,040,753, Cl. 336-223.000.

Bidinger, Gregory P.: *See*—
Dunaway, James H.; Hernandez, Pamela K.; and Bidinger, Gregory P., 6,040,380, Cl. 524-832.000.

Biehl, Philip D.: *See*—
Franz, Patrick J.; Biehl, Philip D.; Straayer, David H.; and Dodier, Robert H., 6,040,821, Cl. 345-159.000.

Bielenberg, Gerhard-Wilhelm: *See*—
David, Samuel; Antel, Jochen; Brueckner, Reinhard; Ziegler, Dieter; Eeckhout, Christian; Bielenberg, Gerhard-Wilhelm; and Peck, Michael, 6,040,303, Cl. 514-218.000.

Bigham, John A.; Little, Dave; Mihm, Edward C.; Sistanizadeh, Kamran; Amin-Salehi, Bahman; Jain, Alpna; Lightfoot, Regina; and Arthur, Ulric E., to Bell Atlantic Network Services, Inc. Full service network having distributed architecture. 6,041,056, Cl. 370-395.000.

Bigo, Louis: *See*—
Mangano, Alain; Allart, Bernard; Bigo, Louis; Garczarek, Michel; Ethet, Yannick; Crave, Joël; and Peignon, Philippe, 6,038,859, Cl. 60-436.000.

Bilbo, Matthew: *See*—
Shah, Tasvir; Harrison, Mark A.; and Bilbo, Matthew, 6,041,325, Cl. 707-10.000.

Bilge, Sima S.: *See*—
Tarr, Phillip I.; Bilge, Sima S.; Besser, Thomas E.; and Vary, James C., Jr., 6,040,421, Cl. 530-300.000.

Biliris, Alexandros; Hillyer, Bruce K.; and Panagos, Euthimios, to Lucent Technologies Inc. Dynamic hierarchical network resource scheduling for continuous media. 6,041,354, Cl. 709-226.000.

Billingsley, Richard: *See*—
Winch, Peter G.; and Billingsley, Richard, 6,040,969, Cl. 361-82.000.

Binney & Smith Inc.: *See*—
Fistner, David C., Sr., 6,039,797, Cl. 106-31.640.
Santini, Andree F.; and Miller, Richard E., 6,040,359, Cl. 523-161.000.

Binns, Bruce W.; Price, Rodney M.; Palm, Charles S.; and Weaver, Suzanne E., to Synthonics, Incorporated. Apparatus for interactive image correlation for three dimensional image production. 6,041,140, Cl. 382-209.000.

Binowski, Nancy: *See*—
Androski, Frank J.; Binowski, Nancy; Ehlinger, James; Robinson, Jerry Allen; and Sheinbein, Daniel, 6,041,117, Cl. 379-268.000.

Biomat B.V.: *See*—
Koole, Leo Hendrik, 6,040,408, Cl. 526-292.100.

BioNumerik Pharmaceuticals, Inc.: *See*—
Hausheer, Frederick H.; and Dodd, Thomas J., 6,040,294, Cl. 514-23.000.
Hausheer, Frederick H.; and Dodd, Thomas J., 6,040,304, Cl. 514-221.000.
Hausheer, Frederick H.; and Dodd, Thomas J., 6,040,312, Cl. 514-283.000.
Hausheer, Fredrick H.; Murali, Dhanabalan; and Seetharamulu, Peddaiahgari, 6,040,330, Cl. 514-408.000.

Biosafe Laboratories, Inc.: *See*—
Tyrrell, Steven P., 6,040,135, Cl. 435-4.000.

Biosearch Italia, S.p.A.: *See*—
De Flora, Antonio; Benatti, Umberto; and Giovine, Marco, 6,040,297, Cl. 514-47.000.

Biostore New Zealand, Ltd.: *See*—
Wiggins, Philippa M., 6,040,132, Cl. 435-2.000.

Biotechnology Research & Development Corp.: *See*—
Doane, William M.; Lawton, John W., Jr.; and Shogren, Randal, 6,040,063, Cl. 428-532.000.

Birch, Brian Jeffrey; and Morris, Nicholas Andrew, to Unilever Patent Holdings BV. Electrochemical reactions. 6,039,861, Cl. 205-335.000.

Bird, J. Dexter, III: *See*—
Naud, Steven F.; Weber, Max D.; Lucero, Lei Lani; Bird, J. Dexter, III; and Fink, Martin D., 6,039,193, Cl. 212-270.000.

Birdwell, Kenneth J., to Microsoft Corporation. Data delivery system and method for delivering computer data over a broadcast network. 6,041,359, Cl. 709-238.000.

Birger, Ari: *See*—
Joffe, Alexander; and Birger, Ari, 6,041,059, Cl. 370-412.000.

Birkner, Stefan; Strian, Ernst; and Kreibiehl, Markus, to LuK GmbH & Co. Component made of an aluminium silicon cast alloy. 6,040,059, Cl. 428-469.000.

Bishop, J. Merrill, to Vulcan Spring & Manufacturing Company. Retractor cable connector for tethered product display. 6,039,496, Cl. 403-4.000.

Bissonnette, Bruce Marc: *See*—
Brasitus, Thomas A.; Bissonnette, Bruce Marc; and Sitrin, Michael D., 6,040,300, Cl. 514-167.000.

Bittar, Joseph; Barker, Frederick H.; Cooney, Anthony; Perl, David I.; Peruggi, Richard E.; and Silverberg, Michael D., to Otis Elevator. Transferring freight or passenger cabs between moving bogies. 6,038,980, Cl. 104-20.000.

Bjeldbak, Gitte. Method for attaining erection of the human sexual organs. 6,039,951, Cl. 424-195.100.

Björklid, Anders; Hardie, Malcolm; and Mäder, Heinz, to Telefonaktiebolaget LM Ericsson. Voltage controlled oscillator for recovering data pulses from a data input stream having digital data with an unknown phase. 6,040,743, Cl. 331-57.000.

Black, David Glenn; Hinch, Garry Dale; Nguyen, Dat Quoc; and Srinivasan, Kasturi Rangan, to Lexmark International, Inc. Solution squarylium charge generation systems incorporating binder blends. 6,040,098, Cl. 430-59.600.

Blair, Christopher S., to National Semiconductor Corporation. Integrated circuit structure with dual thickness cobalt silicide layers and method for its manufacture. 6,040,606, Cl. 257-384.000.

Blair, Timothy P.: *See*—
Campbell, Russell; Dow, Richard M.; Blair, Timothy P.; and Poppenga, Burton H., 6,040,917, Cl. 358-1.170.

Blaisdell, Dennis R.; Mattison, Bruce W.; Farthing, Robert C.; and Sarosy, Michelle A., to Jervis B. Webb Company. Method and apparatus for modeling material handling systems. 6,041,171, Cl. 395-500.270.

Blake, Catherine: *See*—
Wood, Mervin G.; Wiggins, William; Blake, Catherine; Carpenter, Albert; and Chen, Wha, 6,040,455, Cl. 548-259.000.

Blake, Terence G. W.; Andresen, Bernhard H.; and Wall, Frederick G., to Texas Instruments Incorporated. Output buffer having quasi-failsafe operation. 6,040,708, Cl. 326-33.000.

Blakeney, Andrew J.; Medina, Arturo N.; Toukhy, Medhat A.; Ferreira, Lawrence; Jeffries, Alfred T., III; and Naiini, Ahmad A., to Olin Microelectronic Chemicals, Inc. Photosensitive diazonaphthoquinone esters based on selected cyclic alkyl ether-containing phenolics and their use in radiation sensitive mixtures. 6,040,107, Cl. 430-165.000.

Bland, James L.: *See*—
Wozny, Mary Ellen; Chambers, Ralph P.; and Bland, James L., 6,040,370, Cl. 524-394.000.

Bland, Ralph H.; Jonza, James M.; Smith, James D.; Bradley, Jeffrey F.; and Smith, Kenneth B., to 3M Innovative Properties Company. Tear resistant multilayer films based on sebacic acid copolyesters and articles incorporating such films. 6,040,061, Cl. 428-480.000.

Blankenstein, Thomas; and Cayeux-Pezzutto, Sophie, to Max-Delbrück-Centrum Für Molekulare Medizin. Live vaccine for the treatment of tumor diseases. 6,039,941, Cl. 424-93.210.

Blanquet, Elisabeth: *See*—
Anderbouhr, Stéphanie; Schuster, Frédéric; Blanquet, Elisabeth; and Theret, Gérald, 6,040,012, Cl. 427-255.391.

Blau, Reed J.: *See*—
Hinshaw, Jerald C.; Doll, Daniel W.; Blau, Reed J.; and Lund, Gary K., 6,039,820, Cl. 149-45.000.

Bleistahl Produktions-GmbH & Co. KG: *See*—
Dalal, Kirit; Köhler, Ekkehard; and Nadkarni, Anil V., 6,039,785, Cl. 75-235.000.

Blood, William R., Jr.: *See*—
Chambers, Benjamin C.; Blood, William R., Jr.; and Lee, Tien-Yu T., 6,040,624, Cl. 257-692.000.

Blum, Rick: *See*—
Shah, Ashok; Blum, Rick; and Dickinson, Gary, 6,038,825, Cl. 52-172.000.

Blumberg, Richard M.: *See*—
Tsai, Li C.; and Blumberg, Richard M., 6,041,092, Cl. 377-1.000.

Blumenfeld, Lee A.: *See*—
Sliwa, Jack; and Blumenfeld, Lee A., 6,039,701, Cl. 600-588.000.

BML, Inc.: *See*—
Ogawa, Kazuyuki; Tanaka, Kazuya; Nagata, Kinya; and Takano, Syoichi, 6,040,426, Cl. 530-350.000.

BMW AG: *See*—
John, Thomas; Kuhn, Thomas; and Nehse, Wolfgang, 6,041,276, Cl. 701-67.000.

Board of Regents, Univ. of Texas System, The: *See*—
Chwalisz, Krzysztof; and Garfield, Robert E., 6,040,340, Cl. 514-509.000.

Board of Trustees Leland Stanford Junior University: *See*—
Hodgson, Craig W.; Wagener, Jefferson L.; Digonnet, Michel J. F.; and Shaw, H. John, 6,040,571, Cl. 250-227.140.

Board of Trustees operating Michigan State University: *See*—
Hollingsworth, Rawle I.; and Wang, Guijun, 6,040,464, Cl. 549-451.000.

BOC Group plc, The: *See*—
Pooley, Michael B.; Strotton, Carl N.; and Wardle, David G., 6,038,868, Cl. 62-63.000.

Bocek, Joseph M.: *See*—
Kim, Jaeho; and Bocek, Joseph M., 6,041,251, Cl. 600-518.000.

Böcker, Jürgen: *See*—
Thiesen, Stefan; Jungbluth, Dieter; and Böcker, Jürgen, 6,038,955, Cl. 89-41.170.

Bodamer, Roger; Draaijer, Jacco; Voss, Eric; and Mani, Raghu, to Oracle Corporation. Apparatus and method for passing statements to foreign databases by using a virtual package. 6,041,344, Cl. 709-203.000.

Boeing Company, The: *See*—
Matsen, Marc R.; and McCarville, Douglas A., 6,040,563, Cl. 219-633.000.
McCarville, Douglas A., 6,039,832, Cl. 156-292.000.

Boekeloo, Harry F.; and Swick, James A., to Boekeloo, Inc. Sprinkler head trimmer. 6,038,774, Cl. 30-276.000.

Boekeloo, Inc.: *See*—
Boekeloo, Harry F.; and Swick, James A., 6,038,774, Cl. 30-276.000.

Boettcher, John W.; Jagannathan, Seshadri; Orem, Michael W.; and Zola, Philip J., to Eastman Kodak Company. Processes of preparing radiation-sensitive silver halide emulsions. 6,040,128, Cl. 430-569.000.

Bogdan, Alexei, to Lumion Corporation. Programmable universal lighting system. 6,040,661, Cl. 315-224.000.

Boggs, Darrell D.: *See*—
Parker, Donald D.; Boggs, Darrell D.; and Kyker, Alan B., 6,041,403, Cl. 712-210.000.

Böhm, Thomas: *See*—
Reisinger, Hans; Grüning, Ulrike; Wendt, Hermann; Stengl, Reinhard; Lehmann, Volker; Willer, Josef; Franosch, Martin; Schäfer, Herbert; Krautschneider, Wolfgang; Hofmann, Franz; and Böhm, Thomas, 6,040,995, Cl. 365-185.180.

Bohne, Gerhard: *See*—
Thielert, Wolfgang; Bohne, Gerhard; and Müller, Klaus-Helmut, 6,040,271, Cl. 504-134.000.

Bohrer, Kathryn Ann: *See*—
Bickerton, Matthew John; Bohrer, Kathryn Ann; Hughes, Emma Suzanne; Kenworthy, Edward William; Musgrove, Rupert Jeremy; Patterson, LindaMay Rose; Porter, Steven; Salt, David Dennis; and Scattergood, Duncan Keith, 6,041,312, Cl. 705-30.000.

Boice, Charles E.; Kaczmarczyk, John M.; Ngai, Agnes Y.; and Vachon, Michael P., to International Business Machines Corporation. Method to compensate for a fade in a digital video input sequence. 6,040,875, Cl. 348-595.000.

Boileau, Michel A.: *See*—
Hoskins, Matthew W.; and Boileau, Michel A., 6,039,305, Cl. 251-342.000.

Boles, Timothy Edward, to Whitaker Corporation, The. Method of fabricating polysilicon based resistors in Si-Ge heterojunction devices. 6,040,225, Cl. 438-314.000.

Bolla, Kalman; and Bolla, Orsolya, to Chrisofix AG. Medical splint, metal sheet for such a splint and its use. 6,039,706, Cl. 602-5.000.

Bolla, Orsolya: *See*—
Bolla, Kalman; and Bolla, Orsolya, 6,039,706, Cl. 602-5.000.

Bolognesi, Davide: *See*—
Frisina, Ferruccio; Bolognesi, Davide; and Magri', Angelo, 6,040,609, Cl. 257-391.000.

Bonanno, Enzo: *See*—
Guarniero, Umberto; Magon, Franco; and Bonanno, Enzo, 6,039,807, Cl. 118-715.000.

Bond, Bruce. Tamper evident file holder configured for hanging in a file cabinet. 6,039,473, Cl. 383-5.000.

Bonnet, Jacqueline: *See*—
De Nanteuil, Guillaume; Portevin, Bernard; Bonnet, Jacqueline; and Fradin, Armel, 6,040,327, Cl. 514-394.000.

Bonny, Pierre; Kreutzig, Norbert; and Sternal, Thorsten, to DaimlerChrysler AG. Method for manufacturing an air-gap-insulated exhaust manifold. 6,038,769, Cl. 29-890.080.

Bonse, Michael: *See*—
Van De Venne, Gunter; Kemmerling, Frank; Bonse, Michael; Muckelmann, Klaus; and Peters, Rainer, 6,039,536, Cl. 415-216.100.

Borders, Guy Thompson: *See*—
Qin, Si-Zhao Joe; and Borders, Guy Thompson, 6,041,320, Cl. 706-1.000.

Borealis A/S: *See*—
Pentti, Ismo; and Leskinen, Pauli, 6,040,260, Cl. 502-103.000.

Borg, Hermanus J.: *See*—
Zhou, Guo-Fu; Jacobs, Bernardus A.J.; Rijpers, Johannes C.N.; and Borg, Hermanus J., 6,040,066, Cl. 428-641.000.

Boright, Jerry N. Spring hinged actuator. 6,038,737, Cl. 16-297.000.

Boroczky, Lilla; Gebler, Charlene Ann; Kaczmarczyk, John M.; Westermann, Edward F.; and Woodard, Robert L., to International Business Machines Corporation. Adaptive real-time encoding of video sequence employing image statistics. 6,040,861, Cl. 348-409.000.

Borowski, Joachim: *See*—
Ryan, Shawn Gregory; Webber, James Lloyd; and Borowski, Joachim, 6,039,346, Cl. 280-736.000.

Borschowa, Lawrence A.: *See*—
Sullivan, Joseph L.; Borschowa, Lawrence A.; and Nova, Richard C., 6,041,254, Cl. 607-5.000.

Borst, Hans-Ulrich: *See*—
Siegel, Jörg; Borst, Hans-Ulrich; Bell, Peter; Büscher, Ralf; Reif, Heinz; and Jung, Jürgen, 6,040,125, Cl. 430-506.000.

Bortz, Michael L.; and Godil, Asif A., to New Focus, Inc. Simple, low cost, laser absorption sensor system. 6,040,914, Cl. 356-435.000.

Bosshart, Patrick W., to Texas Instruments Incorporated. Domino logic circuits, systems, and methods with precharge control based on completion of evaluation by the subsequent domino logic stage. 6,040,716, Cl. 326-98.000.

Boston, Joseph F.; and Boys, Ian, to Aspen Technology, Inc. Method and apparatus for simulating and optimizing a plant model. 6,041,263, Cl. 700-32.000.

Botich, Michael J.; Halseth, Thor R.; and Barker, John, to MDC Investment Holdings, Inc. Pre-filled retractable needle injection device. 6,039,713, Cl. 604-110.000.

Botka, Christopher M.: *See*—
Nordquist, Jack; Calahan, Mark J.; Damiano, Timothy J.; and Botka, Christopher M., 6,040,676, Cl. 318-696.000.

Bouchard, Hervé; Bourzat, Jean-Dominique; and Commerçon, Alain, to Rhone Poulenc Rorer SA. Taxoids, their preparation and pharmaceutical compositions containing them. 6,040,466, Cl. 549-510.000.

Boucher, Raymond M. G. Liquid phase disinfection/sterilization with microwave energy. 6,039,921, Cl. 422-21.000.

Boufelfel, Ali: *See*—
Mikhael, Michael G.; Boufelfel, Ali; and Yializis, Angelo, 6,040,017, Cl. 427-496.000.

Bougrov, Gleb Elmirovich: *See*—
Antonova, Tatijana Borisovna; Bougrov, Gleb Elmirovich; Kondranin, Sergey Gennadievich; Kralkina, Elena Alexandrovna; Pavlov, Vladimir Borisovich; Alexandrov, Andrej Fedorovich; and Rukhadze, Anri Amvrosievich, 6,040,547, Cl. 219-121.430.

Bourdauducq, Paul, to Elf Atochem S.A. Process for the preparation of 4-amino-1,2,4-triazole. 6,040,456, Cl. 548-265.600.

Bourdelais, Robert P.: *See*—
Aylward, Peter T.; Bourdelais, Robert P.; Haydock, Douglas N.; and Gula, Thaddeus S., 6,040,036, Cl. 428-195.000.

Aylward, Peter T.; Bourdelais, Robert P.; Gula, Thaddeus S.; and Lu, Pang-Chia, 6,040,124, Cl. 430-496.000.

Bourgeois, Stephane: *See—*
Gilbert, Richard; Sauvageau, Mario A.; and Bourgeois, Stephane, 6,038,920, Cl. 73-170.230.

Bourzat, Jean-Dominique: *See—*
Bouchard, Hervé; Bourzat, Jean-Dominique; and Commerçon, Alain, 6,040,466, Cl. 549-510.000.

Bova, G. Steven. Laser cell purification system. 6,040,139, Cl. 435-6.000.

Bowers, Debra D.: *See—*
Patterson, Robert; Whitmore, Rebecca E; Bowers, Debra D.; and Swoboda, Dean P., 6,038,963, Cl. 99-287.000.

Bowling, Rod A.; and Clayton, Robert Paul, to Monfort, Inc. Method for treating a food processing facility. 6,039,984, Cl. 426-61.000.

Bowman, Howard L.; Darwin, Robert L.; Maraffio, William M.; Sawyer, Larry D.; Williams, Robert B.; Hudson, Frank E.; Hunstad, Mary; and Decker, Mark W., to United States of America, Navy. Electrical detector actuated magazine sprinkler (EDAMS) system. 6,039,124, Cl. 169-61.000.

Boyd, Diane C.; Burns, Stuart M.; Hanafi, Hussein I.; Taur, Yuan; and Wille, William C., to International Business Machines Corporation. Method for making field effect transistors having sub-lithographic gates with vertical side walls. 6,040,214, Cl. 438-244.000.

Boyes, Geoffrey E.; and Herlant, Michel A., to Equistar Chemicals, LP. Blended dyes and process for dyeing polypropylene fibers. 6,039,767, Cl. 8-400.000.

Boys, Ian: *See—*
Boston, Joseph F.; and Boys, Ian, 6,041,263, Cl. 700-32.000.

Bozso, Ferenc Miklos; and Emma, Philip George, to International Business Machines Corporation. Clock skew minimization and method for integrated circuits. 6,040,203, Cl. 438-106.000.

BP Chemicals Limited: *See—*
Fougret, Christoph Martin; and Holderich, Wolfgang Friederich, 6,040,262, Cl. 502-162.000.
Jobson, Simon; and Watson, Derrick John, 6,040,474, Cl. 560-243.000.

BPSI Holdings, Inc.: *See—*
Mehra, Dev K.; Ramireddy, Chittamuru; Tang, Li-Juan; and Porter, Stuart C., 6,039,976, Cl. 424-480.000.

Bracco Research USA: *See—*
Niedospial, John J., Jr., 6,039,718, Cl. 604-408.000.

Bradbury, John R.: *See—*
Seifert, Raymond C.; and Bradbury, John R., 6,039,724, Cl. 604-533.000.

Bradley, Jeffrey F.: *See—*
Bland, Ralph H.; Jonza, James M.; Smith, James D.; Bradley, Jeffrey F.; and Smith, Kenneth B., 6,040,061, Cl. 428-480.000.

Brady, James T., to International Business Machines Corporation. Method and apparatus for determining a routing table for each node in a distributed nodal system. 6,041,049, Cl. 370-351.000.

Brady, Jerry L.: *See—*
Stevenson, Mark D.; and Brady, Jerry L., 6,039,116, Cl. 166-263.000.

Bran, Mario E., to Verteq, Inc. Wafer cleaning system. 6,039,059, Cl. 134-105.000.

Brandon, Giles M.: *See—*
Gutierrez, Ernesto Jose; Archibald, Charles Andrew; Kachur, Christopher M.; and Brandon, Giles M., 6,038,871, Cl. 62-133.000.

Brandt, Carsten: *See—*
Scheck, Georg; Klippert, Uwe; and Brandt, Carsten, 6,038,817, Cl. 49-352.000.

Brännland, Rolf C. A.; and Noréus, Sture E. O., to Mo Och Domsjö Aktiebolag. Method of bleaching pulp with ozone wherein the acidity is maintained with an acid solution prepared by electrolysis or electrodialysis. 6,039,837, Cl. 162-29.000.

Brasitus, Thomas A.; Bissonnette, Bruce Marc; and Sitrin, Michael D., to Arch Development Corporation. Method of preventing colon cancer with vitamin D_3 analogues. 6,040,300, Cl. 514-167.000.

Braun, Morris, to Kenall Manufacturing Co. Method and apparatus for securing the same hinged lid assembly to each of a plurality of different containers. 6,039,197, Cl. 215-228.000.

Braunberger, Benjamin A., to Tecre Company, Inc. Apparatus for manufacturing buttons. 6,038,944, Cl. 79-4.000.

Breda, Jean-Marc, to Sextant Avionique. Optical velocimetric probe. 6,040,899, Cl. 356-28.500.

Breed, David S.; Duvall, Wilbur E.; and Johnson, Wendell C., to Automotive Technologies International, Inc. Method and system for optimizing comfort of an occupant. 6,039,139, Cl. 180-271.000.

Breen, Philip: *See—*
Compadre, Cesar; Breen, Philip; Salari, Hamid; Fifer, E. Kim; Lattin, Danny L.; Slavik, Michael; Li, Yanbin; and O'Brien, Timothy, 6,039,992, Cl. 426-332.000.

Bregengaard, Claus: *See—*
Berkner, Kathleen L.; Petersen, Lars Christian; Hart, Charles E.; Hedner, Ulla; and Bregengaard, Claus, 6,039,944, Cl. 424-94.640.

Breidenbach, Paul, to General Motors Corporation. Valve drive arrangement for internal combustion engines. 6,039,019, Cl. 123-90.610.

Breinholt, Jens: *See—*
Lassen, Soren Flensted; Bech, Lisbeth; Ohmann, Anders; Breinholt, Jens; Fuglsang, Claus Crone; and Ostergaard, Peter Rahbek, 6,039,942, Cl. 424-94.600.

Breitlow-Hertzfeldt, Juergen: *See—*
Haehnel, Thomas; Breitlow-Hertzfeldt, Juergen; Saffian, Bernd; and Kern, Josef, 6,040,751, Cl. 335-185.000.

Breme, Jürgen: *See—*
Hegner, Frank; Schmidt, Elke Maria; Güther, Volker; Otto, Andreas; Breme, Jürgen; Müller, Heinz; and Turnsek, Jürgen Peter, 6,039,918, Cl. 420-422.000.

Brennan, Thomas C., to International Business Machines Corporation. Method and apparatus for performing integrated circuit timing including noise. 6,041,169, Cl. 395-500.070.

Breslin, Daniel V. Pen. 6,039,486, Cl. 401-88.000.

Bretschneider, Richard; Siu, Burton; and Qureshi, Imran Iqbal, to Microsoft Corporation. Method and apparatus for automatically updating a data file from a network. 6,041,333, Cl. 707-203.000.

Brew, Thomas W.; and Kragle, Harry A., to Corning Incorporated. Method for honeycomb extrusion using a corrected flow gradient. 6,039,908, Cl. 264-177.120.

Brewer, George J.: *See—*
Venta, Patrick J.; Brewer, George J.; Yuzbasiyan-Gurkan, Vilma; and Schall, William D., 6,040,143, Cl. 435-6.000.

Brewster, John; and Ulema, Mehmet, to Daewoo Telecom, Ltd. Method and apparatus for intelligent network call handling in a telephone exchange. 6,041,108, Cl. 379-196.000.

Brickner, Louis C., Jr.; and Wixey, Barry D., to Delta International Machinery Corp. Composite material C-arm for scroll saw. 6,038,953, Cl. 83-783.000.

Bridgestone Corporation: *See—*
Kurata, Tomoyuki; Kumano, Youichi; and Takahashi, Kazuya, 6,039,405, Cl. 301-43.000.
Siegenthaler, Karl J., 6,039,825, Cl. 156-111.000.

Bridgestone Sports Co., Ltd.: *See—*
Kasashima, Atsuki; Ihara, Keisuke; and Shimosaka, Hirotaka, 6,039,660, Cl. 473-378.000.

Bries, James L.: *See—*
Sadrakula, Philip V.; Kampa, Leonard; Hamerski, Michael D.; and Bries, James L., 6,039,102, Cl. 156-510.000.

Briggs & Stratton Corporation: *See—*
Dykstra, Richard A., 6,040,767, Cl. 340-450.300.

Brigham and Women's Hospital, Inc., The: *See—*
Ridker, Paul; and Hennekens, Charles H., 6,040,147, Cl. 435-7.240.

Brinsea Products, Inc.: *See—*
Pearce, Frank H., 6,039,006, Cl. 119-315.000.

Bristol Compressors, Inc.: *See—*
Monk, David T.; Hill, Joe T.; Wagner, Phillip C.; Loprete, Joseph F.; and Young, Michael R., 6,040,679, Cl. 318-778.000.

Bristol-Myers Squibb Company: *See—*
Carr, Raymond A.; and Lauman, Brian C., 6,038,914, Cl. 73-40.000.
Kim, Kyoung S.; Kimball, S. David; Cai, Zhen-wei; Rawlins, David B.; Misra, Raj N.; Poss, Michael A.; Webster, Kevin R.; Hunt, John T.; and Han, Wen-Ching, 6,040,321, Cl. 514-369.000.

British Aerospace PLC: *See—*
Collier, Alan Derek; Johnston, Stephen Harold; and Eastham, John, 6,039,239, Cl. 228-157.000.

British Telecommunications public limited company: *See—*
Kashyap, Raman; and Armitage, Jonathan Richard, 6,041,069, Cl. 372-6.000.

Brito, Joao Carlos F.; Rote, John K.; Trafton, Frederick W.; and Martins, Marcus M., to Texas Instruments Incorporated. Constant velocity control for an actuator using sampled back EMF control. 6,040,671, Cl. 318-603.000.

Britton, Rick A. Communication path integrity supervision in a network system for automatic alarm data communication. 6,040,770, Cl. 340-539.000.

Broaze, Guy: *See—*
Motyka, Andrea Lee; Broaze, Guy; and Kugler, Alison, 6,040,071, Cl. 428-704.000.
Motyka, Andrea Lee; Broaze, Guy; and Kugler, Alison, 6,040,287, Cl. 510-340.000.

Broder, Christopher C.: *See—*
Earl, Patricia L.; Broder, Christopher C.; Doms, Robert W.; and Moss, Bernard, 6,039,957, Cl. 424-208.100.

Brokaw, A. Paul, to Analog Devices, Inc. Switched-transconductance circuit within integrated T-switches. 6,040,732, Cl. 327-408.000.

Brookner, George, to Ascom Hasler Mailing Systems, Inc. Postal security device incorporating periodic and automatic self implementation of public/private key pair. 6,041,317, Cl. 705-61.000.

Brooks, Dennis L.: *See—*
Quiachon, Dignah B.; Gandhi, Deepak R.; Brooks, Dennis L.; Imran, Mir A.; and Guidi, Roger J., 6,039,743, Cl. 606-108.000.

Broome, Barry G., to Intel Corporation. Athermalized mounts for lenses. 6,040,950, Cl. 359-820.000.

Brose Fahrzeugteile GmbH & Co. KG, Coburg: *See—*
Scheck, Georg; Klippert, Uwe; and Brandt, Carsten, 6,038,817, Cl. 49-352.000.

Brost, Wolfgang: *See—*
Buck, Manfred; Brost, Wolfgang; Handschuh, Robert; and Kratt, Helmut, 6,039,038, Cl. 125-39.000.

Brother Kogyo Kabushiki Kaisha: *See—*
Fukuoka, Mutsuo, 6,039,432, Cl. 347-32.000.
Kato, Hiroyuki; and Sasa, Masahiko, 6,041,119, Cl. 379-424.000.
Suzuki, Tsutomu; Sato, Shougo; and Okabe, Yasushi, 6,041,203, Cl. 399-111.000.

Brow, Karenann: *See—*
Danzyger, Howard L.; Brow, Karenann; Caruso, James; Hibbard, Timothy; McPhilliamy, Steven; and Thuma, Michael, 6,039,292, Cl. 248-118.500.

Brown, Barbara A.: *See—*

Brown, Milton D.; and Brown, Barbara A., 6,039,226, Cl. 224-42.240.

Brown, Cary Lee; Hartsfield, Richard C.; Harter, Bernard Gerald; and Schoolcraft, Brian, to Emerson Electric Co. Electromagnetic device having encapsulated construction and precise positioning of bearing and shaft axes. 6,040,647, Cl. 310-89.000.

Brown, Charles R.; Fogle, Marion O.; and Salley, Thomas F., to Decolam, Inc. Foldable ready-to-use entertainment stand. 6,039,419, Cl. 312-262.000.

Brown, Dana Henry; Christensen, Thomas Charles; Cunningham, Earl A.; and Rogelstad, Wayne A., to International Business Machines Corporation. Self servo writing file. 6,040,955, Cl. 360-75.000.

Brown, Eugene L.: *See—*
Lockhart, David J.; Brown, Eugene L.; Wong, Gordon G.; Chee, Mark S.; and Gingeras, Thomas R., 6,040,138, Cl. 435-6.000.

Brown, Henry John Harding: *See—*
Sanders, Marcus Maria; Kapitan, John Mark; and Brown, Henry John Harding, 6,039,738, Cl. 606-61.000.

Brown, Jack L.; Bruner, Rodney William; Rowe, Neal Edward; Wilkie, William Edward, II; and Yanniello, Robert, to Eaton Corporation. Arrangement for mounting terminal blocks in a mounting panel. 6,039,612, Cl. 439-716.000.

Brown, Joseph D.: *See—*
Wharton, Robert J.; Daniel, Eric R.; and Brown, Joseph D., 6,040,530, Cl. 174-261.000.

Brown, Milton D.; and Brown, Barbara A. Pickup truck spare tire mount. 6,039,226, Cl. 224-42.240.

Brown, Susanne Moira; and MacLean, Alasdair Roderick, to Medical Research Council. Herpes simplex virus-1 deletion variants and vaccines thereof. 6,040,169, Cl. 435-236.000.

Brück, Rolf; and Hirth, Peter, to Emitec Gesellschaft fuer Emissionstechnologies mbH. Honeycomb body with thermal insulation, preferably for an exhaust gas catalytic converter. 6,040,064, Cl. 428-593.000.

Brueckner, Reinhard: *See—*
David, Samuel; Antel, Jochen; Brueckner, Reinhard; Ziegler, Dieter; Eeckhout, Christian; Bielenberg, Gerhard-Wilhelm; and Peck, Michael, 6,040,303, Cl. 514-218.000.

Bruekers, Alphons A. M. L., to U.S. Philips Corporation. Data compression/expansion using a rice encoder/decoder. 6,041,302, Cl. 704-503.000.

Brunato, Siro, to Hydro Drilling International S.p.A. Method and system for obtaining core samples during the well-drilling phase by making use of a coring fluid. 6,039,128, Cl. 175-70.000.

Bruner, Rodney William; and Wilkie, William Edward, II, to Eaton Corporation. Switchgear conductors and mounting arrangements therefor. 6,040,976, Cl. 361-611.000.

Bruner, Rodney William: *See—*
Brown, Jack L.; Bruner, Rodney William; Rowe, Neal Edward; Wilkie, William Edward, II; and Yanniello, Robert, 6,039,612, Cl. 439-716.000.

Bruns, Donald G., to Thermotrex Corporation. Linear actuator. 6,040,643, Cl. 310-26.000.

Brusasco, Raymond M.: *See—*
Penetrante, Bernardino M.; Vogtlin, George E.; Merritt, Bernard T.; and Brusasco, Raymond M., 6,038,853, Cl. 60-274.000.
Penetrante, Bernardino M.; Vogtlin, George E.; Merritt, Bernard T.; and Brusasco, Raymond M., 6,038,854, Cl. 60-297.000.

Bruun, Anders. Water resistant file cabinets. 6,039,415, Cl. 312-229.000.

BSH Bosch und Siemens Hausgeraete GmbH: *See—*
Hirath, Jürgen; and Schütte, Markus, 6,038,830, Cl. 52-788.100.

BTG International Inc.: *See—*
Haselden, Geoffrey Gordon, 6,038,875, Cl. 62-218.000.

BTR Sealing Systems Technical Center, Inc.: *See—*
Willett, Kevin R., 6,038,753, Cl. 29-235.000.

Buchko, Christopher J.: *See—*
Winkler, James L.; Fodor, Stephen P. A.; Buchko, Christopher J.; Ross, Debra A.; Aldwin, Lois; and Modlin, Douglas N., 6,040,193, Cl. 436-180.000.

Buck, George S. Bonding fibrous batts with thermosetting fiber-binders of certain epoxy resins. 6,039,821, Cl. 156-62.200.

Buck, Manfred; Brost, Wolfgang; Handschuh, Robert; and Kratt, Helmut, to Robert Bosch GmbH. Drilling assisting device for hand-guided drill. 6,039,038, Cl. 125-39.000.

Buck, Werner A.: *See—*
Carlson, Bengt A.; and Buck, Werner A., 6,039,304, Cl. 251-209.000.

Bucks, Marcel J. M.; and Nijhof, Engbert B. G., to U.S. Philips Corporation. Circuit arrangement. 6,040,663, Cl. 315-291.000.

Buehler, Martin, to California Institute of Technology. Gas sensor test chip sensing method. 6,040,189, Cl. 436-151.000.

Building Materials Corporation of America: *See—*
Sieling, Frederick W., 6,038,827, Cl. 52-557.000.

Büker, Harald: *See—*
Hasing, Friedrich Wolfgang; Pfeiffer, Frank; and Büker, Harald, 6,041,150, Cl. 385-12.000.

Bullard, Peter, to Francis, Ron. Barrier strip cover and barrier strip for power distribution panels. 6,039,613, Cl. 439-718.000.

Bullock, David: *See—*
Faulkner, W. Harrison, III; Bullock, David; DeGray, Dennis; and Sarasohn, Neil, 6,039,217, Cl. 222-146.500.

Bullock, Michael L.: *See—*
Helterline, Brian L.; Bullock, Michael L.; and Childers, Winthrop D., 6,039,430, Cl. 347-19.000.

Bulou, Jacques: *See—*
Maudhuit, Cecile A.; and Bulou, Jacques, 6,040,123, Cl. 430-463.000.

Bundaberg Foundry Engineers Ltd.: *See—*
Hatt, Raymond John; Wilson, David John; and Batstone, Druce Barry, 6,039,276, Cl. 241-30.000.

Bundy Corporation: *See—*
Hsich, Henry S., 6,039,085, Cl. 138-137.000.

Bunkenburg, Brian K.: *See—*
Skoro, John P., III; Bunkenburg, Brian K.; and Shaughnessy, Mark L., 6,041,226, Cl. 455-405.000.

Burberry, Mitchell S.: *See—*
Bailey, David B.; Burberry, Mitchell S.; and Harris, Mark A., 6,040,115, Cl. 430-303.000.

Burcham, Frank W., Jr.: *See—*
Burken, John J.; and Burcham, Frank W., Jr., 6,041,273, Cl. 701-3.000.

Burdick, Matt; and Chu, Gigi, to Hewlett-Packard Company. Response time measuring system and method for determining and isolating time delays within a network. 6,041,352, Cl. 709-224.000.

Burke, Cathie J.: *See—*
Andrews, John R.; Torpey, Peter A.; Burke, Cathie J.; and Freire, Eduardo M., 6,039,436, Cl. 347-62.000.

Burken, John J.; and Burcham, Frank W., Jr., to United States of America, National Aeronautics and Space Administration. Emergency control aircraft system using thrust modulation. 6,041,273, Cl. 701-3.000.

Burkhart, Chris W.: *See—*
Raaijmakers, Ivo J.; Burkhart, Chris W.; Christensen, David; and Susoeff, Michael N., 6,039,074, Cl. 137-537.000.

Burkus, Frank S., II; Jeram, Edward M.; and Rubinsztajn, Slawomir, to General Electric Company. Liquid injection molding silicone elastomers having primerless adhesion. 6,040,366, Cl. 524-99.000.

Burnham, Jeffrey. Condensation trap for a shower cubicle. 6,038,716, Cl. 4-614.000.

Burnie, James Peter, to NeuTec Pharma plc. Treatment and diagnosis of infections due to helicobacter pylori. 6,039,959, Cl. 424-234.100.

Burnie, Peter James, to Victoria University of Manchester, The. Corynebacterial stress proteins. 6,040,148, Cl. 435-7.320.

Burns, Clay Allen; Nielsen, Peter Madelaire; Sullivan, John Aloysius; and Sullivan, Frederic Ballou-Viaux, to Evolutionary Designs, Inc. Roller skate shock absorber system. 6,039,329, Cl. 280-11.190.

Burns, John A.: *See—*
Bates, Ray G., Jr.; Deweese, Robert M., Jr.; and Burns, John A., 6,038,841, Cl. 56-15.800.

Burns, Stuart M.: *See—*
Boyd, Diane C.; Burns, Stuart M.; Hanafi, Hussein I.; Taur, Yuan; and Wille, William C., 6,040,214, Cl. 438-244.000.

Burns, Stuart Mcallister, Jr.; and Hanafi, Hussein Ibrahim, to International Business Machines Corporation. 2F-square memory cell for gigabit memory applications. 6,040,210, Cl. 438-238.000.

Burris, William Alan; and Prinsen, Philip M., to Alab, LLC. Reversible flow circuit for batch liquid purifier. 6,039,884, Cl. 210-760.000.

Bursal, Faruk, to Synkinetics, Inc. Modified-cam speed converter. 6,039,672, Cl. 476-36.000.

Büscher, Ralf: *See—*
Siegel, Jörg; Borst, Hans-Ulrich; Bell, Peter; Büscher, Ralf; Reif, Heinz; and Jung, Jürgen, 6,040,125, Cl. 430-506.000.

Buschka, Anette: *See—*
Kalentun, Pia; Buschka, Anette; Schmid, Andrea; and Strömbom, Eva, 6,040,494, Cl. 604-369.000.

Bushek, Donald J., to St. Croix Medical, Inc. Ventable connector with seals. 6,039,685, Cl. 600-25.000.

Bussiere, Richard, to Cabletron Systems, Inc. Remote port mirroring system and method thereof. 6,041,042, Cl. 370-245.000.

Busujima, Makoto: *See—*
Hosokoshiyama, Hiroshi; Yoneyama, Masashi; Busujima, Makoto; Tokuda, Hiroaki; Osuga, Naohito; and Tashiro, Kouji, 6,039,204, Cl. 220-623.000.

Butkovich, George M.; and Shubinsky, Vladimir, to Case Corporation. Dual speed PTO shaft retention and support system. 6,038,936, Cl. 74-15.400.

Butler, Aaron S.: *See—*
Melman, Jeffrey D.; and Butler, Aaron S., 6,038,862, Cl. 60-740.000.

Butler, Jerome, to Alfred Butler, Inc. Method of setting stones by using a jewelry prong head for accommodating various size stones. 6,038,751, Cl. 29-10.000.

Butters, Rex A.; and Butters, Scott W. Sliding and tilting shelf drawer. 6,039,422, Cl. 312-334.100.

Butters, Scott W.: *See—*
Butters, Rex A.; and Butters, Scott W., 6,039,422, Cl. 312-334.100.

Butz, Thomas; Kaller, Ralf; Kissel, Guenther; Mayer, Gehard; Koch, Volker; and Schnabel, Werner, to Filterwerk Mann & Hummel GmbH. Filter element. 6,039,779, Cl. 55-499.000.

Buysse, Steven P.; Kennedy, Jenifer S.; Lands, Michael J.; Loeffler, Donald R.; Lukianow, S. Wade; and Ryan, Thomas P., to Valleylab, Inc. Method of vascular tissue sealing pressure control. 6,039,733, Cl. 606-40.000.

Buytaert, Tom Guido; Van de Velde, Stefan Clemens; and Vuylsteke, Pieter Paul. Fast interactive off-line processing method for radiographic images. 6,041,135, Cl. 382-132.000.

Byrd, Charles M.: *See—*
Pfister, Dennis M.; and Byrd, Charles M., 6,038,878, Cl. 62-259.200.
Pfister, Dennis M.; and Byrd, Charles M., 6,038,883, Cl. 62-480.000.

Byun, Hong J; Lim, Jun W; and Park, Hwi C, to LG Foster Ltd. Method of manufacturing speaker diaphragm. 6,039,146, Cl. 181-169.000.

Bzoch, Jan J., to Orthosis Corrective Systems. Orthopedic hinge assembly. 6,039,709, Cl. 602-26.000.

C.F.Scheer & Cie GmbH & Co.: *See—*
Zollitsch, Ludwig; and Kreuz, Ulrich, 6,039,905, Cl. 264-143.000.

Cabletron Systems, Inc.: *See—*
Bussiere, Richard, 6,041,042, Cl. 370-245.000.
Jeffords, Jason; Crowley, Todd A.; and Dev, Roger, 6,041,383, Cl. 710-200.000.

Cabot Corporation: *See—*
Kaufman, Vlasta Brusic; and Wang, Shumin, 6,039,891, Cl. 252-79.100.
Mabry, Melinda Ann; Rumpf, Frederick Harry; Podobnik, Ivan Zlatko; Westveer, Scott Adrian; Morgan, Allan Clark; Chung, Bin; and Andrews, Malcolm John, 6,040,364, Cl. 523-318.000.

CAE Electronics Ltd.: *See—*
Kennedy, Joe B.; Davyduke, Roland; Jackson, James G.; Hannebauer, James B.; Newnes, William R.; Stroud, Brian; and Sergeant, John, 6,039,097, Cl. 144-357.000.
Kennedy, Joe B.; Davyduke, Roland; Jackson, James G.; Hannebauer, James B.; Newnes, William R.; Stroud, Brian; and Sergeant, John, 6,039,098, Cl. 144-357.000.

Cagan, Myron R.: *See—*
Wang, Fei; Foote, David K.; Cagan, Myron R.; and Gupta, Subhash, 6,040,619, Cl. 257-649.000.

Cai, Zhen-wei: *See—*
Kim, Kyoung S.; Kimball, S. David; Cai, Zhen-wei; Rawlins, David B.; Misra, Raj N.; Poss, Michael A.; Webster, Kevin R.; Hunt, John T.; and Han, Wen-Ching, 6,040,321, Cl. 514-369.000.

Caigoy, Arturo L.: *See—*
De Los Santos, Hector J.; Kao, Yu-Hua; Caigoy, Arturo L.; and Ditmars, Eric D., 6,040,611, Cl. 257-415.000.

Cain, Frederick William; Quinlan, Paul Thomas; and Moore, Stephen Raymond, to Loders Croklaan B.V. Low SAFA oils. 6,040,161, Cl. 435-134.000.

Calahan, Mark J.: *See—*
Nordquist, Jack; Calahan, Mark J.; Damiano, Timothy J.; and Botka, Christopher M., 6,040,676, Cl. 318-696.000.

Calamur, Narasimhan; Carrera, Martin E.; Devlin, David J.; and Archuleta, Tom, to University of California and BP Amoco Corporation, Regents of the. Methods of forming and using porous structures for energy efficient separation of light gases by capillary condensation. 6,039,792, Cl. 95-45.000.

Caldwell, J. Michael, to Nextec Applications Inc. Garments of barrier webs. 6,040,251, Cl. 442-123.000.

Calgon Corporation: *See—*
Donlan, Rodney M.; Elliot, David L.; Kapp, Nancy J.; Wiatr, Christopher L.; and Rey, Paul A., 6,039,965, Cl. 424-405.000.

Califano, Andrea; Colville, Scott Eric; and Germain, Robert Steven, to International Business Machines Corporation. Method and apparatus for fingerprint matching using transformation parameter clustering based on local feature correspondences. 6,041,133, Cl. 382-124.000.

California Institute of Technology: *See—*
Buehler, Martin, 6,040,189, Cl. 436-151.000.
OBrien, John; Scherer, Axel; Yariv, Amnon; Lee, Reginald; Xu, Yuanjian; and Painter, Oskar, 6,040,590, Cl. 257-94.000.
Yoshikawa, Masahito; and Davis, Mark E., 6,040,258, Cl. 502-64.000.

Callegaro, Lanfranco; Romeo, Aurelio; and Benedetti, Luca, to Fidia S.p.A. Process for the preparation of microspheres containing biologically active components. 6,039,970, Cl. 424-434.000.

Callis, Glenn E.: *See—*
Addagarla, Sumanth; and Callis, Glenn E., 6,040,279, Cl. 508-437.000.

Camp Kazoo, Ltd.: *See—*
Matthews, Susan H.; and Levine, Cecelia O., 6,038,720, Cl. 5-639.000.

Camp, William O., Jr.: *See—*
Horton, Robert Ray; and Camp, William O., Jr., 6,041,222, Cl. 455-255.000.

CampaMed, Inc.: *See—*
Pero, Ronald W., 6,039,949, Cl. 424-195.100.

Campbell, Donald H.: *See—*
McGee, John D.; Campbell, Donald H.; and Rehfuss, John W., 6,040,062, Cl. 428-500.000.

Campbell, Russell; Dow, Richard M.; Blair, Timothy P.; and Poppenga, Burton H., to Hewlett-Packard Company. Memory partitioning for multi-resolution pauseless page printing. 6,040,917, Cl. 358-1.170.

Campbell Soup Company: *See—*
Bangs, William E.; Khoo, Chor San Heng; and Ko, Sandy, 6,039,978, Cl. 424-489.000.
Bangs, William E.; Dibenedetto, Joseph D.; Friedberg, Joyce L.; Giordano, Denise A.; Glover, Judy M.; Khoo, Chor San Heng; Ko, Sandy; MacNair, R. David C.; Noar, Scott R.; Randazzi, John J., Jr.; Stoever, Harro; and Ziegler, Paula J., 6,039,989, Cl. 426-106.000.

Can Industry Products, Inc.: *See—*
McClung, James A., 6,038,910, Cl. 72-348.000.

Canaani, Eli: *See—*
Croce, Carlo; and Canaani, Eli, 6,040,140, Cl. 435-6.000.

Canale, Anthony J.; and Cronin, John E., to International Business Machines Corporation. Polysilicon mini spacer for trench buried strap formation. 6,040,213, Cl. 438-243.000.

Candescent Technologies Corporation: *See—*
Chakravorty, Kishore K.; and Elizondo, Philip J., 6,039,621, Cl. 445-49.000.
Friedman, Jay, 6,040,809, Cl. 345-74.000.

Canizales, Anastasia: *See—*
Sanjurjo, Angel; Lau, Kai-Hung; Lowe, David; Canizales, Anastasia; Jiang, Naixiong; Wong, Victor; Jiang, Liqiang; Schneider, Luke V.; Mufti, Naheed; Rewick, Robert T.; Johansson, Marie; and Kardos, Keith, 6,039,894, Cl. 252-301.40R.

Cannon, David Maxwell, to International Business Machines Corporation. Storage management system with file aggregation supporting multiple aggregated file counterparts. 6,041,334, Cl. 707-204.000.

Cannon, William J.; Remnant, David K.; Ward, Paul D.; and Hoerig, Timothy R., to TRW Inc. Direct vectored legacy instruction set emulation. 6,041,402, Cl. 712-200.000.

Canon Kabushiki Kaisha: *See—*
Asayama, Atsushi, 6,040,662, Cl. 315-291.000.
Ebinuma, Ryuichi, 6,040,893, Cl. 355-53.000.
Fukada, Taisei; and Kohtani, Hideto, 6,041,175, Cl. 395-500.420.
Funada, Masahiro; and Toda, Yukari, 6,041,205, Cl. 399-196.000.
Hanami, Nobuyuki; Kishi, Junichi; Kawamorita, Yoichi; and Soma, Takao, 6,040,099, Cl. 430-66.000.
Hasegawa, Masanobu; Yoshii, Minoru; and Ohsaki, Yoshinori, 6,040,909, Cl. 356-375.000.
Hirano, Yoshiaki, 6,041,382, Cl. 710-131.000.
Ikeda, Eiichiro, 6,040,858, Cl. 348-242.000.
Ishii, Kazuyoshi, 6,041,024, Cl. 369-13.000.
Iwata, Naohiro; Obana, Katsumi; Terashima, Hideyuki; and Aoki, Noriyuki, 6,040,919, Cl. 358-400.000.
Izukawa, Kazuhiro, 6,041,189, Cl. 396-277.000.
Kaneko, Masanori; and Sukigara, Akihiko, 6,040,670, Cl. 318-561.000.
Kanome, Yuji, 6,039,427, Cl. 347-19.000.
Kashimada, Yoshimasa, 6,041,199, Cl. 399-82.000.
Kashiwaba, Seiichi, 6,040,951, Cl. 359-823.000.
Kawakami, Soichiro, 6,040,087, Cl. 429-218.100.
Kikuchi, Hiroshi; and Tsuboi, Takayuki, 6,041,190, Cl. 396-284.000.
Murata, Jun, 6,041,209, Cl. 399-313.000.
Nakagawa, Takao; and Tsuda, Tadayuki, 6,041,196, Cl. 399-27.000.
Noguchi, Hiromichi; Sugitani, Hiroshi; Koizumi, Yutaka; Inamoto, Tadayoshi; Aono, Kiyomi; and Nakata, Yoshie, 6,040,002, Cl. 427-96.000.
Ohga, Manabu, 6,041,136, Cl. 382-162.000.
Ohno, Manabu; Ohtake, Takeshi; Matsunaga, Satoshi; and Doujo, Tadashi, 6,040,103, Cl. 430-110.000.
Sakaegi, Yuji, 6,040,856, Cl. 348-232.000.
Shibata, Shogo; Fujita, Minoru; Ikeda, Yuji; Ueda, Takaya; Itoh, Fumiaki; and Hirota, Makoto, 6,041,293, Cl. 704-4.000.
Shido, Shunichi; and Kuroda, Ryo, 6,040,848, Cl. 347-159.000.
Sugiura, Susumu, 6,041,144, Cl. 382-239.000.
Suzuki, Akio; Yamamoto, Ei; Kitamura, Toshiyuki; and Yoshida, Hiroyoshi, 6,041,265, Cl. 700-84.000.
Takahashi, Kazuhiro, 6,040,894, Cl. 355-53.000.
Tanaka, Masato; Takai, Hideyuki; and Nakata, Kouichi, 6,040,100, Cl. 430-72.000.
Tsuboi, Takayuki; Yagyu, Mineto; Nagano, Akihiko; and Kikuchi, Hiroshi, 6,040,880, Cl. 349-5.000.
Tsujimoto, Akira, 6,039,437, Cl. 347-63.000.
Yamazaki, Michihito, 6,040,558, Cl. 219-216.000.
Yoshimura, Yuichiro; Tanaka, Atsushi; Yanagisawa, Ryozo; Kobayashi, Katsuyuki; and Sato, Hajime, 6,041,284, Cl. 702-56.000.

Cao, Liang: *See—*
Hu, Jing-Shan; Rosen, Craig A.; and Cao, Liang, 6,040,157, Cl. 435-69.400.

Capaldi, Daniel C.: *See—*
Cheruvallath, Zacharia S.; Ravikumar, Vasulinga T.; Cole, Douglas L.; and Capaldi, Daniel C., 6,040,438, Cl. 536-25.300.

Capiello, Raymond: *See—*
Anscher, Joseph; and Capiello, Raymond, 6,038,746, Cl. 24-115.00G.

Capodieci, Luigi, to Advanced Micro Devices, Inc. Critical dimension equalization across the field by second blanket exposure at low dose over bleachable resist. 6,040,118, Cl. 430-328.000.

Caporiccio, Gerardo, to Dow Corning Corporation. Grease compositions employing fluorinated polymer oils and hexagonal lattice boron nitride. 6,040,277, Cl. 508-155.000.

Cappelli, Giorgio: *See—*
Wieslander, Anders; and Cappelli, Giorgio, 6,039,719, Cl. 604-410.000.

Capro, Inc.: *See—*
Carlson, John; and Driggers, Bernard, 6,039,024, Cl. 123-396.000.

Capurso, Robert G., to Eastman Kodak Company. Multi-position flash with shutter actuator operable in each position on compact camera. 6,041,188, Cl. 396-178.000.

Caravella, James S.; Mietus, David F.; and Moore, Jeremy W., to Motorola, Inc. Circuit and method for verifying data of a wireless communications device. 6,041,221, Cl. 455-186.100.

Carbone, Thomas R.: *See—*
Neag, Dorinel; Meidanis, Stylianos A.; and Carbone, Thomas R., 6,038,738, Cl. 16-324.000.

Carder, David W.: *See—*
Greene, Harold R.; Carder, David W.; and Balko, Jack E., 6,039,510, Cl. 406-21.000.

Carder, Timothy: *See—*
Carder, William E.; and Carder, Timothy, 6,038,733, Cl. 16-16.000.

Carder, William E.; and Carder, Timothy. Method and means for installing carpets. 6,038,733, Cl. 16-16.000.

Cardiac Pacemakers, Inc.: *See—*
Kim, Jaeho; and Bocek, Joseph M., 6,041,251, Cl. 600-518.000.
Michel, Ulrich, 6,041,256, Cl. 607-5.000.

Cardinaels, Jozef Renier Catharina: *See—*
De Buyst, Jo; and Cardinaels, Jozef Renier Catharina, 6,040,527, Cl. 174-88.00C.

Cardiogenesis Corporation: *See—*

Javier, Manuel A., Jr.; Pearce, Stephen B.; Kesten, Randy J.; Payne, Sam G.; and Gertner, Kevin, 6,039,727, Cl. 606-10.000.

CardioSynopsis, Inc.: *See*—
Edwards, Stuart D.; Wehman, Thomas C.; Parker, Theodore L.; Kucklick, Theodore; Skalnyi, Eugene V.; and Stein, Alan, 6,039,757, Cl. 623-1.000.

Cardona, Edgardo, to Kinedyne Corporation. Automatic locking and unlocking shoring bar. 6,039,522, Cl. 410-127.000.

Cardullo, Richard A.: *See*—
Chick, William L.; Wolf, David E.; and Cardullo, Richard A., 6,040,194, Cl. 436-501.000.

Cardy, Douglas Ross; Rambo, Ken; and Waller, Carol, to MCI Communications Corporation. Telecommunications system having separate switch intelligence and switch fabric. 6,041,109, Cl. 379-201.000.

Carl Zeiss Jena GmbH: *See*—
Steiner, Reinhard; and Graefe, Dieter, 6,040,907, Cl. 356-311.000.

Carley, William J.: *See*—
Skarpelos, Michael J.; van der Linden, Robbert; Carley, William J.; Lyon, James M.; and McCline, Matthew C., 6,041,420, Cl. 714-7.000.

Carlson, Bengt A.; and Buck, Werner A., to Belimo Air Control (USA) Inc. Ball valve with modified characteristics. 6,039,304, Cl. 251-209.000.

Carlson, John; and Driggers, Bernard, to Capro, Inc. Throttle control system. 6,039,024, Cl. 123-396.000.

Carman, David; Dalal, Siddhartha R.; Jain, Ashish; and Karunanithi, Nachimuthu, to Telecordia Technologies, Inc. System and method for generating year 2000 test cases. 6,041,330, Cl. 707-101.000.

Carney, Joseph M.: *See*—
Wilt, Truman F.; Walters, David N.; Claar, James A.; Donnelly, Karen D.; Carney, Joseph M.; and Wolff, Andrew R., 6,040,394, Cl. 525-474.000.

Caro, Colin, to Imperial College of Science Technology & Medicine. Vascular prostheses. 6,039,754, Cl. 623-1.000.

Caron, James N.; Mehl, James B.; and Steiner, Karl V., to University of Delaware. Gas-coupled laser acoustic detection. 6,041,020, Cl. 367-149.000.

Carozzi, Nadine: *See*—
Rice, Douglas; Carozzi, Nadine; Anderson, David M.; Rajasekaran, Kanniah; Rangan, Thirumale S.; Yenofsky, Richard; and Lotstein, Richard, 6,040,504, Cl. 800-314.000.

Carpenter, Albert: *See*—
Wood, Mervin G.; Wiggins, William; Blake, Catherine; Carpenter, Albert; and Chen, Wha, 6,040,455, Cl. 548-259.000.

Carpentier, Alain; Guo, George X.; and Schreck, Stefan G., to Baxter International Inc. Mechanical prosthetic valve with coupled leaflets. 6,039,759, Cl. 623-2.000.

Carpino, Louis A.; and El-Faham, Ayman Ahmed, to Research Corporation Technologies, Inc. Synthesis and use of amino acid fluorides as peptide coupling reagent. 6,040,422, Cl. 530-333.000.

Carpio Aragon, Gabriel Arturo: *See*—
Karageozian, Hampar L.; Karageozian, Vicken H.; Kenney, Maria Cristina; Gutierrez Flores, Jose Luis; Carpio Aragon, Gabriel Arturo; and Nesburn, Anthony B., 6,039,943, Cl. 424-94.620.

Carr, Kathyrn; and Ferguson, Ian, to Zeneca Limited. Colored polymers. 6,040,005, Cl. 427-197.000.

Carr, Raymond A.; and Lauman, Brian C., to Bristol-Myers Squibb Company. Leak detection system for liquid processing device. 6,038,914, Cl. 73-40.000.

Carrera, Martin E.: *See*—
Calamur, Narasimhan; Carrera, Martin E.; Devlin, David J.; and Archuleta, Tom, 6,039,792, Cl. 95-45.000.

Carrier, Allen M.; Humphreys, Robert W. R.; and Petersen, Paul M., to National Starch and Chemical Investment Holding Corporation. Detectable water-treatment polymers and methods for monitoring the concentration thereof. 6,040,406, Cl. 526-238.220.

Carrier, Rainer, to Rainer Carrier. Process for the production of wood-veneer steering wheel. 6,038,770, Cl. 29-894.100.

Carroll, Patrick; Schneider, Jon; and Bell, Douglas E., to Home Diagnostics, Inc. Diagnostic sanitary test strip. 6,040,195, Cl. 436-514.000.

Carter, Thurman B.; Luke, Michael A.; and Roberts, John D., to Weatherford/Lamb, Inc. Wellbore tool movement control and method of controlling a wellbore tool. 6,039,118, Cl. 166-355.000.

Cartwright, Mark A.: *See*—
Hobaugh, James M., II; and Cartwright, Mark A., 6,038,941, Cl. 74-493.000.

Caruso, James: *See*—
Danzyger, Howard L.; Brow, Karenann; Caruso, James; Hibbard, Timothy; McPhilliamy, Steven; and Thuma, Michael, 6,039,292, Cl. 248-118.500.

Caryl, Naomi: *See*—
Kusmiss, John H.; and Caryl, Naomi, 6,039,628, Cl. 446-457.000.

Casanova, Scott D.: *See*—
Geib, Joseph J.; Casanova, Scott D.; Mennie, Douglas U.; Mazur, Richard A.; and Watts, Gary P., 6,039,644, Cl. 453-10.000.

Casas, Jordi: *See*—
Gabas, Carlos; and Casas, Jordi, 6,038,942, Cl. 74-500.500.

Case Corporation: *See*—
Butkovich, George M.; and Shubinsky, Vladimir, 6,038,936, Cl. 74-15.400.
Denny, Thomas M., 6,039,141, Cl. 180-329.000.

Case, James R.: *See*—
Long, David C.; Moyer, Thomas P.; O'Neil, Keith C.; Perry, Charles H.; Pomerantz, Glenn A.; Case, James R.; Kando, Laszlo; and Kozol, John E., 6,038,931, Cl. 73-850.000.

Case, T. Scott: *See*—
Walker, Jay S.; Case, T. Scott; Hartmann, Tracy; and Tedesco, Daniel E., 6,041,308, Cl. 705-14.000.

Casilio, Frank: *See*—
Paganini, Lisa M.; Casilio, Frank; Peters, Roy; Straub, Kurt M.; DeHondt, Rene C.; and Fry, Tova, 6,040,637, Cl. 307-10.100.

Casino Data Systems: *See*—
Guinn, Robert; and Richards, David, 6,039,648, Cl. 463-16.000.

Casio Computer Co., Ltd.: *See*—
Yamane, Kazuyasu; Oikawa, Takeya; and Niimi, Tomohiro, 6,041,244, Cl. 455-575.000.

Casper, Stephen L.; and Ma, Manny, to Micron Technology, Inc. Two-stage fusible electrostatic discharge protection circuit. 6,040,733, Cl. 327-525.000.

Casper, Stephen L.; Pinney, David; and Keeth, Brent, to Micron Technology, Inc. Circuit and method for memory device with defect current isolation. 6,041,003, Cl. 365-202.000.

Cassarino, Salvatore: *See*—
Bertola, Aldo; and Cassarino, Salvatore, 6,040,460, Cl. 549-262.000.

Cassity, Thomas G.: *See*—
Hopper, Hans Paul; and Cassity, Thomas G., 6,039,119, Cl. 166-368.000.

Castagna, Doris. Novelty pillow. 6,038,719, Cl. 5-636.000.

Castelnuovo, David: *See*—
Rock, David A.; Schmitter, Paul; Castelnuovo, David; and Goebel, Clement James, III, 6,039,047, Cl. 128-897.000.

Castleberry, James E.: *See*—
Watson, Lynn R.; Castleberry, James E.; Luke, David D.; and Gilbert, David C., 6,040,792, Cl. 341-100.000.

Catanzaro, Giorgio: *See*—
Airaksinen, Maria Leena; and Catanzaro, Giorgio, 6,040,711, Cl. 326-81.000.

Caterpillar Inc.: *See*—
Bailey, Brett M., 6,038,860, Cl. 60-605.200.

Cathey, Joe Ray, to Silicone Specialties, Inc. Expansion joint system. 6,039,503, Cl. 404-67.000.

Catone, David L., to Nyacol Products, Inc. Antimony pentoxide dispersions and method of making. 6,040,371, Cl. 524-409.000.

Cattenot, Jean-Marc, to Metatherm. Device for the relative vacuum deposition of a material on parts in a loose state. 6,038,999, Cl. 118-723.00R.

Caulfield, John T.; Wyles, Richard H.; Schlesselmann, John D.; and Pettijohn, Kevin L., to Raytheon Company. Multipurpose readout integrated circuit with in cell adaptive non-uniformity correction and enhanced dynamic range. 6,040,568, Cl. 250-208.100.

Caushik, Ramesh, to Intel Corporation. Scheme for the detection of V.25 ter responses from modem, on a TAPI voice call. 6,041,075, Cl. 375-222.000.

Cauthen, Mark Everette, to Mahr Corporation. Method and apparatus for precision metering of high viscosity materials. 6,039,545, Cl. 417-53.000.

Cauwet-Martin, Daniele; and Dubief, Claude, to L'Oréal. Cosmetic compositions containing a lipid ceramide compound and a peptide having a fatty chain, and their uses. 6,039,962, Cl. 424-401.000.

Cauwet-Martin, Daniéle: *See*—
Restle, Serge; and Cauwet-Martin, Daniéle, 6,039,936, Cl. 424-70.100.

Cavalla, David J.; Chasin, Mark; and Hofer, Peter, to Euro-Celtique S.A. Purine compounds having PDE IV inhibitory activity and methods of synthesis. 6,040,447, Cl. 544-277.000.

Cayeux-Pezzutto, Sophie: *See*—
Blankenstein, Thomas; and Cayeux-Pezzutto, Sophie, 6,039,941, Cl. 424-93.210.

CCL Industries Inc.: *See*—
Singh, Jaswinder, 6,039,212, Cl. 222-30.000.

CD Food Technology AB: *See*—
Åkerlind, Jan, 6,040,565, Cl. 219-705.000.

CD-Rom USA, Inc.: *See*—
Hutchison, Roger S.; and Hoe, Phua Swee, 6,039,637, Cl. 451-271.000.

Cecchin, Euclid. Golf swing weight distribution indicator. 6,039,658, Cl. 473-269.000.

Cech, Leonard S.; Sewell, Michael R.; Gillis, Edward J.; and Talley, David B., to Automotive Systems Laboratory, Inc. System and method for sensing vehicle door edge movement. 6,039,345, Cl. 280-735.000.

Cedars-Sinai Medical Center: *See*—
Korenberg, Julie R., 6,040,429, Cl. 530-350.000.

Celada-Gonzalez, Juan; Quintero-Flores, Raul Gerardo; Viramontes-Brown, Ricardo; and Flores-Serrano, Roberto Octaviano, to Hylsa S.A. de C.V. Apparatus for producing direct reduced iron with a controlled amount of carbon. 6,039,916, Cl. 266-82.000.

Celi, George R., to United Technologies Corporation. Wear resistant augmentor fuel manifold clamp. 6,038,852, Cl. 60-261.000.

Celtrix Pharmaceuticals, Inc.: *See*—
Sommer, Andreas, 6,040,292, Cl. 514-12.000.

Centaur Pharmaceuticals, Inc.: *See*—
Wilcox, Allan L.; and Zhang, Yong-Kang, 6,040,444, Cl. 544-152.000.

Centre de Recherche Indust. du Quebec: *See*—
Tessier, Clément; Beaumont, François; and Turcotte, Pierre, 6,039,068, Cl. 137-377.000.

Ceram Optec GmbH: *See*—
Berlien, Hans-Peter; Muller, Gerhard; Beuthan, Jürgen; and Philipp, Carsten, 6,039,728, Cl. 606-15.000.

CertainTeed Corporation: *See*—

Stahl, Kermit E.; Noone, Michael J.; and Quaranta, Joseph, 6,038,826, Cl. 52-554.000.

Cha, Hun: *See—*
Yang, Yun-sik; Cha, Hun; and Chae, Seung-ki, 6,039,770, Cl. 29-25.010.

Cha, Tai-An: *See—*
Spaete, Richard; and Cha, Tai-An, 6,040,170, Cl. 435-252.300.

Chabria, Paul R., to Press-A-Lite Corporation. Squeeze-activated flashlight. 6,039,456, Cl. 362-189.000.

Chae, Seung-ki: *See—*
Yang, Yun-sik; Cha, Hun; and Chae, Seung-ki, 6,039,770, Cl. 29-25.010.

Chagnot, Catherine J.; and Crum, Joseph Arden, to Stirling Technology, Inc. Air to air heat and moisture recovery ventilator. 6,039,109, Cl. 165-8.000.

Chak, Yee C.; Dierick, Bryan R.; and Hylton, Gary L., to Ovalstrapping, Inc. Strapping machine having primary and secondary tensioning units and a control system therefor. 6,038,967, Cl. 100-2.000.

Chakravorty, Kishore K.; and Elizondo, Philip J., to Candescent Technologies Corporation. Gate electrode formation method. 6,039,621, Cl. 445-49.000.

Chalberg, Philip E.; and Healy, Patrick B., to Hydrabaths, Inc. Safety suction assembly for use in whirlpool baths and the like. 6,038,712, Cl. 4-507.000.

Chamberlain, L. C. Derek; and Hensley, Frederick M., to Schlage Lock Company. Lockset with motorized system for locking and unlocking. 6,038,896, Cl. 70-279.100.

Chambers, Benjamin C.; Blood, William R., Jr.; and Lee, Tien-Yu T., to Motorola, Inc. Semiconductor device package and method. 6,040,624, Cl. 257-692.000.

Chambers, Peter; and Wehunt, Omer Lem, Jr., to VLSI Technology, Inc. Cache based scan matrix keyboard controller. 6,040,788, Cl. 341-26.000.

Chambers, Ralph P.: *See—*
Wozny, Mary Ellen; Chambers, Ralph P.; and Bland, James L., 6,040,370, Cl. 524-394.000.

Chambost, Bernard; Marion, Philippe; and Mathieu, Corinne, to Rhodia Chimie. Method for hydrogenating aromatic nitro compounds. 6,040,481, Cl. 564-422.000.

Chan, Chong Veng, to Joyful Long International Ltd. Inflatable stitched sports ball and method of making same. 6,039,662, Cl. 473-604.000.

Chan, Min Yu; and Goh, Jing Sua, to Texas Instruments Incorporated. Slotted lead for a semiconductor device. 6,040,623, Cl. 257-692.000.

Chan, Sam: *See—*
Slater, Joseph A.; and Chan, Sam, 6,039,211, Cl. 222-1.000.

Chandler, Mark H.: *See—*
Cole, Hubert L.; and Chandler, Mark H., 6,039,746, Cl. 606-133.000.

Chandler, Paul E.: *See—*
Holley, Gregory L.; and Chandler, Paul E., 6,039,690, Cl. 600-440.000.

Chandler, William Keith; Shah, Nadir; Mahmood, Waqar; and Csipkes, Andrei, to Ciena Corporation. Apparatus and method for calibrating pressure existing between optical fibers and a polishing pad during a polishing process. 6,039,630, Cl. 451-6.000.

Chandy, Ashok; Pattok, Kathryn Lynn; and Chhaya, Deepak, to General Motors Corporation. Apparatus and method for producing a desired return torque in a vehicle power steering system having a rotational steering position sensor. 6,039,144, Cl. 180-446.000.

Chang, Byung Jin: *See—*
Cummings, Tom; Nowak, David; and Chang, Byung Jin, 6,039,461, Cl. 362-287.000.

Chang, Cheng-Kai: *See—*
Meng, Wan-Yu; Chang, Cheng-Kai; Chang, Hwai-Tsu; Hsu, Fang-Ru; and Lee, Ming-Rong, 6,041,322, Cl. 706-43.000.

Chang, Chung-Min. Handle for a compact tool. 6,038,735, Cl. 16-110.100.

Chang, Dale U. Apparatus and method for laser welding the outer joints of metal bellows. 6,040,550, Cl. 219-121.630.

Chang, Daniel, to Auden Technology Mfg. Co., Ltd. Lighting circuit and antenna arrangement of a cellular telephone. 6,039,459, Cl. 362-253.000.

Chang, Hwai-Tsu: *See—*
Meng, Wan-Yu; Chang, Cheng-Kai; Chang, Hwai-Tsu; Hsu, Fang-Ru; and Lee, Ming-Rong, 6,041,322, Cl. 706-43.000.

Chang, Jung-Jen: *See—*
Lin, Chung-Kuang; and Chang, Jung-Jen, 6,039,063, Cl. 135-33.700.

Chang, Lung-Tsai: *See—*
Tarng, Guang-Der; and Chang, Lung-Tsai, 6,039,549, Cl. 418-55.500.

Chang, Mei; Wang, David N. K.; White, John M.; and Maydan, Dan, to Applied Materials, Inc. PECVD of compounds of silicon from silane and nitrogen. 6,040,022, Cl. 427-579.000.

Chang, Ray-I: *See—*
Chen, Meng-Chang; Ho, Jan-Ming; Ko, Ming-Tat; and Chang, Ray-I, 6,040,866, Cl. 348-419.000.

Chang, Sen-Jung, to Pei Chi Enterprise Co., Ltd. Dining table having expandable table top. 6,038,985, Cl. 108-84.000.

Chang, Sung-Hun, to Samsung Electronics Co., Ltd. Chuck assembly with a contamination prevention device for a semiconductor wafer transfer apparatus. 6,038,788, Cl. 34-443.000.

Chang, Yih-Jau: *See—*
Hsu, Chen-Chung; and Chang, Yih-Jau, 6,040,222, Cl. 438-301.000.

Chapman, Cheryl C. Wrist-mounted garment tag holder. 6,038,743, Cl. 24-3.200.

Chappell, Daniel K.: *See—*
Franchville, Douglas J.; and Chappell, Daniel K., 6,041,076, Cl. 375-224.000.

Charewicz, Daniel Joseph. Internally cooled magnetic workpiece holder. 6,039,517, Cl. 409-135.000.

Charland, Michael H.: *See—*
Ackel, Robin J.; Benoit, Douglas E.; Charland, Michael H.; and Faure, Thomas B., 6,039,858, Cl. 205-136.000.

Charlier, Jean: *See—*
Delaite, Emmanuel; Charlier, Jean; and Bertozzi, Giuliano, 6,040,348, Cl. 521-59.000.

Chartered Semiconductor Manufacturing, Ltd.: *See—*
Kong, Sik On, 6,040,996, Cl. 365-185.190.
Li, Jianxun; Chooi, Simon; and Zhou, Mei-Sheng, 6,040,243, Cl. 438-687.000.

Chasin, Mark: *See—*
Cavalla, David J.; Chasin, Mark; and Hofer, Peter, 6,040,447, Cl. 544-277.000.

Chatfield, William D.: *See—*
Meyer, Bennett S.; Chatfield, William D.; Sluder, Larry R.; and Radosevich, James W., 6,041,304, Cl. 705-4.000.

Chatterjee, Dilip K.; and Ghosh, Syamal K., to Eastman Kodak Company. Materials feeder equipment. 6,039,221, Cl. 222-361.000.

Chau, Taylor: *See—*
Cutler, Stanley; Gerth, Gayle B.; Otis, Alton B., Jr.; and Chau, Taylor, 6,039,702, Cl. 601-15.000.

Chau, Vi: *See—*
Rickard, Wayne; Fiacco, Peter; and Chau, Vi, 6,041,397, Cl. 711-209.000.

Chaudiere, Jean: *See—*
Tailhan-Lomont, Catherine; Erdelmeier, Irène; Moutet, Marc; Chaudiere, Jean; and Yadan, Jean-Claude, 6,040,328, Cl. 514-398.000.

Chauquet, Jacques; and Fuchs, Jean Claude, to Erico International Corporation. Electrical clip and method. 6,040,525, Cl. 174-40.0CC.

Chauvin Opsia: *See—*
Lattes, Isabelle; Feurer, Bernard; Guidetti, Brigitte; and Payrou, Viviane, 6,040,485, Cl. 570-126.000.

Chauvin, Yves: *See—*
Mussmann, Lothar; Chauvin, Yves; and Olivier, Helene, 6,040,263, Cl. 502-164.000.

Chayahara, Akiyoshi; Horino, Yuji; Kinomura, Atsushi; Tsubouchi, Nobuteru; and Fujii, Kanenaga, to Agency of Industrial Science & Technology. Method of forming a highly pure thin film and apparatus therefor. 6,039,847, Cl. 204-192.110.

Chbat, Nicolas Wadih; and Badami, Vivek Venugopal, to General Electric Company. Clothes load estimation method and washing machine. 6,038,724, Cl. 8-159.000.

Cheah, Chuan; Munoz, Jorge; and Kinzer, Dan, to International Rectifier Corp. Semiconductor package. 6,040,626, Cl. 257-735.000.

Chee, Mark S.: *See—*
Lockhart, David J.; Brown, Eugene L.; Wong, Gordon G.; Chee, Mark S.; and Gingeras, Thomas R., 6,040,138, Cl. 435-6.000.

Chemcraft, Inc.: *See—*
Hornack, Richard S., 6,039,996, Cl. 426-534.000.

Chen, Ai Ru Sun: *See—*
Franco, Rodrigo; Chen, Ai Ru Sun; and Shuey, David Joseph, 6,040,436, Cl. 536-23.100.

Chen, Ben W.; and Xiong, Bo, to Ateon Networks, Inc. Method and system for providing remote storage for an internet appliance. 6,041,346, Cl. 709-218.000.

Chen, Chao-Cheng; Huang, Ming-Hsin; Tao, Hun-Jan; and Tsai, Chia-Shiung, to Taiwan Semiconductor Manufacturing Company. Chemistry for etching organic low-k materials. 6,040,248, Cl. 438-725.000.

Chen, Cheng Y.: *See—*
Pierce, Michael E.; Chen, Cheng Y.; Choudhury, Anusuya; Radesca, Lilian A.; Tan, Lushi; and Zhao, Dalian, 6,040,480, Cl. 564-390.000.

Chen, Chia-Hsing; and Wang, Mam-Tsung, to Macronix International Co., Ltd. Method for programming an analog/multi-level flash EEPROM. 6,040,993, Cl. 365-185.030.

Chen, Ching Chao. Lamp base structure of a series of Christmas lamps. 6,039,593, Cl. 439-280.000.

Chen, Dao-Long, to LSI Logic Corporation. Data sampling and recover in a phase-locked loop (PLL). 6,041,090, Cl. 375-376.000.

Chen, Feng; Kolagotla, Ravi K.; Ly, Le T.; Mo, Jiancheng; and Srinivas, Hosahalli R., to Lucent Technologies, Inc. Race free and technology independent flag generating circuitry associated with two asynchronous clocks. 6,041,418, Cl. 713-400.000.

Chen, Jiann H.; Lancaster, Robert A.; Tsou, Andy H.; and Anderson, Charles C., to Eastman Kodak Company. Electrostatic charge-suppressing fuser roller. 6,041,210, Cl. 399-333.000.

Chen, Kuo-Chin, to Confirm Personal Care Industrial Corp. Bath ball. 6,038,727, Cl. 15-229.110.

Chen, Liang-Yuan. Windshield wiper with replacement blade. 6,038,730, Cl. 15-250.452.

Chen, Lung: *See—*
Wuu, Shou-Gwo; Chen, Lung; Yaung, Dun-Nian; and Lin, Yi-Miaw, 6,040,227, Cl. 438-382.000.

Chen, Meng-Chang; Ho, Jan-Ming; Ko, Ming-Tat; and Chang, Ray-I. Transmission of variable-bit-rate information data on constant-bit-rate channel. 6,040,866, Cl. 348-419.000.

Chen, Michael Huai Gu; Chung, Fu-Zon; and Lee, Helen Tsenwhei, to Warner-Lambert Company. 3-alkyl-3-phenyl-piperidines. 6,040,316, Cl. 514-316.000.

Chen, Ming Chun: *See—*
Steffan, Paul J.; and Chen, Ming Chun, 6,041,270, Cl. 700-121.000.

Chen, Philip L., to Avision Inc. Dual resolution scanner. 6,041,198, Cl. 399-51.000.

Chen, Ricky Y.; Linder, Lloyd F.; Devendorf, Don C.; and Gorder, Matthew S., to Raytheon Company. Differential pair gain control stage. 6,040,731, Cl. 327-359.000.

Chen, Shu-Hui: *See*—
Sartorelli, Alan C.; Shyam, Krishnamurthy; Penketh, Philip G.; and Chen, Shu-Hui, 6,040,338, Cl. 514-482.000.

Chen, Steven: *See*—
Kohli, Sanjai; and Chen, Steven, 6,041,280, Cl. 701-201.000.

Chen, Sullivan S.: *See*—
Citron, Howard M.; Asano, David K.; Baietto, Henry R.; Chen, Sullivan S.; De Frondeville, Alexis W.; Hahn, Jeffrey H.; Probst, Thomas J., Jr.; Massucci, John E.; Costin, Dinu; and Peragine, Ralph E., 6,038,952, Cl. 83-605.000.

Chen, Tian-Chu, to Kalloy Industrial Co., Ltd. Pivotable seat structure for a bicycle. 6,039,394, Cl. 297-195.100.

Chen, Waterson. Support leg for partition walls. 6,039,294, Cl. 248-188.400.

Chen, Wei-Chin. Pen. 6,039,492, Cl. 401-195.000.

Chen, Wha: *See*—
Wood, Mervin G.; Wiggins, William; Blake, Catherine; Carpenter, Albert; and Chen, Wha, 6,040,455, Cl. 548-259.000.

Chen, Xi: *See*—
Yuan, Jun; and Chen, Xi, 6,040,459, Cl. 549-43.000.

Chen, Xiaolu, to Cybernet Systems Corporation. Compact fiber-optic electronic laser speckle pattern shearography. 6,040,900, Cl. 356-35.500.

Cheng, George: *See*—
Huynh, Son Huy; and Cheng, George, 6,040,805, Cl. 343-785.000.

Cheng, John C. Truck bed tie down anchor cleat. 6,039,520, Cl. 410-106.000.

Cheng, Luo; Irick, Glenn E., Sr.; Chu, Youe-Tsyr; Ghorashi, Hossein M.; Galyon, Michael E.; and Overbay, Mark A., to Zellweger Uster, Inc. Fiber color grading system. 6,040,905, Cl. 356-238.300.

Cheng, Vernon; and Mauro, Greg, to Conexant Systems, Inc. Small-format subsystem for broadband communication services. 6,040,851, Cl. 348-10.000.

Cheng, Yi: *See*—
Kennie, Jerry; Cheng, Yi; Hope, Mark E.; Huff, Shean; Nankee, Robert J., II; Joyce, Mary; Krozek, Dennis A.; Moote, Richard K.; Richardson, Roland T.; Rotramel, William D.; and Seitz, Gary L., 6,041,278, Cl. 701-103.000.

Chennupaty, Srinivas: *See*—
Roussel, Patrice; Chennupaty, Srinivas; Cranford, Mike; Abdallah, Mohammad; Coke, Jim; and Kong, Katherine, 6,041,404, Cl. 712-210.000.

Chern, Horng-Nan: *See*—
Lee, Tzung-Han; and Chern, Horng-Nan, 6,040,241, Cl. 438-622.000.

Cherpeck, Richard E., to Chevron Chemical Company LLC. Fuel compositions containing polyamines of polyalkyl aromatic esters. 6,039,773, Cl. 44-399.000.

Cherry, James R.; and Raynus, Abel, to Armatron International, Inc. Obstacle detection system built-in test method and apparatus. 6,040,765, Cl. 340-436.000.

Cherry, Wesley Robert, Jr., to Daewoo Heavy Industries Ltd.; and Daewoo Heavy Industries America Corporation. Apparatus for controlling a pump motor of a forklift truck. 6,041,163, Cl. 388-811.000.

Cherubini, Mario, to Danieli & C. Officine Meccaniche SPA. Device to remove working rolls in a four-high rolling stand. 6,038,905, Cl. 72-239.000.

Cheruvallath, Zacharia S.; Ravikumar, Vasulinga T.; Cole, Douglas L.; and Capaldi, Daniel C., to ISIS Pharmaceuticals, Inc. Reagent useful for synthesizing sulfurized oligonucleotide analogs. 6,040,438, Cl. 536-25.300.

Chestnut, Kevin L., to Active Voice Corporation. Telecommute server. 6,041,114, Cl. 379-211.000.

Cheu, S. Scot; and Moulton, Russell D., to Valence Technology, Inc. Battery packaging. 6,040,085, Cl. 429-185.000.

Cheung, David: *See*—
Tanaka, Tsutomu; Kelkar, Mukul; Fairbairn, Kevin; Ponnekanti, Hari; and Cheung, David, 6,039,834, Cl. 156-345.000.

Cheung, Tat Kwong, to Top Power Supply Cord Set Co, Limited. Electric plug. 6,039,607, Cl. 439-622.000.

Chevallet, Jacques; and Riquier, Jean-Claude, to Hospal Industrie. Device and method for preparing a treatment liquid by filtration. 6,039,877, Cl. 210-636.000.

Chevallier, Christophe J., to Micron Technology, Inc. Integrated circuit charge coupling circuit. 6,040,992, Cl. 365-183.000.

Chevron Chemical Company LLC: *See*—
Addagarla, Sumanth; and Callis, Glenn E., 6,040,279, Cl. 508-437.000.
Cherpeck, Richard E., 6,039,773, Cl. 44-399.000.

Chhaya, Deepak: *See*—
Chandy, Ashok; Pattok, Kathryn Lynn; and Chhaya, Deepak, 6,039,144, Cl. 180-446.000.

Chia, Chok J.: *See*—
Low, Qwai H.; Chia, Chok J.; and Lim, Seng-Sooi, 6,040,632, Cl. 257-784.000.

Chiang, Chien; and Fraser, David B., to Intel Corporation. Interconnect structure using a combination of hard dielectric and polymer as interlayer dielectrics. 6,040,628, Cl. 257-760.000.

Chiang, Douglas. Supporting bracket for braking cable of bicycle. 6,039,499, Cl. 403-78.000.

Chiang, Kung-An: *See*—
Liue, Yung-Ho; and Chiang, Kung-An, 6,039,776, Cl. 55-385.100.

Chick, William L.; Wolf, David E.; and Cardullo, Richard A., to Sensor Technologies, Inc. Methods and device for detecting and quantifying substances in body fluids. 6,040,194, Cl. 436-501.000.

Chicony Electronics Co., Ltd.: *See*—
Tsai, Ching Cheng; and Chou, Wen To, 6,040,540, Cl. 200-344.000.

Chiku, Takahiro: *See*—
Minami, Hiromasa; Igarashi, Masaru; and Chiku, Takahiro, 6,040,080, Cl. 429-96.000.

Childers, Winthrop D.: *See*—
Helterline, Brian L.; Bullock, Michael L.; and Childers, Winthrop D., 6,039,430, Cl. 347-19.000.

Children' s Hospital and Medical Center: *See*—
Tarr, Phillip I.; Bilge, Sima S.; Besser, Thomas E.; and Vary, James C., Jr., 6,040,421, Cl. 530-300.000.

Chimeric Therapies, Inc.: *See*—
Ildstad, Suzanne T.; and Bergheim, Olav B., 6,039,684, Cl. 600-1.000.

Chin, Amanda L.: *See*—
Rao, R. Padmanabha; and Chin, Amanda L., 6,041,142, Cl. 382-232.000.

Chinese Medicines Scientific Consultants Pty Ltd.: *See*—
Yu, Yu Long; and Bensoussan, Alan, 6,039,954, Cl. 424-195.100.

Chiou, Chie-Wun; and Tseng, Horng-Huei, to Vanguard International Semiconductor Corporation. Automatic plug pulling machine for IC tubes. 6,039,526, Cl. 414-411.000.

Chiou, Song-Rong, to Hon Hai Precision Ind. Co., Ltd. Cable connector. 6,039,606, Cl. 439-610.000.

Chislenko, Alexander; Lashkari, Yezdezard Z.; and McNulty, John E., to Microsoft Corporation. Method and apparatus for item recommendation using automated collaborative filtering. 6,041,311, Cl. 705-27.000.

Chisso Corporation: *See*—
Sawada, Shinichi; Murata, Shizuo; and Isoyama, Toyoshiro, 6,040,890, Cl. 349-182.000.

Chiu, Fu-Ying: *See*—
Liu, Meng-Chang; Lin, Jyh-Feng; Yen, Ming-Shu; Su, Su-Ying; Chiu, Fu-Ying; and Lin, Chien-Hung, 6,040,223, Cl. 438-303.000.

Chiu, John H.: *See*—
Anderson, David K.; Chiu, John H.; McNary, Steven F.; Phyfe, Nicole M.; Turek, David G.; and Mylchreest, Donald G., 6,039,008, Cl. 122-510.000.

Cho, Hyun Nam; Hong, Jae Min; Ko, Young Chan; Choi, Il Seok; and Heo, Young Jin. Process for preparing polyethylene naphthalate based polymers. 6,040,417, Cl. 528-279.000.

Cho, Hyun-Sook: *See*—
Un, Sung-Kyong; Cho, Hyun-Sook; Kim, Hwan-Chul; and Lee, Soo-In, 6,040,850, Cl. 348-10.000.

Cho, Jung-hyun: *See*—
Park, Bae-seung; Kim, Jin-heung; and Cho, Jung-hyun, 6,039,830, Cl. 156-267.000.

Cho, Moon Hwan: *See*—
Oh, Won Zin; Lee, Kune Woo; Choi, Wang Kyu; Park, Hyun Soo; Kim, Jong Seung; Cho, Moon Hwan; and Kim, Jong Kook, 6,040,462, Cl. 549-352.000.

Cho, Sung Ky, to LG Semicon Co., Ltd. Variable frequency dividing circuit. 6,041,093, Cl. 377-47.000.

Choi, Bong-Hwan, to SamSung Electronics Co., Ltd. Method and arrangement for retrieving/supplying developing material in electrophotography forming apparatus. 6,041,208, Cl. 399-281.000.

Choi, Byeongho, to LG Electronics Inc. Method for recording video signals by storing digital video data into DCT blocks for a digital VCR. 6,041,162, Cl. 386-124.000.

Choi, Chang-Shik; and Park, Young-Woo, to Samsung Electronics Co., Ltd. Dynamic random access memory devices having improved peripheral circuit resistors therein. 6,040,596, Cl. 257-306.000.

Choi, Dong Joon, to LG Electronics Inc. Track ball input device. 6,040,820, Cl. 345-156.000.

Choi, Guk-Sun, to Hyundai Motor Company. Hood overslam bumper for automobiles. 6,039,388, Cl. 296-207.000.

Choi, Il Seok: *See*—
Cho, Hyun Nam; Hong, Jae Min; Ko, Young Chan; Choi, Il Seok; and Heo, Young Jin, 6,040,417, Cl. 528-279.000.

Choi, Kuk-Sun, to Hyundai Motor Company. Reinforcement device for side doors of automobiles. 6,039,387, Cl. 296-188.000.

Choi, Man Su. Cosmetic brush assembly. 6,039,052, Cl. 132-313.000.

Choi, Nam Song: *See*—
Hong, Chung, Il; Kim, Jung Woo; Lee, Sang Joon; Ahn, Soon Kil; Choi, Nam Song; Hong, Ryung Kee; Chun, Hyoung Sik; Moon, Seung Kee; and Lee, Hong Woo, 6,040,337, Cl. 514-475.000.

Choi, Sung Woo: *See*—
Paek, Mun Cheol; Choi, Sung Woo; and Nam, Kee Soo, 6,040,001, Cl. 427-78.000.

Choi, Wang Kyu: *See*—
Oh, Won Zin; Lee, Kune Woo; Choi, Wang Kyu; Park, Hyun Soo; Kim, Jong Seung; Cho, Moon Hwan; and Kim, Jong Kook, 6,040,462, Cl. 549-352.000.

Chong Kun Dang Corporation: *See*—
Hong, Chung, Il; Kim, Jung Woo; Lee, Sang Joon; Ahn, Soon Kil; Choi, Nam Song; Hong, Ryung Kee; Chun, Hyoung Sik; Moon, Seung Kee; and Lee, Hong Woo, 6,040,337, Cl. 514-475.000.

Chooi, Kon Hing; Lim, Ka Tiek; and Teoh, Ping Chow. Feeder system and method for supplying electrical components to a pickup location. 6,039,512, Cl. 406-85.000.

Chooi, Simon: *See*—

Li, Jianxun; Chooi, Simon; and Zhou, Mei-Sheng, 6,040,243, Cl. 438-687.000.
Chopping, Geoffrey, to Marconi Communications Limited. Multipurpose synchronous switch architecture. 6,041,055, Cl. 370-391.000.
Chopra, Dinesh, to Micron Technology, Inc. Method and apparatus for mechanical and chemical-mechanical planarization of microelectronic-device substrate assemblies. 6,039,633, Cl. 451-41.000.
Chou, Ammy, to Welcome Company, Ltd. Electric heat pen with sandwiched heater element. 6,040,559, Cl. 219-229.000.
Chou, Chin-Wen, to Shin Jiuh Corp. Ergonomical keyboard assembly. 6,039,478, Cl. 400-472.000.
Chou, Marilyn M.; Tam, Herrick; Yu, King J. J.; and Yu, Ken T. Combined ultrasonic and laser device and method of use. 6,039,565, Cl. 433-29.000.
Chou, Stephen T.: *See*—
Lortz, Victor; and Chou, Stephen T., 6,041,364, Cl. 709-301.000.
Chou, Wen To: *See*—
Tsai, Ching Cheng; and Chou, Wen To, 6,040,540, Cl. 200-344.000.
Chou, William: *See*—
Zhang, Lei; Chou, William; Peters, Michael G.; and Beilin, Solomon I., 6,039,889, Cl. 216-17.000.
Choudhury, Anusuya: *See*—
Pierce, Michael E.; Chen, Cheng Y.; Choudhury, Anusuya; Radesca, Lilian A.; Tan, Lushi; and Zhao, Dalian, 6,040,480, Cl. 564-390.000.
Chrisofix AG: *See*—
Bolla, Kalman; and Bolla, Orsolya, 6,039,706, Cl. 602-5.000.
Christensen, Dale A., to Valmont Industries, Inc. Corner pivot irrigation machine. 6,039,273, Cl. 239-729.000.
Christensen, David: *See*—
Raaijmakers, Ivo J.; Burkhart, Chris W.; Christensen, David; and Susoeff, Michael N., 6,039,074, Cl. 137-537.000.
Christensen, Svend: *See*—
Martin, Wallace Anthony; Adams, Jonathan Patrick; Andersen, Finn Thrige; Beaton, Stephen Robert; Christensen, Svend; Jensen, Allan G.; Kindt-Larsen, Ture; Lust, Victor; Walker, Craig William; and Wang, Daniel Tsu-Fang, 6,039,899, Cl. 264-1.360.
Christensen, Thomas Charles: *See*—
Brown, Dana Henry; Christensen, Thomas Charles; Cunningham, Earl A.; and Rogelstad, Wayne A., 6,040,955, Cl. 360-75.000.
Christeson, Orville H.: *See*—
Shipman, Mark S.; Christeson, Orville H.; and Labatte, Timothy E. W., 6,041,385, Cl. 710-200.000.
Christian Brothers, Inc.: *See*—
Christian, William D.; and Christian, Roger A., 6,039,661, Cl. 473-562.000.
Christian, Jeffrey J.: *See*—
Savage, George M.; Christian, Jeffrey J.; and Dillow, David Curtis, 6,039,748, Cl. 606-180.000.
Christian, Roger A.: *See*—
Christian, William D.; and Christian, Roger A., 6,039,661, Cl. 473-562.000.
Christian, William D.; and Christian, Roger A., to Christian Brothers, Inc. Reinforced hockey replacement blade and method of making the same. 6,039,661, Cl. 473-562.000.
Christiansen, John A.; and Rumbaugh, Erik, to Interbio, Inc. Composition and method for removing suspended solids from wastewater. 6,039,875, Cl. 210-606.000.
Christy, Michael C.: *See*—
Rodgers, Kenneth W.; Strong, Gary D.; Christy, Michael C.; and Mason, Russell C., 6,039,091, Cl. 141-83.000.
Chronis, Todd: *See*—
Weiner, Michael L.; Kolb V, John Jacob; and Chronis, Todd, 6,041,331, Cl. 707-103.000.
Chrysler Corporation: *See*—
Bailey, Gary M., 6,039,378, Cl. 296-37.160.

Duck, Gary S.; Abé, Koichi; Ip, Joseph; Farries, Mark; and Colbourne, Paul, 6,040,932, Cl. 359-124.000.

Cole, Clinton S: *See*—
MacDuff, Ian G; Powers, Daniel J; and Cole, Clinton S, 6,041,257, Cl. 607-5.000.

Cole, Douglas L.: *See*—
Cheruvallath, Zacharia S.; Ravikumar, Vasulinga T.; Cole, Douglas L.; and Capaldi, Daniel C., 6,040,438, Cl. 536-25.300.

Cole, Hubert L.; and Chandler, Mark H. Patch electrolysis system and method for removing hair from skin. 6,039,746, Cl. 606-133.000.

Colella, Guiseppe: *See*—
Lam, Raymond K. F.; Melin, Charles E.; and Colella, Guiseppe, 6,039,788, Cl. 75-623.000.

Coleman Company, Inc., The: *See*—
Nabors, William; Yates, Debra S.; Linnebur, David H.; Rodriguez, Jon; and Hill, Andrew, 6,038,723, Cl. 7-128.000.

Coletica: *See*—
Perrier, Eric; Antoni, Daniele; and Huc, Alain, 6,039,961, Cl. 424-401.000.

Colgate-Palmolive Co: *See*—
Motyka, Andrea Lee; Broaze, Guy; and Kugler, Alison, 6,040,071, Cl. 428-704.000.
Motyka, Andrea Lee; Broaze, Guy; and Kugler, Alison, 6,040,287, Cl. 510-340.000.

Colgate-Palmolive Company: *See*—
Cummings, Bruce, 6,039,216, Cl. 222-137.000.

Collar, Stuart John: *See*—
Davidson, Steven Frederic; Vollendorf, Kim David; DiCicco, Michael Frank; Collar, Stuart John; and Stone, Jeffrey Jay, 6,041,243, Cl. 455-575.000.

Collier, Alan Derek; Johnston, Stephen Harold; and Eastham, John, to British Aerospace PLC. Method of manufacturing structural parts, particularly for use in aircraft. 6,039,239, Cl. 228-157.000.

Collins, Laurence Alexander: *See*—
Field, Martin John; Ballmert, Bernd Jakob; Collins, Laurence Alexander; and Moran, Robert James, 6,039,034, Cl. 123-568.230.

Collins, Walter W. Blade sharpener. 6,039,642, Cl. 451-557.000.

Colomberotto, Giorgio: *See*—
Badiali, Roberto; Bertoli, Luciano; and Colomberotto, Giorgio, 6,039,281, Cl. 242-475.500.

Colorado School of Mines: *See*—
Roche, Steven L., 6,041,018, Cl. 367-46.000.

Colt, Richard L.: *See*—
Gundlach, Kurt B.; Sanchez, Luis A.; Colt, Richard L.; and Sweeney, Maura A., 6,039,793, Cl. 106-31.280.

Colville, Scott Eric: *See*—
Califano, Andrea; Colville, Scott Eric; and Germain, Robert Steven, 6,041,133, Cl. 382-124.000.

Colvin, Bryan, Sr., to Allsoft Distributing Incorporated. Centralized secure communications system. 6,041,123, Cl. 380-49.000.

Colvin, James: *See*—
Heanue, John F.; Daiber, Andrew J.; and Colvin, James, 6,040,930, Cl. 359-21.000.

Com Dev Ltd.: *See*—
Mansour, Raafat R., 6,041,245, Cl. 505-210.000.

Combustion Engineering, Inc.: *See*—
Anderson, David K.; Chiu, John H.; McNary, Steven F.; Phyfe, Nicole M.; Turek, David G.; and Mylchreest, Donald G., 6,039,008, Cl. 122-510.000.

Comco Systems: *See*—
Greene, Harold R.; Carder, David W.; and Balko, Jack E., 6,039,510, Cl. 406-21.000.

Comer, Robert C.; and Scherbring, David J., to Toro Company, The. Turf injector with ground slitting knives. 6,038,989, Cl. 111-123.000.

Cominacini, Luciano, to Glaxo Wellcome Inc. Medicaments for ameliorating endothelial cell activation. 6,040,322, Cl. 514-370.000.

Commercial Intertech Limited: *See*—
Ertmann, Alexander Gareth; and Sadler, Mark, 6,038,957, Cl. 91-461.000.

Commerç on, Alain: *See*—
Bouchard, Hervé; Bourzat, Jean-Dominique; and Commerçon, Alain, 6,040,466, Cl. 549-510.000.

Commereuc, Dominique: *See*—
Olivier, Helene; Commereuc, Dominique; and Drochon, Sebastien, 6,040,483, Cl. 568-454.000.

Commissariat a L'Energie Atomique: *See*—
Anderbouhr, Stéphanie; Schuster, Frédéric; Blanquet, Elisabeth; and Theret, Gérald, 6,040,012, Cl. 427-255.391.

Compadre, Cesar; Breen, Philip; Salari, Hamid; Fifer, E. Kim; Lattin, Danny L.; Slavik, Michael; Li, Yanbin; and O'Brien, Timothy, to University of Arkansas. Method for the broad spectrum prevention and removal of microbial contamination of food products by quaternary ammonium compounds. 6,039,992, Cl. 426-332.000.

Compagnie Generale des Etablisse-Michelin-Michelin & Cie: *See*—
Muhlhoff, Olivier, 6,039,099, Cl. 152-158.000.

Compaq Computer Corporation: *See*—
Homer, Steven S., 6,040,979, Cl. 361-683.000.
Lada, Henry F., Jr., 6,041,416, Cl. 713-330.000.
Mayer, Dale J.; Olarig, Sompong Paul; Whiteman, William F.; and Heinrich, David F., 6,041,377, Cl. 710-113.000.
Melo, Maria L.; and Santos, Gregory N., 6,040,845, Cl. 345-520.000.
Mitchell, Nathan, 6,040,684, Cl. 320-139.000.
Ramsey, Jens K.; Stevens, Jeffrey C.; Tubbs, Michael E.; and Stancil, Charles J., 6,041,401, Cl. 712-43.000.

Compx International, Inc.: *See*—
Cliff, William H., 6,038,898, Cl. 70-491.000.

Conair Corporation: *See*—
Smal, Henri, 6,039,482, Cl. 401-1.000.

Conde, Robert: *See*—
Förster, Karl-Heinz; and Conde, Robert, 6,041,415, Cl. 713-300.000.

Conexant Systems, Inc.: *See*—
Cheng, Vernon; and Mauro, Greg, 6,040,851, Cl. 348-10.000.

Confirm Personal Care Industrial Corp.: *See*—
Chen, Kuo-Chin, 6,038,727, Cl. 15-229.110.

Connah, David M.: *See*—
Wavish, Peter R.; and Connah, David M., 6,040,842, Cl. 345-473.000.

Connolly, Raymond J: *See*—
Durville, Frederick M.; Connolly, Raymond J; Lantis, John C; Rediker, Robert H; and Schwaitzberg, Steven D., 6,039,729, Cl. 606-16.000.

Conrad, Juergen: *See*—
Schmitt-Willich, Heribert; Platzek, Johannes; Gries, Heinz; Schumann-Giampieri, Gabrielle; Weinmann, Hanns-Joachim; Vogler, Hubert; Deutsch, Julius; and Conrad, Juergen, 6,039,931, Cl. 424-9.364.

Conrow, Raymond E., to Alcon Laboratories, Inc. Method of preparing 16α, 17α-dialkylated steroids. 6,040,468, Cl. 552-543.000.

Consortium fur elektrochemische Industrie GmbH: *See*—
Häberle, Norman; Kreuzer, Franz-Heinrich; and Küpfer, Jürgen, 6,040,411, Cl. 528-26.000.

Conston, Stanley R.: *See*—
Ottoboni, Thomas B.; Yamamoto, Ronald K.; and Conston, Stanley R., 6,039,967, Cl. 424-426.000.

Consulagri S.r.l.: *See*—
Orsi, Marco, 6,039,267, Cl. 239-63.000.

Conway, Michael P., to Dekalb Genetics Corporation. Soybean cultivar CX433RR. 6,040,500, Cl. 800-312.000.

Conway, Robert Matthew. Lawn edging system and method for edging lawn. 6,038,811, Cl. 47-33.000.

Conwell, Allyn B. Particulate mixing system. 6,039,470, Cl. 366-137.000.

Cooke, Randolph L.; and Stoy, Vladimir A., to Replication Medical, Inc. Bioreactor wound dressing. 6,040,493, Cl. 602-41.000.

Coonce, Richard L.; Sharghi, Aaron Safula; and Slife, Douglas Alan, to Swagelok Company. Hygienic fitting with thermal expansion area for gasket. 6,039,319, Cl. 277-314.000.

Cooney, Anthony: *See*—
Bittar, Joseph; Barker, Frederick H.; Cooney, Anthony; Perl, David I.; Peruggi, Richard E.; and Silverberg, Michael D., 6,038,980, Cl. 104-20.000.

Cooper, Austin M.; Hazencomb, Robert M.; Silva, Albert W.; and Wright, Robert William, to McDonnell Douglas Corporation. Method for chromium plating titanium alloy. 6,039,860, Cl. 205-208.000.

Cooper Cameron Corporation: *See*—
Hopper, Hans Paul; and Cassity, Thomas G., 6,039,119, Cl. 166-368.000.

Cooper Instrument Corporation: *See*—
Swanson, Gary K.; and L'Heureux, Ernest R., Jr., 6,039,177, Cl. 206-306.000.

Coöperatieve Vereniging Profile Repair, U.A.: *See*—
Van Haandel, Johannes Henricus Maria, 6,039,824, Cl. 156-94.000.

Copes-Vulcan, Inc.: *See*—

Hemme, Kent R.; and Shea, Allan K., 6,039,076, Cl. 137-625.370.

Coppens, Paul; and Jonckheere, Marcus, to Agfa-Gevaert, N.V. Method for preparing an image element for making an improved printing plate according to the silver salt diffusion transfer process. 6,040,109, Cl. 430-204.000.

Cor-A-Vent, Incorporated: *See—*
Sells, Gary L., 6,039,646, Cl. 454-365.000.

Corbin, David Richard; and Rao, V. N. Mallikarjuna, to Du Pont de Nemours, E. I., and Company. Process for the manufacture of 2-chloro-1,1,1-trifluoroethane. 6,040,486, Cl. 570-168.000.

Cordant Technologies Inc.: *See—*
Hinshaw, Jerald C.; Doll, Daniel W.; Blau, Reed J.; and Lund, Gary K., 6,039,820, Cl. 149-45.000.

Cordis Corporation: *See—*
Johnson, Kirk; and Knudtson, Merril L., 6,039,721, Cl. 604-508.000.
Viera, Fernando M., 6,039,699, Cl. 600-585.000.

Cordova, Amado: *See—*
Rahn, John P.; Patterson, Ralph A.; and Cordova, Amado, 6,040,908, Cl. 356-350.000.

Corduan, Horst; and Lochner, Stefan, to Linde Aktiengesellschaft. Air separation process. 6,038,885, Cl. 62-653.000.

Coreflex LLC: *See—*
Valenziano, Frank P., 6,039,359, Cl. 285-45.000.

CoreTek, Inc.: *See—*
Tayebati, Parviz, 6,041,071, Cl. 372-64.000.

Corley, Edward G.; Davies, Ian W.; Larsen, Robert D.; Pye, Philip J.; and Rossen, Kai, to Merck & Co., Inc. Process for synthesizing COX-2 inhibitors. 6,040,319, Cl. 514-334.000.

Cornelius, Dirk L.; and Mittersinker, Gregor, to Rollerblade, Inc. Buckling apparatus using elongated skate cuff. 6,038,791, Cl. 36-115.000.

Cornelius, Lester. Seal for toner cartridge. 6,041,202, Cl. 399-106.000.

Cornell, Jay L.: *See—*
Schilling, Jan C.; Cornell, Jay L.; and Stevenson, Joseph T., 6,039,542, Cl. 416-233.000.

Cornell, Robert W.; and An, Suk Ku, to Fiskars Inc. Edging scissors with guides. 6,038,772, Cl. 30-233.000.

Corning Incorporated: *See—*
Brew, Thomas W.; and Kragle, Harry A., 6,039,908, Cl. 264-177.120.

Corporate Computer Systems: *See—*
Hinderks, Larry W., 6,041,295, Cl. 704-206.000.

Correa, Colt R.: *See—*
Dourra, Hussein; Holbrook, Gerald L.; Correa, Colt R.; and Parenti, David, 6,039,674, Cl. 477-166.000.

Corvas International, Inc.: *See—*
Vlasuk, George Phillip; Stanssens, Patrick Eric Hugo; Messens, Joris Hilda Lieven; Lauwereys, Marc Josef; LaRoche, Yves Rene; Jespers, Laurent Stephane; Gansemans, Yannick Georges Jozef; Moyle, Matthew; and Bergum, Peter W., 6,040,441, Cl. 536-252.000.

Cosco Management, Inc.: *See—*
Bedja, Abdelkrim; Moser, Gregory C.; and King, Raymond P., 6,039,149, Cl. 182-20.000.

Costantini, Michel; Gilbert, Laurent; and Spagnol, Michel, to Rhodia Chimie. Phenol compound hydroxylation method. 6,040,484, Cl. 568-803.000.

Costin, Dinu: *See—*
Citron, Howard M.; Asano, David K.; Baietto, Henry R.; Chen, Sullivan S.; De Frondeville, Alexis W.; Hahn, Jeffrey H.; Probst, Thomas J., Jr.; Massucci, John E.; Costin, Dinu; and Peragine, Ralph E., 6,038,952, Cl. 83-605.000.

Cote, Andrew L., Sr.; and Ganem, Charles F., to Nypro Inc. Swabbable luer-activated valve. 6,039,302, Cl. 251-149.100.

Coulombe, Alain: *See—*
Turcotte, Yvon; and Coulombe, Alain, 6,038,879, Cl. 62-325.000.

Coulonvaux, Paul R., to Donaldson Company, Inc. Air cleaner assembly. 6,039,778, Cl. 55-498.000.

Coulthard, Steve M. Portable emergency response communications system and method. 6,041,242, Cl. 455-575.000.

Council of Scientific & Industrial Research: *See—*
Koshy, Jacob; Thomas, Jijimon Kumpukkattu; Kurian, Jose; Yadava, Yogendra Prasad; and Damodaran, Alathoor Damodaran, 6,040,275, Cl. 505-471.000.

Courault, Jacques, to Alstom. Practical structure for making a multilevel converter. 6,040,990, Cl. 363-59.000.

Cousin, Gérard: *See—*
Gendrot, Edouard; Cousin, Gérard; Ragot, Françoise; and Clee-Bouvet, Marie-Christine, 6,039,979, Cl. 424-497.000.

Covino, Josephine: *See—*
Lee, Ilzoo; and Covino, Josephine, 6,039,929, Cl. 423-328.200.

Cowan, Michael R.: *See—*
Tucker, Sean W.; Cowan, Michael R.; and Martin, Mark P., 6,039,241, Cl. 228-264.000.

Cowan, Stanley W.: *See—*
Tang, Ping-Wah; Lussier, Barbara B.; and Cowan, Stanley W., 6,040,126, Cl. 430-557.000.

Cowater International Inc.: *See—*
Baron, Mark J., 6,038,710, Cl. 4-321.000.

Cowsert, Lex M., to Isis Pharmaceuticals Inc. Antisense inhibition of G-alpha-i2 expression. 6,040,179, Cl. 435-375.000.

Cowsert, Lex M.: *See—*
Monia, Brett P.; and Cowsert, Lex M., 6,040,178, Cl. 435-375.000.

Cox, Brian Geoffrey; and Gray, Thomas, to Zeneca Limited. Process for making benzisothiazolin-3-ones. 6,040,452, Cl. 548-209.000.

Cox, James Stacy, to LAP Licensing, LC. Litter box cleaning system, components and method. 6,039,003, Cl. 119-166.000.

Cox, Kenneth C.: *See—*
Riego, Domingo C.; Cox, Kenneth C.; Sexton, Franklin E.; and Meadows, James C., 6,040,272, Cl. 504-206.000.

Cracauer, Raymond F.; and Michels, Lester D., to Novartis Nutrition AG. Collapsible retention bolster for gastrostomy and other ostomy tubes. 6,039,714, Cl. 604-174.000.

Cramer, Margaret D., to IMO Industries, Inc. Method of making composite barrier can for a magnetic coupling by filament winding. 6,039,827, Cl. 156-173.000.

Cranford, Mike: *See—*
Roussel, Patrice; Chennupaty, Srinivas; Cranford, Mike; Abdallah, Mohammad; Coke, Jim; and Kong, Katherine, 6,041,404, Cl. 712-210.000.

Crave, Joël: *See—*
Mangano, Alain; Allart, Bernard; Bigo, Louis; Garczarek, Michel; Ethet, Yannick; Crave, Joël; and Peignon, Philippe, 6,038,859, Cl. 60-436.000.

Crawford, Michael K.; and Killian, James M. Pelvic support and walking assistance device. 6,039,707, Cl. 602-5.000.

Cray Valley S.A: *See—*
Iliopoulos, Ilias; Lafuma, Francoise; Gillet, Jean-Philippe; and Pezron, Erwoan, 6,040,386, Cl. 525-329.900.

Credence Systems Corporation: *See—*
Berar, Andrei, 6,040,700, Cl. 324-754.000.
Hanners, John C.; Miller, Charles A.; and Stanford, Dean, 6,040,691, Cl. 324-158.100.

Creel, Michael Loren: *See—*
Einziger, William Louis; Eckels, Phillip William; and Creel, Michael Loren, 6,038,867, Cl. 62-45.100.

Crescentini, Lynda N. Helmet with opaque inner layer, translucent outer layer, and patterning therebetween. 6,038,704, Cl. 2-410.000.

Crespi, Ann M.: *See—*
Haas, David P.; Howard, William G.; Crespi, Ann M.; Rorvick, Anthony R.; Rockow, Steven; and Ries, Andrew J., 6,040,082, Cl. 429-163.000.

Cretois, Isabelle: *See—*
Samain, Henri; and Cretois, Isabelle, 6,039,933, Cl. 424-47.000.

Crewdson, Bernard John, to Imperial Chemical Industries PLC. Heat exchange catalytic reactor. 6,039,113, Cl. 165-159.000.

Crisci, Frances E. Bicycle cover with an attachable alarm system. 6,040,764, Cl. 340-432.000.

Croce, Carlo; and Canaani, Eli, to Thomas Jefferson University. Methods for screening and treating leukemias resulting from all-1 region chromosome abnormalities. 6,040,140, Cl. 435-6.000.

Crone, Aaron D.: *See—*
Holowko, Paul L.; and Crone, Aaron D., 6,039,251, Cl. 235-380.000.

Cronin, John E.: *See—*
Canale, Anthony J.; and Cronin, John E., 6,040,213, Cl. 438-243.000.

Crosfield Limited: *See—*
Aldcroft, Derek; Bates, Sharron; and Earl, Graham James, 6,039,798, Cl. 106-272.000.

Crossroads Systems, Inc.: *See—*
Hoese, Geoffrey B., 6,041,381, Cl. 710-129.000.

Crots, David E.: *See—*
Hartman, Terry E.; Kroh, Herbert C.; and Crots, David E., 6,038,889, Cl. 65-319.000.

Croughan, Louise: *See—*
Jellema, Bart; Peeren, René; Croughan, Louise; and Aben, Freek, 6,041,115, Cl. 379-230.000.

DaimlerChrysler AG: *See*—
Bonny, Pierre; Kreutzig, Norbert; and Sternal, Thorsten, 6,038,769, Cl. 29-890.080.
Eckstein, Lutz; and Reichelt, Werner, 6,039,142, Cl. 180-333.000.
Griesinger, Manfred, 6,040,916, Cl. 356-448.000.
Hofele, Franz-Xaver, 6,040,797, Cl. 342-159.000.
Jambor, Arno; and Wagner, Oliver, 6,039,383, Cl. 296-108.000.
Patzelt, Helmut; and Schremmer, Gottfried, 6,039,350, Cl. 280-775.000.

DaimlerChrysler Corporation: *See*—
Dourra, Hussein; Holbrook, Gerald L.; Correa, Colt R.; and Parenti, David, 6,039,674, Cl. 477-166.000.

Dainippon Screen Mfg. Co., Ltd.: *See*—
Matsushita, Masanao; and Taniguchi, Hideyuki, 6,040,120, Cl. 430-347.000.

Daishin Frame Inc.: *See*—
Sakurai, Yasuo, 6,041,305, Cl. 705-5.000.

Dalal, Kirit; Köhler, Ekkehard; and Nadkarni, Anil V., to Bleistahl Produktions-GmbH & Co. KG; and SCM Metal Products, Inc. Material for the powder-metallurgical production of shaped parts, in particular valve seat rings or valve guides with high resistance to wear. 6,039,785, Cl. 75-235.000.

Dalal, Siddhartha R.: *See*—
Carman, David; Dalal, Siddhartha R.; Jain, Ashish; and Karunanithi, Nachimuthu, 6,041,330, Cl. 707-101.000.

Dalgleish, David Thomson; and Sands, Matthew Richard, to Arjobex Limited. Composite plastics film or sheet. 6,040,042, Cl. 428-308.400.

Dallas, Milton R., Jr.; and Randall, Jeffrey T., to Aptar Group, Inc. Multiple-orifice dispensing system with improved seal. 6,039,224, Cl. 222-565.000.

Dalley, James Edward Joseph: *See*—
Smith, Martin Stevens; Smith, Adrian David; Dalley, James Edward Joseph; and McKenna, Stephen John, 6,040,802, Cl. 343-700.0MS.

Damask, John E. Bulk load dispenser and method. 6,039,223, Cl. 222-389.000.

Damiano, Timothy J.: *See*—
Nordquist, Jack; Calahan, Mark J.; Damiano, Timothy J.; and Botka, Christopher M., 6,040,676, Cl. 318-696.000.

Damme, Eric; Gilson, Jean-Marc; Leempoel, Patrick; Lebecq, Fabrice; and Takemasa, Takao, to Dow Corning S.A. Process for preparing chain-extended organopolysiloxanes. 6,040,412, Cl. 528-34.000.

Damodaran, Alathoor Damodaran: *See*—
Koshy, Jacob; Thomas, Jijimon Kumpukkattu; Kurian, Jose; Yadava, Yogendra Prasad; and Damodaran, Alathoor Damodaran, 6,040,275, Cl. 505-471.000.

Danek, Magnus: *See*—
Öhlin, Kenth; and Danek, Magnus, 6,039,159, Cl. 188-322.150.

Danford-Klein, Henrik; and Kring, John, to Schneider National, Inc. Object oriented rating system and method. 6,041,318, Cl. 705-400.000.

Dang, Chi-Hung: *See*—
Hammar, Jerry Walter; Kulakowski, John Edward; Means, Rodney Jerome; and Dang, Chi-Hung, 6,041,026, Cl. 369-36.000.

Dangat, Geetaram S.; Milne, Robert J.; and Orzell, Robert A., to International Business Machines Corporation. Method to provide common support for multiple types of solvers for matching assets with demand in microelectronics manufacturing. 6,041,267, Cl. 700-107.000.

Daniel, Eric R.: *See*—
Wharton, Robert J.; Daniel, Eric R.; and Brown, Joseph D., 6,040,530, Cl. 174-261.000.

Danieli & C. Officine Meccaniche SpA: *See*—
Alfredo, Poloni, 6,038,951, Cl. 83-105.000.
Cherubini, Mario, 6,038,905, Cl. 72-239.000.

Danielson, Arvin D.: *See*—
Durbin, Dennis A.; and Danielson, Arvin D., 6,039,258, Cl. 235-472.010.

Danielson, Robert B.; and Meisinger, Stanlee W., to FasTest, Inc. High pressure fluidline connector. 6,039,303, Cl. 251-149.600.

Danzyger, Howard L.; Brow, Karenann; Caruso, James; Hibbard, Timothy; McPhilliamy, Steven; and Thuma, Michael, to Fellowes Manufacturing Co. Wrist rest assembly. 6,039,292, Cl. 248-118.500.

Darwin, Robert L.: *See*—
Bowman, Howard L.; Darwin, Robert L.; Maraffio, William M.; Sawyer, Larry D.; Williams, Robert B.; Hudson, Frank E.; Hunstad, Mary; and Decker, Mark W., 6,039,124, Cl. 169-61.000.

Das, Nripendra N.: *See*—
Mantkowski, Thomas E.; Das, Nripendra N.; Heidorn, Raymond W.; and King, Jackie L., 6,039,810, Cl. 118-715.000.

Dassel, Mark W.: *See*—
Rostami, Ader M.; DeCoster, David C.; Vassiliou, Eustathios; and Dassel, Mark W., 6,039,902, Cl. 264-37.180.

Datalink Systems Corporation: *See*—
Miller, Nicholas R., 6,040,784, Cl. 340-825.440.

Datcuk, Peter, Jr.; and Duarte, Lou. Push button click mechanism. 6,039,279, Cl. 242-296.000.

Datex-Ohmeda, Inc.: *See*—
Wilke, Thomas A.; and Wang, Ziyi, 6,039,697, Cl. 600-532.000.

Dauksher, William Joseph: *See*—

Mangat, Pawitter Jit Singh; Seese, Philip Armin; and Dauksher, William Joseph, 6,039,835, Cl. 156-345.000.

Dauth, Jochen; Hierstetter, Thomas; Deubzer, Bernward; and Gratzl, Petra, to Wacker-Chemie GmbH. Organosilicon compounds containing oligoisobutylene or polyisobutylene groups. 6,040,383, Cl. 525-100.000.

David, Samuel; Antel, Jochen; Brueckner, Reinhard; Ziegler, Dieter; Eeckhout, Christian; Bielenberg, Gerhard-Wilhelm; and Peck, Michael, to Solvay Pharmaceuticals GmbH. 7-phenyl-1, 4-diazepane compounds, process for their preparation, and pharmaceutical compositions containing them. 6,040,303, Cl. 514-218.000.

Davidovici, Sorin; Tran, Jimmy Cuong; and Kanterakis, Emmanuel, to Golden Bridge Technology, Inc. Multi-clock matched filter for receiving signals with multipath. 6,041,073, Cl. 375-148.000.

Davidsen, Richard E.: *See*—
Walker, William F.; Toth, Cynthia A.; and Davidsen, Richard E., 6,039,691, Cl. 600-452.000.

Davidson, Steven Frederic; Vollendorf, Kim David; DiCicco, Michael Frank; Collar, Stuart John; and Stone, Jeffrey Jay, to Northrop Grumman Corporation. Personal communications unit. 6,041,243, Cl. 455-575.000.

Davies, Ian W.; Journet, Michel; Gerena, Linda; Larsen, Robert D.; Pye, Philip J.; and Rossen, Kai, to Merck & Co., Inc. Process for making diaryl pyridines useful as cox-2-inhibitors. 6,040,450, Cl. 546-256.000.

Davies, Ian W.: *See*—
Corley, Edward G.; Davies, Ian W.; Larsen, Robert D.; Pye, Philip J.; and Rossen, Kai, 6,040,319, Cl. 514-334.000.

Davies, William Bloor; Healy, John Edward; Miller, Gary Kaui Lani; Kozakiewicz, Joseph J.; and Ryles, Roderick G., to CYTEC Technology Corp. Spray drying of polymer-containing dispersions, water-in-oil and water-in-oil microemulsions and dry polymer products formed thereby. 6,039,881, Cl. 210-732.000.

Davis, Cecil J.: *See*—
Moslehi, Mehrdad M.; Davis, Cecil J.; and Heimanson, Dorian, 6,039,848, Cl. 204-192.120.

Davis, Clark C.: *See*—
Jacobsen, Stephen C.; Davis, Clark C.; and Knutti, David F., 6,039,075, Cl. 137-625.280.

Davis, Hilary P.: *See*—
Menovcik, Gregory G.; Balch, Thomas C.; Davis, Hilary P.; and Dudek, Paul, 6,040,360, Cl. 523-206.000.

Davis, James Talmage, II: *See*—
Stanton, Stephen Millard; Davis, James Talmage, II; Dutson, Alan James; and Henderson, Gregory Lane, 6,040,846, Cl. 345-905.000.

Davis, James W.: *See*—
Du, Weimin; Davis, James W.; Pfeifer, Clemens; Shan, Ming-Chien; and Sheard, Nicolas, 6,041,306, Cl. 705-8.000.

Davis, John Gillette; Mays, Allen Thomas; and Slesinger, Kris Allen, to International Business Machines Corporation. Transfer fluxing method and apparatus for component placement on substrate. 6,039,805, Cl. 118-74.000.

Davis, John M.: *See*—
Jackson, Susan M.; Jackson, Robert A.; and Davis, John M., 6,040,772, Cl. 340-568.600.

Davis, Mark E.: *See*—
Yoshikawa, Masahito; and Davis, Mark E., 6,040,258, Cl. 502-64.000.

Davis, Walter Lee. Multiple account portable wireless financial messaging unit. 6,041,314, Cl. 705-41.000.

Davyduke, Roland: *See*—
Kennedy, Joe B.; Davyduke, Roland; Jackson, James G.; Hannebauer, James B.; Newnes, William R.; Stroud, Brian; and Sergeant, John, 6,039,097, Cl. 144-357.000.
Kennedy, Joe B.; Davyduke, Roland; Jackson, James G.; Hannebauer, James B.; Newnes, William R.; Stroud, Brian; and Sergeant, John, 6,039,098, Cl. 144-357.000.

Dawirs, Willis R., to United States of America, Navy. Low duty cycle navigation system. 6,040,801, Cl. 342-457.000.

Dawson, Fredric O. Dumbbell set with quick release plates. 6,039,678, Cl. 482-107.000.

Dawson, Gerald L.; and Redden, James P., to Mas-Hamilton Group, Inc. Back cover lock for a combination lock. 6,038,897, Cl. 70-303.00A.

Day, Charles E. Antacid co-polymer of guanidine and polyethylenimine. 6,040,315, Cl. 514-310.000.

Day, Grant P.: *See*—
Prasad, Arun; Karmaker, Ajit; Zammarieh, Elie; and Day, Grant P., 6,039,569, Cl. 433-180.000.

Day, Michael E. Surface referenced depth control. 6,039,518, Cl. 409-218.000.

Day, Roger William: *See*—
Papavassiliou, Vasilis; Wagner, Matthew Lincoln; and Day, Roger William, 6,040,467, Cl. 549-534.000.

Dayco Products, Inc.: *See*—
Winter, Jeffrey J.; Holden, Homer N.; and Lawrence, James L., 6,039,082, Cl. 138-121.000.

DE NORA S.p.A.: *See*—
Federico, Fulvio, 6,039,852, Cl. 204-255.000.

Dean, Daniel R.; and DeCola, Charles R., to Dean, Daniel R. Paint brush and roller cleaning adapter. 6,038,787, Cl. 34-312.000.

Dean, Frank William, to Stoller Enterprises, Inc. Diformylurea and reaction products of urea and carboxylic acids. 6,040,273, Cl. 504-328.000.

DeAnna, Russell, to United States of America, Army. Passive bimetallic actuator for heat transfer. 6,039,262, Cl. 236-93.00R.

Deas, Alexander Roger, to Memory Corporation Technology Limited. Fault tolerant memory system. 6,041,422, Cl. 714-8.000.

Deason, Howard Thomas: *See*—
Trokhan, Paul Dennis; Phan, Dean Van; Deason, Howard Thomas; and Kleinwächter, Jörg, 6,039,839, Cl. 162-116.000.

Debe, Mark K.; Haugen, Gregory M.; Steinbach, Andrew J.; Thomas, John H., III; and Ziegler, Raymond J., to 3M Innovative Properties Company. Catalyst for membrane electrode assembly and method of making. 6,040,077, Cl. 429-40.000.

de Beijer, Justinus Lambertus Theodurus, to Hunter Douglas International N.V. Mounting system. 6,039,295, Cl. 248-262.000.

de Boer, Jacob; Hamming, Martin; and Goudsmits, Petrus J. M., to ODME International B.V. Device for processing a disc-shaped substrate as well as a station suitable for being coupled to such a device. 6,039,172, Cl. 198-750.100.

DeBoer, Kenneth Frank: *See*—
Sinnott, Robert A.; Clark, W. Dennis; and DeBoer, Kenneth Frank, 6,039,955, Cl. 424-195.100.

De Buyst, Jo; and Cardinaels, Jozef Renier Catharina, to Alcatel. Cable joint with grounding connection and/or screen cross-bonding for power cables. 6,040,527, Cl. 174-88.00C.

DEC International, Inc.: *See*—
Sanford, Scott A., 6,039,001, Cl. 119-14.470.

DeChant, Daniel A. Miniature golf bag travel organizer. 6,039,474, Cl. 383-66.000.

Decker, Mark R. Illuminated keyboard system. 6,040,822, Cl. 345-168.000.

Decker, Mark W.: *See*—
Bowman, Howard L.; Darwin, Robert L.; Maraffio, William M.; Sawyer, Larry D.; Williams, Robert B.; Hudson, Frank E.; Hunstad, Mary; and Decker, Mark W., 6,039,124, Cl. 169-61.000.

DeCola, Charles R.: *See*—
Dean, Daniel R.; and DeCola, Charles R., 6,038,787, Cl. 34-312.000.

Decolam, Inc.: *See*—
Brown, Charles R.; Fogle, Marion O.; and Salley, Thomas F., 6,039,419, Cl. 312-262.000.

DeCoster, David C.: *See*—
Rostami, Ader M.; DeCoster, David C.; Vassiliou, Eustathios; and Dassel, Mark W., 6,039,902, Cl. 264-37.180.

Deere & Company: *See*—
Easton, David Joseph, 6,039,132, Cl. 180-6.440.
Sebben, Daniel Angelo; Lux, Melvin Orville; Zellmer, Timothy Paul; Gueller, Matthew Paul; and Seegert, Brian David, 6,038,843, Cl. 56-202.000.

Dees, Jerome G.; and Kimbel, Kirk, to Fort James Corporation. Containers formed of a composite paperboard web and methods of forming. 6,039,682, Cl. 493-58.000.

De Flora, Antonio; Benatti, Umberto; and Giovine, Marco, to Biosearch Italia, S.p.A.; and Gruppo Lepetit, S.p.A. Dinucleoside-5',5'-pyrophosphates. 6,040,297, Cl. 514-47.000.

DeFrancesco, Stephen M.: *See*—
DeFrancesco, Stephen Michael, 6,039,206, Cl. 220-737.000.

DeFrancesco, Stephen Michael, to DeFrancesco, Stephen M. Stabile cup and mug holder. 6,039,206, Cl. 220-737.000.

De Frondeville, Alexis W.: *See*—
Citron, Howard M.; Asano, David K.; Baietto, Henry R.; Chen, Sullivan S.; De Frondeville, Alexis W.; Hahn, Jeffrey H.; Probst, Thomas J., Jr.; Massucci, John E.; Costin, Dinu; and Peragine, Ralph E., 6,038,952, Cl. 83-605.000.

DeGray, Dennis: *See*—
Faulkner, W. Harrison, III; Bullock, David; DeGray, Dennis; and Sarasohn, Neil, 6,039,217, Cl. 222-146.500.

de Haan, Hendrik Andries; and Munneke, Christiaan Antoon, to Hadewe B.V. Apparatus and method for inserting documents into envelopes. 6,038,835, Cl. 53-460.000.

de Haas, Johannes Maria: *See*—
Dietrich, Paul S.; Van Grinsven, Martinus Quirinus Joseph Marie; Gielen, Johannes Jacobus Ludgerus; de Haas, Johannes Maria; and Van Driel, Roeland, 6,040,185, Cl. 435-468.000.

DeHondt, Rene C.: *See*—
Paganini, Lisa M.; Casilio, Frank; Peters, Roy; Straub, Kurt M.; DeHondt, Rene C.; and Fry, Tova, 6,040,637, Cl. 307-10.100.

Dekalb Genetics Corporation: *See*—
Conway, Michael P., 6,040,500, Cl. 800-312.000.
Hall, Michael A., 6,040,508, Cl. 800-320.100.
Spencer, Michael; Mumm, Rita; and Gwyn, Jeff, 6,040,497, Cl. 800-288.000.

Delagnes, Philippe; and Barba, Dominique, to Laboratoire Central des Ponts et Chaussees; and L'Institut de Recherche et D'Enseignement Superieur aux Techniques de Electronique. Process for detecting surface defects on a textured surface. 6,040,853, Cl. 348-128.000.

Delaite, Emmanuel; Charlier, Jean; and Bertozzi, Giuliano, to Solvay Poloyolefins Europe-Belgium (Societe Anonyme). Composition based on propylene polymers for expanded granules, process for obtaining it and its use. 6,040,348, Cl. 521-59.000.

Delaware Capital Formations, Inc.: *See*—
Kesterman, James; and Pendleton, David, 6,039,201, Cl. 220-484.000.

Delbar Products, Inc.: *See*—
Dolan, Daniel J.; and McPherson, John S., 6,039,449, Cl. 359-871.000.

Delco Electronics Corporaiton: *See*—
Manlove, Gregory Jon; and Kearney, Mark Billings, 6,040,692, Cl. 324-173.000.

Delgado-Frias, Jose Guadalupe: *See*—
Pechanek, Gerald George; Vassiliadis, Stamatis; and Delgado-Frias, Jose Guadalupe, 6,041,398, Cl. 712-11.000.

Dell USA, L.P.: *See—*
Beelitz, Alan E., 6,041,395, Cl. 711-173.000.
Gandre, Jerry D.; Sands, Steven L.; Mills, R. Steven; and Lopez, Arthur, 6,040,982, Cl. 361-724.000.
Schmitt, Ty; and Sim, Vibora, 6,040,981, Cl. 361-695.000.
Schmitt, Ty. R., 6,038,892, Cl. 70-78.000.

Del Nero, Valérie: *See—*
Lallier, Jean-Pierre; Marie, Patrick; Aubry, Jean-Marie; Marti, Marie-José; and Del Nero, Valérie, 6,040,285, Cl. 510-206.000.

De Los Santos, Hector J.; Kao, Yu-Hua; Caigoy, Arturo L.; and Ditmars, Eric D., to Hughes Electonics Corporation. Microelectromechanical device. 6,040,611, Cl. 257-415.000.

Del Soldato, Piero; and Sannicolo', Francesco, to Nicox S.A. Compounds and their compositions having anti-inflammatory and anti-thrombotic activities. 6,040,341, Cl. 514-509.000.

Delta International Machinery Corp.: *See—*
Brickner, Louis C., Jr.; and Wixey, Barry D., 6,038,953, Cl. 83-783.000.

del Verme, Attilio: *See—*
Izmirlian, Avedik; and del Verme, Attilio, 6,040,014, Cl. 427-358.000.

Delwiche, Christopher; Bero, Joseph; and Ginnow, Gregory, to Paper Converting Machine Company. Quick change system for a press. 6,038,972, Cl. 101-216.000.

Demiryont, Hüyla; Parlar, Hüseyin; Ersoy, Ayse; and Aktulga, Ender, to Turkiye Sise ve cam Fabrikalari A.S. Anti-solar and low emissivity functioning multi-layer coatings on transparent substrates. 6,040,939, Cl. 359-360.000.

Demoise, Thomas Edwin, Jr., to Robert Bosch Technology Corporation. Disc brake. 6,039,155, Cl. 188-73.390.

Demonaco, Jeffrey: *See—*
Geis, David G.; Doikas, Peter; and Demonaco, Jeffrey, 6,039,582, Cl. 439-76.100.

De Nanteuil, Guillaume; Portevin, Bernard; Bonnet, Jacqueline; and Fradin, Armel, to Adir Et Compagnie. Benzimidazole, benzoxazole and benzothiazole compounds. 6,040,327, Cl. 514-394.000.

Dencker, Nils. Desk and group of similar desks. 6,039,392, Cl. 297-172.000.

Den Dopper, Rolf A., to Soltec B.V. Reflow soldering apparatus with improved cooling. 6,039,236, Cl. 228-46.000.

Denki Kagaku Kogyo Kabushiki Kaisha: *See—*
Fujii, Nobuhiko; Nakada, Mitsuyuki; and Aoki, Kazuomi, 6,040,377, Cl. 524-571.000.

Dennis, Donald C.; Radosevich, Joseph R.; and Singh, Ranbir, to Lucent Technologies Inc. Device and method of forming a metal to metal capacitor within an integrated circuit. 6,040,616, Cl. 257-535.000.

Denny, Thomas M., to Case Corporation. Moving operator and display unit. 6,039,141, Cl. 180-329.000.

Denso Corporation: *See—*
Kawaguchi, Kiyoshi; Kadota, Shigeru; and Kishita, Kouji, 6,039,111, Cl. 165-104.140.
Konosu, Koji; Sugiura, Akio; and Motizuki, Kunihiro, 6,039,256, Cl. 235-462.430.
Matsugatani, Kazuoki; and Yukumatsu, Masanobu, 6,040,796, Cl. 342-70.000.
Morikawa, Junya; and Miwa, Makoto, 6,039,032, Cl. 123-520.000.
Ogawa, Yuji; Abe, Yasuo; and Inoue, Tamotsu, 6,038,950, Cl. 83-54.000.

Densoken Co., Ltd. & Shoei Chemical Inc.: *See—*
Baba, Seiji; and Endo, Takashi, 6,040,055, Cl. 428-428.000.

Denton, Claude; Kirkpatrick, Donald C.; and Peters, Samuel J., to Tektronix, Inc. SONET path/ATM physical layer transmit/receive processor. 6,041,043, Cl. 370-254.000.

Dentrac Corp.: *See—*
Mushabac, David R.; and Policht, Stanislaw A., 6,038,780, Cl. 33-512.000.

Denyo Kabushiki Kaisha: *See—*
Shinya, Keigo; Kou, Wen Long; Suzuki, Osamu; and Tetsui, Shunichi, 6,040,556, Cl. 219-133.000.

De Peyer, Jacques: *See—*
Häusler, Günther; Gericke, Rolf; Wurziger, Hanns; Baumgarth, Manfred; Lues, Inge; De Peyer, Jacques; and Bergmann, Rolf, 6,040,308, Cl. 514-253.000.

DePinho, Ronald A., to Albert Einstein College of Medicine of Yeshiva University. Myc homology region II—associated protein. 6,040,425, Cl. 530-350.000.

dePinto, Victor M., to Quinton Instruments Company. Adaptive line noise canceler and detector for ECG signals. 6,041,250, Cl. 600-509.000.

Depuy Orthopaedics, Inc.: *See—*
Sanders, Marcus Maria; Kapitan, John Mark; and Brown, Henry John Harding, 6,039,738, Cl. 606-61.000.

Derman, Jay S.: *See—*
Zeren, Greg; and Derman, Jay S., 6,038,891, Cl. 70-58.000.

Dermitzakis, Emmanuil. Manufacture process for a dripline duct with internally located emitters. 6,039,270, Cl. 239-542.000.

Derrick, John R., Jr.: *See—*
Teran, Alfredo J.; Derrick, John R., Jr.; Samad, Nidal A.; Willoughby, W. Todd; and Wood, Richard G., 6,039,874, Cl. 210-605.000.

Desch, Teresa Ann: *See—*
Guskey, Susan Marie; Inman, Everett Junior; Desch, Teresa Ann; Fritschi, Lynne Anne; and Killion, Stephanie Lynn, 6,040,282, Cl. 510-119.000.

Design Ideas, Ltd.: *See—*
Hardy, Christopher, 6,039,563, Cl. 431-291.000.

Desoli, Giuseppe: *See—*
Vondran, Gary L., Jr.; and Desoli, Giuseppe, 6,040,925, Cl. 358-525.000.

Detering, Greig R.: *See—*
Jones, Eric A.; and Detering, Greig R., 6,041,107, Cl. 379-164.000.

Deubzer, Bernward: *See—*
Dauth, Jochen; Hierstetter, Thomas; Deubzer, Bernward; and Gratzl, Petra, 6,040,383, Cl. 525-100.000.

Deutsch, Julius: *See—*
Schmitt-Willich, Heribert; Platzek, Johannes; Gries, Heinz; Schumann-Giampieri, Gabrielle; Weinmann, Hanns-Joachim; Vogler, Hubert; Deutsch, Julius; and Conrad, Juergen, 6,039,931, Cl. 424-9.364.

Deutsche Telekom AG: *See—*
Heitmann, Walter, 6,041,156, Cl. 385-139.000.

Deutsche-Thompson Brandt GmbH: *See—*
Dieterle, Franz; and Läufer, Martin, 6,040,664, Cl. 315-383.000.

Deutsche Thomson-Brandt GmbH: *See—*
Platte, Hans-Joachim, 6,041,159, Cl. 386-46.000.

Dev, Roger: *See—*
Jeffords, Jason; Crowley, Todd A.; and Dev, Roger, 6,041,383, Cl. 710-200.000.

Devendorf, Don C.: *See—*
Chen, Ricky Y.; Linder, Lloyd F.; Devendorf, Don C.; and Gorder, Matthew S., 6,040,731, Cl. 327-359.000.

Devlin, David J.: *See—*
Calamur, Narasimhan; Carrera, Martin E.; Devlin, David J.; and Archuleta, Tom, 6,039,792, Cl. 95-45.000.

Deweese, Robert M., Jr.: *See—*
Bates, Ray G., Jr.; Deweese, Robert M., Jr.; and Burns, John A., 6,038,841, Cl. 56-15.800.

Dewey, James M.: *See—*
Hammond, Maynard D.; and Dewey, James M., 6,041,417, Cl. 713-400.000.

De Zen, Vic. Plastic fencing and components therefor. 6,039,307, Cl. 256-19.000.

Dhindsa, Rajinder; Singh, Vikram; and Tokunaga, Ken, to LAM Research Corporation. Focus rings. 6,039,836, Cl. 156-345.000.

DHT Technologies, Ltd.: *See—*
McLeod, Galvin Thomas, 6,039,129, Cl. 175-258.000.

Diachina, John W.; Persson, Bengt; Raith, Alex K.; and Sammarco, Anthony J., to Telefonaktiebolaget LM Ericsson. Digital control channels having logical channels supporting broadcast SMS. 6,041,047, Cl. 370-347.000.

Diamond Multimedia Systems, Inc.: *See—*
Pham, Duc, 6,041,373, Cl. 710-62.000.

Dibble, Eric P.; Johnson, Eric A.; and Phillips, Raymond A., Jr., to International Business Machines Corporation. Method of improved cavity BGA circuit package. 6,040,631, Cl. 257-783.000.

Dibenedetto, Joseph D.: *See—*
Bangs, William E.; Dibenedetto, Joseph D.; Friedberg, Joyce L.; Giordano, Denise A.; Glover, Judy M.; Khoo, Chor San Heng; Ko, Sandy; MacNair, R. David C.; Noar, Scott R.; Randazzi, John J., Jr.; Stoever, Harro; and Ziegler, Paula J., 6,039,989, Cl. 426-106.000.

DiCicco, Michael Frank: *See—*
Davidson, Steven Frederic; Vollendorf, Kim David; DiCicco, Michael Frank; Collar, Stuart John; and Stone, Jeffrey Jay, 6,041,243, Cl. 455-575.000.

Dickerson, Robert E.: *See—*
Fitterman, Alan S.; and Dickerson, Robert E., 6,040,121, Cl. 430-419.000.

Dickinson, David A.: *See—*
Godleski, Stephen A.; Dickinson, David A.; and Williams, Antony J., 6,040,129, Cl. 430-604.000.

Dickinson, Gary: *See—*
Shah, Ashok; Blum, Rick; and Dickinson, Gary, 6,038,825, Cl. 52-172.000.

Dickinson, Roger Peter: *See—*
Dack, Kevin Neil; and Dickinson, Roger Peter, 6,040,309, Cl. 514-253.000.

DiCroce, John R., to Audiovox Corporation. System controlling vehicle warm up operation responsive to environment CO level. 6,040,636, Cl. 307-10.100.

Diebold, Incorporated: *See—*
Symonds, Robert D.; Singer, Irek; St. George, Peter; and Gill, Robert Bradley, 6,039,245, Cl. 235-379.000.

Diederich, Ann Marie, to SmithKline Beecham Corporation. Method for preparing certain acetonitriles. 6,040,471, Cl. 558-315.000.

Diels, H. Wolfgang. Extending system. 6,039,516, Cl. 409-134.000.

Diep, Vinh Hew; and Naikal, Najibullah, to Harris Corporation. Handset access mechanism and method. 6,041,121, Cl. 379-446.000.

Dierick, Bryan R.: *See—*
Chak, Yee C.; Dierick, Bryan R.; and Hylton, Gary L., 6,038,967, Cl. 100-2.000.

Diesel Engine Retardes, Inc.: *See—*
Meistrick, Zdenek; and Pitzi, Vincent, 6,039,022, Cl. 123-321.000.

Dieterle, Franz; and Läufer, Martin, to Deutsche-Thompson Brandt GmbH. Circuit for limiting the beam current of a cathode ray tube. 6,040,664, Cl. 315-383.000.

Dietrich, Paul S.; Van Grinsven, Martinus Quirinus Joseph Marie; Gielen, Johannes Jacobus Ludgerus; de Haas, Johannes Maria; and Van Driel, Roeland, to Novartis AG. Genetic stabilizing elements. 6,040,185, Cl. 435-468.000.

Dietz, Jon M.: *See—*
Law, Marcus Dixon; and Dietz, Jon M., 6,040,496, Cl. 800-280.000.

Di Fiore, Dario; and Stanisci, Carlo, to Mattioli Engineering Ltd. Equipment for microdermoabrasion through a flow of air/reducing substances mix and relative handpiece. 6,039,745, Cl. 606-131.000.

DigiLens, Inc.: *See*—
Popovich, Milan M., 6,040,928, Cl. 359-15.000.

Digital Instruments: *See*—
Cleveland, Jason P.; and Anczykowski, Boris, 6,038,916, Cl. 73-105.000.

Digonnet, Michel J. F.: *See*—
Hodgson, Craig W.; Wagener, Jefferson L.; Digonnet, Michel J. F.; and Shaw, H. John, 6,040,571, Cl. 250-227.140.

Dillow, David Curtis: *See*—
Savage, George M.; Christian, Jeffrey J.; and Dillow, David Curtis, 6,039,748, Cl. 606-180.000.

DiMarco, Mario, to Honeywell Inc. Electrical connector for circuit card assemblies. 6,039,581, Cl. 439-74.000.

Di Nardi, Peter C., to Ernst Thielenhaus GmbH & Co. KG. Precision grinding of a part-spherical recess. 6,039,636, Cl. 451-178.000.

Ding, Ni: *See*—
Hostettler, Fritz; Rhum, David; Forman, Michael R.; Helmus, Michael N.; and Ding, Ni, 6,040,058, Cl. 428-457.000.

DiPoto, James P.: *See*—
Ghiam, Farid F.; and DiPoto, James P., 6,040,046, Cl. 428-343.000.

DiSalvo, Nicholas L., to Leviton Manufacturing Co., Inc. Reset lockout for circuit interrupting device. 6,040,967, Cl. 361-42.000.

Disc Replacement Technologies, Inc.: *See*—
Shelokov, Alexis P., 6,039,763, Cl. 623-17.000.

Discenzo, Frederick M.: *See*—
Dister, Carl J.; and Discenzo, Frederick M., 6,041,287, Cl. 702-182.000.

Dischert, Lee Robert, to Matsushita Electric Industrial Co. Ltd. Method and apparatus for converting an interlace-scan video signal into a non-interlace-scan video signal. 6,040,869, Cl. 348-448.000.

Dister, Carl J.; and Discenzo, Frederick M., to Reliance Electric Industrial Company. System architecture for on-line machine diagnostics. 6,041,287, Cl. 702-182.000.

Ditmars, Eric D.: *See*—
De Los Santos, Hector J.; Kao, Yu-Hua; Caigoy, Arturo L.; and Ditmars, Eric D., 6,040,611, Cl. 257-415.000.

Dittrick, Frank J. Body gripping trap setting system. 6,038,809, Cl. 43-97.000.

Doan, Trung T.: *See*—
Sandhu, Gurtej S.; Elliott, Richard L.; Doan, Trung T.; and Larsen, Jody D., 6,040,245, Cl. 438-692.000.

Doane, William M.; Lawton, John W., Jr.; and Shogren, Randal, to United States of America, Agriculture; and Biotechnology Research & Development Corp. Biodegradable polyester and natural polymer laminates. 6,040,063, Cl. 428-532.000.

Dobbs, Michael D, to Hewlett-Packard Company. Simplified print mode selection method and apparatus. 6,039,426, Cl. 347-19.000.

Dobson, Robert A., IV. Toy train control system. 6,039,291, Cl. 246-219.000.

Dodd, Thomas J.: *See*—
Hausheer, Frederick H.; and Dodd, Thomas J., 6,040,294, Cl. 514-23.000.
Hausheer, Frederick H.; and Dodd, Thomas J., 6,040,304, Cl. 514-221.000.
Hausheer, Frederick H.; and Dodd, Thomas J., 6,040,312, Cl. 514-283.000.

Dodier, Robert H.: *See*—
Franz, Patrick J.; Biehl, Philip D.; Straayer, David H.; and Dodier, Robert H., 6,040,821, Cl. 345-159.000.

Dodson, John Paul: *See*—
Amro, Hatim Yousef; and Dodson, John Paul, 6,041,326, Cl. 707-10.000.

Doi, Ichiro; and Tonomura, Shoichiro, to Asahi Kasei Kogyo Kabushiki Kaisha. Method and apparatus for total reflection X-ray fluorescence spectroscopy. 6,041,096, Cl. 378-48.000.

Doikas, Peter: *See*—
Geis, David G.; Doikas, Peter; and Demonaco, Jeffrey, 6,039,582, Cl. 439-76.100.

Dolan, Daniel J.; and McPherson, John S., to Delbar Products, Inc. Retainer clip for a vehicle rearview mirror. 6,039,449, Cl. 359-871.000.

Doll, Daniel W.: *See*—
Hinshaw, Jerald C.; Doll, Daniel W.; Blau, Reed J.; and Lund, Gary K., 6,039,820, Cl. 149-45.000.

Domenighini, Pierluigi; and Clapis, Matteo, to Italian Beauty Inovations, Inc. Head and facial massaging apparatus. 6,039,704, Cl. 601-79.000.

Doms, Robert W.: *See*—
Earl, Patricia L.; Broder, Christopher C.; Doms, Robert W.; and Moss, Bernard, 6,039,957, Cl. 424-208.100.

Donaldson Company, Inc.: *See*—
Coulonvaux, Paul R., 6,039,778, Cl. 55-498.000.

Dondale, Charles Stephen, to LSI Logic Corporation. Audio transient suppression device. 6,040,740, Cl. 330-149.000.

Donlan, Rodney M.; Elliot, David L.; Kapp, Nancy J.; Wiatr, Christopher L.; and Rey, Paul A., to Calgon Corporation. Surfanctants for reducing bacterial adhesion onto surfaces. 6,039,965, Cl. 424-405.000.

Donnelly Corporation: *See*—
Agrawal, Anoop; Tonazzi, Juan Carlos Lopez; LeCompte, Robert Steven; Baertelin. Carl; and Fischer, Douglas Alan, 6,039,390, Cl. 296-211.000.

Donnelly, Karen D.: *See*—
Wilt, Truman F.; Walters, David N.; Claar, James A.; Donnelly, Karen D.; Carney, Joseph M.; and Wolff, Andrew R., 6,040,394, Cl. 525-474.000.

Donnelly Optics: *See*—
Schaub, Michael P., 6,040,943, Cl. 359-565.000.

Doods, Henri: *See*—
Eberlein, Wolfgang; Engel, Wolfhard; Rudolf, Klaus; Doods, Henri; Wieland, Heike-Andrea; and Willim, Klaus-Dieter, 6,040,289, Cl. 514-2.000.

Dooley, John C., III: *See*—
Dooley, John C., Jr.; Meyerson, Karen R.; and Dooley, John C., III, 6,039,370, Cl. 294-1.500.

Dooley, John C., Jr.; Meyerson, Karen R.; and Dooley, John C., III. Apparatus for capturing and disposing of animal litter. 6,039,370, Cl. 294-1.500.

Dopp, Robert Brian: *See*—
Adey, Robert; Dopp, Robert Brian; and Oltman, John Edward, 6,040,074, Cl. 429-27.000.

Doran, Daniel B., to Hyundai Electronics America. Automated washing system and method. 6,039,057, Cl. 134-95.200.

Dorf, Paula. Cosmetic brush. 6,039,051, Cl. 132-313.000.

Dornier, Peter D.; and Krumm, Valentin, to Lindauer Dornier Gesellschaft mbH. Separating weft thread waste of a single uncontaminated material from untwisted leno binding threads in trimmed catch selvages. 6,039,086, Cl. 139-54.000.

Doshi, Bharat Tarachand; Dravida, Subrahmanyam; Kustka, George John; Magill, Peter D.; Siller, Curtis A.; and Sriram, Kotikalapudi, to Lucent Technologies, Inc. Method and apparatus enabling multiple access for multiple services and multiple transmission modes over a broadband communication network utilizing an adaptive digital access protocol. 6,041,051, Cl. 370-352.000.

Dostert, Bruno: *See*—
Bertheau, Fernand; Maire, Patrick; Dostert, Bruno; and Bellali, Eddie, 6,039,045, Cl. 128-207.110.

Douceur, John R.; Bar, Ofer; and Bernet, Yoram, to Microsfot Corporation. Technique for efficiently classifying packets using a trie-indexed hierarchy forest that accommodates wildcards. 6,041,053, Cl. 370-389.000.

Douglas, Joel S.; and Drexler, Karen R., to Mercury Diagnostics, Inc. Diagnostic compositions and devices utilizing same. 6,040,151, Cl. 435-28.000.

Douglas, Leonard Richard: *See*—
Wojnarowski, Robert John; Rose, James Wilson; Balch, Ernest Wayne; Douglas, Leonard Richard; Downey, Evan Taylor; and Gdula, Michael, 6,040,226, Cl. 438-381.000.

Douglas, Peter; Dudik, Evan; Evans, John; and Kritzer, Alan, to Salus Media Inc. Therapeutic behavior modification program, compliance monitoring and feedback system. 6,039,688, Cl. 600-300.000.

Douglas, Stephen Joseph: *See*—
Finsterwald, P. Michael; Douglas, Stephen Joseph; and Just, Ricky Gail, 6,038,752, Cl. 29-25.350.

Doujo, Tadashi: *See*—
Ohno, Manabu; Ohtake, Takeshi; Matsunaga, Satoshi; and Doujo, Tadashi, 6,040,103, Cl. 430-110.000.

Dourra, Hussein; Holbrook, Gerald L.; Correa, Colt R.; and Parenti, David, to DaimlerChrysler Corporation. Quick learn procedure for fill volumes of an electronically controlled automatic transmission. 6,039,674, Cl. 477-166.000.

Dove Systems, Inc.: *See*—
Abbott, John D.; and Vassiliadis, Arthur, 6,039,567, Cl. 433-88.000.

Dow AgroSciences LLC: *See*—
Hackler, Ronald E.; and Lawrence, Kathryn E., 6,040,345, Cl. 514-594.000.

Dow Chemical Company, The: *See*—
Gan, Joseph; Badini, Gabriele; and Hoffmann, Klaus E., 6,040,396, Cl. 525-502.000.
Jennings, James K.; Jenkines, Randall C.; and Mobley, Larry W., 6,040,381, Cl. 524-871.000.
Nickias, Peter N.; Marks, Tobin J.; and Obora, Yasushi, 6,040,401, Cl. 526-160.000.

Dow Corning Corporation: *See*—
Caporiccio, Gerardo, 6,040,277, Cl. 508-155.000.
Glover, Shedric Oneal; Lee, Chi-long; and Tong, Wen-hong, 6,040,353, Cl. 522-15.000.

Dow Corning S.A.: *See*—
Damme, Eric; Gilson, Jean-Marc; Leempoel, Patrick; Lebecq, Fabrice; and Takemasa, Takao, 6,040,412, Cl. 528-34.000.

Dow Corning Toray Silicone Co., Ltd.: *See*—
Isshiki, Minoru; Mine, Katsutoshi; and Yamakawa, Kimio, 6,040,395, Cl. 525-476.000.
Mine, Katsutoshi; Mitani, Osamu; Nakayoshi, Kazumi; and Tazawa, Rikako, 6,039,831, Cl. 156-272.600.
Mine, Katsutoshi; Mitani, Osamu; Nakayoshi, Kazumi; and Tazawa, Rikako, 6,040,362, Cl. 523-212.000.

Dow, G. Sam: *See*—
Wedeen, Robert S.; Durham, Arthur J.; Ferris, Matthew D.; and Dow, G. Sam, 6,040,739, Cl. 330-66.000.

Dow, James C.: *See*—
Khovaylo, Modest; Puyot, Michael A.; Dow, James C.; Henderson, Scott; and Stowell, Davin, 6,040,572, Cl. 250-235.000.

Dow, Richard M.: *See*—
Campbell, Russell; Dow, Richard M.; Blair, Timothy P.; and Poppenga, Burton H., 6,040,917, Cl. 358-1.170.

Dow, Robert L.; and Tate, Bonnie F., to Pfizer Inc. 4-aminopyrrole (3,2-d) pyrimidines as neuropeptide Y receptor antagonists. 6,040,310, Cl. 514-258.000.

Dowa Mining Co., Ltd.: *See*—
Hisano, Seiichi; Saito, Kazuhisa; Sano, Kazushi; Konno, Shinichi; Horikawa, Yoshichika; and Aihara, Yasuhiko, 6,040,043, Cl. 428-323.000.
Sugawara, Akira; Hana, Yoshitake; Endo, Takayoshi; and Sugiyama, Osamu, 6,040,067, Cl. 428-647.000.

Dowbenko, Donald J.: *See*—
Lasky, Laurence A.; and Dowbenko, Donald J., 6,040,437, Cl. 536-23.100.

Dowell, Craig M.: *See*—
Levi, Steven P.; VanAntwerp, Mark D.; Dowell, Craig M.; and Knowlton, Chadd B., 6,041,345, Cl. 709-217.000.

Downey, Evan Taylor: *See*—
Wojnarowski, Robert John; Rose, James Wilson; Balch, Ernest Wayne; Douglas, Leonard Richard; Downey, Evan Taylor; and Gdula, Michael, 6,040,226, Cl. 438-381.000.

Doxey, Mark Harvey; and Young, Shirley M., to General Motors Corporation. Air bag module assembly. 6,039,341, Cl. 280-728.200.

Dr. Karl Thomae GmbH: *See*—
Eberlein, Wolfgang; Engel, Wolfhard; Rudolf, Klaus; Doods, Henri; Wieland, Heike-Andrea; and Willim, Klaus-Dieter, 6,040,289, Cl. 514-2.000.

Draaijer, Jacco: *See*—
Bodamer, Roger; Draaijer, Jacco; Voss, Eric; and Mani, Raghu, 6,041,344, Cl. 709-203.000.

Draganich, Louis F.: *See*—
Pottenger, Lawrence A.; and Draganich, Louis F., 6,039,764, Cl. 623-20.000.

Drager Sicherheitstechnik GmbH: *See*—
Ammann, Klaus; and Bäther, Wolfgang, 6,040,777, Cl. 340-632.000.

Drake, Charles A.; Wu, An-hsiang; and Yao, Jianhua, to Phillips Petroleum Company. Hydrocarbon conversion catalyst composition and processes therefor and therewith. 6,040,257, Cl. 502-64.000.

Drake, Steven D.: *See*—
Warner, Mark W.; Drake, Steven D.; and Giardello, Michael A., 6,040,363, Cl. 523-214.000.

Dravida, Subrahmanyam: *See*—
Doshi, Bharat Tarachand; Dravida, Subrahmanyam; Kustka, George John; Magill, Peter D.; Siller, Curtis A.; and Sriram, Kotikalapudi, 6,041,051, Cl. 370-352.000.

Dresser Industries, Inc.: *See*—
Smith, Richard Michael, 6,038,929, Cl. 73-756.000.

Drexl, Hans-Jürgen, to Mannesmann Sachs AG. Arrangement for monitoring the wear status of a friction clutch. 6,040,768, Cl. 340-453.000.

Drexler, Karen R.: *See*—
Douglas, Joel S.; and Drexler, Karen R., 6,040,151, Cl. 435-28.000.

Driggers, Bernard: *See*—
Carlson, John; and Driggers, Bernard, 6,039,024, Cl. 123-396.000.

Drochon, Sebastien: *See*—
Olivier, Helene; Commereuc, Dominique; and Drochon, Sebastien, 6,040,483, Cl. 568-454.000.

Droukas, Roger C.: *See*—
Lawson, Richard R.; and Droukas, Roger C., 6,038,785, Cl. 34-145.000.

Drysdale, Neville Everton; Wang, Lin; and Yang, Zhen-Yu, to Du Pont de Nemours, E. I., and Company. Process for the polymerization of cyclic ethers. 6,040,419, Cl. 528-408.000.

DSM N.V.: *See*—
Murphy, Edward J.; Classey, Jeffrey; and Szum, David M., 6,040,357, Cl. 523-160.000.

Du Pont de Nemours, E. I., and Company: *See*—
Baker, Ralph Thomas; Petrov, Viacheslav Alexandrovich; and Rao, Velliyurnott Mallikarjuna, 6,040,487, Cl. 570-172.000.
Bekiarian, Paul Gregory, 6,040,405, Cl. 526-206.000.
Corbin, David Richard; and Rao, V. N. Mallikarjuna, 6,040,486, Cl. 570-168.000.
Drysdale, Neville Everton; Wang, Lin; and Yang, Zhen-Yu, 6,040,419, Cl. 528-408.000.
Johnson, Robert William, 6,040,913, Cl. 356-432.000.
Page, Loretta Ann Grezzo; Spinelli, Harry Joseph; and Anton, Waifong Liew, 6,040,358, Cl. 523-161.000.

Du Pont Pharmaceuticals Company: *See*—
Pierce, Michael E.; Chen, Cheng Y.; Choudhury, Anusuya; Radesca, Lilian A.; Tan, Lushi; and Zhao, Dalian, 6,040,480, Cl. 564-390.000.

Du, Weimin; Davis, James W.; Pfeifer, Clemens; Shan, Ming-Chien; and Sheard, Nicolas, to Hewlett-Packard Company. System and method for performing flexible workflow process execution in a distributed workflow management system. 6,041,306, Cl. 705-8.000.

Duane, Michael P.: *See*—
Gardner, Mark I.; Kadosh, Daniel; and Duane, Michael P., 6,040,220, Cl. 438-286.000.

Duarte, Lou: *See*—
Datcuk, Peter, Jr.; and Duarte, Lou, 6,039,279, Cl. 242-296.000.

Dubas, Henri: *See*—
Schädeli, Ulrich; Zambounis, John S.; Iqbal, Abul; Hao, Zhimin; and Dubas, Henri, 6,040,108, Cl. 430-200.000.

Dubief, Claude: *See*—
Cauwet-Martin, Daniele; and Dubief, Claude, 6,039,962, Cl. 424-401.000.

Ducat, Paul D., to Glasstech, Inc. Mold support frame assembly having thermally stable center. 6,038,886, Cl. 65-273.000.

Ducat, Paul D.: *See*—
Vild, Michael J.; and Ducat, Paul D., 6,038,887, Cl. 65-273.000.

Ducellier, Thomas, to Alcatel. Semiconductor optical amplifier. 6,040,938, Cl. 359-344.000.

Duchenne, Laurent; Grigorescu, Benony; and Loiselet, Jean-Pierre, to Valeo Vision. Motor vehicle headlight equipped with a device for adjusting the angular position of a reflector contained therein. 6,039,466, Cl. 362-515.000.

Duck, Gary S.; Abé, Koichi; Ip, Joseph; Farries, Mark; and Colbourne, Paul. Method and circuit for demultiplexing an optical signal. 6,040,932, Cl. 359-124.000.

Dudek, Paul: *See*—
Menovcik, Gregory G.; Balch, Thomas C.; Davis, Hilary P.; and Dudek, Paul, 6,040,360, Cl. 523-206.000.

Dudik, Evan: *See*—
Douglas, Peter; Dudik, Evan; Evans, John; and Kritzer, Alan, 6,039,688, Cl. 600-300.000.

Dudley, Russell D. Support arrangement for centrifugal chip separator. 6,039,869, Cl. 210-232.000.

Duggan, Mark E.; and Hartman, George D., to Merck & Co., Inc. Integrin receptor antagonists. 6,040,311, Cl. 514-275.000.

Duggan, Mark E.; Halczenko, Wasyl; Egbertson, Melissa S.; Hartman, George D.; and Laswell, William L., to Merck & Co., Inc. Sulfonamide fibrinogen receptor antagonists. 6,040,317, Cl. 514-317.000.

Duke University: *See*—
Walker, William F.; Toth, Cynthia A.; and Davidsen, Richard E., 6,039,691, Cl. 600-452.000.

Dunaway, James H.; Hernandez, Pamela K.; and Bidinger, Gregory P., to Tremco Incorporated. High solids copolymer dispersion from a latex and its use in caulks, sealants and adhesives. 6,040,380, Cl. 524-832.000.

Dunn, Steven B.; and Petterson, Tor H. Bottle rack. 6,038,784, Cl. 34-104.000.

Dunn, Thomas J.: *See*—
Jain, Kanti; Dunn, Thomas J.; Farmiga, Nestor O.; Weisbecker, Carl; and Kling, Carl C., 6,040,552, Cl. 219-121.700.

Dunny, Gregory John: *See*—
Lipton, Marc Ira; and Dunny, Gregory John, 6,041,104, Cl. 379-67.100.

Dunphy, Katherine Ann; Schnapp, Susan T; and Johnson, David C, to Hewlett-Packard Company. Apparatus and method of priming ink supply tubes in an ink jet printer. 6,039,443, Cl. 347-92.000.

Dupre, Herman K.; and Santry, Charles N. Portable snow making system for home use. 6,039,265, Cl. 239-14.200.

Duramax Marine, LLC: *See*—
MacDonald, George, 6,039,320, Cl. 277-370.000.

Durand, David V. Daily planning calendar. 6,039,355, Cl. 283-2.000.

Durbin, Dennis A.; and Danielson, Arvin D., to Norand Corporation. Hand-held portable data collection terminal system. 6,039,258, Cl. 235-472.010.

Durham, Arthur J.: *See*—
Wedeen, Robert S.; Durham, Arthur J.; Ferris, Matthew D.; and Dow, G. Sam, 6,040,739, Cl. 330-66.000.

Durham, Lamoyne W. Laser vehicle parking apparatus. 6,040,787, Cl. 340-932.200.

Durney, Michael J.: *See*—
Durney, Peggy R.; and Durney, Michael J., 6,038,748, Cl. 24-302.000.

Durney, Peggy R.; and Durney, Michael J. Laundry holder with sock snare. 6,038,748, Cl. 24-302.000.

Dürrwaechter, Martin: *See*—
Huber, Thomas; and Dürrwaechter, Martin, 6,039,288, Cl. 244-118.100.

Durville, Frederick M.; Connolly, Raymond J; Lantis, John C; Rediker, Robert H; and Schwaitzberg, Steven D., to Cynosure, Inc.; and N. E. Medical Center Hospitals. Portable cautery system. 6,039,729, Cl. 606-16.000.

Dutson, Alan James: *See*—
Stanton, Stephen Millard; Davis, James Talmage, II; Dutson, Alan James; and Henderson, Gregory Lane, 6,040,846, Cl. 345-905.000.

Duvall, Roger Mather: *See*—
Claar, Jeffrey Mark; Duvall, Roger Mather; and Oliver, Richard Joseph, 6,041,407, Cl. 713-1.000.

Duvall, Wilbur E.: *See*—
Breed, David S.; Duvall, Wilbur E.; and Johnson, Wendell C., 6,039,139, Cl. 180-271.000.

Duvvury, Charvaka; Amerasekera, E. Ajith; and Ramaswamy, Sridhar, to Texas Instruments Incorporated. EOS/ESD protection for high density integrated circuits. 6,040,968, Cl. 361-56.000.

Dvorak, Charles A.; Wren, Douglas L.; Fisher, Lawrence E.; Axt, Steven D.; Humphreys, Eric R.; Arzeno, Humberto B.; Beard, Colin C.; Nguyen, Sam Linh; Han, Yeun-Kwei; Roberts, Christopher R.; Lund, Jan P.; and Fatheree, Paul R., to Syntex (U.S.A.) Inc. Process for preparing a 2-(2-amino-1,6-dihydro-6-oxo-purin-9-yl) methoxy-1,3-propanediol derivative. 6,040,446, Cl. 544-276.000.

Dyer, Allan E. Operation of a vertebral axial decompression table. 6,039,737, Cl. 606-58.000.

Dykstra, Richard A., to Briggs & Stratton Corporation. Control system for engine lubricant level sensor. 6,040,767, Cl. 340-450.300.

Dynamit Nobel Gmbh Explosivstoff-und Systemstechnik: *See*—
Stein, Bernd; Lehnert, Heinz; Zimmermann, Wilhelm; and Steinhauer, Heinz, 6,038,901, Cl. 72-85.000.

Dyncorp, Inc.: *See*—
Wolfe, N. Lee; and Cipollone, Mark G., 6,039,882, Cl. 210-747.000.

Lundin, David J.; and Eliason, Kevin M., 6,039,553, Cl. 425-115.000.
Elite Entry Phone Corp.: *See*—
Parsadayan, Alex; and Parsadayan, Walter, 6,041,106, Cl. 379-102.060.
Elizabeth Arden Company, Division of Conopco, Inc.: *See*—
Mohammadi, Fatemeh, 6,039,935, Cl. 424-59.000.
Elizondo, Philip J.: *See*—
Chakravorty, Kishore K.; and Elizondo, Philip J., 6,039,621, Cl. 445-49.000.
Elko, Gary Wayne, to Lucent Technologies Inc. Steerable and variable first-order differential microphone array. 6,041,127, Cl. 381-92.000.
Ellenberger & Poensgen GmbH: *See*—
Krasser, Fritz; and Winkler, Franz, 6,040,747, Cl. 335-35.000.
Elliot, David L.: *See*—
Donlan, Rodney M.; Elliot, David L.; Kapp, Nancy J.; Wiatr, Christopher L.; and Rey, Paul A., 6,039,965, Cl. 424-405.000.
Elliott, Candace E.: *See*—
Kamboj, Rajender; Elliott, Candace E.; and Nutt, Stephen L., 6,040,175, Cl. 435-325.000.
Elliott, Richard L.: *See*—
Sandhu, Gurtej S.; Elliott, Richard L.; Doan, Trung T.; and Larsen, Jody D., 6,040,245, Cl. 438-692.000.
Ellis-Monaghan, John J.; and Pricer, Wilbur D., to International Business Machines Corporation. SRAM memory cell having reduced surface area. 6,040,991, Cl. 365-154.000.
Ellison, Alex; Kordina, Olle; Gu, Chun-Yuan; Hallin, Christer; Janzen, Erik; and Tuominen, Marko, to ABB Research Ltd.; and Okmetic Ltd. Device for epitaxially growing objects and method for such a growth. 6,039,812, Cl. 118-725.000.
Ellsworth, Stoughton L.: *See*—
Allen, Michael P.; Ellsworth, Stoughton L.; Ensler, Lawrence M.; and Subramanian, Kumar, 6,039,868, Cl. 210-232.000.
EM Microelectronic-Marin SA: *See*—
Münch, Ulrich; Jaeggi, Dominik; and Schneeberger, Niklaus, 6,040,579, Cl. 250-344.000.
EMC Corporation: *See*—
Halligan, Kenneth A.; and Ofer, Erez, 6,041,394, Cl. 711-166.000.
Emerald BioStructures, Inc.: *See*—
Kim, Hidong; and Stewart, Lansing Joseph, 6,039,804, Cl. 117-206.000.
Emerson Electric Co: *See*—
Thorn, J. Stephen; and Woodward, Arthur E., 6,040,989, Cl. 363-41.000.
Emerson Electric Co.: *See*—
Brown, Cary Lee; Hartsfield, Richard C.; Harter, Bernard Gerald; and Schoolcraft, Brian, 6,040,647, Cl. 310-89.000.
Emerson, Terrence: *See*—
Nims, Robert A.; O'Brien, Patrick Lee; and Emerson, Terrence, 6,040,635, Cl. 290-52.000.
Emitec Gesellschaft fuer Emissiontechnologies mbH: *See*—
Brück, Rolf; and Hirth, Peter, 6,040,064, Cl. 428-593.000.
Emma, Philip George: *See*—
Bozso, Ferenc Miklos; and Emma, Philip George, 6,040,203, Cl. 438-106.000.
Emody, Kenneth J.: *See*—
Jablonski, Ted M.; Meyer, Michael S.; Miller, David A.; Martin, Herman H.; Emody, Kenneth J.; Levine, Gary S.; and Tinucci, Peter, 6,039,220, Cl. 222-236.000.
Empi, Inc.: *See*—
Agarwala, Poonam; and Malewicz, Andrzej M., 6,041,259, Cl. 607-46.000.
EMTEC Magnetics GmbH: *See*—
Götz, Klaus; Jakusch, Helmut; Loch, Werner; Hoffmann, Erich; Gottmann, Hans-Georg; Jenor, Hans-Joachim; and Voit, Johann, 6,040,041, Cl. 428-216.000.
Emulex Corporation: *See*—
Rickard, Wayne; Fiacco, Peter; and Chau, Vi, 6,041,397, Cl. 711-209.000.
Enami, Kunio: *See*—
Masami, Shinohara; Uda, Mitsuru; and Enami, Kunio, 6,040,888, Cl. 349-155.000.
Endo, Hiroshi: *See*—
Tachihara, Hiroyuki; Inoue, Hidemichi; and Endo, Hiroshi, 6,040,799, Cl. 342-357.060.
Endo, Satoru: *See*—
Mera, Takeshi; Endo, Satoru; and Sugiyama, Mitsuhiro, 6,040,655, Cl. 313-409.000.
Endo, Takashi: *See*—
Baba, Seiji; and Endo, Takashi, 6,040,055, Cl. 428-428.000.
Endo, Takayoshi: *See*—
Sugawara, Akira; Hana, Yoshitake; Endo, Takayoshi; and Sugiyama, Osamu, 6,040,067, Cl. 428-647.000.
Endovascular Systems, Inc.: *See*—
Marin, Michael L.; and Marin, Ralph, 6,039,749, Cl. 606-198.000.
Endovascular Technologies, Inc.: *See*—
Quiachon, Dinah B.; Piplani, Alec A.; Baker, Steve G.; Williams, Ronald G.; Williams, Richard S.; Osborn, Kenneth L.; Layman, Ted W.; and Johansson, Peter K., 6,039,758, Cl. 623-1.000.
Endress + Hauser GmbH + Co.: *See*—
Hegner, Frank; Schmidt, Elke Maria; Güther, Volker; Otto, Andreas; Breme, Jürgen; Müller, Heinz; and Turnsek, Jürgen Peter, 6,039,918, Cl. 420-422.000.
Energetics, Inc.: *See*—
Jackson, Sherry D., 6,040,333, Cl. 514-456.000.
Engel Maschinenbau Gesellschaft m.b.H.: *See*—
Eppich, Stefan, 6,039,559, Cl. 425-574.000.
Engel, Stefan: *See*—
Kast, Jürgen; Vossen, Marcus; von Deyn, Wolfgang; Engel, Stefan; Hill, Regina Luise; Kardorff, Uwe; Otten, Martina; Plath, Peter; Walter, Helmut; Westphalen, Karl-Otto; and Misslitz, Ulf, 6,040,274, Cl. 504-348.000.
Engel, Wolfhard: *See*—
Eberlein, Wolfgang; Engel, Wolfhard; Rudolf, Klaus; Doods, Henri; Wieland, Heike-Andrea; and Willim, Klaus-Dieter, 6,040,289, Cl. 514-2.000.
Engineering & Research Associates, Inc.: *See*—
Taylor, Junius E.; and Acker, Loren C., 6,039,731, Cl. 606-34.000.
Engle, Thomas E., to Westinghouse Air Brake Company. Shutoff valve assembly. 6,039,409, Cl. 303-7.000.
Engstrand, Brad. Apparatus, system and method for experiencing motion. 6,039,653, Cl. 472-59.000.
Enichen, William A.; and Robinson, Christophe F., to Nikon Corporation. Measurement marks for e-beam projection mask and method of using. 6,040,095, Cl. 430-5.000.
Ensler, Lawrence M.: *See*—
Allen, Michael P.; Ellsworth, Stoughton L.; Ensler, Lawrence M.; and Subramanian, Kumar, 6,039,868, Cl. 210-232.000.
Environmental Screening Technology, Inc.: *See*—
Kimball, David V., 6,040,703, Cl. 324-755.000.
Eppich, Stefan, to Engel Maschinenbau Gesellschaft m.b.H. Apparatus for displacing a plasticizing and injection unit. 6,039,559, Cl. 425-574.000.
Epstein, Saul: *See*—
Kurtin, Stephen; and Epstein, Saul, 6,040,947, Cl. 359-666.000.
Equistar Chemicals, LP: *See*—
Boyes, Geoffrey E.; and Herlant, Michel A., 6,039,767, Cl. 8-400.000.
Hlatky, Gregory G., 6,040,261, Cl. 502-117.000.
Erdelmeier, Irène: *See*—
Tailhan-Lomont, Catherine; Erdelmeier, Irène; Moutet, Marc; Chaudiere, Jean; and Yadan, Jean-Claude, 6,040,328, Cl. 514-398.000.
Erhart, Richard Alexander; and Kozicek, James Richard, to Vivid Semiconductor, Inc. LCD drive IC with pixel inversion operation. 6,040,815, Cl. 345-98.000.
Erickson, Leif O., to Imation Corp. Data storage tape cartridge with hub alignment insert. 6,040,966, Cl. 360-132.000.
Erickson, Mark A.: *See*—
Shah, Sunil C.; Pandey, Pradeep; and Erickson, Mark A., 6,041,172, Cl. 395-500.270.

Erickson, Paul M.; and Spets, Timothy J., to Motorola, Inc. Method for providing information packets from a packet switching network to a base site and corresponding communication system. 6,041,048, Cl. 370-349.000.
Erico International Corporation: *See*—
Chauquet, Jacques; and Fuchs, Jean Claude, 6,040,525, Cl. 174-40.0CC.
Ericsson Inc.: *See*—
Horton, Robert Ray; and Camp, William O., Jr., 6,041,222, Cl. 455-255.000.
Patterson, Gregory S., 6,038,742, Cl. 24-3.120.
Raith, Alex K.; Ramesh, Rajaram; Molnar, Karl; Koilpillai, R. David; and Koorapaty, Havish, 6,040,800, Cl. 342-387.000.
Spall, John M., 6,040,803, Cl. 343-700.0MS.
Erlich, Henry A.; Horn, Glenn; Saiki, Randall K.; Mullis, Kary B.; and Gelfand, David H., to Roche Molecular Systems, Inc. Kits for amplifying and detecting nucleic acid sequences, including a probe. 6,040,166, Cl. 435-194.000.
Ernst, Gregory R. Organizer for a set of hand tools. 6,039,178, Cl. 206-376.000.
Ernst Mühlbauer KG: *See*—
Hübner, Heijo; Lübbers, Dierk; and Mühlbauer, Wolfgang, 6,040,354, Cl. 523-109.000.
Ernst Thielenhaus GmbH & Co. KG: *See*—
Di Nardi, Peter C., 6,039,636, Cl. 451-178.000.
Errarp Innovation AB: *See*—
Persson, Bror, 6,038,717, Cl. 5-607.000.
Ersoy, Ayse: *See*—
Demiryont, Hüyla; Parlar, Hüseyin; Ersoy, Ayse; and Aktulga, Ender, 6,040,939, Cl. 359-360.000.
Ertmann, Alexander Gareth; and Sadler, Mark, to Commercial Intertech Limited. Control valves. 6,038,957, Cl. 91-461.000.
Erwin, Randy J.: *See*—
Farmer, John E.; and Erwin, Randy J., 6,038,962, Cl. 92-118.000.
Eshelman, Lyn M.; and Stoebe, Timothy W., to Eastman Kodak Company. Color photothermography. 6,040,131, Cl. 430-619.000.
Esprit, Lee O. Fishing light. 6,039,464, Cl. 362-477.000.
ESS Technology, Inc.: *See*—
Yu, Xianggang; Sculley, Terry Lee; and Niehaus, Jeffrey Alan, 6,041,339, Cl. 708-313.000.
Esser, Thomas; and Schneidereit, Ulrich, to Eurocopter Deutschland GmbH. Electro-optical process for the static harmonization of weapon systems and aircraft. 6,040,854, Cl. 348-159.000.
Essex, John D.: *See*—
McKnight, Darwin T.; Essex, John D.; and Symensma, Kenneth L., 6,038,732, Cl. 15-414.000.
Estakhri, Petro, to Lexar Media, Inc. Flash memory leveling architecture having no external latch. 6,040,997, Cl. 365-185.330.
Estakhri, Petro, to Lexar Media, Inc. Method of increasing data reliability of a flash memory device without compromising compatibility. 6,041,001, Cl. 365-200.000.
Eta SA Fabriques d'Ebauches: *See*—
Le Letty, Ronan, 6,040,654, Cl. 310-366.000.
Etablissement Supervis: *See*—
Näff, Dominik; and Lörenz, René, 6,039,502, Cl. 403-282.000.
Etalon, Inc.: *See*—
Miles, Mark W., 6,040,937, Cl. 359-291.000.
Ethet, Yannick: *See*—
Mangano, Alain; Allart, Bernard; Bigo, Louis; Garczarek, Michel; Ethet, Yannick; Crave, Joël; and Peignon, Philippe, 6,038,859, Cl. 60-436.000.
Eto, Hiromichi: *See*—
Takeda, Sunao; Kaneko, Yasushi; Tokizawa, Minoru; Eto, Hiromichi; Ishida, Kazuya; Maebashi, Kazunori; Matsumoto, Masaru; Asaoka, Takemitsu; and Sato, Susumu, 6,040,325, Cl. 514-383.000.
Etoh, Minoru, to Matsushita Electric Industrial Co., Ltd. Motion vector detector and video coder. 6,040,864, Cl. 348-416.000.
Etoh, Minoru: *See*—
Hayashi, Takaaki; and Etoh, Minoru, 6,041,145, Cl. 382-268.000.
Etters, Harry N.; Fuerst, Robert M.; and Watt, Russell J., to Molex Incorporated. Male connector for flat flexible circuit. 6,039,600, Cl. 439-496.000.
Eum, Jae-yong, to Samsung Electronics Co., Ltd. Belt steering apparatus for controlling inclined movement of an endless rotating belt. 6,039,663, Cl. 474-103.000.
Euro-Celtique S.A.: *See*—
Cavalla, David J.; Chasin, Mark; and Hofer, Peter, 6,040,447, Cl. 544-277.000.
Eurocopter Deutschland GmbH: *See*—
Bansemir, Horst, 6,039,538, Cl. 416-134.00A.
Esser, Thomas; and Schneidereit, Ulrich, 6,040,854, Cl. 348-159.000.
European Molecular Biology Laboratory (EMBL): *See*—
Stewart, Francis, 6,040,430, Cl. 530-358.000.
Evans, Bruce W.: *See*—
Hsu, Shi-Ping; Ling, James M.; Messenger, Arthur F.; and Evans, Bruce W., 6,041,410, Cl. 713-186.000.
Evans, George: *See*—
Watson, Fred W.; Hannock, Wayne; Lam, Robert; and Evans, George, 6,038,979, Cl. 102-481.000.
Evans, John: *See*—
Douglas, Peter; Dudik, Evan; Evans, John; and Kritzer, Alan, 6,039,688, Cl. 600-300.000.
Evans, Mark J.: *See*—
Rollins, Scott; Rother, Russell P.; Matis, Louis A.; and Evans, Mark J., 6,040,428, Cl. 530-350.000.
Evolutionary Designs, Inc.: *See*—
Burns, Clay Allen; Nielsen, Peter Madelaire; Sullivan, John Aloysius; and Sullivan, Frederic Ballou-Viaux, 6,039,329, Cl. 280-11.190.
Excel Dryer Inc.: *See*—
Aisenberg, Sol; Freedman, George; Hed, A. Ze'ev; and Pavelle, Richard, 6,038,786, Cl. 34-267.000.
Exedy Corporation: *See*—
Fukushima, Hirotaka; and Takenaka, Mitsuhiko, 6,039,651, Cl. 464-98.000.
Tanaka, Masanobu; and Imanaka, Hideyuki, 6,039,161, Cl. 192-70.180.
Exxon Chemical Patents Inc.: *See*—
Mohr, Gary David; and Verduijn, Johannes Petrus, 6,039,864, Cl. 208-134.000.
Mohr, Gary David; and Verduijn, Johannes Petrus, 6,040,259, Cl. 502-67.000.
Sun, Hsiang-Ning; and Vaughn, Stephen Neil, 6,040,264, Cl. 502-214.000.
F. M. Locotos Equipment & Design Co.: *See*—
Locotos, Frank M., 6,039,509, Cl. 405-302.200.
FAAC S.p.A.: *See*—
Manini, Michelangelo, 6,038,815, Cl. 49-31.000.
Fabbrizio, Vito; and Kramer, Alan, to SGS-Thomson Microelectronics S.r.l. Electronic device for performing convolution operations. 6,041,321, Cl. 706-41.000.
Fabio Perini S.p.A.: *See*—
Biagiotti, Guglielmo, 6,039,285, Cl. 242-563.000.
Fabo, Tomas: *See*—
Lindquist, Bengt W.; and Fabo, Tomas, 6,040,492, Cl. 602-41.000.
Facchin, Girolamo Angelo. Bearing caster. 6,038,734, Cl. 16-24.000.
Fado, Frank; Guasti, Peter; Nassiff, Amado; and VanBuskirk, Ronald, to International Business Machines Corporation. Configuring an audio interface with contingent microphone setup. 6,041,301, Cl. 704-270.000.
FAFCO, Incorporated: *See*—
Rhodes, Richard O., 6,038,768, Cl. 29-890.043.
Fahl, William E.; and Wasserman, Wyeth W., to Wisconsin Alumni Research Foundation. Protein and gene for antioxidant response. 6,040,424, Cl. 530-350.000.
Fairbairn, Kevin: *See*—
Tanaka, Tsutomu; Kelkar, Mukul; Fairbairn, Kevin; Ponnekanti, Hari; and Cheung, David, 6,039,834, Cl. 156-345.000.
Fairchild Holding Corp.: *See*—
Stafford, Jay M., 6,038,754, Cl. 29-267.000.
Fairchild Korea Semiconductor, Ltd.: *See*—
Kim, Hyun-Chul, 6,040,212, Cl. 438-242.000.
Falk Corporation, The: *See*—
Schunck, Richard A.; and Sokolowski, Gordon L., 6,039,667, Cl. 475-159.000.
Fallet, Eric L.; Goodwin, Michael R.; and Hahm, Timothy P., to Eastman Kodak Company. Diffuse optical transmission density measurement system. 6,040,904, Cl. 356-236.000.
Fanella, Keith. Ergonomic positioning apparatus for guitar or like instruments. 6,040,509, Cl. 84-280.000.
Fang, Kevin Q.: *See*—
Gao, Yun; Hett, Robert; Fang, Kevin Q.; Wald, Stephen A.; Redmon, Martin P.; and Senanayake, Chris Hugh, 6,040,344, Cl. 514-554.000.
Fanuc Ltd: *See*—
Terada, Akihiro; and Okuda, Mitsuhiro, 6,040,554, Cl. 219-124.340.
Farina, Michael: *See*—
Fauteux, Denis G.; Rounds, Robert, III; and Farina, Michael, 6,040,078, Cl. 429-48.000.
Farinato, Raymond S.: *See*—
Mallon, Joseph J.; Farinato, Raymond S.; Rosati, Louis; and Freeman, John J., Jr., 6,040,376, Cl. 524-547.000.
Farmer, John E.; and Erwin, Randy J., to Farmer Mold and Machine Works, Inc. Apparatus for moving a carrier. 6,038,962, Cl. 92-118.000.
Farmer Mold and Machine Works, Inc.: *See*—
Farmer, John E.; and Erwin, Randy J., 6,038,962, Cl. 92-118.000.
Farmiga, Nestor O.: *See*—
Jain, Kanti; Dunn, Thomas J.; Farmiga, Nestor O.; Weisbecker, Carl; and Kling, Carl C., 6,040,552, Cl. 219-121.700.
Farnsworth, Albert W. Automotive damping device. 6,039,311, Cl. 267-227.000.
Farnworth, Warren M.: *See*—
Akram, Salman; and Farnworth, Warren M., 6,040,239, Cl. 438-612.000.
Hembree, David R.; Farnworth, Warren M.; Wood, Alan G.; Gochnour, Derek; and Akram, Salman, 6,040,702, Cl. 324-755.000.
Farries, Mark: *See*—
Duck, Gary S.; Abé, Koichi; Ip, Joseph; Farries, Mark; and Colbourne, Paul, 6,040,932, Cl. 359-124.000.
Farsakh, Christof, to Siemens Aktinegesellschaft. Method of channel allocation. 6,041,237, Cl. 455-450.000.
Farthing, Robert C.: *See*—
Blaisdell, Dennis R.; Mattison, Bruce W.; Farthing, Robert C.; and Sarosy, Michelle A., 6,041,171, Cl. 395-500.270.
FasTest, Inc.: *See*—
Danielson, Robert B.; and Meisinger, Stanlee W., 6,039,303, Cl. 251-149.600.
Fatheree, Paul R.: *See*—

Dvorak, Charles A.; Wren, Douglas L.; Fisher, Lawrence E.; Axt, Steven D.; Humphreys, Eric R.; Arzeno, Humberto B.; Beard, Colin C.; Nguyen, Sam Linh; Han, Yeun-Kwei; Roberts, Christopher R.; Lund, Jan P.; and Fatheree, Paul R., 6,040,446, Cl. 544-276.000.

Faulkner, Titus: *See*—
Manev, Vesselin; Faulkner, Titus; Barnette, Wayne; and Gao, Yuan, 6,040,089, Cl. 429-231.100.

Faulkner, W. Harrison, III; Bullock, David; DeGray, Dennis; and Sarasohn, Neil, to Nordson Corporation. Apparatus and method for thermoplastic material handling. 6,039,217, Cl. 222-146.500.

Faure, Thomas B.: *See*—
Ackel, Robin J.; Benoit, Douglas E.; Charland, Michael H.; and Faure, Thomas B., 6,039,858, Cl. 205-136.000.

Fauteux, Denis G.; Rounds, Robert, III; and Farina, Michael, to Mitsubishi Chemical Corporation. Free form battery apparatus. 6,040,078, Cl. 429-48.000.

Fay, Thomas F., III; La Ferla, Raffaele; Sherman, Andrew J.; and Stankiewicz, Edwin P., to Ultramet. Foam catalyst support for exhaust purification. 6,040,266, Cl. 502-439.000.

Fayolle, Francoise; Le Roux, Francoise; and Vandecasteele, Jean-Paul, to Institut Francais du Petrole. Process for bacterial treatment of effluents that contain ethyl-tert-butyl ether. 6,040,154, Cl. 435-42.000.

Fayz, Shirin: *See*—
Inaba, Tadanobu; Fayz, Shirin; and Stewart, David John, 6,040,434, Cl. 536-23.000.

Fedderke, Helge: *See*—
Moll, Reiner; Fedderke, Helge; and Hartmann, Christoph, 6,039,154, Cl. 188-67.000.

Federico, Fulvio, to DE NORA S.p.A. Bipolar plate for filter press electrolyzers. 6,039,852, Cl. 204-255.000.

Feigenbaum, Jeffrey J. Replacement wiper blade. 6,038,729, Cl. 15-250.410.

Fel-Pro Incorporated: *See*—
Mockenhaupt, Martin; and Szot', Michael J., 6,039,323, Cl. 277-593.000.

Feld, Jack: *See*—
Weder, Donald E.; and Feld, Jack, 6,039,179, Cl. 206-423.000.

Feldmann, Peter; and Freund, Roland W., to Lucent Technologies, Inc. Apparatus and method for analyzing passive circuits using reduced-order modeling of large linear subcircuits. 6,041,170, Cl. 395-500.230.

Fellowes Manufacturing Co: *See*—
Danzyger, Howard L.; Brow, Karenann; Caruso, James; Hibbard, Timothy; McPhilliamy, Steven; and Thuma, Michael, 6,039,292, Cl. 248-118.500.

FemRx, Inc.: *See*—
Savage, George M.; Christian, Jeffrey J.; and Dillow, David Curtis, 6,039,748, Cl. 606-180.000.

Fenelon, Don. *See*—
O'Donovan, Tim; and Fenelon, Don, 6,039,514, Cl. 408-1.00R.

Fenton, James M.: *See*—
Swafford, M. David; and Fenton, James M., 6,040,701, Cl. 324-754.000.

Ferch, Eric Blaine: *See*—
Cullen, Michael John; Tonkin, John Phillip; and Ferch, Eric Blaine, 6,039,023, Cl. 123-339.230.

Ferguson, Ian: *See*—
Carr, Kathyrn; and Ferguson, Ian, 6,040,005, Cl. 427-197.000.

Ferguson, Paul F., Jr.; and Wilson, James, to Analog Devices, Inc. Switched-capacitor sigma-delta analog-to-digital converter with input voltage overload protection. 6,040,793, Cl. 341-143.000.

Ferrari, Forrest K.; Xiao, Xiao; and Samulski, Richard Jude, to University of North Carloina at Chapel Hill. Helper virus-free AAV production. 6,040,183, Cl. 435-457.000.

Ferrario, Bruno, to SGS-Thomson Microelectronics S.r.l. Integrated capacitance multiplier especially for a temperature compensated circuit. 6,040,730, Cl. 327-344.000.

Ferreira, Lawrence: *See*—
Blakeney, Andrew J.; Medina, Arturo N.; Toukhy, Medhat A.; Ferreira, Lawrence; Jeffries, Alfred T., III; and Naiini, Ahmad A., 6,040,107, Cl. 430-165.000.

Ferris, Matthew D.: *See*—
Wedeen, Robert S.; Durham, Arthur J.; Ferris, Matthew D.; and Dow, G. Sam, 6,040,739, Cl. 330-66.000.

Festo AG & Co: *See*—
Förster, Karl-Heinz; and Conde, Robert, 6,041,415, Cl. 713-300.000.

Festo AG & Co.: *See*—
Stoll, Kurt; Berger, Rolf; and Gebauer, Günter, 6,039,358, Cl. 285-23.000.

Feszthammer, Andras A.: *See*—
Sigmar, Axel M.; Iseli, James W.; Szalay, Jozsef; Haide, Janos; and Feszthammer, Andras A., 6,041,283, Cl. 702-16.000.

Feurer, Bernard: *See*—
Lattes, Isabelle; Feurer, Bernard; Guidetti, Brigitte; and Payrou, Viviane, 6,040,485, Cl. 570-126.000.

Feyfant, Patrick: *See*—
Martin, Varenka; Archambaud, Denis; Feyfant, Patrick; Gaglione, Philippe; Yoshida, Satoshi; Winckel, Laurent; and Weigelt, Oliver, 6,041,217, Cl. 455-38.300.

Fiacco, Peter: *See*—
Rickard, Wayne; Fiacco, Peter; and Chau, Vi, 6,041,397, Cl. 711-209.000.

Fico Cables, S.A.: *See*—
Gabas, Carlos; and Casas, Jordi, 6,038,942, Cl. 74-500.500.

Fidia S.p.A.: *See*—
Callegaro, Lanfranco; Romeo, Aurelio; and Benedetti, Luca, 6,039,970, Cl. 424-434.000.

Fiedler, Michael: *See*—
Stapfer, Michael; and Fiedler, Michael, 6,040,901, Cl. 356-71.000.

Field Management Services, Inc.: *See*—
Jones, Billy Dan, 6,040,878, Cl. 348-819.000.

Field, Martin John; Ballmert, Bernd Jakob; Collins, Laurence Alexander; and Moran, Robert James, to General Motors Corporation. Exhaust gas recirculation valve. 6,039,034, Cl. 123-568.230.

Fifer, E. Kim: *See*—
Compadre, Cesar; Breen, Philip; Salari, Hamid; Fifer, E. Kim; Lattin, Danny L.; Slavik, Michael; Li, Yanbin; and O'Brien, Timothy, 6,039,992, Cl. 426-332.000.

Filippi, Giovanni; and Maria van Os, Rudolphus Louis, to Rosemount Inc. Flush mount remote seal. 6,038,961, Cl. 92-98.00R.

Filterwerk Mann & Hummel GmbH: *See*—
Butz, Thomas; Kaller, Ralf; Kissel, Guenther; Mayer, Gehard; Koch, Volker; and Schnabel, Werner, 6,039,779, Cl. 55-499.000.
Hummel, Karl Ernst; Luka, Helmut; and Sommer, Bruno, 6,039,780, Cl. 55-502.000.

Fink, Martin D.: *See*—
Naud, Steven F.; Weber, Max D.; Lucero, Lei Lani; Bird, J. Dexter, III; and Fink, Martin D., 6,039,193, Cl. 212-270.000.

Finn-Power International, Inc.: *See*—
Lindstrom, Mikko, 6,041,271, Cl. 700-175.000.

Finnerty, Donald Wayne: *See*—
Alfonso, Jorge; Elbon, Leonard R.; Franzoi, Eric A.; and Finnerty, Donald Wayne, 6,040,045, Cl. 428-327.000.

Finsterwald, Martin. Method of building up a data bank containing customer data and/or for the organization of a rebate or coupon system. 6,039,244, Cl. 235-375.000.

Finsterwald, P. Michael; Douglas, Stephen Joseph; and Just, Ricky Gail, to Parallel Design, Inc. Method for manufacturing an ultrasonic transducer incorporating an array of slotted transducer elements. 6,038,752, Cl. 29-25.350.

Fireman, Stephen. Golf club. 6,039,656, Cl. 473-131.000.

Firma Carl Freudenberg: *See*—
Stadler, Rolf, 6,039,322, Cl. 277-551.000.

First Medical, Inc.: *See*—
Allen, Michael P.; Ellsworth, Stoughton L.; Ensler, Lawrence M.; and Subramanian, Kumar, 6,039,868, Cl. 210-232.000.

Fischer, Anton, to TRW Occupant Restraint Systems GmbH. Gas bag cover. 6,039,340, Cl. 280-728.200.

Fischer, Douglas Alan: *See*—
Agrawal, Anoop; Tonazzi, Juan Carlos Lopez; LeCompte, Robert Steven; Baertelin, Carl; and Fischer, Douglas Alan, 6,039,390, Cl. 296-211.000.

Fischer, Erik: *See*—
Andersen, Knud Erik; Jørgensen, Tine Krogh; Hohlweg, Rolf; Fischer, Erik; Olsen, Uffe Bang; Polivka, Zdenek; Sindelar, Karel; and Valenta, Vladimir, 6,040,318, Cl. 514-329.000.

Fischer, Hannes, to Schablonentechnik Kufstein Aktiengesellschaft. Method and apparatus for producing a screen-printing stencil. 6,038,971, Cl. 101-129.000.

Fischer, Werner; and Luebbert, Birte, to Robert Bosch GmbH. Device for triggering an electromagnetic load. 6,040,721, Cl. 327-110.000.

Fischer-Wilk, Robert: *See*—
Wandel, Hermann; Jost, Michael; Sommer, Helmut; and Fischer-Wilk, Robert, 6,038,932, Cl. 73-861.650.

Fish, John: *See*—
Hooper, James R.; Strother, Richard K.; Fish, John; Pawling, Paul G.; and Sauer, Gerald L., 6,040,397, Cl. 525-526.000.

Fish, Ronald C.: *See*—
Postman, Joel R.; Miller, George B.; and Fish, Ronald C., 6,041,374, Cl. 710-73.000.

Fishback, Thomas L.; Heyman, Duane A.; Reichel, Curtis J.; and Jaglowski, Adam J., to BASF Corporation. Composition of polytetramethylene ether glycols and polyoxy alkylene polyether polyols having a low degree of unsaturation. 6,040,413, Cl. 528-44.000.

Fisher Controls International, Inc.: *See*—
Qin, Si-Zhao Joe; and Borders, Guy Thompson, 6,041,320, Cl. 706-1.000.

Fisher, David M., Jr.: *See*—
Coates, Wayne L., Jr.; and Fisher, David M., Jr., 6,039,458, Cl. 362-249.000.

Fisher Dynamics Corporation: *See*—
Whalen, John F.; and Robinson, David L., 6,039,399, Cl. 297-362.120.

Fisher, Gordon: *See*—
Sonnenberg, Wade; Houle, Patrick J.; Luong, Thong B.; Shelnut, James G.; and Fisher, Gordon, 6,039,859, Cl. 205-159.000.

Fisher, Jack E. Fail-safe actuator with two permanent magnets. 6,040,752, Cl. 335-234.000.

Fisher, Lawrence E.: *See*—
Dvorak, Charles A.; Wren, Douglas L.; Fisher, Lawrence E.; Axt, Steven D.; Humphreys, Eric R.; Arzeno, Humberto B.; Beard, Colin C.; Nguyen, Sam Linh; Han, Yeun-Kwei; Roberts, Christopher R.; Lund, Jan P.; and Fatheree, Paul R., 6,040,446, Cl. 544-276.000.

Fiskars Inc.: *See*—
Cornell, Robert W.; and An, Suk Ku, 6,038,772, Cl. 30-233.000.

Fistner, David C., Sr., to Binney & Smith Inc. Washable marking composition. 6,039,797, Cl. 106-31.640.

Fitterman, Alan S.; and Dickerson, Robert E., to Eastman Kodak Company. Two-stage processing of low silver black-and-white photographic elements. 6,040,121, Cl. 430-419.000.
Fitzek, Doris: *See*—
Van De Berg, Albert; and Fitzek, Doris, 6,040,385, Cl. 525-205.000.
Fitzgerald, Eugene A.; and Samavedam, Srikanth B., to Massachusetts Institute of Technology. Utilization of miscut substrates to improve relaxed graded silicon-germanium and germanium layers on silicon. 6,039,803, Cl. 117-89.000.
Flanders, John A.; Ready, David C.; Van Seters, Steven; Schwartz, Leonard; and Townsend, William D., to 3Com Corporation. Hardware filtering method and apparatus. 6,041,058, Cl. 370-401.000.
Fleck, Rod G.; and Arnold, Roger D., to Siemens Aktiengesellschaft. Apparatus for read/write-access to registers having register file architecture in a central processing unit. 6,041,387, Cl. 711-5.000.
Fleischhauer, Grier S.; Higgins, Charles T.; Losee, D. Bruce; Nelson, J. Robert, Jr.; Ripley, Robert L.; Sano, Masato; Sharpe, David E.; and Watkins, Michael L., to Philip Morris Incorporated. Power controller and method of operating an electrical smoking system. 6,040,560, Cl. 219-494.000.
Flieger, Horst; and Marshall, John, to Hansgrohe AG. Multiple shower combination. 6,038,715, Cl. 4-601.000.
Flink, Christopher M. Ergonomic hand-held shopping basket. 6,039,205, Cl. 220-659.000.
Fliss, Makiko: *See*—
Bancroft, Frank Carter; and Fliss, Makiko, 6,040,144, Cl. 435-6.000.
Flores-Serrano, Roberto Octaviano: *See*—
Celada-Gonzalez, Juan; Quintero-Flores, Raul Gerardo; Viramontes-Brown, Ricardo; and Flores-Serrano, Roberto Octaviano, 6,039,916, Cl. 266-82.000.
Floryan, Richard F.; and Hambro, George, to ITT Manufacturing Enterprises, Inc. Method and apparatus for a microchannel plate having a fissured coating. 6,040,000, Cl. 427-78.000.
Flottmann, Dirk: *See*—
Schantz, Matthäus; Köppl, Franz; and Flottmann, Dirk, 6,040,544, Cl. 209-577.000.
Flowers, Brian Lee, to Gallopac Industries Inc. Container system and method of use. 6,039,210, Cl. 222-1.000.
Fluoroware, Inc.: *See*—
Bhatt, Sanjiv M.; Eggum, Shawn D.; and Olson, Wayne C., 6,039,186, Cl. 206-711.000.
Flynn, Robin L.; Hayes, Dan M.; and Nickey, George A., to Owens-Brockway Glass Container Inc. Apparatus for delivering glass gobs in a glass forming machines. 6,038,888, Cl. 65-304.000.
FMC Corporation: *See*—
Manev, Vesselin; Faulkner, Titus; Barnette, Wayne; and Gao, Yuan, 6,040,089, Cl. 429-231.100.
Focke & Co (GmbH & Co.): *See*—
Focke, Heinz; Häfker, Thomas; Stiller, Martin; and Schlenker, Michael, 6,038,832, Cl. 53-234.000.
Focke & Co. (GmbH & Co.): *See*—
Focke, Heinz; and Stiller, Martin, 6,038,836, Cl. 53-462.000.
Focke, Heinz; Häfker, Thomas; Stiller, Martin; and Schlenker, Michael, to Focke & Co (GmbH & Co.). Apparatus for producing (large) packs. 6,038,832, Cl. 53-234.000.
Focke, Heinz; and Stiller, Martin, to Focke & Co. (GmbH & Co.). Process and apparatus for the optoelectronic monitoring of packaging material. 6,038,836, Cl. 53-462.000.
Fodor, Stephen P. A.: *See*—
Winkler, James L.; Fodor, Stephen P. A.; Buchko, Christopher J.; Ross, Debra A.; Aldwin, Lois; and Modlin, Douglas N., 6,040,193, Cl. 436-180.000.
Fogarty, Terence M.; and Arp, Robert A., to Fogarty, Terence M. Implantable injection port. 6,039,712, Cl. 604-93.000.
Fogei, Thomas; Göhmann, Jürgen; and Klaunzer, Norman, to Agfa Gevaert NV. Bleaching bath. 6,040,122, Cl. 430-461.000.
Fogle, Marion O.: *See*—
Brown, Charles R.; Fogle, Marion O.; and Salley, Thomas F., 6,039,419, Cl. 312-262.000.
Folkesson, Rolf: *See*—
Larsson, Lennart; and Folkesson, Rolf, 6,041,083, Cl. 375-304.000.
Follensbee, Robert A.: *See*—
Ho, Kwok-Lun; Follensbee, Robert A.; Harmer, Walter L.; and Morris, Mary L., 6,039,775, Cl. 51-295.000.
Fonda, Arturo: *See*—
Paulson, Jeffrey R.; and Fonda, Arturo, 6,039,849, Cl. 204-192.120.
Fontana, Anacleto, to Cintal S.a.s. di Fontana Paola & C. Structure for suspension in articles of furniture or the like and method for the assembly of said structure. 6,039,404, Cl. 297-452.640.
Fontanazzi, Paolo, to Tetra Laval Holdings & Finance S.A. Packaging unit for continuously producing sealed packages, containing pourable food products, from a tube of packaging material. 6,038,838, Cl. 53-551.000.
Foote, David K.: *See*—
Wang, Fei; Foote, David K.; Cagan, Myron R.; and Gupta, Subhash, 6,040,619, Cl. 257-649.000.
Forber, Simon John, to B. Braun Celsa. Assembly for positioning an implant in an internal passageway of a body. 6,039,744, Cl. 606-108.000.
Forbes, David R.; Mortensen, Dave; Bean, Ron M; and Williams, Gregory G., to Hunter's Specialties, Inc. Durable and easily operated game calling device. 6,039,627, Cl. 446-208.000.
Ford Global Technologies, Inc.: *See*—
Banks, Alan James, 6,038,756, Cl. 29-453.000.
Cullen, Michael John; Tonkin, John Phillip; and Ferch, Eric Blaine, 6,039,023, Cl. 123-339.230.
Jones, Robert Allen; Kaufman, Mark C.; and Rumpel, Manfred Carl, 6,039,351, Cl. 280-781.000.
Stuntz, Ross Maxwell; and Zaremba, Alexander Timofeevich, 6,039,028, Cl. 123-436.000.
Ford, Jerri M.: *See*—
Ford, Wayne N.; and Ford, Jerri M., 6,038,994, Cl. 114-259.000.
Ford, Wayne N.; and Ford, Jerri M. Small boat support and rigging apparatus and method of use. 6,038,994, Cl. 114-259.000.
Fordham, Edmund J.: *See*—
Ramakrishnan, Terizhandur S.; Schwartz, Lawrence M.; Fordham, Edmund J.; Kenyon, William E.; and Wilkinson, David J., 6,040,696, Cl. 324-303.000.
Forman, Adrienne: *See*—
Miller-Kovach, Karen; Watson, Sarah May; Way, Marian Jane; Frye, Wanema; Melnyk, Mary Grace; and Forman, Adrienne, 6,040,531, Cl. 177-25.160.
Forman, Michael R.: *See*—
Hostettler, Fritz; Rhum, David; Forman, Michael R.; Helmus, Michael N.; and Ding, Ni, 6,040,058, Cl. 428-457.000.
Formato, Richard M.: *See*—
Jens, Stephen C.; Harvey, Andrew C.; and Formato, Richard M., 6,039,556, Cl. 425-363.000.
Formica Corporation: *See*—
Alfonso, Jorge; Elbon, Leonard R.; Franzoi, Eric A.; and Finnerty, Donald Wayne, 6,040,045, Cl. 428-327.000.
Forschungszentrum Julich GmbH: *See*—
Hasing, Friedrich Wolfgang; Pfeiffer, Frank; and Büker, Harald, 6,041,150, Cl. 385-12.000.
Szot, Krzysztof; Speier, Wolfgang; and Herion, Jörg, 6,040,070, Cl. 428-700.000.
Forschungszentrum Kalsruhe GmbH: *See*—
Merz, Albert; Vogg, Hubert; and Walter, Roland, 6,038,988, Cl. 110-346.000.
Förster, Karl-Heinz; and Conde, Robert, to Festo AG & Co. Field bus arrangement having independent power circuits and control circuits. 6,041,415, Cl. 713-300.000.
Forsyth, John: *See*—
Szczepanski, Gerald; and Forsyth, John, 6,038,938, Cl. 74-473.240.
Fort James Corporation: *See*—
Dees, Jerome G.; and Kimbel, Kirk, 6,039,682, Cl. 493-58.000.
Patterson, Robert; Whitmore, Rebecca E; Bowers, Debra D.; and Swoboda, Dean P., 6,038,963, Cl. 99-287.000.
Foser, Hanspeter, to Ivoclar AG. Method of producing dentures and articulator for use therewith. 6,039,566, Cl. 433-60.000.
Fossaceca, John Mark: *See*—
McCarthy, Dennis Ronald; Fossaceca, John Mark; and Kapadia, Maneck Behram, 6,041,240, Cl. 455-464.000.
Foster, Simon Edward: *See*—
Adcock, Paul Leonard; Mitchell, Philip John; and Foster, Simon Edward, 6,040,075, Cl. 429-32.000.
Fougret, Christoph Martin; and Holderich, Wolfgang Friederich, to BP Chemicals Limited. Catalyst and use thereof. 6,040,262, Cl. 502-162.000.
Fourie Inc.: *See*—
Nishida, Shinsuke, 6,040,831, Cl. 345-340.000.
Fox, Donald George: *See*—
Achter, Amy Michele; Balzar, Tammy Jo; and Fox, Donald George, 6,039,828, Cl. 156-217.000.
Fox, Richard H.; Steinbacher, David M.; Olin, Wesley L.; Meyers, Vernon O.; and Zimmerle, William J. Powered locomotive parking brake. 6,039,158, Cl. 188-162.000.
Foxboro Company, The: *See*—
Karas, Edwin L., 6,038,927, Cl. 73-706.000.
Fradin, Armel: *See*—
De Nanteuil, Guillaume; Portevin, Bernard; Bonnet, Jacqueline; and Fradin, Armel, 6,040,327, Cl. 514-394.000.
Fraisse, Christian, to SGS-Thomson Microelectronics S.A. Signal processing system and method for digitally mixing a plurality of analog input signals. 6,041,080, Cl. 375-242.000.
France/Scott Fetzer Company: *See*—
Hopkins, William Thomas; Riesland, David Henrik; and Banks, Anthony William, 6,040,778, Cl. 340-650.000.
Franchville, Douglas J.; and Chappell, Daniel K., to Wavetek Corporation. Digitally modulated CATV power measurement using undersampling. 6,041,076, Cl. 375-224.000.
Francis, Ron: *See*—
Bullard, Peter, 6,039,613, Cl. 439-718.000.
Franco, Rodrigo; Chen, Ai Ru Sun; and Shuey, David Joseph, to American Home Products Corporation. Nucleic acid encoding human neuronal calcium channel subunits. 6,040,436, Cl. 536-23.100.
Francsis, Kenneth M. Data-imprinted dental radiograph device and process. 6,041,102, Cl. 378-165.000.
Frank, Ronald; and Guler, Sinan, to Gsellschaft fur Biotechnologische Forschung mbH (GBF). Process for synthesis of peptides. 6,040,423, Cl. 530-334.000.
Franks, Bert. Adaptable safety rail system for flat roofs and parapets. 6,038,829, Cl. 52-645.000.
Franosch, Martin: *See*—

Reisinger, Hans; Grüning, Ulrike; Wendt, Hermann; Stengl, Reinhard; Lehmann, Volker; Willer, Josef; Franosch, Martin; Schäfer, Herbert; Krautschneider, Wolfgang; Hofmann, Franz; and Böhm, Thomas, 6,040,995, Cl. 365-185.180.

Frantz, Francis J.: *See*—
Jackson, Neil A.; Williamson, John T.; Frantz, Francis J.; Ryll, Patrick B.; and Greenbaum, Hyman A., 6,041,019, Cl. 367-124.000.

Franz, Patrick J.; Biehl, Philip D.; Straayer, David H.; and Dodier, Robert H., to InControl Solutions, Inc. Cursor tracking. 6,040,821, Cl. 345-159.000.

Franzoi, Eric A.: *See*—
Alfonso, Jorge; Elbon, Leonard R.; Franzoi, Eric A.; and Finnerty, Donald Wayne, 6,040,045, Cl. 428-327.000.

Fraser, David B.: *See*—
Chiang, Chien; and Fraser, David B., 6,040,628, Cl. 257-760.000.

Fred Hutchinson Cancer Research Center: *See*—
Riddell, Stanley R.; and Greenberg, Philip D., 6,040,177, Cl. 435-372.300.

Frederick, Donald A.; and Hall, David B. TDM array of optical non-acoustic pressure sensors. 6,038,926, Cl. 73-705.000.

Freedman, George: *See*—
Aisenberg, Sol; Freedman, George; Hed, A. Ze'ev; and Pavelle, Richard, 6,038,786, Cl. 34-267.000.

Freedman, Melvin S., to Avery Dennison Corporation. Composite facestocks. 6,040,027, Cl. 428-40.100.

Freeman, John J., Jr.: *See*—
Mallon, Joseph J.; Farinato, Raymond S.; Rosati, Louis; and Freeman, John J., Jr., 6,040,376, Cl. 524-547.000.

Frei, Karl; and Luger, Klaus, to Telesonic AG. Device for continuous disintegration of activated sludge. 6,039,867, Cl. 210-173.000.

Freire, Eduardo M.: *See*—
Andrews, John R.; Torpey, Peter A.; Burke, Cathie J.; and Freire, Eduardo M., 6,039,436, Cl. 347-62.000.

Freitag, Rodney T. Tool tray. 6,038,984, Cl. 108-44.000.

Freker, David E., to Intel Corporation. Optimizing page size in mixed memory array using address multiplexing. 6,041,016, Cl. 365-238.500.

French, Robert C. Method for making thermobonded gloves. 6,039,829, Cl. 156-251.000.

French, Thomas G.; Guio, Raphael H.; Kowalyshen, Henry W.; McGlone, Buddy B.; Mears, Gregory C.; and Opfer, John C., to S&C Electric Company. Switchgear assembly. 6,040,538, Cl. 200-293.000.

Freund, Joseph Michael; Przybylek, George John; and Romero, Dennis Mark, to Lucent Technologies Inc. Method and apparatus for component pickup. 6,039,833, Cl. 156-344.000.

Freund, Roland W.: *See*—
Feldmann, Peter; and Freund, Roland W., 6,041,170, Cl. 395-500.230.

Frey, Christopher, to Otto Sauer Achsenfabrik Keilberg. Vehicle axle suspension assembly. 6,039,336, Cl. 280-124.128.

Fried, Rafael, to I.C. Com Ltd. FRCPG: Forecasted restoration complementary pass gates. 6,040,717, Cl. 326-113.000.

Friedberg, Joyce L.: *See*—
Bangs, William E.; Dibenedetto, Joseph D.; Friedberg, Joyce L.; Giordano, Denise A.; Glover, Judy M.; Khoo, Chor San Heng; Ko, Sandy; MacNair, R. David C.; Noar, Scott R.; Randazzi, John J., Jr.; Stoever, Harro; and Ziegler, Paula J., 6,039,989, Cl. 426-106.000.

Friedley, Vernon E.; and Barito, Thomas R., to Scroll Technologies. Magnetic debris trap. 6,039,550, Cl. 418-55.600.

Friedman, Chava: *See*—
Friedman, Saloman; and Friedman, Chava, 6,039,990, Cl. 426-129.000.

Friedman, Elliot P.: *See*—
Khwaja, Tasneem A.; and Friedman, Elliot P., 6,039,950, Cl. 424-195.100.

Friedman, Howard Stephen; and Stott, Paul Edwin. Benzoquinoneimines as vinyl aromatic polymerization inhibitors. 6,039,895, Cl. 252-404.000.

Friedman, Jay, to Candescent Technologies Corporation. Fed display row driver with chip-to-chip settling time matching and phase detection circuits used to prevent uneven or nonuniform brightness in display. 6,040,809, Cl. 345-74.000.

Friedman, Saloman; and Friedman, Chava. Vacuum processed fish product in a tomato base cooking sauce. 6,039,990, Cl. 426-129.000.

Frisina, Ferruccio; Bolognesi, Davide; and Magri', Angelo, to STMicroelectronics S.r.l. Process for integrating, in a single semiconductor chip, MOS technology devices with different threshold voltages. 6,040,609, Cl. 257-391.000.

Fritschi, Lynne Anne: *See*—
Guskey, Susan Marie; Inman, Everett Junior; Desch, Teresa Ann; Fritschi, Lynne Anne; and Killion, Stephanie Lynn, 6,040,282, Cl. 510-119.000.

Froese-Peeck, Rüdiger; Gerhard, Detlef; and Lechner, Johann, to Siemens Aktiengesellschaft. Method for imaging bar codes. 6,039,254, Cl. 235-462.320.

Frutschi, Hansulrich, to Asea Brown Boveri AG. Method for spontaneously increasing power in operation of a power station system. 6,038,848, Cl. 60-39.050.

Fry, Tova: *See*—
Paganini, Lisa M.; Casilio, Frank; Peters, Roy; Straub, Kurt M.; DeHondt, Rene C.; and Fry, Tova, 6,040,637, Cl. 307-10.100.

Frye, Wanema: *See*—
Miller-Kovach, Karen; Watson, Sarah May; Way, Marian Jane; Frye, Wanema; Melnyk, Mary Grace; and Forman, Adrienne, 6,040,531, Cl. 177-25.160.

Fu Tai Umbrella Works, Ltd.: *See*—
Lin, Chung-Kuang; and Chang, Jung-Jen, 6,039,063, Cl. 135-33.700.

Fuchigami, Kazutoshi: *See*—
Kudo, Kenji; Kuwabara, Kohji; Yamashita, Shigeharu; Fuchigami, Kazutoshi; and Katsuyama, Norikazu, 6,040,987, Cl. 363-21.000.

Fuchs, Eileen Carol: *See*—
Mallangi, Chandrasekhar R; Sher, Alexander A.; Fuchs, Eileen Carol; Vadehra, Dharam Vir; and Wedral, Elaine Regina, 6,039,986, Cl. 426-74.000.

Fuchs, Jean Claude: *See*—
Chauquet, Jacques; and Fuchs, Jean Claude, 6,040,525, Cl. 174-40.0CC.

Fuerst, Robert M.: *See*—
Etters, Harry N.; Fuerst, Robert M.; and Watt, Russell J., 6,039,600, Cl. 439-496.000.

Fuessl, Hans-Peter: *See*—
Herden, Werner; Konrad, Johann; Jahn, Hans-Peter; Knapp, Martin; Fuessl, Hans-Peter; and Qu, Ning, 6,040,204, Cl. 438-109.000.

Fugleberg, Sigmund Peder: *See*—
Hultholm, Stig-Erik; and Fugleberg, Sigmund Peder, 6,039,790, Cl. 75-739.000.

Fuglsang, Claus Crone: *See*—
Lassen, Soren Flensted; Bech, Lisbeth; Ohmann, Anders; Breinholt, Jens; Fuglsang, Claus Crone; and Ostergaard, Peter Rahbek, 6,039,942, Cl. 424-94.600.

Fuji Electric Co., Ltd.: *See*—
Kitamura, Tadao; and Shinohara, Hisaji, 6,040,528, Cl. 174-138.00C.

Fuji Kihan Co., Ltd.: *See*—
Miyasaka, Yoshio, 6,038,900, Cl. 72-53.000.

Fuji Machinery Mfg. & Electronics Co., Ltd.: *See*—
Hirakawa, Tadashi, 6,040,984, Cl. 361-777.000.

Fuji Photo Film Co., Ltd.: *See*—
Kuramitsu, Masayuki; Saitou, Mitsuo; Maeno, Yutaka; and Hara, Takefumi, 6,040,127, Cl. 430-567.000.

Fuji Photo Optical Co., Ltd.: *See*—
Minami, Itsuji; and Takahashi, Kazuaki, 6,040,612, Cl. 257-432.000.
Ohno, Kazunori, 6,040,949, Cl. 359-689.000.
Sakamoto, Toshio; Tanaka, Toshizumi; Itoi, Hiromu; and Yoshihara, Masatoshi, 6,039,695, Cl. 600-459.000.
Toyama, Nobuaki, 6,040,948, Cl. 359-689.000.

Fuji Xerox Co., Ltd.: *See*—
Ichiriki, Hideki, 6,040,920, Cl. 358-403.000.
Nakamura, Masaki; and Yoshida, Satoshi, 6,040,104, Cl. 430-110.000.
Sumikawa, Akihiro, 6,040,817, Cl. 345-113.000.
Takahashi, Sakon; Takagi, Shinpei; Mizutani, Noriyuki; Oya, Yasuhiro; and Ishida, Haruhide, 6,040,102, Cl. 430-108.000.
Tomikawa, Ichiro; Soga, Mitsuhide; Fujii, Katsuyuki; Ogawa, Katsuhide; Yoshida, Junichi; Kawachi, Shigeo; and Noda, Takehiko, 6,039,441, Cl. 347-86.000.

Fujii, Hironari: *See*—
Sobajima, Yoshihiro; Akashige, Etsushi; Fujii, Hironari; and Amano, Akira, 6,040,374, Cl. 524-451.000.

Fujii, Kanenaga: *See*—
Chayahara, Akiyoshi; Horino, Yuji; Kinomura, Atsushi; Tsubouchi, Nobuteru; and Fujii, Kanenaga, 6,039,847, Cl. 204-192.110.

Fujii, Katsuyuki: *See*—
Tomikawa, Ichiro; Soga, Mitsuhide; Fujii, Katsuyuki; Ogawa, Katsuhide; Yoshida, Junichi; Kawachi, Shigeo; and Noda, Takehiko, 6,039,441, Cl. 347-86.000.

Fujii, Makoto: *See*—
Fujikura, Teruhiko; Kinoshita, Naoyoshi; Fujii, Makoto; Matsuhara, Kenji; and Natsume, Munehiro, 6,041,214, Cl. 399-403.000.

Fujii, Nobuhiko; Nakada, Mitsuyuki; and Aoki, Kazuomi, to Denki Kagaku Kogyo Kabushiki Kaisha. Chloroprene rubber composition. 6,040,377, Cl. 524-571.000.

Fujii, Takashi: *See*—
Sekijima, Takenori; Fujii, Takashi; Wakino, Kikuo; and Okada, Masakatsu, 6,039,802, Cl. 117-49.000.

Fujikawa, Yasuji; and Ueda, Michio, to Shikoku Kakoki Co., Ltd. Device for and method of cleaning filling nozzle. 6,039,058, Cl. 134-104.100.

Fujikawa, Yoshifumi: *See*—
Terada, Koichi; Kojima, Keiji; Fujikawa, Yoshifumi; Nojiri, Tohru; and Nishioka, Kiyokazu, 6,041,399, Cl. 712-24.000.

Fujiki, Hironao; Miyoshi, Kei; and Muramatsu, Hironobu, to Shin-Etsu Chemical Co., Ltd. Organopolysiloxane compositions. 6,040,361, Cl. 523-209.000.

Fujikin Incorporated: *See*—
Ohmi, Tadahiro; Yamaji, Michio; Shinohara, Tsutomu; Itoi, Shigeru; Hirao, Keiji; Kawano, Yuji; Tanaka, Shigeaki; Yokoyama, Kosuke; Morokoshi, Hiroshi; and Ikeda, Nobukazu, 6,039,360, Cl. 285-61.000.

Fujikura, Teruhiko; Kinoshita, Naoyoshi; Fujii, Makoto; Matsuhara, Kenji; and Natsume, Munehiro, to Minolta Co., Ltd. Image forming apparatus capable of improving ease of use in mail bin mode. 6,041,214, Cl. 399-403.000.

Fujimoto, Makoto: *See*—
Yamamoto, Hiroshi; Shimeki, Yasuharu; Kayashima, Kazuhiro; Maruno, Susumu; Fujimoto, Makoto; and Kojima, Yoshihiro, 6,040,825, Cl. 345-173.000.

Fujimoto, Masahisa: *See*—
Sunagawa, Takuya; Watanabe, Hiroshi; Ohshita, Ryuji; Fujimoto, Masahisa; Nohma, Toshiyuki; and Nishio, Koji, 6,040,090, Cl. 429-231.950.

Fujino, Shuji: *See*—

Hirata, Toshiaki; Urano, Akihiro; Fujino, Shuji; Yamada, Mitsugu; Nakano, Hidetomo; Morita, Shinji; and Miyazaki, Satoshi, 6,041,353, Cl. 709-224.000.

Sugauchi, Kiminori; Hirata, Toshiaki; Nishiki, Kenya; Miyazaki, Satoshi; Mizuguchi, Keizo; and Fujino, Shuji, 6,041,349, Cl. 709-223.000.

Fujioka, Shuzo, to Mitsubishi Denki Kabushiki Kaisha. Recognition system and recognition method for non-contact IC cards. 6,040,786, Cl. 340-928.000.

Fujioka, Toyozo: *See*—
Nishimura, Koichi; Kawamura, Tatsuya; and Fujioka, Toyozo, 6,040,388, Cl. 525-332.100.

Fujisawa, Hiroki: *See*—
Hotta, Nigishi; and Fujisawa, Hiroki, 6,040,326, Cl. 514-386.000.

Fujishima, Atuyoshi: *See*—
Yagi, Nobuaki; and Fujishima, Atuyoshi, 6,039,230, Cl. 227-120.000.

Fujita, Minoru: *See*—
Shibata, Shogo; Fujita, Minoru; Ikeda, Yuji; Ueda, Takaya; Itoh, Fumiaki; and Hirota, Makoto, 6,041,293, Cl. 704-4.000.

Fujitani, Ikuji: *See*—
Takeda, Haruo; Tatsumi, Yukio; Fujitani, Ikuji; Shioda, Takuya; Yoshimi, Tomofumi; Sugimoto, Tomohiko; and Haeiwa, Kazuhisa, 6,041,082, Cl. 375-300.000.

Fujitsu Limited: *See*—
Fukumasa, Hidenobu; Oishi, Yasuyuki; Nagatani, Kazuo; and Hamada, Hajime, 6,041,034, Cl. 370-203.000.

Hasegawa, Shinya; Kayashima, Shigeo; Maeda, Satoshi; and Aritake, Hirokazu, 6,040,929, Cl. 359-17.000.

Kawabe, Keiko; Matsuo, Akihiko; Kimura, Minako; Nagahashi, Kenji; and Uehara, Sanya, 6,041,177, Cl. 395-704.000.

Kikuchi, Kazuhito, 6,041,414, Cl. 713-300.000.

Koike, Yoshio; Ohmuro, Katsufumi; Sasaki, Takahiro; and Takeda, Arihiro, 6,040,885, Cl. 349-129.000.

Komiya, Satoshi; Awaji, Naoki; and Kashiwagi, Shunji, 6,040,198, Cl. 438-16.000.

Kosaka, Tadayoshi; Toyoda, Osamu; and Namiki, Fumihiro, 6,039,622, Cl. 445-52.000.

Koshiba, Takeshi; Matsuoka, Masahiro; and Takayama, Kuniharu, 6,040,840, Cl. 345-441.000.

Kudo, Kenji; Kuwabara, Kohji; Yamashita, Shigeharu; Fuchigami, Kazutoshi; and Katsuyama, Norikazu, 6,040,987, Cl. 363-21.000.

Meki, Seiji; Yamada, Shunji; and Moriyama, Junichi, 6,041,066, Cl. 370-512.000.

Miyake, Shoji; Inaba, Toru; and Koda, Eiji, 6,041,052, Cl. 370-360.000.

Miyazaki, Akimitsu; Ibukuro, Sadao; and Nagakubo, Yasunori, 6,040,931, Cl. 359-110.000.

Mukai, Masanori, 6,039,246, Cl. 235-379.000.

Murakami, Hiroshi; Yoshioka, Koji; Morita, Keizo; Itokazu, Masafumi; Nakabayashi, Ken-ichi; Yamamoto, Akira; and Haraguchi, Munehiro, 6,040,814, Cl. 345-94.000.

Nishida, Masatsugu; Ikeda, Toru; and Yokoyama, Tomoki, 6,040,674, Cl. 318-632.000.

Otani, Seigen, 6,040,594, Cl. 257-295.000.

Shiitani, Shuichi; and Watanabe, Masaki, 6,040,836, Cl. 345-427.000.

Takashimizu, Yoshihiro; and Tabata, Yoshio, 6,040,923, Cl. 358-498.000.

Takimoto, Minoru, 6,041,350, Cl. 709-223.000.

Utsumi, Kenichi, 6,040,956, Cl. 360-92.000.

Yamamoto, Takayuki; Kasamatsu, Yoshiharu; Toyoguchi, Takashi; Yokohata, Toru; and Koishi, Ryosuke, 6,040,958, Cl. 360-103.000.

Yamato, Seiichi; Kamei, Noboru; Okuma, Kazuyoshi; Sugawa, Katsumi; Kadota, Hironori; and Sakata, Tomoyuki, 6,041,062, Cl. 370-465.000.

Zhang, Lei; Chou, William; Peters, Michael G.; and Beilin, Solomon I., 6,039,889, Cl. 216-17.000.

Fukada, Taisei; and Kohtani, Hideto, to Canon Kabushiki Kaisha. Display control method. 6,041,175, Cl. 395-500.420.

Fukada, Tetsuo: *See*—
Toyoda, Yoshihiko; Fukada, Tetsuo; Mori, Takeshi; and Hasegawa, Makiko, 6,039,808, Cl. 118-715.000.

Fukada, Toshiaki: *See*—
Schuster, Mike; and Fukada, Toshiaki, 6,041,299, Cl. 704-232.000.

Fukakusa, Shinji: *See*—
Gotou, Toyokazu; and Fukakusa, Shinji, 6,040,581, Cl. 250-390.010.

Fukami, Masanobu: *See*—
Tozu, Kenji; Itoh, Takayuki; Fukami, Masanobu; and Yokoyama, Satoshi, 6,039,411, Cl. 303-116.100.

Fukayama, Hiroyuki: *See*—
Sakurai, Yasuhiro; and Fukayama, Hiroyuki, 6,040,744, Cl. 331-176.000.

Fukuda, Kenichi; and Tarumi, Yasuo, to Shin-Etsu Chemical Co., Ltd. Addition-curable perfluoro compound-containing composition. 6,040,400, Cl. 526-126.000.

Fukui, Nobuhito: *See*—
Yako, Yuko; Takahashi, Kenji; Takagaki, Hiroshi; and Fukui, Nobuhito, 6,040,112, Cl. 430-270.100.

Fukui, Takayuki, to Nissan Motor Co., Ltd. Epoxy resin type composition for stiffening vehicle body and method for stiffening vehicle body. 6,040,350, Cl. 521-135.000.

Fukui, Wataru: *See*—
Takahashi, Yasuhiro; and Fukui, Wataru, 6,040,698, Cl. 324-399.000.

Fukumasa, Hidenobu; Oishi, Yasuyuki; Nagatani, Kazuo; and Hamada, Hajime, to Fujitsu Limited. Spread spectrum communication system. 6,041,034, Cl. 370-203.000.

Fukumuro, Kaori: *See*—
Mano, Shigeru; Watanabe, Hiroshi; Fukumuro, Kaori; and Yamaya, Yorihiro, 6,040,267, Cl. 503-201.000.

Fukuno, Hiroki: *See*—
Suenaga, Kiyoshi; Tomita, Yasuoki; and Fukuno, Hiroki, 6,039,531, Cl. 415-115.000.

Fukuo, Hidetoshi; and Yokoi, Masakazu, to Sakura Color Products Corporation. Ink composition for oil marking pen. 6,039,795, Cl. 106-31.580.

Fukuoka, Mutsuo, to Brother Kogyo Kabushiki Kaisha. Ink jet recording apparatus with recovering device of ink jet head. 6,039,432, Cl. 347-32.000.

Fukushima, Eiji; and Shimizu, Shigemi, to Sanden Corporation. Reciprocating pistons of piston-type compressor. 6,038,960, Cl. 92-12.200.

Fukushima, Hirotaka; and Takenaka, Mitsuhiko, to Exedy Corporation. Flex plate and flywheel configuration. 6,039,651, Cl. 464-98.000.

Fukushima, Shinichi: *See*—
Izumi, Nobuaki; Fukushima, Shinichi; and Tsukamoto, Junichi, 6,040,873, Cl. 348-559.000.

Fukuta, Kinsho: *See*—
Hirabayashi, Mineo; Hozumi, Mamoru; and Fukuta, Kinsho, 6,039,465, Cl. 362-496.000.

Fukuyama, Yoshitaka: *See*—
Ohtomo, Fumio; Nakata, Yuji; Fukuyama, Yoshitaka; Inomata, Asako; Shibuya, Sachio; Koga, Akinori; Ishii, Junji; Ito, Shoko; and Yamamoto, Hironobu, 6,038,850, Cl. 60-39.182.

Fulford, H. James; and Gardner, Mark I., to Advanced Micro Devices, Inc. Formation of lightly doped regions under a gate. 6,040,602, Cl. 257-344.000.

Fulford, H. Jim: *See*—
Wristers, Derick J.; Fulford, H. Jim; and Gardner, Mark I., 6,040,607, Cl. 257-389.000.

Fullen, George R.: *See*—
Fullen, Jeryl G.; and Fullen, George R., 6,038,935, Cl. 73-865.400.

Fullen, Jeryl G.; and Fullen, George R., to Fullen Systems, Inc. Apparatus and method for measuring the magnitude and distribution of forces on the foot of a quadruped. 6,038,935, Cl. 73-865.400.

Fullen Systems, Inc.: *See*—
Fullen, Jeryl G.; and Fullen, George R., 6,038,935, Cl. 73-865.400.

Fullerton, Michael G.: *See*—
Mehney, Mark A.; McCarthy, Michael C.; Fullerton, Michael G.; and Malecke, Floyd J., 6,039,344, Cl. 280-735.000.

Fulterer Gesellschaft m.b.H.: *See*—
Fulterer, Manfred, 6,039,421, Cl. 312-333.000.
Fulterer, Manfred, 6,039,423, Cl. 312-334.290.

Fulterer, Manfred, to Fulterer Gesellschaft m.b.H. Pull-out device. 6,039,421, Cl. 312-333.000.

Fulterer, Manfred, to Fulterer Gesellschaft m.b.H. Pull-out device for a tall cupboard. 6,039,423, Cl. 312-334.290.

Funada, Masahiro; and Toda, Yukari, to Canon Kabushiki Kaisha. Image processing apparatus for laying out plurality of images in conformity with image orientation. 6,041,205, Cl. 399-196.000.

Funayama, Yasuhiro: *See*—
Hori, Takeshi; Uezono, Tsutomu; Yoshii, Tomoyuki; and Funayama, Yasuhiro, 6,040,106, Cl. 430-127.000.

Furukawa, Hiroyuki, to Sharp Kabushiki Kaisha. Driving circuit for driving simple matrix type display apparatus. 6,040,826, Cl. 345-196.000.

Furukawa, Taichiro; Kondoh, Kohhei; Yamashita, Atsushi; and Kanbori, Seiji, to NTN Corporation. Retainer for roller bearing and method for manufacturing the same. 6,039,475, Cl. 384-580.000.

Furuya, Yoshiyuki: *See*—
Kataoka, Ichiro; Aoki, Kunimitsu; Furuya, Yoshiyuki; Matsushita, Junichi; Nishiyama, Hiroshi; Nakajima, Katsutoshi; Norizuki, Akira; Murakami, Katsumi; and Amari, Takeyuki, 6,040,760, Cl. 340-425.500.

Fushimi, Koichi: *See*—
Okuda, Akihito; Fushimi, Koichi; and Terayama, Hiroshi, 6,039,666, Cl. 475-72.000.

Futaba Denshi Kogyo K.K.: *See*—
Itoh, Shigeo; Makita, Yoshio; Tonegawa, Takeshi; Hirata, Yoshihiko; and Kadowaki, Akira, 6,039,620, Cl. 445-25.000.

Future Tek, Inc.: *See*—
Gehrke, Larry M; Gehrke, Russel J.; Gehrke, Michael S.; and Gehrke, Gabriel P., 6,039,914, Cl. 264-460.000.

Gabas, Carlos; and Casas, Jordi, to Fico Cables, S.A. Manually adjusted device for control cable terminals. 6,038,942, Cl. 74-500.500.

Gabe, Howard L., to Novartis AG. Soybean cultivar B630518RR. 6,040,501, Cl. 800-312.000.

Gabig, Joseph A.; and Jones, David B., to Matthews International Corporation. Merchandising selling system and display unit. 6,039,576, Cl. 434-367.000.

Gabriel, Robert: *See*—
Popoff, Christine; Nartey, Alwyn; Gabriel, Robert; and Aubay, Eric, 6,040,288, Cl. 510-466.000.

Gadre, Shirish: *See*—
Ozcelik, Taner; Gadre, Shirish; and Tan, Yew-Koon, 6,041,400, Cl. 712-35.000.

Gaertner, Mark A.; and Heath, Mark A., to Seagate Technology, Inc. System and method for formatting disc surfaces. 6,040,952, Cl. 360-48.000.

Gagliardo, John P., to Regal Products, Inc. Fluid proportioning valve and method. 6,039,065, Cl. 137-3.000.

Gaglione, Philippe: *See—*
Martin, Varenka; Archambaud, Denis; Feyfant, Patrick; Gaglione, Philippe; Yoshida, Satoshi; Winckel, Laurent; and Weigelt, Oliver, 6,041,217, Cl. 455-38.300.

Gale, Gregory W. Flexible protective article and packaging using same. 6,039,184, Cl. 206-586.000.

Gallatin, W. Michael; and Vazeux, Rosemay, to ICOS Corporation. Antibodies to ICAM-related protein. 6,040,176, Cl. 435-326.000.

Gallimore, Michael B.; and Gibson, Donald, to Serrmi Products, Inc. Adjustable pier railroad house assembly having dual adjustment capabilities. 6,038,823, Cl. 52-126.100.

Gallopac Industries Inc.: *See—*
Flowers, Brian Lee, 6,039,210, Cl. 222-1.000.

Galperin, Anatoly: *See—*
Miller, Bearge; Miller, Norman K.; Sarkisian, Gevork; Sarkissian, Karen; and Galperin, Anatoly, 6,040,536, Cl. 200-83.00N.

Galyon, Michael E.: *See—*
Cheng, Luo; Irick, Glenn E., Sr.; Chu, Youe-Tsyr; Ghorashi, Hossein M.; Galyon, Michael E.; and Overbay, Mark A., 6,040,905, Cl. 356-238.300.

Gambro AB: *See—*
Wieslander, Anders; and Cappelli, Giorgio, 6,039,719, Cl. 604-410.000.
Wieslander, Anders, 6,039,720, Cl. 604-410.000.

Gamou, Naoyasu, to Sony Corporation. Color signal adjustment apparatus. 6,040,855, Cl. 348-223.000.

Gan, Joseph; Badini, Gabriele; and Hoffmann, Klaus E., to Dow Chemical Company, The. Curing catalysts for curing epoxy resins. 6,040,396, Cl. 525-502.000.

Gandhi, Deepak R.: *See—*
Quiachon, Dignah B.; Gandhi, Deepak R.; Brooks, Dennis L.; Imran, Mir A.; and Guidi, Roger J., 6,039,743, Cl. 606-108.000.

Gandre, Jerry D.; Sands, Steven L.; Mills, R. Steven; and Lopez, Arthur, to Dell USA, L.P. Electronic system implementing redundant and nonredundant power supply configurations. 6,040,982, Cl. 361-724.000.

Ganem, Charles F.: *See—*
Cote, Andrew L., Sr.; and Ganem, Charles F., 6,039,302, Cl. 251-149.100.

Gangkofner, Stefan: *See—*
Steiner, Klaus; Gangkofner, Stefan; and Grunenwald, Jean-Marie, 6,040,479, Cl. 564-304.000.

Gangly, Ashit: *See—*
Greenlee, William; Gangly, Ashit; and Wasley, Jan W. F., 6,040,448, Cl. 544-363.000.

Gankema, Harold: *See—*
Kok, Douwe Marten; and Gankema, Harold, 6,040,278, Cl. 508-208.000.

Gannon, John J., Jr.: *See—*
Gontarski, Christopher J.; Ogden, Steven D.; and Gannon, John J., Jr., 6,039,106, Cl. 160-201.000.

Gansemans, Yannick Georges Jozef: *See—*
Vlasuk, George Phillip; Stanssens, Patrick Eric Hugo; Messens, Joris Hilda Lieven; Lauwereys, Marc Josef; LaRoche, Yves Rene; Jespers, Laurent Stephane; Gansemans, Yannick Georges Jozef; Moyle, Matthew; and Bergum, Peter W., 6,040,441, Cl. 536-252.000.

Gao, Yuan: *See—*
Manev, Vesselin; Faulkner, Titus; Barnette, Wayne; and Gao, Yuan, 6,040,089, Cl. 429-231.100.

Gao, Yun; Hett, Robert; Fang, Kevin Q.; Wald, Stephen A.; Redmon, Martin P.; and Senanayake, Chris Hugh, to Sepracor Inc. Formoterol process. 6,040,344, Cl. 514-554.000.

Garcia, Douglas J.; and Saulnier, Christian, to Electro Scientific Industries, Inc. Rolling electrical contactor. 6,040,705, Cl. 324-762.000.

Garczarek, Michel: *See—*
Mangano, Alain; Allart, Bernard; Bigo, Louis; Garczarek, Michel; Ethet, Yannick; Crave, Joël; and Peignon, Philippe, 6,038,859, Cl. 60-436.000.

Gardiner, Ian: *See—*
Kennelly, Kevin; Gardiner, Ian; Noble, David; and Muliadiredja, Achmad R., 6,039,507, Cl. 405-227.000.

Gardner, Mark I.; and Gilmer, Mark C., to Advanced Micro Devices, Inc. Oxide formation technique using thin film silicon deposition. 6,040,207, Cl. 438-216.000.

Gardner, Mark I.; Kadosh, Daniel; and Duane, Michael P., to Advanced Micro Devices, Inc. Asymmetrical transistor formed from a gate conductor of unequal thickness. 6,040,220, Cl. 438-286.000.

Gardner, Mark I.: *See—*
Fulford, H. James; and Gardner, Mark I., 6,040,602, Cl. 257-344.000.
Wristers, Derick J.; Fulford, H. Jim; and Gardner, Mark I., 6,040,607, Cl. 257-389.000.

Garfield, Robert E.: *See—*
Chwalisz, Krzysztof; and Garfield, Robert E., 6,040,340, Cl. 514-509.000.

Garlock Inc: *See—*
Harrelson, Albert L., III, 6,038,778, Cl. 33-483.000.

Garner, Frank; and Klamecki, Joseph, to Aeroquip Vickers, Inc. Aeration-cavitation demonstration console. 6,039,570, Cl. 434-126.000.

Garrard, Lisa J.; Henner, Dennis J.; Bass, Steven; Greene, Ronald; Lowman, Henry B.; Wells, James A.; and Matthews, David J., to Genentech, Inc. Enrichment method for variant proteins with altered binding properties. 6,040,136, Cl. 435-5.000.

Gasparrini, C. Robert: *See—*
Hara, Akira; Onuma, Hiraku; Oyaizu, Hideo; Suzuki, Yuuichi; and Gasparrini, C. Robert, 6,038,731, Cl. 15-256.510.

Gateway 2000, Inc.: *See—*
Spencer, Julian A. Q., 6,040,978, Cl. 361-683.000.

Gau, Jing-Horng, to United Semiconductor Corp. Method of manufacturing shallow trench isolation. 6,040,232, Cl. 438-424.000.

Gau, Tsai-Sheng; and Dai, Chang-Ming, to Industrial Technology Research Institute. Elimination of proximity effect in photoresist. 6,040,119, Cl. 430-330.000.

Gdula, Michael: *See—*
Wojnarowski, Robert John; Rose, James Wilson; Balch, Ernest Wayne; Douglas, Leonard Richard; Downey, Evan Taylor; and Gdula, Michael, 6,040,226, Cl. 438-381.000.

Gebauer, Günter: *See—*
Stoll, Kurt; Berger, Rolf; and Gebauer, Günter, 6,039,358, Cl. 285-23.000.

Gebler, Charlene Ann: *See—*
Boroczky, Lilla; Gebler, Charlene Ann; Kaczmarczyk, John M.; Westermann, Edward F.; and Woodard, Robert L., 6,040,861, Cl. 348-409.000.

GEBO Conveyors Consultants & Systems, Inc.: *See—*
Ross, Yvan, 6,040,553, Cl. 219-121.710.

GEC Alsthom Transport SA: *See—*
Laporte, Jean-Jacques; Tassily, Eric; and Muttin, Frédéric, 6,039,349, Cl. 280-748.000.

Gehre, Hans-Joachim; and Winterstein, Frank, to Siemens Aktiengesellschaft. Direct voltage back-up system at a power supply outlet. 6,040,640, Cl. 307-66.000.

Gehrke, Gabriel P.: *See—*
Gehrke, Larry M; Gehrke, Russel J.; Gehrke, Michael S.; and Gehrke, Gabriel P., 6,039,914, Cl. 264-460.000.

Gehrke, Larry M; Gehrke, Russel J.; Gehrke, Michael S.; and Gehrke, Gabriel P., to Future Tek, Inc. Method of converting asphalt composition roofing shingles into dimensional construction products. 6,039,914, Cl. 264-460.000.

Gehrke, Michael S.: *See—*
Gehrke, Larry M; Gehrke, Russel J.; Gehrke, Michael S.; and Gehrke, Gabriel P., 6,039,914, Cl. 264-460.000.

Gehrke, Russel J.: *See—*
Gehrke, Larry M; Gehrke, Russel J.; Gehrke, Michael S.; and Gehrke, Gabriel P., 6,039,914, Cl. 264-460.000.

Geib, Joseph J.; Casanova, Scott D.; Mennie, Douglas U.; Mazur, Richard A.; and Watts, Gary P., to Cummins-Allison Corp. Coin sorter. 6,039,644, Cl. 453-10.000.

Geis, David G.; Doikas, Peter; and Demonaco, Jeffrey, to Motorola, Inc. Discharge lamp ballast housing with solderless connectors. 6,039,582, Cl. 439-76.100.

Gelfand, David H.: *See—*
Erlich, Henry A.; Horn, Glenn; Saiki, Randall K.; Mullis, Kary B.; and Gelfand, David H., 6,040,166, Cl. 435-194.000.

GEN Maintenance Technology Inc.: *See—*
Tominaga, Youji; Toda, Kazuo; and Yamamura, Nobuo, 6,040,049, Cl. 428-355.0EN.

Genda, Kyoji: *See—*
Saito, Takahiko; Nakanishi, Akira; Obayashi, Shunzi; Genda, Kyoji; and Toshikage, Hideki, 6,041,191, Cl. 396-311.000.

Gendrot, Edouard; Cousin, Gérard; Ragot, Françoise; and Clee-Bouvet, Marie-Christine, to Laboratoires Prographarm. Multiparticulate pharmaceutical form with programmed and pulsed release and process for its preparation. 6,039,979, Cl. 424-497.000.

Gene Shears Pty. Limited: *See—*
Sioud, Mouldy, 6,040,159, Cl. 435-91.310.

Genemedicine, Inc.: *See—*
Rolland, Alain; and Mumper, Russell J., 6,040,295, Cl. 514-44.000.

Genentech, Inc.: *See—*
Garrard, Lisa J.; Henner, Dennis J.; Bass, Steven; Greene, Ronald; Lowman, Henry B.; Wells, James A.; and Matthews, David J., 6,040,136, Cl. 435-5.000.
Lasky, Laurence A.; and Dowbenko, Donald J., 6,040,437, Cl. 536-23.100.

General DataComm, Inc.: *See—*
Kurdzo, James Patrick; and Zakrzewski, Robert Alan, 6,041,064, Cl. 370-466.000.

General Dynamics Armament Systems, Inc.: *See—*
Maynard, Alfred Charles, 6,039,347, Cl. 280-736.000.

General Electric Company: *See—*
Burkus, Frank S., II; Jeram, Edward M.; and Rubinsztajn, Slawomir, 6,040,366, Cl. 524-99.000.
Chbat, Nicolas Wadih; and Badami, Vivek Venugopal, 6,038,724, Cl. 8-159.000.
Einziger, William Louis; Eckels, Phillip William; and Creel, Michael Loren, 6,038,867, Cl. 62-45.100.
Isaacs, Ralph G.; and Portaz, Joseph M., 6,041,132, Cl. 382-100.000.
Mantkowski, Thomas E.; Das, Nripendra N.; Heidorn, Raymond W.; and King, Jackie L., 6,039,810, Cl. 118-715.000.
Paul, William C.; and Sieloff, Gloria, 6,040,250, Cl. 442-61.000.
Schilling, Jan C.; Cornell, Jay L.; and Stevenson, Joseph T., 6,039,542, Cl. 416-233.000.
Wojnarowski, Robert John; Rose, James Wilson; Balch, Ernest Wayne; Douglas, Leonard Richard; Downey, Evan Taylor; and Gdula, Michael, 6,040,226, Cl. 438-381.000.

Wozny, Mary Ellen; Chambers, Ralph P.; and Bland, James L., 6,040,370. Cl. 524-394.000.
Young, Henry Todd; Beach, Frederick Gaylord; and Roman, James Price, 6,041,285, Cl. 702-113.000.
General Federation of Labor, Kupat Holim Health Institution of the: *See*—
Rephaeli, Ada; and Nudelman, Abraham, 6,040,342, Cl. 514-548.000.
General Instrument Corporation: *See*—
Rao, R. Padmanabha; and Chin, Amanda L., 6,041,142, Cl. 382-232.000.
General Motors Corporation: *See*—
Breidenbach, Paul, 6,039,019, Cl. 123-90.610.
Chandy, Ashok; Pattok, Kathryn Lynn; and Chhaya, Deepak, 6,039,144, Cl. 180-446.000.
Doxey, Mark Harvey; and Young, Shirley M., 6,039,341, Cl. 280-728.200.
Field, Martin John; Ballmert, Bernd Jakob; Collins, Laurence Alexander; and Moran, Robert James, 6,039,034, Cl. 123-568.230.
Gutierrez, Ernesto Jose; Archibald, Charles Andrew; Kachur, Christopher M.; and Brandon, Giles M., 6,038,871, Cl. 62-133.000.
Haag, Ronald Helmut; Orr, Brian Norman; and Moceanu, John Ion, 6,038,818, Cl. 49-360.000.
Hendriksma, Nick John, 6,039,017, Cl. 123-90.430.
Joppeck, Dwayne Paul, 6,039,160, Cl. 192-52.500.
Kielar, Stanley John; Westercamp, Kenneth Lee; and Bauer, Chad David, 6,039,143, Cl. 180-412.000.
Krajewski, Paul Edward; Lanzi, Ronald George; and Schroth, James Gregory, 6,038,911, Cl. 72-379.200.
Murty, Balarama Vempaty, 6,040,561, Cl. 219-494.000.
Niederman, Robert Raymond; Starner, Allen Richard; and Ryan, Shawn Gregory, 6,039,348, Cl. 280-741.000.
Ryan, Shawn Gregory; Webber, James Lloyd; and Borowski, Joachim, 6,039,346, Cl. 280-736.000.
Spath, Mark James, 6,039,018, Cl. 123-90.550.
General Scientific Corporation: *See*—
Cummings, Tom; Nowak, David; and Chang, Byung Jin, 6,039,461, Cl. 362-287.000.
Gentry, Daniel Robert; Greenwood, Rebecca Claire; and Lawlor, Elizabeth Jane, to Smithkline Beecham Corporation. Histidyl tRNA synthetase from *Streptococcus pneumoniae*. 6,040,162, Cl. 435-183.000.
Georgetown University: *See*—
Lippman, Marc E.; and Lupu, Ruth, 6,040,290, Cl. 514-12.000.
Gerena, Linda: *See*—
Davies, Ian W.; Journet, Michel; Gerena, Linda; Larsen, Robert D.; Pye, Philip J.; and Rossen, Kai, 6,040,450, Cl. 546-256.000.
Gerhard, Detlef: *See*—
Froese-Peeck, Rüdiger; Gerhard, Detlef; and Lechner, Johann, 6,039,254, Cl. 235-462.320.
Gericke, Joachim: *See*—
Lehmann, Volker; and Gericke, Joachim, 6,040,970, Cl. 361-115.000.
Gericke, Rolf: *See*—
Häusler, Günther; Gericke, Rolf; Wurziger, Hanns; Baumgarth, Manfred; Lues, Inge; De Peyer, Jacques; and Bergmann, Rolf, 6,040,308, Cl. 514-253.000.
Germain, Robert Steven: *See*—
Califano, Andrea; Colville, Scott Eric; and Germain, Robert Steven, 6,041,133, Cl. 382-124.000.
Gerold, Gregory L.; and Wiesenhahn, Mark R. Voice-activated toy truck with animated features. 6,039,626, Cl. 446-175.000.
Gerth, Gayle B.: *See*—
Cutler, Stanley; Gerth, Gayle B.; Otis, Alton B., Jr.; and Chau, Taylor, 6,039,702, Cl. 601-15.000.
Gertner, Kevin: *See*—
Javier, Manuel A., Jr.; Pearce, Stephen B.; Kesten, Randy J.; Payne, Sam G.; and Gertner, Kevin, 6,039,727, Cl. 606-10.000.
Gestermann, Fritz; Pinter, Hans-Dieter; Metzger, Karl-Ludwig; and Herold, Heiko, to Bayer Aktiengesellschaft. Electrochemical half-cell. 6,039,853, Cl. 204-258.000.
Getselis, Arkady; Newman, Walter; and Tufano, Anthony, to Leviton Manufacturing Co., Inc. Lampholder for compact fluorescent lamps. 6,039,597, Cl. 439-441.000.
GFE Metalle und Materialien GmbH: *See*—
Hegner, Frank; Schmidt, Elke Maria; Güther, Volker; Otto, Andreas; Breme, Jürgen; Müller, Heinz; and Turnsek, Jürgen Peter, 6,039,918, Cl. 420-422.000.
Ghiam, Farid F.; and DiPoto, James P., to Tredegar Corporation. Masking film and method for producing same. 6,040,046, Cl. 428-343.000.
Ghorashi, Hossein M.: *See*—
Cheng, Luo; Irick, Glenn E., Sr.; Chu, Youe-Tsyr; Ghorashi, Hossein M.; Galyon, Michael E.; and Overbay, Mark A., 6,040,905, Cl. 356-238.300.
Ghosh, Syamal K.: *See*—
Chatterjee, Dilip K.; and Ghosh, Syamal K., 6,039,221, Cl. 222-361.000.
Giant Manufacturing Co., Ltd.: *See*—
Lin, Ming-Shyang, 6,038,923, Cl. 73-488.000.
Giardello, Michael A.: *See*—
Warner, Mark W.; Drake, Steven D.; and Giardello, Michael A., 6,040,363, Cl. 523-214.000.
Gibson, Donald: *See*—
Gallimore, Michael B.; and Gibson, Donald, 6,038,823, Cl. 52-126.100.
Gibson, Sarah F., to Mitsubishi Electric Information Technology Center America, Inl. (ITA). System for depicting surfaces using volumetric distance maps. 6,040,835, Cl. 345-424.000.
Gidney, Bernard C. Side stroking golf putter. 6,039,657, Cl. 473-252.000.
Gielen, Johannes Jacobus Ludgerus: *See*—
Dietrich, Paul S.; Van Grinsven, Martinus Quirinus Joseph Marie; Gielen, Johannes Jacobus Ludgerus; de Haas, Johannes Maria; and Van Driel, Roeland, 6,040,185, Cl. 435-468.000.
Giesecke & Devrient GmbH: *See*—
Stapfer, Michael; and Fiedler, Michael, 6,040,901, Cl. 356-71.000.
Gilbert, Bruce Michael; Joersz, Robert T.; Lovett, Thomas D.; and Safranek, Robert J., to Sequent Computer Systems, Inc. Distributed shared memory system having a first node that prevents other nodes from accessing requested data until a processor on the first node controls the requested data. 6,041,376, Cl. 710-108.000.
Gilbert, David C.: *See*—
Watson, Lynn R.; Castleberry, James E.; Luke, David D.; and Gilbert, David C., 6,040,792, Cl. 341-100.000.
Gilbert, James A.; and Gupta, Manish, to Gilbert, James A. 401K user software. 6,041,313, Cl. 705-36.000.
Gilbert, Laurent: *See*—
Costantini, Michel; Gilbert, Laurent; and Spagnol, Michel, 6,040,484, Cl. 568-803.000.
Gilbert, Richard; Sauvageau, Mario A.; and Bourgeois, Stephane, to Meteoglobe Canada Inc. Precipitation measuring system. 6,038,920, Cl. 73-170.230.
Giles, Richard. Modular boat anchor and kit. 6,038,996, Cl. 114-297.000.
Gill, Hardayal Singh, to International Business Machines Corporation. Current-pinned, current resettable soft AP-pinned spin valve sensor. 6,040,961, Cl. 360-113.000.
Gill, Robert Bradley: *See*—
Symonds, Robert D.; Singer, Irek; St. George, Peter; and Gill, Robert Bradley, 6,039,245, Cl. 235-379.000.
Gillespie, William, Jr.: *See*—
Benedetto, John R.; Gillespie, William, Jr.; and Benedetto, Deborah, 6,038,970, Cl. 101-127.100.
Gillet, Jean-Philippe: *See*—
Iliopoulos, Ilias; Lafuma, Francoise; Gillet, Jean-Philippe; and Pezron, Erwoan, 6,040,386, Cl. 525-329.900.
Gillette Canada Company: *See*—
Park, Edward H.; and Sweeney, Philip, 6,039,054, Cl. 132-321.000.
Gillette Company, The: *See*—
Seddon, Mark Arthur; and Barnes, Clive, 6,039,493, Cl. 401-209.000.
Gillis, Donald G.; and Johnson, Daniel, to TNT Steel Industries, Inc. Mobile ladder stand. 6,039,147, Cl. 182-15.000.
Gillis, Edward J.: *See*—
Cech, Leonard S.; Sewell, Michael R.; Gillis, Edward J.; and Talley, David B., 6,039,345, Cl. 280-735.000.
Gilmer, Mark C.: *See*—
Gardner, Mark I.; and Gilmer, Mark C., 6,040,207, Cl. 438-216.000.
Gilson, Jean-Marc: *See*—
Damme, Eric; Gilson, Jean-Marc; Leempoel, Patrick; Lebecq, Fabrice; and Takemasa, Takao, 6,040,412, Cl. 528-34.000.
Gima S.P.A.: *See*—
Zaniboni, Carlo, 6,039,169, Cl. 198-347.100.
Ginat, Jonathan. Tilt back chair control. 6,039,397, Cl. 297-289.000.
Ginell, Thomas; Thorsell, Lars; and Lindman, Per, to Telefonaktiebolaget LM Ericsson. Circuit for improved load transient response in power supplies. 6,040,639, Cl. 307-44.000.
Gingeras, Thomas R.: *See*—
Lockhart, David J.; Brown, Eugene L.; Wong, Gordon G.; Chee, Mark S.; and Gingeras, Thomas R., 6,040,138, Cl. 435-6.000.
Ginnow, Gregory: *See*—
Delwiche, Christopher; Bero, Joseph; and Ginnow, Gregory, 6,038,972, Cl. 101-216.000.
Giordano, Denise A.: *See*—

Giori, Gualtiero G.; and Giori, Janine. Pressure adjustable, anatomically contoured mattress. 6,038,722, Cl. 5-709.000.
Giori, Janine: *See*—
Giori, Gualtiero G.; and Giori, Janine, 6,038,722, Cl. 5-709.000.
Giovine, Marco: *See*—
De Flora, Antonio; Benatti, Umberto; and Giovine, Marco, 6,040,297, Cl. 514-47.000.
Girijavallabhan, Viyyoor M.: *See*—
Njoroge, F. George; Vibulbhan, Bancha; Pinto, Patrick A.; and Girijavallabhan, Viyyoor M., 6,039,683, Cl. 574-274.000.
Givaudan Roure Flavors Corporation: *See*—
Soper, Jon C.; and Thomas, M. Teresa, 6,039,901, Cl. 264-4.300.
Glass, William H.; Lokhorst, Mark; Lodwick, Philip A.; and Schoenzeit, Loren, to Electronics for Imaging, Inc. Method and apparatus for split printing of color and monochrome documents. 6,041,200, Cl. 399-82.000.
Glasstech, Inc.: *See*—
Ducat, Paul D., 6,038,886, Cl. 65-273.000.
Vild, Michael J.; and Ducat, Paul D., 6,038,887, Cl. 65-273.000.
Glaxo Wellcome Inc.: *See*—
Cominacini, Luciano, 6,040,322, Cl. 514-370.000.
Slater, Joseph A.; and Chan, Sam, 6,039,211, Cl. 222-1.000.
Glitho, Roch; and Banville, Mario, to Telefonaktiebolaget LM Ericsson. Implementation of notification capabilities in relational databases. 6,041,327, Cl. 707-10.000.
Glover, Edward Charles; and Glover, Martyn Stuart, to Eastman Kodak Company. Collection of process effluent. 6,040,776, Cl. 340-618.000.

Glover, Judy M.: *See*—
Bangs, William E.; Dibenedetto, Joseph D.; Friedberg, Joyce L.; Giordano, Denise A.; Glover, Judy M.; Khoo, Chor San Heng; Ko, Sandy; MacNair, R. David C.; Noar, Scott R.; Randazzi, John J., Jr.; Stoever, Harro; and Ziegler, Paula J., 6,039,989, Cl. 426-106.000.

Glover, Martyn Stuart: *See*—
Glover, Edward Charles; and Glover, Martyn Stuart, 6,040,776, Cl. 340-618.000.

Glover, Shedric Oneal; Lee, Chi-long; and Tong, Wen-hong, to Dow Corning Corporation. Radiation curable silicone compositions. 6,040,353, Cl. 522-15.000.

Gluchowski, Charles: *See*—
Jeon, Yoon T.; and Gluchowski, Charles, 6,040,451, Cl. 548-181.000.

Glück, Reinhard; Klein, Peter; Herrmann, Peter; and Wälti, Ernst Rudolf, to Nika Health Products Limited. Synthetic membrane vesicles containing functionally active fusion peptides as drug delivery systems. 6,040,167, Cl. 435-235.100.

Glushko, Boris, to O.M.D. Optical Memory Devices, Ltd. Optical memory device and a method for manufacturing thereof. 6,039,898, Cl. 264-1.330.

Gluszek, Andrew, to SSAC, Inc. Current sensing method and apparatus. 6,040,689, Cl. 324-127.000.

GMC Co., Ltd.: *See*—
Ishiyama, Noritaka, 6,040,642, Cl. 310-12.000.

Goble, Colin Charles Owen, to Gyrus Medical Limited. Electrosurgical hand-held battery-operated instrument. 6,039,734, Cl. 606-41.000.

Gochnour, Derek: *See*—
Hembree, David R.; Farnworth, Warren M.; Wood, Alan G.; Gochnour, Derek; and Akram, Salman, 6,040,702, Cl. 324-755.000.

Goda, Hiroki: *See*—
Tsuji, Tomoko; Takai, Hisashi; and Goda, Hiroki, 6,039,555, Cl. 425-362.000.

Godil, Asif A.: *See*—
Bortz, Michael L.; and Godil, Asif A., 6,040,914, Cl. 356-435.000.

Godleski, Stephen A.; Dickinson, David A.; and Williams, Antony J., to Eastman Kodak Company. Photographic emulsion having an improved speed, photographic element containing said emulsion, and method. 6,040,129, Cl. 430-604.000.

Goebel, Clement James, III: *See*—
Rock, David A.; Schmitter, Paul; Castelnuovo, David; and Goebel, Clement James, III, 6,039,047, Cl. 128-897.000.

Goedecke Aktiengesellschaft: *See*—
Steiner, Klaus; Gangkofner, Stefan; and Grunenwald, Jean-Marie, 6,040,479, Cl. 564-304.000.

Goertz, Harvey M.; Timmons, Richard J.; and Johnson, William R., to OMS Investments, Inc. Precoated controlled release fertilizers and processes for their preparation. 6,039,781, Cl. 71-1.000.

Goetz, Frederick James. Environmentally sensitive compositions of matter based on 3H-fluoren-3-ylidenes and process for making same. 6,041,157, Cl. 385-141.000.

Goh, Jing Sua: *See*—
Chan, Min Yu; and Goh, Jing Sua, 6,040,623, Cl. 257-692.000.

Göhmann, Jürgen: *See*—
Fogel, Thomas; Göhmann, Jürgen; and Klaunzer, Norman, 6,040,122, Cl. 430-461.000.

Goldbach, William: *See*—
Martenson, Kenneth R.; Mosesian, Jerry L.; Wilkinson, Alan F.; and Goldbach, William, 6,040,971, Cl. 361-118.000.

Goldberg, Randy G., to AT&T Corp. Vocoder for coding speech by using a correlation between spectral magnitudes and candidate excitations. 6,041,297, Cl. 704-219.000.

Golden Bridge Technology, Inc.: *See*—
Davidovici, Sorin; Tran, Jimmy Cuong; and Kanterakis, Emmanuel, 6,041,073, Cl. 375-148.000.

Golden, Martin: *See*—
Rudnick, James J.; and Golden, Martin, 6,039,183, Cl. 206-570.000.

Golden, Rosemary Antoinette: *See*—
Sekula, Bernard Charles; and Golden, Rosemary Antoinette, 6,039,998, Cl. 426-605.000.

Goldenberg, Eugene. Disposable toothbrush and flossing device. 6,039,050, Cl. 132-309.000.

Goldman, Richard B., to Steel, Laurence M. Forced hot air sterilizing method and apparatus. 6,039,926, Cl. 422-116.000.

Goldman, Tomasz Jerzy: *See*—
Povlsen, Lars; Skjoldborg, Erling; and Goldman, Tomasz Jerzy, 6,041,063, Cl. 370-465.000.

Goldsberry, Fred L., to Goldsberry, Fred L. Method for producing images of reservoir boundaries. 6,041,017, Cl. 367-38.000.

Goldstein, Arthur M., to Adapter, Inc. Method and apparatus for performing error correction code operations. 6,041,431, Cl. 714-784.000.

Goldstein, Léon; Leclerc, Denis; and Dagens, Béatrice, to Alcatel. Method of manufacturing an integrated optical component comprising a thick waveguide coupled to a thin waveguide. 6,040,246, Cl. 438-706.000.

Gollan, Arye Z. Radial wound fiber disk. 6,039,870, Cl. 210-321.610.

Golod, Mikhail: *See*—
Tsenter, Boris; and Golod, Mikhail, 6,040,685, Cl. 320-160.000.

Golovistikov, Ivan Nikolaevich; Kacharava, Leonid Yazonovich; and Alikhanov, Khallar Abdumuslimovich, to Golovistikov, Ivan Nikolaevich; and Kacharava, Leonid Yazonovich. Method of determining the suppressor cell component of human immune status and a means for the realization thereof. 6,040,187, Cl. 436-63.000.

Gong, Jeng; and Yang, Sheng-Hsing, to United Microelectronics Corp. High voltage device. 6,040,601, Cl. 257-341.000.

Gonsior, Wolfgang, to XOMOX International GmbH & Co. Pipe fitting, in particular a control and shut-off valve. 6,039,069, Cl. 137-454.200.

Gontarski, Christopher J.; Ogden, Steven D.; and Gannon, John J., Jr., to Albany International Corp. Door with articulated cam. 6,039,106, Cl. 160-201.000.

Gonzalez, Fernando: *See*—
Honeycutt, Jeffrey W.; Gonzalez, Fernando; and Ahmed, Fawad, 6,040,208, Cl. 438-229.000.

Gonzalez, Leonel. Methods and apparatus for automatically lauching sticks of various materials into oil and gas wells. 6,039,122, Cl. 166-379.000.

Goodman, David John: *See*—
Earl, Joel Ray; Goodman, David John; and Nation, George Wayne, 6,041,324, Cl. 707-9.000.

Goodwin, Michael R.: *See*—
Fallet, Eric L.; Goodwin, Michael R.; and Hahm, Timothy P., 6,040,904, Cl. 356-236.000.

Goodyear Tire & Rubber Company, The: *See*—
Wideman, Lawson Gibson; and Sandstrom, Paul Harry, 6,040,389, Cl. 525-332.600.

Gorder, Matthew S.: *See*—
Chen, Ricky Y.; Linder, Lloyd F.; Devendorf, Don C.; and Gorder, Matthew S., 6,040,731, Cl. 327-359.000.

Gordon, Edward J.: *See*—
Paul, Donald C.; Bennett, Joseph C.; Bettini, Joseph A.; and Gordon, Edward J., 6,039,579, Cl. 439-56.000.

Gordon, Illinois J. Split rail bed guard system. 6,038,721, Cl. 5-663.000.

Gorgi, Claudio; and Taverna, Claudio, to Imarc S.p.A. Device for adjusting the inclination of the back-rest relative to the seating portion in chairs in general. 6,039,398, Cl. 297-354.100.

Gorton, Earl M.: *See*—
Amato, Domenick V.; and Gorton, Earl M., 6,040,488, Cl. 570-264.000.

Gortz, Udo, to Nokia Mobile Phones, Ltd. Method for synthesizing a frame of a speech signal with a computed stochastic excitation part. 6,041,298, Cl. 704-223.000.

Goss, G. Robert; and Soral, Robert, to Oil-Dri Corporation of America. Cellulosic animal litter product. 6,039,004, Cl. 119-172.000.

Goss, Raymond G., to MCI Communications Corporation. Headset with multiple connections. 6,041,130, Cl. 381-374.000.

Gotou, Toyokazu; and Fukakusa, Shinji, to Mitsubishi Denki Kabushiki Kaisha. Gamma-ray compensated neutron ionization chamber. 6,040,581, Cl. 250-390.010.

Gottmann, Hans-Georg: *See*—
Götz, Klaus; Jakusch, Helmut; Loch, Werner; Hoffmann, Erich; Gottmann, Hans-Georg; Jenor, Hans-Joachim; and Voit, Johann, 6,040,041, Cl. 428-216.000.

Götz, Klaus; Jakusch, Helmut; Loch, Werner; Hoffmann, Erich; Gottmann, Hans-Georg; Jenor, Hans-Joachim; and Voit, Johann, to EMTEC Magnetics GmbH. Magnetic recording medium. 6,040,041, Cl. 428-216.000.

Götz, Roland: *See*—
Vogelbacher, Uwe Josef; Keil, Michael; Klintz, Ralf; Wahl, Josef; Wingert, Horst; König, Hartmann; Rack, Michael; Götz, Roland; and Teles, Joaquim Henrique, 6,040,458, Cl. 548-371.100.

Goudsmits, Petrus J. M.: *See*—
de Boer, Jacob; Hamming, Martin; and Goudsmits, Petrus J. M., 6,039,172, Cl. 198-750.100.

Govind, Nayna; Jinks, Philip A.; Ross, Danna L.; and Ward, Gary H., to 3M Innovative Properties Company. Medicinal inhalation aerosol formulations containing budesonide. 6,039,932, Cl. 424-45.000.

Grabbe, Dimitry: *See*—
Korsunsky, Iosif; Grabbe, Dimitry; Hasircoglu, Alex; Schroepfer, Richard; and Ringler, Daniel Robert, 6,039,583, Cl. 439-101.000.

Graber, John H.; and Pomerantz, Mitchell P., to Johnson Worldwide Associates, Inc. Underwater air supply system. 6,039,043, Cl. 128-202.140.

Graefe, Dieter: *See*—
Steiner, Reinhard; and Graefe, Dieter, 6,040,907, Cl. 356-311.000.

Gräf, Bernd: *See*—
Mrotzek, Werner; Gräf, Bernd; and Schönke, Ingoberth, 6,039,093, Cl. 141-386.000.

Graham, Alexandra E.; Thomas, Albert V.; and Yang, Rachel R. P., to Abbott Laboratories. Hypophosphite deoxygenation reactions in the synthesis of erythromycin derivatives. 6,040,440, Cl. 536-124.000.

Graham, Jamey: *See*—
Hart, Peter; and Graham, Jamey, 6,041,182, Cl. 395-712.000.

Grant, Selwyn E. Protective shipping container for flowers. 6,039,180, Cl. 206-423.000.

Grapha-Holding AG: *See*—
Kramer, Felix, 6,039,317, Cl. 271-204.000.

Grasmann, Ulrich, to Kiekert AG. Acoustic warning system for motor-vehicle subsystem. 6,040,761, Cl. 340-425.500.

Grasso, Albert P.; Martin, Ronald G.; and Roche, Robert P., to International Fuel Cells. Composite article. 6,039,823, Cl. 156-89.260.

Gratzl, Petra: *See*—
Dauth, Jochen; Hierstetter, Thomas; Deubzer, Bernward; and Gratzl, Petra, 6,040,383, Cl. 525-100.000.

Graunke, Gary L.; and Aucsmith, David W., to Intel Corporation. Method and apparatus for hiding crytographic keys utilizing autocorrelation timing encoding and computation. 6,041,122, Cl. 380-21.000.

Grave, Duane A., to Rockwell Science Center, Inc. Sculptured transflector for dual mode active matrix liquid crystal display backlight. 6,039,451, Cl. 362-29.000.

Gray, Nancy M.; and Woosley, Raymond Leon, to Sepracor Inc. Methods ad compositions of (−) ketoconazole for treating fungal yeast and dermatophyte infections. 6,040,307, Cl. 514-252.000.
Gray, Thomas: *See*—
Cox, Brian Geoffrey; and Gray, Thomas, 6,040,452, Cl. 548-209.000.
Grazioli, Mario: *See*—
Pfister, Norbert; Grazioli, Mario; and Ehmig, Gerhard, 6,039,229, Cl. 227-10.000.
Greco, Richard. Valve system for regenerative thermal oxidizers. 6,039,927, Cl. 422-175.000.
Green Ford, Inc.: *See*—
Green, H. Dean; Salquero, George J.; Lang, Lowell, deceased, 6,041,310, Cl. 705-27.000.
Green, H. Dean; Salquero, George J.; Lang, Lowell, deceased (by Marilyn Lang, iegal representative), to Green Ford, Inc. Method and system for automobile transactions. 6,041,310, Cl. 705-27.000.
Green, Thomas B.: *See*—
Lewis, Edmund T.; and Green, Thomas B., 6,040,186, Cl. 436-53.000.
Green, Thomas S., to Advanced Micro Devices, Inc. Instruction length prediction using an instruction length pattern detector. 6,041,405, Cl. 712-213.000.
Greenbaum, Hyman A.: *See*—
Jackson, Neil A.; Williamson, John T.; Frantz, Francis J.; Ryll, Patrick B.; and Greenbaum, Hyman A., 6,041,019, Cl. 367-124.000.
Greenberg, Philip D.: *See*—
Riddell, Stanley R.; and Greenberg, Philip D., 6,040,177, Cl. 435-372.300.
Greene, Harold R.; Carder, David W.; and Balko, Jack E., to Comco Systems. Carrier automatic braking system. 6,039,510, Cl. 406-21.000.
Greene, Michael J.: *See*—
Schulz, Gregory R.; and Greene, Michael J., 6,039,769, Cl. 8-574.000.
Greene, Ronald: *See*—
Garrard, Lisa J.; Henner, Dennis J.; Bass, Steven; Greene, Ronald; Lowman, Henry B.; Wells, James A.; and Matthews, David J., 6,040,136, Cl. 435-5.000.
Greener, Alan L.; and Jerpseth, Bruce D., to Stratagene. Method for more efficient electroporation. 6,040,184, Cl. 435-461.000.
Greengard, Paul; Porton, Barbara; and Kao, Hung-Teh, to Rockefeller University, The. DNA encoding the human synapsin III gene and uses thereof. 6,040,168, Cl. 435-235.100.
Greenlee, William; Gangly, Ashit; and Wasley, Jan W. F., to Neurogen Corporation. Certain 1-(2-naphthyl) and 1-(2-azanaphthyl)-4-(1-phenylmethyl) piperazines, dopamine receptor subtype specific ligands. 6,040,448, Cl. 544-363.000.
Greenwood, Rebecca Claire: *See*—
Gentry, Daniel Robert; Greenwood, Rebecca Claire; and Lawlor, Elizabeth Jane, 6,040,162, Cl. 435-183.000.
Greep, Darcy W., to MegaDyne Medical Products, Inc. Electric field concentrated electrosurgical electrode. 6,039,735, Cl. 606-45.000.
Greive, Michael. Device for securing the ends of catheter guide wires. 6,039,722, Cl. 604-528.000.
Gretz, Thomas J.: *See*—
Larson, John A.; Gretz, Thomas J.; and Ofcharsky, John, 6,038,821, Cl. 52-97.000.
Grewell, Patricia: *See*—
Waddington, William H.; Tan, Leng Leng; and Grewell, Patricia, 6,041,384, Cl. 710-200.000.
Gries, Heinz: *See*—
Schmitt-Willich, Heribert; Platzek, Johannes; Gries, Heinz; Schumann-Giampieri, Gabrielle; Weinmann, Hanns-Joachim; Vogler, Hubert; Deutsch, Julius; and Conrad, Juergen, 6,039,931, Cl. 424-9.364.
Griesinger, Manfred, to DaimlerChrysler AG. Process and apparatus for determining the condition of a road surface. 6,040,916, Cl. 356-448.000.
Griffin LLC: *See*—
Ullah, Hamid. 6,040,299, Cl. 514-75.000.
Grigorescu, Benony: *See*—
Duchenne, Laurent; Grigorescu, Benony; and Loiselet, Jean-Pierre, 6,039,466, Cl. 362-515.000.
Grimsley, John L.: *See*—
Quan, Thomas A.; and Grimsley, John L., 6,041,028, Cl. 369-44.340.
Grosse, Neil O. Back rest. 6,038,713, Cl. 4-575.100.
Grow, Ann E. Raman spectroscopic method for determining the ligand binding capacity of biologicals. 6,040,191, Cl. 436-172.000.
Grundy, Michael J.; and Wright, James T., to Toro Company, The. Arc marking system for sprinkler. 6,039,268, Cl. 239-73.000.
Grunenwald, Jean-Marie: *See*—
Steiner, Klaus; Gangkofner, Stefan; and Grunenwald, Jean-Marie, 6,040,479, Cl. 564-304.000.
Grüning, Ulrike: *See*—
Reisinger, Hans; Grüning, Ulrike; Wendt, Hermann; Stengl, Reinhard; Lehmann, Volker; Willer, Josef; Franosch, Martin; Schäfer, Herbert; Krautschneider, Wolfgang; Hofmann, Franz; and Böhm, Thomas, 6,040,995, Cl. 365-185.180.
Gruppo Lepetit, S.p.A.: *See*—
De Flora, Antonio; Benatti, Umberto; and Giovine, Marco, 6,040,297, Cl. 514-47.000.
Gsellschaft fur Biotechnologische Forschung mbH (GBF): *See*—
Frank, Ronald; and Guler, Sinan, 6,040,423, Cl. 530-334.000.
GTE Internetworking Incorporated: *See*—
Schudel, Gregg W.; and Knight, J. Scott, 6,040,672, Cl. 318-611.000.
Gu, Chun-Yuan: *See*—
Ellison, Alex; Kordina, Olle; Gu, Chun-Yuan; Hallin, Christer; Janzen, Erik; and Tuominen, Marko, 6,039,812, Cl. 118-725.000.
Guarniero, Umberto; Magon, Franco; and Bonanno, Enzo, to MEMC Electronic Materials, Inc. Apparatus for moving exhaust tube of barrel reactor. 6,039,807, Cl. 118-715.000.
Guasti, Peter: *See*—
Fado, Frank; Guasti, Peter; Nassiff, Amado; and VanBuskirk, Ronald, 6,041,301, Cl. 704-270.000.
Guazzi, Giuseppe, to Solchem Italiana S.p.A. Acyclovir dihydrate sodium salt and the preparation thereof. 6,040,445, Cl. 544-276.000.
Gueissaz, François, to Asulab S.A. Magnetic microswitch. 6,040,748, Cl. 335-78.000.
Gueller, Matthew Paul: *See*—
Sebben, Daniel Angelo; Lux, Melvin Orville; Zellmer, Timothy Paul; Gueller, Matthew Paul; and Seegert, Brian David, 6,038,843, Cl. 56-202.000.
Guenther, Dolores: *See*—
Guenther, Torbett B., 6,038,714, Cl. 4-576.100.
Guenther, Torbett B., to Guenther, Torbett B.; and Guenther, Dolores. Concealed grab bar. 6,038,714, Cl. 4-576.100.
Guidetti, Brigitte: *See*—
Lattes, Isabelle; Feurer, Bernard; Guidetti, Brigitte; and Payrou, Viviane, 6,040,485, Cl. 570-126.000.
Guidi, Roger J.: *See*—
Quiachon, Dignah B.; Gandhi, Deepak R.; Brooks, Dennis L.; Imran, Mir A.; and Guidi, Roger J., 6,039,743, Cl. 606-108.000.
Guillemot, Georges: *See*—
Pericard, Louis; and Guillemot, Georges, 6,039,306, Cl. 251-353.000.
Guinn, Robert; and Richards, David, to Casino Data Systems. Automated tournament gaming system: apparatus and method. 6,039,648, Cl. 463-16.000.
Guio, Raphael H.: *See*—
French, Thomas G.; Guio, Raphael H.; Kowalyshen, Henry W.; McGlone, Buddy B.; Mears, Gregory C.; and Opfer, John C., 6,040,538, Cl. 200-293.000.
Gula, Thaddeus S.: *See*—
Aylward, Peter T.; Bourdelais, Robert P.; Haydock, Douglas N.; and Gula, Thaddeus S., 6,040,036, Cl. 428-195.000.
Aylward, Peter T.; Bourdelais, Robert P.; Gula, Thaddeus S.; and Lu, Pang-Chia, 6,040,124, Cl. 430-496.000.
Guler, Sinan: *See*—
Frank, Ronald; and Guler, Sinan, 6,040,423, Cl. 530-334.000.
Gullberg, Lars, to Wartsila Diesel International Ltd Oy. Method for coupling and a coupling device. 6,039,497, Cl. 403-16.000.
Gundlach, Kurt B.; Sanchez, Luis A.; Colt, Richard L.; and Sweeney, Maura A., to Xerox Corporation. Inks for ink jet printing with reduced intercolor bleed. 6,039,793, Cl. 106-31.280.
Gunn, Brian Leslie; Moore, James; and Hancocks, Michael Turley, to Able Industries Limited. Pressurizable beverage vessels. 6,039,090, Cl. 141-17.000.
Guo, George X.: *See*—
Carpentier, Alain; Guo, George X.; and Schreck, Stefan G., 6,039,759, Cl. 623-2.000.
Guo, William G.: *See*—
Peiffer, Larry; Zeigler, Terry; and Guo, William G., 6,038,877, Cl. 62-244.000.
Gupta, Manish: *See*—
Gilbert, James A.; and Gupta, Manish, 6,041,313, Cl. 705-36.000.
Gupta, Subhash: *See*—
Wang, Fei; Foote, David K.; Cagan, Myron R.; and Gupta, Subhash, 6,040,619, Cl. 257-649.000.
Gurak, Ronald: *See*—
Abrams, Jack; Pearson, Timothy; and Gurak, Ronald, 6,039,286, Cl. 242-564.400.
Guskey, Susan Marie; Inman, Everett Junior; Desch, Teresa Ann; Fritschi, Lynne Anne; and Killion, Stephanie Lynn, to Procter & Gamble Company, The. Styling shampoo compositions which deliver improved hair curl retention and hair feel. 6,040,282, Cl. 510-119.000.
Gustafsson, Lars Erik; Persson, Gunnar Magnus Severus; and Strömberg, Stefan Per Axel, to Aerocrine AB. Device for determining the levels of NO in exhaled air. 6,038,913, Cl. 73-23.300.
Gustafsson, Ulf: *See*—
Bakowski, Mietek; Gustafsson, Ulf; Rottner, Kurt; and Savage, Susan, 6,040,237, Cl. 438-521.000.
Güther, Volker: *See*—
Hegner, Frank; Schmidt, Elke Maria; Güther, Volker; Otto, Andreas; Breme, Jürgen; Müller, Heinz; and Turnsek, Jürgen Peter, 6,039,918, Cl. 420-422.000.
Gutierrez, Ernesto Jose; Archibald, Charles Andrew; Kachur, Christopher M.; and Brandon, Giles M., to General Motors Corporation. Dual mode control of a variable displacement refrigerant compressor. 6,038,871, Cl. 62-133.000.
Gutierrez Flores, Jose Luis: *See*—
Karageozian, Hampar L.; Karageozian, Vicken H.; Kenney, Maria Cristina; Gutierrez Flores, Jose Luis; Carpio Aragon, Gabriel Arturo; and Nesburn, Anthony B., 6,039,943, Cl. 424-94.620.
Gutman, George; Jiang, Licai; and Verman, Boris, to Osmic, Inc. Single corner kirkpatrick-baez beam conditioning optic assembly. 6,041,099, Cl. 378-85.000.
Guyt, Charles B., to Intel Corporation. FIFO using a fading ones counter. 6,041,370, Cl. 710-57.000.
Gwaltney, Robert E.: *See*—

190-263 OG D-00 -- 54 : QL 3

Cunningham, Charles L.; and Gwaltney, Robert E., 6,039,104, Cl. 157-21.000.

Gwyn, Jeff: *See*—
Spencer, Michael; Mumm, Rita; and Gwyn, Jeff, 6,040,497, Cl. 800-288.000.

Gyrus Medical Limited: *See*—
Goble, Colin Charles Owen, 6,039,734, Cl. 606-41.000.

H&S Manufacturing Co., Inc.: *See*—
Peeters, Kenneth J.; and Landon, Gregory L., 6,038,844, Cl. 56-377.000.

Ha, Jae Hee; and Jun, Sun Ae, to LG Semicon Co., Ltd. Method of etching an organic anti-reflective coating. 6,039,888, Cl. 216-13.000.

Haag, Ronald Helmut; Orr, Brian Norman; and Moceanu, John Ion, to General Motors Corporation. Actuator assembly for a powered sliding door system. 6,038,818, Cl. 49-360.000.

Haarmann & Reimer GmbH: *See*—
Ley, Jakob; and Langner, Roland, 6,039,939, Cl. 424-78.030.

Haas, David P.; Howard, William G.; Crespi, Ann M.; Rorvick, Anthony R.; Rockow, Steven; and Ries, Andrew J., to Medtronic, Inc. Volumetrically efficient battery for implantable medical devices. 6,040,082, Cl. 429-163.000.

Haas, Gerhard, to Siemens Aktiengesellschaft. Method and device for controlled illumination of an object for improving identification of an object feature in an image of the object. 6,040,895, Cl. 355-70.000.

Häberle, Norman; Kreuzer, Franz-Heinrich; and Küpfer, Jürgen, to Consortium fur elektrochemische Industrie GmbH. Low glass temperature organosiloxanes. 6,040,411, Cl. 528-26.000.

Hacker, Fred L.: *See*—
Kooy, Hanne M.; Hacker, Fred L.; and Bellerive, Marc R., 6,041,101, Cl. 378-147.000.

Hackler, Ronald E.; and Lawrence, Kathryn E., to Dow AgroSciences LLC. Benzoylphenylurea insecticides and methods of using them to control cockroaches. 6,040,345, Cl. 514-594.000.

Hadewe B.V.: *See*—
de Haan, Hendrik Andries; and Munneke, Christiaan Antoon, 6,038,835, Cl. 53-460.000.

Haehnel, Thomas; Breitlow-Hertzfeldt, Juergen; Saffian, Bernd; and Kern, Josef, to Siemens Electromechanical Components GmbH & Co. KG. Battery section switch. 6,040,751, Cl. 335-185.000.

Haeiwa, Kazuhisa: *See*—
Takeda, Haruo; Tatsumi, Yukio; Fujitani, Ikuji; Shioda, Takuya; Yoshimi, Tomofumi; Sugimoto, Tomohiko; and Haeiwa, Kazuhisa, 6,041,082, Cl. 375-300.000.

Häfker, Thomas: *See*—
Focke, Heinz; Häfker, Thomas; Stiller, Martin; and Schlenker, Michael, 6,038,832, Cl. 53-234.000.

Hafler, David A.: *See*—
Weiner, Howard L.; and Hafler, David A., 6,039,947, Cl. 424-184.100.

Haga, Muneo: *See*—
Matsumoto, Kenji; Suzuki, Kazuo; and Haga, Muneo, 6,040,004, Cl. 427-185.000.

Haga, Ryo, to Kabushiki Kaisha Toshiba. Semiconductor device with high speed write capabilities. 6,041,004, Cl. 365-207.000.

Hagiwara, Yoshihiro; Suetsugu, Junichi; Mizoguchi, Tadashi; Minemoto, Hitoshi; Takemoto, Hitoshi; Shima, Kazuo; and Yakushiji, Toru, to NEC Corporation. Electrostatic ink jet recording device having a stirring system. 6,039,442, Cl. 347-89.000.

Hagiwara, Zenzo: *See*—
Yoshida, Hiroaki; Hagiwara, Zenzo; and Terasaki, Masanao, 6,040,086, Cl. 429-211.000.

Hagiya, Shigeo: *See*—
Sugimoto, Hiroshi; Hagiya, Shigeo; Taketani, Noriaki; Yonemoto, Takaharu; and Yoshioka, Osamu, 6,040,620, Cl. 257-666.000.

Hahm, Timothy P.: *See*—
Fallet, Eric L.; Goodwin, Michael R.; and Hahm, Timothy P., 6,040,904, Cl. 356-236.000.

Hahn, Jeffrey H.: *See*—
Citron, Howard M.; Asano, David K.; Baietto, Henry R.; Chen, Sullivan S.; De Frondeville, Alexis W.; Hahn, Jeffrey H.; Probst, Thomas J., Jr.; Massucci, John E.; Costin, Dinu; and Peragine, Ralph E., 6,038,952, Cl. 83-605.000.

Hähnle, Hans-Joachim: *See*—
Ebel, Klaus; and Hähnle, Hans-Joachim, 6,040,420, Cl. 528-480.000.

Haide, Janos: *See*—
Sigmar, Axel M.; Iseli, James W.; Szalay, Jozsef; Haide, Janos; and Feszthammer, Andras A., 6,041,283, Cl. 702-16.000.

Haining, Robert W.: *See*—
Rose, Mark D.; and Haining, Robert W., 6,041,216, Cl. 455-9.000.

Haken, Dipl.-Ing. Klaus: *See*—
Minet, Wilhelm, 6,039,293, Cl. 248-125.800.

Halczenko, Wasyl: *See*—
Duggan, Mark E.; Halczenko, Wasyl; Egbertson, Melissa S.; Hartman, George D.; and Laswell, William L., 6,040,317, Cl. 514-317.000.

Haley, Tedford E., to Appleton Papers, Inc. Film bubble wrap interleaf. 6,038,834, Cl. 53-399.000.

Hall, Brian W. Method of optimizing a guitar tremolo. 6,040,511, Cl. 84-313.000.

Hall, David B.: *See*—
Frederick, Donald A.; and Hall, David B., 6,038,926, Cl. 73-705.000.

Hall, Michael A., to Dekalb Genetics Corporation. Inbred corn plant 01HG12 and seeds thereof. 6,040,508, Cl. 800-320.100.

Hallgrimsson, Bjarki, to Lumatec Industries, Inc. Flat flashlight device with key ring attachment and registerable and mateabe parts. 6,039,454, Cl. 362-116.000.

Halligan, Kenneth A.; and Ofer, Erez, to EMC Corporation. Disk array write protection at the sub-unit level. 6,041,394, Cl. 711-166.000.

Hallin, Christer: *See*—
Ellison, Alex; Kordina, Olle; Gu, Chun-Yuan; Hallin, Christer; Janzen, Erik; and Tuominen, Marko, 6,039,812, Cl. 118-725.000.

Halseth, Thor R.: *See*—
Botich, Michael J.; Halseth, Thor R.; and Barker, John, 6,039,713, Cl. 604-110.000.

Ham, Sang-Man, to SamSung Electronics Co., Ltd. Paper width detecting apparatus and method for ink-jet printer. 6,039,481, Cl. 400-708.000.

Hamada, Hajime: *See*—
Fukumasa, Hidenobu; Oishi, Yasuyuki; Nagatani, Kazuo; and Hamada, Hajime, 6,041,034, Cl. 370-203.000.

Hamada, Shuta: *See*—
Haneda, Satoshi; Tokimatsu, Hiroyuki; Onodera, Masahiro; and Hamada, Shuta, 6,041,204, Cl. 399-159.000.

Hamagishi, Goro; Kanatani, Keiichi; Kishimoto, Shunichi; Sakata, Masahiro; Yamashita, Atsuhiro; Matsushita, Naoki; and Mashitani, Ken, to Sanyo Electric Co., Ltd. Three-dimensional display. 6,040,807, Cl. 345-6.000.

Hamaguchi, Shinichi: *See*—
Nakanishi, Tatsuo; Hamaguchi, Shinichi; and Kijima, Eiichi, 6,040,105, Cl. 430-127.000.

Hamamoto, Tomoki: *See*—
Takenouchi, Kenji; Hamamoto, Tomoki; and Noguchi, Toshitada, 6,040,158, Cl. 435-89.000.

Hamano, Takashi: *See*—
Nakata, Katsuhiko; Nakamura, Masatsugu; and Hamano, Takashi, 6,040,343, Cl. 514-549.000.

Hamasaki, Takeshi: *See*—
Tamura, Akihiro; Sakaue, Shigeo; and Hamasaki, Takeshi, 6,040,860, Cl. 348-252.000.

Hamblin, Steven Lee. Hiker's utility trail cart. 6,039,333, Cl. 280-47.180.

Hambro, George: *See*—
Floryan, Richard F.; and Hambro, George, 6,040,000, Cl. 427-78.000.

Hamerski, Michael D.: *See*—
Sadrakula, Philip V.; Kampa, Leonard; Hamerski, Michael D.; and Bries, James L., 6,039,102, Cl. 156-510.000.

Hamilton, Jeffrey R.; Pontaoe, John S.; and Thatcher, Bryce, to Illinois Tool Works Inc. Pack waist-belt and buckles therefor. 6,038,747, Cl. 24-164.000.

Hamm, Gary L.: *See*—
Hamm, Robert L.; and Hamm, Gary L., 6,039,277, Cl. 241-189.100.

Hamm, Jack. Interchangeable shaft golf club. 6,039,659, Cl. 473-306.000.

Hamm, Robert L.; and Hamm, Gary L. Pulverizer. 6,039,277, Cl. 241-189.100.

Hammar, Jerry Walter; Kulakowski, John Edward; Means, Rodney Jerome; and Dang, Chi-Hung, to International Business Machines Corporation. Storage and retrieval library with side-by-side storage cells. 6,041,026, Cl. 369-36.000.

Hammerbeck, David M.: *See*—
Tomai, Mark A.; Hammerbeck, David M.; and Swingle, Karl F., 6,039,969, Cl. 424-434.000.

Hamming, Martin: *See*—
de Boer, Jacob; Hamming, Martin; and Goudsmits, Petrus J. M., 6,039,172, Cl. 198-750.100.

Hammond, Maynard D.; and Dewey, James M., to Hewlett-Packard Company. Method and apparatus for synchronizing data received in an accelerated graphics port of a graphics memory system. 6,041,417, Cl. 713-400.000.

Hamrick, William T., Sr. Noncombustible transportable building. 6,038,824, Cl. 52-143.000.

Han, Dong-Hwan, to LG Semicon, Co., Ltd. Interpolation filter system. 6,041,338, Cl. 708-313.000.

Han, Hee Suk: *See*—
Lee, Yoon Pyo; Lee, Chun Sik; Kim, Kwang Ho; Jurng, Jong Soo; Kim, Young Il; Shin, Hung Tae; and Han, Hee Suk, 6,038,869, Cl. 62-100.000.

Han, Wen-Ching: *See*—
Kim, Kyoung S.; Kimball, S. David; Cai, Zhen-wei; Rawlins, David B.; Misra, Raj N.; Poss, Michael A.; Webster, Kevin R.; Hunt, John T.; and Han, Wen-Ching, 6,040,321, Cl. 514-369.000.

Han, Yeun-Kwei: *See*—
Dvorak, Charles A.; Wren, Douglas L.; Fisher, Lawrence E.; Axt, Steven D.; Humphreys, Eric R.; Arzeno, Humberto B.; Beard, Colin C.; Nguyen, Sam Linh; Han, Yeun-Kwei; Roberts, Christopher R.; Lund, Jan P.; and Fatheree, Paul R., 6,040,446, Cl. 544-276.000.

Han, Youn-soo; Kim, Hyeung-ki; Kim, Hyun-joon; and Kim, Seung-un, to Samsung Electronics Co., Ltd. Clean room smock having an integral air passage. 6,038,699, Cl. 2-69.000.

Hana, Yoshitake: *See*—
Sugawara, Akira; Hana, Yoshitake; Endo, Takayoshi; and Sugiyama, Osamu, 6,040,067, Cl. 428-647.000.

Hanafi, Hussein I.: *See*—
Boyd, Diane C.; Burns, Stuart M.; Hanafi, Hussein I.; Taur, Yuan; and Wille, William C., 6,040,214, Cl. 438-244.000.

Hanafi, Hussein Ibrahim: *See*—
Burns, Stuart Mcallister, Jr.; and Hanafi, Hussein Ibrahim, 6,040,210, Cl. 438-238.000.

Hanami, Nobuyuki; Kishi, Junichi; Kawamorita, Yoichi; and Soma, Takao, to Canon Kabushiki Kaisha. Electrophotographic photosensitive material. 6,040,099, Cl. 430-66.000.

Hanano Corporation: *See*—
Hanano, Takashi; and Shibuya, Hisataka, 6,039,108, Cl. 164-72.000.

Hanano, Takashi; and Shibuya, Hisataka, to Hanano Corporation. Sleeve lubricating method and sleeve lubricating mechanism. 6,039,108, Cl. 164-72.000.

Hancock, Robert E. W.; and Karunaratne, Nedra, to University of British Columbia. Antimicrobial cationic peptides. 6,040,435, Cl. 536-23.100.

Hancocks, Michael Turley: *See*—
Gunn, Brian Leslie; Moore, James; and Hancocks, Michael Turley, 6,039,090, Cl. 141-17.000.

Handa, Fumitaka: *See*—
Tanaka, Tetsuya; Tsuzuki, Koichi; Nishijima, Noriyo; Handa, Fumitaka; and Nakadaira, Shiro, 6,039,866, Cl. 210-136.000.

Handschuh, Robert: *See*—
Buck, Manfred; Brost, Wolfgang; Handschuh, Robert; and Kratt, Helmut, 6,039,038, Cl. 125-39.000.

Haneda, Satoshi; Tokimatsu, Hiroyuki; Onodera, Masahiro; and Hamada, Shuta, to Konica Corporation. Color image forming apparatus with an organic photoconductor. 6,041,204, Cl. 399-159.000.

Hanes, Mark D., to Phillips Petroleum Company. Polymer blend clarity. 6,040,382, Cl. 525-98.000.

Haney, Daniel E.; and Haney, Matthew J. Multiple printing process registration method. 6,038,977, Cl. 101-490.000.

Haney, Matthew J.: *See*—
Haney, Daniel E.; and Haney, Matthew J., 6,038,977, Cl. 101-490.000.

Haney, Scott J.: *See*—
Miller, Daniel L.; Haney, Scott J.; and Ouellette, Christopher J., 6,041,332, Cl. 707-104.000.

Hanmi Pharm. Co. Ltd.: *See*—
Woo, Jong-Soo; and Yi, Hong-Gi, 6,039,981, Cl. 424-601.000.

Hannebauer, James B.: *See*—
Kennedy, Joe B.; Davyduke, Roland; Jackson, James G.; Hannebauer, James B.; Newnes, William R.; Stroud, Brian; and Sergeant, John, 6,039,097, Cl. 144-357.000.
Kennedy, Joe B.; Davyduke, Roland; Jackson, James G.; Hannebauer, James B.; Newnes, William R.; Stroud, Brian; and Sergeant, John, 6,039,098, Cl. 144-357.000.

Hanners, John C.; Miller, Charles A.; and Stanford, Dean, to Credence Systems Corporation. Test head for integrated circuit tester arranging tester component circuit boards on three dimensions. 6,040,691, Cl. 324-158.100.

Hannock, Wayne: *See*—
Watson, Fred W.; Hannock, Wayne; Lam, Robert; and Evans, George, 6,038,979, Cl. 102-481.000.

Hansen, Scott A.: *See*—
Van Order, Kim L.; Smith, Nels R.; and Hansen, Scott A., 6,038,937, Cl. 74-473.00R.

Hansgrohe AG: *See*—
Flieger, Horst; and Marshall, John, 6,038,715, Cl. 4-601.000.

Hansung Special Glass Co., Ltd.: *See*—
Park, Sun-Eun, 6,038,816, Cl. 49-86.100.

Hantz, Dominique: *See*—
Antoine, Dominique; and Hantz, Dominique, 6,038,760, Cl. 29-605.000.

Hao, Zhimin: *See*—
Schädeli, Ulrich; Zambounis, John S.; Iqbal, Abul; Hao, Zhimin; and Dubas, Henri, 6,040,108, Cl. 430-200.000.

Hara, Akira; Onuma, Hiraku; Oyaizu, Hideo; Suzuki, Yuuichi; and Gasparrini, C. Robert, to Baldwin-Japan Ltd. Cylinder cleaning device. 6,038,731, Cl. 15-256.510.

Hara, Shigehiro: *See*—
Inoue, Soichi; Higashikawa, Iwao; Ogawa, Yoji; Hara, Shigehiro; and Yamamoto, Kazuko, 6,040,114, Cl. 430-296.000.

Hara, Takefumi: *See*—
Kuramitsu, Masayuki; Saitou, Mitsuo; Maeno, Yutaka; and Hara, Takefumi, 6,040,127, Cl. 430-567.000.

Hara, Yoshikazu; Motoe, Katsuro; and Sanagi, Hisashi, to Riso Kagaku Corporation. Stencil printer and method of stopping in place printing drum of the printer. 6,038,968, Cl. 101-116.000.

Harada, Akihiko; and Higashitani, Keiichi, to Mitsubishi Denki Kabushiki Kaisha. Semiconductor device and method of manufacturing semiconductor device. 6,040,627, Cl. 257-752.000.

Harada Industry Co., Ltd.: *See*—
Tachihara, Hiroyuki; Inoue, Hidemichi; and Endo, Hiroshi, 6,040,799, Cl. 342-357.060.

Haraguchi, Munehiro: *See*—
Murakami, Hiroshi; Yoshioka, Koji; Morita, Keizo; Itokazu, Masafumi; Nakabayashi, Ken-ichi; Yamamoto, Akira; and Haraguchi, Munehiro, 6,040,814, Cl. 345-94.000.

Harano, Nobuya, to NEC Corporation. Antenna unit for portable radio unit. 6,040,804, Cl. 343-702.000.

Hardee, Cynthia G. Support device for newly cropped ears of dogs. 6,039,751, Cl. 606-204.150.

Hardie, Malcolm: *See*—
Björklid, Anders; Hardie, Malcolm; and Mäder, Heinz, 6,040,743, Cl. 331-57.000.

Hardy, Christopher, to Design Ideas, Ltd. Stackable hexagonal candle holders. 6,039,563, Cl. 431-291.000.

Hardy, Paul: *See*—
Malone, Dan J.; and Hardy, Paul, 6,040,953, Cl. 360-53.000.

Hargroder, Todd. Shower/tub transfer chair. 6,039,403, Cl. 297-440.240.

Hargroves, Curtis L.: *See*—
Melane, Marcus L.; Pisterzi, Michael J.; Mills, Edward G.; and Hargroves, Curtis L., 6,039,414, Cl. 312-205.000.

Harhay, Gregory P. Resonance raman spectroscopy for identifying and quantitating biomatter, organic, and inorganic analytes. 6,040,906, Cl. 356-301.000.

Harman, James N.; and Upcavage, Richard J., to ICP Corporation. Paste dispensing brush. 6,039,489, Cl. 401-146.000.

Harmer, Walter L.: *See*—
Ho, Kwok-Lun; Follensbee, Robert A.; Harmer, Walter L.; and Morris, Mary L., 6,039,775, Cl. 51-295.000.

Harness Systems Technologies Research, Ltd.: *See*—
Tanaka, Tsutomu, 6,039,605, Cl. 439-610.000.

Harrelson, Albert L., III, to Garlock Inc. Shaft compression packing ruler. 6,038,778, Cl. 33-483.000.

Harris Corporation: *See*—
Diep, Vinh Hew; and Naikal, Najibullah, 6,041,121, Cl. 379-446.000.
Panchou, Karen A.; Newton, Charles M.; and Rosier, Charles D., 6,040,630, Cl. 257-783.000.

Harris, Mark A.: *See*—
Bailey, David B.; Burberry, Mitchell S.; and Harris, Mark A., 6,040,115, Cl. 430-303.000.

Harris, Melvin Ward; and Mayfield, Scott Hayward, to Olin Corporation. Shotshell having a protective barrier layer. 6,038,978, Cl. 102-467.000.

Harris, Philip G.; and Batlaw, Rajnish, to Milliken & Company. Oxyalkylene-substituted aminophenol intermediate. 6,040,482, Cl. 564-443.000.

Harrison, John: *See*—
Clifford, Bruce; and Harrison, John, 6,040,897, Cl. 356-4.010.

Harrison, Mark A.: *See*—
Shah, Tasvir; Harrison, Mark A.; and Bilbo, Matthew, 6,041,325, Cl. 707-10.000.

Harrod, Charles E.; and Stephens, William D., to Atlantic Research Corporation. Solid propellant containing ferrocenyl phosphine derivatives. 6,039,819, Cl. 149-19.200.

Harsham, Bret; and Jain, Lalit, to Unified Access Communications. Computer system and computer-implemented process for simultaneous configuration and monitoring of a computer network. 6,041,347, Cl. 709-220.000.

Hart, Charles E.: *See*—
Berkner, Kathleen L.; Petersen, Lars Christian; Hart, Charles E.; Hedner, Ulla; and Bregengaard, Claus, 6,039,944, Cl. 424-94.640.

Hart, Frank P.; Nagaraj, Ravi; Noble, James L.; and Songer, Neil W., to Intel Corporation. Method and apparatus for providing a processor module for a computer system. 6,041,372, Cl. 710-62.000.

Hart, John H.; and Sherer, W. Paul, to 3Com Corp. Virtual network architecture for connectionless LAN backbone. 6,041,166, Cl. 395-200.680.

Hart, Peter; and Graham, Jamey, to Ricoh Company Ltd; and Ricoh Corporation. Automatic invocation of computational resources without user intervention. 6,041,182, Cl. 395-712.000.

Hartel, Marc: *See*—
Besserer, Horst; Hartel, Marc; and Zachrai, Jürgen, 6,039,420, Cl. 312-265.100.

Harter, Bernard Gerald: *See*—
Brown, Cary Lee; Hartsfield, Richard C.; Harter, Bernard Gerald; and Schoolcraft, Brian, 6,040,647, Cl. 310-89.000.

Hartman, George D.: *See*—
Duggan, Mark E.; and Hartman, George D., 6,040,311, Cl. 514-275.000.
Duggan, Mark E.; Halczenko, Wasyl; Egbertson, Melissa S.; Hartman, George D.; and Laswell, William L., 6,040,317, Cl. 514-317.000.

Hartman, Terry E.; Kroh, Herbert C.; and Crots, David E., to Libbey Glass Inc. Cooling system for a glassware machine. 6,038,889, Cl. 65-319.000.

Hartmann, Christoph: *See*—
Moll, Reiner; Fedderke, Helge; and Hartmann, Christoph, 6,039,154, Cl. 188-67.000.

Hartmann, Tracy: *See*—
Walker, Jay S.; Case, T. Scott; Hartmann, Tracy; and Tedesco, Daniel E., 6,041,308, Cl. 705-14.000.

Hartsfield, Richard C.: *See*—
Brown, Cary Lee; Hartsfield, Richard C.; Harter, Bernard Gerald; and Schoolcraft, Brian, 6,040,647, Cl. 310-89.000.

Hartung, Hans-Georg; Münker, Jochen; and Richter, Hans-Peter, to SMS Schloemann-Siemag Aktiengesellschaft. Roll stand for strip rolling. 6,038,906, Cl. 72-241.800.

Haruyama, Munetada: *See*—
Saitoh, Masayuki; Kitajima, Yasuo; Iwasawa, Norio; Miura, Kenju; Haruyama, Munetada; and Hashino, Junko, 6,040,335, Cl. 514-460.000.

Harvey, Andrew C.: *See*—
Jens, Stephen C.; Harvey, Andrew C.; and Formato, Richard M., 6,039,556, Cl. 425-363.000.

Hasegawa, Makiko: *See*—
Toyoda, Yoshihiko; Fukada, Tetsuo; Mori, Takeshi; and Hasegawa, Makiko, 6,039,808, Cl. 118-715.000.

Hasegawa, Masanobu; Yoshii, Minoru; and Ohsaki, Yoshinori, to Canon Kabushiki Kaisha. Surface position detecting system and device manufacturing method using the same. 6,040,909, Cl. 356-375.000.

Hasegawa, Shinya; Kayashima, Shigeo; Maeda, Satoshi; and Aritake, Hirokazu, to Fujitsu Limited. Light beam scanning apparatus. 6,040,929, Cl. 359-17.000.

Hasegawa, Takumi, to NEC Corporation. High-speed delay verification apparatus and method therefor. 6,041,168, Cl. 395-500.070.

Hasegawa, Toshiyuki: *See*—

Kawamura, Akira; Hasegawa, Toshiyuki; and Tanikawa, Akira, 6,039,799, Cl. 106-287.200.

Hasegawa, Tsutomu: *See*—
Masuda, Kenichi; Hasegawa, Tsutomu; and Teramoto, Fuminori, 6,040,659, Cl. 315-56.000.

Haselden, Geoffrey Gordon, to BTG International Inc. Vapor compression system. 6,038,875, Cl. 62-218.000.

Hashiguchi, Toshihiko: *See*—
Kimura, Kenichi; Shiga, Akira; Hashiguchi, Toshihiko; Murakami, Eiji; and Sasaki, Katsumi, 6,039,752, Cl. 606-205.000.

Hashimoto, Hiroyuki: *See*—
Terai, Kenichi; and Hashimoto, Hiroyuki, 6,041,126, Cl. 381-71.600.

Hashimoto, Takuya: *See*—
Tanaka, Hiroaki; Sasaki, Yutaka; and Hashimoto, Takuya, 6,040,745, Cl. 333-26.000.

Hashino, Junko: *See*—
Saitoh, Masayuki; Kitajima, Yasuo; Iwasawa, Norio; Miura, Kenju; Haruyama, Munetada; and Hashino, Junko, 6,040,335, Cl. 514-460.000.

Hasing, Friedrich Wolfgang; Pfeiffer, Frank; and Büker, Harald, to Forschungszentrum Julich GmbH. Multipass cavity sensor for measuring a tissue-equivalent radiation dose. 6,041,150, Cl. 385-12.000.

Hasircoglu, Alex: *See*—
Korsunsky, Iosif; Grabbe, Dimitry; Hasircoglu, Alex; Schroepfer, Richard; and Ringler, Daniel Robert, 6,039,583, Cl. 439-101.000.

Hasshi, Suehiro; and Takahashi, Toshiki, to Honda Giken Kogyo Kabushiki Kaisha. Floor structure of a vehicle. 6,039,386, Cl. 296-185.000.

Hata, Toshiaki, to Mitsubishi Denki Kabushiki Kaisha. Reverse rotation control apparatus for a two-cycle engine of a motor vehicle. 6,039,010, Cl. 123-41.00E.

Hatakenaka, Makoto: *See*—
Kitaguchi, Akira; Hatakenaka, Makoto; Nakajima, Michio; Motonami, Kaoru; Shiroshima, Kiyoyuki; and Yamashita, Takekazu, 6,040,614, Cl. 257-529.000.

Hatayama, Yoshinori: *See*—
Ohnishi, Sei; and Hatayama, Yoshinori, 6,039,299, Cl. 248-562.000.

Hatt, Raymond John; Wilson, David John; and Batstone, Druce Barry, to Bundaberg Foundry Engineers Ltd. Apparatus and method for crushing sugar cane. 6,039,276, Cl. 241-30.000.

Hattori, Tetsutaro: *See*—
Miyano, Sotaro; Hattori, Tetsutaro; Uesugi, Osamu; Tamai, Yasufumi; and Sayo, Noboru, 6,040,465, Cl. 549-510.000.

Haudenschild, Christian C.: *See*—
Slimak, Robert A.; Haudenschild, Christian C.; and Slimak, Karen M., 6,040,057, Cl. 428-453.000.

Haugen, Gregory M.: *See*—
Debe, Mark K.; Haugen, Gregory M.; Steinbach, Andrew J.; Thomas, John H., III; and Ziegler, Raymond J., 6,040,077, Cl. 429-40.000.

Hauger, Serge: *See*—
Metzger, Georges; Reinehr, Dieter; and Hauger, Serge, 6,040,443, Cl. 544-90.000.

Hausheer, Frederick H.; and Dodd, Thomas J., to BioNumerik Pharmaceuticals, Inc. Formulations and methods of reducing toxicity of antineoplastic agents. 6,040,294, Cl. 514-23.000.

Hausheer, Frederick H.; and Dodd, Thomas J., to BioNumerik Pharmaceuticals, Inc. Formulations and methods of reducing toxicity of antineoplastic agents. 6,040,304, Cl. 514-221.000.

Hausheer, Frederick H.; and Dodd, Thomas J., to BioNumerik Pharmaceuticals, Inc. Formulations and methods of reducing toxicity of antineoplastic agents. 6,040,312, Cl. 514-283.000.

Hausheer, Fredrick H.; Murali, Dhanabalan; and Seetharamulu, Peddaiahgari, to BioNumerik Pharmaceuticals, Inc. Pharmaceutical formulations of taxanes. 6,040,330, Cl. 514-408.000.

Häusler, Günther; Gericke, Rolf; Wurziger, Hanns; Baumgarth, Manfred; Lues, Inge; De Peyer, Jacques; and Bergmann, Rolf, to Merck Gesellschaft mit beschrankter Haftung. Chroman derivatives. 6,040,308, Cl. 514-253.000.

Hauter, Bradley David. Soccer shoe cover. 6,038,792, Cl. 36-133.000.

Hauver, Bruce C., Sr.; Locati, Ronald P.; and Massaglia, Larry Michael, to Thomas & Betts International, Inc. Power inserter connector. 6,039,609, Cl. 439-668.000.

Havens, Dale I.; and Atkinson, Michael R. Indexing system for changeable signs. 6,038,799, Cl. 40-505.000.

Hayafune, Takeshi; Maemura, Kouichiro; and Miura, Takahito, to Ricoh Company, Ltd. Remote maintenance system and method for computer peripherals. 6,041,183, Cl. 395-712.000.

Hayakawa, Ichiro: *See*—
Yoshida, Akira; Oda, Kozo; Kasai, Takashi; Shimada, Kousei; Kogen, Hiroshi; Hayakawa, Ichiro; Ishihara, Sadao; Koga, Teiichiro; Kitazawa, Eiichi; and Tokui, Taro, 6,040,339, Cl. 514-485.000.

Hayakawa, Yoshihiro; and Kataoka, Masanori, to Japan Science and Technology Corporation. Method for chemical synthesis of oligonucleotides. 6,040,439, Cl. 536-25.340.

Hayashi, Motohiko; and Tanaka, Masahiro, to Sharp Kabushiki Kaisha. Communication apparatus. 6,040,921, Cl. 358-434.000.

Hayashi, Seiji: *See*—
Nimura, Mitsuhiro; Hayashi, Seiji; Ito, Yasunobu; and Inoue, Keizo, 6,041,281, Cl. 701-211.000.

Hayashi, Takaaki; and Etoh, Minoru, to Matsushita Electric Industrial Co., Ltd. Device and method for smoothing picture signal, device and method for encoding picture and device and method for decoding picture. 6,041,145, Cl. 382-268.000.

Hayashi, Yutaka; Kamiya, Masaaki; Kojima, Yoshikazu; and Takasu, Hiroaki, to Agency of Industrial Science and Technology; and Seiko Instruments Inc. Method of fabricating semiconductor device having stacked-layered substrate. 6,040,200, Cl. 438-30.000.

Hayashizaki, Shinichi: *See*—
Kawawada, Naoki; Namiki, Hiroaki; Takehara, Isamu; Iwaki, Tadao; Ishida, Takashi; Hayashizaki, Shinichi; Shimaguchi, Hirotada; and Konno, Katsushige, 6,040,648, Cl. 310-90.000.

Haydock, Douglas N.: *See*—
Aylward, Peter T.; Bourdelais, Robert P.; Haydock, Douglas N.; and Gula, Thaddeus S., 6,040,036, Cl. 428-195.000.

Hayes, Dan M.: *See*—
Flynn, Robin L.; Hayes, Dan M.; and Nickey, George A., 6,038,888, Cl. 65-304.000.

Hayes Lemmerz International, Inc.: *See*—
Robertson, Charles L.; Hedding, Michael A.; and McGrath, Michael C., 6,039,410, Cl. 303-7.000.

Hazencomb, Robert M.: *See*—
Cooper, Austin M.; Hazencomb, Robert M.; Silva, Albert W.; and Wright, Robert William, 6,039,860, Cl. 205-208.000.

He, Li-wei: *See*—
Cohen, Michael F.; He, Li-wei; and Salesin, David H., 6,040,841, Cl. 345-473.000.

Head, Claude D., III, to Texas Instruments Incorporated. Method of manufacturing a product from a workpiece. 6,039,168, Cl. 198-341.070.

Headley, Thomas D.; and Powers, Edward T., to Transfusion Technologies Corporation. System for liquid separation. 6,039,711, Cl. 604-4.000.

Health Sciences, Allegheny University of the: *See*—
Ildstad, Suzanne T.; and Bergheim, Olav B., 6,039,684, Cl. 600-1.000.

Healy, John Edward: *See*—
Davies, William Bloor; Healy, John Edward; Miller, Gary Kaui Lani; Kozakiewicz, Joseph J.; and Ryles, Roderick G., 6,039,881, Cl. 210-732.000.

Healy, Patrick B.: *See*—
Chalberg, Philip E.; and Healy, Patrick B., 6,038,712, Cl. 4-507.000.

Heanue, John F.; Daiber, Andrew J.; and Colvin, James, to Siros Technologies, Inc. Volume holographic storage using rotated signal beam encoder. 6,040,930, Cl. 359-21.000.

Heartstream: *See*—
MacDuff, Ian G; Powers, Daniel J; and Cole, Clinton S, 6,041,257, Cl. 607-5.000.

Heath, Mark A.: *See*—
Gaertner, Mark A.; and Heath, Mark A., 6,040,952, Cl. 360-48.000.

Hebert, Raymond T., to Optimize Incorporated. Color superposition and mixing of light beams for a video display system. 6,040,946, Cl. 359-630.000.

Hed, A. Ze'ev: *See*—
Aisenberg, Sol; Freedman, George; Hed, A. Ze'ev; and Pavelle, Richard, 6,038,786, Cl. 34-267.000.

Hedding, Michael A.: *See*—
Robertson, Charles L.; Hedding, Michael A.; and McGrath, Michael C., 6,039,410, Cl. 303-7.000.

Hedner, Ulla: *See*—
Berkner, Kathleen L.; Petersen, Lars Christian; Hart, Charles E.; Hedner, Ulla; and Bregengaard, Claus, 6,039,944, Cl. 424-94.640.

Hegner, Frank; Schmidt, Elke Maria; Güther, Volker; Otto, Andreas; Breme, Jürgen; Müller, Heinz; and Turnsek, Jürgen Peter, to Endress + Hauser GmbH + Co.; GFE Metalle und Materialien GmbH; and Breme, Jurgen. Active brazing solder for brazing alumina-ceramic parts. 6,039,918, Cl. 420-422.000.

Heiberg, Christopher J.: *See*—
Wie, Bong; Bailey, David A.; and Heiberg, Christopher J., 6,039,290, Cl. 244-165.000.

Heidelberger Druckmaschinen AG: *See*—
Helmstädter, Karl-Heinz; and Schröder, Raimund, 6,038,976, Cl. 101-410.000.
Marmin, Jean Claude, 6,038,973, Cl. 101-225.000.
Platsch, Hans, 6,038,998, Cl. 118-46.000.
Richards, John S., 6,038,974, Cl. 101-232.000.

Heidorn, Raymond W.: *See*—
Mantkowski, Thomas E.; Das, Nripendra N.; Heidorn, Raymond W.; and King, Jackie L., 6,039,810, Cl. 118-715.000.

Heilig, Alexander; and Schultz, Dirk, to TRW Occupant Restraitn Systems GmbH & Co. KG. Knee restraint device for vehicles. 6,039,380, Cl. 296-70.000.

Heimanson, Dorian: *See*—
Moslehi, Mehrdad M.; Davis, Cecil J.; and Heimanson, Dorian, 6,039,848, Cl. 204-192.120.

Heinemeyer, Peter: *See*—
Becker, Klaus; Staiger, Wolfgang; Jung, Matthias; and Heinemeyer, Peter, 6,039,114, Cl. 165-170.000.

Heinley, David Ralph: *See*—
Lau, Willie; Kelly, Michael DeWayne; Lorah, Dennis Paul; and Heinley, David Ralph, 6,040,409, Cl. 526-328.000.

Heinrich, David F.: *See*—
Mayer, Dale J.; Olarig, Sompong Paul; Whiteman, William F.; and Heinrich, David F., 6,041,377, Cl. 710-113.000.

Heinz Bereuter: *See*—
Bereuter, Heinz; Bereuter, Thomas; Bereuter, Wolfgang; and Kohlhaupt, Ingrid, 6,040,281, Cl. 508-508.000.

Heinz-Michael, Zaoralek, to Schwabische Huttenwerke GmbH. Heating roll. 6,039,681, Cl. 492-20.000.

Heisel, Uwe; and Tröger, Johannes. Milling tool with reduced noise emission for machining wood or the like. 6,039,096, Cl. 144-235.000.
Heitmann, Walter, to Deutsche Telekom AG. Optical connection. 6,041,156, Cl. 385-139.000.
Helifix Limited: *See*—
Paterson, Robert Ian; and Sweeney, Patrick John. 6,039,125, Cl. 173-1.000.
Helliwell, Laura I.: *See*—
L'Allier, James J.; Welsh, Sally H.; Nielsen, Boyd W.; Miles, Kurt W.; Myers, Ken L.; Henrie, Stephen P.; Norberg, Michael I.; and Helliwell, Laura I., 6,039,575, Cl. 434-323.000.
Helmstädter, Karl-Heinz; and Schröder, Raimund, to Heidelberger Druckmaschinen AG. Suction-air control device. 6,038,976, Cl. 101-410.000.
Helmus, Michael N.: *See*—
Hostettler, Fritz; Rhum, David; Forman, Michael R.; Helmus, Michael N.; and Ding, Ni, 6,040,058, Cl. 428-457.000.
Helterline, Brian L.; Bullock, Michael L.; and Childers, Winthrop D., to Hewlett-Packard Company. Method and apparatus for storing and retrieving information on a replaceable printing component. 6,039,430, Cl. 347-19.000.
Hembree, David R.; Farnworth, Warren M.; Wood, Alan G.; Gochnour, Derek; and Akram, Salman, to Micron Technology, Inc. Carrier and system for testing bumped semiconductor components. 6,040,702, Cl. 324-755.000.
Hemme, Kent R.; and Shea, Allan K., to Copes-Vulcan, Inc. High energy loss fluid control device. 6,039,076, Cl. 137-625.370.
Hemmings, Brian Arthur; and Millward, Thomas Anders, to Novartis AG. Nucleic acids encoding nuclear Dbf2-related (Ndr) kinases. 6,040,164, Cl. 435-189.000.
Henderson, Gregory Lane: *See*—
Stanton, Stephen Millard; Davis, James Talmage, II; Dutson, Alan James; and Henderson, Gregory Lane, 6,040,846, Cl. 345-905.000.
Henderson, J. Kirston. Machine for transport of passengers and cargo. 6,039,135, Cl. 180-65.300.
Henderson, Scott: *See*—
Khovaylo, Modest; Puyot, Michael A.; Dow, James C.; Henderson, Scott; and Stowell, Davin, 6,040,572, Cl. 250-235.000.
Hendrick, Paul P. Buccal sheath and improved orthodontic system and method using same. 6,039,564, Cl. 433-17.000.
Hendrickson, J. Dean: *See*—
Stein, John P.; and Hendrickson, J. Dean, 6,039,228, Cl. 224-532.000.
Hendriksma, Nick John, to General Motors Corporation. Hydraulic lash adjuster with lash. 6,039,017, Cl. 123-90.430.
Hendrix, Dean P.; and Rowe, David F., Jr., to Ingersoll-Rand Company. Compressor with compressor base that includes fluid supply openings. 6,039,547, Cl. 417-234.000.
Henkel Corporation: *See*—
Kelly, Timm L.; and Rochfort, Gary L., 6,040,280, Cl. 508-503.000.
Henkin, Melvyn L.; and Laby, Jordan M. Water suction powered automatic swimming pool cleaning system. 6,039,886, Cl. 210-776.000.
Henne, Bruce J.: *See*—
Alton, Alfred J.; Beese, James P.; Ekmanis, Juris L.; Henne, Bruce J.; and Smith, William F., 6,040,130, Cl. 430-617.000.
Hennecken, Bruno, to Rheinische Filztuchfabrik GmbH. Press pad for high-pressure and low-pressure presses. 6,040,253, Cl. 442-239.000.
Hennekens, Charles H.: *See*—
Ridker, Paul; and Hennekens, Charles H., 6,040,147, Cl. 435-7.240.
Henner, Dennis J.: *See*—
Garrard, Lisa J.; Henner, Dennis J.; Bass, Steven; Greene, Ronald; Lowman, Henry B.; Wells, James A.; and Matthews, David J., 6,040,136, Cl. 435-5.000.
Hennessy Industries, Inc.: *See*—
Cunningham, Charles L.; and Gwaltney, Robert E., 6,039,104, Cl. 157-21.000.
Henrie, Stephen P.: *See*—
L'Allier, James J.; Welsh, Sally H.; Nielsen, Boyd W.; Miles, Kurt W.; Myers, Ken L.; Henrie, Stephen P.; Norberg, Michael I.; and Helliwell, Laura I., 6,039,575, Cl. 434-323.000.
Henry, Paul M., to National Semiconductor Corporation. Median reference voltage selection circuit. 6,040,718, Cl. 327-71.000.
Henshaw, Susan F., to International Business Machines Corp. Method and system for display manipulation of multiple applications in a data processing system. 6,040,833, Cl. 345-344.000.
Hensley, Frederick M.: *See*—
Chamberlain, L. C. Derek; and Hensley, Frederick M., 6,038,896, Cl. 70-279.100.
Hentschel, Wolfgang, to Auto Kabel Managementgesellschaft mbH. Process and device for connecting a cord made of filaments to a drilled hole or sheath. 6,038,765, Cl. 29-857.000.
Heo, Young Jin: *See*—
Cho, Hyun Nam; Hong, Jae Min; Ko, Young Chan; Choi, Il Seok; and Heo, Young Jin, 6,040,417, Cl. 528-279.000.
Herberg, Arnold J.: *See*—
Bauer, Barney J.; and Herberg, Arnold J., 6,039,353, Cl. 280-806.000.
Herden, Werner; Konrad, Johann; Jahn, Hans-Peter; Knapp, Martin; Fuessl, Hans-Peter; and Qu, Ning, to Robert Bosch GmbH. Method of stacking chips with a removable connecting layer. 6,040,204, Cl. 438-109.000.
Herion, Jörg: *See*—
Szot, Krzysztof; Speier, Wolfgang; and Herion, Jörg, 6,040,070, Cl. 428-700.000.
Herlant, Michel A.: *See*—
Boyes, Geoffrey E.; and Herlant, Michel A., 6,039,767, Cl. 8-400.000.
Herman, Jeff: *See*—
Kaufman, Kenneth; and Herman, Jeff, 6,039,838, Cl. 162-109.000.
Hermanns, Ferdinand-Josef; and Meyer, Urs, to W. Schlafhorst AG & Co. Method for monitoring the application of paraffin on a traveling yarn. 6,039,282, Cl. 242-485.100.
Hernandez, Pamela K.: *See*—
Dunaway, James H.; Hernandez, Pamela K.; and Bidinger, Gregory P., 6,040,380, Cl. 524-832.000.
Hernesniemi, Lasse, to Ahlstrom Machinery Inc. Screen having inclined slots for use in a continuous digester. 6,039,841, Cl. 162-251.000.
Herold, Heiko: *See*—
Gestermann, Fritz; Pinter, Hans-Dieter; Metzger, Karl-Ludwig; and Herold, Heiko, 6,039,853, Cl. 204-258.000.
Herrmann, John E.: *See*—
Amero, Willard F., Jr.; and Herrmann, John E., 6,039,608, Cl. 439-651.000.
Herrmann, Peter: *See*—
Glück, Reinhard; Klein, Peter; Herrmann, Peter; and Wälti, Ernst Rudolf, 6,040,167, Cl. 435-235.100.
Herrmann, Wolfgang Anton: *See*—
Riedel, Michael; Weller, Thomas; Jacobs, Alexandra; Herrmann, Wolfgang Anton; and Morawietz, Markus, 6,040,469, Cl. 556-53.000.
Hett, Robert: *See*—
Gao, Yun; Hett, Robert; Fang, Kevin Q.; Wald, Stephen A.; Redmon, Martin P.; and Senanayake, Chris Hugh, 6,040,344, Cl. 514-554.000.
Heveling, Josef; and Wellig, Alain, to Lonza AG. Process for the preparation of formylimidazoles. 6,040,457, Cl. 548-333.500.
Hewett, Frank W. Material dispensing system. 6,039,214, Cl. 222-93.000.
Hewlett-Packard Company: *See*—
Beerling, Tim, 6,039,438, Cl. 347-63.000.
Burdick, Matt; and Chu, Gigi, 6,041,352, Cl. 709-224.000.
Campbell, Russell; Dow, Richard M.; Blair, Timothy P.; and Poppenga, Burton H., 6,040,917, Cl. 358-1.170.
Dobbs, Michael D, 6,039,426, Cl. 347-19.000.
Du, Weimin; Davis, James W.; Pfeifer, Clemens; Shan, Ming-Chien; and Sheard, Nicolas, 6,041,306, Cl. 705-8.000.
Dunphy, Katherine Ann; Schnapp, Susan T; and Johnson, David C, 6,039,443, Cl. 347-92.000.
Hammond, Maynard D.; and Dewey, James M., 6,041,417, Cl. 713-400.000.
Helterline, Brian L.; Bullock, Michael L.; and Childers, Winthrop D., 6,039,430, Cl. 347-19.000.
Hoffer, Cary J., 6,040,977, Cl. 361-680.000.
Hsu, Wei, 6,041,393, Cl. 711-157.000.
Juve, Ronald A, 6,039,428, Cl. 347-19.000.
Khovaylo, Modest; Puyot, Michael A.; Dow, James C.; Henderson, Scott; and Stowell, Davin, 6,040,572, Cl. 250-235.000.
May, Gregory J., 6,040,681, Cl. 320-113.000.
Melvin, Bruce W., 6,041,065, Cl. 370-492.000.
Moroney, Nathan, 6,039,434, Cl. 347-43.000.
Tsai, Li C.; and Blumberg, Richard M., 6,041,092, Cl. 377-1.000.
Tucker, Sean W.; Cowan, Michael R.; and Martin, Mark P., 6,039,241, Cl. 228-264.000.
Vondran, Gary L., Jr.; and Desoli, Giuseppe, 6,040,925, Cl. 358-525.000.
Vondran, Gary L., Jr., 6,040,926, Cl. 358-525.000.
Wharton, Robert J.; Daniel, Eric R.; and Brown, Joseph D., 6,040,530, Cl. 174-261.000.
Winter, Kirt Alan; and Smith, Thomas G., 6,040,927, Cl. 358-534.000.
Heyman, Duane A.: *See*—
Fishback, Thomas L.; Heyman, Duane A.; Reichel, Curtis J.; and Jaglowski, Adam J., 6,040,413, Cl. 528-44.000.
Heyworth, Diane S.; and Heyworth, Robert C. Decal applying process usng direct screen printing. 6,039,822, Cl. 156-82.000.
Heyworth, Robert C.: *See*—
Heyworth, Diane S.; and Heyworth, Robert C., 6,039,822, Cl. 156-82.000.
Hibbard, Timothy: *See*—
Danzyger, Howard L.; Brow, Karenann; Caruso, James; Hibbard, Timothy; McPhilliamy, Steven; and Thuma, Michael, 6,039,292, Cl. 248-118.500.
Hibbs, Bart D.: *See*—
Parker, Danny S.; Su, Guan Hua; and Hibbs, Bart D., 6,039,541, Cl. 416-223.00R.
Hichri, Habib; Lesins, Viesturs; and Sommer, Christopher C., to Occidental Chemical Corporation. Sulfodechlorinating aromatic compounds. 6,040,477, Cl. 562-46.000.
Hiegel, Todd N. Protective cover for a computer mouse. 6,040,539, Cl. 200-302.100.
Hierstetter, Thomas: *See*—
Dauth, Jochen; Hierstetter, Thomas; Deubzer, Bernward; and Gratzl, Petra, 6,040,383, Cl. 525-100.000.
Higaki, Yoshiyuki: *See*—
Nagasaka, Hideaki; Samoto, Haruhiko; Yashiro, Yoshinobu; and Higaki, Yoshiyuki, 6,039,029, Cl. 123-442.000.
Higashikawa, Iwao: *See*—
Inoue, Soichi; Higashikawa, Iwao; Ogawa, Yoji; Hara, Shigehiro; and Yamamoto, Kazuko, 6,040,114, Cl. 430-296.000.
Higashitani, Keiichi: *See*—
Harada, Akihiko; and Higashitani, Keiichi, 6,040,627, Cl. 257-752.000.
Higgins, Charles T.: *See*—

Fleischhauer, Grier S.; Higgins, Charles T.; Losee, D. Bruce; Nelson, J. Robert, Jr.; Ripley, Robert L.; Sano, Masato; Sharpe, David E.; and Watkins, Michael L., 6,040,560, Cl. 219-494.000.

Hikata, Seiichi; and Toyota, Natsuki, to Toshiba Battery Co., Ltd. Alkaline dry cell containing a can of nickel-plated steel having an inner surface of graphite. 6,040,083, Cl. 429-169.000.

Hill, Andrew: *See*—
Nabors, William; Yates, Debra S.; Linnebur, David H.; Rodriguez, Jon; and Hill, Andrew, 6,038,723, Cl. 7-128.000.

Hill, Gregory S.: *See*—
Hill, Jeffery L.; and Hill, Gregory S., 6,039,479, Cl. 400-621.000.

Hill, Jeffery L.; and Hill, Gregory S., to Dynetics Engineering Corporation, Inc. Printing assembly with continuous stock cutter and sheet feeder for feeding cut sheets to printer. 6,039,479, Cl. 400-621.000.

Hill, Joe T.: *See*—
Monk, David T.; Hill, Joe T.; Wagner, Phillip C.; Loprete, Joseph F.; and Young, Michael R., 6,040,679, Cl. 318-778.000.

Hill, Otho Dale, to Smart Shoes, Inc. Card dispensing shoe with scanner apparatus, system and method therefor. 6,039,650, Cl. 463-47.000.

Hill, Regina Luise: *See*—
Kast, Jürgen; Vossen, Marcus; von Deyn, Wolfgang; Engel, Stefan; Hill, Regina Luise; Kardorff, Uwe; Otten, Martina; Plath, Peter; Walter, Helmut; Westphalen, Karl-Otto; and Misslitz, Ulf, 6,040,274, Cl. 504-348.000.

Hillyer, Bruce K.: *See*—
Biliris, Alexandros; Hillyer, Bruce K.; and Panagos, Euthimios, 6,041,354, Cl. 709-226.000.

Hilti Aktiengesellschaft: *See*—
Pfister, Norbert; Grazioli, Mario; and Ehmig, Gerhard, 6,039,229, Cl. 227-10.000.

Hilton, William W. Impact responsive extendiable arm pick-up for walking cane or the like. 6,039,064, Cl. 135-66.000.

Himeshima, Tomoharu; Nakagawa, Kazumoto; Iwai, Tatsuo; and Watanabe, Takayuki, to Mitsubishi Gas Chemical Company, Inc. Oxygen absorbent composition. 6,039,892, Cl. 252-188.280.

Himmel, Maria Azua; and Rodriguez, Herman, to International Business Machines Corporation. Web browser support for dynamic update of bookmarks. 6,041,360, Cl. 709-245.000.

Hinai, Masatoshi: *See*—
Kondo, Motoyasu; Sakuma, Fukuyo; Urakawa, Youichi; Yokoyama, Yoshihito; and Hinai, Masatoshi, 6,040,704, Cl. 324-762.000.

Hinch, Garry Dale: *See*—
Black, David Glenn; Hinch, Garry Dale; Nguyen, Dat Quoc; and Srinivasan, Kasturi Rangan, 6,040,098, Cl. 430-59.600.

Hinderks, Larry W., to Corporate Computer Systems. Comparing CODEC input/output to adjust psycho-acoustic parameters. 6,041,295, Cl. 704-206.000.

Hinds, Kenneth F. Tooth shaped dental implants. 6,039,568, Cl. 433-175.000.

Hinshaw, Jerald C.; Doll, Daniel W.; Blau, Reed J.; and Lund, Gary K., to Cordant Technologies Inc. Metal complexes for use as gas generants. 6,039,820, Cl. 149-45.000.

Hippenmeyer, Heinrich: *See*—
Reichenbach, Jürgen; and Hippenmeyer, Heinrich, 6,039,253, Cl. 235-462.010.

Hirabayashi, Mineo; Hozumi, Mamoru; and Fukuta, Kinsho, to Kabushiki Kaisha Toyoda Jidoshokki Seisakusho. Service cover for a rear combination lamp. 6,039,465, Cl. 362-496.000.

Hiraide, Tsuneo: *See*—
Mitoh, Ayumi; and Hiraide, Tsuneo, 6,040,196, Cl. 436-518.000.

Hirakawa, Tadashi, to Fuji Machinery Mfg. & Electronics Co., Ltd. Printed circuit board with opposed bonding shelves for semiconductor chip wire bonding at different levels. 6,040,984, Cl. 361-777.000.

Hirano, Yoshiaki, to Canon Kabushiki Kaisha. Printing apparatus and a method therefor, and information processing apparatus and a method therefor. 6,041,382, Cl. 710-131.000.

Hirao, Keiji: *See*—
Ohmi, Tadahiro; Yamaji, Michio; Shinohara, Tsutomu; Itoi, Shigeru; Hirao, Keiji; Kawano, Yuji; Tanaka, Shigeaki; Yokoyama, Kosuke; Morokoshi, Hiroshi; and Ikeda, Nobukazu, 6,039,360, Cl. 285-61.000.

Hirao, Masahiko: *See*—
Ohtani, Toshihiro; Ogi, Hirotsugu; and Hirao, Masahiko, 6,038,925, Cl. 73 598.000.

Hiraoka, Hirokazu: *See*—
Ootuka, Minoru; Hiraoka, Hirokazu; Shimadu, Toru; and Noda, Masayuki, 6,040,252, Cl. 442-169.000.

Hiraoka, Noriyoshi; and Takahashi, Masanori, to Sanshin Kogyo Kabushiki Kaisha. Exhaust arrangement for outboard motor. 6,039,618, Cl. 440-89.000.

Hirata, Michimasa, to Seikagaku Corporation. Antimicrobial peptide. 6,040,291, Cl. 514-12.000.

Hirata, Toshiaki; Urano, Akihiro; Fujino, Shuji; Yamada, Mitsugu; Nakano, Hidetomo; Morita, Shinji; and Miyazaki, Satoshi, to Hitachi, Ltd.; and Hitachi Information Network, Ltd. Method for searching for network connection path. 6,041,353, Cl. 709-224.000.

Hirata, Toshiaki: *See*—
Sugauchi, Kiminori; Hirata, Toshiaki; Nishiki, Kenya; Miyazaki, Satoshi; Mizuguchi, Keizo; and Fujino, Shuji, 6,041,349, Cl. 709-223.000.

Hirata, Yoshihiko: *See*—
Itoh, Shigeo; Makita, Yoshio; Tonegawa, Takeshi; Hirata, Yoshihiko; and Kadowaki, Akira, 6,039,620, Cl. 445-25.000.

Hirath, Jürgen; and Schütte, Markus, to BSH Bosch und Siemens Hausgeraete GmbH. Heat insulated wall. 6,038,830, Cl. 52-788.100.

Hirosawa, Toshio: *See*—
Kokunishi, Motohide; Kato, Hiromu; Ito, Tsutomu; and Hirosawa, Toshio, 6,041,425, Cl. 714-37.000.

Hirose, Tadafumi, to Honda Giken Kogyo Kabushiki Kaisha. Engine-operated generator. 6,039,009, Cl. 123-2.000.

Hirose, Tatsuya: *See*—
Okabe, Takanori; Ban, Takashi; Suzuki, Shigeru; and Hirose, Tatsuya, 6,039,264, Cl. 237-12.30R.

Hirota, Makoto: *See*—
Shibata, Shogo; Fujita, Minoru; Ikeda, Yuji; Ueda, Takaya; Itoh, Fumiaki; and Hirota, Makoto, 6,041,293, Cl. 704-4.000.

Hirota, Toshiaki: *See*—
Maki, Hidetaka; Akazaki, Shusuke; and Hirota, Toshiaki, 6,041,279, Cl. 701-104.000.

Hirota, Toshiharu: *See*—
Abe, Yoshiaki; and Hirota, Toshiharu, 6,040,755, Cl. 338-22.00R.

Hiroya, Masaaki: *See*—
Ito, Atsushi; and Hiroya, Masaaki, 6,039,250, Cl. 235-380.000.

Hirsh, Jeffrey I.; Revelli, Joseph F., Jr.; and Nutt, Alan C. G., to Eastman Kodak Company. Phase-noise type broad spectral bandwidth optical low-pass anti-aliasing filter. 6,040,857, Cl. 348-241.000.

Hirt, Thomas; Baron, Richard Carlton; Lohmann, Dieter; and Meier, Wolfgang Peter, to Novartis AG. Process for the manufacture of an ophthalmic molding. 6,039,913, Cl. 264-331.110.

Hirth, Peter: *See*—
Brück, Rolf; and Hirth, Peter, 6,040,064, Cl. 428-593.000.

Hisamune, Yosiaki, to NEC Corporation. Method of manufacturing semiconductor device without bird beak effect. 6,040,234, Cl. 438-439.000.

Hisano, Seiichi; Saito, Kazuhisa; Sano, Kazushi; Konno, Shinichi; Horikawa, Yoshichika; and Aihara, Yasuhiko, to Dowa Mining Co., Ltd. Particles for lower layer of coating type magnetic recording medium. 6,040,043, Cl. 428-323.000.

Hitachi Cable, Ltd.: *See*—
Sugimoto, Hiroshi; Hagiya, Shigeo; Taketani, Noriaki; Yonemoto, Takaharu; and Yoshioka, Osamu, 6,040,620, Cl. 257-666.000.

Hitachi Electronics Engineering Co., Ltd.: *See*—
Nemoto, Ryoji, 6,039,925, Cl. 422-82.080.

Hitachi Haramachi Electronics Co., Ltd.: *See*—
Shiina, Kazuhiro; Kawamoto, Koji; Miura, Masato; Ohura, Hitoshi; Ozeki, Shoichi; Akiyama, Noboru; Nunomura, Kunihoro; Nemoto, Minehiro; and Iwamura, Masahiro, 6,040,827, Cl. 345-208.000.

Hitachi Information Network, Ltd.: *See*—
Hirata, Toshiaki; Urano, Akihiro; Fujino, Shuji; Yamada, Mitsugu; Nakano, Hidetomo; Morita, Shinji; and Miyazaki, Satoshi, 6,041,353, Cl. 709-224.000.

Hitachi, Ltd.: *See*—
Aimoto, Takeshi, 6,041,038, Cl. 370-229.000.
Bando, Yumi; Okamura, Takumi; and Murata, Toshinori, 6,040,867, Cl. 348-423.000.
Hirata, Toshiaki; Urano, Akihiro; Fujino, Shuji; Yamada, Mitsugu; Nakano, Hidetomo; Morita, Shinji; and Miyazaki, Satoshi, 6,041,353, Cl. 709-224.000.
Ito, Atsushi; and Hiroya, Masaaki, 6,039,250, Cl. 235-380.000.
Kanda, Motohiro; Yamamoto, Akira; Nakano, Toshio; and Yoshida, Minoru, 6,041,391, Cl. 711-112.000.
Kobayashi, Hiromi; Nishida, Hideo; Miura, Haruo; Eino, Takashi; and Takahashi, Kazuki, 6,039,535, Cl. 415-172.100.
Kokunishi, Motohide; Kato, Hiromu; Ito, Tsutomu; and Hirosawa, Toshio, 6,041,425, Cl. 714-37.000.
Matsuyama, Shigeru; Asuma, Hiroaki; Shimura, Masato; Tomita, Yoshifumi; and Aratani, Sukekazu, 6,040,887, Cl. 349-141.000.
Mera, Takeshi; Endo, Satoru; and Sugiyama, Mitsuhiro, 6,040,655, Cl. 313-409.000.
Nishioka, Mototsugu; Umeki, Hisashi; and Matsui, Susumu, 6,041,408, Cl. 713-171.000.
Okamoto, Hiroo; Hosokawa, Kyoichi; Owashi, Hitoaki; Tachibana, Hiroaki; and Noguchi, Takaharu, 6,041,161, Cl. 386-112.000.
Ota, Masuyuki; Kawachi, Genshiro; Kitajima, Masaaki; Sasaki, Tohru; Oh-e, Masahito; Kondo, Katsumi; and Tsumura, Makoto, 6,040,886, Cl. 349-141.000.
Sano, Toshiaki; Ishii, Tomoyuki; Yano, Kazuo; and Mine, Toshiyuki, 6,040,605, Cl. 257-369.000.
Shiina, Kazuhiro; Kawamoto, Koji; Miura, Masato; Ohura, Hitoshi; Ozeki, Shoichi; Akiyama, Noboru; Nunomura, Kunihoro; Nemoto, Minehiro; and Iwamura, Masahiro, 6,040,827, Cl. 345-208.000.
Shiraishi, Takuya; Nogi, Toshiharu; Ohsuga, Minoru; Nakayama, Yoko; and Tokuyasu, Noboru, 6,039,026, Cl. 123-399.000.
Sugauchi, Kiminori; Hirata, Toshiaki; Nishiki, Kenya; Miyazaki, Satoshi; Mizuguchi, Keizo; and Fujino, Shuji, 6,041,349, Cl. 709-223.000.
Tanaka, Tetsuya; Tsuzuki, Koichi; Nishijima, Noriyo; Handa, Fumitaka; and Nakadaira, Shiro, 6,039,866, Cl. 210-136.000.
Terada, Koichi; Kojima, Keiji; Fujikawa, Yoshifumi; Nojiri, Tohru; and Nishioka, Kiyokazu, 6,041,399, Cl. 712-24.000.
Yamamoto, Akira, 6,041,421, Cl. 714-7.000.
Yamamoto, Hiroki; Naito, Takashi; Namekawa, Takashi; Takahashi, Ken; Watanabe, Masahiro; and Takeo, Noriyuki, 6,040,029, Cl. 428-64.100.

Hitomi, Yoshinori: *See*—

Terai, Tadayoshi; Hitomi, Yoshinori; Okano, Masayuki; and Kinoshita, Kazutoshi, 6,038,728, Cl. 15-250.201.

Hlatky, Gregory G., to Equistar Chemicals, LP. Supported single-site catalyst and olefin polymerization process. 6,040,261, Cl. 502-117.000.

Ho, Jan-Ming: *See*—
Chen, Meng-Chang; Ho, Jan-Ming; Ko, Ming-Tat; and Chang, Ray-I, 6,040,866, Cl. 348-419.000.

Ho, Kwok-Lun; Follensbee, Robert A.; Harmer, Walter L.; and Morris, Mary L., to 3M Innovative Properties Company. Abrasive article containing a grinding aid and method of making the same. 6,039,775, Cl. 51-295.000.

Ho, Wan-chol: *See*—
Park, Won-seo; Ho, Wan-chol; Ryu, Duk-Kyun; and Kim, Jong-yeob, 6,040,785, Cl. 340-928.000.

Ho, Zonh-Zen; Jannson, Tomasz P.; Lieberman, Robert A.; Savant, Gajendra D.; and Wang, Allan, to Physical Optics Corporation. Apparatus for analyzing biological samples. 6,040,171, Cl. 435-288.100.

Hobaugh, James M., II; and Cartwright, Mark A., to TRW Inc. Telescoping torque transmitting shaft assembly. 6,038,941, Cl. 74-493.000.

Hobson, Alex R.; McCollam, F. Michael J.; and Powell, Beth P., to W. L. Gore & Associates, Inc. Cleaning assembly for critical image surfaces in printer devices and method of using same. 6,041,211, Cl. 399-352.000.

Hodges, Robert Louis, to STMicroelectronics, Inc. Method of making a shallow trench isolation with thin nitride as gate dielectric. 6,040,233, Cl. 438-427.000.

Hodgson, Craig W.; Wagener, Jefferson L.; Digonnet, Michel J. F.; and Shaw, H. John, to Board of Trustees Leland Stanford Junior University. Time domain multiplexed amplified sensor arrays with improved signal to noise ratios. 6,040,571, Cl. 250-227.140.

Hoe, Phua Swee: *See*—
Hutchison, Roger S.; and Hoe, Phua Swee, 6,039,637, Cl. 451-271.000.

Hoechst AG: *See*—
Behme, Klaus-Jürgen; Jansen, Rolf-Michael; and Zimmermann, Andreas, 6,040,375, Cl. 524-492.000.

Hoechst Aktiengesellschaft: *See*—
Lupo, Donald; Remmers, Marcus; and Neher, Dieter, 6,040,069, Cl. 428-690.000.

Hoechst Marion Roussel: *See*—
Nabahi, Shohre, 6,039,968, Cl. 424-433.000.

Hoechst Marion Roussel, Inc.: *See*—
MacLaren, David D.; Lefler, John R.; and Minish, Sharon K., 6,039,974, Cl. 424-472.000.

Hoeganaes Corporation: *See*—
Luk, Sydney, 6,039,784, Cl. 75-231.000.

Hoegemeyer Hybrid: *See*—
Hoegemeyer, Thomas, 6,040,506, Cl. 800-320.100.
Hoegemeyer, Thomas, 6,040,507, Cl. 800-320.100.

Hoegemeyer, Thomas, to Hoegemeyer Hybrid. Inbred corn line HX621. 6,040,506, Cl. 800-320.100.

Hoegemeyer, Thomas, to Hoegemeyer Hybrid. Inbred corn line HX622. 6,040,507, Cl. 800-320.100.

Hoenisch, Ian P.: *See*—
Houvener, Robert C.; Hoenisch, Ian P.; and Schappler, Joseph, 6,040,783, Cl. 340-825.310.

Hoerig, Timothy R.: *See*—
Cannon, William J.; Remnant, David K.; Ward, Paul D.; and Hoerig, Timothy R., 6,041,402, Cl. 712-200.000.

Hoese, Geoffrey B., to Crossroads Systems, Inc. Fibre channel to SCSI addressing method and system. 6,041,381, Cl. 710-129.000.

Hoess, Werner: *See*—
Albrecht, Klaus; Hoess, Werner; and Schikowsky, Hartmut, 6,040,387, Cl. 525-330.500.

Hofele, Franz-Xaver, to DaimlerChrysler AG. Method for detecting a radar target. 6,040,797, Cl. 342-159.000.

Hofer, Peter: *See*—
Cavalla, David J.; Chasin, Mark; and Hofer, Peter, 6,040,447, Cl. 544-277.000.

Hoffer, Cary J., to Hewlett-Packard Company. Palm rest for a keyboard or a portable computer having a numeric keypad. 6,040,977, Cl. 361-680.000.

Höffges, Peter: *See*—
Miller, Gert; and Höffges, Peter, 6,039,314, Cl. 271-9.010.

Hoffman, Eric J.: *See*—
McDaniel, Bart; Beiley, Mark A.; Clark, Lawrence T.; Hoffman, Eric J.; and Bawolek, Edward J., 6,040,592, Cl. 257-292.000.

Hoffman-La Roche Inc.: *See*—
Shah, Navnit Hargovindas; Railkar, Aruna M.; and Phuapradit, Wantanee, 6,039,975, Cl. 424-473.000.

Hoffmann, Eduard; and Prem, Wolfgang, to MAN Roland Druckmaschinen AG. Printing roller for channel-free printing. 6,038,975, Cl. 101-375.000.

Hoffmann, Erich: *See*—
Götz, Klaus; Jakusch, Helmut; Loch, Werner; Hoffmann, Erich; Gottmann, Hans-Georg; Jenor, Hans-Joachim; and Voit, Johann, 6,040,041, Cl. 428-216.000.

Hoffmann, Klaus E.: *See*—
Gan, Joseph; Badini, Gabriele; and Hoffmann, Klaus E., 6,040,396, Cl. 525-502.000.

Hoffmann-La Roche Inc.: *See*—
Batcho, Andrew David; Manchand, Percy Sarwood; and Uskokovic, Milan Radoje, 6,040,461, Cl. 549-332.000.

Hofius, David V., Sr.; and Hofius, Mark W. Expansion and mounting apparatus for infrared radiant energy source. 6,041,164, Cl. 392-407.000.

Hofius, Mark W.: *See*—
Hofius, David V., Sr.; and Hofius, Mark W., 6,041,164, Cl. 392-407.000.

Hofler, Sr., Kenneth L.: *See*—
Strickland, Charles, 6,039,544, Cl. 417-53.000.

Hofmann, Franz: *See*—
Reisinger, Hans; Grüning, Ulrike; Wendt, Hermann; Stengl, Reinhard; Lehmann, Volker; Willer, Josef; Franosch, Martin; Schäfer, Herbert; Krautschneider, Wolfgang; Hofmann, Franz; and Böhm, Thomas, 6,040,995, Cl. 365-185.180.

Hog, Norbert, to Robert Bosch GmbH. Control device for an optical sensor. 6,040,669, Cl. 318-480.000.

Hoger, Heinz; and Rath, Andreas, to DaimlerChrysler. Screwed connection of a vehicle hinge bracket. 6,038,740, Cl. 16-382.000.

Hogg, Tad H.: *See*—
Jackson, Warren B.; and Hogg, Tad H., 6,039,316, Cl. 271-194.000.

Hohlweg, Rolf; Madsen, Peter; Jørgensen, Tine Krogh; Andersen, Knud Erik; Watson, Brett; Polivka, Zdenek; Konigova, Otylie; Kovandova, Martina; Silhánková, Alexandra; and Valenta, Vladimir, to Novo Nordisk A/S. 1,4-disubstituted piperazines. 6,040,302, Cl. 514-217.000.

Hohlweg, Rolf: *See*—
Andersen, Knud Erik; Jørgensen, Tine Krogh; Hohlweg, Rolf; Fischer, Erik; Olsen, Uffe Bang; Polivka, Zdenek; Sindelar, Karel; and Valenta, Vladimir, 6,040,318, Cl. 514-329.000.

Hokazono, Nobutaka: *See*—
Mitani, Masato; Nakajima, Kazuto; Kotani, Hiroyuki; Hokazono, Nobutaka; Naka, Hiroyuki; Yamaguchi, Akira; Ikeda, Junji; and Aoki, Nobuyuki, 6,040,016, Cl. 427-421.000.

Holbrook, Gerald L.: *See*—
Dourra, Hussein; Holbrook, Gerald L.; Correa, Colt R.; and Parenti, David, 6,039,674, Cl. 477-166.000.

Holden, Homer N.: *See*—
Winter, Jeffrey J.; Holden, Homer N.; and Lawrence, James L., 6,039,082, Cl. 138-121.000.

Holder, John D.; and Johnson, Bayard K., to MEMC Electronic Materials, Inc. Continuous oxidation process for crystal pulling apparatus. 6,039,801, Cl. 117-20.000.

" Holderbahk" Financiere Glarus AG: *See*—
Edlinger, Alfred, 6,039,787, Cl. 75-531.000.

Holderich, Wolfgang Friederich: *See*—
Fougret, Christoph Martin; and Holderich, Wolfgang Friederich, 6,040,262, Cl. 502-162.000.

Holger, Ernst: *See*—
Struck, Sönke; and Holger, Ernst, 6,040,727, Cl. 327-277.000.

Holladay, Will L. Chain saw accessory for supporting a chainsaw during vertical cutting. 6,038,775, Cl. 30-376.000.

Holland, James: *See*—
Pogo, Beatriz; and Holland, James, 6,040,146, Cl. 435-7.230.

Holland Sweetener Company V.O.F.: *See*—
Slangen, Hubertus J. M.; and Kemper, Astrid E., 6,039,275, Cl. 241-17.000.

Hollander, Rudolf Richard, to NEDCON Magazijninrichting B. V. Storage shelf system having shelf members with securing elements engaging cutouts at horizontal bars. 6,039,192, Cl. 211-186.000.

Holley, Gregory L.; and Chandler, Paul E., to Acuson Corporation. Method and apparatus for frequency control of an ultrasound system. 6,039,690, Cl. 600-440.000.

Hollingsworth, Rawle I.; and Wang, Guijun, to Board of Trustees operating Michigan State University. Process for the preparation of protected 3-amino-1,2-dihydroxypropane acetal and derivatives thereof. 6,040,464, Cl. 549-451.000.

Holloway, Thomas C., to Texas Instruments Incorporated. Method of improving diffusion barrier properties of gate oxides by applying ions or free radicals of nitrogen in low energy. 6,040,249, Cl. 438-769.000.

Holman, Hoi-Ying N., to University of California, The Regents of the. In vitro gastrointestinal mimetic protocol for measuring bioavailable contaminants. 6,040,188, Cl. 436-71.000.

Holmes, David William James, to AT&T Wireless Services Inc. Method for allocating a mobile station TMSI. 6,039,624, Cl. 445-403.000.

Holmes, Frederick J., to Semco Machine Corporation. Mounting apparatus for vectorless testing. 6,040,699, Cl. 324-754.000.

Holmes Product Corp.: *See*—
Turner, Tom; and Livergood, Robert J., 6,039,462, Cl. 362-410.000.

Holmes, William K., to Omnicell Technologies, Inc. Lighting system and methods for a dispensing device. 6,039,467, Cl. 364-479.010.

Holowko, Paul L.; and Crone, Aaron D. Method and system for secure control of a medical device. 6,039,251, Cl. 235-380.000.

Hölzel, Folkhard; Kramer, Manfred; and Tiedemann, Jens, to WABCO GmbH. Safety valve arrangement. 6,039,072, Cl. 137-512.300.

Home Diagnostics, Inc.: *See*—
Carroll, Patrick; Schneider, Jon; and Bell, Douglas E., 6,040,195, Cl. 436-514.000.

Homer, Steven S., to Compaq Computer Corporation. Computer having module bay with variable insertion opening size. 6,040,979, Cl. 361-683.000.

Hon Hai Precision Ind. Co., Ltd.: *See*—
Chiou, Song-Rong, 6,039,606, Cl. 439-610.000.
Li, Yu-Chieh, 6,040,541, Cl. 200-344.000.

Hon Hai Precison Ind. Co., Ltd.: *See*—
Tseng, Gwou-Jong; and Kang, Yuh-Huey, 6,039,595, Cl. 439-377.000.

Honaga, Kazuhiro: *See*—
Sugimoto, Takashi; and Honaga, Kazuhiro, 6,039,138, Cl. 180-245.000.

Honda, Atsuhito: *See*—

Toge, Tetsuo; Komatsubara, Michiro; Honda, Atsuhito; Sadahiro, Kenichi; and Senda, Kunihiro, 6,039,818, Cl. 148-307.000.

Honda Giken Kogyo Kabushiki Kaisha: *See*—
Hasshi, Suehiro; and Takahashi, Toshiki, 6,039,386, Cl. 296-185.000.
Hirose, Tadafumi, 6,039,009, Cl. 123-2.000.
Isobe, Takashi; and Tsutsumi, Kojiro, 6,038,912, Cl. 73-1.590.
Maki, Hidetaka; Akazaki, Shusuke; and Hirota, Toshiaki, 6,041,279, Cl. 701-104.000.
Nakajima, Yoshiyuki, 6,040,763, Cl. 340-427.000.
Nishina, Yuji; and Kimisawa, Toshihide, 6,039,296, Cl. 248-311.200.
Okamoto, Takafumi, 6,040,073, Cl. 429-26.000.
Okuda, Akihito; Fushimi, Koichi; and Terayama, Hiroshi, 6,039,666, Cl. 475-72.000.

Honda, Hirohiko; and Kato, Yoshinobu, to Toshiba Kikai Kabushiki Kaisha. Machine tool control system and machine tool control method, and detection system and detection method therefor. 6,040,666, Cl. 318-276.000.

Honda, Tsutomu; Matsumoto, Hiroyuki; and Suzuki, Tatsuya, to Minolta Co., Ltd. Camera capable of video and film shooting having optical viewfinder. 6,041,195, Cl. 396-429.000.

Honda, Yoshitaka: *See*—
Ichikawa, Yoshito; Mihori, Takashi; Sakurai, Tomohisa; and Honda, Yoshitaka, 6,039,732, Cl. 606-38.000.

Honeycutt, Jeffrey W.; Gonzalez, Fernando; and Ahmed, Fawad, to Micron Technology, Inc. Angled ion implantation for selective doping. 6,040,208, Cl. 438-229.000.

Honeywell Inc.: *See*—
DiMarco, Mario, 6,039,581, Cl. 439-74.000.
Rybarczyk, David F.; Mar, Lori S.; Mets, Christiaan M.H.; and Xi, Xiaojin, 6,041,178, Cl. 395-705.000.
Wie, Bong; Bailey, David A.; and Heiberg, Christopher J., 6,039,290, Cl. 244-165.000.
Wruck, Richard A.; and Shavit, Gideon, 6,041,264, Cl. 700-40.000.
Youngner, Daniel W.; and Ridley, Jeffrey A., 6,040,749, Cl. 335-78.000.

Hong, Chung, II; Kim, Jung Woo; Lee, Sang Joon; Ahn, Soon Kil; Choi, Nam Song; Hong, Ryung Kee; Chun, Hyoung Sik; Moon, Seung Kee; and Lee, Hong Woo, to Chong Kun Dang Corporation. 5-demethoxyfumagillol derivatives and processes for preparing the same. 6,040,337, Cl. 514-475.000.

Hong, Jae Min: *See*—
Cho, Hyun Nam; Hong, Jae Min; Ko, Young Chan; Choi, Il Seok; and Heo, Young Jin, 6,040,417, Cl. 528-279.000.

Hong Kong Disc-Lock Company Limited: *See*—
McKinlay, Alistair N., 6,039,524, Cl. 411-149.000.

Hong, Ryung Kee: *See*—
Hong, Chung, II; Kim, Jung Woo; Lee, Sang Joon; Ahn, Soon Kil; Choi, Nam Song; Hong, Ryung Kee; Chun, Hyoung Sik; Moon, Seung Kee; and Lee, Hong Woo, 6,040,337, Cl. 514-475.000.

Hooper, James R.; Strother, Richard K.; Fish, John; Pawling, Paul G.; and Sauer, Gerald L., to Lockheed Martin Corporation. Extremely low viscosity matrix epoxy suffusion resin system. 6,040,397, Cl. 525-526.000.

Hoover Company, The: *See*—
McKnight, Darwin T.; Essex, John D.; and Symensma, Kenneth L., 6,038,732, Cl. 15-414.000.

Hope, Mark E.: *See*—
Kennie, Jerry; Cheng, Yi; Hope, Mark E.; Huff, Shean; Nankee, Robert J., II; Joyce, Mary; Krozek, Dennis A.; Moote, Richard K.; Richardson, Roland T.; Rotramel, William D.; and Seitz, Gary L., 6,041,278, Cl. 701-103.000.

Hopkins, William Thomas; Riesland, David Henrik; and Banks, Anthony William, to France/Scott Fetzer Company. Neon power supply with midpoint ground detection and diagnostic functions. 6,040,778, Cl. 340-650.000.

Hopper, C. Bradford: *See*—
Zika, Steven J.; and Hopper, C. Bradford, 6,040,912, Cl. 356-394.000.

Hopper, Hans Paul; and Cassity, Thomas G., to Cooper Cameron Corporation. Completion system. 6,039,119, Cl. 166-368.000.

Hoppie, Lyle O., to Eaton Corporation. System and method for regenerative electromagnetic engine valve actuation. 6,039,014, Cl. 123-90.110.

Horchler, David C.: *See*—
Clark, Stephen L.; Horchler, David C.; Stoner, Stuart C.; Pontius, Glenn J.; and Nailor, William K., III, 6,038,762, Cl. 29-739.000.

Hori, Takeshi; Uezono, Tsutomu; Yoshii, Tomoyuki; and Funayama, Yasuhiro, to NEC Corporation. Porous photoreceptor and method for manufacturing the same. 6,040,106, Cl. 430-127.000.

Horikawa, Yoshichika: *See*—
Hisano, Seiichi; Saito, Kazuhisa; Sano, Kazushi; Konno, Shinichi; Horikawa, Yoshichika; and Aihara, Yasuhiko, 6,040,043, Cl. 428-323.000.

Horino, Yuji: *See*—
Chayahara, Akiyoshi; Horino, Yuji; Kinomura, Atsushi; Tsubouchi, Nobuteru; and Fujii, Kanenaga, 6,039,847, Cl. 204-192.110.

Hormel Foods, LLC: *See*—
Zamzow, Merle, 6,039,995, Cl. 426-518.000.

Horn, Glenn: *See*—
Erlich, Henry A.; Horn, Glenn; Saiki, Randall K.; Mullis, Kary B.; and Gelfand, David H., 6,040,166, Cl. 435-194.000.

Horn, Lois. Device for lifting and handling fowl or meat. 6,039,373, Cl. 294-15.000.

Horn, Marcus J., to Amersham Pharmacia Biotech AB. Chemical sample treatment system and cassette, and methods for effecting multistep treatment process. 6,039,924, Cl. 422-67.000.

Hornack, Richard S., to Chemcraft, Inc. Acid-neutralizing additive for roasting coffee. 6,039,996, Cl. 426-534.000.

Horng, Alex, to Sunonwealth Electric Machine Industry Co., Ltd. Support structure apparatus for a spindle motor of a compact disc machine. 6,040,649, Cl. 310-91.000.

Horowitz, Carl: *See*—
Sanduja, Mohan L.; Horowitz, Carl; Kamruzzaman, Mohammed; Thottathil, Paul; and Ramsey, Earl A., 6,039,964, Cl. 424-404.000.
Sanduja, Mohan L.; Horowitz, Carl; Thomas, Abraham; and Thottathil, Paul, 6,040,378, Cl. 524-588.000.

Horstmann Timers & Controls Limited: *See*—
Ladds, David Anthony, 6,040,690, Cl. 324-142.000.

Horton, Robert Ray; and Camp, William O., Jr., to Ericsson Inc. Systems and methods for sharing reference frequency signals within a wireless mobile terminal between a wireless transceiver and a global positioning system receiver. 6,041,222, Cl. 455-255.000.

Hoshino, Tatsuyuki: *See*—
Ban, Takashi; Hoshino, Tatsuyuki; Okabe, Takanori; and Ban, Takahisa, 6,039,007, Cl. 122-26.000.

Hoskin, Robert F. Braking system for in-line skates. 6,039,330, Cl. 280-11.200.

Hoskins, Matthew W.; and Boileau, Michel A., to K-2 Corporation. Bite valve for hydration bladder. 6,039,305, Cl. 251-342.000.

Hosokawa, Kyoichi: *See*—
Okamoto, Hiroo; Hosokawa, Kyoichi; Owashi, Hitoaki; Tachibana, Hiroaki; and Noguchi, Takaharu, 6,041,161, Cl. 386-112.000.

Hosokoshiyama, Hiroshi; Yoneyama, Masashi; Busujima, Makoto; Tokuda, Hiroaki; Osuga, Naohito; and Tashiro, Kouji, to Yoshino Kogyosho Co., Ltd. Extrusion-blow molded container having cylindrical body and metal mold for producing the same. 6,039,204, Cl. 220-623.000.

Hospal Industrie: *See*—
Chevallet, Jacques; and Riquier, Jean-Claude, 6,039,877, Cl. 210-636.000.

Hostettler, Fritz; Rhum, David; Forman, Michael R.; Helmus, Michael N.; and Ding, Ni, to Schneider (USA) Inc. Slippery, tenaciously adhering hydrophilic polyurethane hydrogel coatings, coated metal substrate materials, and coated medical devices. 6,040,058, Cl. 428-457.000.

Hotta, Nigishi; and Fujisawa, Hiroki, to Nippon Zoki Pharmaceuticals Co., Ltd. 3-deoxyglucosone production inhibitor. 6,040,326, Cl. 514-386.000.

Hotta, Yasuhiro; and Kouchi, Shuichiro, to Sharp Kabushiki Kaisha. Semiconductor memory device. 6,040,999, Cl. 365-200.000.

Houle, Patrick J.: *See*—
Sonnenberg, Wade; Houle, Patrick J.; Luong, Thong B.; Shelnut, James G.; and Fisher, Gordon, 6,039,859, Cl. 205-159.000.

Houlihan, John A. Selectable control energy and water conservation system. 6,039,067, Cl. 137-337.000.

Houvener, Robert C.; Hoenisch, Ian P.; and Schappler, Joseph, to Image Data, LLC. System and method for remote, wireless positive identity verification. 6,040,783, Cl. 340-825.310.

Howa Machinery, Ltd.: *See*—
Oketani, Tetsuya; and Uemura, Tadashi, 6,039,680, Cl. 483-57.000.

Howard, Richard T., to Assisi Software Corporation. Method and system for simulating forest management. 6,041,173, Cl. 395-500.270.

Howard, William G.: *See*—
Haas, David P.; Howard, William G.; Crespi, Ann M.; Rorvick, Anthony R.; Rockow, Steven; and Ries, Andrew J., 6,040,082, Cl. 429-163.000.

Howell, Steven Christopher, to Jaguar Cars, Limited, Whitley, Coventry. Immobilization system for motor vehicles. 6,040,638, Cl. 307-10.200.

Howland, Thomas E.: *See*—
Snoke, Steven R.; Silvis, Gary; and Howland, Thomas E., 6,039,417, Cl. 312-257.100.

Howmedica GmbH: *See*—
Simon, Bernd, 6,039,739, Cl. 606-64.000.

Hoya Corporation: *See*—
Minato, Atsuo, 6,039,447, Cl. 351-216.000.

Hoyt, Matthew B.: *See*—
Kent, Diane R.; Hoyt, Matthew B.; Ilg, Otto M.; and Queen, Morris K., 6,039,903, Cl. 264-40.100.

Hozumi, Mamoru: *See*—
Hirabayashi, Mineo; Hozumi, Mamoru; and Fukuta, Kinsho, 6,039,465, Cl. 362-496.000.

Hsiao, Yi Li, to Taiwan Semiconductor Manufacturing Co., Ltd. Method for detecting wafer orientation during transport. 6,040,585, Cl. 250-559.400.

Hsich, Henry S., to Bundy Corporation. Multi-layer tubing assembly with foamed outer layer. 6,039,085, Cl. 138-137.000.

Hsieh, An-Fu. Multi-usage electric tool with angle-changeable grip. 6,039,126, Cl. 173-216.000.

Hsu, Chen-Chung; and Chang, Yih-Jau, to United Microelectronics Corp. Method for fabricating an electrostatistic discharge protection device to protect an integrated circuit. 6,040,222, Cl. 438-301.000.

Hsu, Ching-Hsiang: *See*—
Lin, Ruei-Ling; and Hsu, Ching-Hsiang, 6,040,217, Cl. 438-258.000.

Hsu, Fang-Ru: *See*—
Meng, Wan-Yu; Chang, Cheng-Kai; Chang, Hwai-Tsu; Hsu, Fang-Ru; and Lee, Ming-Rong, 6,041,322, Cl. 706-43.000.

Hsu, Shi-Ping; Ling, James M.; Messenger, Arthur F.; and Evans, Bruce W., to TRW Inc. Personal identification fob. 6,041,410, Cl. 713-186.000.

Hsu, Wei, to Hewlett-Packard Co. Array padding for higher memory throughput in the presence of dirty misses. 6,041,393, Cl. 711-157.000.

Hu, Francisco, to Shyang Feng Electric & Machinery Co., Inc. Door lock. 6,038,894, Cl. 70-224.000.

Hu, Jing-Shan; Rosen, Craig A.; and Cao, Liang, to Human Genome Sciences, Inc. Vascular endothelial growth factor 2. 6,040,157, Cl. 435-69.400.

Huang, Chi-Jung; and Li, Ken Ming, to S3 Incorporated. Programmable delay timing calibrator for high speed data interface. 6,041,419, Cl. 713-401.000.

Huang, Chung-Chen, to Teh Yor Industrial Co., Ltd. Apparatus for producing shade material. 6,039,103, Cl. 156-511.000.

Huang, Ming-Hsin: *See—*
Chen, Chao-Cheng; Huang, Ming-Hsin; Tao, Hun-Jan; and Tsai, Chia-Shiung, 6,040,248, Cl. 438-725.000.

Huang, Nen-Fu; Wang, Yao-Tzung; and Lin, Trung-Pao, to Industrial Technology Research Inst. Method for maintaining virtual local area networks with mobile terminals in an ATM network. 6,041,358, Cl. 709-238.000.

Hubbard, James Allison: *See—*
Bass, Brian Mitchell; Hubbard, James Allison; Oman, Price Ward; and Pita, Frank J., 6,041,375, Cl. 710-103.000.

Huber, Brigitte T.; Schmitz, Tracy; and Underwood, Robert, to Tufts University. Potentiation of the immune response. 6,040,145, Cl. 435-7.200.

Huber, Thomas; and Dürrwaechter, Martin, to Telair International GmbH. Floor unit. 6,039,288, Cl. 244-118.100.

Hübner, Heijo; Lübbers, Dierk; and Mühlbauer, Wolfgang, to Ernst Mühlbauer KG. Impression compound with a silicon base and wax admixture. 6,040,354, Cl. 523-109.000.

Huc, Alain: *See—*
Perrier, Eric; Antoni, Daniele; and Huc, Alain, 6,039,961, Cl. 424-401.000.

Hudson, Frank E.: *See—*
Bowman, Howard L.; Darwin, Robert L.; Maraffio, William M.; Sawyer, Larry D.; Williams, Robert B.; Hudson, Frank E.; Hunstad, Mary; and Decker, Mark W., 6,039,124, Cl. 169-61.000.

Hudson, Robert Leslie, to Kimberly-Clark Worldwide, Inc. Photostabilization package usable in nonwoven fabrics and nonwoven fabrics containing same. 6,040,255, Cl. 442-382.000.

Huemmer, Wolfgang: *See—*
Telser, Thomas; Huemmer, Wolfgang; and Kurtz, Karl-Rudolf, 6,040,116, Cl. 430-306.000.

Huff, Karen L. Through-the-washer-dryer pouch-type detergent bag and method of use. 6,040,286, Cl. 510-297.000.

Huff, Shean: *See—*
Kennie, Jerry; Cheng, Yi; Hope, Mark E.; Huff, Shean; Nankee, Robert J., II; Joyce, Mary; Krozek, Dennis A.; Moote, Richard K.; Richardson, Roland T.; Rotramel, William D.; and Seitz, Gary L., 6,041,278, Cl. 701-103.000.

Hughes Electonics Corporation: *See—*
De Los Santos, Hector J.; Kao, Yu-Hua; Caigoy, Arturo L.; and Ditmars, Eric D., 6,040,611, Cl. 257-415.000.

Hughes Electronics Corporation: *See—*
Mead, Donald C., 6,041,147, Cl. 382-305.000.
Rosati, Ronald F., 6,041,233, Cl. 455-427.000.

Hughes, Emma Suzanne: *See—*
Bickerton, Matthew John; Bohrer, Kathryn Ann; Hughes, Emma Suzanne; Kenworthy, Edward William; Musgrove, Rupert Jeremy; Patterson, LindaMay Rose; Porter, Steven; Salt, David Dennis; and Scattergood, Duncan Keith, 6,041,312, Cl. 705-30.000.

Hughes, Lillie. Geographical area terrarium. 6,039,571, Cl. 434-151.000.

Huh, Kyung Bum; and Kim, Kwang Joon, to Korea Advanced Institute Science and Technology. Switched reluctance motor having noise and vibration reduced. 6,040,678, Cl. 318-701.000.

Hultholm, Stig-Erik; and Fugleberg, Sigmund Peder, to Outkumpu Technology Oy. Method for recovering nickel hydrometallurgically from two different nickel mattes. 6,039,790, Cl. 75-739.000.

Human Genome Sciences, Inc.: *See—*
Hu, Jing-Shan; Rosen, Craig A.; and Cao, Liang, 6,040,157, Cl. 435-69.400.

Hummel, Karl Ernst; Luka, Helmut; and Sommer, Bruno, to Filterwerk Mann & Hummel GmbH. Filter arrangement. 6,039,780, Cl. 55-502.000.

Humphreys, Eric R.: *See—*
Dvorak, Charles A.; Wren, Douglas L.; Fisher, Lawrence E.; Axt, Steven D.; Humphreys, Eric R.; Arzeno, Humberto B.; Beard, Colin C.; Nguyen, Sam Linh; Han, Yeun-Kwei; Roberts, Christopher R.; Lund, Jan P.; and Fatheree, Paul R., 6,040,446, Cl. 544-276.000.

Humphreys, Robert W. R.: *See—*
Carrier, Allen M.; Humphreys, Robert W. R.; and Petersen, Paul M., 6,040,406, Cl. 526-238.220.

Hung, Chih-Teng: *See—*
Sung, Chih-Ta Star; Mattela, Venkat; Afsar, Muhammad; Singh, Balraj; and Hung, Chih-Teng, 6,040,998, Cl. 365-194.000.

Hung, Ching-Cheh, to National Aeronautics and Space Administration, The United States of America as represented by Administration of the. Process for producing metal compounds from graphite oxide. 6,039,930, Cl. 423-592.000.

Hunstad, Mary: *See—*
Bowman, Howard L.; Darwin, Robert L.; Maraffio, William M.; Sawyer, Larry D.; Williams, Robert B.; Hudson, Frank E.; Hunstad, Mary; and Decker, Mark W., 6,039,124, Cl. 169-61.000.

Hunt, John T.: *See—*
Kim, Kyoung S.; Kimball, S. David; Cai, Zhen-wei; Rawlins, David B.; Misra, Raj N.; Poss, Michael A.; Webster, Kevin R.; Hunt, John T.; and Han, Wen-Ching, 6,040,321, Cl. 514-369.000.

Hunt Wesson, Inc.: *See—*
Bakshi, Amarjit S.; and Khatri, Lakho L., 6,039,999, Cl. 426-633.000.

Hunter Douglas International N.V.: *See—*
de Beijer, Justinus Lambertus Theodurus, 6,039,295, Cl. 248-262.000.

Hunter' s Specialties, Inc.: *See—*
Forbes, David R.; Mortensen, Dave; Bean, Ron M; and Williams, Gregory G., 6,039,627, Cl. 446-208.000.

Huntsman Petrochemical Corporation: *See—*
Marquis, Edward T.; and Baldwin, Robert E., 6,040,284, Cl. 510-201.000.

Hurry, Fariba: *See—*
Edwin, Tarun J.; Hurry, Fariba; and Banas, Christopher E., 6,039,755, Cl. 623-1.000.

Husted, Myron J. Retractable air deflector for a vehicle. 6,039,385, Cl. 296-180.300.

Hutchison, Roger S.; and Hoe, Phua Swee, to CD-Rom USA, Inc. Security device for destroying the information bearing layer and data of a compact disc. 6,039,637, Cl. 451-271.000.

Huttinger Medizintechnik GmbH: *See—*
Berlien, Hans-Peter; Muller, Gerhard; Beuthan, Jürgen; and Philipp, Carsten, 6,039,728, Cl. 606-15.000.

Hutto, Sterling: *See—*
Kunzelman, Kevin; and Hutto, Sterling, 6,041,357, Cl. 709-228.000.

Huynh, Quoi V.; Ngo, Sang T.; Judkins, Joseph James, III; and Alfano, Donald E., to TelCom Semiconductor, Inc. Monolithic fan controller. 6,040,668, Cl. 318-471.000.

Huynh, Son Huy; and Cheng, George, to Antcom Corp. Low profile ceramic choke. 6,040,805, Cl. 343-785.000.

HWA Shin Musical Instrument Co., Ltd.: *See—*
Liao, Tsun-Chi, 6,040,514, Cl. 84-421.000.

Hydrabaths, Inc.: *See—*
Chalberg, Philip E.; and Healy, Patrick B., 6,038,712, Cl. 4-507.000.

Hydro Drilling International S.p.A.: *See—*
Brunato, Siro, 6,039,128, Cl. 175-70.000.

Hyland, James Henry: *See—*
Benjamin, Karen Elizabeth; and Hyland, James Henry, 6,039,599, Cl. 439-489.000.

Hylsa S.A. de C.V.: *See—*
Celada-Gonzalez, Juan; Quintero-Flores, Raul Gerardo; Viramontes-Brown, Ricardo; and Flores-Serrano, Roberto Octaviano, 6,039,916, Cl. 266-82.000.
Munoz-Baca, Julio Manuel; Bäumer, Klaus; and Bald, Erhard, 6,039,283, Cl. 242-534.000.

Hylton, Gary L.: *See—*
Chak, Yee C.; Dierick, Bryan R.; and Hylton, Gary L., 6,038,967, Cl. 100-2.000.

Hynecek, Jaroslav, to Texas Instruments Incorporated. Fixed-pattern-noise reduction in active pixel image sensors. 6,040,569, Cl. 250-208.100.

Hyoda, Shunji; Kita, Masaharu; Sawada, Hirotoshi; Nemugaki, Shuichi; Otsuka, Sumio; Miyawaki, Yoshitaka; Ogawa, Takashi; and Kubo, Yuhki, to Japan Hydrazine Co., Inc; and Masuda Chemical Industry Co., Ltd. Method for preparing 5,5'-bi-1H-tetrazole salt. 6,040,453, Cl. 548-250.000.

Hyundai Electronics America: *See—*
Doran, Daniel B., 6,039,057, Cl. 134-95.200.

Hyundai Electronics Industries Co., Ltd.: *See—*
Jun, Jung-Mok; and Lee, Seok-Lyul, 6,040,882, Cl. 349-39.000.
Kim, Jung Pill; and Jung, In Chul, 6,041,009, Cl. 365-225.700.
Park, Sang Hoon, 6,040,593, Cl. 257-292.000.
Yi, Seung Hyun; and Kim, Jae Whan, 6,041,005, Cl. 365-207.000.

Hyundai Motor Company: *See—*
Choi, Guk-Sun, 6,039,388, Cl. 296-207.000.
Choi, Kuk-Sun, 6,039,387, Cl. 296-188.000.
Park, Jong-sool, 6,039,670, Cl. 475-275.000.

Hyundai Motor Company, Ltd.: *See—*
Jo, Sung Hwan, 6,039,321, Cl. 277-435.000.

I.C. Com Ltd.: *See—*
Fried, Rafael, 6,040,717, Cl. 326-113.000.

I.E.E. International Electronics & Engineering S.a.r.l.: *See—*
Lehnen, Hans Gunter; Lorig, Roland; and Schmitt, Stefan, 6,038,930, Cl. 73-774.000.

I/O Sensors, Inc.: *See—*
Ip, Matthew W., 6,040,625, Cl. 257-719.000.

Iams Company, The: *See—*
Sunvold, Gregory D.; Tetrick, Mark A.; and Reinhart, Gregory A., 6,039,952, Cl. 424-195.100.

Ibukuro, Sadao: *See—*
Miyazaki, Akimitsu; Ibukuro, Sadao; and Nagakubo, Yasunori, 6,040,931, Cl. 359-110.000.

Ichikawa, Yoshito; Mihori, Takashi; Sakurai, Tomohisa; and Honda, Yoshitaka, to Olympus Optical Co., Ltd. Electric operation apparatus. 6,039,732, Cl. 606-38.000.

Ichimura, Isao; Maeda, Fumisada; Yamamoto, Kenji; Ohsato, Kiyoshi; Watanabe, Toshio; and Suzuki, Akira, to Sony Corporation. Optical disc recording/reproduction apparatus and method. 6,041,031, Cl. 369-112.000.

Ichioka, Ryoji; Yamakawa, Shinobu; Okino, Hirohito; Kato, Hajime; Iwayama, Kazuyoshi; Konta, Hiroshi; and Kitamura, Akira, to Toray Industries, Inc. Process for producing aromatic compounds by dealkylation, transalkylation, or disproportionation. 6,040,490, Cl. 585-475.000.

Ichiriki, Hideki, to Fuji Xerox Co., Ltd. Document storage apparatus. 6,040,920, Cl. 358-403.000.

Ichor Medical Systems Inc.: *See—*
Walker, Jeffrey P.; and Bernard, Robert M., 6,041,252, Cl. 604-20.000.

ICOS Corporation: *See—*
Gallatin, W. Michael; and Vazeux, Rosemay, 6,040,176, Cl. 435-326.000.

ICP Corporation: *See—*

Harman, James N.; and Upcavage, Richard J., 6,039,489, Cl. 401-146.000.
Ide, Masafumi: *See*—
Akiba, Yuichi; and Ide, Masafumi, 6,040,201, Cl. 438-30.000.
Idemitsu Petrochemical Co., Ltd.: *See*—
Nishimura, Koichi; Kawamura, Tatsuya; and Fujioka, Toyozo, 6,040,388, Cl. 525-332.100.
Igarashi, Masaru: *See*—
Minami, Hiromasa; Igarashi, Masaru; and Chiku, Takahiro, 6,040,080, Cl. 429-96.000.
Igi, Nobuhiro: *See*—
Kato, Motoki; Igi, Nobuhiro; and Yasuda, Kazunori, 6,040,865, Cl. 348-416.000.
Ihara, Keisuke: *See*—
Kasashima, Atsuki; Ihara, Keisuke; and Shimosaka, Hirotaka, 6,039,660, Cl. 473-378.000.
Iida, Michihiko; Kawashima, Tetsuji; Sato, Shoji; and Masuda, Shozo, to Sony Corporation. Disc apparatus. 6,041,029, Cl. 369-50.000.
Iida, Ryohei: *See*—
Yamaguchi, Yuji; Yoshimori, Masaharu; Ozawa, Hiroyuki; Iida, Ryohei; and Taniguchi, Kazuo, 6,040,844, Cl. 345-518.000.
Iijima, Motoko: *See*—
Watanabe, Yoshitane; Suzuki, Keitaro; Koyama, Yoshinari; and Iijima, Motoko, 6,040,372, Cl. 524-413.000.
Iimura, Keiji. Flat light source with U-shaped configuration. 6,039,452, Cl. 362-31.000.
Ikarashi, Tsunehiko: *See*—
Kanazawa, Hiromichi; Ueda, Kunihiro; Yanagiuchi, Katsuaki; Ikarashi, Tsunehiko; and Kohno, Masahide, 6,040,052, Cl. 428-408.000.
Ikeda Bussan Co., Ltd.: *See*—
Yoshida, Tomonori; and Eguchi, Moriyuki, 6,039,400, Cl. 297-367.000.
Ikeda, Eiichiro, to Canon Kabushiki Kaisha. Method and apparatus for expanding the dynamic range of sensed color images. 6,040,858, Cl. 348-242.000.
Ikeda, Junji: *See*—
Mitani, Masato; Nakajima, Kazuto; Kotani, Hiroyuki; Hokazono, Nobutaka; Naka, Hiroyuki; Yamaguchi, Akira; Ikeda, Junji; and Aoki, Nobuyuki, 6,040,016, Cl. 427-421.000.
Ikeda, Kazuo; Komorita, Hiroshi; Sato, Yoshitoshi; Komatsu, Michiyasu; and Mizunoya, Nobuyuki, to Kabushiki Kaisha Toshiba. Silicon nitride circuit board. 6,040,039, Cl. 428-210.000.
Ikeda, Kiyoshi: *See*—
Kobayashi, Hideyuki; Kishimoto, Mitsuru; Ooishi, Noboru; and Ikeda, Kiyoshi, 6,039,433, Cl. 347-40.000.
Ikeda, Nobukazu: *See*—
Ohmi, Tadahiro; Yamaji, Michio; Shinohara, Tsutomu; Itoi, Shigeru; Hirao, Keiji; Kawano, Yuji; Tanaka, Shigeaki; Yokoyama, Kosuke; Morokoshi, Hiroshi; and Ikeda, Nobukazu, 6,039,360, Cl. 285-61.000.
Ikeda, Tamotsu, to Sony Corporation. Apparatus and method for detecting signal points using signal point-mapping. 6,041,432, Cl. 714-786.000.
Ikeda, Toru: *See*—
Nishida, Masatsugu; Ikeda, Toru; and Yokoyama, Tomoki, 6,040,674, Cl. 318-632.000.
Ikeda, Yuji: *See*—
Shibata, Shogo; Fujita, Minoru; Ikeda, Yuji; Ueda, Takaya; Itoh, Fumiaki; and Hirota, Makoto, 6,041,293, Cl. 704-4.000.
Ikeyama, Yasushi: *See*—
Arai, Hatsuyuki; and Ikeyama, Yasushi, 6,040,244, Cl. 438-691.000.
Ildstad, Suzanne T.; and Bergheim, Olav B., to Health Sciences, Allegheny University of the; and Chimeric Therapies, Inc. Non-lethal conditioning methods for the treatment of acquired immunodeficiency syndrome. 6,039,684, Cl. 600-1.000.
Ilg, Otto M.: *See*—
Kent, Diane R.; Hoyt, Matthew B.; Ilg, Otto M.; and Queen, Morris K., 6,039,903, Cl. 264-40.100.

Ishida, Nobuo; Togashi, Jun; Kimura, Tomomichi; Morikawa, Kiyoshi; Nakayama, Yoshifumi; Akiyama, Hiroshi; Yanagisawa, Tatsuya; and Ota, Takashi, to Pioneer Electronic Corp. Disk changer with trays movable between retaining and drawn-out positions. 6,041,032, Cl. 369-191.000.

Ishida, Takashi: *See*—
Kawawada, Naoki; Namiki, Hiroaki; Takehara, Isamu; Iwaki, Tadao; Ishida, Takashi; Hayashizaki, Shinichi; Shimaguchi, Hirotada; and Konno, Katsushige, 6,040,648, Cl. 310-90.000.

Ishida, Tatsuyoshi; Yasuda, Masaaki; Onishi, Hitoshi; Kihara, Noriaki; Tsutsui, Toshiyuki; Sagane, Toshihiro; Kawasaki, Masaaki; and Nakahama, Hidenari, to Mitsui Petrochemical Industrial, Ltd. Chain polyene group-containing norbornene compound and unsaturated ethylene copolymer using the same. 6,040,407, Cl. 526-281.000.

Ishiguro, Yasuyuki; Sanada, Yoshiaki; Takaya, Toshihiko; Kimura, Takahiko; Kaneshige, Masatoshi; and Yamamoto, Shuuhei, to Sharp Kabushiki Kaisha. Apparatus for controlling the movement of magnetized developer material in a latent, electrostatic image developing deviced. 6,041,207, Cl. 399-275.000.

Ishihara, Sadao: *See*—
Yoshida, Akira; Oda, Kozo; Kasai, Takashi; Shimada, Kousei; Kogen, Hiroshi; Hayakawa, Ichiro; Ishihara, Sadao; Koga, Teiichiro; Kitazawa, Eiichi; and Tokui, Taro, 6,040,339, Cl. 514-485.000.

Ishihara, Yoshio: *See*—
Wu, Shang-Qian; Morishita, Jun-ichi; Ishihara, Yoshio; and Kimijima, Tetsuya, 6,040,915, Cl. 356-435.000.

Ishihara, Yuko: *See*—
Karasawa, Akio; Yamaguchi, Akihiro; Yamaguchi, Keizaburo; and Ishihara, Yuko, 6,040,111, Cl. 430-270.100.

Ishii, Junji: *See*—
Ohtomo, Fumio; Nakata, Yuji; Fukuyama, Yoshitaka; Inomata, Asako; Shibuya, Sachio; Koga, Akinori; Ishii, Junji; Ito, Shoko; and Yamamoto, Hironobu, 6,038,850, Cl. 60-39.182.

Ishii, Kazuyoshi, to Canon Kabushiki Kaisha. Signal reproducing apparatus utilizing displacement of magnetic wall. 6,041,024, Cl. 369-13.000.

Ishii, Rie: *See*—
Okubo, Hiromi; and Ishii, Rie, 6,041,139, Cl. 382-199.000.

Ishii, Tomoyuki: *See*—
Sano, Toshiaki; Ishii, Tomoyuki; Yano, Kazuo; and Mine, Toshiyuki, 6,040,605, Cl. 257-369.000.

Ishimori, Shozo; Yamaguchi, Masatoshi; Auvergne, Cristophe; and Leguillette, Bertrand, to Kubota Corporation. Rear discharge mower unit and lawn tractor. 6,038,840, Cl. 56-13.300.

Ishitobi, Michio: *See*—
Kitagawa, Tooru; and Ishitobi, Michio, 6,040,050, Cl. 428-364.000.

Ishiyama, Noritaka, to GMC Co., Ltd. Linear motor equipped with a stator which is easily assembled. 6,040,642, Cl. 310-12.000.

Ishizuka Electronics Corporation: *See*—
Nojiri, Toshiyuki; and Saito, Shinichi, 6,038,872, Cl. 62-140.000.

ISIS Pharmaceuticals, Inc.: *See*—
Cheruvallath, Zacharia S.; Ravikumar, Vasulinga T.; Cole, Douglas L.; and Capaldi, Daniel C., 6,040,438, Cl. 536-25.300.
Cowsert, Lex M., 6,040,179, Cl. 435-375.000.
Monia, Brett P.; and Cowsert, Lex M., 6,040,178, Cl. 435-375.000.

Islam, Mojahedul, to Witco Corporation. Production of foamed compositions containing gypsum. 6,039,800, Cl. 106-680.000.

Isobe, Takashi; and Tsutsumi, Kojiro, to Honda Giken Kogyo Kabushiki Kaisha. Failure detection system of pressure sensor. 6,038,912, Cl. 73-1.590.

Isomura, Yoshinori; Yasohara, Masahiro; and Takada, Kazuyuki, to Matsushita Electric Industrial Co., Ltd. Motor control apparatus. 6,040,673, Cl. 318-615.000.

Isoyama, Toyoshiro: *See*—
Sawada, Shinichi; Murata, Shizuo; and Isoyama, Toyoshiro, 6,040,890, Cl. 349-182.000.

Israël, Joseph; and Levesque, Yvon. Absorbent article for collecting non-aqueous liquids and a method for manufacturing the absorbent article. 6,040,032, Cl. 428-98.000.

Isshiki, Minoru; Mine, Katsutoshi; and Yamakawa, Kimio, to Dow Corning Toray Silicone Co., Ltd. Electrical components and method for the fabrication thereof. 6,040,395, Cl. 525-476.000.

Isuzu Ceramics Research Institute Co., Ltd.: *See*—
Kita, Hideki, 6,040,256, Cl. 501-97.100.
Kita, Hideki; and Kawamura, Hideo, 6,040,519, Cl. 136-230.000.

Isuzu Motors Limited: *See*—
Yamada, Chuji; Kobayashi, Shin; Ogawa, Makoto; Kuwahara, Tohru; and Okumura, Eiji, 6,039,157, Cl. 188-158.000.

Itac, Ltd.: *See*—
Zinoviev, Nikolai Timofeevich; and Siomkin, Boris Vasilievich, 6,039,274, Cl. 241-1.000.

Italian Beauty Inovations, Inc.: *See*—
Domenighini, Pierluigi; and Clapis, Matteo, 6,039,704, Cl. 601-79.000.

Ito, Atsushi; and Hiroya, Masaaki, to Hitachi, Ltd. Electronic money sending system. 6,039,250, Cl. 235-380.000.

Ito, Fumihito; and Shou, Guoliang, to Yozan, Inc. Capacitance-forming method. 6,040,228, Cl. 438-393.000.

Ito, Fuminori: *See*—
Okamoto, Akihiko; and Ito, Fuminori, 6,040,973, Cl. 361-235.000.

Ito, Katsuya: *See*—
Mori, Kenichi; Ito, Katsuya; Kotani, Tooru; Suzuki, Toshitake; and Sasaki, Yasushi, 6,039,444, Cl. 347-105.000.

Ito, Satoru: *See*—
Yamamoto, Hiroshi; Niwa, Hisao; Kojima, Yoshihiro; Maruno, Susumu; Kayashima, Kazuhiro; Kouda, Toshiyuki; Maekawa, Hidetsugu; Ito, Satoru; and Shimeki, Yasuharu, 6,041,141, Cl. 382-231.000.

Ito, Shinichi, to Sanyo Machine Works, Ltd. Method and apparatus for assembling piston assembly. 6,038,767, Cl. 29-888.020.

Ito, Shoko: *See*—
Ohtomo, Fumio; Nakata, Yuji; Fukuyama, Yoshitaka; Inomata, Asako; Shibuya, Sachio; Koga, Akinori; Ishii, Junji; Ito, Shoko; and Yamamoto, Hironobu, 6,038,850, Cl. 60-39.182.

Ito, Tsutomu: *See*—
Kokunishi, Motohide; Kato, Hiromu; Ito, Tsutomu; and Hirosawa, Toshio, 6,041,425, Cl. 714-37.000.

Ito, Yasunobu: *See*—
Nimura, Mitsuhiro; Hayashi, Seiji; Ito, Yasunobu; and Inoue, Keizo, 6,041,281, Cl. 701-211.000.

Itoh, Fumiaki: *See*—
Shibata, Shogo; Fujita, Minoru; Ikeda, Yuji; Ueda, Takaya; Itoh, Fumiaki; and Hirota, Makoto, 6,041,293, Cl. 704-4.000.

Itoh, Manabu: *See*—
Yamamoto, Ichiro; Itoh, Manabu; Shimojo, Masato; Yumiya, Yasunobu; Mukaihira, Takafumi; and Akada, Yasushige, 6,040,331, Cl. 514-411.000.

Itoh, Shigeo; Makita, Yoshio; Tonegawa, Takeshi; Hirata, Yoshihiko; and Kadowaki, Akira, to Futaba Denshi Kogyo K.K. Method of manufacturing vacuum hermetic vessels. 6,039,620, Cl. 445-25.000.

Itoh, Takayuki: *See*—
Tozu, Kenji; Itoh, Takayuki; Fukami, Masanobu; and Yokoyama, Satoshi, 6,039,411, Cl. 303-116.100.

Itoi, Hiromu: *See*—
Sakamoto, Toshio; Tanaka, Toshizumi; Itoi, Hiromu; and Yoshihara, Masatoshi, 6,039,695, Cl. 600-459.000.

Itoi, Shigeru: *See*—
Ohmi, Tadahiro; Yamaji, Michio; Shinohara, Tsutomu; Itoi, Shigeru; Hirao, Keiji; Kawano, Yuji; Tanaka, Shigeaki; Yokoyama, Kosuke; Morokoshi, Hiroshi; and Ikeda, Nobukazu, 6,039,360, Cl. 285-61.000.

Itokazu, Masafumi: *See*—
Murakami, Hiroshi; Yoshioka, Koji; Morita, Keizo; Itokazu, Masafumi; Nakabayashi, Ken-ichi; Yamamoto, Akira; and Haraguchi, Munehiro, 6,040,814, Cl. 345-94.000.

ITT Manufacturing Enterprises: *See*—
Vrescak, Warren David; Vest, Daniel Brown; Thomas, Nils Ian; Peck, Thomas N.; and Mabry, Thomas, 6,040,657, Cl. 313-544.000.

ITT Manufacturing Enterprises, Inc.: *See*—
Floryan, Richard F.; and Hambro, George, 6,040,000, Cl. 427-78.000.
Muller, Harry; and Mathes, Joachim, 6,039,367, Cl. 293-117.000.

ITT Maufacturing Enterprises, Inc.: *See*—
Batistic, Ivica; and Schmidt, Robert, 6,041,277, Cl. 701-71.000.

Ittycheriah, Abraham Poovakunnel; and Maes, Stephane Herman, to International Business Machines Corporation. System and method of using pre-enrolled speech sub-units for efficient speech synthesis. 6,041,300, Cl. 704-255.000.

Ivan, Andrew J.: *See*—
Roos, Pieter Gerhard; Ivan, Andrew J.; and Mattson, Rodney A., 6,041,097, Cl. 378-62.000.

Iveco Fiat S.p.A.: *See*—
Pigozzi, Gian Maria, 6,039,669, Cl. 475-207.000.

Ivoclar AG: *See*—
Foser, Hanspeter, 6,039,566, Cl. 433-60.000.

Iwabuchi, Hiroaki; Sone, Yoichi; and Utagawa, Tetsuyuki, to LINTEC Corporation. Pressure-sensitive adhesive sheet and laminate of pressure-sensitive adhesive sheets. 6,040,026, Cl. 428-40.100.

Iwai, Tatsuo: *See*—

Himeshima, Tomoharu; Nakagawa, Kazumoto; Iwai, Tatsuo; and Watanabe, Takayuki, 6,039,892, Cl. 252-188.280.

Iwaki, Tadao: *See*—
Kawawada, Naoki; Namiki, Hiroaki; Takehara, Isamu; Iwaki, Tadao; Ishida, Takashi; Hayashizaki, Shinichi; Shimaguchi, Hirotada; and Konno, Katsushige, 6,040,648, Cl. 310-90.000.

Iwamura, Masahiro: *See*—
Shiina, Kazuhiro; Kawamoto, Koji; Miura, Masato; Ohura, Hitoshi; Ozeki, Shoichi; Akiyama, Noboru; Nunomura, Kunihoro; Nemoto, Minehiro; and Iwamura, Masahiro, 6,040,827, Cl. 345-208.000.

Iwanade, Hisao: *See*—
Oono, Masahiro; Iwanade, Hisao; Saitoh, Noboru; Sato, Koji; Shiba, Sukenori; Yoshida, Tatsuya; and Nagai, Nobuyuki, 6,040,677, Cl. 318-696.000.

Iwano, Hiroshi; Kazama, Isamu; and Yasuoka, Masayuki, to Nissan Motor Co., Ltd. Internal combustion engine. 6,039,025, Cl. 123-399.000.

Iwasaki, Kyuhachiro: *See*—
Sekiya, Takuro; and Iwasaki, Kyuhachiro, 6,039,425, Cl. 347-15.000.

Iwasawa, Norio: *See*—
Saitoh, Masayuki; Kitajima, Yasuo; Iwasawa, Norio; Miura, Kenju; Haruyama, Munetada; and Hashino, Junko, 6,040,335, Cl. 514-460.000.

Iwata, Naohiro; Obana, Katsumi; Terashima, Hideyuki; and Aoki, Noriyuki, to Canon Kabushiki Kaisha. Reading-recording apparatus having a lid member which serves as a paper guide. 6,040,919, Cl. 358-400.000.

Iwayama, Kazuyoshi: *See*—
Ichioka, Ryoji; Yamakawa, Shinobu; Okino, Hirohito; Kato, Hajime; Iwayama, Kazuyoshi; Konta, Hiroshi; and Kitamura, Akira, 6,040,490, Cl. 585-475.000.

Iyer, Ravi, to Micron Technology, Inc. Reactive sputter faceting of silicon dioxide to enhance gap fill of spaces between metal lines. 6,039,851, Cl. 204-192.320.

Izmirlian, Avedik; and del Verme, Attilio. Fabric treatment composition. 6,040,014, Cl. 427-358.000.

Izukawa, Kazuhiro, to Canon Kabushiki Kaisha. Camera system, camera and camera-accessory. 6,041,189, Cl. 396-277.000.

Izumi, Nobuaki; Fukushima, Shinichi; and Tsukamoto, Junichi, to Sony Corporation. Apparatus and method for processing moving image data. 6,040,873, Cl. 348-559.000.

J. Schmalz GmbH: *See*—
Schmalz, Kurt; Schmalz, Wolfgang; and Eisele, Thomas, 6,039,530, Cl. 414-627.000.

Jablonski, Ted M.; Meyer, Michael S.; Miller, David A.; Martin, Herman H.; Emody, Kenneth J.; Levine, Gary S.; and Tinucci, Peter, to IMI Cornelius Inc. Low profile ice dispenser. 6,039,220, Cl. 222-236.000.

Jackson, James G.: *See*—
Kennedy, Joe B.; Davyduke, Roland; Jackson, James G.; Hannebauer, James B.; Newnes, William R.; Stroud, Brian; and Sergeant, John, 6,039,097, Cl. 144-357.000.
Kennedy, Joe B.; Davyduke, Roland; Jackson, James G.; Hannebauer, James B.; Newnes, William R.; Stroud, Brian; and Sergeant, John, 6,039,098, Cl. 144-357.000.

Jackson, Mark E.: *See*—
Jackson, Roger Lee; and Jackson, Mark E., 6,038,946, Cl. 81-177.200.

Jackson, Neil A.; Williamson, John T.; Frantz, Francis J.; Ryll, Patrick B.; and Greenbaum, Hyman A., to United States of America, Navy. Fusing contact data for best-estimate solution. 6,041,019, Cl. 367-124.000.

Jackson, Robert A.: *See*—
Jackson, Susan M.; Jackson, Robert A.; and Davis, John M., 6,040,772, Cl. 340-568.600.

Jackson, Roger Lee; and Jackson, Mark E. Axially repositionable adapter for use with a ratchet assembly. 6,038,946, Cl. 81-177.200.

Jackson, Sherry D., to Energetics, Inc. Dietary supplements. 6,040,333, Cl. 514-456.000.

Jackson, Susan M.; Jackson, Robert A.; and Davis, John M. Alarm system for forgotten golf club. 6,040,772, Cl. 340-568.600.

Jackson, Warren B.; and Hogg, Tad H., to Xerox Corporation. Multi-hierarchical control system for controlling object motion with smart matter. 6,039,316, Cl. 271-194.000.

Jacobs, Alexandra: *See*—
Riedel, Michael; Weller, Thomas; Jacobs, Alexandra; Herrmann, Wolfgang Anton; and Morawietz, Markus, 6,040,469, Cl. 556-53.000.

Jacobs, Bernardus A.J.: *See*—
Zhou, Guo-Fu; Jacobs, Bernardus A.J.; Rijpers, Johannes C.N.; and Borg, Hermanus J., 6,040,066, Cl. 428-641.000.

Jacobs, Thomas Gerardus Maria: *See*—
Beijaard, Barend Jacobus Emmanuel; Jacobs, Thomas Gerardus Maria; and Tiggeloven, Leonardus Jozephus Antonius, 6,039,080, Cl. 138-115.000.

Jacobsen, Alex W.: *See*—
Zimmerman, Julie G.; and Jacobsen, Alex W., 6,039,495, Cl. 402-79.000.

Jacobsen, Stephen C.; Davis, Clark C.; and Knutti, David F., to Sarco LC. Band controlled valve/actuator. 6,039,075, Cl. 137-625.280.

Jaeggi, Dominik: *See*—
Münch, Ulrich; Jaeggi, Dominik; and Schneeberger, Niklaus, 6,040,579, Cl. 250-344.000.

Jagannathan, Seshadri: *See*—
Boettcher, John W.; Jagannathan, Seshadri; Orem, Michael W.; and Zola, Philip J., 6,040,128, Cl. 430-569.000.

Jaglowski, Adam J.: *See*—
Fishback, Thomas L.; Heyman, Duane A.; Reichel, Curtis J.; and Jaglowski, Adam J., 6,040,413, Cl. 528-44.000.

Jaguar Cars, Limited, Whitley, Coventry: *See*—
Howell, Steven Christopher, 6,040,638, Cl. 307-10.200.

Jahn, Hans-Peter: *See*—
Herden, Werner; Konrad, Johann; Jahn, Hans-Peter; Knapp, Martin; Fuessl, Hans-Peter; and Qu, Ning, 6,040,204, Cl. 438-109.000.

Jain, Alpna: *See*—
Bigham, John A.; Little, Dave; Mihm, Edward C.; Sistanizadeh, Kamran; Amin-Salehi, Bahman; Jain, Alpna; Lightfoot, Regina; and Arthur, Ulric E., 6,041,056, Cl. 370-395.000.

Jain, Ashish: *See*—
Carman, David; Dalal, Siddhartha R.; Jain, Ashish; and Karunanithi, Nachimuthu, 6,041,330, Cl. 707-101.000.

Jain, Kanti; Dunn, Thomas J.; Farmiga, Nestor O.; Weisbecker, Carl; and Kling, Carl C. High-speed drilling system for micro-via pattern formation, and resulting structure. 6,040,552, Cl. 219-121.700.

Jain, Lalit: *See*—
Harsham, Bret; and Jain, Lalit, 6,041,347, Cl. 709-220.000.

Jain, Sunil; and Williams, Robert, to Cisco Technology, Inc. Customizable user interface for network navigation and management. 6,040,834, Cl. 345-356.000.

Jakusch, Helmut: *See*—
Götz, Klaus; Jakusch, Helmut; Loch, Werner; Hoffmann, Erich; Gottmann, Hans-Georg; Jenor, Hans-Joachim; and Voit, Johann, 6,040,041, Cl. 428-216.000.

Jambor, Arno; and Wagner, Oliver, to DaimlerChrysler AG. Roof construction for a motor vehicle. 6,039,383, Cl. 296-108.000.

Jander, Michael Horst, to NV Owens-Corning S.A. Method for dispensing reinforcement fibers. 6,038,949, Cl. 83-13.000.

Jang, G. David. Intravascular stent. 6,039,756, Cl. 623-1.000.

Jang, Min-ho: *See*—
Kim, Jin-hwan; and Jang, Min-ho, 6,041,027, Cl. 369-44.240.

Jannson, Tomasz P.: *See*—
Ho, Zonh-Zen; Jannson, Tomasz P.; Lieberman, Robert A.; Savant, Gajendra D.; and Wang, Allan, 6,040,171, Cl. 435-288.100.

Jano, Patrice: *See*—
Rioland, Jacques; Thibout, Paul; and Jano, Patrice, 6,040,566, Cl. 250-201.900.

Jansen, Rolf-Michael: *See*—
Behme, Klaus-Jürgen; Jansen, Rolf-Michael; and Zimmermann, Andreas, 6,040,375, Cl. 524-492.000.

Janzen, Erik: *See*—
Ellison, Alex; Kordina, Olle; Gu, Chun-Yuan; Hallin, Christer; Janzen, Erik; and Tuominen, Marko, 6,039,812, Cl. 118-725.000.

Janzen, Jeffrey W.: *See*—
Baudouin, Daniel; Russell, Ernest J.; and Janzen, Jeffrey W., 6,040,983, Cl. 361-760.000.

Japan Hydrazine Co., Inc: *See*—
Hyoda, Shunji; Kita, Masaharu; Sawada, Hirotoshi; Nemugaki, Shuichi; Otsuka, Sumio; Miyawaki, Yoshitaka; Ogawa, Takashi; and Kubo, Yuhki, 6,040,453, Cl. 548-250.000.

Japan Polychem Corporation: *See*—
Sobajima, Yoshihiro; Akashige, Etsushi; Fujii, Hironari; and Amano, Akira, 6,040,374, Cl. 524-451.000.

Japan Polyolefins Co., Ltd.: *See*—
Monoi, Takashi; Yamamoto, Masakazu; Torigoe, Hidenobu; and Takemoto, Yasunori, 6,040,399, Cl. 526-106.000.

Japan Science and Technology Corporation: *See*—
Hayakawa, Yoshihiro; and Kataoka, Masanori, 6,040,439, Cl. 536-25.340.

Japan Storage Battery Co., Ltd.: *See*—
Yoshida, Hiroaki; Hagiwara, Zenzo; and Terasaki, Masanao, 6,040,086, Cl. 429-211.000.

Jarvis, Edward C., to Oakley, Inc. Impact resistant face shield. 6,038,705, Cl. 2-424.000.

Jarvis Walker Pty. Ltd.: *See*—
Tao, Ning, 6,039,278, Cl. 242-246.000.

Jatco Corporation: *See*—
Takiguchi, Masahiro, 6,041,275, Cl. 701-55.000.

Javier, Manuel A., Jr.; Pearce, Stephen B.; Kesten, Randy J.; Payne, Sam G.; and Gertner, Kevin, to Cardiogenesis Corporation. Channel forming device with penetration limiter. 6,039,727, Cl. 606-10.000.

Jaw, Jerry, to United Microelectronics Corp. High-speed analog-to-digital converter. 6,040,794, Cl. 341-155.000.

Jayne, John T.; Worsnop, Douglas R.; and Kolb, Charles E., to Aerodyne Research, Inc. Atmospheric-particle analyzer. 6,040,574, Cl. 250-288.000.

JB Research, Inc.: *See*—
Cutler, Stanley; Gerth, Gayle B.; Otis, Alton B., Jr.; and Chau, Taylor, 6,039,702, Cl. 601-15.000.

Jeffords, Jason; Crowley, Todd A.; and Dev, Roger, to Cabletron Systems, Inc. Establishing control of lock token for shared objects upon approval messages from all other processes. 6,041,383, Cl. 710-200.000.

Jeffries, Alfred T., III: *See*—
Blakeney, Andrew J.; Medina, Arturo N.; Toukhy, Medhat A.; Ferreira, Lawrence; Jeffries, Alfred T., III; and Naiini, Ahmad A., 6,040,107, Cl. 430-165.000.

Jellema, Bart; Peeren, René; Croughan, Louise; and Aben, Freek, to Telefonaktiebolaget LM Ericsson. User interaction procedure. 6,041,115, Cl. 379-230.000.

Jen, Zo-Chun, to Nan Ya Plastics Corporation. Process for manufacturing different shrinkage microfiber texture yarn. 6,038,847, Cl. 57-908.000.

Jeneric/Pentron Incorporated: *See*—
Prasad, Arun; Karmaker, Ajit; Zammarieh, Elie; and Day, Grant P., 6,039,569, Cl. 433-180.000.

Jenkines, Randall C.: *See*—
Jennings, James K.; Jenkines, Randall C.; and Mobley, Larry W., 6,040,381, Cl. 524-871.000.

Jenkins, David: *See*—
Cigaina, Valerio; and Jenkins, David, 6,041,258, Cl. 607-40.000.

Jennings, Earle Willis, III, to SC-Wireless Inc. Aggregation of shaped directional receiving antenna array for improved location information. 6,041,232, Cl. 455-422.000.

Jennings, James K.; Jenkines, Randall C.; and Mobley, Larry W., to Dow Chemical Company, The. Preparation of filled reactive polyurethane carpet backing formulations using an in-line continuous mixing process. 6,040,381, Cl. 524-871.000.

Jenor, Hans-Joachim: *See*—
Götz, Klaus; Jakusch, Helmut; Loch, Werner; Hoffmann, Erich; Gottmann, Hans-Georg; Jenor, Hans-Joachim; and Voit, Johann, 6,040,041, Cl. 428-216.000.

Jens, Stephen C.; Harvey, Andrew C.; and Formato, Richard M., to Velcro Industries B.V. Stackable mold plates having arrays of laser-cut mold surfaces at their edges. 6,039,556, Cl. 425-363.000.

Jensen, Allan G.: *See*—
Martin, Wallace Anthony; Adams, Jonathan Patrick; Andersen, Finn Thrige; Beaton, Stephen Robert; Christensen, Svend; Jensen, Allan G.; Kindt-Larsen, Ture; Lust, Victor; Walker, Craig William; and Wang, Daniel Tsu-Fang, 6,039,899, Cl. 264-1.360.

Jeon, Yoon T.; and Gluchowski, Charles, to Synaptic Pharmaceutical Corporation. Substituted indoles and uses thereof. 6,040,451, Cl. 548-181.000.

Jeram, Edward M.: *See*—
Burkus, Frank S., II; Jeram, Edward M.; and Rubinsztajn, Slawomir, 6,040,366, Cl. 524-99.000.

Jerpseth, Bruce D.: *See*—
Greener, Alan L.; and Jerpseth, Bruce D., 6,040,184, Cl. 435-461.000.

Jervis B. Webb Company: *See*—
Blaisdell, Dennis R.; Mattison, Bruce W.; Farthing, Robert C.; and Sarosy, Michelle A., 6,041,171, Cl. 395-500.270.

Jespers, Laurent Stephane: *See*—
Vlasuk, George Phillip; Stanssens, Patrick Eric Hugo; Messens, Joris Hilda Lieven; Lauwereys, Marc Josef; LaRoche, Yves Rene; Jespers, Laurent Stephane; Gansemans, Yannick Georges Jozef; Moyle, Matthew; and Bergum, Peter W., 6,040,441, Cl. 536-252.000.

Jessup, James Lyle; and Paalman, Donald Henry, to Kimberly-Clark Worldwide, Inc. Laterally expandable tampon. 6,039,716, Cl. 604-385.100.

Jiang, Licai: *See*—
Gutman, George; Jiang, Licai; and Verman, Boris, 6,041,099, Cl. 378-85.000.

Jiang, Liqiang: *See*—
Sanjurjo, Angel; Lau, Kai-Hung; Lowe, David; Canizales, Anastasia; Jiang, Naixiong; Wong, Victor; Jiang, Liqiang; Schneider, Luke V.; Mufti, Naheed; Rewick, Robert T.; Johansson, Marie; and Kardos, Keith, 6,039,894, Cl. 252-301.40R.

Jiang, Naixiong: *See*—
Sanjurjo, Angel; Lau, Kai-Hung; Lowe, David; Canizales, Anastasia; Jiang, Naixiong; Wong, Victor; Jiang, Liqiang; Schneider, Luke V.; Mufti, Naheed; Rewick, Robert T.; Johansson, Marie; and Kardos, Keith, 6,039,894, Cl. 252-301.40R.

Jikuhara, Ichiro: *See*—
Nishida, Takanobu; and Jikuhara, Ichiro, 6,040,789, Cl. 341-50.000.

Jin, Sang-Hun, to Daewoo Electronics Co., Ltd. Method for transforming original bill-of-material for printed circuit board into standard bill-of-material. 6,041,268, Cl. 700-107.000.

Jin, Tai: *See*—
Ramanathan, Srinivas; Perry, Edward H.; and Jin, Tai, 6,041,041, Cl. 370-241.000.

Jinks, Philip A.: *See*—
Govind, Nayna; Jinks, Philip A.; Ross, Danna L.; and Ward, Gary H., 6,039,932, Cl. 424-45.000.

Jo, Sung Hwan, to Hyundai Motor Company, Ltd. Piston ring device for use in a combustion engine of a vehicle. 6,039,321, Cl. 277-435.000.

Jobson, Simon; and Watson, Derrick John, to BP Chemicals Limited. Integrated process for the production of vinyl acetate and/or acetic acid. 6,040,474, Cl. 560-243.000.

Jochim, Carol. Real time stenographic system utilizing vowel omission principle. 6,041,292, Cl. 704-3.000.

Joersz, Robert T.: *See*—
Gilbert, Bruce Michael; Joersz, Robert T.; Lovett, Thomas D.; and Safranek, Robert J., 6,041,376, Cl. 710-108.000.

Joffe, Alexander; and Birger, Ari, to MMC Networks, Inc. Time-wheel ATM cell scheduling. 6,041,059, Cl. 370-412.000.

Johansson, Marie: *See*—
Sanjurjo, Angel; Lau, Kai-Hung; Lowe, David; Canizales, Anastasia; Jiang, Naixiong; Wong, Victor; Jiang, Liqiang; Schneider, Luke V.; Mufti, Naheed; Rewick, Robert T.; Johansson, Marie; and Kardos, Keith, 6,039,894, Cl. 252-301.40R.

Johansson, Peter K.: *See*—
Quiachon, Dinah B.; Piplani, Alec A.; Baker, Steve G.; Williams, Ronald G.; Williams, Richard S.; Osborn, Kenneth L.; Layman, Ted W.; and Johansson, Peter K., 6,039,758, Cl. 623-1.000.

Johe, Karl K., to NeuralStem Biopharmaceuticals, Ltd. In vitro generation of differentiated neurons from cultures of mammalian multipotential CNS stem cells. 6,040,180, Cl. 435-377.000.

John, Thomas; Kuhn, Thomas; and Nehse, Wolfgang, to Mannesman Sachs AG; and BMW AG. Device for controlling a starting procedure. 6,041,276, Cl. 701-67.000.

Johns Hopkins University: *See*—
Pasternack, Gary R., 6,040,173, Cl. 435-320.100.

Johnson & Johnson Vision Products, Inc.: *See*—
Martin, Wallace Anthony; Adams, Jonathan Patrick; Andersen, Finn Thrige; Beaton, Stephen Robert; Christensen, Svend; Jensen, Allan G.; Kindt-Larsen, Ture; Lust, Victor; Walker, Craig William; and Wang, Daniel Tsu-Fang, 6,039,899, Cl. 264-1.360.
Sekharipuram, Venkateshwaran N.; Mecham, Beverly Sue; Bhatnagar, Atul; and McGrath, James E., 6,040,416, Cl. 528-168.000.

Johnson, Bayard K.: *See*—
Holder, John D.; and Johnson, Bayard K., 6,039,801, Cl. 117-20.000.

Johnson, Daniel: *See*—
Gillis, Donald G.; and Johnson, Daniel, 6,039,147, Cl. 182-15.000.

Johnson, David C: *See*—
Dunphy, Katherine Ann; Schnapp, Susan T; and Johnson, David C, 6,039,443, Cl. 347-92.000.

Johnson, Eric A.: *See*—
Dibble, Eric P.; Johnson, Eric A.; and Phillips, Raymond A., Jr., 6,040,631, Cl. 257-783.000.

Johnson, Greg P., to Micron Electronics, Inc. Disk drive to chassis mounting apparatus and method. 6,040,980, Cl. 361-685.000.

Johnson, H. Thad. Integrated spring ring retainer for captivating a fastener to a workpiece. 6,039,525, Cl. 411-353.000.

Johnson, James R. Fastener tape material, bag utilizing fastener tape material, and method of manufacture thereof. 6,040,033, Cl. 428-99.000.

Johnson, Karl M.: *See*—
Adair, Dennis W.; Johnson, Karl M.; and Kern, Earl R., 6,040,298, Cl. 514-50.000.

Johnson, Kirk; and Knudtson, Merril L., to Cordis Corporation. Method and catheter system for delivering medication with an everting balloon catheter. 6,039,721, Cl. 604-508.000.

Johnson, Kristina M.; and Mao, Chong Chang, to University Technology Corporation. Programmable hologram generator. 6,040,883, Cl. 349-116.000.

Johnson, Robert E. Handy flashlight holder. 6,039,297, Cl. 248-314.000.

Johnson, Robert William, to Du Pont de Nemours, E. I., and Company. Method to determine light scattering efficiency of pigments. 6,040,913, Cl. 356-432.000.

Johnson, Todd J.; and Miller, William H., to Monsanto Company. Carbon dioxide assisted hydrolysis of aminophosphonates. 6,040,476, Cl. 562-1.000.

Johnson, Wendell C.: *See*—
Breed, David S.; Duvall, Wilbur E.; and Johnson, Wendell C., 6,039,139, Cl. 180-271.000.

Johnson, William R.: *See*—
Goertz, Harvey M.; Timmons, Richard J.; and Johnson, William R., 6,039,781, Cl. 71-1.000.

Johnson Worldwide Associates, Inc.: *See*—
Graber, John H.; and Pomerantz, Mitchell P., 6,039,043, Cl. 128-202.140.

Johnston, Stephen Harold: *See*—
Collier, Alan Derek; Johnston, Stephen Harold; and Eastham, John, 6,039,239, Cl. 228-157.000.

Jonckheere, Marcus: *See*—
Coppens, Paul; and Jonckheere, Marcus, 6,040,109, Cl. 430-204.000.

Jones, Billy Dan, to Field Management Services, Inc. Apparatus, methods and material for absorbing magnetic radiation. 6,040,878, Cl. 348-819.000.

Jones, David B.: *See*—
Gabig, Joseph A.; and Jones, David B., 6,039,576, Cl. 434-367.000.

Jones, Eric A.; and Detering, Greig R., to AG Communication Systems Corporation. Telephone extension switch hook state detection system. 6,041,107, Cl. 379-164.000.

Jones, John J.; Saggio, Rosario S.; Okamoto, Karlton K.; and Lenoil, Isidor, to McDonnell Douglas Corporation. Impact-resistant restraint for cargo. 6,039,519, Cl. 410-69.000.

Jones, Robert Allen; Kaufman, Mark C.; and Rumpel, Manfred Carl, to Ford Global Technologies, Inc. Motor vehicle rear structure. 6,039,351, Cl. 280-781.000.

Jones, William F.: *See*—
Watson, Charles C.; and Jones, William F., 6,040,580, Cl. 250-363.030.

Jonza, James M.: *See*—
Bland, Ralph H.; Jonza, James M.; Smith, James D.; Bradley, Jeffrey F.; and Smith, Kenneth B., 6,040,061, Cl. 428-480.000.

Joppeck, Dwayne Paul, to General Motors Corporation. Friction torque transmitter with a one-way actuator. 6,039,160, Cl. 192-52.500.

Jordan, Hakikta Najin. Security cover for pick-up truck beds. 6,039,379, Cl. 296-37.600.

Jordan Valley Applied Radiation: *See*—
Yokhin, Boris, 6,041,095, Cl. 378-45.000.

Jordi, Hans Ulrich, to Neopac AG. Screw cap. 6,039,199, Cl. 215-254.000.

Jörg Vogelsang GmbH & Co.: *See*—
Vogelsang, Jörg, 6,038,943, Cl. 74-579.00E.

Jø rgensen, Tine Krogh: *See*—
Andersen, Knud Erik; Jørgensen, Tine Krogh; Hohlweg, Rolf; Fischer, Erik; Olsen, Uffe Bang; Polivka, Zdenek; Sindelar, Karel; and Valenta, Vladimir, 6,040,318, Cl. 514-329.000.

Hohlweg, Rolf; Madsen, Peter; Jørgensen, Tine Krogh; Andersen, Knud Erik; Watson, Brett; Polivka, Zdenek; Konigova, Otylie; Kovandova, Martina; Silhánková, Alexandra; and Valenta, Vladimir, 6,040,302, Cl. 514-217.000.

Jost, Michael: *See*—
Wandel, Hermann; Jost, Michael; Sommer, Helmut; and Fischer-Wilk, Robert, 6,038,932, Cl. 73-861.650.

Journet, Michel: *See*—
Davies, Ian W.; Journet, Michel; Gerena, Linda; Larsen, Robert D.; Pye, Philip J.; and Rossen, Kai, 6,040,450, Cl. 546-256.000.

Joyce, Mary: *See*—
Kennie, Jerry; Cheng, Yi; Hope, Mark E.; Huff, Shean; Nankee, Robert J., II; Joyce, Mary; Krozek, Dennis A.; Moote, Richard K.; Richardson, Roland T.; Rotramel, William D.; and Seitz, Gary L., 6,041,278, Cl. 701-103.000.

Joyful Long International Ltd.: *See*—
Chan, Chong Veng, 6,039,662, Cl. 473-604.000.

JSR Corporation: *See*—
Ota, Toshiyuki; Sano, Kimiyasu; Tashiro, Hideaki; and Sato, Hozumi, 6,040,117, Cl. 430-311.000.

Ju, Dz Ching; Ng, John Shek-Luen; and Sarkar, Vivek, to International Business Machines Corporation. Method of, system for, and computer program product for providing quick fusion in WHERE constructs. 6,041,181, Cl. 395-709.000.

Ju, Ted. Compact disk box capable of automatically extending and retracting compact disks. 6,039,413, Cl. 312-9.150.

Judkins, Joseph James, III: *See*—
Huynh, Quoi V.; Ngo, Sang T.; Judkins, Joseph James, III; and Alfano, Donald E., 6,040,668, Cl. 318-471.000.

Julian, Thomas Benjamin: *See*—
Rabin, Yoed; Julian, Thomas Benjamin; and Wolmark, Norman, 6,039,730, Cl. 606-23.000.

Jun, Jung-Mok; and Lee, Seok-Lyul, to Hyundai Electronics Industries Co., Ltd. Liquid crystal display device having "H" character common electrode and method of fabricating thereof. 6,040,882, Cl. 349-39.000.

Jun, Sun Ae: *See*—
Ha, Jae Hee; and Jun, Sun Ae, 6,039,888, Cl. 216-13.000.

Jun, Sung-Gon, to SamSung Electronics Co., Ltd. Device and method of converting scanning pattern of display device. 6,040,868, Cl. 348-448.000.

Jung, In Chul: *See*—
Kim, Jung Pill; and Jung, In Chul, 6,041,009, Cl. 365-225.700.

Jung, Jürgen: *See*—
Siegel, Jörg; Borst, Hans-Ulrich; Bell, Peter; Büscher, Ralf; Reif, Heinz; and Jung, Jürgen, 6,040,125, Cl. 430-506.000.

Jung, Matthias: *See*—
Becker, Klaus; Staiger, Wolfgang; Jung, Matthias; and Heinemeyer, Peter, 6,039,114, Cl. 165-170.000.

Jung, Russell W.: *See*—
Jung, Wayne D.; Jung, Russell W.; and Loudermilk, Alan R., 6,040,902, Cl. 356-73.000.

Jung, Seung Bae: *See*—
Lee, Eung Suk; Park, Wan Hee; Park, June Ho; and Jung, Seung Bae, 6,038,779, Cl. 33-503.000.

Jung, Sung-Gon, to SamSung Electronics Co., Ltd. Monitor control circuit using wireless headphones and method therefor. 6,041,225, Cl. 455-352.000.

Jung, Tae-sung: *See*—
Park, Jong-min; and Jung, Tae-sung, 6,040,735, Cl. 327-541.000.

Jung, Wayne D.; Jung, Russell W.; and Loudermilk, Alan R., to LJ Laboratories, L.L.C. Apparatus and method for measuring color. 6,040,902, Cl. 356-73.000.

Jungbluth, Dieter: *See*—
Thiesen, Stefan; Jungbluth, Dieter; and Böcker, Jürgen, 6,038,955, Cl. 89-41.170.

Jungjohann, Thomas: *See*—
Moll, Reiner; Fedderke, Helge; and Hartmann, Christoph, 6,039,154, Cl. 188-67.000.

Junichi, Imaizumi; Yuri, Kawasaki; Tetsushi, Makino; and Toyoshi, Iida, to Tanaka Chemical Corporation. Nickel hydroxide particles having an α- or β-cobalt hydroxide coating layer for use in alkali batteries and a process for producing the nickel hydroxide. 6,040,007, Cl. 427-215.000.

Jurng, Jong Soo: *See*—
Lee, Yoon Pyo; Lee, Chun Sik; Kim, Kwang Ho; Jurng, Jong Soo; Kim, Young Il; Shin, Hung Tae; and Han, Hee Suk, 6,038,869, Cl. 62-100.000.

Just, Ricky Gail: *See*—
Finsterwald, P. Michael; Douglas, Stephen Joseph; and Just, Ricky Gail, 6,038,752, Cl. 29-25.350.

Juve, Ronald A, to Hewlett-Packard Company. Method for improving ink jet printer reliability in the presence of ink shorts. 6,039,428, Cl. 347-19.000.

K-2 Corporation: *See*—
Hoskins, Matthew W.; and Boileau, Michel A., 6,039,305, Cl. 251-342.000.

Kaak, Johan Hendrik Bernard: *See*—
Vrouwenvelder, Cornelis Carinus, 6,039,993, Cl. 426-496.000.

Kabushiki Kaiha Ultraclean Technology Research Institute: *See*—
Ohmi, Tadahiro; and Nitta, Takahisa, 6,039,814, Cl. 134-1.000.

Kabushiki Kaisha Kyushu Nissho: *See*—
Tokumoto, Masahisa; and Ishibashi, Eiji, 6,040,562, Cl. 219-530.000.

Kabushiki Kaisha Nihon Micronics: *See*—
Kondo, Motoyasu; Sakuma, Fukuyo; Urakawa, Youichi; Yokoyama, Yoshihito; and Hinai, Masatoshi, 6,040,704, Cl. 324-762.000.

Kabushiki Kaisha Toshiba: *See*—
Atsumi, Shigeru; and Tanaka, Sumio, 6,041,014, Cl. 365-230.060.
Banba, Hironori; Shiga, Hitoshi; Atsumi, Shigeru; and Umezawa, Akira, 6,041,012, Cl. 365-226.000.
Haga, Ryo, 6,041,004, Cl. 365-207.000.
Ikeda, Kazuo; Komorita, Hiroshi; Sato, Yoshitoshi; Komatsu, Michiyasu; and Mizunoya, Nobuyuki, 6,040,039, Cl. 428-210.000.
Inoue, Soichi; Higashikawa, Iwao; Ogawa, Yoji; Hara, Shigehiro; and Yamamoto, Kazuko, 6,040,114, Cl. 430-296.000.
Kohno, Fumihiro, 6,041,013, Cl. 365-230.030.
Kurata, Mamoru; and Nakamura, Shin, 6,041,424, Cl. 714-33.000.
Maejima, Hiroshi, 6,041,002, Cl. 365-201.000.
Nakayama, Kazuya; and Sugiyama, Koichi, 6,040,598, Cl. 257-329.000.
Noguchi, Mitsuhiro; and Oowaki, Yukihito, 6,040,610, Cl. 257-392.000.
Ogusu, Masahiro; Tomioka, Tazuko; and Ohshima, Shigeru, 6,040,934, Cl. 359-152.000.
Ohmi, Takao, 6,041,030, Cl. 369-54.000.
Ohtomo, Fumio; Nakata, Yuji; Fukuyama, Yoshitaka; Inomata, Asako; Shibuya, Sachio; Koga, Akinori; Ishii, Junji; Ito, Shoko; and Yamamoto, Hironobu, 6,038,850, Cl. 60-39.182.
Shiba, Akio, 6,038,851, Cl. 60-39.182.
Suzuki, Hirokazu, 6,041,231, Cl. 455-422.000.
Taki, Keishi; and Yanagi, Yutaka, 6,040,545, Cl. 219-75.000.
Ueda, Makoto; Shiga, Shigenori; Tajima, Satoko; and Morishita, Hideki, 6,041,091, Cl. 376-327.000.
Umezawa, Akira; Atsumi, Shigeru; and Banba, Hironori, 6,041,011, Cl. 365-226.000.
Yasumoto, Taka-aki; and Yamaguchi, Hideki, 6,040,068, Cl. 428-688.000.

Kabushiki Kaisha Toyoda Jidoshokki Seisakusho: *See*—
Ban, Takashi; Hoshino, Tatsuyuki; Okabe, Takanori; and Ban, Takahisa, 6,039,007, Cl. 122-26.000.
Hirabayashi, Mineo; Hozumi, Mamoru; and Fukuta, Kinsho, 6,039,465, Cl. 362-496.000.
Okabe, Takanori; Ban, Takashi; Suzuki, Shigeru; and Hirose, Tatsuya, 6,039,264, Cl. 237-12.30R.

Kabushiki Kaisha Yuyama Seisakusho: *See*—
Yuyama, Shoji; and Shigeyama, Yasuhiro, 6,039,209, Cl. 221-171.000.

Kacharava, Leonid Yazonovich: *See*—
Golovistikov, Ivan Nikolaevich; Kacharava, Leonid Yazonovich; and Alikhanov, Khallar Abdumuslimovich, 6,040,187, Cl. 436-63.000.

Kachur, Christopher M.: *See*—
Gutierrez, Ernesto Jose; Archibald, Charles Andrew; Kachur, Christopher M.; and Brandon, Giles M., 6,038,871, Cl. 62-133.000.

Kaczmarczyk, John M.: *See*—
Boice, Charles E.; Kaczmarczyk, John M.; Ngai, Agnes Y.; and Vachon, Michael P., 6,040,875, Cl. 348-595.000.
Boroczky, Lilla; Gebler, Charlene Ann; Kaczmarczyk, John M.; Westermann, Edward F.; and Woodard, Robert L., 6,040,861, Cl. 348-409.000.

Kaczmarek, Andrew R., Jr.: *See*—
Miller, Lester D.; Maska, Mark S.; and Kaczmarek, Andrew R., Jr., 6,041,100, Cl. 378-141.000.

Kadosh, Daniel: *See*—
Gardner, Mark I.; Kadosh, Daniel; and Duane, Michael P., 6,040,220, Cl. 438-286.000.

Kadota, Hironori: *See*—
Yamato, Seiichi; Kamei, Noboru; Okuma, Kazuyoshi; Sugawa, Katsumi; Kadota, Hironori; and Sakata, Tomoyuki, 6,041,062, Cl. 370-465.000.

Kadota, Shigeru: *See*—
Kawaguchi, Kiyoshi; Kadota, Shigeru; and Kishita, Kouji, 6,039,111, Cl. 165-104.140.

Kadowaki, Akira: *See*—
Itoh, Shigeo; Makita, Yoshio; Tonegawa, Takeshi; Hirata, Yoshihiko; and Kadowaki, Akira, 6,039,620, Cl. 445-25.000.

Kagami, Toshiki: *See*—
Yui, Yasuji; and Kagami, Toshiki, 6,039,431, Cl. 347-30.000.

Kageyama, Hidehei; and Mitsuya, Yoshihide, to Kotobuki & Co., Ltd. Writing instrument. 6,039,484, Cl. 401-52.000.

Kageyama, Hidehei; Mitsuya, Yoshihide; and Ebinuma, Tadayoshi, to Kotobuki & Co., Ltd. Double-chuck mechanical pencil. 6,039,485, Cl. 401-67.000.

Kahlke, Michael: *See*—
Thumfart, Dieter; and Kahlke, Michael, 6,039,040, Cl. 126-39.00G.

Kahne, Daniel E.; and Yan, Lin, to Trustees of Princeton University, The. Sulfinyl hexose derivatives useful for glycosylation. 6,040,433, Cl. 536-4.100.

Kaida, Hiroaki, to Murata Manufacturing Co., Ltd. Piezoelectric resonator adapted to generate a harmonic wave in a thickness extensional vibration mode. 6,040,652, Cl. 310-320.000.

Kaihovirta, Juha; Pakarinen, Pekka; and Luontama, Matti, to Valmet Corporation. Method for controlling the curl of paper and a paper or board machine line that applies the method. 6,038,789, Cl. 34-448.000.

Kaijala, Murray, to CTS Corproation. Compact potentiometer. 6,040,756, Cl. 338-160.000.

Kajii, Shinichiro: *See*—
Nishimura, Masaharu; Ohnishi, Keizo; Yasuda, Chiaki; Kajii, Shinichiro; Patrick, William P.; and Zander, Anthony C., 6,041,125, Cl. 381-71.400.

Kakehashi, Eiichirou, to NEC Corporation. Method of manufacturing a contact plug. 6,040,242, Cl. 438-672.000.

Kakihara, Toshio: *See*—

Kanamaru, Atsushi; Kakihara, Toshio; Kigami, Yuhji; and Saitoh, Takahiro, 6,041,392, Cl. 711-113.000.

Kakikura, Eisaku: *See*—
Yamamoto, Iwao; Kakikura, Eisaku; Kinouchi, Masami; Inoue, Yoshiaki; and Shiotsu, Tamotsu, 6,040,051, Cl. 428-367.000.

Kakizaki, Yukio; Kiuchi, Toru; Amano, Kesayoshi; and Umatate, Toshikazu, to Nikon Corporation. Mask substrate, projection exposure apparatus equipped with the mask substrate, and a pattern formation method utilizing the projection exposure apparatus. 6,040,096, Cl. 430-5.000.

Kalbach, Robert J. Wire mesh stapler device. 6,039,233, Cl. 227-176.100.

Kalbacher, Klaus; Schuttarle, Karl; Temmesfeld, Axel; and Eckerskorn, Winfried, to Modine Manufacturing Company; and Bayerische Motoren Werke. Thermally responsive valve assembly. 6,039,263, Cl. 236-93.00A.

Kalentun, Pia; Buschka, Anette; Schmid, Andrea; and Strömbom, Eva, to SCA Hygiene Products AB. Foam material its manufacturing method and use and an absorbent disposable article comprising such a foam material. 6,040,494, Cl. 604-369.000.

Kaller, Ralf: *See*—
Butz, Thomas; Kaller, Ralf; Kissel, Guenther; Mayer, Gehard; Koch, Volker; and Schnabel, Werner, 6,039,779, Cl. 55-499.000.

Kallman Corporation: *See*—
Zimmerman, Julie G.; and Jacobsen, Alex W., 6,039,495, Cl. 402-79.000.

Kalloy Industrial Co., Ltd.: *See*—
Chen, Tian-Chu, 6,039,394, Cl. 297-195.100.

Kamada, Takehiro, to Matsushita Electric Industrial Co., Ltd. Viterbi decoder and viterbi decoding method. 6,041,433, Cl. 714-795.000.

Kamarei, A. Reza, to Princeton Nutrition, L.L.C. Refrigeration-shelf-stable ultra-pasteurized or pasteurized infant formula. 6,039,985, Cl. 426-72.000.

Kamboj, Rajender; Elliott, Candace E.; and Nutt, Stephen L., to Allelix Biopharmaceuticals, Inc. AMPA-binding human GluR2 receptors. 6,040,175, Cl. 435-325.000.

Kamei, Noboru: *See*—
Yamato, Seiichi; Kamei, Noboru; Okuma, Kazuyoshi; Sugawa, Katsumi; Kadota, Hironori; and Sakata, Tomoyuki, 6,041,062, Cl. 370-465.000.

Kamijima, Akifumi: *See*—
Terunuma, Koichi; and Kamijima, Akifumi, 6,040,965, Cl. 360-122.000.

Kamishima, Yoshiyuki, to NEC Corporation. Code generator for selectively producing cyclic redundancy check data codes different in data length. 6,041,434, Cl. 714-807.000.

Kamiya, Hiroshi, to NEC Corporation. Bus driver circuit having adjustable rise and fall times. 6,040,724, Cl. 327-170.000.

Kamiya, Masaaki: *See*—
Hayashi, Yutaka; Kamiya, Masaaki; Kojima, Yoshikazu; and Takasu, Hiroaki, 6,040,200, Cl. 438-30.000.

Kamiya, Ryo: *See*—
Mukojima, Masahiro; and Kamiya, Ryo, 6,040,515, Cl. 84-603.000.

Kamiyama, Hiroshi: *See*—
Nakatsuji, Fumio; Maeda, Toshinori; and Kamiyama, Hiroshi, 6,041,368, Cl. 710-20.000.

Kamon, Koichi; and Matsuda, Shinya, to Minolta Co., Ltd. Image reading apparatus for reading book-like documents. 6,041,146, Cl. 382-274.000.

Kampa, Leonard: *See*—
Sadrakula, Philip V.; Kampa, Leonard; Hamerski, Michael D.; and Bries, James L., 6,039,102, Cl. 156-510.000.

Kamruzzaman, Mohammed: *See*—
Sanduja, Mohan L.; Horowitz, Carl; Kamruzzaman, Mohammed; Thottathil, Paul; and Ramsey, Earl A., 6,039,964, Cl. 424-404.000.

Kanai, Hiroaki; Yagyu, Kiyohide; Maruta, Akira; Sasahara, Kouji; and Shiomi, Tsugio, to Kanai Juyo Kogyo Co., Ltd. Production method of a spinning ring for a ring spinning machine. 6,038,758, Cl. 29-557.000.

Kanai Juyo Kogyo Co., Ltd.: *See*—
Kanai, Hiroaki; Yagyu, Kiyohide; Maruta, Akira; Sasahara, Kouji; and Shiomi, Tsugio, 6,038,758, Cl. 29-557.000.

Kanamaru, Atsushi; Kakihara, Toshio; Kigami, Yuhji; and Saitoh, Takahiro, to International Business Machines Corporation. Disk drive device and method for controlling the same. 6,041,392, Cl. 711-113.000.

Kanan, Ronald C. Floatation component for a suspension system for a snowmobile. 6,039,136, Cl. 180-182.000.

Kanaoka, Masaru, to Mitsubishi Denki Kabushiki Kaisha. Laser beam machining apparatus and corresponding method which employs a laser beam to pretreat and machine a workpiece. 6,040,549, Cl. 219-121.610.

Kanatani, Keiichi: *See*—
Hamagishi, Goro; Kanatani, Keiichi; Kishimoto, Shunichi; Sakata, Masahiro; Yamashita, Atsuhiro; Matsushita, Naoki; and Mashitani, Ken, 6,040,807, Cl. 345-6.000.

Kanayama, Satoshi: *See*—
Miya, Shinya; and Kanayama, Satoshi, 6,040,367, Cl. 524-107.000.

Kanazawa, Hiromichi; Ueda, Kunihiro; Yanagiuchi, Katsuaki; Ikarashi, Tsunehiko; and Kohno, Masahide, to TDK Corporation. Magnetic recording medium. 6,040,052, Cl. 428-408.000.

Kanazawa, Kiyosumi; and Nakagawa, Yoshiro, to TDK Corporation. Magnetoresistive element with conductive films and magnetic domain films overlapping a central active area. 6,040,962, Cl. 360-113.000.

Kanbori, Seiji: *See*—
Furukawa, Taichiro; Kondoh, Kohhei; Yamashita, Atsushi; and Kanbori, Seiji, 6,039,475, Cl. 384-580.000.

Kanda, Motohiro; Yamamoto, Akira; Nakano, Toshio; and Yoshida, Minoru, to Hitachi, Ltd. Storage device and method for data sharing. 6,041,391, Cl. 711-112.000.

Kando, Laszlo: *See*—
Long, David C.; Moyer, Thomas P.; O'Neil, Keith C.; Perry, Charles H.; Pomerantz, Glenn A.; Case, James R.; Kando, Laszlo; and Kozol, John E., 6,038,931, Cl. 73-850.000.

Kaneda, Fumio, to United States of America, Navy. Circuit for preventing battery damage. 6,040,682, Cl. 320-136.000.

Kaneko, Masanori; and Sukigara, Akihiko, to Canon Kabushiki Kaisha. Controller for printer carriage motor. 6,040,670, Cl. 318-561.000.

Kaneko, Yasushi: *See*—
Takeda, Sunao; Kaneko, Yasushi; Tokizawa, Minoru; Eto, Hiromichi; Ishida, Kazuya; Maebashi, Kazunori; Matsumoto, Masaru; Asaoka, Takemitsu; and Sato, Susumu, 6,040,325, Cl. 514-383.000.

Kaneshige, Masatoshi: *See*—
Ishiguro, Yasuyuki; Sanada, Yoshiaki; Takaya, Toshihiko; Kimura, Takahiko; Kaneshige, Masatoshi; and Yamamoto, Shuuhei, 6,041,207, Cl. 399-275.000.

Kang, Hee-Bok; and Kim, Dae-Hui, to LG Semicon Co., Ltd. Output buffer control circuit that performs high speed operation by generating a predetermined width of a pulse based on an output control signal. 6,040,715, Cl. 326-87.000.

Kang, Hun: *See*—
Baek, Young Sik; Lee, Sang Man; and Kang, Hun, 6,041,036, Cl. 370-222.000.

Kang, Won Ki: *See*—
Myers, Charles; Trepel, Jane; Kang, Won Ki; Whitesell, Luke; and Neckers, Len, 6,040,334, Cl. 514-460.000.

Kang, Young-Cheol; Lee, Byung-Hak; and Song, Man-Ho, to Samsung Display Devices Co., Ltd. Method and apparatus for manufacturing partition wall of plasma display device. 6,039,619, Cl. 445-24.000.

Kang, Yuh-Huey: *See*—
Tseng, Gwou-Jong; and Kang, Yuh-Huey, 6,039,595, Cl. 439-377.000.

Kanki, Masahiro; Kawano, Mutsuhiro; and Matano, Takashi, to Dai Nippon Printing Co., Ltd. Durable gravure ink and uses of the same. 6,040,356, Cl. 523-160.000.

Kanome, Yuji, to Canon Kabushiki Kaisha. Recording apparatus having deviation adjusting mechanism. 6,039,427, Cl. 347-19.000.

Kansai Paint Co. Ltd.: *See*—
Nakao, Yasushi; and Nakamura, Shigeru, 6,040,015, Cl. 427-407.100.

Kansei Corporation: *See*—
Sasaki, Tsuneo, 6,039,342, Cl. 280-728.300.

Kanterakis, Emmanuel: *See*—
Davidovici, Sorin; Tran, Jimmy Cuong; and Kanterakis, Emmanuel, 6,041,073, Cl. 375-148.000.

Kao, Hung-Teh: *See*—
Greengard, Paul; Porton, Barbara; and Kao, Hung-Teh, 6,040,168, Cl. 435-235.100.

Kao, Yu-Hua: *See*—
De Los Santos, Hector J.; Kao, Yu-Hua; Caigoy, Arturo L.; and Ditmars, Eric D., 6,040,611, Cl. 257-415.000.

Kapadia, Maneck Behram: *See*—
McCarthy, Dennis Ronald; Fossaceca, John Mark; and Kapadia, Maneck Behram, 6,041,240, Cl. 455-464.000.

Kapitan, John Mark: *See*—
Sanders, Marcus Maria; Kapitan, John Mark; and Brown, Henry John Harding, 6,039,738, Cl. 606-61.000.

Kaplitt, Michael G., to Rockefeller University, The. Defective DNA viral vector comprising a neural tissue-specific promoter for in vivo expression of a gene. 6,040,172, Cl. 435-320.100.

Kapp, Nancy J.: *See*—
Donlan, Rodney M.; Elliot, David L.; Kapp, Nancy J.; Wiatr, Christopher L.; and Rey, Paul A., 6,039,965, Cl. 424-405.000.

Karafiath, Gabor; and Cusanelli, Dominic S., to United States of America, Navy. Combined wedge-flap for improved ship powering. 6,038,995, Cl. 114-271.000.

Karageozian, Hampar L.; Karageozian, Vicken H.; Kenney, Maria Cristina; Gutierrez Flores, Jose Luis; Carpio Aragon, Gabriel Arturo; and Nesburn, Anthony B., to Advanced Corneal Systems. Method for accelerating clearance of hemorrhagic blood from the vitreous body with hyaluronidase. 6,039,943, Cl. 424-94.620.

Karageozian, Vicken H.: *See*—
Karageozian, Hampar L.; Karageozian, Vicken H.; Kenney, Maria Cristina; Gutierrez Flores, Jose Luis; Carpio Aragon, Gabriel Arturo; and Nesburn, Anthony B., 6,039,943, Cl. 424-94.620.

Karakaedos, Glen. Combined portable umbrella and air blower. 6,039,062, Cl. 135-16.000.

Karales, Stephen P., to Karales, Stephen P. Vacuum tumbling of meats and other foods. 6,040,013, Cl. 427-281.000.

Karas, Edwin L., to Foxboro Company, The. Vertically mounted differential pressure transmitter having an integrally mounted sensor. 6,038,927, Cl. 73-706.000.

Karasawa, Akio; Yamaguchi, Akihiro; Yamaguchi, Keizaburo; and Ishihara, Yuko, to Mitsui Chemicals, Inc. Aromatic hydroxycarboxylic acid resins and their use. 6,040,111, Cl. 430-270.100.

Karasawa, Joji, to Seiko Epson Corporation. Head mount display device. 6,040,945, Cl. 359-630.000.

Kardorff, Uwe: *See*—
Kast, Jürgen; Vossen, Marcus; von Deyn, Wolfgang; Engel, Stefan; Hill, Regina Luise; Kardorff, Uwe; Otten, Martina; Plath, Peter; Walter, Helmut; Westphalen, Karl-Otto; and Misslitz, Ulf, 6,040,274, Cl. 504-348.000.

Kardos, Keith: *See*—

Sanjurjo, Angel; Lau, Kai-Hung; Lowe, David; Canizales, Anastasia; Jiang, Naixiong; Wong, Victor; Jiang, Liqiang; Schneider, Luke V.; Mufti, Naheed; Rewick, Robert T.; Johansson, Marie; and Kardos, Keith, 6,039,894, Cl. 252-301.40R.

Kargel, Reinhard: *See—*
McMullen, Jacques; Tsu, Wilson; and Kargel, Reinhard, 6,039,789, Cl. 75-711.000.

Karl Storz GmbH & Co. KG: *See—*
Storz, Karl, deceased, 6,039,687, Cl. 600-135.000.

Karmaker, Ajit: *See—*
Prasad, Arun; Karmaker, Ajit; Zammarieh, Elie; and Day, Grant P., 6,039,569, Cl. 433-180.000.

Karunanithi, Nachimuthu: *See—*
Carman, David; Dalal, Siddhartha R.; Jain, Ashish; and Karunanithi, Nachimuthu, 6,041,330, Cl. 707-101.000.

Karunaratne, Nedra: *See—*
Hancock, Robert E. W.; and Karunaratne, Nedra, 6,040,435, Cl. 536-23.100.

Kasai, Takashi: *See—*
Yoshida, Akira; Oda, Kozo; Kasai, Takashi; Shimada, Kousei; Kogen, Hiroshi; Hayakawa, Ichiro; Ishihara, Sadao; Koga, Teiichiro; Kitazawa, Eiichi; and Tokui, Taro, 6,040,339, Cl. 514-485.000.

Kasamatsu, Yoshiharu: *See—*
Yamamoto, Takayuki; Kasamatsu, Yoshiharu; Toyoguchi, Takashi; Yokohata, Toru; and Koishi, Ryosuke, 6,040,958, Cl. 360-103.000.

Kasarnich, Steven M. Carpenter's finger guard. 6,038,697, Cl. 2-21.000.

Kasashima, Atsuki; Ihara, Keisuke; and Shimosaka, Hirotaka, to Bridgestone Sports Co., Ltd. Golf ball. 6,039,660, Cl. 473-378.000.

Kashihara, Mabumi, to NEC Corporation. Charging device. 6,041,197, Cl. 399-50.000.

Kashimada, Yoshimasa, to Canon Kabushiki Kaisha. Image formation apparatus with sheet stacking control feature. 6,041,199, Cl. 399-82.000.

Kashiwaba, Seiichi, to Canon Kabushiki Kaisha. Optical apparatus having hard circuit board encoder. 6,040,951, Cl. 359-823.000.

Kashiwagi, Shunji: *See—*
Komiya, Satoshi; Awaji, Naoki; and Kashiwagi, Shunji, 6,040,198, Cl. 438-16.000.

Kashyap, Raman; and Armitage, Jonathan Richard, to British Telecommunications public limited company. Laser device tuned by forming a refractive index grating in optical fiber. 6,041,069, Cl. 372-6.000.

Kassmann, Gary W., to Xerox Corporation. System and method for grey value expansion of pixel data. 6,040,791, Cl. 341-95.000.

Kast, Jürgen; Vossen, Marcus; von Deyn, Wolfgang; Engel, Stefan; Hill, Regina Luise; Kardorff, Uwe; Otten, Martina; Plath, Peter; Walter, Helmut; Westphalen, Karl-Otto; and Misslitz, Ulf, to BASF Aktiengesellschaft. 2-Aroylcyclohexanediones, their preparation and their use as herbicides or plant growth-regulating agents. 6,040,274, Cl. 504-348.000.

Katagiri, Moriya; Sugita, Yukihiko; and Kitahara, Yoshiyuki, to Olympus Optical Co., Ltd. Drive force transmission mechanism having inclined drive shaft for camera. 6,039,476, Cl. 396-418.000.

Kataoka, Ichiro; Aoki, Kunimitsu; Furuya, Yoshiyuki; Matsushita, Junichi; Nishiyama, Hiroshi; Nakajima, Katsutoshi; Norizuki, Akira; Murakami, Katsumi; and Amari, Takeyuki, to Yazaki Corporation. Center cluster module and system, and electrical equipment connector system. 6,040,760, Cl. 340-425.500.

Kataoka, Masanori: *See—*
Hayakawa, Yoshihiro; and Kataoka, Masanori, 6,040,439, Cl. 536-25.340.

Kato, Hajime: *See—*
Ichioka, Ryoji; Yamakawa, Shinobu; Okino, Hirohito; Kato, Hajime; Iwayama, Kazuyoshi; Konta, Hiroshi; and Kitamura, Akira, 6,040,490, Cl. 585-475.000.

Kato, Hiromu: *See—*
Kokunishi, Motohide; Kato, Hiromu; Ito, Tsutomu; and Hirosawa, Toshio, 6,041,425, Cl. 714-37.000.

Kato, Hiroyuki; and Sasa, Masahiko, to Brother Kogyo Kabushiki Kaisha. Handset detection device for use in telephones. 6,041,119, Cl. 379-424.000.

Kato, Kiichiro; Kondoh, Takeshi; Taguchi, Katsuhisa; and Takahashi, Kazuhiro, to Lintec Corporation. Energy beam curable hydrophilic pressure sensitive adhesive composition and use thereof. 6,040,048, Cl. 428-345.000.

Kato, Motoki, to Sony Corporation. Method of coding and decoding motion vector and apparatus therefor, and method of coding and decoding picture signal and apparatus therefor. 6,040,863, Cl. 348-415.000.

Kato, Motoki; Igi, Nobuhiro; and Yasuda, Kazunori, to Sony Corporation. Image signal coding method and apparatus, image signal transmission method, and signal recording medium. 6,040,865, Cl. 348-416.000.

Kato, Tatsuya: *See—*
Utsunomiya, Hajime; Kato, Tatsuya; and Inoue, Hiroyasu, 6,040,030, Cl. 428-64.100.

Kato, Toshihiro: *See—*
Kishino, Katsumi; and Kato, Toshihiro, 6,040,587, Cl. 257-11.000.

Kato, Yoshinobu: *See—*
Honda, Hirohiko; and Kato, Yoshinobu, 6,040,666, Cl. 318-276.000.

Katoh Electrical Machinery Co., Ltd.: *See—*
Katoh, Hideo, 6,038,739, Cl. 16-342.000.

Katoh, Hideo, to Katoh Electrical Machinery Co., Ltd. Tilt hinge. 6,038,739, Cl. 16-342.000.

Katsumi Kishino: *See—*
Kishino, Katsumi; and Kato, Toshihiro, 6,040,587, Cl. 257-11.000.

Katsuno, Yoji: *See—*
Kodera, Hiroji; and Katsuno, Yoji, 6,038,763, Cl. 29-845.000.

Katsuyama, Norikazu: *See—*
Kudo, Kenji; Kuwabara, Kohji; Yamashita, Shigeharu; Fuchigami, Kazutoshi; and Katsuyama, Norikazu, 6,040,987, Cl. 363-21.000.

Katsuyama, Tsutomu: *See—*
O, Waho; and Katsuyama, Tsutomu, 6,041,081, Cl. 375-297.000.

Kaufman, Kenneth; and Herman, Jeff, to Kimberly-Clark Worldwide, Inc. System for making absorbent paper products. 6,039,838, Cl. 162-109.000.

Kaufman, Mark C.: *See—*
Jones, Robert Allen; Kaufman, Mark C.; and Rumpel, Manfred Carl, 6,039,351, Cl. 280-781.000.

Kaufman, Vlasta Brusic; and Wang, Shumin, to Cabot Corporation. Multi-oxidizer precursor for chemical mechanical polishing. 6,039,891, Cl. 252-79.100.

Kawabata, Eiji: *See—*
Oda, Shigeru; and Kawabata, Eiji, 6,040,470, Cl. 558-58.000.

Kawabe, Keiko; Matsuo, Akihiko; Kimura, Minako; Nagahashi, Kenji; and Uehara, Sanya, to Fujitsu Limited. Program analyzing apparatus which categorizes variables into domains and method thereof. 6,041,177, Cl. 395-704.000.

Kawachi, Genshiro: *See—*
Ota, Masuyuki; Kawachi, Genshiro; Kitajima, Masaaki; Sasaki, Tohru; Oh-e, Masahito; Kondo, Katsumi; and Tsumura, Makoto, 6,040,886, Cl. 349-141.000.

Kawachi, Shigeo: *See—*
Tomikawa, Ichiro; Soga, Mitsuhide; Fujii, Katsuyuki; Ogawa, Katsuhide; Yoshida, Junichi; Kawachi, Shigeo; and Noda, Takehiko, 6,039,441, Cl. 347-86.000.

Kawaguchi, Kiyoshi; Kadota, Shigeru; and Kishita, Kouji, to Denso Corporation. Cooling device boiling and condensing refrigerant. 6,039,111, Cl. 165-104.140.

Kawakami, Kumiko: *See—*
Tsuchiya, Yoshimi; Nomoto, Takashi; Ohsawa, Hirokazu; Kawakami, Kumiko; Ohwaki, Kenji; and Nishikibe, Masaru, 6,040,449, Cl. 546-193.000.

Kawakami, Soichiro, to Canon Kabushiki Kaisha. Powdery material, electrode member, and method for manufacturing same for a secondary cell. 6,040,087, Cl. 429-218.100.

Kawamorita, Yoichi: *See—*
Hanami, Nobuyuki; Kishi, Junichi; Kawamorita, Yoichi; and Soma, Takao, 6,040,099, Cl. 430-66.000.

Kawamoto, Koji: *See—*
Shiina, Kazuhiro; Kawamoto, Koji; Miura, Masato; Ohura, Hitoshi; Ozeki, Shoichi; Akiyama, Noboru; Nunomura, Kuniharo; Nemoto, Minehiro; and Iwamura, Masahiro, 6,040,827, Cl. 345-208.000.

Kawamoto, Shiro; Richard, Harry Gene; Sheldon, John; and Imgawa, Yoichi, to Ryobi Outdoor Products, Inc. Multiple-position, operator-carried, four-stroke engine. 6,039,020, Cl. 123-196.00R.

Kawamura, Akira; Hasegawa, Toshiyuki; and Tanikawa, Akira, to Sumitomo Chemical Company Limited. Paper coating composition. 6,039,799, Cl. 106-287.200.

Kawamura, Hideo: *See—*
Kita, Hideki; and Kawamura, Hideo, 6,040,519, Cl. 136-230.000.

Kawamura, Kazue: *See—*
Kojima, Hiroyuki; Ogawa, Yuri; Kawamura, Kazue; and Sano, Konosuke, 6,040,160, Cl. 435-115.000.

Kawamura, Naohisa: *See—*
Kusunoki, Akihiko; Kawamura, Naohisa; Sugizaki, Yoshiki; and Kuwahara, Akio, 6,039,971, Cl. 424-443.000.

Kawamura, Tatsuya: *See—*
Nishimura, Koichi; Kawamura, Tatsuya; and Fujioka, Toyozo, 6,040,388, Cl. 525-332.100.

Kawamura, Yoshihiro: *See—*
Mizuno, Yuhei; Kawamura, Yoshihiro; and Kondo, Shiro, 6,039,766, Cl. 8-142.000.

Kawanishi, Toshiro, to Uchihashi Estec Co., Ltd. Thin type thermal fuse and manufacturing method thereof. 6,040,754, Cl. 337-297.000.

Kawano, Mutsuhiro: *See—*
Kanki, Masahiro; Kawano, Mutsuhiro; and Matano, Takashi, 6,040,356, Cl. 523-160.000.

Kawano, Yuji: *See—*
Ohmi, Tadahiro; Yamaji, Michio; Shinohara, Tsutomu; Itoi, Shigeru; Hirao, Keiji; Kawano, Yuji; Tanaka, Shigeaki; Yokoyama, Kosuke; Morokoshi, Hiroshi; and Ikeda, Nobukazu, 6,039,360, Cl. 285-61.000.

Kawasaki, Kenji, to Olympus Optical Co., Ltd. Reflecting fluorescence microscope. 6,040,940, Cl. 359-389.000.

Kawasaki, Masaaki: *See—*
Ishida, Tatsuyoshi; Yasuda, Masaaki; Onishi, Hitoshi; Kihara, Noriaki; Tsutsui, Toshiyuki; Sagane, Toshihiro; Kawasaki, Masaaki; and Nakahama, Hidenari, 6,040,407, Cl. 526-281.000.

Kawasaki Steel Corporation: *See—*
Toge, Tetsuo; Komatsubara, Michiro; Honda, Atsuhito; Sadahiro, Kenichi; and Senda, Kunihiro, 6,039,818, Cl. 148-307.000.

Kawasaki, Toshisuke; and Oka, Shogo, to Seikagaku Corporation. DNA encoding glucuronyltransferase. 6,040,156, Cl. 435-69.100.

Kawashima, Tetsuji: *See—*
Iida, Michihiko; Kawashima, Tetsuji; Sato, Shoji; and Masuda, Shozo, 6,041,029, Cl. 369-50.000.

Kawata, Masakazu: *See—*
Miyamoto, Tetsuya; and Kawata, Masakazu, 6,039,896, Cl. 252-511.000.

Kawate, Yasutoshi: *See*—
Arakawa, Seiichi; Matsute, Masataka; and Kawate, Yasutoshi, 6,039,893, Cl. 252-299.010.

Kawawada, Naoki; Namiki, Hiroaki; Takehara, Isamu; Iwaki, Tadao; Ishida, Takashi; Hayashizaki, Shinichi; Shimaguchi, Hirotada; and Konno, Katsushige, to Seiko Instruments Inc. Spindle motor and rotator device. 6,040,648, Cl. 310-90.000.

Kay, John; and Kille, Peter. Multifunctional protein and DNA sequence encoding same. 6,040,155, Cl. 435-69.100.

Kayashima, Kazuhiro: *See*—
Yamamoto, Hiroshi; Shimeki, Yasuharu; Kayashima, Kazuhiro; Maruno, Susumu; Fujimoto, Makoto; and Kojima, Yoshihiro, 6,040,825, Cl. 345-173.000.
Yamamoto, Hiroshi; Niwa, Hisao; Kojima, Yoshihiro; Maruno, Susumu; Kayashima, Kazuhiro; Kouda, Toshiyuki; Maekawa, Hidetsugu; Ito, Satoru; and Shimeki, Yasuharu, 6,041,141, Cl. 382-231.000.

Kayashima, Shigeo: *See*—
Hasegawa, Shinya; Kayashima, Shigeo; Maeda, Satoshi; and Aritake, Hirokazu, 6,040,929, Cl. 359-17.000.

Kaylor, Billy E.: *See*—
Moore, Richard L.; Robson, Michael G.; Lockeby, Warren E., Jr.; and Kaylor, Billy E., 6,038,813, Cl. 47-75.000.

Kazama, Isamu: *See*—
Iwano, Hiroshi; Kazama, Isamu; and Yasuoka, Masayuki, 6,039,025, Cl. 123-399.000.

Kazeef, Michael G.; and Perruchoud, Raymond. Fused calcined petroleum coke and method of formation. 6,039,791, Cl. 75-764.000.

Kazo, Osamu; and Kokubo, Tsuyoshi, to NEC Corporation. Card recovery method and card issuing apparatus. 6,039,412, Cl. 311-39.100.

Kearney, Mark Billings: *See*—
Manlove, Gregory Jon; and Kearney, Mark Billings, 6,040,692, Cl. 324-173.000.

Keck, Peter C.; and Smart, John E., to Stryker Corporation. Single chain analogs of the TGF-β superfamily (morphons). 6,040,431, Cl. 530-399.000.

Keeler, Tracy N.: *See*—
Chung, Kenny; Keeler, Tracy N.; and Tan, Manuel L., 6,039,960, Cl. 424-401.000.

Keener, Frank. Portable bandsaw sawmill apparatus. 6,038,954, Cl. 83-795.000.

Keeth, Brent: *See*—
Casper, Stephen L.; Pinney, David; and Keeth, Brent, 6,041,003, Cl. 365-202.000.

Keil, Michael: *See*—
Vogelbacher, Uwe Josef; Keil, Michael; Klintz, Ralf; Wahl, Josef; Wingert, Horst; König, Hartmann; Rack, Michael; Götz, Roland; and Teles, Joaquim Henrique, 6,040,458, Cl. 548-371.100.

Kelkar, Mukul: *See*—
Tanaka, Tsutomu; Kelkar, Mukul; Fairbairn, Kevin; Ponnekanti, Hari; and Cheung, David, 6,039,834, Cl. 156-345.000.

Keller, Herbert: *See*—
Pfaff, Georg; and Keller, Herbert, 6,040,779, Cl. 340-661.000.

Keller, Jakob; Marlow, Paul; McMillan, Robin; and Valk, Martin, to Asea Brown Boveri AG. Burner arrangement for a gas turbine for preventing the ingress of fluids into a fuel passage. 6,038,863, Cl. 60-742.000.

Keller, Josef, to Kun Teng Industry Co., Ltd. Multi-speed drive hub for a bicycle. 6,039,671, Cl. 475-296.000.

Kelley, David E.; Kramer, Jeffrey C.; Pontell, Jonathan L.; Parral, Loretta S.; Roth, Michelle V.; Yergen, Anoush; and Sanford, Arlene, to Twentieth Century Fox Film Corporation. Apparatus for providing facial support. 6,039,710, Cl. 602-74.000.

Kelly, Michael DeWayne: *See*—
Lau, Willie; Kelly, Michael DeWayne; Lorah, Dennis Paul; and Heinley, David Ralph, 6,040,409, Cl. 526-328.000.

Kelly, Sean: *See*—
Timson, Colin J.; Yap, Chas Hock Eng; and Kelly, Sean, 6,041,412, Cl. 713-200.000.

Kelly, Thomas J.; and Kelly, Trucee V. Floor wiper construction. 6,038,726, Cl. 15-227.000.

Kelly, Timm L.; and Rochfort, Gary L., to Henkel Corporation. Lubricant and surface conditioner suitable for conversion coated metal surfaces. 6,040,280, Cl. 508-503.000.

Kelly, Trucee V.: *See*—
Kelly, Thomas J.; and Kelly, Trucee V., 6,038,726, Cl. 15-227.000.

Kelsey Hayes Company: *See*—
Schneider, Daniel P., 6,039,156, Cl. 188-73.440.
Wiacek, Michael F.; and Koch, Gary L., 6,039,407, Cl. 301-111.000.

Kemmerling, Frank: *See*—
Van De Venne, Gunter; Kemmerling, Frank; Bonse, Michael; Muckelmann, Klaus; and Peters, Rainer, 6,039,536, Cl. 415-216.100.

Kemper, Astrid E.: *See*—
Slangen, Hubertus J. M.; and Kemper, Astrid E., 6,039,275, Cl. 241-17.000.

Kenall Manufacturing Co.: *See*—
Braun, Morris, 6,039,197, Cl. 215-228.000.

Kendall, Michael. Orthotic system. 6,038,793, Cl. 36-173.000.

Kendrick, Jimmy Ray, to Moore North America, Inc. Security bands to prevent counterfeiting with color copies. 6,039,357, Cl. 283-93.000.

Kennedy, Jenifer S.: *See*—
Buysse, Steven P.; Kennedy, Jenifer S.; Lands, Michael J.; Loeffler, Donald R.; Lukianow, S. Wade; and Ryan, Thomas P., 6,039,733, Cl. 606-40.000.

Kennedy, Joe B.; Davyduke, Roland; Jackson, James G.; Hannebauer, James B.; Newnes, William R.; Stroud, Brian; and Sergeant, John, to CAE Electronics Ltd. Position-based integrated motion controlled curve sawing. 6,039,097, Cl. 144-357.000.

Kennedy, Joe B.; Davyduke, Roland; Jackson, James G.; Hannebauer, James B.; Newnes, William R.; Stroud, Brian; and Sergeant, John, to Cae Electronics Ltd. Position-based integrated motion controlled curve sawing. 6,039,098, Cl. 144-357.000.

Kennelly, Kevin; Gardiner, Ian; Noble, David; and Muliadiredja, Achmad R., to Atlantic Richfield Company. Method and device for assembling cluster platforms. 6,039,507, Cl. 405-227.000.

Kenney, Maria Cristina: *See*—
Karageozian, Hampar L.; Karageozian, Vicken H.; Kenney, Maria Cristina; Gutierrez Flores, Jose Luis; Carpio Aragon, Gabriel Arturo; and Nesburn, Anthony B., 6,039,943, Cl. 424-94.620.

Kennie, Jerry; Cheng, Yi; Hope, Mark E.; Huff, Shean; Nankee, Robert J., II; Joyce, Mary; Krozek, Dennis A.; Moote, Richard K.; Richardson, Roland T.; Rotramel, William D.; and Seitz, Gary L., to Chrysler Corporation. Method of triggering a determination of the composition of fuel in a flexible fueled vehicle. 6,041,278, Cl. 701-103.000.

Kent, Diane R.; Hoyt, Matthew B.; Ilg, Otto M.; and Queen, Morris K., to BASF Corporation. Process of making a bicomponent fiber. 6,039,903, Cl. 264-40.100.

Kent, Dorothy M. Toilet plunger holder and cover. 6,038,709, Cl. 4-255.050.

Kent, Stephen Brian Henry; Milton, Saskia Charlotte Florence; and Milton, Raymond Cecil deLisle, to Scripps Research Institute, The. D-enzyme compositions and methods of their use. 6,040,133, Cl. 435-4.000.

Kenworthy, Edward William: *See*—
Bickerton, Matthew John; Bohrer, Kathryn Ann; Hughes, Emma Suzanne; Kenworthy, Edward William; Musgrove, Rupert Jeremy; Patterson, LindaMay Rose; Porter, Steven; Salt, David Dennis; and Scattergood, Duncan Keith, 6,041,312, Cl. 705-30.000.

Kenyon, Kenneth H.: *See*—
Bennett, Patricia S.; Kenyon, Kenneth H.; Ekern, Ronald J.; Rose, Janna L.; and Wieser, Josie B., 6,040,088, Cl. 429-229.000.

Kenyon, Stephen C.: *See*—
Monroe, John W.; Smith, John J.; Kenyon, Stephen C.; and Anderson, Michael E., 6,040,843, Cl. 345-507.000.

Kenyon, William E.: *See*—
Ramakrishnan, Terizhandur S.; Schwartz, Lawrence M.; Fordham, Edmund J.; Kenyon, William E.; and Wilkinson, David J., 6,040,696, Cl. 324-303.000.

Kerlin, Harold William: *See*—
Pauza, William Vito; and Kerlin, Harold William, 6,039,610, Cl. 439-682.000.

Kern, Earl R.: *See*—
Adair, Dennis W.; Johnson, Karl M.; and Kern, Earl R., 6,040,298, Cl. 514-50.000.

Kern, Josef: *See*—
Haehnel, Thomas; Breitlow-Hertzfeldt, Juergen; Saffian, Bernd; and Kern, Josef, 6,040,751, Cl. 335-185.000.

Kern, Klaus: *See*—
Rieger, Uwe; Kern, Klaus; and Thomas, Daniel, 6,039,364, Cl. 292-300.000.

Kesten, Randy J.: *See*—
Javier, Manuel A., Jr.; Pearce, Stephen B.; Kesten, Randy J.; Payne, Sam G.; and Gertner, Kevin, 6,039,727, Cl. 606-10.000.

Kesterman, James; and Pendleton, David, to Delaware Capital Formations, Inc. Reinforcing flange for underground sump. 6,039,201, Cl. 220-484.000.

Keys, Clyde James. Octagonal shaped concrete block. 6,038,822, Cl. 52-100.000.

Khachaturian, Jon E. Method and apparatus for the offshore installation of multi-ton packages such as deck packages and jackets. 6,039,506, Cl. 405-204.000.

Khaleghi, Farideh; Solheim, Alan Glen; and Barnard, Chris Wilhelm, to Nortel Networks Corporation. Method and apparatus for channel equalization in wavelength division multiplexed systems. 6,040,933, Cl. 359-124.000.

Khalil, Gamal: *See*—
Malin, Stephen F.; and Khalil, Gamal, 6,040,578, Cl. 250-339.120.

Khanna, Yash P.; Puterbuagh, Frank H., Jr.; Kuhn, William P.; and Schena, Martin J., to AlliedSignal Inc. Nylon 6 or 66 based compositions and films formed therefrom having reduced curl. 6,040,392, Cl. 525-432.000.

Khatri, Lakho L.: *See*—
Bakshi, Amarjit S.; and Khatri, Lakho L., 6,039,999, Cl. 426-633.000.

Kho, Samuel P., to Newmoon.Com. Network traffic by instruction packet size reduction. 6,041,351, Cl. 709-224.000.

Khoo, Chor San Heng: *See*—
Bangs, William E.; Khoo, Chor San Heng; and Ko, Sandy, 6,039,978, Cl. 424-489.000.
Bangs, William E.; Dibenedetto, Joseph D.; Friedberg, Joyce L.; Giordano, Denise A.; Glover, Judy M.; Khoo, Chor San Heng; Ko, Sandy; MacNair, R. David C.; Noar, Scott R.; Randazzi, John J., Jr.; Stoever, Harro; and Ziegler, Paula J., 6,039,989, Cl. 426-106.000.

Khovaylo, Modest; Puyot, Michael A.; Dow, James C.; Henderson, Scott; and Stowell, Davin, to Hewlett-Packard Company. Notebook styled scanner. 6,040,572, Cl. 250-235.000.

Khwaja, Tasneem A.; and Friedman, Elliot P., to University of Southern California; and Pharmaprint Inc. Pharmaceutical grade saw palmetto. 6,039,950, Cl. 424-195.100.

Kida, Sumio: *See*—

Toyama, Yoshiharu; Kuroda, Akikazu; Kiyama, Tokuji; Kida, Sumio; Yoshida, Shunji; Yamamoto, Takashi; and Atsumi, Tetsuya, 6,039,809, Cl. 118-715.000.

Kidalov, Sergei V.: *See*—
Bashlov, Nikolai L.; Vul, Alexandr Y.; Kidalov, Sergei V.; Kozyrev, Sergei; Milenin, Vyacheslav M.; and Timofeev, Nikolai A., 6,040,658, Cl. 313-637.000.

Kiekert AG: *See*—
Grasmann, Ulrich, 6,040,761, Cl. 340-425.500.
Menke, Johannes-Theodor; and Reis, Klaus-Peter, 6,038,895, Cl. 70-278.100.

Kielar, Stanley John; Westercamp, Kenneth Lee; and Bauer, Chad David, to General Motors Corporation. Steerable drive axle with electrically-powered steering apparatus. 6,039,143, Cl. 180-412.000.

Kiest, Larry W., Jr., to LMK Enterprises, Inc. Apparatus and method for repairing the junction of a sewer main line and lateral pipe. 6,039,079, Cl. 138-98.000.

Kigami, Yuhji: *See*—
Kanamaru, Atsushi; Kakihara, Toshio; Kigami, Yuhji; and Saitoh, Takahiro, 6,041,392, Cl. 711-113.000.

Kihara, Noriaki: *See*—
Ishida, Tatsuyoshi; Yasuda, Masaaki; Onishi, Hitoshi; Kihara, Noriaki; Tsutsui, Toshiyuki; Sagane, Toshihiro; Kawasaki, Masaaki; and Nakahama, Hidenari, 6,040,407, Cl. 526-281.000.

Kijima, Eiichi: *See*—
Nakanishi, Tatsuo; Hamaguchi, Shinichi; and Kijima, Eiichi, 6,040,105, Cl. 430-127.000.

Kikuchi, Hiroshi; and Tsuboi, Takayuki, to Canon Kabushiki Kaisha. Image display apparatus. 6,041,190, Cl. 396-284.000.

Kikuchi, Hiroshi: *See*—
Tsuboi, Takayuki; Yagyu, Mineto; Nagano, Akihiko; and Kikuchi, Hiroshi, 6,040,880, Cl. 349-5.000.

Kikuchi, Kazuhito, to Fujitsu Limited. Uninterruptible power supply apparatus which supplies guaranteed power to electronic apparatuses in a system. 6,041,414, Cl. 713-300.000.

Kilander, Holger. Combined broom and rake. 6,038,794, Cl. 37-285.000.

Kilgore, Jason T.: *See*—
Robinson, Barry S.; and Kilgore, Jason T., 6,039,030, Cl. 123-457.000.

Kilkki, Matti Kalevi; and Ruutu, Jussi Pekka Olavi, to Nokia Telecommunications, OY. System and method for determining network bandwidth availability using priority level feedback. 6,041,039, Cl. 370-230.000.

Kille, Peter: *See*—
Kay, John; and Kille, Peter, 6,040,155, Cl. 435-69.100.

Killian, James M.: *See*—
Crawford, Michael K.; and Killian, James M., 6,039,707, Cl. 602-5.000.

Killion, Stephanie Lynn: *See*—
Guskey, Susan Marie; Inman, Everett Junior; Desch, Teresa Ann; Fritschi, Lynne Anne; and Killion, Stephanie Lynn, 6,040,282, Cl. 510-119.000.

Kim, Dae-Hui: *See*—
Kang, Hee-Bok; and Kim, Dae-Hui, 6,040,715, Cl. 326-87.000.

Kim, Derek; and Lopez, Thomas, to Reynolds Industries Incorporated. Connector assembly with self activating environmental seal. 6,039,585, Cl. 439-137.000.

Kim, Hak Lyang, to LG Electronics, Inc. Communication control device and method for television receiver. 6,040,872, Cl. 348-553.000.

Kim, Han-sung, to Samsung Electronics Co., Ltd. Ion beam focuser for an ion implanter analyzer. 6,040,582, Cl. 250-492.210.

Kim, Hidong; and Stewart, Lansing Joseph, to Emerald BioStructures, Inc. Crystallization tray. 6,039,804, Cl. 117-206.000.

Kim, Hwan-Chul: *See*—
Un, Sung-Kyong; Cho, Hyun-Sook; Kim, Hwan-Chul; and Lee, Soo-In, 6,040,850, Cl. 348-10.000.

Kim, Hyeog-ki: *See*—
Lim, Chang-su; Kim, Hyeog-ki; Kim, Sue-ryeon; and Kim, Il-kyoung, 6,040,254, Cl. 442-261.000.

Kim, Hyeung-ki: *See*—
Han, Youn-soo; Kim, Hyeung-ki; Kim, Hyun-joon; and Kim, Seung-un, 6,038,699, Cl. 2-69.000.

Kim, Hyun-Chul, to Fairchild Korea Semiconductor, Ltd. Methods of forming trench-gate semiconductor devices using sidewall implantation techniques to control threshold voltage. 6,040,212, Cl. 438-242.000.

Kim, Hyun-joon: *See*—
Han, Youn-soo; Kim, Hyeung-ki; Kim, Hyun-joon; and Kim, Seung-un, 6,038,699, Cl. 2-69.000.

Kim, Il-kyoung: *See*—
Lim, Chang-su; Kim, Hyeog-ki; Kim, Sue-ryeon; and Kim, Il-kyoung, 6,040,254, Cl. 442-261.000.

Kim, Jae Whan: *See*—
Yi, Seung Hyun; and Kim, Jae Whan, 6,041,005, Cl. 365-207.000.

Kim, Jaeho; and Bocek, Joseph M., to Cardiac Pacemakers, Inc. System and method for detecting atrial events of a heart. 6,041,251, Cl. 600-518.000.

Kim, Jae-Yoon: *See*—
Ko, Young-Hoon; Lee, Jung-Goo; and Kim, Jae-Yoon, 6,040,390, Cl. 525-338.000.

Kim, Jin-Bog, to Samsung Electronics Co., Ltd. Peripheral unit connection status display device of composite video apparatus and methods thereof. 6,040,874, Cl. 348-569.000.

Kim, Jin-heung: *See*—
Park, Bae-seung; Kim, Jin-heung; and Cho, Jung-hyun, 6,039,830, Cl. 156-267.000.

Kim, Jin-hwan; and Jang, Min-ho, to Samsung Electronics Co., Ltd. Optical pickup for using disks each having a different thickness. 6,041,027, Cl. 369-44.240.

Kim, Jin-nyun, to Samsung Display Devices Co., Ltd. Getter flashing method for cathode ray tube and getter for conducting same. 6,040,656, Cl. 313-481.000.

Kim, Jitae. Intelligent safe system. 6,040,771, Cl. 340-545.000.

Kim, Jong Kook: *See*—
Oh, Won Zin; Lee, Kune Woo; Choi, Wang Kyu; Park, Hyun Soo; Kim, Jong Seung; Cho, Moon Hwan; and Kim, Jong Kook, 6,040,462, Cl. 549-352.000.

Kim, Jong Seung: *See*—
Oh, Won Zin; Lee, Kune Woo; Choi, Wang Kyu; Park, Hyun Soo; Kim, Jong Seung; Cho, Moon Hwan; and Kim, Jong Kook, 6,040,462, Cl. 549-352.000.

Kim, Jong-Woo, to Samsung Electronics Co., Ltd. Apparatus for filtering solvent of liquid electrophotographic printer. 6,041,201, Cl. 399-93.000.

Kim, Jong-yeob: *See*—
Park, Won-seo; Ho, Wan-chol; Ryu, Duk-Kyun; and Kim, Jong-yeob, 6,040,785, Cl. 340-928.000.

Kim, Jung Pill; and Jung, In Chul, to Hyundai Electronics Industries Co., Ltd. Apparatus for stabilizing an antifuse used for a memory device. 6,041,009, Cl. 365-225.700.

Kim, Jung Woo: *See*—
Hong, Chung, Il; Kim, Jung Woo; Lee, Sang Joon; Ahn, Soon Kil; Choi, Nam Song; Hong, Ryung Kee; Chun, Hyoung Sik; Moon, Seung Kee; and Lee, Hong Woo, 6,040,337, Cl. 514-475.000.

Kim, Kwang Ho: *See*—
Lee, Yoon Pyo; Lee, Chun Sik; Kim, Kwang Ho; Jurng, Jong Soo; Kim, Young Il; Shin, Hung Tae; and Han, Hee Suk, 6,038,869, Cl. 62-100.000.

Kim, Kwang Joon: *See*—
Huh, Kyung Bum; and Kim, Kwang Joon, 6,040,678, Cl. 318-701.000.

Kim, Kyoung S.; Kimball, S. David; Cai, Zhen-wei; Rawlins, David B.; Misra, Raj N.; Poss, Michael A.; Webster, Kevin R.; Hunt, John T.; and Han, Wen-Ching, to Bristol-Myers Squibb Company. Aminothiazole inhibitors of cyclin dependent kinases. 6,040,321, Cl. 514-369.000.

Kim, Kyung Woon; and Lee, Hong Cheol, to Daewoo Motor Co., Ltd. Apparatus of exhaust gas recirculation valve for an internal combustion engine. 6,039,033, Cl. 123-568.170.

Kim, Seung-Hwan; Park, Seon-Hee; and Ryu, Chang-Su, to Electronics and Telecommunications Research Institute. Method for manufacturing probabilistic switch using multiplicative noise. 6,040,641, Cl. 307-112.000.

Kim, Seung-un: *See*—
Han, Youn-soo; Kim, Hyeung-ki; Kim, Hyun-joon; and Kim, Seung-un, 6,038,699, Cl. 2-69.000.

Kim, Sue-ryeon: *See*—
Lim, Chang-su; Kim, Hyeog-ki; Kim, Sue-ryeon; and Kim, Il-kyoung, 6,040,254, Cl. 442-261.000.

Kim, Tae Geun: *See*—
Park, Chang Soon; Kim, Tae Geun; and Tak, Sung Woo, 6,039,248, Cl. 235-379.000.

Kim, Tae Jin; Thio, Tineke; and Ebbesen, Thomas Wren, to NEC Research Institute, Inc. Optical transmission control apparatus utilizing metal films perforated with subwavelength-diameter holes. 6,040,936, Cl. 359-245.000.

Kim, Unsoon; Liu, Yowjuang W.; and Sun, Yu, to Advanced Micro Devices, Inc. Isolation boundaries in flash memory cores. 6,040,597, Cl. 257-321.000.

Kim, Young Il: *See*—
Lee, Yoon Pyo; Lee, Chun Sik; Kim, Kwang Ho; Jurng, Jong Soo; Kim, Young Il; Shin, Hung Tae; and Han, Hee Suk, 6,038,869, Cl. 62-100.000.

Kim, Young-sun: *See*—
Park, Young-wook; Yoo, Cha-young; Kim, Young-sun; and Nam, Seung-hee, 6,039,811, Cl. 118-719.000.

Kimball, David V., to Environmental Screening Technology, Inc. Fixture for vibration testing. 6,040,703, Cl. 324-755.000.

Kimball, S. David: *See*—
Kim, Kyoung S.; Kimball, S. David; Cai, Zhen-wei; Rawlins, David B.; Misra, Raj N.; Poss, Michael A.; Webster, Kevin R.; Hunt, John T.; and Han, Wen-Ching, 6,040,321, Cl. 514-369.000.

Kimbel, Kirk: *See*—
Dees, Jerome G.; and Kimbel, Kirk, 6,039,682, Cl. 493-58.000.

Kimberly-Clark Worldwide, Inc.: *See*—
Achter, Amy Michele; Balzar, Tammy Jo; and Fox, Donald George, 6,039,828, Cl. 156-217.000.
Hudson, Robert Leslie, 6,040,255, Cl. 442-382.000.
Jessup, James Lyle; and Paalman, Donald Henry, 6,039,716, Cl. 604-385.100.
Kaufman, Kenneth; and Herman, Jeff, 6,039,838, Cl. 162-109.000.

Kimijima, Tetsuya: *See*—
Wu, Shang-Qian; Morishita, Jun-ichi; Ishihara, Yoshio; and Kimijima, Tetsuya, 6,040,915, Cl. 356-435.000.

Kimisawa, Toshihide: *See*—
Nishina, Yuji; and Kimisawa, Toshihide, 6,039,296, Cl. 248-311.200.

Kimoto Co., Ltd.: *See*—
Miwa, Minoru; Takeno, Akiyoshi; Koike, Toshihiro; Ako, Satoshi; and Sugiyama, Yasunori, 6,040,941, Cl. 359-443.000.

Kimura, Kenichi; Shiga, Akira; Hashiguchi, Toshihiko; Murakami, Eiji; and Sasaki, Katsumi, to Olympus Optical Co., Ltd. Treating instrument for operation and medical device using the treatment device. 6,039,752, Cl. 606-205.000.

Kimura, Mikihiro; and Sekine, Masahiro, to Mitsubishi Denki Kabushiki Kaisha. Semiconductor test structure for estimating defects at isolation edge and test method using the same. 6,040,199, Cl. 438-17.000.

Kimura, Minako: *See*—
Kawabe, Keiko; Matsuo, Akihiko; Kimura, Minako; Nagahashi, Kenji; and Uehara, Sanya, 6,041,177, Cl. 395-704.000.

Kimura, Nobutake; Ariga, Masato; Yamakawa, Hirohito; Nakagawa, Yoshio; and Shimizu, Akio, to Nisshin Flour Milling Co., Ltd. Hairless mouse sensitive to *helicobacter pylori*. 6,040,495, Cl. 800-8.000.

Kimura, Seiichi: *See*—
Takamatsu, Risuke; and Kimura, Seiichi, 6,039,300, Cl. 251-129.120.

Kimura, Takahiko: *See*—
Ishiguro, Yasuyuki; Sanada, Yoshiaki; Takaya, Toshihiko; Kimura, Takahiko; Kaneshige, Masatoshi; and Yamamoto, Shuuhei, 6,041,207, Cl. 399-275.000.

Kimura, Tomomichi: *See*—
Ishida, Nobuo; Togashi, Jun; Kimura, Tomomichi; Morikawa, Kiyoshi; Nakayama, Yoshifumi; Akiyama, Hiroshi; Yanagisawa, Tatsuya; and Ota, Takashi, 6,041,032, Cl. 369-191.000.

Kinal, George Vladimir; Nagle, James Robert, II; Soddu, Claudio; and Ryan, Fintan Richard, to International Mobile Satellite Organization. Satellite radiodetermination. 6,040,798, Cl. 342-357.010.

Kindt-Larsen, Ture: *See*—
Martin, Wallace Anthony; Adams, Jonathan Patrick; Andersen, Finn Thrige; Beaton, Stephen Robert; Christensen, Svend; Jensen, Allan G.; Kindt-Larsen, Ture; Lust, Victor; Walker, Craig William; and Wang, Daniel Tsu-Fang, 6,039,899, Cl. 264-1.360.

Kinedyne Corporation: *See*—
Cardona, Edgardo, 6,039,522, Cl. 410-127.000.

Kinetic Ceramics, Inc.: *See*—
O'Neill, Cormac G., 6,040,653, Cl. 310-328.000.

King, Jackie L.: *See*—
Mantkowski, Thomas E.; Das, Nripendra N.; Heidorn, Raymond W.; and King, Jackie L., 6,039,810, Cl. 118-715.000.

King, Raymond P.: *See*—
Bedja, Abdelkrim; Moser, Gregory C.; and King, Raymond P., 6,039,149, Cl. 182-20.000.

Kinnard, David W., to Eaton Corporation. Wafer temperature monitoring device utilizing flexible thermocouple. 6,040,518, Cl. 136-201.000.

Kinomura, Atsushi: *See*—
Chayahara, Akiyoshi; Horino, Yuji; Kinomura, Atsushi; Tsubouchi, Nobuteru; and Fujii, Kanenaga, 6,039,847, Cl. 204-192.110.

Kinoshita, Kazutoshi: *See*—
Terai, Tadayoshi; Hitomi, Yoshinori; Okano, Masayuki; and Kinoshita, Kazutoshi, 6,038,728, Cl. 15-250.201.

Kinoshita, Naoyoshi: *See*—
Fujikura, Teruhiko; Kinoshita, Naoyoshi; Fujii, Makoto; Matsuhara, Kenji; and Natsume, Munehiro, 6,041,214, Cl. 399-403.000.

Kinoshita, Tadatoshi, to Yourbusiness Co., Ltd. Bending die having rotary die. 6,038,908, Cl. 72-315.000.

Kinouchi, Masami: *See*—
Yamamoto, Iwao; Kakikura, Eisaku; Kinouchi, Masami; Inoue, Yoshiaki; and Shiotsu, Tamotsu, 6,040,051, Cl. 428-367.000.

Kinsho, Toshihiko; Satake, Munekazu; and Miyazaki, Tadakazu, to Sanyo Chemical Industries Ltd. Epoxy curing agent and one-component (type) epoxy resin composition. 6,040,398, Cl. 525-527.000.

Kinzer, Dan: *See*—
Cheah, Chuan; Munoz, Jorge; and Kinzer, Dan, 6,040,626, Cl. 257-735.000.

Kioritz Corporation: *See*—
Taomo, Toshio; and Song, Wang Yan, 6,039,037, Cl. 125-13.010.

Kirchhoefer, Dennis Ray; Miller, Thomas Edward; and Tsangaris, Paris, to Knowles Electronics, Inc. Shock resistant electroacoustic transducer. 6,041,131, Cl. 381-415.000.

Kirk, Randall D.: *See*—
Monette, Dave R.; and Kirk, Randall D., 6,039,389, Cl. 296-207.000.

Kirkpatrick, Donald C.: *See*—
Denton, Claude; Kirkpatrick, Donald C.; and Peters, Samuel J., 6,041,043, Cl. 370-254.000.

Kishi, Gregory Tad, to International Business Machines Corporation. Automated message processing system configured to automatically manage introduction of removable data storage media into media library. 6,041,329, Cl. 707-100.000.

Kishi, Junichi: *See*—
Hanami, Nobuyuki; Kishi, Junichi; Kawamorita, Yoichi; and Soma, Takao, 6,040,099, Cl. 430-66.000.

Kishimoto, Kazunori, to NEC Corporation. Ternary signal input circuit. 6,040,709, Cl. 326-59.000.

Kishimoto, Mitsuru: *See*—
Kobayashi, Hideyuki; Kishimoto, Mitsuru; Ooishi, Noboru; and Ikeda, Kiyoshi, 6,039,433, Cl. 347-40.000.

Kishimoto, Shunichi: *See*—
Hamagishi, Goro; Kanatani, Keiichi; Kishimoto, Shunichi; Sakata, Masahiro; Yamashita, Atsuhiro; Matsushita, Naoki; and Mashitani, Ken, 6,040,807, Cl. 345-6.000.

Kishino, Katsumi; and Kato, Toshihiro, to Katsumi Kishino; and Daido Tokushuko Kabushiki Kaisha. Spin-polarized electron emitter having semiconductor opto-electronic layer with split valence band. 6,040,587, Cl. 257-11.000.

Kishita, Kouji: *See*—
Kawaguchi, Kiyoshi; Kadota, Shigeru; and Kishita, Kouji, 6,039,111, Cl. 165-104.140.

Kisman, Kenneth Edwin, to Rangewest Technologies Ltd. Enhanced lift method and apparatus for the production of hydrocarbons. 6,039,121, Cl. 166-369.000.

Kissel, Guenther: *See*—
Butz, Thomas; Kaller, Ralf; Kissel, Guenther; Mayer, Gehard; Koch, Volker; and Schnabel, Werner, 6,039,779, Cl. 55-499.000.

Kita, Hideki, to Isuzu Ceramics Research Institute Co., Ltd. Method for producing a reaction sintered ceramic. 6,040,256, Cl. 501-97.100.

Kita, Hideki; and Kawamura, Hideo, to Isuzu Ceramics Research Institute Co., Ltd. Unit sheath. 6,040,519, Cl. 136-230.000.

Kita, Masaharu: *See*—
Hyoda, Shunji; Kita, Masaharu; Sawada, Hirotoshi; Nemugaki, Shuichi; Otsuka, Sumio; Miyawaki, Yoshitaka; Ogawa, Takashi; and Kubo, Yuhki, 6,040,453, Cl. 548-250.000.

Kita, Tatsuya: *See*—
Ueno, Takeshi; Kita, Tatsuya; and Shibasaki, Naoji, 6,040,268, Cl. 503-227.000.

Kitagawa, Tooru; and Ishitobi, Michio, to Toyo Boseki Kabushiki Kaisha. Polybenzazole fiber having high tensile modulus and process of manufacture thereof. 6,040,050, Cl. 428-364.000.

Kitaguchi, Akira; Hatakenaka, Makoto; Nakajima, Michio; Motonami, Kaoru; Shiroshima, Kiyoyuki; and Yamashita, Takekazu, to Mitsubishi Denki Kabushiki Kaisha; and Mitsubishi Electric System LSI Design Corporation. Semiconductor integrated circuit including a capacitor and a fuse element. 6,040,614, Cl. 257-529.000.

Kitahara, Yoshiyuki: *See*—
Katagiri, Moriya; Sugita, Yukihiko; and Kitahara, Yoshiyuki, 6,039,476, Cl. 396-418.000.

Kitajima, Masaaki: *See*—
Ota, Masuyuki; Kawachi, Genshiro; Kitajima, Masaaki; Sasaki, Tohru; Oh-e, Masahito; Kondo, Katsumi; and Tsumura, Makoto, 6,040,886, Cl. 349-141.000.

Kitajima, Yasuo: *See*—
Saitoh, Masayuki; Kitajima, Yasuo; Iwasawa, Norio; Miura, Kenju; Haruyama, Munetada; and Hashino, Junko, 6,040,335, Cl. 514-460.000.

Kitamura, Akira: *See*—
Ichioka, Ryoji; Yamakawa, Shinobu; Okino, Hirohito; Kato, Hajime; Iwayama, Kazuyoshi; Konta, Hiroshi; and Kitamura, Akira, 6,040,490, Cl. 585-475.000.

Kitamura, Hiroshi, to Whitaker Corporation, The. Lever type connector. 6,039,586, Cl. 439-157.000.

Kitamura, Tadao; and Shinohara, Hisaji, to Fuji Electric Co., Ltd. Insulating supporting structure for high-voltage apparatus including inorganic insulating layer formed on a surface of an organic insulating structure. 6,040,528, Cl. 174-138.00C.

Kitamura, Toshiyuki: *See*—
Suzuki, Akio; Yamamoto, Ei; Kitamura, Toshiyuki; and Yoshida, Hiroyoshi, 6,041,265, Cl. 700-84.000.

Kitazawa, Eiichi: *See*—
Yoshida, Akira; Oda, Kozo; Kasai, Takashi; Shimada, Kousei; Kogen, Hiroshi; Hayakawa, Ichiro; Ishihara, Sadao; Koga, Teiichiro; Kitazawa, Eiichi; and Tokui, Taro, 6,040,339, Cl. 514-485.000.

Kittel, Florenz: *See*—
Krumm, Helmut; Kittel, Florenz; Koette, Rolf; and Motzheim, Ralf, 6,039,907, Cl. 264-161.000.

Kiuchi, Toru: *See*—
Kakizaki, Yukio; Kiuchi, Toru; Amano, Kesayoshi; and Umatate, Toshikazu, 6,040,096, Cl. 430-5.000.

Kiyama, Tokuji: *See*—
Toyama, Yoshiharu; Kuroda, Akikazu; Kiyama, Tokuji; Kida, Sumio; Yoshida, Shunji; Yamamoto, Takashi; and Atsumi, Tetsuya, 6,039,809, Cl. 118-715.000.

Klamecki, Joseph: *See*—
Garner, Frank; and Klamecki, Joseph, 6,039,570, Cl. 434-126.000.

Klauer, Andrew W. Clip-on side sun visor. 6,039,381, Cl. 296-97.600.

Klaunzer, Norman: *See*—
Fogel, Thomas; Göhmann, Jürgen; and Klaunzer, Norman, 6,040,122, Cl. 430-461.000.

Klauser, Thomas; Kramer, Joachim; Meyer, Thomas F.; and Pohlner, Johannes, to Max-Planck-Gesellschaft zur Forderung der Wissenschaften e.V. Bacteria for preparing stable fusion proteins and methods for detecting the same. 6,040,141, Cl. 435-6.000.

Klein, Dean A., to Micron Electronics, Inc. Method for providing two modes of I/O pad termination. 6,040,714, Cl. 326-86.000.

Klein, Dieter, to SMS Schloemann-Siemag Aktiengesellschaft. Suspended coupling for lifting devices, particularly for picking up and depositing thermal insulation hoods. 6,039,374, Cl. 294-67.310.

Klein, George W., to ASC Incorporated. Powered drive assembly. 6,038,819, Cl. 49-362.000.

Klein, Peter: *See*—
Glück, Reinhard; Klein, Peter; Herrmann, Peter; and Wälti, Ernst Rudolf, 6,040,167, Cl. 435-235.100.

Kleinerman, Aurel. Apparatus and method for high performance remote application gateway servers. 6,041,365, Cl. 709-302.000.

Kleinwächter, Jörg: *See*—
Trokhan, Paul Dennis; Phan, Dean Van; Deason, Howard Thomas; and Kleinwächter, Jörg, 6,039,839, Cl. 162-116.000.

Klemm, Peter; and Rudloff, Hilmar, to Schuler Pressen GmbH & Co. Method for vibration damping of workpiece transport device driven elements. 6,039,310, Cl. 267-137.000.

Klemm, William Robert; and Rivard, Germain Francois, to Texas A & M University System. Method and kit for monitoring mammalian reproductive cycles. 6,039,923, Cl. 422-61.000.

Klerken, Pierre Antonius Marie: *See*—
van Eekhout, Mike Paul; Klerken, Pierre Antonius Marie; and Quirijnen, Robertus Petrus Cornelis, 6,040,847, Cl. 347-151.000.

Kling, Carl C.: *See*—
Jain, Kanti; Dunn, Thomas J.; Farmiga, Nestor O.; Weisbecker, Carl; and Kling, Carl C., 6,040,552, Cl. 219-121.700.

Klintz, Ralf: *See*—
Vogelbacher, Uwe Josef; Keil, Michael; Klintz, Ralf; Wahl, Josef; Wingert, Horst; König, Hartmann; Rack, Michael; Götz, Roland; and Teles, Joaquim Henrique, 6,040,458, Cl. 548-371.100.

Klippert, Uwe: *See*—
Scheck, Georg; Klippert, Uwe; and Brandt, Carsten, 6,038,817, Cl. 49-352.000.

Knapp, Kenneth M. Unicast paraffin removing pipeline pig incorporating multiple diameter and thickness discs and having a central bending portion for turns. 6,038,725, Cl. 15-104.061.

Knapp, Martin: *See*—
Herden, Werner; Konrad, Johann; Jahn, Hans-Peter; Knapp, Martin; Fuessl, Hans-Peter; and Qu, Ning, 6,040,204, Cl. 438-109.000.

Knaust, Holger, to Knorr-Bremse. Governor for air compressors of vehicles. 6,038,856, Cl. 60-410.000.

Knebel, Joachim; and Spalt, Werner, to Roehm GmbH. Process for the preparation of polyglycol(meth)acrylates. 6,040,473, Cl. 560-217.000.

Knerr, Charles R. Decorative patch. 6,038,702, Cl. 2-244.000.

Knight, J. Scott: *See*—
Schudel, Gregg W.; and Knight, J. Scott, 6,040,672, Cl. 318-611.000.

Knorr-Bremse: *See*—
Knaust, Holger, 6,038,856, Cl. 60-410.000.

Knorr, Gottfried; Rotermund, Udo; Baum, Eva; Seifert, Holger; and Wiegmann, Werner, to BASF Aktiegesellschaft. Production of rigid polyurethanes foams with reduced density. 6,040,349, Cl. 521-131.000.

Knowles Electronics, Inc.: *See*—
Kirchhoefer, Dennis Ray; Miller, Thomas Edward; and Tsangaris, Paris, 6,041,131, Cl. 381-415.000.

Knowlton, Chadd B.: *See*—
Levi, Steven P.; VanAntwerp, Mark D.; Dowell, Craig M.; and Knowlton, Chadd B., 6,041,345, Cl. 709-217.000.

Knox, Andrew; and Beeteson, John, to International Business Machines Corporation. Method of addressing a magnetic matrix electron source flat panel display. 6,040,808, Cl. 345-13.000.

Knudsen, Anton Marius: *See*—
Wardeberg, Jørn; and Knudsen, Anton Marius, 6,041,282, Cl. 702-1.000.

Knudtson, Merril L.: *See*—
Johnson, Kirk; and Knudtson, Merril L., 6,039,721, Cl. 604-508.000.

Knutti, David F.: *See*—
Jacobsen, Stephen C.; Davis, Clark C.; and Knutti, David F., 6,039,075, Cl. 137-625.280.

Ko, Ming-Tat: *See*—
Chen, Meng-Chang; Ho, Jan-Ming; Ko, Ming-Tat; and Chang, Ray-I, 6,040,866, Cl. 348-419.000.

Ko, Sandy: *See*—
Bangs, William E.; Khoo, Chor San Heng; and Ko, Sandy, 6,039,978, Cl. 424-489.000.
Bangs, William E.; Dibenedetto, Joseph D.; Friedberg, Joyce L.; Giordano, Denise A.; Glover, Judy M.; Khoo, Chor San Heng; Ko, Sandy; MacNair, R. David C.; Noar, Scott R.; Randazzi, John J., Jr.; Stoever, Harro; and Ziegler, Paula J., 6,039,989, Cl. 426-106.000.

Ko, Young Chan: *See*—
Cho, Hyun Nam; Hong, Jae Min; Ko, Young Chan; Choi, Il Seok; and Heo, Young Jin, 6,040,417, Cl. 528-279.000.

Ko, Young-Hoon; Lee, Jung-Goo; and Kim, Jae-Yoon, to Korea Kumho Petrochemical Co., Ltd. Process for hydrogenating conjugated diene polymers. 6,040,390, Cl. 525-338.000.

Kobayashi, Hideyuki; Kishimoto, Mitsuru; Ooishi, Noboru; and Ikeda, Kiyoshi, to Oki Data Corporation. Ink jet recording apparatus and control method thereof. 6,039,433, Cl. 347-40.000.

Kobayashi, Hiromi; Nishida, Hideo; Miura, Haruo; Eino, Takashi; and Takahashi, Kazuki, to Hitachi, Ltd. Labyrinth sealing device, and fluid machine providing the same. 6,039,535, Cl. 415-172.100.

Kobayashi, Kanji; and Yamaguchi, Masao, to TDK Corporation. Slider with blunt edges. 6,040,959, Cl. 360-103.000.

Kobayashi, Katsuyuki: *See*—
Yoshimura, Yuichiro; Tanaka, Atsushi; Yanagisawa, Ryozo; Kobayashi, Katsuyuki; and Sato, Hajime, 6,041,284, Cl. 702-56.000.

Kobayashi, Seiji: *See*—
Arai, Masayuki; and Kobayashi, Seiji, 6,040,985, Cl. 361-780.000.

Kobayashi, Shin: *See*—
Yamada, Chuji; Kobayashi, Shin; Ogawa, Makoto; Kuwahara, Tohru; and Okumura, Eiji, 6 039,157, Cl. 188-158.000.

Kobayashi, Toshitake: *See*—
Takahashi, Kazuhiro; Kobayashi, Toshitake; Takemoto, Masataka; Matano, Takashi; and Ono, Haruo, 6,040,044, Cl. 428-323.000.

Kobayashi, Yuji; and Yamashita, Shinichiro, to Sony Corporation. Printed circuit board having two holes connecting first and second ground areas. 6,040,524, Cl. 174-36.000.

Koch, Gary L.: *See*—
Wiacek, Michael F.; and Koch, Gary L., 6,039,407, Cl. 301-111.000.

Koch, Michael; Kock, Wulf; Lupton, David Francis; and Scholz, Friedhold, to W. C. Heraeus GmbH & Co. KG. Process for making rhenium-containing alloys. 6,039,920, Cl. 420-590.000.

Koch, Thomas L.; and Waarts, Robert, to SDL, Inc. Resonant pumped short cavity fiber laser. 6,041,070, Cl. 372-6.000.

Koch, Volker: *See*—
Butz, Thomas; Kaller, Ralf; Kissel, Guenther; Mayer, Gehard; Koch, Volker; and Schnabel, Werner, 6,039,779, Cl. 55-499.000.

Kock, Wulf: *See*—
Koch, Michael; Kock, Wulf; Lupton, David Francis; and Scholz, Friedhold, 6,039,920, Cl. 420-590.000.

Kocsis, John Joseph, Jr. Plant enclosure for outdoor use. 6,038,810, Cl. 47-21.000.

Koda, Eiji: *See*—
Miyake, Shoji; Inaba, Toru; and Koda, Eiji, 6,041,052, Cl. 370-360.000.

Kodak Polychrome Graphics LLC: *See*—
Bailey, David B.; Burberry, Mitchell S.; and Harris, Mark A., 6,040,115, Cl. 430-303.000.

Kodama, Kazuhiko: *See*—
Ohira, Tadashi; Sato, Yoshiaki; and Kodama, Kazuhiko, 6,039,912, Cl. 264-328.100.

Kodera Electronics Co., Ltd.: *See*—
Kodera, Hiroji; and Katsuno, Yoji, 6,038,763, Cl. 29-845.000.

Kodera, Hiroji; and Katsuno, Yoji, to Kodera Electronics Co., Ltd. Processed wire connecting apparatus. 6,038,763, Cl. 29-845.000.

Kodonas, Konstantin G.: *See*—
Bass, Edward R.; Kodonas, Konstantin G.; and Weis, Vincent R., 6,041,319, Cl. 705-409.000.

Koehler, Christian: *See*—
Posselt, Andreas; and Koehler, Christian, 6,039,021, Cl. 123-306.000.

Koeing & Bauer Aktiengesellschaft: *See*—
Lehrieder, Erwin Paul Josef; Röder, Klaus Walter; and Trutschel, Hartwig Horst, 6,039,284, Cl. 242-559.000.

Koenemann, Bernd Karl Ferdinand, to International Business Machines Corporation. System for test data storage reduction. 6,041,429, Cl. 714-738.000.

Koette, Rolf: *See*—
Krumm, Helmut; Kittel, Florenz; Koette, Rolf; and Motzheim, Ralf, 6,039,907, Cl. 264-161.000.

Koga, Akinori: *See*—
Ohtomo, Fumio; Nakata, Yuji; Fukuyama, Yoshitaka; Inomata, Asako; Shibuya, Sachio; Koga, Akinori; Ishii, Junji; Ito, Shoko; and Yamamoto, Hironobu, 6,038,850, Cl. 60-39.182.

Koga, Kazuhi: *See*—
Marutani, Yoshiaki; Tomita, Takashi; Nakahama, Tadamitsu; Uemura, Hiroyuki; Koga, Kazuhi; and Ohsawa, Mika, 6,040,009, Cl. 427-241.000.

Koga, Teiichiro: *See*—
Yoshida, Akira; Oda, Kozo; Kasai, Takashi; Shimada, Kousei; Kogen, Hiroshi; Hayakawa, Ichiro; Ishihara, Sadao; Koga, Teiichiro; Kitazawa, Eiichi; and Tokui, Taro, 6,040,339, Cl. 514-485.000.

Kogen, Hiroshi: *See*—
Yoshida, Akira; Oda, Kozo; Kasai, Takashi; Shimada, Kousei; Kogen, Hiroshi; Hayakawa, Ichiro; Ishihara, Sadao; Koga, Teiichiro; Kitazawa, Eiichi; and Tokui, Taro, 6,040,339, Cl. 514-485.000.

Koguro, Kiyoto; Oga, Toshikazu; Tokunaga, Norihito; Mitsui, Sunao; and Orita, Ryozo, to Toyo Kasei Kogyo Company Limited. Process for preparation of a 1-(tetrazolylbiphenylmethyl)-imidazole derivative. 6,040,454, Cl. 548-253.000.

Köhler, Ekkehard: *See*—
Dalal, Kirit; Köhler, Ekkehard; and Nadkarni, Anil V., 6,039,785, Cl. 75-235.000.

Kohlhaupt, Ingrid: *See*—
Bereuter, Heinz; Bereuter, Thomas; Bereuter, Wolfgang; and Kohlhaupt, Ingrid, 6,040,281, Cl. 508-508.000.

Kohli, Sanjai; and Chen, Steven, to SiRF Technology, Inc. GPS car navigation system. 6,041,280, Cl. 701-201.000.

Kohno, Fumihiro, to Kabushiki Kaisha Toshiba. Semiconductor memory device, method of laying out semiconductor memory device, method of driving semiconductor pattern of semiconductor device. 6,041,013, Cl. 365-230.030.

Kohno, Masahide: *See*—
Kanazawa, Hiromichi; Ueda, Kunihiro; Yanagiuchi, Katsuaki; Ikarashi, Tsunehiko; and Kohno, Masahide, 6,040,052, Cl. 428-408.000.

Kohtani, Hideto: *See*—
Fukada, Taisei; and Kohtani, Hideto, 6,041,175, Cl. 395-500.420.

Koide, Norikatsu; Asami, Shinya; Umezaki, Junichi; Koike, Masayoshi; Yamasaki, Shiro; and Nagai, Seiji, to Toyoda Gosei Co., Ltd. Semiconductor light-emitting device. 6,040,588, Cl. 257-15.000.

Koike, Kunio: *See*—
Shinkawa, Osamu; and Koike, Kunio, 6,041,021, Cl. 368-64.000.

Koike, Masayoshi: *See*—
Koide, Norikatsu; Asami, Shinya; Umezaki, Junichi; Koike, Masayoshi; Yamasaki, Shiro; and Nagai, Seiji, 6,040,588, Cl. 257-15.000.

Koike, Toshihiro: *See*—
Miwa, Minoru; Takeno, Akiyoshi; Koike, Toshihiro; Ako, Satoshi; and Sugiyama, Yasunori, 6,040,941, Cl. 359-443.000.

Koike, Yoshio; Ohmuro, Katsufumi; Sasaki, Takahiro; and Takeda, Arihiro, to Fujitsu Limited. Liquid crystal display with three domains wherein molecules in the third domain are substantially vertically aligned regardless of voltage application. 6,040,885, Cl. 349-129.000.

Koilpillai, R. David: *See*—
Raith, Alex K.; Ramesh, Rajaram; Molnar, Karl; Koilpillai, R. David; and Koorapaty, Havish, 6,040,800, Cl. 342-387.000.

Koishi, Ryosuke: *See*—
Yamamoto, Takayuki; Kasamatsu, Yoshiharu; Toyoguchi, Takashi; Yokohata, Toru; and Koishi, Ryosuke, 6,040,958, Cl. 360-103.000.

Koizumi, Yutaka: *See*—
Noguchi, Hiromichi; Sugitani, Hiroshi; Koizumi, Yutaka; Inamoto, Tadayoshi; Aono, Kiyomi; and Nakata, Yoshie, 6,040,002, Cl. 427-96.000.

Kojima, Hiroyuki; Ogawa, Yuri; Kawamura, Kazue; and Sano, Konosuke, to Ajinomoto Co., Inc. Method of producing L-lysine by fermentation. 6,040,160, Cl. 435-115.000.

Kojima, Keiji: *See*—
Terada, Koichi; Kojima, Keiji; Fujikawa, Yoshifumi; Nojiri, Tohru; and Nishioka, Kiyokazu, 6,041,399, Cl. 712-24.000.

Kojima, Yoshihiro: *See*—
Yamamoto, Hiroshi; Shimeki, Yasuharu; Kayashima, Kazuhiro; Maruno, Susumu; Fujimoto, Makoto; and Kojima, Yoshihiro, 6,040,825, Cl. 345-173.000.
Yamamoto, Hiroshi; Niwa, Hisao; Kojima, Yoshihiro; Maruno, Susumu; Kayashima, Kazuhiro; Kouda, Toshiyuki; Maekawa, Hidetsugu; Ito, Satoru; and Shimeki, Yasuharu, 6,041,141, Cl. 382-231.000.

Kojima, Yoshikazu: *See*—
Hayashi, Yutaka; Kamiya, Masaaki; Kojima, Yoshikazu; and Takasu, Hiroaki, 6,040,200, Cl. 438-30.000.

Kok, Douwe Marten; and Gankema, Harold, to Acheson Industries, Inc. Water-free release/lubrication agent for treating the walls of a die for original shaping or reshaping. 6,040,278, Cl. 508-208.000.

Kokubo, Tsuyoshi: *See*—
Kazo, Osamu; and Kokubo, Tsuyoshi, 6,039,412, Cl. 311-39.100.

Kokuga, Toshiharu: *See*—
Toya, Shoichi; and Kokuga, Toshiharu, 6,040,680, Cl. 320-108.000.

Kokunishi, Motohide; Kato, Hiromu; Ito, Tsutomu; and Hirosawa, Toshio, to Hitachi, Ltd. Error recovery method and apparatus in a computer system. 6,041,425, Cl. 714-37.000.

Kolagotla, Ravi K.: *See*—
Chen, Feng; Kolagotla, Ravi K.; Ly, Le T.; Mo, Jiancheng; and Srinivas, Hosahalli R., 6,041,418, Cl. 713-400.000.

Kolb, Charles E.: *See*—
Jayne, John T.; Worsnop, Douglas R.; and Kolb, Charles E., 6,040,574, Cl. 250-288.000.

Kolb V, John Jacob: *See*—
Weiner, Michael L.; Kolb V, John Jacob; and Chronis, Todd, 6,041,331, Cl. 707-103.000.

Kolesnick, Richard N.; Liu, Jun; and Zhang, Yuhua, to Sloan-Kettering Institute for Cancer Research. Assay for identifying agents which act on the ceramide-activated protein kinase, kinase suppressor of ras, and methods of using said agents. 6,040,149, Cl. 435-15.000.

Kolstrup, Anders Peter, to Orla Kragh Jensen; and Lars Barthold Nielsen. Planet gear for high revolutions. 6,039,668, Cl. 475-183.000.

Komatsu, Michiyasu: *See*—
Ikeda, Kazuo; Komorita, Hiroshi; Sato, Yoshitoshi; Komatsu, Michiyasu; and Mizunoya, Nobuyuki, 6,040,039, Cl. 428-210.000.

Komatsubara, Michiro: *See*—
Toge, Tetsuo; Komatsubara, Michiro; Honda, Atsuhito; Sadahiro, Kenichi; and Senda, Kunihiro, 6,039,818, Cl. 148-307.000.

Komet Praezisionswerkzeuge Robert Breuning GmbH: *See*—
Bach, Guenther; and Naumann, Heinz, 6,039,634, Cl. 451-49.000.

Komiya, Satoshi; Awaji, Naoki; and Kashiwagi, Shunji, to Fujitsu Limited. Element concentration measuring method and apparatus, and semiconductor device fabrication method and apparatus. 6,040,198, Cl. 438-16.000.

Komiyama, Takeo: *See*—
Osawa, Seiichi; and Komiyama, Takeo, 6,039,440, Cl. 347-70.000.

Komorita, Hiroshi: *See*—
Ikeda, Kazuo; Komorita, Hiroshi; Sato, Yoshitoshi; Komatsu, Michiyasu; and Mizunoya, Nobuyuki, 6,040,039, Cl. 428-210.000.

Komplin, Steven Robert; Murthy, Ashok; and Sullivan, Carl Edmond, to Lexmark International, Inc. Ink jet heater chip module. 6,039,439, Cl. 347-65.000.

Kondo, Katsumi: *See*—
Ota, Masuyuki; Kawachi, Genshiro; Kitajima, Masaaki; Sasaki, Tohru; Oh-e, Masahito; Kondo, Katsumi; and Tsumura, Makoto, 6,040,886, Cl. 349-141.000.

Kondo, Motoyasu; Sakuma, Fukuyo; Urakawa, Youichi; Yokoyama, Yoshihito; and Hinai, Masatoshi, to Kabushiki Kaisha Nihon Micronics. Probe unit and inspection head. 6,040,704, Cl. 324-762.000.

Kondo, Shiro: *See*—
Mizuno, Yuhei; Kawamura, Yoshihiro; and Kondo, Shiro, 6,039,766, Cl. 8-142.000.

Kondoh, Kohhei: *See*—
Furukawa, Taichiro; Kondoh, Kohhei; Yamashita, Atsushi; and Kanbori, Seiji, 6,039,475, Cl. 384-580.000.

Kondoh, Takeshi: *See*—
Kato, Kiichiro; Kondoh, Takeshi; Taguchi, Katsuhisa; and Takahashi, Kazuhiro, 6,040,048, Cl. 428-345.000.

Kondranin, Sergey Gennadievich: *See*—
Antonova, Tatijana Borisovna; Bougrov, Gleb Elmirovich; Kondranin, Sergey Gennadievich; Kralkina, Elena Alexandrovna; Pavlov, Vladimir Borisovich; Alexandrov, Andrej Fedorovich; and Rukhadze, Anri Amvrosievich, 6,040,547, Cl. 219-121.430.

Kondratek, Glen M.: *See*—
Mather, Carl; Quigley, Douglas J.; and Kondratek, Glen M., 6,039,382, Cl. 296-107.010.

Konefal, Robert S.; and Vander, Noel T., to Owens-Brockway Prescription Products Inc. Child resistant package. 6,039,195, Cl. 215-209.000.

Könemann, Bernd: *See*—
Krettek, Christian; Könemann, Bernd; Perrier, Alexandre; and Senn, Peter, 6,039,742, Cl. 606-96.000.

Kong, Katherine: *See*—
Roussel, Patrice; Chennupaty, Srinivas; Cranford, Mike; Abdallah, Mohammad; Coke, Jim; and Kong, Katherine, 6,041,404, Cl. 712-210.000.

Kong, Sik On, to Chartered Semiconductor Manufacturing, Ltd. Constant current programming waveforms for non-volatile memories. 6,040,996, Cl. 365-185.190.

Konica Corporation: *See*—
Haneda, Satoshi; Tokimatsu, Hiroyuki; Onodera, Masahiro; and Hamada, Shuta, 6,041,204, Cl. 399-159.000.
Makino, Masanori; Mochizuki, Hirotake; Misawa, Takao; and Tsuda, Takao, 6,040,891, Cl. 355-46.000.
Mano, Shigeru; Watanabe, Hiroshi; Fukumuro, Kaori; and Yamaya, Yorihiro, 6,040,267, Cl. 503-201.000.
Nakanishi, Tatsuo; Hamaguchi, Shinichi; and Kijima, Eiichi, 6,040,105, Cl. 430-127.000.

König, Hartmann: *See*—
Vogelbacher, Uwe Josef; Keil, Michael; Klintz, Ralf; Wahl, Josef; Wingert, Horst; König, Hartmann; Rack, Michael; Götz, Roland; and Teles, Joaquim Henrique, 6,040,458, Cl. 548-371.100.

Konigova, Otylie: *See*—
Hohlweg, Rolf; Madsen, Peter; Jørgensen, Tine Krogh; Andersen, Knud Erik; Watson, Brett; Polivka, Zdenek; Konigova, Otylie; Kovandova, Martina; Silhánková, Alexandra; and Valenta, Vladimir, 6,040,302, Cl. 514-217.000.

Konings, John, to Quantum Corporation. Disk drive disk damper. 6,040,957, Cl. 360-98.080.

Koninklijke PTT Nederland N.V.: *See*—
Beerends, John Gerard, 6,041,294, Cl. 704-203.000.

Konno, Katsushige: *See*—
Kawawada, Naoki; Namiki, Hiroaki; Takehara, Isamu; Iwaki, Tadao; Ishida, Takashi; Hayashizaki, Shinichi; Shimaguchi, Hirotada; and Konno, Katsushige, 6,040,648, Cl. 310-90.000.

Konno, Shinichi: *See*—
Hisano, Seiichi; Saito, Kazuhisa; Sano, Kazushi; Konno, Shinichi; Horikawa, Yoshichika; and Aihara, Yasuhiko, 6,040,043, Cl. 428-323.000.

Konosu, Koji; Sugiura, Akio; and Motizuki, Kunihiro, to Denso Corporation. Optical information reading apparatus having dust-proof plate. 6,039,256, Cl. 235-462.430.

Konrad Doppelmayr & Sohn Maschinenfabrik mbH & Co. KG: *See*—
Trieb, Herbert, 6,039,171, Cl. 198-699.000.

Konrad, Johann: *See*—
Herden, Werner; Konrad, Johann; Jahn, Hans-Peter; Knapp, Martin; Fuessl, Hans-Peter; and Qu, Ning, 6,040,204, Cl. 438-109.000.

Konstantin, Peter: *See*—
Wu, Xiaosong; Shertok, Joel; and Konstantin, Peter, 6,039,872, Cl. 210-500.350.

Konta, Hiroshi: *See*—
Ichioka, Ryoji; Yamakawa, Shinobu; Okino, Hirohito; Kato, Hajime; Iwayama, Kazuyoshi; Konta, Hiroshi; and Kitamura, Akira, 6,040,490, Cl. 585-475.000.

Koo, Hyoung Mo, to SamSung Electronics Co., Ltd. Air conditioner capable of controlling an amount of bypassed refrigerant according to a temperature of circulating refrigerant. 6,038,873, Cl. 62-196.400.

Koole, Leo Hendrik, to Biomat B.V. Radiopaque polymers and methods for preparation thereof. 6,040,408, Cl. 526-292.100.

Koorapaty, Havish: *See*—
Raith, Alex K.; Ramesh, Rajaram; Molnar, Karl; Koilpillai, R. David; and Koorapaty, Havish, 6,040,800, Cl. 342-387.000.

Kooy, Hanne M.; Hacker, Fred L.; and Bellerive, Marc R., to Radionics, Inc. Jaw and circular collimator. 6,041,101, Cl. 378-147.000.

Köppl, Franz: *See*—
Schantz, Matthäus; Köppl, Franz; and Flottmann, Dirk, 6,040,544, Cl. 209-577.000.

Kordina, Olle: *See*—
Ellison, Alex; Kordina, Olle; Gu, Chun-Yuan; Hallin, Christer; Janzen, Erik; and Tuominen, Marko, 6,039,812, Cl. 118-725.000.

Korea Advanced Institute Science and Technology: *See*—
Huh, Kyung Bum; and Kim, Kwang Joon, 6,040,678, Cl. 318-701.000.

Korea Atomic Energy Research Institute: *See*—
Oh, Won Zin; Lee, Kune Woo; Choi, Wang Kyu; Park, Hyun Soo; Kim, Jong Seung; Cho, Moon Hwan; and Kim, Jong Kook, 6,040,462, Cl. 549-352.000.

Korea Electric Power Corporation: *See*—
Oh, Won Zin; Lee, Kune Woo; Choi, Wang Kyu; Park, Hyun Soo; Kim, Jong Seung; Cho, Moon Hwan; and Kim, Jong Kook, 6,040,462, Cl. 549-352.000.

Korea Institute of Science and Technology: *See*—

Lee, Yoon Pyo; Lee, Chun Sik; Kim, Kwang Ho; Jurng, Jong Soo; Kim, Young Il; Shin, Hung Tae; and Han, Hee Suk, 6,038,869, Cl. 62-100.000.

Korea Kumho Petrochemical Co., Ltd.: *See*—
Ko, Young-Hoon; Lee, Jung-Goo; and Kim, Jae-Yoon, 6,040,390, Cl. 525-338.000.

Korenberg, Julie R., to Cedars-Sinai Medical Center. Congenital heart disease proteins and products related thereto. 6,040,429, Cl. 530-350.000.

Kori, Moris: *See*—
Yudovsky, Joseph; and Kori, Moris, 6,040,011, Cl. 427-255.280.

Korilis, Ioannis A.: *See*—
Ahuja, Sudhir R.; Korilis, Ioannis A.; and Varvarigou, Theodora A., 6,041,307, Cl. 705-8.000.

Koriseva, Juha: *See*—
Kytönen, Pauli; Koriseva, Juha; and Leinonen, Erkki, 6,039,840, Cl. 162-205.000.

Korpak Limited: *See*—
MacKinnon, Robin, 6,039,101, Cl. 156-443.000.

Korsunsky, Iosif; Grabbe, Dimitry; Hasircoglu, Alex; Schroepfer, Richard; and Ringler, Daniel Robert, to Whitaker Corporation, The. Configurable ground plane. 6,039,583, Cl. 439-101.000.

Kosaka, Tadayoshi; Toyoda, Osamu; and Namiki, Fumihiro, to Fujitsu Limited. Method of forming barrier ribs of display panel. 6,039,622, Cl. 445-52.000.

Koshiba, Takeshi; Matsuoka, Masahiro; and Takayama, Kuniharu, to Fujitsu Limited. Virtual clay system and its method of simulation. 6,040,840, Cl. 345-441.000.

Koshinski, Casmir J., to Pittsburgh Mineral and Environmental Technology, Inc. Method and apparatus for reducing the carbon content of combustion ash and related products. 6,038,987, Cl. 110-344.000.

Koshy, Jacob; Thomas, Jijimon Kumpukkattu; Kurian, Jose; Yadava, Yogendra Prasad; and Damodaran, Alathoor Damodaran, to Council of Scientific & Industrial Research. Preparation of superconducting films and a process for preparing the films. 6,040,275, Cl. 505-471.000.

Kosiec, Jeannie Han, to Motorola, Inc. Resistorless low-current CMOS voltage reference generator. 6,040,720, Cl. 327-83.000.

Kost, Joseph; Pliquett, Uwe; Mitragotri, Samir S.; Langer, Robert S.; and Weaver, James C., to Massachusetts Institute of Technology. Effect of electric field and ultrasound for transdermal drug delivery. 6,041,253, Cl. 604-20.000.

Kostka, Stanley J.; and Pan, Rennan, to Aquatrols Corporation of America, Inc. Agrochemical emulsion concentrates. 6,039,966, Cl. 424-405.000.

Kotani, Hiroyuki: *See*—
Mitani, Masato; Nakajima, Kazuto; Kotani, Hiroyuki; Hokazono, Nobutaka; Naka, Hiroyuki; Yamaguchi, Akira; Ikeda, Junji; and Aoki, Nobuyuki, 6,040,016, Cl. 427-421.000.

Kotani, Tooru: *See*—
Mori, Kenichi; Ito, Katsuya; Kotani, Tooru; Suzuki, Toshitake; and Sasaki, Yasushi, 6,039,444, Cl. 347-105.000.

Kotobuki & Co., Ltd.: *See*—
Kageyama, Hidehei; and Mitsuya, Yoshihide, 6,039,484, Cl. 401-52.000.
Kageyama, Hidehei; Mitsuya, Yoshihide; and Ebinuma, Tadayoshi, 6,039,485, Cl. 401-67.000.

Kou, Wen Long: *See*—
Shinya, Keigo; Kou, Wen Long; Suzuki, Osamu; and Tetsui, Shunichi, 6,040,556, Cl. 219-133.000.

Kouchi, Shuichiro: *See*—
Hotta, Yasuhiro; and Kouchi, Shuichiro, 6,040,999, Cl. 365-200.000.

Kouda, Toshiyuki: *See*—
Yamamoto, Hiroshi; Niwa, Hisao; Kojima, Yoshihiro; Maruno, Susumu; Kayashima, Kazuhiro; Kouda, Toshiyuki; Maekawa, Hidetsugu; Ito, Satoru; and Shimeki, Yasuharu, 6,041,141, Cl. 382-231.000.

Koullias, Iconomos A.: *See*—
Nelson, Dale H.; and Koullias, Iconomos A., 6,040,728, Cl. 327-292.000.

Kovac, S. Robert. System and a method for the long term cure of recurrent urinary female incontinence. 6,039,686, Cl. 600-30.000.

Kovandova, Martina: *See*—
Hohlweg, Rolf; Madsen, Peter; Jørgensen, Tine Krogh; Andersen, Knud Erik; Watson, Brett; Polivka, Zdenek; Konigova, Otylie; Kovandova, Martina; Silhánková, Alexandra; and Valenta, Vladimir, 6,040,302, Cl. 514-217.000.

Kowalcyzk, Dennis. Washout assembly for cement mixer vehicle. 6,039,468, Cl. 366-41.000.

Kowalczyk, Karen. Readily cleanable litter cleaning system. 6,039,368, Cl. 294-1.300.

Kowalyshen, Henry W.: *See*—
French, Thomas G.; Guio, Raphael H.; Kowalyshen, Henry W.; McGlone, Buddy B.; Mears, Gregory C.; and Opfer, John C., 6,040,538, Cl. 200-293.000.

Koyama, Jun: *See*—
Zhang, Hongyong; Koyama, Jun; and Teramoto, Satoshi, 6,040,589, Cl. 257-59.000.

Koyama, Kuniaki; and Osame, Juichiro, to Research Foundation for Microbial Diseases of Osaka University, The. Stabilized live vaccine. 6,039,958, Cl. 424-230.100.

Koyama, Osamu. Projection type display apparatus with color optimized anti-reflection films. 6,040,881, Cl. 349-8.000.

Koyama, Yoshinari: *See*—
Watanabe, Yoshitane; Suzuki, Keitaro; Koyama, Yoshinari; and Iijima, Motoko, 6,040,372, Cl. 524-413.000.

Kozakiewicz, Joseph J.: *See*—
Davies, William Bloor; Healy, John Edward; Miller, Gary Kaui Lani; Kozakiewicz, Joseph J.; and Ryles, Roderick G., 6,039,881, Cl. 210-732.000.

Kozicek, James Richard: *See*—
Erhart, Richard Alexander; and Kozicek, James Richard, 6,040,815, Cl. 345-98.000.

Kozol, John E.: *See*—
Long, David C.; Moyer, Thomas P.; O'Neil, Keith C.; Perry, Charles H.; Pomerantz, Glenn A.; Case, James R.; Kando, Laszlo; and Kozol, John E., 6,038,931, Cl. 73-850.000.

Kozyrev, Sergei: *See*—
Bashlov, Nikolai L.; Vul, Alexandr Y.; Kidalov, Sergei V.; Kozyrev, Sergei; Milenin, Vyacheslav M.; and Timofeev, Nikolai A., 6,040,658, Cl. 313-637.000.

Kragle, Harry A.: *See*—
Brew, Thomas W.; and Kragle, Harry A., 6,039,908, Cl. 264-177.120.

Kraiczyk, Josef; and Mulders, Stephanus, to Siemens Aktiengesellschaft. Contact spring having an improved electrical contact. 6,039,601, Cl. 439-500.000.

Krajewski, Paul Edward; Lanzi, Ronald George; and Schroth, James Gregory, to General Motors Corporation. One piece corrugated anti-intrusion barrier and method. 6,038,911, Cl. 72-379.200.

Kralkina, Elena Alexandrovna: *See*—
Antonova, Tatijana Borisovna; Bougrov, Gleb Elmirovich; Kondranin, Sergey Gennadievich; Kralkina, Elena Alexandrovna; Pavlov, Vladimir Borisovich; Alexandrov, Andrej Fedorovich; and Rukhadze, Anri Amvrosievich, 6,040,547, Cl. 219-121.430.

Kramer, Alan: *See*—
Fabbrizio, Vito; and Kramer, Alan, 6,041,321, Cl. 706-41.000.

Kramer, Felix, to Grapha-Holding AG. Gripper releasing device signature conveyor. 6,039,317, Cl. 271-204.000.

Kramer, Jeffrey C.: *See*—
Kelley, David E.; Kramer, Jeffrey C.; Pontell, Jonathan L.; Parral, Loretta S.; Roth, Michelle V.; Yergen, Anoush; and Sanford, Arlene, 6,039,710, Cl. 602-74.000.

Kramer, Joachim: *See*—
Klauser, Thomas; Kramer, Joachim; Meyer, Thomas F.; and Pohlner, Johannes, 6,040,141, Cl. 435-6.000.

Kramer, Manfred: *See*—
Hölzel, Folkhard; Kramer, Manfred; and Tiedemann, Jens, 6,039,072, Cl. 137-512.300.

Krasnansky, Robert: *See*—
Maver, Tammy Lynne; and Krasnansky, Robert, 6,040,368, Cl. 524-110.000.

Krasser, Fritz; and Winkler, Franz, to Ellenberger & Poensgen GmbH. Overcurrent circuit breaker. 6,040,747, Cl. 335-35.000.

Kratschmera, Ralf: *See*—
Schneider, Otto; and Kratschmera, Ralf, 6,040,410, Cl. 528-14.000.

Kratt, Helmut: *See*—
Buck, Manfred; Brost, Wolfgang; Handschuh, Robert; and Kratt, Helmut, 6,039,038, Cl. 125-39.000.

Kraus, Willibald, to TRW Automotive Electronics & Components GmbH & Co. KG. Adjustable connector system. 6,039,523, Cl. 411-48.000.

Krause, Ralf: *See*—
Daberkow, Andreas; Krause, Ralf; Ott, Norbert; and Krouzilek, Rolf, 6,038,981, Cl. 105-168.000.

Krause, Werner; Maier, Franz-Karl; Bauer, Michael; Schuhmann Giampieri, Gabriele; Press, Wolf-Rudiger; and Muschik, Peter, to Schering Aktiengesellschaft. Metal complexes, of DTPA derivatives suitable for use in diagnosis and therapy. 6,040,432, Cl. 534-16.000.

Krautschneider, Wolfgang: *See*—
Reisinger, Hans; Grüning, Ulrike; Wendt, Hermann; Stengl, Reinhard; Lehmann, Volker; Willer, Josef; Franosch, Martin; Schäfer, Herbert; Krautschneider, Wolfgang; Hofmann, Franz; and Böhm, Thomas, 6,040,995, Cl. 365-185.180.

Krawczyk, Dwayne M.; and McFarlin, Mabry M., to Louisiana Bucks Unlimited, L.L.C. Breakable ampule, swab and cap for scent material. 6,039,488, Cl. 401-132.000.

Kray, Kevin P.: *See*—
Reynolds, Kim A.; Marino, Charles P.; and Kray, Kevin P., 6,040,384, Cl. 525-180.000.

KRC-GP, Inc.: *See*—
Selvidge, Charles W.; and Vauk, Dennis A., 6,039,771, Cl. 44-311.000.

Kreibiehl, Markus: *See*—
Birkner, Stefan; Strian, Ernst; and Kreibiehl, Markus, 6,040,059, Cl. 428-469.000.

Kren, Lawrence A.: *See*—
Steinetz, Bruce M.; and Kren, Lawrence A., 6,039,325, Cl. 277-633.000.

Krettek, Christian; Könemann, Bernd; Perrier, Alexandre; and Senn, Peter, to Synthes (U.S.A.). Alignment device for locking the base part of intramedullary nails. 6,039,742, Cl. 606-96.000.

Kreutzig, Norbert: *See*—
Bonny, Pierre; Kreutzig, Norbert; and Sternal, Thorsten, 6,038,769, Cl. 29-890.080.

Kreuz, Ulrich: *See*—
Zollitsch, Ludwig; and Kreuz, Ulrich, 6,039,905, Cl. 264-143.000.

Kreuzer, Franz-Heinrich: *See*—
Häberle, Norman; Kreuzer, Franz-Heinrich; and Küpfer, Jürgen, 6,040,411, Cl. 528-26.000.

Kring, John: *See*—
Danford-Klein, Henrik; and Kring, John, 6,041,318, Cl. 705-400.000.

Kristiansen, Gordon. Disposable dispenser of samples of cosmetic product. 6,039,487, Cl. 401-126.000.

Kristoffersen, Kjell, to Vingmed Sound A/S. Method and apparatus for processing ultrasound signals. 6,039,692, Cl. 600-454.000.

Kritzer, Alan: *See*—
Douglas, Peter; Dudik, Evan; Evans, John; and Kritzer, Alan, 6,039,688, Cl. 600-300.000.

Krivitski, Nikolai M.; and Starostin, Dimitry M., to Transonic Systems, Inc. Single light sensor optical probe for monitoring blood parameters and cardiovascular measurements. 6,041,246, Cl. 600-322.000.

Kroh, Herbert C.: *See*—
Hartman, Terry E.; Kroh, Herbert C.; and Crots, David E., 6,038,889, Cl. 65-319.000.

Krohne Messtechnik GmbH & Co. KG: *See*—
Van der Pol, Roland, 6,040,741, Cl. 330-297.000.

Kroll, Mark W. Disposable external defibrillator. 6,041,255, Cl. 607-5.000.

Krouzilek, Rolf: *See*—
Daberkow, Andreas; Krause, Ralf; Ott, Norbert; and Krouzilek, Rolf, 6,038,981, Cl. 105-168.000.

Krozek, Dennis A.: *See*—
Kennie, Jerry; Cheng, Yi; Hope, Mark E.; Huff, Shean; Nankee, Robert J., II; Joyce, Mary; Krozek, Dennis A.; Moote, Richard K.; Richardson, Roland T.; Rotramel, William D.; and Seitz, Gary L., 6,041,278, Cl. 701-103.000.

Krüger, Christof: *See*—
Pepper, Tammy; Krüger, Christof; and Mäkelä, Matti, 6,039,813, Cl. 127-42.000.

Krumm, Helmut; Kittel, Florenz; Koette, Rolf; and Motzheim, Ralf, to Saint Gobain Vitrage. Method for finishing an extruded seal in situ on a sheet. 6,039,907, Cl. 264-161.000.

Krumm, Valentin: *See*—
Dornier, Peter D.; and Krumm, Valentin, 6,039,086, Cl. 139-54.000.

Kuan Hsieng Industrial Co., Ltd.: *See*—
Sheu, Lih-Ching, 6,039,406, Cl. 301-108.400.

Kubalak, Thomas P.; Sheperd, Peter; and LaPlante, Jeffrey P., to Mentor Corporation. Urethral occlusion device for maintaining urinary bladder retention and method of use. 6,039,750, Cl. 606-201.000.

Kubo, Keiji: *See*—
Nishikawa, Kohei; Shibouta, Yumiko; and Kubo, Keiji, 6,040,324, Cl. 514-381.000.

Kubo, Yuhki: *See*—
Hyoda, Shunji; Kita, Masaharu; Sawada, Hirotoshi; Nemugaki, Shuichi; Otsuka, Sumio; Miyawaki, Yoshitaka; Ogawa, Takashi; and Kubo, Yuhki, 6,040,453, Cl. 548-250.000.

Kubota Corporation: *See*—
Ishimori, Shozo; Yamaguchi, Masatoshi; Auvergne, Cristophe; and Leguillette, Bertrand, 6,038,840, Cl. 56-13.300.

Kubota, Kazuhide; and Miyabayashi, Toshiyuki, to Seiko Epson Corporation. Ink jet recording ink and method. 6,039,796, Cl. 106-31.600.

Kubota, Minoru: *See*—
Yamaguchi, Atsuyoshi; and Kubota, Minoru, 6,038,764, Cl. 29-854.000.

Kubota, Norikazu, to Sanyo Electric Co., Ltd. Low NO_x burner and method of controlling recirculation of exhaust gas. 6,039,560, Cl. 431-9.000.

Kubota, Rie, to International Business Machines Corporation. Information search method, information search device, and storage medium for storing an information search program. 6,041,323, Cl. 707-5.000.

Kucklick, Theodore: *See*—
Edwards, Stuart D.; Wehman, Thomas C.; Parker, Theodore L.; Kucklick, Theodore; Skalnyi, Eugene V.; and Stein, Alan, 6,039,757, Cl. 623-1.000.

Kuczynski, Otto. Resettable puzzle. 6,039,318, Cl. 273-153.00S.

Kudo, Kenji; Kuwabara, Kohji; Yamashita, Shigeharu; Fuchigami, Kazutoshi; and Katsuyama, Norikazu, to Fujitsu Limited. DC-DC converter unit. 6,040,987, Cl. 363-21.000.

Kudoh, Kazuhiro, to NEC Corporation. Device and method for facilitating selection of a selective calling receiver radio area. 6,041,218, Cl. 455-38.400.

Kudu Indutries, Inc.: *See*—
Mills, Robert A. R., 6,039,115, Cl. 166-68.500.

Kugler, Alison: *See*—
Motyka, Andrea Lee; Broaze, Guy; and Kugler, Alison, 6,040,071, Cl. 428-704.000.
Motyka, Andrea Lee; Broaze, Guy; and Kugler, Alison, 6,040,287, Cl. 510-340.000.

Kuhn, Thomas: *See*—
John, Thomas; Kuhn, Thomas; and Nehse, Wolfgang, 6,041,276, Cl. 701-67.000.

Kuhn, William P.: *See*—
Khanna, Yash P.; Puterbuagh, Frank H., Jr.; Kuhn, William P.; and Schena, Martin J., 6,040,392, Cl. 525-432.000.

Kuklinski, Robert, to United States of America, Navy. Method and apparatus for producing gas bubbles in a liquid medium. 6,039,309, Cl. 261-1.000.

Kulakowski, John Edward: *See*—
Hammar, Jerry Walter; Kulakowski, John Edward; Means, Rodney Jerome; and Dang, Chi-Hung, 6,041,026, Cl. 369-36.000.

Kulicke & Soffa Investments, Inc.: *See*—
Toner, Eugene M., 6,039,234, Cl. 228-4.500.

Kumagai, Masato: *See*—
Sato, Hisaaki; Kumagai, Masato; and Araki, Tomoaki, 6,039,027, Cl. 123-399.000.

Kumano, Youichi: *See*—
Kurata, Tomoyuki; Kumano, Youichi; and Takahashi, Kazuya, 6,039,405, Cl. 301-43.000.

Kun Teng Industry Co., Ltd.: *See*—
Keller, Josef, 6,039,671, Cl. 475-296.000.

Kunishi, Shinsuke, to Molex Incorporated. Electrical connector with relatively movable two-part housing. 6,039,590, Cl. 439-247.000.

Kunzelman, Kevin; and Hutto, Sterling, to Electric Classified, Inc. Common session token system and protocol. 6,041,357, Cl. 709-228.000.

Kupfer, Abraham; Kupfer, Hannah; and Monks, Colin R. F., to National Jewish Medical and Research Center. Method and assay for regulation of T cell proliferation. 6,040,152, Cl. 435-29.000.

Kupfer, Hannah: *See*—
Kupfer, Abraham; Kupfer, Hannah; and Monks, Colin R. F., 6,040,152, Cl. 435-29.000.

Küpfer, Jürgen: *See*—
Häberle, Norman; Kreuzer, Franz-Heinrich; and Küpfer, Jürgen, 6,040,411, Cl. 528-26.000.

Kuramitsu, Masayuki; Saitou, Mitsuo; Maeno, Yutaka; and Hara, Takefumi, to Fuji Photo Film Co., Ltd. Method for producing silver halide emulsion and photographic material containing the same. 6,040,127, Cl. 430-567.000.

Kurasawa, Yoshihiro; and Nishida, Koji, to Mitsubishi Engineering-Plastics Corporation. Closed secondary battery container. 6,040,084, Cl. 429-176.000.

Kurata, Mamoru; and Nakamura, Shin, to Kabushiki Kaisha Toshiba. Method of analyzing semiconductor device operation, method of analyzing specific physical phenomena, and apparatus for performing these methods. 6,041,424, Cl. 714-33.000.

Kurata, Tomoyuki; Kumano, Youichi; and Takahashi, Kazuya, to Bridgestone Corporation. Segment mounted on vehicle wheel or endless rubber track. 6,039,405, Cl. 301-43.000.

Kurdzo, James Patrick; and Zakrzewski, Robert Alan, to General DataComm, Inc. Voice server module for ATM switch. 6,041,064, Cl. 370-466.000.

Kurian, Jose: *See*—
Koshy, Jacob; Thomas, Jijimon Kumpukkattu; Kurian, Jose; Yadava, Yogendra Prasad; and Damodaran, Alathoor Damodaran, 6,040,275, Cl. 505-471.000.

Kurihara, Katsuki: *See*—
Morooka, Hisao; Miura, Takamitsu; Yamada, Hiroshi; Kurihara, Katsuki; Matsuse, Mitsutaka; and Arai, Yasuyuki, 6,040,520, Cl. 136-245.000.

Kurihara, Toshiyuki: *See*—
Okamoto, Masakazu; and Kurihara, Toshiyuki, 6,038,866, Cl. 62-6.000.

Kuriyama, Chojiro, to Rohm Co., Ltd. Method for manufacturing a solid electrolytic capacitor array. 6,040,229, Cl. 438-396.000.

Kuriyama, Hiroshi: *See*—
Edatsune, Isao; Kuriyama, Hiroshi; and Urano, Osamu, 6,040,918, Cl. 358-296.000.

Kurmis, Viktor, to Paul Hellerman GmbH. Tool for tying cable harnesses. 6,039,089, Cl. 140-93.200.

Kuroda, Akikazu: *See*—
Toyama, Yoshiharu; Kuroda, Akikazu; Kiyama, Tokuji; Kida, Sumio; Yoshida, Shunji; Yamamoto, Takashi; and Atsumi, Tetsuya, 6,039,809, Cl. 118-715.000.

Kuroda, Ryo: *See*—
Shido, Shunichi; and Kuroda, Ryo, 6,040,848, Cl. 347-159.000.

Kuroda, Tetsuo; Miyasaka, Matsuho; and Takahashi, Norio, to Ebara Corporation. Absorption chiller-heater and method for forming initial anticorrosive film therefor. 6,038,882, Cl. 62-476.000.

Kurogane, Saori; and Sakamoto, Hiromi, to Sharp Kabushiki Kaisha. Thin film transistor. 6,040,206, Cl. 438-149.000.

Kurosawa, Motoharu; and Abe, Hiroshi, to Asahi Seiko Kabushiki Kaisha. Coin distributor. 6,039,643, Cl. 453-3.000.

Kurosawa, Motoharu: *See*—
Abe, Hiroshi; and Kurosawa, Motoharu, 6,039,166, Cl. 194-317.000.

Kurose, Shigeo: *See*—
Okada, Kesao; and Kurose, Shigeo, 6,040,034, Cl. 428-143.000.

Kurple, Kenneth R. Foundry curing system. 6,040,355, Cl. 523-139.000.

Kurtin, Stephen; and Epstein, Saul, to Lane Research. Variable spectacle lens. 6,040,947, Cl. 359-666.000.

Kurtz, Karl-Rudolf: *See*—
Telser, Thomas; Huemmer, Wolfgang; and Kurtz, Karl-Rudolf, 6,040,116, Cl. 430-306.000.

Kusano, Manabu: *See*—
Takeshita, Naoki; Kusano, Manabu; Sagawa, Fumihiko; and Nakagawa, Taizo, 6,040,529, Cl. 174-254.000.

Kushihi, Yuichi; and Shikata, Masaru, to Murata Manufacturing Co., Ltd. Circular-polarization antenna. 6,040,806, Cl. 343-853.000.

Kushiya, Katsumi; Okumura, Daisuke; and Sugiyama, Ichiro, to Showa Shell Sekiyu K.K. N-type window layer for a thin film solar cell and method of making. 6,040,521, Cl. 136-265.000.

Kusmiss, John H.; and Caryl, Naomi. Self-mobile cat toy. 6,039,628, Cl. 446-457.000.

Kustka, George John: *See*—
Doshi, Bharat Tarachand; Dravida, Subrahmanyam; Kustka, George John; Magill, Peter D.; Siller, Curtis A.; and Sriram, Kotikalapudi, 6,041,051, Cl. 370-352.000.

Kusunoki, Akihiko; Kawamura, Naohisa; Sugizaki, Yoshiki; and Kuwahara, Akio, to Saitama Daiichi Pharmaceutical Co., Ltd. Composition for skin patch preparation and process for preparing the same. 6,039,971, Cl. 424-443.000.

Kutchko, Joseph. Buoyant deodorizer bar. 6,039,938, Cl. 424-76.100.

Kuwabara, Kohji: *See*—
Kudo, Kenji; Kuwabara, Kohji; Yamashita, Shigeharu; Fuchigami, Kazutoshi; and Katsuyama, Norikazu, 6,040,987, Cl. 363-21.000.

Kuwahara, Akio: *See*—
Kusunoki, Akihiko; Kawamura, Naohisa; Sugizaki, Yoshiki; and Kuwahara, Akio, 6,039,971, Cl. 424-443.000.

Kuwahara, Tohru: *See*—
Yamada, Chuji; Kobayashi, Shin; Ogawa, Makoto; Kuwahara, Tohru; and Okumura, Eiji, 6,039,157, Cl. 188-158.000.

Kvaerner Oilfield Products: *See*—
Wilkins, Robert Lee; and Moles, Peter, 6,039,120, Cl. 166-368.000.

Kvarnström, Bo: *See*—
Niska, Håkan; Kvarnström, Bo; and Oom, Jan, 6,041,228, Cl. 455-419.000.

KVH Industries, Inc.: *See*—
Monte, Thomas D., 6,041,149, Cl. 385-2.000.

Kwon, Yong Chin. Quick change side full hoist ring assembly. 6,039,500, Cl. 403-78.000.

Kyker, Alan B.: *See*—
Parker, Donald D.; Boggs, Darrell D.; and Kyker, Alan B., 6,041,403, Cl. 712-210.000.

Kyocera Corporation: *See*—
Suguro, Akihiro, 6,041,220, Cl. 455-90.000.

Kyodo Shiko Co., Ltd.: *See*—
Tokita, Yoshiaki; and Takagi, Takahiro, 6,040,024, Cl. 428-35.200.

Kyowa Hakko Kogyo Co., Ltd.: *See*—
Sota, Akio; Okiura, Tomoo; and Azuma, Masaki, 6,039,782, Cl. 71-10.000.

Kytönen, Pauli; Koriseva, Juha; and Leinonen, Erkki, to Valmet Corporation. Roll for a supercalender and method for calendering a web. 6,039,840, Cl. 162-205.000.

Labatte, Timothy E. W.: *See*—
Shipman, Mark S.; Christeson, Orville H.; and Labatte, Timothy E. W., 6,041,385, Cl. 710-200.000.

LaBerge, Paul A., to Micron Electronics, Inc. Method for increasing the number of devices capable of being operably connected to a host bus. 6,041,380, Cl. 710-129.000.

Laboratoire Central des Ponts et Chaussees: *See*—
Delagnes, Philippe; and Barba, Dominique, 6,040,853, Cl. 348-128.000.

Laboratoires Prographarm: *See*—
Gendrot, Edouard; Cousin, Gérard; Ragot, Françoise; and Clee-Bouvet, Marie-Christine, 6,039,979, Cl. 424-497.000.

Labsystems Oy: *See*—
Tuunanen, Jukka, 6,040,192, Cl. 436-177.000.

Laby, Jordan M.: *See*—
Henkin, Melvyn L.; and Laby, Jordan M., 6,039,886, Cl. 210-776.000.

Lacroix, Eric: *See*—
Bertocchio, Rene; Lacroix, Eric; and Perdrieux, Sylvain, 6,039,845, Cl. 203-57.000.

Lada, Henry F., Jr., to Compaq Computer Corporation. Circuit for reducing audio amplifier noise during powering on and off. 6,041,416, Cl. 713-330.000.

Ladd, Arnold M.: *See*—
Suffi, Louis; and Ladd, Arnold M., 6,039,578, Cl. 439-54.000.

Ladds, David Anthony, to Horstmann Timers & Controls Limited. Electricity measurement using two conductors. 6,040,690, Cl. 324-142.000.

Laengerer & Reich GmbH & Co.: *See*—
Strähle, Roland, 6,039,110, Cl. 165-10.000.

La Ferla, Raffaele: *See*—
Fay, Thomas F., III; La Ferla, Raffaele; Sherman, Andrew J.; and Stankiewicz, Edwin P., 6,040,266, Cl. 502-439.000.

Lafuma, Francoise: *See*—
Iliopoulos, Ilias; Lafuma, Francoise; Gillet, Jean-Philippe; and Pezron, Erwoan, 6,040,386, Cl. 525-329.900.

Lähteenmäki, Ari, to Suunto Oyj. Face shield, incorporating a wrist watch display. 6,039,446, Cl. 351-43.000.

L' Air Liquide, Societe Anonyme pour l'Etude et l'Exploitation de Procedes Georges Claude: *See*—
Marles Franco, Joan, 6,039,786, Cl. 75-414.000.

Lakhansingh, Cynthia. Portable digital radio and compact disk player. 6,041,023, Cl. 369-7.000.

LaLange, Jacques; and Pamart, Olivier, to Whitaker Corporation, The. Electrical connector with a shunt incorporated into a secondary locking member. 6,039,589, Cl. 439-188.000.

LaLiberte, Thomas R.: *See*—
Miller, Philip; and LaLiberte, Thomas R., 6,039,911, Cl. 264-280.000.

L' Allier, James J.; Welsh, Sally H.; Nielsen, Boyd W.; Miles, Kurt W.; Myers, Ken L.; Henrie, Stephen P.; Norberg, Michael I.; and Helliwell, Laura I., to National Education Corporation. Interactive learning system with pretest. 6,039,575, Cl. 434-323.000.

Lallier, Jean-Pierre; Marie, Patrick; Aubry, Jean-Marie; Marti, Marie-José; and Del Nero, Valérie, to Elf Atochem, S.A. Composition for stripping paints, varnishes or lacquers. 6,040,285, Cl. 510-206.000.

Lam, Chung H., to International Business Machines Corporation. Two square NVRAM cell. 6,040,218, Cl. 438-259.000.

Lam, Raymond K. F.; Melin, Charles E.; and Colella, Guiseppe, to Sony Corporation; and Materials Research Corporation. Melting and casting of high purity chromium with controlled oxygen content. 6,039,788, Cl. 75-623.000.

LAM Research Corporation: *See*—
Dhindsa, Rajinder; Singh, Vikram; and Tokunaga, Ken, 6,039,836, Cl. 156-345.000.

Lam, Robert: *See*—
Watson, Fred W.; Hannock, Wayne; Lam, Robert; and Evans, George, 6,038,979, Cl. 102-481.000.

Lambelet, Lawrence E., Jr., to Ortho Pharmaceutical Corporation. Variable day start tablet dispenser. 6,039,208, Cl. 221-25.000.

Lamberg, Fredrik, to Seco Tools AB. Drill having radially overlapping indexable cutting inserts. 6,039,515, Cl. 408-188.000.

Lambert, Jeffrey W. Wall mounted pivoting work bench. 6,039,416, Cl. 312-245.000.

Lamers Beheer B.V.: *See*—
Lamers, Jacobus Stephanus, 6,040,018, Cl. 427-510.000.

Lamers, Jacobus Stephanus, to Lamers Beheer B.V. Method for reinforcing a board, sheet or foil. 6,040,018, Cl. 427-510.000.

Lancaster, Robert A.: *See*—
Chen, Jiann H.; Lancaster, Robert A.; Tsou, Andy H.; and Anderson, Charles C., 6,041,210, Cl. 399-333.000.

Landon, Gregory L.: *See*—
Peeters, Kenneth J.; and Landon, Gregory L., 6,038,844, Cl. 56-377.000.

Lands, Michael J.: *See*—
Buysse, Steven P.; Kennedy, Jenifer S.; Lands, Michael J.; Loeffler, Donald R.; Lukianow, S. Wade; and Ryan, Thomas P., 6,039,733, Cl. 606-40.000.

Lane, James N.: *See*—
Neeley, Rocky E.; and Lane, James N., 6,038,893, Cl. 70-175.000.

Lane, Norman. Dynamic pressure regulator cushion. 6,038,956, Cl. 91-409.000.

Lane Research: *See*—
Kurtin, Stephen; and Epstein, Saul, 6,040,947, Cl. 359-666.000.

Lang, Feng, to Prime Hill Development Limited. Motor vehicle air-conditioning system. 6,038,876, Cl. 62-238.400.

Lang, Lowell, deceased (by Marilyn Lang, legal representative): *See*—
Green, H. Dean; Salquero, George J.; Lang, Lowell, deceased, 6,041,310, Cl. 705-27.000.

Lang, Marilyn, legal representative: *See*—
Green, H. Dean; Salquero, George J.; Lang, Lowell, deceased, 6,041,310, Cl. 705-27.000.

Lang, Stephen Michael: *See*—
Barlow, Yvonne Margaret; and Lang, Stephen Michael, 6,039,972, Cl. 424-445.000.

Langer, Günter: *See*—
Pawlowski, Christoph; Langer, Günter; and Meyer, Wilhelm, 6,039,328, Cl. 280-7.130.

Langer, Robert S.: *See*—
Kost, Joseph; Pliquett, Uwe; Mitragotri, Samir S.; Langer, Robert S.; and Weaver, James C., 6,041,253, Cl. 604-20.000.

Langner, Roland: *See*—
Ley, Jakob; and Langner, Roland, 6,039,939, Cl. 424-78.030.

Lantis, John C: *See*—
Durville, Frederick M.; Connolly, Raymond J; Lantis, John C; Rediker, Robert H; and Schwaitzberg, Steven D., 6,039,729, Cl. 606-16.000.

Lanzi, Ronald George: *See*—
Krajewski, Paul Edward; Lanzi, Ronald George; and Schroth, James Gregory, 6,038,911, Cl. 72-379.200.

Laor, Raviv, to OneClip.com, Incorporated. Method of and system for distributing and redeeming electronic coupons. 6,041,309, Cl. 705-14.000.

LAP Licensing, LC.: *See*—
Cox, James Stacy, 6,039,003, Cl. 119-166.000.

LaPlante, Jeffrey P.: *See*—
Kubalak, Thomas P.; Sheperd, Peter; and LaPlante, Jeffrey P., 6,039,750, Cl. 606-201.000.

La Porta, Thomas F.; and Netravali, Arun N., to Lucent Technologies, Inc. Interactive call identification. 6,041,103, Cl. 379-67.100.

Laporte, Jean-Jacques; Tassily, Eric; and Muttin, Frédéric, to GEC Alsthom Transport SA. Devices with inflatable members for protecting vehicles against impacts. 6,039,349, Cl. 280-748.000.

Larguier, René. Electric motor/thermal engine drive for a vehicle in which the electric motor functions as a flywheel, starter motor, and generator. 6,040,634, Cl. 290-45.000.

LaRoche, Yves Rene: *See*—
Vlasuk, George Phillip; Stanssens, Patrick Eric Hugo; Messens, Joris Hilda Lieven; Lauwereys, Marc Josef; LaRoche, Yves Rene; Jespers, Laurent Stephane; Gansemans, Yannick Georges Jozef; Moyle, Matthew; and Bergum, Peter W., 6,040,441, Cl. 536-252.000.

Larreacorp, Ltd.: *See*—
Sinnott, Robert A.; Clark, W. Dennis; and DeBoer, Kenneth Frank, 6,039,955, Cl. 424-195.100.

Lars Barthold Nielsen: *See*—
Kolstrup, Anders Peter, 6,039,668, Cl. 475-183.000.

Larsen, Jody D.: *See*—
Sandhu, Gurtej S.; Elliott, Richard L.; Doan, Trung T.; and Larsen, Jody D., 6,040,245, Cl. 438-692.000.

Larsen, Robert D.: *See*—
Corley, Edward G.; Davies, Ian W.; Larsen, Robert D.; Pye, Philip J.; and Rossen, Kai, 6,040,319, Cl. 514-334.000.
Davies, Ian W.; Journet, Michel; Gerena, Linda; Larsen, Robert D.; Pye, Philip J.; and Rossen, Kai, 6,040,450, Cl. 546-256.000.

Larson, John A.; Gretz, Thomas J.; and Ofcharsky, John, to Plastic Components, Inc. Variable width sill support. 6,038,821, Cl. 52-97.000.

Larson, Margaret J.; Rutter, John W.; and Smith, Larry L., to Sonotech, Inc. Coupling sheath for ultrasound transducers. 6,039,694, Cl. 600-459.000.

Larsson, Björn, to SCA Hygiene Products AB. Adhesive fastening device. 6,039,717, Cl. 604-391.000.

Larsson, Lennart; and Folkesson, Rolf, to Allgon Ab. Method and system for tuning resonance modules. 6,041,083, Cl. 375-304.000.
Laser Technology, Inc.: *See*—
Clifford, Bruce; and Harrison, John, 6,040,897, Cl. 356-4.010.
Lashkari, Yezdezard Z.: *See*—
Chislenko, Alexander; Lashkari, Yezdezard Z.; and McNulty, John E., 6,041,311, Cl. 705-27.000.
Lasky, Laurence A.; and Dowbenko, Donald J., to Genentech, Inc. Tyrosine phosphorylated cleavage furrow-associated proteins (PSTPIPS). 6,040,437, Cl. 536-23.100.
Lassen, Soren Flensted; Bech, Lisbeth; Ohmann, Anders; Breinholt, Jens; Fuglsang, Claus Crone; and Ostergaard, Peter Rahbek, to Novo Nordick A/S. Phytase polypeptides. 6,039,942, Cl. 424-94.600.
Laswell, William L.: *See*—
Duggan, Mark E.; Halczenko, Wasyl; Egbertson, Melissa S.; Hartman, George D.; and Laswell, William L., 6,040,317, Cl. 514-317.000.
Lattes, Isabelle; Feurer, Bernard; Guidetti, Brigitte; and Payrou, Viviane, to Chauvin Opsia. Fluorinated organic compounds, ophthalmological applications thereof and method for making same. 6,040,485, Cl. 570-126.000.
Lattin, Danny L.: *See*—
Compadre, Cesar; Breen, Philip; Salari, Hamid; Fifer, E. Kim; Lattin, Danny L.; Slavik, Michael; Li, Yanbin; and O'Brien, Timothy, 6,039,992, Cl. 426-332.000.
Lau, Jark C.; and Lin, Philip Sim. Method and apparatus for stabilizing a moving low-strength sheet. 6,039,842, Cl. 162-272.000.
Lau, Kai-Hung: *See*—
Sanjurjo, Angel; Lau, Kai-Hung; Lowe, David; Canizales, Anastasia; Jiang, Naixiong; Wong, Victor; Jiang, Liqiang; Schneider, Luke V.; Mufti, Naheed; Rewick, Robert T.; Johansson, Marie; and Kardos, Keith, 6,039,894, Cl. 252-301.40R.
Lau, Willie; Kelly, Michael DeWayne; Lorah, Dennis Paul; and Heinley, David Ralph, to Rohm and Haas Company. Polymer compositions. 6,040,409, Cl. 526-328.000.
Läufer, Martin: *See*—
Dieterle, Franz; and Läufer, Martin, 6,040,664, Cl. 315-383.000.
Laugier, Jean-Pierre: *See*—
Cupferman, Sylvie; and Laugier, Jean-Pierre, 6,040,347, Cl. 514-723.000.
Lauman, Brian C.: *See*—
Carr, Raymond A.; and Lauman, Brian C., 6,038,914, Cl. 73-40.000.
Lautenschlager, Wolfgang; and Stahl, Uwe, to Alcatel. Method and apparatus for providing a telecommunications service. 6,041,110, Cl. 379-201.000.
Lauvray, Olivier J.; and Rodriguez, David, to Motorola, Inc. Semiconductor component comprising an electrostatic-discharge protection device. 6,040,604, Cl. 257-355.000.
Lauwereys, Marc Josef: *See*—
Vlasuk, George Phillip; Stanssens, Patrick Eric Hugo; Messens, Joris Hilda Lieven; Lauwereys, Marc Josef; LaRoche, Yves Rene; Jespers, Laurent Stephane; Gansemans, Yannick Georges Jozef; Moyle, Matthew; and Bergum, Peter W., 6,040,441, Cl. 536-252.000.
Law, Marcus Dixon; and Dietz, Jon M., to Novartis Finance Corporation. Use of translationally altered RNA to confer resistance to maize dwarf mosaic virus and other monocotyledonous plant viruses. 6,040,496, Cl. 800-280.000.
Law, R. Thomas. Separator for air conveyed pellets. 6,039,513, Cl. 406-171.000.
Law, Simon M., to Xerox Corporation. Method of building an adaptive huffman codeword tree. 6,040,790, Cl. 341-65.000.
Lawler, John J. Toy animal and habitat clothing. 6,038,698, Cl. 2-69.000.
Lawlor, Elizabeth Jane, to SmithKline Beecham Corporation; and SmithKline Beecham p.l.c. Asparaginyl tRNA synthetase from *streptococcus pneumoniae*. 6,040,163, Cl. 435-183.000.
Lawlor, Elizabeth Jane: *See*—
Gentry, Daniel Robert; Greenwood, Rebecca Claire; and Lawlor, Elizabeth Jane, 6,040,162, Cl. 435-183.000.
Lawrence, James L.: *See*—
Winter, Jeffrey J.; Holden, Homer N.; and Lawrence, James L., 6,039,082, Cl. 138-121.000.
Lawrence, Kathryn E.: *See*—
Hackler, Ronald E.; and Lawrence, Kathryn E., 6,040,345, Cl. 514-594.000.
Lawson, Richard R.; and Droukas, Roger C. Vacuum drying screen. 6,038,785, Cl. 34-145.000.
Lawton, John W., Jr.: *See*—
Doane, William M.; Lawton, John W., Jr.; and Shogren, Randal, 6,040,063, Cl. 428-532.000.
Layman, Ted W.: *See*—
Quiachon, Dinah B.; Piplani, Alec A.; Baker, Steve G.; Williams, Ronald G.; Williams, Richard S.; Osborn, Kenneth L.; Layman, Ted W.; and Johansson, Peter K., 6,039,758, Cl. 623-1.000.
Lazo, John S.; Rice, Robert L.; Cunningham, April; and Wipf, Peter, to University of Pittsburgh. Phosphatase inhibitors and methods of use thereof. 6,040,323, Cl. 514-374.000.
Le, Thong H.: *See*—
Le, Thong Huu; and Le, Timothy Van, 6,038,773, Cl. 30-249.000.
Le, Thong Huu; and Le, Timothy Van, to Le, Thong H. Adjustable length pruning instrument. 6,038,773, Cl. 30-249.000.
Le, Timothy Van: *See*—
Le, Thong Huu; and Le, Timothy Van, 6,038,773, Cl. 30-249.000.
Lear Corporation: *See*—
Rus, Liviu, 6,039,401, Cl. 297-378.130.
Lebecq, Fabrice: *See*—
Damme, Eric; Gilson, Jean-Marc; Leempoel, Patrick; Lebecq, Fabrice; and Takemasa, Takao, 6,040,412, Cl. 528-34.000.
Lechner, Johann: *See*—
Froese-Peeck, Rüdiger; Gerhard, Detlef; and Lechner, Johann, 6,039,254, Cl. 235-462.320.
Leclerc, Denis: *See*—
Goldstein, Léon; Leclerc, Denis; and Dagens, Béatrice, 6,040,246, Cl. 438-706.000.
LeCompte, Robert Steven: *See*—
Agrawal, Anoop; Tonazzi, Juan Carlos Lopez; LeCompte, Robert Steven; Baertelin, Carl; and Fischer, Douglas Alan, 6,039,390, Cl. 296-211.000.
Lee, Byung-Hak: *See*—
Kang, Young-Cheol; Lee, Byung-Hak; and Song, Man-Ho, 6,039,619, Cl. 445-24.000.
Lee, Chi-long: *See*—
Glover, Shedric Oneal; Lee, Chi-long; and Tong, Wen-hong, 6,040,353, Cl. 522-15.000.
Lee, Chun Sik: *See*—
Lee, Yoon Pyo; Lee, Chun Sik; Kim, Kwang Ho; Jurng, Jong Soo; Kim, Young Il; Shin, Hung Tae; and Han, Hee Suk, 6,038,869, Cl. 62-100.000.
Lee, Eung Suk; Park, Wan Hee; Park, June Ho; and Jung, Seung Bae, to Pohang Iron & Steel Co., Ltd.; and Research Institute of Industrial Science & Technology. Apparatus for measuring thickness and method therefor. 6,038,779, Cl. 33-503.000.
Lee, George C.; and Liang, Zhong, to Research Foundation of State of New York. Low frequency seismic accelerometer. 6,038,924, Cl. 73-514.340.
Lee, Helen Tsenwhei: *See*—
Chen, Michael Huai Gu; Chung, Fu-Zon; and Lee, Helen Tsenwhei, 6,040,316, Cl. 514-316.000.
Lee, Hong Cheol: *See*—
Kim, Kyung Woon; and Lee, Hong Cheol, 6,039,033, Cl. 123-568.170.
Lee, Hong Woo: *See*—
Hong, Chung, Il; Kim, Jung Woo; Lee, Sang Joon; Ahn, Soon Kil; Choi, Nam Song; Hong, Ryung Kee; Chun, Hyoung Sik; Moon, Seung Kee; and Lee, Hong Woo, 6,040,337, Cl. 514-475.000.
Lee, Ilzoo; and Covino, Josephine, to United States of America, Navy. Synthesis of monoclinic celsian. 6,039,929, Cl. 423-328.200.
Lee, In-Hee: *See*—
Lehrer, Robert I.; Zhao, Chengquan; and Lee, In-Hee, 6,040,293, Cl. 514-13.000.
Lee, Jack. Socket displaying device. 6,039,188, Cl. 206-758.000.
Lee, Jeong-Ki, to Daewoo Motor Co, Ltd. Air filter device and an automobile having the same. 6,039,777, Cl. 55-385.300.
Lee, Jung-Goo: *See*—
Ko, Young-Hoon; Lee, Jung-Goo; and Kim, Jae-Yoon, 6,040,390, Cl. 525-338.000.
Lee, Kune Woo: *See*—
Oh, Won Zin; Lee, Kune Woo; Choi, Wang Kyu; Park, Hyun Soo; Kim, Jong Seung; Cho, Moon Hwan; and Kim, Jong Kook, 6,040,462, Cl. 549-352.000.
Lee, Ming-Rong: *See*—
Meng, Wan-Yu; Chang, Cheng-Kai; Chang, Hwai-Tsu; Hsu, Fang-Ru; and Lee, Ming-Rong, 6,041,322, Cl. 706-43.000.
Lee, Reginald: *See*—
OBrien, John; Scherer, Axel; Yariv, Amnon; Lee, Reginald; Xu, Yuanjian; and Painter, Oskar, 6,040,590, Cl. 257-94.000.
Lee, Sang Joon: *See*—
Hong, Chung, Il; Kim, Jung Woo; Lee, Sang Joon; Ahn, Soon Kil; Choi, Nam Song; Hong, Ryung Kee; Chun, Hyoung Sik; Moon, Seung Kee; and Lee, Hong Woo, 6,040,337, Cl. 514-475.000.
Lee, Sang Man: *See*—
Baek, Young Sik; Lee, Sang Man; and Kang, Hun, 6,041,036, Cl. 370-222.000.
Lee, Sang-oh, to Samsung Electronics, Co., Ltd. Power-on reset circuit with adjustable interval. 6,040,722, Cl. 327-143.000.
Lee, Seok-Lyul: *See*—
Jun, Jung-Mok; and Lee, Seok-Lyul, 6,040,882, Cl. 349-39.000.
Lee, Soo-In: *See*—
Un, Sung-Kyong; Cho, Hyun-Sook; Kim, Hwan-Chul; and Lee, Soo-In, 6,040,850, Cl. 348-10.000.
Lee, Tien-Yu T.: *See*—
Chambers, Benjamin C.; Blood, William R., Jr.; and Lee, Tien-Yu T., 6,040,624, Cl. 257-692.000.
Lee, Tzung-Han; and Chern, Horng-Nan, to United Microelectronics Corp. Method of avoiding sidewall residue in forming connections. 6,040,241, Cl. 438-622.000.
Lee, William Robert; and Richardson, Leland Duane, to International Business Machines Corporation. Dynamically configurable variable frequency and duty cycle clock and signal generation. 6,040,725, Cl. 327-175.000.
Lee, Yoon Pyo; Lee, Chun Sik; Kim, Kwang Ho; Jurng, Jong Soo; Kim, Young Il; Shin, Hung Tae; and Han, Hee Suk, to Korea Institute of Science and Technology. Method and apparatus for making spherical ice particles. 6,038,869, Cl. 62-100.000.
Leempoel, Patrick: *See*—
Damme, Eric; Gilson, Jean-Marc; Leempoel, Patrick; Lebecq, Fabrice; and Takemasa, Takao, 6,040,412, Cl. 528-34.000.
LeFlécher, René; and Robson, Peter, to Bestfoods. Ready-to-bake shelf-stable cake dough and process for its manufacture. 6,039,994, Cl. 426-498.000.
Lefler, John R.: *See*—

MacLaren, David D.; Lefler, John R.; and Minish, Sharon K., 6,039,974, Cl. 424-472.000.
Legnani, Marco Alessandro: *See—*
Pidutti, Albino; and Legnani, Marco Alessandro, 6,040,687, Cl. 323-316.000.
Leguillette, Bertrand: *See—*
Ishimori, Shozo; Yamaguchi, Masatoshi; Auvergne, Cristophe; and Leguillette, Bertrand, 6,038,840, Cl. 56-13.300.
Lehmann, Volker; and Gericke, Joachim, to Siemens AG. Interrupter unit of a high-voltage power circuit breaker. 6,040,970, Cl. 361-115.000.
Lehmann, Volker: *See—*
Reisinger, Hans; Grüning, Ulrike; Wendt, Hermann; Stengl, Reinhard; Lehmann, Volker; Willer, Josef; Franosch, Martin; Schäfer, Herbert; Krautschneider, Wolfgang; Hofmann, Franz; and Böhm, Thomas, 6,040,995, Cl. 365-185.180.
Lehnen, Hans Gunter; Lorig, Roland; and Schmitt, Stefan, to I.E.E. International Electronics & Engineering S.a.r.l. Device for detection of trapping in a power-operated closing element. 6,038,930, Cl. 73-774.000.
Lehnert, Heinz: *See—*
Stein, Bernd; Lehnert, Heinz; Zimmermann, Wilhelm; and Steinhauer, Heinz, 6,038,901, Cl. 72-85.000.
Lehrer, Robert I.; Zhao, Chengquan; and Lee, In-Hee, to University of California, The Regents of the. Clavanins. 6,040,293, Cl. 514-13.000.
Lehrieder, Erwin Paul Josef; Röder, Klaus Walter; and Trutschel, Hartwig Horst, to Koeing & Bauer Aktiengesellschaft. Haulage car for paper rolls. 6,039,284, Cl. 242-559.000.
Lei, Hou Chong. Safety piezo-electric lighter. 6,039,561, Cl. 431-153.000.
Leica Microsystems AG: *See—*
Stuettler, Herbert M., 6,040,852, Cl. 348-43.000.
Leichty, Philip Lynn; and Slane, Albert Alfonse, to International Business Machines Corporation. Communications cell scheduler and scheduling method for providing periodic activities. 6,041,060, Cl. 370-412.000.
Leinonen, Erkki: *See—*
Kytönen, Pauli; Koriseva, Juha; and Leinonen, Erkki, 6,039,840, Cl. 162-205.000.
Le Letty, Ronan, to Eta SA Fabriques d'Ebauches. Piezoelectric transformer. 6,040,654, Cl. 310-366.000.
Lemonnier, Jean, to Millipore Corporation. Cartridge as well as air analysis method and apparatus using it. 6,040,153, Cl. 435-30.000.
Lendl, Wilhelm. Table arrangement for motor vehicles. 6,038,983, Cl. 108-44.000.
Lenoil, Isidor: *See—*
Jones, John J.; Saggio, Rosario S.; Okamoto, Karlton K.; and Lenoil, Isidor, 6,039,519, Cl. 410-69.000.
Leo Elektronenmikroskopie GmbH: *See—*
Benner, Gerd, 6,040,576, Cl. 250-305.000.
Le Riche, Frédéric Pierre Alain; and Pierre, Bernard Raymond, to 3M Innovative Properties Company. Apparatus and method for applying coating materials to individual sheet members. 6,040,006, Cl. 427-209.000.
Lerio Corporation, The: *See—*
Moore, Richard L.; Robson, Michael G.; Lockeby, Warren E., Jr.; and Kaylor, Billy E., 6,038,813, Cl. 47-75.000.
Le Roux, Francoise: *See—*
Fayolle, Francoise; Le Roux, Francoise; and Vandecasteele, Jean-Paul, 6,040,154, Cl. 435-42.000.
Lesins, Viesturs: *See—*
Hichri, Habib; Lesins, Viesturs; and Sommer, Christopher C., 6,040,477, Cl. 562-46.000.
Leskinen, Pauli: *See—*
Pentti, Ismo; and Leskinen, Pauli, 6,040,260, Cl. 502-103.000.
Letuchy, Yakov A.: *See—*
Luebke, Gary; Benton, Kenneth Curtis; and Letuchy, Yakov A., 6,040,379, Cl. 524-734.000.
Letze, Thomas: *See—*
Lysen, Heinrich; Aschenbrenner, Kal; and Letze, Thomas, 6,040,903, Cl. 356-153.000.
Level One Communications, Inc.: *See—*
Rao, Sailesh Krishna, 6,041,078, Cl. 375-240.000.
Levermann, Ulrich: *See—*
Schulte, Martin; and Levermann, Ulrich, 6,039,384, Cl. 296-146.200.
Levesque, Yvon: *See—*
Israël, Joseph; and Levesque, Yvon, 6,040,032, Cl. 428-98.000.
Levi, Steven P.; VanAntwerp, Mark D.; Dowell, Craig M.; and Knowlton, Chadd B., to Microsoft Corporation. Active stream format for holding multiple media streams. 6,041,345, Cl. 709-217.000.
Levine, Cecelia O.: *See—*
Matthews, Susan H.; and Levine, Cecelia O., 6,038,720, Cl. 5-639.000.
Levine, Gary S.: *See—*
Jablonski, Ted M.; Meyer, Michael S.; Miller, David A.; Martin, Herman H.; Emody, Kenneth J.; Levine, Gary S.; and Tinucci, Peter, 6,039,220, Cl. 222-236.000.
Levine, Peter Alan; Sauer, Donald Jon; and McCaffrey, Nathaniel Joseph, to Sarnoff Corporation. Extended dynamic range image sensor system. 6,040,570, Cl. 250-208.100.
Leviton Manufacturing Co., Inc.: *See—*
DiSalvo, Nicholas L., 6,040,967, Cl. 361-42.000.
Getselis, Arkady; Newman, Walter; and Tufano, Anthony, 6,039,597, Cl. 439-441.000.
Levy, Paul S., to VLSI Technology. Scan testable circuit arrangement. 6,041,427, Cl. 714-724.000.
Lewis, Aaron; Palanker, Daniel; and Turovets, Igor, to Nanoptics, Inc. Method and apparatus for concentrating laser beams. 6,039,726, Cl. 606-3.000.
Lewis, Alan G., to Xerox Corporation. Active matrix display with integrated drive circuitry. 6,040,812, Cl. 345-89.000.
Lewis, Edmund T.; and Green, Thomas B., to Tekmar Company. Vial autosampler with selectable modules. 6,040,186, Cl. 436-53.000.
Lewis, Jimmie, to Adac Plastics, Inc. Door handle assembly and method of mounting. 6,039,366, Cl. 292-352.000.
Lexar Media, Inc.: *See—*
Estakhri, Petro, 6,040,997, Cl. 365-185.330.
Estakhri, Petro, 6,041,001, Cl. 365-200.000.
Lexmark International, Inc.: *See—*
Black, David Glenn; Hinch, Garry Dale; Nguyen, Dat Quoc; and Srinivasan, Kasturi Rangan, 6,040,098, Cl. 430-59.600.
Komplin, Steven Robert; Murthy, Ashok; and Sullivan, Carl Edmond, 6,039,439, Cl. 347-65.000.
Ley, Jakob; and Langner, Roland, to Haarmann & Reimer GmbH. N-acylhydroxyamino acid esters and their use. 6,039,939, Cl. 424-78.030.
Ley, Wayne A.; Mroczka, David E.; and Talaski, Edward J., to Walbro Corporation. Fuel pump with controlled vapor intake. 6,039,548, Cl. 417-313.000.
Leybold Materials GmbH: *See—*
Wollenberg, Norbert, 6,039,855, Cl. 204-298.120.
Leyden, Roger; and Surma, Terrance, to Se-Kure Controls, Inc. Security system. 6,039,498, Cl. 403-61.000.
LG Electronics Inc.: *See—*
Choi, Byeongho, 6,041,162, Cl. 386-124.000.
Choi, Dong Joon, 6,040,820, Cl. 345-156.000.
Kim, Hak Lyang, 6,040,872, Cl. 348-553.000.
Park, Ki Pan, 6,040,828, Cl. 345-213.000.
LG Foster Ltd.: *See—*
Byun, Hong J; Lim, Jun W; and Park, Hwi C, 6,039,146, Cl. 181-169.000.
LG Semicon Co., Ltd.: *See—*
Cho, Sung Ky, 6,041,093, Cl. 377-47.000.
Chung, Seong Woo, 6,040,247, Cl. 438-713.000.
Ha, Jae Hee; and Jun, Sun Ae, 6,039,888, Cl. 216-13.000.
Han, Dong-Hwan, 6,041,338, Cl. 708-313.000.
Kang, Hee-Bok; and Kim, Dae-Hui, 6,040,715, Cl. 326-87.000.
Yu, Young J., 6,040,202, Cl. 438-70.000.
L' Heureux, Ernest R., Jr.: *See—*
Swanson, Gary K.; and L'Heureux, Ernest R., Jr., 6,039,177, Cl. 206-306.000.
Li, Jianxun; Chooi, Simon; and Zhou, Mei-Sheng, to Chartered Semiconductor Manufacturing Ltd. Method to form copper damascene interconnects using a reverse barrier metal scheme to eliminate copper diffusion. 6,040,243, Cl. 438-687.000.
Li, Ken Ming: *See—*
Huang, Chi-Jung; and Li, Ken Ming, 6,041,419, Cl. 713-401.000.
Li, Kin Chung. Piezoelectric lighter with safety lock. 6,039,562, Cl. 431-153.000.
Li, Lehmann K.; and Li, Rhodemann, to Li Medical Technologies, Inc. Intervertebral spacer and tool and method for emplacement thereof. 6,039,761, Cl. 623-17.000.
Li Medical Technologies, Inc.: *See—*
Li, Lehmann K.; and Li, Rhodemann, 6,039,761, Cl. 623-17.000.
Li, Rhodemann: *See—*
Li, Lehmann K.; and Li, Rhodemann, 6,039,761, Cl. 623-17.000.
Li, Shulong: *See—*

Chooi, Kon Hing; Lim, Ka Tiek; and Teoh, Ping Chow, 6,039,512, Cl. 406-85.000.

Lim, Kwang-taek, to Samsung Electronics Co., Ltd. Universal paper cassette. 6,039,315, Cl. 271-160.000.

Lim, Seng-Sooi: *See*—
Low, Qwai H.; Chia, Chok J.; and Lim, Seng-Sooi, 6,040,632, Cl. 257-784.000.

Lin, Chien-Hung: *See*—
Liu, Meng-Chang; Lin, Jyh-Feng; Yen, Ming-Shu; Su, Su-Ying; Chiu, Fu-Ying; and Lin, Chien-Hung, 6,040,223, Cl. 438-303.000.

Lin, Chung-Kuang; and Chang, Jung-Jen, to Fu Tai Umbrella Works, Ltd. Multiple-fold windproof umbrella for preventing sagging of umbrella cloth. 6,039,063, Cl. 135-33.700.

Lin, Jyh-Feng: *See*—
Liu, Meng-Chang; Lin, Jyh-Feng; Yen, Ming-Shu; Su, Su-Ying; Chiu, Fu-Ying; and Lin, Chien-Hung, 6,040,223, Cl. 438-303.000.

Lin, Ming-Shyang, to Giant Manufacturing Co., Ltd. Hand-operated accelerator device for an electric-powered bicycle. 6,038,923, Cl. 73-488.000.

Lin, Philip Sim: *See*—
Lau, Jark C.; and Lin, Philip Sim, 6,039,842, Cl. 162-272.000.

Lin, Ruei-Ling; and Hsu, Ching-Hsiang. Fabricating method of an ultra-fast pseudo-dynamic nonvolatile flash memory. 6,040,217, Cl. 438-258.000.

Lin, Shih-Ming. Lamp assembly. 6,039,463, Cl. 362-414.000.

Lin, Trung-Pao: *See*—
Huang, Nen-Fu; Wang, Yao-Tzung; and Lin, Trung-Pao, 6,041,358, Cl. 709-238.000.

Lin, Yen-Yi: *See*—
Yang, Chie-Ming; Wang, Jih-Hwa; and Lin, Yen-Yi, 6,040,238, Cl. 438-592.000.

Lin, Yi-Miaw: *See*—
Wuu, Shou-Gwo; Chen, Lung; Yaung, Dun-Nian; and Lin, Yi-Miaw, 6,040,227, Cl. 438-382.000.

Lindauer Dornier Gesellschaft mbH: *See*—
Dornier, Peter D.; and Krumm, Valentin, 6,039,086, Cl. 139-54.000.

Linde Aktiengesellschaft: *See*—
Corduan, Horst; and Lochner, Stefan, 6,038,885, Cl. 62-653.000.

Linder, Lloyd F.: *See*—
Chen, Ricky Y.; Linder, Lloyd F.; Devendorf, Don C.; and Gorder, Matthew S., 6,040,731, Cl. 327-359.000.

Lindman, Per: *See*—
Ginell, Thomas; Thorsell, Lars; and Lindman, Per, 6,040,639, Cl. 307-44.000.

Lindquist, Bengt W.; and Fabo, Tomas, to Molnlycke Health Care AB. Method of securing a liquid impervious sheet to a wound pad. 6,040,492, Cl. 602-41.000.

Lindrose, Albert Michael; and Stefansky, Frederick Mark, to Seagate Technology, Inc. Air damper for disc drive actuator latch mechanism. 6,040,960, Cl. 360-105.000.

Lindstrom, Mikko, to Finn-Power International, Inc. Apparatus to determine the operational effectiveness of a machine tool and method therefor. 6,041,271, Cl. 700-175.000.

Linear Technology Corporation: *See*—
Schenkel, Jeffrey, 6,040,686, Cl. 323-282.000.

Linemaster Switch Corporation: *See*—
McClintock, Larry E., 6,040,537, Cl. 200-86.500.

Ling, James M.: *See*—
Hsu, Shi-Ping; Ling, James M.; Messenger, Arthur F.; and Evans, Bruce W., 6,041,410, Cl. 713-186.000.

Link, Helmut Friedrich; and Trautmann, Günther-Heinrich, to Index-Werke GmbH & Co. KG Hahn & Tessky. Workpiece spindle device for a machine tool. 6,038,948, Cl. 82-147.000.

Linkiewicz, John M., to Triangle Package Machinery Company. Longitudinal seam sealer for polyethylene material. 6,038,839, Cl. 53-551.000.

Linnebur, David H.: *See*—
Nabors, William; Yates, Debra S.; Linnebur, David H.; Rodriguez, Jon; and Hill, Andrew, 6,038,723, Cl. 7-128.000.

L' Institut de Recherche et D'Enseignement Superieur aux Techniques de Electronique: *See*—
Delagnes, Philippe; and Barba, Dominique, 6,040,853, Cl. 348-128.000.

LINTEC Corporation: *See*—
Iwabuchi, Hiroaki; Sone, Yoichi; and Utagawa, Tetsuyuki, 6,040,026, Cl. 428-40.100.
Kato, Kiichiro; Kondoh, Takeshi; Taguchi, Katsuhisa; and Takahashi, Kazuhiro, 6,040,048, Cl. 428-345.000.

Lion Apparel, Inc.: *See*—
Aldridge, Donald; and Curtis, Nicholas J., 6,038,700, Cl. 2-81.000.

Lippman, Marc E.; and Lupu, Ruth, to Georgetown University. Ligand growth factor gp30 that binds to the erbB-2 receptor protein and induces cellular responses. 6,040,290, Cl. 514-12.000.

Lipton, Marc Ira; and Dunny, Gregory John, to Ameritech Corporation. Method and system for ordering a telecommunication service. 6,041,104, Cl. 379-67.100.

List AG: *See*—
Palmer, David, 6,039,469, Cl. 366-97.000.

Liston, Laurence D. N.; Schoepf, Joseph L.; and Royalty, Charles Michael, to AlliedSignal Inc. Detachable integral aircraft tailcone and power assembly. 6,039,287, Cl. 244-54.000.

Little, Dave: *See*—
Bigham, John A.; Little, Dave; Mihm, Edward C.; Sistanizadeh, Kamran; Amin-Salehi, Bahman; Jain, Alpna; Lightfoot, Regina; and Arthur, Ulric E., 6,041,056, Cl. 370-395.000.

Littleton, Jerry W. Pump shut off system. 6,039,543, Cl. 417-12.000.

Litton Systems, Inc.: *See*—
Rahn, John P.; Patterson, Ralph A.; and Cordova, Amado, 6,040,908, Cl. 356-350.000.

Liu, David, to Vanguad International Semiconductor Corporation. Substrate clamp design for minimizing substrate to clamp sticking during thermal processing of thermally flowable layers. 6,039,854, Cl. 204-298.110.

Liu, Jack. Internal rotary structure of a crystal ball seat. 6,038,798, Cl. 40-411.000.

Liu, Jeng-Shu: *See*—
Yeh, Ching-Fa; and Liu, Jeng-Shu, 6,039,857, Cl. 205-106.000.

Liu, Jiancheng; and Yamazaki, Kazuo, to MTI Corporation. Method and for system for detecting damaged bills. 6,040,584, Cl. 250-559.110.

Liu, Jun: *See*—
Kolesnick, Richard N.; Liu, Jun; and Zhang, Yuhua, 6,040,149, Cl. 435-15.000.

Liu, Meng-Chang; Lin, Jyh-Feng; Yen, Ming-Shu; Su, Su-Ying; Chiu, Fu-Ying; and Lin, Chien-Hung, to Taiwan Semiconductor Manufacturing Company. Method for making improved polysilicon FET gate electrodes having composite sidewall spacers using a trapezoidal-shaped insulating layer for more reliable integrated circuits. 6,040,223, Cl. 438-303.000.

Liu, Peichun Peter; Singh, Rajinder Paul; and Tung, Shih-Hsiung Steve, to International Business Machines Corporation. Token mechanism for cache-line replacement within a cache memory having redundant cache lines. 6,041,390, Cl. 711-110.000.

Liu, Yowjuang W.: *See*—
Kim, Unsoon; Liu, Yowjuang W.; and Sun, Yu, 6,040,597, Cl. 257-321.000.

Liue, Yung-Ho; and Chiang, Kung-An. Cleaning device for avoiding dissipation of polluted air due to smoking. 6,039,776, Cl. 55-385.100.

Livergood, Robert J.: *See*—
Turner, Tom; and Livergood, Robert J., 6,039,462, Cl. 362-410.000.

Lizzi, Frederic, to Riverside Research Institute. Stripe electrode transducer for use with therapeutic ultrasonic radiation treatment. 6,039,689, Cl. 600-439.000.

LJ Laboratories, L.L.C.: *See*—
Jung, Wayne D.; Jung, Russell W.; and Loudermilk, Alan R., 6,040,902, Cl. 356-73.000.

LMK Enterprises, Inc.: *See*—
Kiest, Larry W., Jr., 6,039,079, Cl. 138-98.000.

Lobet, Yves: *See*—
Locht, Camille; and Lobet, Yves, 6,040,427, Cl. 530-350.000.

Locati, Ronald P.: *See*—
Hauver, Bruce C., Sr.; Locati, Ronald P.; and Massaglia, Larry Michael, 6,039,609, Cl. 439-668.000.

Loch, Werner: *See*—
Götz, Klaus; Jakusch, Helmut; Loch, Werner; Hoffmann, Erich; Gottmann, Hans-Georg; Jenor, Hans-Joachim; and Voit, Johann, 6,040,041, Cl. 428-216.000.

Lochhead, Michael J.; and Yager, Paul, to University of Washington. Multiple patterned structures on a single substrate fabricated by elastomeric micromolding techniques. 6,039,897, Cl. 264-1.240.

Lochner. Stefan: *See*—
Corduan, Horst; and Lochner, Stefan, 6,038,885, Cl. 62-653.000.

Locht, Camille; and Lobet, Yves, to SmithKline Beecham Biologicals. Vaccine. 6,040,427, Cl. 530-350.000.

Lockeby, Warren E., Jr.: *See*—
Moore, Richard L.; Robson, Michael G.; Lockeby, Warren E., Jr.; and Kaylor, Billy E., 6,038,813, Cl. 47-75.000.

Lockformer Company, The: *See*—
Shah, Ashok; Blum, Rick; and Dickinson, Gary, 6,038,825, Cl. 52-172.000.

Lockhart, David J.; Brown, Eugene L.; Wong, Gordon G.; Chee, Mark S.; and Gingeras, Thomas R., to Affymetrix, Inc. Expression monitoring by hybridization to high density oligonucleotide arrays. 6,040,138, Cl. 435-6.000.

Lockheed Martin Corporation: *See*—
Hooper, James R.; Strother, Richard K.; Fish, John; Pawling, Paul G.; and Sauer, Gerald L., 6,040,397, Cl. 525-526.000.
Nygren, William D., 6,038,736, Cl. 16-275.000.
Ramakrishnan, Sriram; Steigerwald, Robert Louis; and Bicknell, William Hull, 6,040,753, Cl. 336-223.000.

Locotos, Frank M., to F. M. Locotos Equipment & Design Co. Mine roof support apparatus and method. 6,039,509, Cl. 405-302.200.

Loders Croklaan B.V.: *See*—
Cain, Frederick William; Quinlan, Paul Thomas; and Moore, Stephen Raymond, 6,040,161, Cl. 435-134.000.

Lodwick, Philip A.: *See*—
Glass, William H.; Lokhorst, Mark; Lodwick, Philip A.; and Schoenzeit, Loren, 6,041,200, Cl. 399-82.000.

Loebach, John A.: *See*—

O'Herron, Michael R.; Loebach, John A.; and Whitehead, Greg A., 6,038,915, Cl. 73-49.300.

Loeffler, Donald R.: *See*—
Buysse, Steven P.; Kennedy, Jenifer S.; Lands, Michael J.; Loeffler, Donald R.; Lukianow, S. Wade; and Ryan, Thomas P., 6,039,733, Cl. 606-40.000.

Logan, John R.: *See*—
Maluf, Nadim I.; Logan, John R.; and Sprakelaar, Gertjan van, 6,038,928, Cl. 73-724.000.

Lohmann, Dieter: *See*—
Hirt, Thomas; Baron, Richard Carlton; Lohmann, Dieter; and Meier, Wolfgang Peter, 6,039,913, Cl. 264-331.110.

Loiselet, Jean-Pierre: *See*—
Duchenne, Laurent; Grigorescu, Benony; and Loiselet, Jean-Pierre, 6,039,466, Cl. 362-515.000.

Lokhorst, Mark: *See*—
Glass, William H.; Lokhorst, Mark; Lodwick, Philip A.; and Schoenzeit, Loren, 6,041,200, Cl. 399-82.000.

London Innovation Ltd.: *See*—
Lynch, Cedric M., 6,040,645, Cl. 310-58.000.

Long, David C.; Moyer, Thomas P.; O'Neil, Keith C.; Perry, Charles H.; Pomerantz, Glenn A.; Case, James R.; Kando, Laszlo; and Kozol, John E., to International Business Machines Corporation. Method and apparatus for the testing of plastically deformable objects. 6,038,931, Cl. 73-850.000.

Longhurst, Audrey: *See*—
Alterman, Steven S.; Sanchez, Mauricio E.; and Longhurst, Audrey, 6,041,045, Cl. 370-313.000.

Lonza AG: *See*—
Heveling, Josef; and Wellig, Alain, 6,040,457, Cl. 548-333.500.

Loper, Cobie W., to Wellstream, Inc. Vented, layered-wall deepwater conduit and method. 6,039,083, Cl. 138-135.000.

Lopez, Arthur: *See*—
Gandre, Jerry D.; Sands, Steven L.; Mills, R. Steven; and Lopez, Arthur, 6,040,982, Cl. 361-724.000.

Lopez, Thomas: *See*—
Kim, Derek; and Lopez, Thomas, 6,039,585, Cl. 439-137.000.

Lopreiato, Mark Anthony. Forearm furniture leverage straps. 6,039,376, Cl. 294-152.000.

Loprete, Joseph F.: *See*—
Monk, David T.; Hill, Joe T.; Wagner, Phillip C.; Loprete, Joseph F.; and Young, Michael R., 6,040,679, Cl. 318-778.000.

Lorah, Dennis Paul: *See*—
Lau, Willie; Kelly, Michael DeWayne; Lorah, Dennis Paul; and Heinley, David Ralph, 6,040,409, Cl. 526-328.000.

L' Oréal: *See*—
Cauwet-Martin, Daniele; and Dubief, Claude, 6,039,962, Cl. 424-401.000.
Philippe, Michel; Luppi, Bernadette; and Semeria, Didier, 6,039,963, Cl. 424-401.000.
Restle, Serge; and Cauwet-Martin, Danièle, 6,039,936, Cl. 424-70.100.
Samain, Henri; and Cretois, Isabelle, 6,039,933, Cl. 424-47.000.

Lorek, Serge, to Elf Atochem S.A. Adhesion binder containing glutarimide moieties. 6,040,025, Cl. 428-35.900.

Lörenz, René: *See*—
Näff, Dominik; and Lörenz, René, 6,039,502, Cl. 403-282.000.

Lorig, Roland: *See*—
Lehnen, Hans Gunter; Lorig, Roland; and Schmitt, Stefan, 6,038,930, Cl. 73-774.000.

Lortz, Victor; and Chou, Stephen T., to Intel Corporation. Method and system for adding a device entry to a device tree upon detecting the connection of a device. 6,041,364, Cl. 709-301.000.

Losee, D. Bruce: *See*—
Fleischhauer, Grier S.; Higgins, Charles T.; Losee, D. Bruce; Nelson, J. Robert, Jr.; Ripley, Robert L.; Sano, Masato; Sharpe, David E.; and Watkins, Michael L., 6,040,560, Cl. 219-494.000.

Losi, Marco: *See*—
Pelagalli, Sergio; and Losi, Marco, 6,041,428, Cl. 714-734.000.

Lotstein, Richard: *See*—
Rice, Douglas; Carozzi, Nadine; Anderson, David M.; Rajasekaran, Kanniah; Rangan, Thirumale S.; Yenofsky, Richard; and Lotstein, Richard, 6,040,504, Cl. 800-314.000.

Loudermilk, Alan R.: *See*—
Jung, Wayne D.; Jung, Russell W.; and Loudermilk, Alan R., 6,040,902, Cl. 356-73.000.

Loudon Enterprises, Inc.: *See*—
Myers, Loren D., 6,039,127, Cl. 175-57.000.

Loughborough University of Technology: *See*—
Adcock, Paul Leonard; Mitchell, Philip John; and Foster, Simon Edward, 6,040,075, Cl. 429-32.000.

Louisiana Bucks Unlimited, L.L.C.: *See*—
Krawczyk, Dwayne M.; and McFarlin, Mabry M., 6,039,488, Cl. 401-132.000.

Lovett, Thomas D.: *See*—
Gilbert, Bruce Michael; Joersz, Robert T.; Lovett, Thomas D.; and Safranek, Robert J., 6,041,376, Cl. 710-108.000.

Low, Qwai H.; Chia, Chok J.; and Lim, Seng-Sooi, to LSI Logic Corporation. Multiple sized die. 6,040,632, Cl. 257-784.000.

Lowe, David: *See*—
Sanjurjo, Angel; Lau, Kai-Hung; Lowe, David; Canizales, Anastasia; Jiang, Naixiong; Wong, Victor; Jiang, Liqiang; Schneider, Luke V.; Mufti, Naheed; Rewick, Robert T.; Johansson, Marie; and Kardos, Keith, 6,039,894, Cl. 252-301.40R.

Lowman, Henry B.: *See*—
Garrard, Lisa J.; Henner, Dennis J.; Bass, Steven; Greene, Ronald; Lowman, Henry B.; Wells, James A.; and Matthews, David J., 6,040,136, Cl. 435-5.000.

LPKF d.o.o.: *See*—
Podlipec, Milan; Podlipec, Bostjan; Zepic, Janez; and Vizjak, Kilijan, 6,038,969, Cl. 101-127.100.

LSI Logic Corporation: *See*—
Chen, Dao-Long, 6,041,090, Cl. 375-376.000.
Dondale, Charles Stephen, 6,040,740, Cl. 330-149.000.
Low, Qwai H.; Chia, Chok J.; and Lim, Seng-Sooi, 6,040,632, Cl. 257-784.000.
Smith, Michael B., 6,041,348, Cl. 709-220.000.

Lu, Guowen: *See*—
Wu, Shudong; and Lu, Guowen, 6,040,910, Cl. 356-376.000.

Lu, Pang-Chia: *See*—
Aylward, Peter T.; Bourdelais, Robert P.; Gula, Thaddeus S.; and Lu, Pang-Chia, 6,040,124, Cl. 430-496.000.

Lübbers, Dierk: *See*—
Hübner, Heijo; Lübbers, Dierk; and Mühlbauer, Wolfgang, 6,040,354, Cl. 523-109.000.

Lübke, Andreas; Rech, Bernd; and Zawade, Torsten, to Volkswagen AG. Motor vehicle navigation system arrangement. 6,040,766, Cl. 340-438.000.

Lucas, Michael. Child's personal security assistant. 6,040,780, Cl. 340-691.100.

Lucas Novasensor: *See*—
Maluf, Nadim I.; Logan, John R.; and Sprakelaar, Gertjan van, 6,038,928, Cl. 73-724.000.

Lucent Technologies Inc.: *See*—
Ahuja, Sudhir R.; Korilis, Ioannis A.; and Varvarigou, Theodora A., 6,041,307, Cl. 705-8.000.
Allen, Jonathon Brandon, 6,041,316, Cl. 705-52.000.
Anderson, David C.; and Stephenson, Daniel Lee, 6,041,155, Cl. 385-139.000.
Andersson, Russell L., 6,040,871, Cl. 348-510.000.
Bailey, James A.; and Wilson, William B., 6,040,742, Cl. 331-2.000.
Baker, Thomas W.; and Mobin, Mohammed S., 6,041,086, Cl. 375-341.000.
Bergmann, Ernest Eisenhardt, 6,040,942, Cl. 359-487.000.
Biliris, Alexandros; Hillyer, Bruce K.; and Panagos, Euthimios, 6,041,354, Cl. 709-226.000.
Chen, Feng; Kolagotla, Ravi K.; Ly, Le T.; Mo, Jiancheng; and Srinivas, Hosahalli R., 6,041,418, Cl. 713-400.000.
Dennis, Donald C.; Radosevich, Joseph R.; and Singh, Ranbir, 6,040,616, Cl. 257-535.000.
Doshi, Bharat Tarachand; Dravida, Subrahmanyam; Kustka, George John; Magill, Peter D.; Siller, Curtis A.; and Sriram, Kotikalapudi, 6,041,051, Cl. 370-352.000.
Elko, Gary Wayne, 6,041,127, Cl. 381-92.000.
Feldmann, Peter; and Freund, Roland W., 6,041,170, Cl. 395-500.230.
Freund, Joseph Michael; Przybylek, George John; and Romero, Dennis Mark, 6,039,833, Cl. 156-344.000.
La Porta, Thomas F.; and Netravali, Arun N., 6,041,103, Cl. 379-67.100.
Martin, David G., 6,040,726, Cl. 327-175.000.
Michel, Alan Dean; and Williams, Eric, 6,041,118, Cl. 379-391.000.
Nagaraj, Krishnaswamy, 6,041,084, Cl. 375-317.000.
Nelson, Dale H.; and Koullias, Iconomos A., 6,040,728, Cl. 327-292.000.
Wild, Ronald Lee, 6,039,165, Cl. 194-217.000.

Lucero, Lei Lani: *See*—
Naud, Steven F.; Weber, Max D.; Lucero, Lei Lani; Bird, J. Dexter, III; and Fink, Martin D., 6,039,193, Cl. 212-270.000.

Ludemann, John F.: *See*—
Pyle, Clifford L.; and Ludemann, John F., 6,038,790, Cl. 36-30.00R.

Luebbert, Birte: *See*—
Fischer, Werner; and Luebbert, Birte, 6,040,721, Cl. 327-110.000.

Luebke, Gary; Benton, Kenneth Curtis; and Letuchy, Yakov A., to Penford Corporation. Starch copolymer products and process. 6,040,379, Cl. 524-734.000.

Lueck, Dale E.; and Parrish, Clyde F., to United States of America, National Aeronautics and Space Administration. Process and equipment for nitrogen oxide waste conversion to fertilizer. 6,039,783, Cl. 71-59.000.

Lues, Inge: *See*—
Häusler, Günther; Gericke, Rolf; Wurziger, Hanns; Baumgarth, Manfred; Lues, Inge; De Peyer, Jacques; and Bergmann, Rolf, 6,040,308, Cl. 514-253.000.

Luger, Klaus: *See*—
Frei, Karl; and Luger, Klaus, 6,039,867, Cl. 210-173.000.

Luk Fahrzeug-Hydraulik GmbH & Co. KG: *See*—
Agner, Ivo, 6,039,326, Cl. 280-5.506.

LuK GmbH & Co.: *See*—
Birkner, Stefan; Strian, Ernst; and Kreibiehl, Markus, 6,040,059, Cl. 428-469.000.

Luk, Sydney, to Hoeganaes Corporation. Iron-based powder compositions containing green strength enhancing lubricants. 6,039,784, Cl. 75-231.000.

Luka, Helmut: *See*—
Hummel, Karl Ernst; Luka, Helmut; and Sommer, Bruno, 6,039,780, Cl. 55-502.000.

Luke, David D.: *See*—
Watson, Lynn R.; Castleberry, James E.; Luke, David D.; and Gilbert, David C., 6,040,792, Cl. 341-100.000.

Luke, Don, to Ciba Specialty Chemicals Water Treatments Limited. Mineral solids separation processes. 6,039,189, Cl. 209-5.000.

Luke, Michael A.: *See*—
Carter, Thurman B.; Luke, Michael A.; and Roberts, John D., 6,039,118, Cl. 166-355.000.

Lukianow, S. Wade: *See*—
Buysse, Steven P.; Kennedy, Jenifer S.; Lands, Michael J.; Loeffler, Donald R.; Lukianow, S. Wade; and Ryan, Thomas P., 6,039,733, Cl. 606-40.000.

Lumatec Industries, Inc.: *See*—
Hallgrimsson, Bjarki, 6,039,454, Cl. 362-116.000.

Lumion Corporation: *See*—
Bogdan, Alexei, 6,040,661, Cl. 315-224.000.

Lund, Gary K.: *See*—
Hinshaw, Jerald C.; Doll, Daniel W.; Blau, Reed J.; and Lund, Gary K., 6,039,820, Cl. 149-45.000.

Lund, Jan P.: *See*—
Dvorak, Charles A.; Wren, Douglas L.; Fisher, Lawrence E.; Axt, Steven D.; Humphreys, Eric R.; Arzeno, Humberto B.; Beard, Colin C.; Nguyen, Sam Linh; Han, Yeun-Kwei; Roberts, Christopher R.; Lund, Jan P.; and Fatheree, Paul R., 6,040,446, Cl. 544-276.000.

Lundin, David J.; and Eliason, Kevin M., to 3M Innovative Properties Company. Apparatus for molding light extraction structures onto a light guide. 6,039,553, Cl. 425-115.000.

Luong, Thong B.: *See*—
Sonnenberg, Wade; Houle, Patrick J.; Luong, Thong B.; Shelnut, James G.; and Fisher, Gordon, 6,039,859, Cl. 205-159.000.

Luontama, Matti: *See*—
Kaihovirta, Juha; Pakarinen, Pekka; and Luontama, Matti, 6,038,789, Cl. 34-448.000.

Lupo, Donald; Remmers, Marcus; and Neher, Dieter, to Hoechst Aktiengesellschaft. Electroluminescene device with emission of polarized light. 6,040,069, Cl. 428-690.000.

Luppi, Bernadette: *See*—
Philippe, Michel; Luppi, Bernadette; and Semeria, Didier, 6,039,963, Cl. 424-401.000.

Lupton, David Francis: *See*—
Koch, Michael; Kock, Wulf; Lupton, David Francis; and Scholz, Friedhold, 6,039,920, Cl. 420-590.000.

Lupu, Ruth: *See*—
Lippman, Marc E.; and Lupu, Ruth, 6,040,290, Cl. 514-12.000.

Lussier, Barbara B.: *See*—
Tang, Ping-Wah; Lussier, Barbara B.; and Cowan, Stanley W., 6,040,126, Cl. 430-557.000.

Lust, Victor: *See*—
Martin, Wallace Anthony; Adams, Jonathan Patrick; Andersen, Finn Thrige; Beaton, Stephen Robert; Christensen, Svend; Jensen, Allan G.; Kindt-Larsen, Ture; Lust, Victor; Walker, Craig William; and Wang, Daniel Tsu-Fang, 6,039,899, Cl. 264-1.360.

Lux, Melvin Orville: *See*—
Sebben, Daniel Angelo; Lux, Melvin Orville; Zellmer, Timothy Paul; Gueller, Matthew Paul; and Seegert, Brian David, 6,038,843, Cl. 56-202.000.

Ly, Le T.: *See*—
Chen, Feng; Kolagotla, Ravi K.; Ly, Le T.; Mo, Jiancheng; and Srinivas, Hosahalli R., 6,041,418, Cl. 713-400.000.

Lynch, Cedric M., to London Innovation Ltd. Electrical machines. 6,040,645, Cl. 310-58.000.

Lynntech, Inc.: *See*—
Murphy, Oliver J.; Salinas, Carlos; and Cisar, Alan J., 6,040,072, Cl. 429-12.000.

Lyon, James M.: *See*—
Skarpelos, Michael J.; van der Linden, Robbert; Carley, William J.; Lyon, James M.; and McCline, Matthew C., 6,041,420, Cl. 714-7.000.

Lysen, Heinrich; Aschenbrenner, Kal; and Letze, Thomas, to Prüftechnik Dieter Busch AG. Electro-optical measuring device for determining the relative position of two bodies, or of two surface areas of bodies, in relation to each other. 6,040,903, Cl. 356-153.000.

M-C Power Corporation: *See*—
Reeder, Kenneth W., 6,040,076, Cl. 429-35.000.

Ma, Manny: *See*—
Casper, Stephen L.; and Ma, Manny, 6,040,733, Cl. 327-525.000.

Ma, Manny K. F.; Somasekharan, Rajesh; and Li, Wen, to Micron Technology, Inc. Field-effect transistor for one-time programmable nonvolatile memory element. 6,040,608, Cl. 257-390.000.

Mabry, Melinda Ann; Rumpf, Frederick Harry; Podobnik, Ivan Zlatko; Westveer, Scott Adrian; Morgan, Allan Clark; Chung, Bin; and Andrews, Malcolm John, to Cabot Corporation. Methods for producing elastomeric compositions. 6,040,364, Cl. 523-318.000.

Mabry, Thomas: *See*—
Vrescak, Warren David; Vest, Daniel Brown; Thomas, Nils Ian; Peck, Thomas N.; and Mabry, Thomas, 6,040,657, Cl. 313-544.000.

MacCormack, David Ross: *See*—
Wilson, Charles Park; Winter, Gerhard Josef; and MacCormack, David Ross, 6,041,361, Cl. 709-253.000.

MacDonald, George, to Duramax Marine, LLC. Adjustable seal for propeller drive shaft. 6,039,320, Cl. 277-370.000.

MacDonald, James, to Astra AB. Bicyclic isothiourea derivatives useful in therapy. 6,040,314, Cl. 514-307.000.

MacDuff, Ian G; Powers, Daniel J; and Cole, Clinton S, to Heartstream. Method of using a measuring instrument and data gathering system. 6,041,257, Cl. 607-5.000.

Machado, Manuel: *See*—
Pereira, John; Machado, Manuel; and Antaya, Stephen, 6,039,616, Cl. 439-874.000.

Machnik, Franz; and Weeger, Hans-Peter, to Zinser Textilmaschinen GmbH. Method for changing the bobbins in a roving frame. 6,038,845, Cl. 57-267.000.

Mack, Karl-Heinz, to Zinser Textilmaschinen GmbH. Roving frame with a device enabling full roving bobbins to be replaced automatically by empty roving sleeves. 6,038,846, Cl. 57-281.000.

Mackiewicz, John e.: *See*—
Towers, Kenneth Scott; McClain, Richard Becker; and Mackiewicz, John e., 6,038,857, Cl. 60-422.000.

MacKinnon, Robin, to Korpak Limited. Cutting and creasing apparatus. 6,039,101, Cl. 156-443.000.

Mackool, Richard J. Angulated phacoemulsification needle whose outer surface converges and inner channel narrows. 6,039,715, Cl. 604-272.000.

MacLaren, David D.; Lefler, John R.; and Minish, Sharon K., to Hoechst Marion Roussel, Inc. Pharmaceutical composition for combination of piperidinoalkanol-decongestant. 6,039,974, Cl. 424-472.000.

MacLean, Alasdair Roderick: *See*—
Brown, Susanne Moira; and MacLean, Alasdair Roderick, 6,040,169, Cl. 435-236.000.

MacNair, R. David C.: *See*—
Bangs, William E.; Dibenedetto, Joseph D.; Friedberg, Joyce L.; Giordano, Denise A.; Glover, Judy M.; Khoo, Chor San Heng; Ko, Sandy; MacNair, R. David C.; Noar, Scott R.; Randazzi, John J., Jr.; Stoever, Harro; and Ziegler, Paula J., 6,039,989, Cl. 426-106.000.

Macronix International Co., Ltd.: *See*—
Chen, Chia-Hsing; and Wang, Mam-Tsung, 6,040,993, Cl. 365-185.030.
Su, Ming-Chang, 6,041,061, Cl. 370-461.000.

Maddalozzo, John, Jr.; McBrearty, Gerald Francis; and Shieh, Johnny Meng-Han, to International Business Machines Corporation. System and method for dynamic specification of input/output attributes. 6,041,366, Cl. 710-5.000.

Madden, Donna. Apparatus for tallying the amount of time for which a pair of contact lenses have been worn. 6,038,997, Cl. 116-308.000.

Maddrell, Richard; and Maser, Thomas L., to Publications International, Ltd. Method for making an electronic book for producing audible sounds in response to visual indicia. 6,041,215, Cl. 434-317.000.

Mäder, Heinz: *See*—
Björklid, Anders; Hardie, Malcolm; and Mäder, Heinz, 6,040,743, Cl. 331-57.000.

Madsen, Ole Dragsbaek; Michelsen, Birgitte Koch; Petersen, Jacob Steen; Roep, Bart O.; and Teisner, Borge, to Novo Nordisk A/S. Method of diagnosing preclinical diabetes. 6,040,134, Cl. 435-4.000.

Madsen, Peter: *See*—
Hohlweg, Rolf; Madsen, Peter; Jørgensen, Tine Krogh; Andersen, Knud Erik; Watson, Brett; Polivka, Zdenek; Konigova, Otylie; Kovandova, Martina; Silhánková, Alexandra; and Valenta, Vladimir, 6,040,302, Cl. 514-217.000.

Maebashi, Kazunori: *See*—
Takeda, Sunao; Kaneko, Yasushi; Tokizawa, Minoru; Eto, Hiromichi; Ishida, Kazuya; Maebashi, Kazunori; Matsumoto, Masaru; Asaoka, Takemitsu; and Sato, Susumu, 6,040,325, Cl. 514-383.000.

Maeda, Fumisada: *See*—
Ichimura, Isao; Maeda, Fumisada; Yamamoto, Kenji; Ohsato, Kiyoshi; Watanabe, Toshio; and Suzuki, Akira, 6,041,031, Cl. 369-112.000.

Maeda, Satoshi: *See*—
Hasegawa, Shinya; Kayashima, Shigeo; Maeda, Satoshi; and Aritake, Hirokazu, 6,040,929, Cl. 359-17.000.

Maeda, Toshinori: *See*—
Nakatsuji, Fumio; Maeda, Toshinori; and Kamiyama, Hiroshi, 6,041,368, Cl. 710-20.000.

Maejima, Hiroshi, to Kabushiki Kaisha Toshiba. Semiconductor memory device and method of testing the same. 6,041,002, Cl. 365-201.000.

Maekawa, Hidetsugu: *See*—
Yamamoto, Hiroshi; Niwa, Hisao; Kojima, Yoshihiro; Maruno, Susumu; Kayashima, Kazuhiro; Kouda, Toshiyuki; Maekawa, Hidetsugu; Ito, Satoru; and Shimeki, Yasuharu, 6,041,141, Cl. 382-231.000.

Maekawa, Kazuteru; Suzuki, Yukiyoshi; and Yanagikubo, Takeshi, to Aisin AW Co., Ltd. Information display system with touch panel. 6,040,824, Cl. 345-173.000.

Maemura, Kouichiro: *See*—
Hayafune, Takeshi; Maemura, Kouichiro; and Miura, Takahito, 6,041,183, Cl. 395-712.000.

Maeno, Yutaka: *See*—
Kuramitsu, Masayuki; Saitou, Mitsuo; Maeno, Yutaka; and Hara, Takefumi, 6,040,127, Cl. 430-567.000.

Maes, Stephane Herman: *See*—
Ittycheriah, Abraham Poovakunnel; and Maes, Stephane Herman, 6,041,300, Cl. 704-255.000.

Magill, Peter D.: *See*—
Doshi, Bharat Tarachand; Dravida, Subrahmanyam; Kustka, George John; Magill, Peter D.; Siller, Curtis A.; and Sriram, Kotikalapudi, 6,041,051, Cl. 370-352.000.

Magneti Marelli S.p.A.: *See*—
Milanesi, Andrea; Poletto, Vanni; Poma, Alberto; and Morelli, Marco, 6,040,736, Cl. 327-541.000.

Magon, Franco: *See*—
Guarniero, Umberto; Magon, Franco; and Bonanno, Enzo, 6,039,807, Cl. 118-715.000.

Magri', Angelo: *See*—

Frisina, Ferruccio; Bolognesi, Davide; and Magri', Angelo, 6,040,609, Cl. 257-391.000.

Mahmood, Waqar: *See*—
Chandler, William Keith; Shah, Nadir; Mahmood, Waqar; and Csipkes, Andrei, 6,039,630, Cl. 451-6.000.

Mahr Corporation: *See*—
Cauthen, Mark Everette, 6,039,545, Cl. 417-53.000.

Mahurin, Eric W., to Advanced Micro Devices, Inc. Method and circuit for adding operands of multiple size. 6,041,341, Cl. 708-700.000.

Maier, Franz-Karl: *See*—
Krause, Werner; Maier, Franz-Karl; Bauer, Michael; Schuhmann Giampieri, Gabriele; Press, Wolf-Rudiger; and Muschik, Peter, 6,040,432, Cl. 534-16.000.

Maire, Patrick: *See*—
Bertheau, Fernand; Maire, Patrick; Dostert, Bruno; and Bellali, Eddie, 6,039,045, Cl. 128-207.110.

Maitland, Gregory. Fish hook with bait holder. 6,038,806, Cl. 43-4.500.

Mäkelä, Matti: *See*—
Pepper, Tammy; Krüger, Christof; and Mäkelä, Matti, 6,039,813, Cl. 127-42.000.

Maki, Hidetaka; Akazaki, Shusuke; and Hirota, Toshiaki, to Honda Giken Kogyo Kabushiki Kaisha. Fuel metering control system for internal combustion engine. 6,041,279, Cl. 701-104.000.

Makino, Masanori; Mochizuki, Hirotake; Misawa, Takao; and Tsuda, Takao, to Konica Corporation. Photographic printing apparatus. 6,040,891, Cl. 355-46.000.

Makita, Yoshio: *See*—
Itoh, Shigeo; Makita, Yoshio; Tonegawa, Takeshi; Hirata, Yoshihiko; and Kadowaki, Akira, 6,039,620, Cl. 445-25.000.

Malavasi, Massimo: *See*—
Temtchenko, Tatiana; and Malavasi, Massimo, 6,040,414, Cl. 528-70.000.

Maldanis, Algert J.: *See*—
Waters, Brian G.; Stoltz, Gregory E.; and Maldanis, Algert J., 6,039,164, Cl. 194-206.000.

Malecke, Floyd J.: *See*—
Mehney, Mark A.; McCarthy, Michael C.; Fullerton, Michael G.; and Malecke, Floyd J., 6,039,344, Cl. 280-735.000.

Malewicz, Andrzej M.: *See*—
Agarwala, Poonam; and Malewicz, Andrzej M., 6,041,259, Cl. 607-46.000.

Malgichev, Vladimir: *See*—
Shturman, Leonid; Morov, Georgiy; and Malgichev, Vladimir, 6,039,747, Cl. 606-159.000.

Malhi, Satwinder D. S., to Texas Instruments Incorporated. Thin display unit for portable computers. 6,040,811, Cl. 345-87.000.

Malik, Dale W., to BellSouth Intellectual Property Corporation. Method for transferring switch-based information to an external network element. 6,041,112, Cl. 379-209.000.

Malik, Tariq, to Citgo Petroleum Corporation. Containment system for coke drums. 6,039,844, Cl. 202-227.000.

Malin, Stephen F.; and Khalil, Gamal, to Instrumentation Metrics, Inc. Method and apparatus for multi-spectral analysis of organic blood analytes in noninvasive infrared spectroscopy. 6,040,578, Cl. 250-339.120.

Mallangi, Chandrasekhar R; Sher, Alexander A.; Fuchs, Eileen Carol; Vadehra, Dharam Vir; and Wedral, Elaine Regina, to Nestec S.A. Fortification of foodstuff. 6,039,986, Cl. 426-74.000.

Mallon, Joseph J.; Farinato, Raymond S.; Rosati, Louis; and Freeman, John J., Jr., to Cytec Technology Corp. Anionic water-soluble polymer precipitation in salt solution. 6,040,376, Cl. 524-547.000.

Malloy, Elizabeth A.: *See*—
Beers, Scott A.; Malloy, Elizabeth A.; Wachter, Michael P.; and Wu, Wei, 6,040,320, Cl. 514-341.000.

Malone, Dan J.; and Hardy, Paul, to International Business Machines Corporation. Adaptive data recovery method and means tuned to thermal asperities in a cyclic, multitracked magnetic storage subsystem. 6,040,953, Cl. 360-53.000.

Maloney, James G.; and Smiddle, Ronald D., to Eaton Corporation. Actuation mechanism for trip actuated breaker auxiliary multiple microswitch. 6,040,746, Cl. 335-13.000.

Maltsev, Pavel A., to Intermec Corporation. Bar code reading system for reconstructing irregularly damaged bar codes. 6,039,252, Cl. 235-462.000.

Maluf, Nadim I.; Logan, John R.; and Sprakelaar, Gertjan van, to Lucas Novasensor. Miniature gauge pressure sensor using silicon fusion bonding and back etching. 6,038,928, Cl. 73-724.000.

Mametani, Tomoharu: *See*—
Nagai, Yukihiro; and Mametani, Tomoharu, 6,040,615, Cl. 257-529.000.

MAN Roland Druckmaschinen AG: *See*—
Hoffmann, Eduard; and Prem, Wolfgang, 6,038,975, Cl. 101-375.000.

Manchand, Percy Sarwood: *See*—
Batcho, Andrew David; Manchand, Percy Sarwood; and Uskokovic, Milan Radoje, 6,040,461, Cl. 549-332.000.

Mandzukic, Thomas, to Premier Farnell Corp. Coanda effect nozzle. 6,039,269, Cl. 239-458.000.

Manev, Vesselin; Faulkner, Titus; Barnette, Wayne; and Gao, Yuan, to FMC Corporation. Multiple-doped oxide cathode material for secondary lithium and lithium-ion batteries. 6,040,089, Cl. 429-231.100.

Mangano, Alain; Allart, Bernard; Bigo, Louis; Garczarek, Michel; Ethet, Yannick; Crave, Joël; and Peignon, Philippe, to Poclain Hydraulics Industrie. Hydraulic fluid circuit having a hydraulic motor and a three-position selector for selecting the circulation of fluid. 6,038,859, Cl. 60-436.000.

Mangat, Pawitter Jit Singh; Seese, Philip Armin; and Dauksher, William Joseph, to Motorola, Inc. Etching apparatus and method of etching a substrate. 6,039,835, Cl. 156-345.000.

Mangler, Robert J., to ACCO Brands, Inc. Index sheet having a dual-side directly machine printable index tab portion and method of making the same. 6,039,354, Cl. 281-38.000.

Mani, Raghu: *See*—
Bodamer, Roger; Draaijer, Jacco; Voss, Eric; and Mani, Raghu, 6,041,344, Cl. 709-203.000.

Manini, Michelangelo, to FAAC S.p.A. Gate movement drive. 6,038,815, Cl. 49-31.000.

Manker, Charles: *See*—
Moenning, Stephen P.; and Manker, Charles, 6,039,725, Cl. 606-1.000.

Manlove, Gregory Jon; and Kearney, Mark Billings, to Delco Electronics Corporaiton. Variable attenuation circuit for a differential variable reluctance sensor using current mode. 6,040,692, Cl. 324-173.000.

Mann, Daniel, to Advanced Micro Devices, Inc. Parallel and serial debug port on a processor. 6,041,406, Cl. 712-227.000.

Mannesman Sachs AG: *See*—
John, Thomas; Kuhn, Thomas; and Nehse, Wolfgang, 6,041,276, Cl. 701-67.000.

Mannesmann Rexroth AG: *See*—
Mies, Hubertus, 6,038,858, Cl. 60-436.000.

Mannesmann Sachs AG: *See*—
Drexl, Hans-Jürgen, 6,040,768, Cl. 340-453.000.

Manning and Napier Information Services, LLC: *See*—
Weiner, Michael L.; Kolb V, John Jacob; and Chronis, Todd, 6,041,331, Cl. 707-103.000.

Manning, Monte, to Micron Technology, Inc. Semiconductor processing methods of forming a buried contact, a conductive line, an electrical connection to a buried contact area, and a field effect transistor gate. 6,040,221, Cl. 438-297.000.

Mano, Shigeru; Watanabe, Hiroshi; Fukumuro, Kaori; and Yamaya, Yorihiro, to Konica Corporation. Image forming method. 6,040,267, Cl. 503-201.000.

Mansour, Raafat R., to Com Dev Ltd. High power superconductive circuits and method of construction thereof. 6,041,245, Cl. 505-210.000.

Manteghi, Kamran, to VLSI Technology, Inc. Oxide wire bond insulation in semiconductor assemblies. 6,040,633, Cl. 257-784.000.

Mantkowski, Thomas E.; Das, Nripendra N.; Heidorn, Raymond W.; and King, Jackie L., to General Electric Company. High temperature vapor coating container. 6,039,810, Cl. 118-715.000.

Manz, Herbert; Tuncer, Haluk; and Zaeper, Manfred, to Rheinmetall W & M GmbH. Apparatus for hardening the inside contour of a gun barrel with laser radiation. 6,040,551, Cl. 219-121.650.

Mao, Chong Chang: *See*—
Johnson, Kristina M.; and Mao, Chong Chang, 6,040,883, Cl. 349-116.000.

Mar, Lori S.: *See*—
Rybarczyk, David F.; Mar, Lori S.; Mets, Christiaan M.H.; and Xi, Xiaojin, 6,041,178, Cl. 395-705.000.

Maraffio, William M.: *See*—
Bowman, Howard L.; Darwin, Robert L.; Maraffio, William M.; Sawyer, Larry D.; Williams, Robert B.; Hudson, Frank E.; Hunstad, Mary; and Decker, Mark W., 6,039,124, Cl. 169-61.000.

Marconi Communications Limited: *See*—
Chopping, Geoffrey, 6,041,055, Cl. 370-391.000.

Marfat, Anthony, to Pfizer Inc. Substituted indazole analogs. 6,040,329, Cl. 514-405.000.

Maria van Os, Rudolphus Louis: *See*—
Filippi, Giovanni; and Maria van Os, Rudolphus Louis, 6,038,961, Cl. 92-98.00R.

Marie, Patrick: *See*—
Lallier, Jean-Pierre; Marie, Patrick; Aubry, Jean-Marie; Marti, Marie-José; and Del Nero, Valérie, 6,040,285, Cl. 510-206.000.

Marin, Michael L.; and Marin, Ralph, to Endovascular Systems, Inc. Method and apparatus for deploying non-circular stents and graftstent complexes. 6,039,749, Cl. 606-198.000.

Marin, Ralph: *See*—
Marin, Michael L.; and Marin, Ralph, 6,039,749, Cl. 606-198.000.

Marino, Charles P.: *See*—
Reynolds, Kim A.; Marino, Charles P.; and Kray, Kevin P., 6,040,384, Cl. 525-180.000.

Marion, Philippe: *See*—
Chambost, Bernard; Marion, Philippe; and Mathieu, Corinne, 6,040,481, Cl. 564-422.000.

Marion, Robert L.: *See*—
Stern, Roger A.; Sullivan, Vincent N.; and Marion, Robert L., 6,041,260, Cl. 607-98.000.

Markandey, Vishal: *See*—
Pettitt, Gregory S.; and Markandey, Vishal, 6,040,876, Cl. 348-624.000.

Markel Corporation: *See*—
Reynolds, Kim A.; Marino, Charles P.; and Kray, Kevin P., 6,040,384, Cl. 525-180.000.

Marks, Joel, to WorkTools, Inc. Universal joint angle driving tool. 6,039,652, Cl. 464-147.000.

Marks, Tobin J.: *See*—
Nickias, Peter N.; Marks, Tobin J.; and Obora, Yasushi, 6,040,401, Cl. 526-160.000.

Markström, Lars; Zander, Lennarth; Olofsson, Erik; and Norblad, Olof, to AB Volvo. Collector device for the primary pipes of an exhaust manifold. 6,038,855, Cl. 60-323.000.

Markusch, Peter H.: *See—*
Cline, Robert L.; Rosthauser, James W.; and Markusch, Peter H., 6,040,028, Cl. 428-41.800.

Marles Franco, Joan, to L'Air Liquide, Societe Anonyme pour l'Etude et l'Exploitation de Procedes Georges Claude. Process for melting a metal charge in a rotary furnace and rotary furnace for implementing such a process. 6,039,786, Cl. 75-414.000.

Marlow, Paul: *See—*
Keller, Jakob; Marlow, Paul; McMillan, Robin; and Valk, Martin, 6,038,863, Cl. 60-742.000.

Marmin, Jean Claude, to Heidelberger Druckmaschinen AG. Web infeeding or threading device for rotary printing presses. 6,038,973, Cl. 101-225.000.

Marom, Dan M.: *See—*
Mendlovic, David; and Marom, Dan M., 6,041,151, Cl. 385-16.000.

Marquis, Edward T.; and Baldwin, Robert E., to Huntsman Petrochemical Corporation. Paint coatings remover comprising propylene carbonate and hydrogen peroxide. 6,040,284, Cl. 510-201.000.

Marr, Kenneth W., to Micron Technology Inc. Method and apparatus for embedded read only memory in static random access memory. 6,041,008, Cl. 365-225.700.

Marsh, Richard A.: *See—*
Schmitt, John V.; and Marsh, Richard A., 6,038,919, Cl. 73-149.000.

Marsh, Richard N.; and Martin, Demian T., to Monster Cable Products, Inc. Locking electrical connector. 6,039,591, Cl. 439-265.000.

Marshall, John: *See—*
Flieger, Horst; and Marshall, John, 6,038,715, Cl. 4-601.000.

Marsic, Martin D., to MTD Products Inc. Clutch retaining device. 6,039,162, Cl. 192-108.000.

Martenson, Kenneth R.; Mosesian, Jerry L.; Wilkinson, Alan F.; and Goldbach, William. Circuit protection device. 6,040,971, Cl. 361-118.000.

Marti, Marie-José: *See—*
Lallier, Jean-Pierre; Marie, Patrick; Aubry, Jean-Marie; Marti, Marie-José; and Del Nero, Valérie, 6,040,285, Cl. 510-206.000.

Martin, David G., to Lucent Technologies Inc. Digital duty cycle correction loop apparatus and method. 6,040,726, Cl. 327-175.000.

Martin, Demian T.: *See—*
Marsh, Richard N.; and Martin, Demian T., 6,039,591, Cl. 439-265.000.

Martin, Herman H.: *See—*
Jablonski, Ted M.; Meyer, Michael S.; Miller, David A.; Martin, Herman H.; Emody, Kenneth J.; Levine, Gary S.; and Tinucci, Peter, 6,039,220, Cl. 222-236.000.

Martin, Mark P.: *See—*
Tucker, Sean W.; Cowan, Michael R.; and Martin, Mark P., 6,039,241, Cl. 228-264.000.

Martin, Ronald G.: *See—*
Grasso, Albert P.; Martin, Ronald G.; and Roche, Robert P., 6,039,823, Cl. 156-89.260.

Martin, Varenka; Archambaud, Denis; Feyfant, Patrick; Gaglione, Philippe; Yoshida, Satoshi; Winckel, Laurent; and Weigelt, Oliver, to VLSI Technology, Inc. Personal handyphone system hardware checking of broadcasting reception indication. 6,041,217, Cl. 455-38.300.

Martin, Wallace Anthony; Adams, Jonathan Patrick; Andersen, Finn Thrige; Beaton, Stephen Robert; Christensen, Svend; Jensen, Allan G.; Kindt-Larsen, Ture; Lust, Victor; Walker, Craig William; and Wang, Daniel Tsu-Fang, to Johnson & Johnson Vision Products, Inc. Consolidated contact lens molding. 6,039,899, Cl. 264-1.360.

Martins, Marcus M.: *See—*
Brito, Joao Carlos F.; Rote, John K.; Trafton, Frederick W.; and Martins, Marcus M., 6,040,671, Cl. 318-603.000.

Martucci, Norman S.; and Mathew, Boney A., to Teleflex, Inc. Expanded fluoropolymer tubular structure, hose assembly and method for making same. 6,039,084, Cl. 138-137.000.

Marugame, Tomoyuki: *See—*
Andoh, Tomio; Shibata, Shiro; and Marugame, Tomoyuki, 6,039,480, Cl. 400-662.000.

Maruno, Susumu: *See—*
Yamamoto, Hiroshi; Shimeki, Yasuharu; Kayashima, Kazuhiro; Maruno, Susumu; Fujimoto, Makoto; and Kojima, Yoshihiro, 6,040,825, Cl. 345-173.000.
Yamamoto, Hiroshi; Niwa, Hisao; Kojima, Yoshihiro; Maruno, Susumu; Kayashima, Kazuhiro; Kouda, Toshiyuki; Maekawa, Hidetsugu; Ito, Satoru; and Shimeki, Yasuharu, 6,041,141, Cl. 382-231.000.

Maruta, Akira: *See—*
Kanai, Hiroaki; Yagyu, Kiyohide; Maruta, Akira; Sasahara, Kouji; and Shiomi, Tsugio, 6,038,758, Cl. 29-557.000.

Marutani, Yoshiaki; Tomita, Takashi; Nakahama, Tadamitsu; Uemura, Hiroyuki; Koga, Kazuhi; and Ohsawa, Mika, to Mazda Motor Corporation. Low solvent content type-resin composition, coating composition containing such resin composition and process for coating such coating composition. 6,040,009, Cl. 427-241.000.

Maruyama, Atsushi: *See—*
Okumura, Yoichiro; Nagai, Michio; Terada, Hiroshi; and Maruyama, Atsushi, 6,041,187, Cl. 396-132.000.

Mas-Hamilton Group, Inc.: *See—*
Dawson, Gerald L.; and Redden, James P., 6,038,897, Cl. 70-303.00A.

Masami, Shinohara; Uda, Mitsuru; and Enami, Kunio, to International Business Machines Corporation. Positioning of posts in liquid crystal valves for a projection display device. 6,040,888, Cl. 349-155.000.

Maser, Thomas L.: *See—*
Maddrell, Richard; and Maser, Thomas L., 6,041,215, Cl. 434-317.000.

Mashitani, Ken: *See—*
Hamagishi, Goro; Kanatani, Keiichi; Kishimoto, Shunichi; Sakata, Masahiro; Yamashita, Atsuhiro; Matsushita, Naoki; and Mashitani, Ken, 6,040,807, Cl. 345-6.000.

Maska, Mark S.: *See—*
Miller, Lester D.; Maska, Mark S.; and Kaczmarek, Andrew R., Jr., 6,041,100, Cl. 378-141.000.

Mason, Russell C.: *See—*
Rodgers, Kenneth W.; Strong, Gary D.; Christy, Michael C.; and Mason, Russell C., 6,039,091, Cl. 141-83.000.

Massachusetts Institute of Technology: *See—*
Fitzgerald, Eugene A.; and Samavedam, Srikanth B., 6,039,803, Cl. 117-89.000.
Kost, Joseph; Pliquett, Uwe; Mitragotri, Samir S.; Langer, Robert S.; and Weaver, James C., 6,041,253, Cl. 604-20.000.

Massaglia, Larry Michael: *See—*
Hauver, Bruce C., Sr.; Locati, Ronald P.; and Massaglia, Larry Michael, 6,039,609, Cl. 439-668.000.

Massucci, John E.: *See—*
Citron, Howard M.; Asano, David K.; Baietto, Henry R.; Chen, Sullivan S.; De Frondeville, Alexis W.; Hahn, Jeffrey H.; Probst, Thomas J., Jr.; Massucci, John E.; Costin, Dinu; and Peragine, Ralph E., 6,038,952, Cl. 83-605.000.

Masuda Chemical Industry Co., Ltd.: *See—*
Hyoda, Shunji; Kita, Masaharu; Sawada, Hirotoshi; Nemugaki, Shuichi; Otsuka, Sumio; Miyawaki, Yoshitaka; Ogawa, Takashi; and Kubo, Yuhki, 6,040,453, Cl. 548-250.000.

Masuda, Fumitoshi; and Morikami, Masashi, to Murata Manufacturing Co., Ltd. Variable resistor. 6,040,757, Cl. 338-160.000.

Masuda, Hideyuki, to Yamaha Corporation. Tone generation system using computer software and storage medium storing the computer software. 6,040,516, Cl. 84-622.000.

Masuda, Kenichi; Hasegawa, Tsutomu; and Teramoto, Fuminori, to Toyo Denso Kabushiki Kaisha. Discharge lamp lighting device. 6,040,659, Cl. 315-56.000.

Masuda, Shozo: *See—*
Iida, Michihiko; Kawashima, Tetsuji; Sato, Shoji; and Masuda, Shozo, 6,041,029, Cl. 369-50.000.

Matano, Takashi: *See—*
Kanki, Masahiro; Kawano, Mutsuhiro; and Matano, Takashi, 6,040,356, Cl. 523-160.000.
Takahashi, Kazuhiro; Kobayashi, Toshitake; Takemoto, Masataka; Matano, Takashi; and Ono, Haruo, 6,040,044, Cl. 428-323.000.

Materials Research Corporation: *See—*
Lam, Raymond K. F.; Melin, Charles E.; and Colella, Guiseppe, 6,039,788, Cl. 75-623.000.

Mather, Carl; Quigley, Douglas J.; and Kondratek, Glen M., to Chrysler Corporation. Folding top for a motor vehicle. 6,039,382, Cl. 296-107.010.

Mathes, Joachim: *See—*
Muller, Harry; and Mathes, Joachim, 6,039,367, Cl. 293-117.000.

Mathew, Boney A.: *See—*
Martucci, Norman S.; and Mathew, Boney A., 6,039,084, Cl. 138-137.000.

Mathews, Edward Henry. Method of assisting the conducting of a research project. 6,041,303, Cl. 705-1.000.

Mathieu, Corinne: *See—*
Chambost, Bernard; Marion, Philippe; and Mathieu, Corinne, 6,040,481, Cl. 564-422.000.

Matis, Louis A.: *See—*
Rollins, Scott; Rother, Russell P.; Matis, Louis A.; and Evans, Mark J., 6,040,428, Cl. 530-350.000.

Matsen, Marc R.; and McCarville, Douglas A., to Boeing Company, The. Bonded assemblies. 6,040,563, Cl. 219-633.000.

Matsubara, Yoshihisa, to NEC Corporation. Method for forming interconnection structure. 6,040,240, Cl. 438-618.000.

Matsuda, Hideo: *See—*
Tamagaki, Akira; Shimazawa, Yoichi; Matsuda, Hideo; and Yoshiura, Syoichiro, 6,040,924, Cl. 358-523.000.

Matsuda, Shinya: *See—*
Kamon, Koichi; and Matsuda, Shinya, 6,041,146, Cl. 382-274.000.

Matsugatani, Kazuoki; and Yukumatsu, Masanobu, to Denso Corporation. Radar system installable in an automotive vehicle for detecting a target object. 6,040,796, Cl. 342-70.000.

Matsuhara, Kenji: *See—*
Fujikura, Teruhiko; Kinoshita, Naoyoshi; Fujii, Makoto; Matsuhara, Kenji; and Natsume, Munehiro, 6,041,214, Cl. 399-403.000.

Matsui, Eriko: *See—*
Yasuda, Akio; Nito, Keiichi; Matsui, Eriko; Takanashi, Hidehiko; and Bao, Yang Ying, 6,040,884, Cl. 349-129.000.

Matsui, Susumu: *See—*
Nishioka, Mototsugu; Umeki, Hisashi; and Matsui, Susumu, 6,041,408, Cl. 713-171.000.

Matsumoto, Hiroyuki: *See—*
Honda, Tsutomu; Matsumoto, Hiroyuki; and Suzuki, Tatsuya, 6,041,195, Cl. 396-429.000.

Matsumoto, Kenji; Suzuki, Kazuo; and Haga, Muneo, to 3M Innovative Properties Company. Method and apparatus for fabricating a particle-coated substrate, and such substrate. 6,040,004, Cl. 427-185.000.

Matsumoto, Masaru: *See—*
Takeda, Sunao; Kaneko, Yasushi; Tokizawa, Minoru; Eto, Hiromichi; Ishida, Kazuya; Maebashi, Kazunori; Matsumoto, Masaru; Asaoka, Takemitsu; and Sato, Susumu, 6,040,325, Cl. 514-383.000.

Matsunaga, Satoshi: *See—*

Ohno, Manabu; Ohtake, Takeshi; Matsunaga, Satoshi; and Doujo, Tadashi, 6,040,103, Cl. 430-110.000.

Matsuo, Akihiko: *See*—
Kawabe, Keiko; Matsuo, Akihiko; Kimura, Minako; Nagahashi, Kenji; and Uehara, Sanya, 6,041,177, Cl. 395-704.000.

Matsuoka, Masahiro: *See*—
Koshiba, Takeshi; Matsuoka, Masahiro; and Takayama, Kuniharu, 6,040,840, Cl. 345-441.000.

Matsuse, Mitsutaka: *See*—
Morooka, Hisao; Miura, Takamitsu; Yamada, Hiroshi; Kurihara, Katsuki; Matsuse, Mitsutaka; and Arai, Yasuyuki, 6,040,520, Cl. 136-245.000.

Matsushita Electric Industial Co., Ltd.: *See*—
Ogura, Takashi; and Murata, Kousaku, 6,039,145, Cl. 181-167.000.

Matsushita Electric Industrial, Co.: *See*—
Nakatsuji, Fumio; Maeda, Toshinori; and Kamiyama, Hiroshi, 6,041,368, Cl. 710-20.000.

Matsushita Electric Industrial Co. Ltd.: *See*—
Dischert, Lee Robert, 6,040,869, Cl. 348-448.000.
Etoh, Minoru, 6,040,864, Cl. 348-416.000.
Hayashi, Takaaki; and Etoh, Minoru, 6,041,145, Cl. 382-268.000.
Isomura, Yoshinori; Yasohara, Masahiro; and Takada, Kazuyuki, 6,040,673, Cl. 318-615.000.
Kamada, Takehiro, 6,041,433, Cl. 714-795.000.
Mitani, Masato; Nakajima, Kazuto; Kotani, Hiroyuki; Hokazono, Nobutaka; Naka, Hiroyuki; Yamaguchi, Akira; Ikeda, Junji; and Aoki, Nobuyuki, 6,040,016, Cl. 427-421.000.
Ohira, Tadashi; Sato, Yoshiaki; and Kodama, Kazuhiko, 6,039,912, Cl. 264-328.100.
Osawa, Toshio, 6,039,588, Cl. 439-164.000.
Otsubo, Kensei; and Yamaguchi, Hideo, 6,041,033, Cl. 369-271.000.
Takamori, Hiroki; and Morisige, Takayuki, 6,041,067, Cl. 370-514.000.
Takeuchi, Yoshiharu; Aburaya, Kiyoji; Yasu, Toshiharu; Tsubokawa, Masahiro; Sakai, Manabu; Aoshika, Shoji; and Narita, Tsutayoshi, 6,039,551, Cl. 418-88.000.
Takubo, Yoneharu, 6,040,813, Cl. 345-92.000.
Tamura, Akihiro; Sakaue, Shigeo; and Hamasaki, Takeshi, 6,040,860, Cl. 348-252.000.
Terai, Kenichi; and Hashimoto, Hiroyuki, 6,041,126, Cl. 381-71.600.
Umeda, Takashi; and Ohno, Motoyasu, 6,040,922, Cl. 358-468.000.
Yamamoto, Hiroshi; Shimeki, Yasuharu; Kayashima, Kazuhiro; Maruno, Susumu; Fujimoto, Makoto; and Kojima, Yoshihiro, 6,040,825, Cl. 345-173.000.
Yamamoto, Hiroshi; Niwa, Hisao; Kojima, Yoshihiro; Maruno, Susumu; Kayashima, Kazuhiro; Kouda, Toshiyuki; Maekawa, Hidetsugu; Ito, Satoru; and Shimeki, Yasuharu, 6,041,141, Cl. 382-231.000.

Matsushita Electric Indutrial Co., Ltd.: *See*—
Ueda, Shigeki; Inada, Ikuhiro; and Uchiyama, Satomi, 6,040,564, Cl. 219-682.000.

Matsushita Electric Works, Ltd.: *See*—
Sakamoto, Hiroshi; and Abe, Hideaki, 6,040,986, Cl. 363-20.000.

Matsushita Electronics Corporation: *See*—
Mitani, Masato; Nakajima, Kazuto; Kotani, Hiroyuki; Hokazono, Nobutaka; Naka, Hiroyuki; Yamaguchi, Akira; Ikeda, Junji; and Aoki, Nobuyuki, 6,040,016, Cl. 427-421.000.
Nose, Sachiyuki, 6,040,621, Cl. 257-666.000.
Tsuura, Katsuhiko, 6,040,706, Cl. 324-765.000.

Matsushita, Junichi: *See*—
Kataoka, Ichiro; Aoki, Kunimitsu; Furuya, Yoshiyuki; Matsushita, Junichi; Nishiyama, Hiroshi; Nakajima, Katsutoshi; Norizuki, Akira; Murakami, Katsumi; and Amari, Takeyuki, 6,040,760, Cl. 340-425.500.

Matsushita, Masanao; and Taniguchi, Hideyuki, to Dainippon Screen Mfg. Co., Ltd. Thermal processing apparatus. 6,040,120, Cl. 430-347.000.

Matsushita, Naoki: *See*—
Hamagishi, Goro; Kanatani, Keiichi; Kishimoto, Shunichi; Sakata, Masahiro; Yamashita, Atsuhiro; Matsushita, Naoki; and Mashitani, Ken, 6,040,807, Cl. 345-6.000.

Matsutani Chemical Industries Co., Ltd.: *See*—
Mizoguchi, Naoyuki; Yamamoto, Katsuyuki; and Wada, Kimihito, 6,039,997, Cl. 426-549.000.

Matsute, Masataka: *See*—
Arakawa, Seiichi; Matsute, Masataka; and Kawate, Yasutoshi, 6,039,893, Cl. 252-299.010.

Matsuura, Takanobu, to Alps Electric Co., Ltd. Ink ribbon take-up mechanism having transfer member. 6,039,477, Cl. 400-236.000.

Matsuyama, Shigeru; Asuma, Hiroaki; Shimura, Masato; Tomita, Yoshifumi; and Aratani, Sukekazu, to Hitachi, Ltd. Liquid crystal display device with wide viewing angle characteristics comprising high resistivity black matrix. 6,040,887, Cl. 349-141.000.

Matt, Hans Jürgen; Walker, Michael; and Ackermann, Uwe, to Alcatel. Method of adaptively adjusting the coefficients of a digital filter in an echo canceller. 6,041,290, Cl. 702-191.000.

Mattela, Venkat: *See*—
Sung, Chih-Ta Star; Mattela, Venkat; Afsar, Muhammad; Singh, Balraj; and Hung, Chih-Teng, 6,040,998, Cl. 365-194.000.

Matthews, David J.: *See*—
Garrard, Lisa J.; Henner, Dennis J.; Bass, Steven; Greene, Ronald; Lowman, Henry B.; Wells, James A.; and Matthews, David J., 6,040,136, Cl. 435-5.000.

Matthews International Corporation: *See*—
Gabig, Joseph A.; and Jones, David B., 6,039,576, Cl. 434-367.000.

Matthews, Susan H.; and Levine, Cecelia O., to Camp Kazoo, Ltd. Attachment for a support pillow and methods for its use. 6,038,720, Cl. 5-639.000.

Mattioli Engineering Ltd.: *See*—
Di Fiore, Dario; and Stanisci, Carlo, 6,039,745, Cl. 606-131.000.

Mattison, Bruce W.: *See*—
Blaisdell, Dennis R.; Mattison, Bruce W.; Farthing, Robert C.; and Sarosy, Michelle A., 6,041,171, Cl. 395-500.270.

Mattson, Per Gustav, to U.S. Philips Corporation. Magnetic card read/write apparatus. 6,039,259, Cl. 235-475.000.

Mattson, Rodney A.: *See*—
Roos, Pieter Gerhard; Ivan, Andrew J.; and Mattson, Rodney A., 6,041,097, Cl. 378-62.000.

Maudhuit, Cecile A.; and Bulou, Jacques, to Eastman Kodak Company. Final rinsing solution for color photographic product. 6,040,123, Cl. 430-463.000.

Mauduit, Nicolas. Chopperless operation of a thermal infrared radiation sensor system by application of heat pulses to thermally isolated pixel sensor elements. 6,040,577, Cl. 250-338.100.

Mauro, Greg: *See*—
Cheng, Vernon; and Mauro, Greg, 6,040,851, Cl. 348-10.000.

Mauze, Ganapati R.; and Serikov, Vladimir, to Agilent Technologies, Inc. Thermometric apparatus and method for determining the concentration of a vapor in a gas stream. 6,038,922, Cl. 73-335.080.

Maver, Tammy Lynne; and Krasnansky, Robert, to Rohm and Haas Company. Aqueous coating compositions with extended open time. 6,040,368, Cl. 524-110.000.

Max Co., Ltd.: *See*—
Yagi, Nobuaki; and Fujishima, Atuyoshi, 6,039,230, Cl. 227-120.000.

Max-Delbrück-Centrum Für Molekulare Medizin: *See*—
Blankenstein, Thomas; and Cayeux-Pezzutto, Sophie, 6,039,941, Cl. 424-93.210.

Max-Planck-Gesellschaft zur Forderung der Wissenschaften e.V.: *See*—
Klauser, Thomas; Kramer, Joachim; Meyer, Thomas F.; and Pohlner, Johannes, 6,040,141, Cl. 435-6.000.
Neher, Erwin; and Würriehausen, Frank, 6,040,567, Cl. 250-206.000.

May, Gregory J., to Hewlett-Packard Company. Enhanced docking tray supports for custom featuring for external battery charging for notebook computers. 6,040,681, Cl. 320-113.000.

Maydan, Dan: *See*—
Chang, Mei; Wang, David N. K.; White, John M.; and Maydan, Dan, 6,040,022, Cl. 427-579.000.

Mayer, Dale J.; Olarig, Sompong Paul; Whiteman, William F.; and Heinrich, David F., to Compaq Computer Corporation. Method and apparatus for distributing interrupts in a scalable symmetric multiprocessor system without changing the bus width or bus protocol. 6,041,377, Cl. 710-113.000.

Mayer, Gehard: *See*—
Butz, Thomas; Kaller, Ralf; Kissel, Guenther; Mayer, Gehard; Koch, Volker; and Schnabel, Werner, 6,039,779, Cl. 55-499.000.

Mayfield, Scott Hayward: *See*—
Harris, Melvin Ward; and Mayfield, Scott Hayward, 6,038,978, Cl. 102-467.000.

Maynard, Alfred Charles, to General Dynamics Armament Systems, Inc. Liquid propellant airbag inflator with dual telescoping pistons. 6,039,347, Cl. 280-736.000.

Mayo Foundation for Medical Education and Research: *See*—
Seward, James Bernard; and Tajik, Abdul Jamil, 6,039,693, Cl. 600-459.000.

Mays, Allen Thomas: *See*—
Davis, John Gillette; Mays, Allen Thomas; and Slesinger, Kris Allen, 6,039,805, Cl. 118-74.000.

Mazda Motor Corporation: *See*—
Marutani, Yoshiaki; Tomita, Takashi; Nakahama, Tadamitsu; Uemura, Hiroyuki; Koga, Kazuhi; and Ohsawa, Mika, 6,040,009, Cl. 427-241.000.

Mazur, Richard A., to Cummins-Allison Corp. Software loading system for a coin sorter. 6,039,645, Cl. 453-10.000.

Mazur, Richard A.: *See*—
Geib, Joseph J.; Casanova, Scott D.; Mennie, Douglas U.; Mazur, Richard A.; and Watts, Gary P., 6,039,644, Cl. 453-10.000.

McBrearty, Gerald Francis: *See*—
Maddalozzo, John, Jr.; McBrearty, Gerald Francis; and Shieh, Johnny Meng-Han, 6,041,366, Cl. 710-5.000.

McCabe, Francis J. Fan blade, structures and methods. 6,039,533, Cl. 415-146.000.

McCaffrey, Nathaniel Joseph: *See*—
Levine, Peter Alan; Sauer, Donald Jon; and McCaffrey, Nathaniel Joseph, 6,040,570, Cl. 250-208.100.

McCallister, Ronald D., to Sicom, Inc. Rapid synchronization for communication systems. 6,041,088, Cl. 375-358.000.

McCarthy, Dennis Ronald; Fossaceca, John Mark; and Kapadia, Maneck Behram, to Thomson Consumer Electronics Inc. Clear channel selection system for a cordless telephone. 6,041,240, Cl. 455-464.000.

McCarthy, Michael C.: *See*—
Mehney, Mark A.; McCarthy, Michael C.; Fullerton, Michael G.; and Malecke, Floyd J., 6,039,344, Cl. 280-735.000.

McCarville, Douglas A., to Boeing Company, The. Thermoplastic titanium honeycomb panel. 6,039,832, Cl. 156-292.000.

McCarville, Douglas A.: *See*—
Matsen, Marc R.; and McCarville, Douglas A., 6,040,563, Cl. 219-633.000.

McClain, Richard Becker: *See*—
Towers, Kenneth Scott; McClain, Richard Becker; and Mackiewicz, John e., 6,038,857, Cl. 60-422.000.

McCleerey, Earl William: *See*—
Whiteman, Robert Neil, Jr.; McCleerey, Earl William; and McClinton, Jeffrey Byron, 6,039,596, Cl. 439-404.000.

McCline, Matthew C.: *See*—
Skarpelos, Michael J.; van der Linden, Robbert; Carley, William J.; Lyon, James M.; and McCline, Matthew C., 6,041,420, Cl. 714-7.000.

McClintock, Larry E., to Linemaster Switch Corporation. Foot operated control unit. 6,040,537, Cl. 200-86.500.

McClinton, Jeffrey Byron: *See*—
Whiteman, Robert Neil, Jr.; McCleerey, Earl William; and McClinton, Jeffrey Byron, 6,039,596, Cl. 439-404.000.

McClung, James A., to Can Industry Products, Inc. Method and apparatus for forming tapered metal container bodies. 6,038,910, Cl. 72-348.000.

McClure, David C.; and Youssef, Tom, to STMicroelectronics, Inc. Initialization for fuse control. 6,041,000, Cl. 365-200.000.

McClure, Donald: *See*—
Threlkeld, Kevin; and McClure, Donald, 6,040,502, Cl. 800-312.000.

McCollam, F. Michael J.: *See*—
Hobson, Alex R.; McCollam, F. Michael J.; and Powell, Beth P., 6,041,211, Cl. 399-352.000.

McConnell, Kenneth G., to Iowa State University Research Foundation, Inc. Blower fan blade passage rate noise control scheme. 6,039,532, Cl. 415-119.000.

McCreery, Thomas: *See*—
Unger, Evan; McCreery, Thomas; Yellowhair, David; and Barrette, Terrence R., 6,039,557, Cl. 425-429.000.

McDaniel, Bart; Beiley, Mark A.; Clark, Lawrence T.; Hoffman, Eric J.; and Bawolek, Edward J., to Intel Corporation. Well to substrate photodiode for use in a CMOS sensor on a salicide process. 6,040,592, Cl. 257-292.000.

McDaniel, Michael E. Combination tool box and fuel tank. 6,039,203, Cl. 220-562.000.

McDonnell Douglas Corporation: *See*—
Cooper, Austin M.; Hazencomb, Robert M.; Silva, Albert W.; and Wright, Robert William, 6,039,860, Cl. 205-208.000.
Jones, John J.; Saggio, Rosario S.; Okamoto, Karlton K.; and Lenoil, Isidor, 6,039,519, Cl. 410-69.000.

McElroy, Christopher Patrick: *See*—
McElroy, Timothy Patrick; McElroy, Christopher Patrick; and McElroy, Lucian G., 6,038,781, Cl. 34-38.000.

McElroy, Lucian G.: *See*—
McElroy, Timothy Patrick; McElroy, Christopher Patrick; and McElroy, Lucian G., 6,038,781, Cl. 34-38.000.

McElroy, Timothy Patrick; McElroy, Christopher Patrick; and McElroy, Lucian G., to Proto-Vest, Inc. Method of de-icing an aircraft. 6,038,781, Cl. 34-38.000.

McFadden, Lynette. Support harness for a hard shelled hair dryer. 6,038,783, Cl. 34-99.000.

McFarlin, Mabry M.: *See*—
Krawczyk, Dwayne M.; and McFarlin, Mabry M., 6,039,488, Cl. 401-132.000.

McGee, John D.; Campbell, Donald H.; and Rehfuss, John W., to BASF Corporation. Aqueous coating compositions for environmental etch resistant coatings. 6,040,062, Cl. 428-500.000.

McGivern, Robert F.: *See*—
Redei, Eva; Aird, Fraser; Rittenhouse, Peter A.; and McGivern, Robert F., 6,039,956, Cl. 424-198.100.

McGlone, Buddy B.: *See*—
French, Thomas G.; Guio, Raphael H.; Kowalyshen, Henry W.; McGlone, Buddy B.; Mears, Gregory C.; and Opfer, John C., 6,040,538, Cl. 200-293.000.

McGrath, James E.: *See*—
Sekharipuram, Venkateshwaran N.; Mecham, Beverly Sue; Bhatnagar, Atul; and McGrath, James E., 6,040,416, Cl. 528-168.000.

McGrath, Michael C.: *See*—
Robertson, Charles L.; Hedding, Michael A.; and McGrath, Michael C., 6,039,410, Cl. 303-7.000.

MCI Communications Corporation: *See*—
Cardy, Douglas Ross; Rambo, Ken; and Waller, Carol, 6,041,109, Cl. 379-201.000.
Goss, Raymond G., 6,041,130, Cl. 381-374.000.
Stuber, Richard L., 6,041,367, Cl. 710-18.000.

McIntyre, Dale F.; and Allen, Loretta E., to Eastman Kodak Company. Insertable thermal printer cartridges for digital camera. 6,040,849, Cl. 347-214.000.

McKay, William F., to SDGI Holdings, Inc. Reinforced bone graft substitutes. 6,039,762, Cl. 623-17.000.

McKenna, Stephen John: *See*—
Smith, Martin Stevens; Smith, Adrian David; Dalley, James Edward Joseph; and McKenna, Stephen John, 6,040,802, Cl. 343-700.0MS.

McKenzie Forest Products, Inc.: *See*—
O'Donovan, Tim; and Fenelon, Don, 6,039,514, Cl. 408-1.00R.

McKinlay, Alistair N., to Hong Kong Disc-Lock Company Limited. Self-locking safety wheel nut with locking wrench. 6,039,524, Cl. 411-149.000.

McKnight, Darwin T.; Essex, John D.; and Symensma, Kenneth L., to Hoover Company, The. Vacuum cleaner nozzle adapter. 6,038,732, Cl. 15-414.000.

McLeod, Galvin Thomas, to DHT Technologies, Ltd. Locking system for a firing mechanism of a downhole tool. 6,039,129, Cl. 175-258.000.

McMillan Company: *See*—
McMillan, Robert D.; and McMillan, Robert M., 6,038,921, Cl. 73-204.230.

McMillan, Robert D.; and McMillan, Robert M., to McMillan Company. Mass flow sensor system for fast temperature sensing responses. 6,038,921, Cl. 73-204.230.

McMillan, Robert M.: *See*—
McMillan, Robert D.; and McMillan, Robert M., 6,038,921, Cl. 73-204.230.

McMillan, Robin: *See*—
Keller, Jakob; Marlow, Paul; McMillan, Robin; and Valk, Martin, 6,038,863, Cl. 60-742.000.

McMullen, Dillon G.: *See*—
McMullen, Frederick G.; McMullen, Dillon G.; and McMullen, Roger B., 6,039,774, Cl. 48-102.00A.

McMullen, Frederick G.; McMullen, Dillon G.; and McMullen, Roger B. Pyrolytic conversion of organic feedstock and waste. 6,039,774, Cl. 48-102.00A.

McMullen, Jacques; Tsu, Wilson; and Kargel, Reinhard, to Barrick Gold Corporation. Removal of boron and fluoride from water. 6,039,789, Cl. 75-711.000.

McMullen, Roger B.: *See*—
McMullen, Frederick G.; McMullen, Dillon G.; and McMullen, Roger B., 6,039,774, Cl. 48-102.00A.

Mcmurren, Irving B. Battery electrolyte level indicator. 6,040,079, Cl. 429-91.000.

McNary, Steven F.: *See*—
Anderson, David K.; Chiu, John H.; McNary, Steven F.; Phyfe, Nicole M.; Turek, David G.; and Mylchreest, Donald G., 6,039,008, Cl. 122-510.000.

McNeal, Joseph Ross: *See*—
Ryden, William Dennis; and McNeal, Joseph Ross, 6,038,707, Cl. 2-436.000.

McNulty, John E.: *See*—
Chislenko, Alexander; Lashkari, Yezdezard Z.; and McNulty, John E., 6,041,311, Cl. 705-27.000.

McPherson, John S.: *See*—
Dolan, Daniel J.; and McPherson, John S., 6,039,449, Cl. 359-871.000.

McPherson, Mathew A. Elastically mounted counterweight for a cam or pulley. 6,039,035, Cl. 124-25.600.

McPhilliamy, Steven: *See*—
Danzyger, Howard L.; Brow, Karenann; Caruso, James; Hibbard, Timothy; McPhilliamy, Steven; and Thuma, Michael, 6,039,292, Cl. 248-118.500.

McTeer, Everett A.; Zahorik, Russell C.; and Meikle, Scott G., to Micron Technology, Inc. Antireflective coating and wiring line stack. 6,040,613, Cl. 257-437.000.

MDC Investment Holdings, Inc.: *See*—
Botich, Michael J.; Halseth, Thor R.; and Barker, John, 6,039,713, Cl. 604-110.000.

Mead, Donald C., to Hughes Electronics Corporation. Content-based indexing of images by coding levels defined as a function of reduced entropy. 6,041,147, Cl. 382-305.000.

Meadows, James C.: *See*—
Riego, Domingo C.; Cox, Kenneth C.; Sexton, Franklin E.; and Meadows, James C., 6,040,272, Cl. 504-206.000.

Meadox Medicals, Inc.: *See*—
Rudnick, James J.; and Golden, Martin, 6,039,183, Cl. 206-570.000.

Means, Rodney Jerome: *See*—
Hammar, Jerry Walter; Kulakowski, John Edward; Means, Rodney Jerome; and Dang, Chi-Hung, 6,041,026, Cl. 369-36.000.

Mears, Gregory C.: *See*—
French, Thomas G.; Guio, Raphael H.; Kowalyshen, Henry W.; McGlone, Buddy B.; Mears, Gregory C.; and Opfer, John C., 6,040,538, Cl. 200-293.000.

Mears, Randall F.; and Rucker, Brad L., to Electronics Data Systems Corporation. Method and system for integrating disparate information technology applications and platforms across an enterprise. 6,041,362, Cl. 709-300.000.

Mecham, Beverly Sue: *See*—
Sekharipuram, Venkateshwaran N.; Mecham, Beverly Sue; Bhatnagar, Atul; and McGrath, James E., 6,040,416, Cl. 528-168.000.

Medcare Medical Group, Inc.: *See*—
Bell, Craig J., 6,039,696, Cl. 600-532.000.

Medical Research Council: *See*—
Brown, Susanne Moira; and MacLean, Alasdair Roderick, 6,040,169, Cl. 435-236.000.

Medina, Arturo N.: *See*—
Blakeney, Andrew J.; Medina, Arturo N.; Toukhy, Medhat A.; Ferreira, Lawrence; Jeffries, Alfred T., III; and Naiini, Ahmad A., 6,040,107, Cl. 430-165.000.

Medrad, Inc.: *See*—
Misic, George J., 6,040,697, Cl. 324-318.000.

Medtronic, Inc.: *See*—
Haas, David P.; Howard, William G.; Crespi, Ann M.; Rorvick, Anthony R.; Rockow, Steven; and Ries, Andrew J., 6,040,082, Cl. 429-163.000.
Paulsen, Mark J.; Miller, Jennifer P.; and Ebert, Michael J., 6,040,369, Cl. 524-212.000.

MegaDyne Medical Products, Inc.: *See*—
Greep, Darcy W., 6,039,735, Cl. 606-45.000.

Mehl, James B.: *See*—
Caron, James N.; Mehl, James B.; and Steiner, Karl V., 6,041,020, Cl. 367-149.000.

Mehney, Mark A.; McCarthy, Michael C.; Fullerton, Michael G.; and Malecke, Floyd J., to TRW Inc. Vehicle occupant weight sensor apparatus. 6,039,344, Cl. 280-735.000.
Mehra, Dev K.; Ramireddy, Chittamuru; Tang, Li-Juan; and Porter, Stuart C., to BPSI Holdings, Inc. Enteric film coating compositions, method of coating therewith, and coated forms. 6,039,976, Cl. 424-480.000.
Mehta, Sunil D.: *See*—
Ishida, Emi; Li, Xiao-Yu; and Mehta, Sunil D., 6,040,019, Cl. 427-526.000.
Mehtali, Majid: *See*—
Imler, Jean-Luc; Mehtali, Majid; and Pavirani, Andréa, 6,040,174, Cl. 435-325.000.
Meidanis, Stylianos A.: *See*—
Neag, Dorinel; Meidanis, Stylianos A.; and Carbone, Thomas R., 6,038,738, Cl. 16-324.000.
Meier, Maureen E.: *See*—
Meier, William R.; and Meier, Maureen E., 6,039,572, Cl. 434-254.000.
Meier, William R.; and Meier, Maureen E. Float platform for aquatic instruction and therapy. 6,039,572, Cl. 434-254.000.
Meier, Wolfgang Peter: *See*—
Hirt, Thomas; Baron, Richard Carlton; Lohmann, Dieter; and Meier, Wolfgang Peter, 6,039,913, Cl. 264-331.110.
Meikle, Scott G.: *See*—
McTeer, Everett A.; Zahorik, Russell C.; and Meikle, Scott G., 6,040,613, Cl. 257-437.000.
Meiler, Reinhold; and Stevens, Dirk, to Siemens Aktiengesellschaft. Method for manufacturing a rotor unit for a synchro system. 6,038,761, Cl. 29-605.000.
Meisinger, Stanlee W.: *See*—
Danielson, Robert B.; and Meisinger, Stanlee W., 6,039,303, Cl. 251-149.600.
Meislin, Robert. Single unit surgical fastener and method. 6,039,753, Cl. 606-213.000.
Meislin, Robert J. Method for surgical repair with hook-and-loop fastener. 6,039,741, Cl. 606-72.000.
Meistrick, Zdenek; and Pitzi, Vincent, to Diesel Engine Retardes, Inc. Co-axial master piston assembly. 6,039,022, Cl. 123-321.000.
Mejia, Manuel, to Altera Corporation. Apparatus and method for protecting a circuit during a hot socket condition. 6,040,712, Cl. 326-82.000.
Meki, Seiji; Yamada, Shunji; and Moriyama, Junichi, to Fujitsu Limited. Method of synchronization status message processing in transmission apparatus. 6,041,066, Cl. 370-512.000.
Melane, Marcus L.; Pisterzi, Michael J.; Mills, Edward G.; and Hargroves, Curtis L., to Alcatel USA Sourcing, L.P. Modular electronic enclosure having rotational molded plastic interlocking components. 6,039,414, Cl. 312-205.000.
Meli, Oswald P. J., to MWM Distributors. Plumbing compression fitting for connecting ends of pipe. 6,039,361, Cl. 285-148.190.
Melin, Charles E.: *See*—
Lam, Raymond K. F.; Melin, Charles E.; and Colella, Guiseppe, 6,039,788, Cl. 75-623.000.
Melki, Judith; and Munnich, Arnold, to Institut National de la Santa et de la Recherche Medicale. Method and probes for detecting markers linked to the infantile spinal muscular atrophy locus. 6,040,142, Cl. 435-6.000.
Melman, Jeffrey D.; and Butler, Aaron S., to United Technologies Corporation. Vibration damper for a fuel nozzle of a gas turbine engine. 6,038,862, Cl. 60-740.000.
Melnyk, Mary Grace: *See*—
Miller-Kovach, Karen; Watson, Sarah May; Way, Marian Jane; Frye, Wanema; Melnyk, Mary Grace; and Forman, Adrienne, 6,040,531, Cl. 177-25.160.
Melo, Maria L.; and Santos, Gregory N., to Compaq Computer Corp. Device and method for reducing power consumption within an accelerated graphics port target. 6,040,845, Cl. 345-520.000.
Melvin, Bruce W., to Hewlett-Packard Company. Flexible multi-frequency repeater. 6,041,065, Cl. 370-492.000.
MEMC Electronic Materials, Inc.: *See*—
Guarniero, Umberto; Magon, Franco; and Bonanno, Enzo, 6,039,807, Cl. 118-715.000.
Holder, John D.; and Johnson, Bayard K., 6,039,801, Cl. 117-20.000.
Memory Corporation Technology Limited: *See*—
Deas, Alexander Roger, 6,041,422, Cl. 714-8.000.
Mendel, Carl Robert; Smith, Darrick Taylor; Veerkamp, Dennis James; and Voss, Steven Harry, to International Business Machines Corporation. Integrated lead suspension tool block. 6,038,755, Cl. 29-281.400.
Mendes s.r.l.: *See*—
Moretti, Sonia, 6,040,346, Cl. 514-642.000.
Mendiola, Jeff, to Micron Technology, Inc. Off center three point carrier for wet processing semiconductor substrates. 6,039,187, Cl. 206-711.000.
Mendlovic, David; and Marom, Dan M., to Ramot University Authority for Applied Research & Industrial Development Ltd. All optical switch. 6,041,151, Cl. 385-16.000.
Meng, Wan-Yu; Chang, Cheng-Kai; Chang, Hwai-Tsu; Hsu, Fang-Ru; and Lee, Ming-Rong, to Industrial Technology Research Institute. Method and apparatus for processing data in a neural network. 6,041,322, Cl. 706-43.000.
Menke, Johannes-Theodor; and Reis, Klaus-Peter, to Kiekert AG. Electrical self-powered motor-vehicle door latch. 6,038,895, Cl. 70-278.100.
Mennie, Douglas U.: *See*—
Geib, Joseph J.; Casanova, Scott D.; Mennie, Douglas U.; Mazur, Richard A.; and Watts, Gary P., 6,039,644, Cl. 453-10.000.
Menovcik, Gregory G.; Balch, Thomas C.; Davis, Hilary P.; and Dudek, Paul, to BASF Corporation. Coating composition comprising stabilized inorganic pigments. 6,040,360, Cl. 523-206.000.
Mentor Corporation: *See*—
Kubalak, Thomas P.; Sheperd, Peter; and LaPlante, Jeffrey P., 6,039,750, Cl. 606-201.000.
Rodgers, Kenneth W.; Strong, Gary D.; Christy, Michael C.; and Mason, Russell C., 6,039,091, Cl. 141-83.000.
Mera, Takeshi; Endo, Satoru; and Sugiyama, Mitsuhiro, to Hitachi, Ltd. Cathode-ray tube having unitary electrode plate of different thicknesses. 6,040,655, Cl. 313-409.000.
Mercati, Valentino, to Aboca di Mercati Valentino & C. Societa Semplice. Highly concentrated mineralised natural complex for the integration of mineral oligoelements and method for its production. 6,039,953, Cl. 424-195.100.
Merck & Co., Inc.: *See*—
Balkovec, James M.; and Tse, Bruno, 6,040,463, Cl. 549-418.000.
Corley, Edward G.; Davies, Ian W.; Larsen, Robert D.; Pye, Philip J.; and Rossen, Kai, 6,040,319, Cl. 514-334.000.
Davies, Ian W.; Journet, Michel; Gerena, Linda; Larsen, Robert D.; Pye, Philip J.; and Rossen, Kai, 6,040,450, Cl. 546-256.000.
Duggan, Mark E.; and Hartman, George D., 6,040,311, Cl. 514-275.000.
Duggan, Mark E.; Halczenko, Wasyl; Egbertson, Melissa S.; Hartman, George D.; and Laswell, William L., 6,040,317, Cl. 514-317.000.
Merck Gesellschaft mit beschrankter Haftung: *See*—
Häusler, Günther; Gericke, Rolf; Wurziger, Hanns; Baumgarth, Manfred; Lues, Inge; De Peyer, Jacques; and Bergmann, Rolf, 6,040,308, Cl. 514-253.000.
Mercury Diagnostics, Inc.: *See*—
Douglas, Joel S.; and Drexler, Karen R., 6,040,151, Cl. 435-28.000.
Merit-Malta Ltd.: *See*—
Thalhammer, Robert, 6,040,535, Cl. 200-43.080.
Merjanian, John Michael, to National Registry, Inc., The. Ergonomic fingerprint reader housing. 6,041,134, Cl. 382-126.000.
Merritt, Bernard T.: *See*—
Penetrante, Bernardino M.; Vogtlin, George E.; Merritt, Bernard T.; and Brusasco, Raymond M., 6,038,853, Cl. 60-274.000.
Penetrante, Bernardino M.; Vogtlin, George E.; Merritt, Bernard T.; and Brusasco, Raymond M., 6,038,854, Cl. 60-297.000.
Merritt, Bonnie M.: *See*—
Merritt, Charles R.; and Merritt, Bonnie M., 6,041,335, Cl. 707-512.000.
Merritt, Charles R.; and Merritt, Bonnie M. Method of annotating a primary image with an image and for transmitting the annotated primary image. 6,041,335, Cl. 707-512.000.
Merritt, Leander; and Ward, John S., to Eli Lilly and Company. Process for preparing 1,2,5-thiadiazole containing ethers. 6,040,442, Cl. 540-461.000.
Merz, Albert; Vogg, Hubert; and Walter, Roland, to Forschungszentrum Kalsruhe GmbH. Waste incinerating method and apparatus with countercurrent exhaust gas flow. 6,038,988, Cl. 110-346.000.
Mesher, Shaun T. E., to Trisol Inc. Removal of phosphates from hydrocarbon streams. 6,039,865, Cl. 208-263.000.
Messenger, Arthur F.: *See*—
Hsu, Shi-Ping; Ling, James M.; Messenger, Arthur F.; and Evans, Bruce W., 6,041,410, Cl. 713-186.000.

Roberts, Martin Ceredig, 6,039,577, Cl. 437-237.000.
Sandhu, Gurtej; and Thakur, Randhir P. S., 6,040,020, Cl. 427-557.000.
Sandhu, Gurtej S.; Elliott, Richard L.; Doan, Trung T.; and Larsen, Jody D., 6,040,245, Cl. 438-692.000.
Srinivasan, Anand; and Sandhu, Gurtej S., 6,040,010, Cl. 427-250.000.

Microsfot Corporation: *See*—
Douceur, John R.; Bar, Ofer; and Bernet, Yoram, 6,041,053, Cl. 370-389.000.

Microsoft Corporation: *See*—
Birdwell, Kenneth J., 6,041,359, Cl. 709-238.000.
Bretschneider, Richard; Siu, Burton; and Qureshi, Imran Iqbal, 6,041,333, Cl. 707-203.000.
Chislenko, Alexander; Lashkari, Yezdezard Z.; and McNulty, John E., 6,041,311, Cl. 705-27.000.
Cohen, Michael F.; He, Li-wei; and Salesin, David H., 6,040,841, Cl. 345-473.000.
Levi, Steven P.; VanAntwerp, Mark D.; Dowell, Craig M.; and Knowlton, Chadd B., 6,041,345, Cl. 709-217.000.
Van Kleeck, Michael, 6,041,137, Cl. 382-185.000.

Midmark Corporation: *See*—
Pennington, Donald R.; Stickley, Keith A.; and Reesby, Cyril F., 6,038,718, Cl. 5-618.000.

Midway Games Inc.: *See*—
Sedor, Thomas M.; and Valavanis, Theodore, 6,040,758, Cl. 338-197.000.

Mierzwiak, James G.: *See*—
Wolfe, Steven R.; and Mierzwiak, James G., 6,039,198, Cl. 215-228.000.

Mies, Hubertus, to Mannesmann Rexroth AG. Inching and braking system with interconnected brake and inching valves. 6,038,858, Cl. 60-436.000.

Mietus, David F.: *See*—
Caravella, James S.; Mietus, David F.; and Moore, Jeremy W., 6,041,221, Cl. 455-186.100.

Mihm, Edward C.: *See*—
Bigham, John A.; Little, Dave; Mihm, Edward C.; Sistanizadeh, Kamran; Amin-Salehi, Bahman; Jain, Alpna; Lightfoot, Regina; and Arthur, Ulric E., 6,041,056, Cl. 370-395.000.

Mihori, Takashi: *See*—
Ichikawa, Yoshito; Mihori, Takashi; Sakurai, Tomohisa; and Honda, Yoshitaka, 6,039,732, Cl. 606-38.000.

Mikami, Kazuhiro; Yamada, Kazuhito; and Nishiwaki, Jiro, to Aisin AW Co., Ltd. Control system for automatic transmission. 6,039,673, Cl. 477-93.000.

Mikhael, Michael G.; Boufelfel, Ali; and Yializis, Angelo, to Sigma Laboratories, Inc. Formation of multilayered photonic polymer composites. 6,040,017, Cl. 427-496.000.

Milanesi, Andrea; Poletto, Vanni; Poma, Alberto; and Morelli, Marco, to SGS-Thomson Microelectronics S.r.l.; and Magneti Marelli S.p.A. Control circuit for power transistors in a voltage regulator. 6,040,736, Cl. 327-541.000.

Milde, Helmut I; and Philp, Sanborn F, to Ion Physics Corporation. Compound method for disinfection of liquids. 6,039,883, Cl. 210-748.000.

Milenin, Vyacheslav M.: *See*—
Bashlov, Nikolai L.; Vul, Alexandr Y.; Kidalov, Sergei V.; Kozyrev, Sergei; Milenin, Vyacheslav M.; and Timofeev, Nikolai A., 6,040,658, Cl. 313-637.000.

Miles, Kurt W.: *See*—
L'Allier, James J.; Welsh, Sally H.; Nielsen, Boyd W.; Miles, Kurt W.; Myers, Ken L.; Henrie, Stephen P.; Norberg, Michael I.; and Helliwell, Laura I., 6,039,575, Cl. 434-323.000.

Miles, Mark W., to Etalon, Inc. Interferometric modulation. 6,040,937, Cl. 359-291.000.

Miller, Albert R.: *See*—
Ekkert, Len; Miller, Albert R.; and Zemlo, Bridgett, 6,039,196, Cl. 215-216.000.

Miller, Bearge; Miller, Norman K.; Sarkisian, Gevork; Sarkissian, Karen; and Galperin, Anatoly, to Miller Edge, Inc. Pressure responsive switch and method of making same. 6,040,536, Cl. 200-83.00N.

Miller, Charles A.: *See*—
Hanners, John C.; Miller, Charles A.; and Stanford, Dean, 6,040,691, Cl. 324-158.100.

Miller, Daniel L.; Haney, Scott J.; and Ouellette, Christopher J., to Alcatel USA Sourcing, L.P. Product-independent performance monitoring tool kit. 6,041,332, Cl. 707-104.000.

Miller, David A.: *See*—
Jablonski, Ted M.; Meyer, Michael S.; Miller, David A.; Martin, Herman H.; Emody, Kenneth J.; Levine, Gary S.; and Tinucci, Peter, 6,039,220, Cl. 222-236.000.

Miller Edge, Inc.: *See*—
Miller, Bearge; Miller, Norman K.; Sarkisian, Gevork; Sarkissian, Karen; and Galperin, Anatoly, 6,040,536, Cl. 200-83.00N.

Miller, Gary Kaui Lani: *See*—
Davies, William Bloor; Healy, John Edward; Miller, Gary Kaui Lani; Kozakiewicz, Joseph J.; and Ryles, Roderick G., 6,039,881, Cl. 210-732.000.

Miller, George B.: *See*—
Postman, Joel R.; Miller, George B.; and Fish, Ronald C., 6,041,374, Cl. 710-73.000.

Miller, Gert; and Höffges, Peter, to Scheidt & Bachmann GmbH. Self-filling storage device for card-shaped data carriers. 6,039,314, Cl. 271-9.010.

Miller, Henry F., to Becton Dickinson and Company. Method and apparatus for removing barrier-type closures from blood collection tubes. 6,039,698, Cl. 600-576.000.

Miller, Jennifer P.: *See*—
Paulsen, Mark J.; Miller, Jennifer P.; and Ebert, Michael J., 6,040,369, Cl. 524-212.000.

Miller, Lester D.; Maska, Mark S.; and Kaczmarek, Andrew R., Jr., to Picker International, Inc. Cooling device for x-ray tube bearing assembly. 6,041,100, Cl. 378-141.000.

Miller, Nicholas R., to Datalink Systems Corporation. Alphanumeric paging message system operating on internet. 6,040,784, Cl. 340-825.440.

Miller, Norman K.: *See*—
Miller, Bearge; Miller, Norman K.; Sarkisian, Gevork; Sarkissian, Karen; and Galperin, Anatoly, 6,040,536, Cl. 200-83.00N.

Miller, Philip; and LaLiberte, Thomas R., to 3M Innovative Properties Company. Method for capping stem fasteners. 6,039,911, Cl. 264-280.000.

Miller, Richard E.: *See*—
Santini, Andree F.; and Miller, Richard E., 6,040,359, Cl. 523-161.000.

Miller, Thomas Edward: *See*—
Kirchhoefer, Dennis Ray; Miller, Thomas Edward; and Tsangaris, Paris, 6,041,131, Cl. 381-415.000.

Miller, William H.: *See*—
Johnson, Todd J.; and Miller, William H., 6,040,476, Cl. 562-1.000.

Miller-Kovach, Karen; Watson, Sarah May; Way, Marian Jane; Frye, Wanema; Melnyk, Mary Grace; and Forman, Adrienne, to Weight Watchers (UK) Limited. Process for controlling body weight. 6,040,531, Cl. 177-25.160.

Milliken & Company: *See*—
Harris, Philip G.; and Batlaw, Rajnish, 6,040,482, Cl. 564-443.000.

Vogt, Kirkland W.; and Li, Shulong, 6,040,393, Cl. 525-454.000.

Millipore Corporation: *See*—
Lemonnier, Jean, 6,040,153, Cl. 435-30.000.

Mills, Edward G.: *See*—
Melane, Marcus L.; Pisterzi, Michael J.; Mills, Edward G.; and Hargroves, Curtis L., 6,039,414, Cl. 312-205.000.

Mills, Robert A. R., to Kudu Indutries, Inc. Safety coupling for rotary pump. 6,039,115, Cl. 166-68.500.

Mills, R. Steven: *See*—
Gandre, Jerry D.; Sands, Steven L.; Mills, R. Steven; and Lopez, Arthur, 6,040,982, Cl. 361-724.000.

Millward, Thomas Anders: *See*—
Hemmings, Brian Arthur; and Millward, Thomas Anders, 6,040,164, Cl. 435-189.000.

Milne, Robert J.: *See*—
Dangat, Geetaram S.; Milne, Robert J.; and Orzell, Robert A., 6,041,267, Cl. 700-107.000.

Milton, Raymond Cecil deLisle: *See*—
Kent, Stephen Brian Henry; Milton, Saskia Charlotte Florence; and Milton, Raymond Cecil deLisle, 6,040,133, Cl. 435-4.000.

Milton, Saskia Charlotte Florence: *See*—
Kent, Stephen Brian Henry; Milton, Saskia Charlotte Florence; and Milton, Raymond Cecil deLisle, 6,040,133, Cl. 435-4.000.

Mimura, Kazuya, to NEC Corporation. Tantalum powder and solid electrolytic capacitor using the same. 6,040,975, Cl. 361-523.000.

Mimura, Kenji. Rotary compressor. 6,039,552, Cl. 418-166.000.

Mina, Nabil L.; Vilanilam, Santosh; and Yarbrough, Garrett S., to EGS Electrical Group LLC. Explosion proof toggle switch. 6,040,543, Cl. 200-559.000.

Minami, Hiromasa; Igarashi, Masaru; and Chiku, Takahiro, to Suzuki Motor Corporation. Battery tray. 6,040,080, Cl. 429-96.000.

Minami, Itsuji; and Takahashi, Kazuaki, to Fuji Photo Optical Co., Ltd. Image pickup apparatus for endoscope having reduced diameter. 6,040,612, Cl. 257-432.000.

Minami, Toshiya; Satoh, Hiroshi; and Satoh, Takanobu, to International Business Machines Corporation. Method and apparatus for displaying pixels on a display device. 6,040,818, Cl. 345-147.000.

Minato, Atsuo, to Hoya Corporation. Artificial vision system. 6,039,447, Cl. 351-216.000.

Minato, Kazuaki: *See*—
Yamada, Kazuo; Mitate, Takehito; Nishimura, Naoto; Tsukuda, Yoshihiro; and Minato, Kazuaki, 6,040,092, Cl. 429-331.000.

Minato, Tadaharu: *See*—
Uenishi, Akio; and Minato, Tadaharu, 6,040,600, Cl. 257-330.000.

Mine, Katsutoshi; Mitani, Osamu; Nakayoshi, Kazumi; and Tazawa, Rikako, to Dow Corning Toray Silicone Co., Ltd. Electrically conductive silicone elastomer compositions, methods for manufacturing semiconductor devices, and semiconductor devices. 6,039,831, Cl. 156-272.600.

Mine, Katsutoshi; Mitani, Osamu; Nakayoshi, Kazumi; and Tazawa, Rikako, to Dow Corning Toray Silicone Co., Ltd. Heat-conducting polymer composition. 6,040,362, Cl. 523-212.000.

Mine, Katsutoshi: *See*—
Isshiki, Minoru; Mine, Katsutoshi; and Yamakawa, Kimio, 6,040,395, Cl. 525-476.000.

Mine, Toshiyuki: *See*—
Sano, Toshiaki; Ishii, Tomoyuki; Yano, Kazuo; and Mine, Toshiyuki, 6,040,605, Cl. 257-369.000.

Minemoto, Hitoshi: *See*—
Hagiwara, Yoshihiro; Suetsugu, Junichi; Mizoguchi, Tadashi; Minemoto, Hitoshi; Takemoto, Hitoshi; Shima, Kazuo; and Yakushiji, Toru, 6,039,442, Cl. 347-89.000.

Miner, Norman A., to Microchem Laboratory, Inc. Concentrated alkaline glutaraldehyde-phenolic disinfectant. 6,040,283, Cl. 510-161.000.

Minet, Wilhelm, to Haken, Dipl.-Ing. Klaus. Auxiliary device for bed-ridden and disabled patients. 6,039,293, Cl. 248-125.800.

Minish, Sharon K.: *See*—
MacLaren, David D.; Lefler, John R.; and Minish, Sharon K., 6,039,974, Cl. 424-472.000.

Minnesota Mining and Manufacturing Company: *See*—
Scholz, Matthew T.; and Tiers, George V., 6,040,053, Cl. 428-412.000.
Schulz, Stephen C., 6,039,850, Cl. 204-192.150.

Minolta Co., Ltd.: *See*—
Fujikura, Teruhiko; Kinoshita, Naoyoshi; Fujii, Makoto; Matsuhara, Kenji; and Natsume, Munehiro, 6,041,214, Cl. 399-403.000.
Honda, Tsutomu; Matsumoto, Hiroyuki; and Suzuki, Tatsuya, 6,041,195, Cl. 396-429.000.
Kamon, Koichi; and Matsuda, Shinya, 6,041,146, Cl. 382-274.000.
Morikawa, Takeshi, 6,041,165, Cl. 395-102.000.

Minter, Larry L.; and Parham, Greg L., to Missouri Valley Steel Company. Burn table. 6,039,915, Cl. 266-49.000.

Mintzer, Lester, to Xilinx, Inc. Method for configuring an FPGA for large FFTs and other vector rotation computations. 6,041,340, Cl. 708-403.000.

Miotto, Sergio. Potted plant container provided with means for the self-regulated administration of liquid. 6,038,814, Cl. 47-79.000.

Misawa, Takao: *See*—
Makino, Masanori; Mochizuki, Hirotake; Misawa, Takao; and Tsuda, Takao, 6,040,891, Cl. 355-46.000.

Misic, George J., to Medrad, Inc. Magnetic resonance imaging receiver/transmitter coils. 6,040,697, Cl. 324-318.000.

Misra, Raj N.: *See*—
Kim, Kyoung S.; Kimball, S. David; Cai, Zhen-wei; Rawlins, David B.; Misra, Raj N.; Poss, Michael A.; Webster, Kevin R.; Hunt, John T.; and Han, Wen-Ching, 6,040,321, Cl. 514-369.000.

Missel, Gregory E.; and Romano, Charles E., to Eastman Kodak Company. High uniform gloss ink-jet receivers. 6,040,060, Cl. 428-478.200.

Misslitz, Ulf: *See*—
Kast, Jürgen; Vossen, Marcus; von Deyn, Wolfgang; Engel, Stefan; Hill, Regina Luise; Kardorff, Uwe; Otten, Martina; Plath, Peter; Walter, Helmut; Westphalen, Karl-Otto; and Misslitz, Ulf, 6,040,274, Cl. 504-348.000.

Missouri Valley Steel Company: *See*—
Minter, Larry L.; and Parham, Greg L., 6,039,915, Cl. 266-49.000.

Mistry, Kishor Kumar: *See*—
Symes, Kenneth Charles; and Mistry, Kishor Kumar, 6,039,900, Cl. 264-4.100.

Mita Industrial Co., Ltd.: *See*—
Okada, Mitsuharu, 6,041,212, Cl. 399-359.000.

Mitani, Masato; Nakajima, Kazuto; Kotani, Hiroyuki; Hokazono, Nobutaka; Naka, Hiroyuki; Yamaguchi, Akira; Ikeda, Junji; and Aoki, Nobuyuki, to Matsushita Electric Industrial Co., Ltd.; and Matsushita Electronics Corporation. Liquid application nozzle, method of manufacturing same, liquid application method, liquid application device, and method of manufacturing cathode-ray tube. 6,040,016, Cl. 427-421.000.

Mitani, Osamu: *See*—
Mine, Katsutoshi; Mitani, Osamu; Nakayoshi, Kazumi; and Tazawa, Rikako, 6,039,831, Cl. 156-272.600.
Mine, Katsutoshi; Mitani, Osamu; Nakayoshi, Kazumi; and Tazawa, Rikako, 6,040,362, Cl. 523-212.000.

Mitate, Takehito: *See*—
Yamada, Kazuo; Mitate, Takehito; Nishimura, Naoto; Tsukuda, Yoshihiro; and Minato, Kazuaki, 6,040,092, Cl. 429-331.000.

Mitchell, Julia. Nursing pad. 6,039,629, Cl. 450-57.000.

Mitchell, Nathan, to Compaq Computer Corporation. Lithium ion fast pulse charger. 6,040,684, Cl. 320-139.000.

Mitchell, Philip John: *See*—
Adcock, Paul Leonard; Mitchell, Philip John; and Foster, Simon Edward, 6,040,075, Cl. 429-32.000.

Mito, Nobuaki, to Sumitomo Chemical Company, Limited. Herbicidal composition. 6,040,270, Cl. 504-128.000.

Mitoh, Ayumi; and Hiraide, Tsuneo, to Asahi Kogaku Kogyo Kabushiki Kaisha. Method of evaluating a testing element for antigens or antibodies. 6,040,196, Cl. 436-518.000.

Mitragotri, Samir S.: *See*—
Kost, Joseph; Pliquett, Uwe; Mitragotri, Samir S.; Langer, Robert S.; and Weaver, James C., 6,041,253, Cl. 604-20.000.

Mitsubishi Chemical Corporation: *See*—
Fauteux, Denis G.; Rounds, Robert, III; and Farina, Michael, 6,040,078, Cl. 429-48.000.
Yamamoto, Iwao; Kakikura, Eisaku; Kinouchi, Masami; Inoue, Yoshiaki; and Shiotsu, Tamotsu, 6,040,051, Cl. 428-367.000.

Mitsubishi Denki Kabushiki Kaisha: *See*—
Fujioka, Shuzo, 6,040,786, Cl. 340-928.000.
Gotou, Toyokazu; and Fukakusa, Shinji, 6,040,581, Cl. 250-390.010.
Harada, Akihiko; and Higashitani, Keiichi, 6,040,627, Cl. 257-752.000.
Hata, Toshiaki, 6,039,010, Cl. 123-41.00E.
Kanaoka, Masaru, 6,040,549, Cl. 219-121.610.
Kimura, Mikihiro; and Sekine, Masahiro, 6,040,199, Cl. 438-17.000.
Kitaguchi, Akira; Hatakenaka, Makoto; Nakajima, Michio; Motonami, Kaoru; Shiroshima, Kiyoyuki; and Yamashita, Takekazu, 6,040,614, Cl. 257-529.000.
Nagai, Yukihiro; and Mametani, Tomoharu, 6,040,615, Cl. 257-529.000.
Shimizu, Satoshi; and Oda, Hidekazu, 6,040,629, Cl. 257-770.000.
Someya, Jun, 6,040,819, Cl. 345-147.000.
Takahashi, Hideki, 6,040,599, Cl. 257-330.000.
Takahashi, Yasuhiro; and Fukui, Wataru, 6,040,698, Cl. 324-399.000.
Toyoda, Yoshihiko; Fukada, Tetsuo; Mori, Takeshi; and Hasegawa, Makiko, 6,039,808, Cl. 118-715.000.
Uenishi, Akio; and Minato, Tadaharu, 6,040,600, Cl. 257-330.000.
Watanabe, Masahiro, 6,040,795, Cl. 342-70.000.

Mitsubishi Electric Information Technology Center America, Inl. (ITA): *See*—
Gibson, Sarah F., 6,040,835, Cl. 345-424.000.

Mitsubishi Electric System LSI Design Corporation: *See*—
Kitaguchi, Akira; Hatakenaka, Makoto; Nakajima, Michio; Motonami, Kaoru; Shiroshima, Kiyoyuki; and Yamashita, Takekazu, 6,040,614, Cl. 257-529.000.

Mitsubishi Engineering-Plastics Corporation: *See*—
Kurasawa, Yoshihiro; and Nishida, Koji, 6,040,084, Cl. 429-176.000.
Miya, Shinya; and Kanayama, Satoshi, 6,040,367, Cl. 524-107.000.

Mitsubishi Gas Chemical Company, Inc.: *See*—
Himeshima, Tomoharu; Nakagawa, Kazumoto; Iwai, Tatsuo; and Watanabe, Takayuki, 6,039,892, Cl. 252-188.280.

Mitsubishi Heavy Industries, Ltd.: *See*—
Suenaga, Kiyoshi; Tomita, Yasuoki; and Fukuno, Hiroki, 6,039,531, Cl. 415-115.000.

Mitsubishi Jukogyo Kabushiki Kaishal: *See*—
Nishimura, Masaharu; Ohnishi, Keizo; Yasuda, Chiaki; Kajii, Shinichiro; Patrick, William P.; and Zander, Anthony C., 6,041,125, Cl. 381-71.400.

Mitsubishi Materials Polycrystalline Silicon Corporation: *See*—

Toyama, Yoshiharu; Kuroda, Akikazu; Kiyama, Tokuji; Kida, Sumio; Yoshida, Shunji; Yamamoto, Takashi; and Atsumi, Tetsuya, 6,039,809, Cl. 118-715.000.

Mitsubishi Materials Silicon Corporation: *See*—
Toyama, Yoshiharu; Kuroda, Akikazu; Kiyama, Tokuji; Kida, Sumio; Yoshida, Shunji; Yamamoto, Takashi; and Atsumi, Tetsuya, 6,039,809, Cl. 118-715.000.

Mitsubishi Shindoh Co., Ltd.: *See*—
Momose, Mitsuru, 6,040,038, Cl. 428-209.000.

Mitsuhashi, Masashige; Ohno, Kenichi; and Yoshida, Kenichi, to NEC Corporation. Surface polishing apparatus including a dresser. 6,039,635, Cl. 451-72.000.

Mitsui Chemicals, Inc.: *See*—
Karasawa, Akio; Yamaguchi, Akihiro; Yamaguchi, Keizaburo; and Ishihara, Yuko, 6,040,111, Cl. 430-270.100.

Mitsui High-tec Inc.: *See*—
Sakai, Nobuo; Ishida, Migaku; and Irie, Junichi, 6,039,511, Cl. 406-46.000.

Mitsui Petrochemical Industrial, Ltd.: *See*—
Ishida, Tatsuyoshi; Yasuda, Masaaki; Onishi, Hitoshi; Kihara, Noriaki; Tsutsui, Toshiyuki; Sagane, Toshihiro; Kawasaki, Masaaki; and Nakahama, Hidenari, 6,040,407, Cl. 526-281.000.

Mitsui, Sunao: *See*—
Koguro, Kiyoto; Oga, Toshikazu; Tokunaga, Norihito; Mitsui, Sunao; and Orita, Ryozo, 6,040,454, Cl. 548-253.000.

Mitsumori, Kenichi: *See*—
Yeol, Oh Eui; Mitsumori, Kenichi; and Miyazawa, Satoshi, 6,039,815, Cl. 134-2.000.

Mitsuya, Yoshihide: *See*—
Kageyama, Hidehei; and Mitsuya, Yoshihide, 6,039,484, Cl. 401-52.000.
Kageyama, Hidehei; Mitsuya, Yoshihide; and Ebinuma, Tadayoshi, 6,039,485, Cl. 401-67.000.

Mittersinker, Gregor: *See*—
Cornelius, Dirk L.; and Mittersinker, Gregor, 6,038,791, Cl. 36-115.000.

Miura, Haruo: *See*—
Kobayashi, Hiromi; Nishida, Hideo; Miura, Haruo; Eino, Takashi; and Takahashi, Kazuki, 6,039,535, Cl. 415-172.100.

Miura, Kenju: *See*—
Saitoh, Masayuki; Kitajima, Yasuo; Iwasawa, Norio; Miura, Kenju; Haruyama, Munetada; and Hashino, Junko, 6,040,335, Cl. 514-460.000.

Miura, Kouji: *See*—
Onishi, Masanori; Murata, Masanao; Nakai, Yutaka; Yasuda, Katsumi; Sugino, Tsukasa; Nakagawa, Susumu; and Miura, Kouji, 6,041,274, Cl. 701-26.000.

Miura, Masato: *See*—
Shiina, Kazuhiro; Kawamoto, Koji; Miura, Masato; Ohura, Hitoshi; Ozeki, Shoichi; Akiyama, Noboru; Nunomura, Kunihoro; Nemoto, Minehiro; and Iwamura, Masahiro, 6,040,827, Cl. 345-208.000.

Miura, Takahito: *See*—
Hayafune, Takeshi; Maemura, Kouichiro; and Miura, Takahito, 6,041,183, Cl. 395-712.000.

Miura, Takamitsu: *See*—
Morooka, Hisao; Miura, Takamitsu; Yamada, Hiroshi; Kurihara, Katsuki; Matsuse, Mitsutaka; and Arai, Yasuyuki, 6,040,520, Cl. 136-245.000.

Miwa, Makoto: *See*—
Morikawa, Junya; and Miwa, Makoto, 6,039,032, Cl. 123-520.000.

Miwa, Minoru; Takeno, Akiyoshi; Koike, Toshihiro; Ako, Satoshi; and Sugiyama, Yasunori, to Kimoto Co., Ltd. Reflection screen and method for producing the same. 6,040,941, Cl. 359-443.000.

Miya, Shinya; and Kanayama, Satoshi, to Mitsubishi Engineering-Plastics Corporation. Polycarbonate resin composition. 6,040,367, Cl. 524-107.000.

Miyabayashi, Toshiyuki: *See*—
Kubota, Kazuhide; and Miyabayashi, Toshiyuki, 6,039,796, Cl. 106-31.600.

Miyakawa, Hisashi: *See*—
Michiki, Hideyuki; Miyakawa, Hisashi; and Ohsaki, Kozo, 6,041,272, Cl. 700-266.000.

Miyake, Shoji; Inaba, Toru; and Koda, Eiji, to Fujitsu Limited. Call control system for a subscriber transmission device. 6,041,052, Cl. 370-360.000.

Miyamoto, Takaaki, to Sony Corporation. Plasma CVD process for metal films and metal nitride films. 6,040,021, Cl. 427-576.000.

Miyamoto, Tetsuya; and Kawata, Masakazu, to Sumitomo Bakelite Co., Ltd. Anisotropic conductive adhesive and method for preparation thereof and an electronic apparatus using said adhesive. 6,039,896, Cl. 252-511.000.

Miyamoto, Yasuo; and Takata, Hidekazu, to Sharp Kabushiki Kaisha. Semiconductor type memory device having consecutive access to arbitrary memory address. 6,041,015, Cl. 365-236.000.

Miyano, Sotaro; Hattori, Tetsutaro; Uesugi, Osamu; Tamai, Yasufumi; and Sayo, Noboru, to Takasago International Corporation. Process for producing optically active β-lactones. 6,040,465, Cl. 549-510.000.

Miyasaka, Matsuho: *See*—
Kuroda, Tetsuo; Miyasaka, Matsuho; and Takahashi, Norio, 6,038,882, Cl. 62-476.000.

Miyasaka, Yoshio, to Fuji Kihan Co., Ltd. Method for a surface treatment of metallic product. 6,038,900, Cl. 72-53.000.

Miyawaki, Yoshitaka: *See*—
Hyoda, Shunji; Kita, Masaharu; Sawada, Hirotoshi; Nemugaki, Shuichi; Otsuka, Sumio; Miyawaki, Yoshitaka; Ogawa, Takashi; and Kubo, Yuhki, 6,040,453, Cl. 548-250.000.

Miyazaki, Akimitsu; Ibukuro, Sadao; and Nagakubo, Yasunori, to Fujitsu Limited. Optical transmitter, terminal-station apparatus having the optical transmitter, and optical communication system. 6,040,931, Cl. 359-110.000.

Miyazaki, Satoshi: *See*—
Hirata, Toshiaki; Urano, Akihiro; Fujino, Shuji; Yamada, Mitsugu; Nakano, Hidetomo; Morita, Shinji; and Miyazaki, Satoshi, 6,041,353, Cl. 709-224.000.
Sugauchi, Kiminori; Hirata, Toshiaki; Nishiki, Kenya; Miyazaki, Satoshi; Mizuguchi, Keizo; and Fujino, Shuji, 6,041,349, Cl. 709-223.000.

Miyazaki, Tadakazu: *See*—
Kinsho, Toshihiko; Satake, Munekazu; and Miyazaki, Tadakazu, 6,040,398, Cl. 525-527.000.

Miyazawa, Satoshi: *See*—
Yeol, Oh Eui; Mitsumori, Kenichi; and Miyazawa, Satoshi, 6,039,815, Cl. 134-2.000.

Miyoshi, Kei: *See*—
Fujiki, Hironao; Miyoshi, Kei; and Muramatsu, Hironobu, 6,040,361, Cl. 523-209.000.

Miyoshi, Kunio: *See*—
Tanaka, Junichi; Miyoshi, Kunio; and Yamashita, Sensuke, 6,039,723, Cl. 604-532.000.

Mizoguchi, Naoyuki; Yamamoto, Katsuyuki; and Wada, Kimihito, to Matsutani Chemical Industries Co., Ltd. Bread and bread's dough. 6,039,997, Cl. 426-549.000.

Mizoguchi, Tadashi: *See*—
Hagiwara, Yoshihiro; Suetsugu, Junichi; Mizoguchi, Tadashi; Minemoto, Hitoshi; Takemoto, Hitoshi; Shima, Kazuo; and Yakushiji, Toru, 6,039,442, Cl. 347-89.000.

Mizuguchi, Keizo: *See*—
Sugauchi, Kiminori; Hirata, Toshiaki; Nishiki, Kenya; Miyazaki, Satoshi; Mizuguchi, Keizo; and Fujino, Shuji, 6,041,349, Cl. 709-223.000.

Mizuno, Yuhei; Kawamura, Yoshihiro; and Kondo, Shiro, to Nicca Chemical Co., Ltd. Cleaning process for dry cleaning. 6,039,766, Cl. 8-142.000.

Mizunoya, Nobuyuki: *See*—
Ikeda, Kazuo; Komorita, Hiroshi; Sato, Yoshitoshi; Komatsu, Michiyasu; and Mizunoya, Nobuyuki, 6,040,039, Cl. 428-210.000.

Mizunuma, Koji: *See*—
Nitta, Satoru; and Mizunuma, Koji, 6,039,904, Cl. 264-40.500.

Mizushima, Takashi: *See*—
Okita, Tomoaki; Nakashima, Katsumi; Mizushima, Takashi; and Wadaki, Takeru, 6,040,351, Cl. 521-140.000.

Mizutani, Noriyuki: *See*—
Takahashi, Sakon; Takagi, Shinpei; Mizutani, Noriyuki; Oya, Yasuhiro; and Ishida, Haruhide, 6,040,102, Cl. 430-108.000.

MMC Networks, Inc.: *See*—
Joffe, Alexander; and Birger, Ari, 6,041,059, Cl. 370-412.000.

Mo, Jiancheng: *See*—
Chen, Feng; Kolagotla, Ravi K.; Ly, Le T.; Mo, Jiancheng; and Srinivas, Hosahalli R., 6,041,418, Cl. 713-400.000.

Mo Och Domsjö Aktiebolag: *See*—
Brännland, Rolf C. A.; and Noréus, Sture E. O., 6,039,837, Cl. 162-29.000.

Mobil Oil Corporation: *See*—
Mueller, Manfred W., 6,039,117, Cl. 166-312.000.

Mobin, Mohammed S.: *See*—
Baker, Thomas W.; and Mobin, Mohammed S., 6,041,086, Cl. 375-341.000.

Mobley, Larry W.: *See*—
Jennings, James K.; Jenkines, Randall C.; and Mobley, Larry W., 6,040,381, Cl. 524-871.000.

Moceanu, John Ion: *See*—
Haag, Ronald Helmut; Orr, Brian Norman; and Moceanu, John Ion, 6,038,818, Cl. 49-360.000.

Mochida Pharmaceutical Co., Ltd.: *See*—
Yamamoto, Ichiro; Itoh, Manabu; Shimojo, Masato; Yumiya, Yasunobu; Mukaihira, Takafumi; and Akada, Yasushige, 6,040,331, Cl. 514-411.000.

Mochizuki, Hirotake: *See*—
Makino, Masanori; Mochizuki, Hirotake; Misawa, Takao; and Tsuda, Takao, 6,040,891, Cl. 355-46.000.

Mockenhaupt, Martin; and Szott, Michael J., to Fel-Pro Incorporated. Rubber molded gasket with compression limiter. 6,039,323, Cl. 277-593.000.

Modine Manufacturing Company: *See*—
Kalbacher, Klaus; Schuttarle, Karl; Temmesfeld, Axel; and Eckerskorn, Winfried, 6,039,263, Cl. 236-93.00A.

Modlin, Douglas N.: *See*—
Winkler, James L.; Fodor, Stephen P. A.; Buchko, Christopher J.; Ross, Debra A.; Aldwin, Lois; and Modlin, Douglas N., 6,040,193, Cl. 436-180.000.

Moenning, Stephen P.; and Manker, Charles. Apparatus and method for securing a medical instrument to a cannula of a trocar assembly. 6,039,725, Cl. 606-1.000.

Mohammadi, Fatemeh, to Elizabeth Arden Company, Division of Conopco, Inc. Sunscreen compositions. 6,039,935, Cl. 424-59.000.

Mohammed, Mannan, to Intel Corporation. Method and apparatus for detecting network traffic and initiating a dial-up connection using separate upstream and downstream devices. 6,041,356, Cl. 709-227.000.

Mohr, Gary David; and Verduijn, Johannes Petrus, to Exxon Chemical Patents Inc. Hydrocarbon conversion process using a zeolite bound zeolite catalyst. 6,039,864, Cl. 208-134.000.

Mohr, Gary David; and Verduijn, Johannes Petrus, to Exxon Chemical Patents Inc. Metal-containing zeolite catalyst, preparation thereof and use for hydrocarbon conversion. 6,040,259, Cl. 502-67.000.

Moles, Peter: *See*—
Wilkins, Robert Lee; and Moles, Peter, 6,039,120, Cl. 166-368.000.

Molex Incorporated: *See*—
Etters, Harry N.; Fuerst, Robert M.; and Watt, Russell J., 6,039,600, Cl. 439-496.000.
Kunishi, Shinsuke, 6,039,590, Cl. 439-247.000.

Moll, Reiner; Fedderke, Helge; and Hartmann, Christoph, to Jungjohann, Thomas. Braking means for a movable part of a furniture component, especially an upholstered furniture component. 6,039,154, Cl. 188-67.000.

Molnar, Karl: *See*—
Raith, Alex K.; Ramesh, Rajaram; Molnar, Karl; Koilpillai, R. David; and Koorapaty, Havish, 6,040,800, Cl. 342-387.000.

Molnlycke Health Care AB: *See*—
Lindquist, Bengt W.; and Fabo, Tomas, 6,040,492, Cl. 602-41.000.

Momose, Mitsuru, to Mitsubishi Shindoh Co., Ltd. Film condenser and metalized film. 6,040,038, Cl. 428-209.000.

Monden, Noriko: *See*—
Arimori, Susumu; Seko, Masahiro; Tanaka, Masakazu; Monden, Noriko; and Yokota, Hideyuki, 6,040,415, Cl. 528-71.000.

Monette, Dave R.; and Kirk, Randall D., to Chrysler Corporation. Stabilization system for liftgate. 6,039,389, Cl. 296-207.000.

Monfort, Inc.: *See*—
Bowling, Rod A.; and Clayton, Robert Paul, 6,039,984, Cl. 426-61.000.

Monia, Brett P.; and Cowsert, Lex M., to Isis Pharmaceuticals Inc. Antisense inhibition of Smad5 expression. 6,040,178, Cl. 435-375.000.

Monk, David T.; Hill, Joe T.; Wagner, Phillip C.; Loprete, Joseph F.; and Young, Michael R., to Bristol Compressors, Inc. Variable capacity compressor having two-step motor strength adjustability. 6,040,679, Cl. 318-778.000.

Monks, Colin R. F.: *See*—
Kupfer, Abraham; Kupfer, Hannah; and Monks, Colin R. F., 6,040,152, Cl. 435-29.000.

Monoi, Takashi; Yamamoto, Masakazu; Torigoe, Hidenobu; and Takemoto, Yasunori, to Japan Polyolefins Co., Ltd. Preparation method of ethylene base polymer. 6,040,399, Cl. 526-106.000.

Monroe, John W.; Smith, John J.; Kenyon, Stephen C.; and Anderson, Michael E., to Sparta, Inc. System for transmission and recovery of digital data using video graphics display processor and method of operation thereof. 6,040,843, Cl. 345-507.000.

Monsanto Company: *See*—
Johnson, Todd J.; and Miller, William H., 6,040,476, Cl. 562-1.000.
Riego, Domingo C.; Cox, Kenneth C.; Sexton, Franklin E.; and Meadows, James C., 6,040,272, Cl. 504-206.000.

Monsanto Corporation: *See*—
Moots, Craig K., 6,040,499, Cl. 800-312.000.

Monster Cable Products, Inc.: *See*—
Marsh, Richard N.; and Martin, Demian T., 6,039,591, Cl. 439-265.000.

Monte, Thomas D., to KVH Industries, Inc. Grooved optical fiber for use with an electrode and a method for making same. 6,041,149, Cl. 385-2.000.

Monte, Woodrow C. Laminated baked product and method of making the same. 6,039,988, Cl. 426-94.000.

Moon, Seung Kee: *See*—
Hong, Chung, Il; Kim, Jung Woo; Lee, Sang Joon; Ahn, Soon Kil; Choi, Nam Song; Hong, Ryung Kee; Chun, Hyoung Sik; Moon, Seung Kee; and Lee, Hong Woo, 6,040,337, Cl. 514-475.000.

Moore, James: *See*—
Gunn, Brian Leslie; Moore, James; and Hancocks, Michael Turley, 6,039,090, Cl. 141-17.000.

Moore, Jeremy W.: *See*—
Caravella, James S.; Mietus, David F.; and Moore, Jeremy W., 6,041,221, Cl. 455-186.100.

Moore North America, Inc.: *See*—
Kendrick, Jimmy Ray, 6,039,357, Cl. 283-93.000.

Moore, Richard L.; Robson, Michael G.; Lockeby, Warren E., Jr.; and Kaylor, Billy E., to Lerio Corporation, The. Method and apparatus for controlling root growth. 6,038,813, Cl. 47-75.000.

Moore, Stephen Raymond: *See*—
Cain, Frederick William; Quinlan, Paul Thomas; and Moore, Stephen Raymond, 6,040,161, Cl. 435-134.000.

Moore U.S.A. Inc.: *See*—
Tee, M. Richard, 6,039,242, Cl. 229-92.100.

Moote, Richard K.: *See*—
Kennie, Jerry; Cheng, Yi; Hope, Mark E.; Huff, Shean; Nankee, Robert J., II; Joyce, Mary; Krozek, Dennis A.; Moote, Richard K.; Richardson, Roland T.; Rotramel, William D.; and Seitz, Gary L., 6,041,278, Cl. 701-103.000.

Moots, Craig K., to Monsanto Corporation. Soybean cultivar 943347632294. 6,040,499, Cl. 800-312.000.

Moran, Robert James: *See*—
Field, Martin John; Ballmert, Bernd Jakob; Collins, Laurence Alexander; and Moran, Robert James, 6,039,034, Cl. 123-568.230.

Morando, Jorge A. Jet column reactor pump with coaxial and/or lateral intake opening. 6,039,917, Cl. 266-217.000.

Morataya, Carmen, to Intevep, S.A. Method for dehydrating a waste hydrocarbon sludge. 6,039,880, Cl. 210-708.000.

Morawietz, Markus: *See*—
Riedel, Michael; Weller, Thomas; Jacobs, Alexandra; Herrmann, Wolfgang Anton; and Morawietz, Markus, 6,040,469, Cl. 556-53.000.

Morelli, Marco: *See*—
Milanesi, Andrea; Poletto, Vanni; Poma, Alberto; and Morelli, Marco, 6,040,736, Cl. 327-541.000.

Moretti, Sonia, to Sigma-Tau Industrie Farmaceutiche Riunite S.p.A.; and Mendes s.r.l. Use of L-carnitine and derivatives for reducing ceramide levels and potentiating antiretroviral drugs. 6,040,346, Cl. 514-642.000.

Morgan, Allan Clark: *See*—
Mabry, Melinda Ann; Rumpf, Frederick Harry; Podobnik, Ivan Zlatko; Westveer, Scott Adrian; Morgan, Allan Clark; Chung, Bin; and Andrews, Malcolm John, 6,040,364, Cl. 523-318.000.

Morghen, Manfred A. Workpiece clamping system. 6,039,312, Cl. 269-47.000.

Mori, Kenichi; Ito, Katsuya; Kotani, Tooru; Suzuki, Toshitake; and Sasaki, Yasushi, to Toyo Boseki Kabushiki Kaisha. Recording material. 6,039,444, Cl. 347-105.000.

Mori, Takeshi: *See*—
Toyoda, Yoshihiko; Fukada, Tetsuo; Mori, Takeshi; and Hasegawa, Makiko, 6,039,808, Cl. 118-715.000.

Mori, Yoshikuni: *See*—
Naka, Akio; Yamamoto, Tetsuya; and Mori, Yoshikuni, 6,040,101, Cl. 430-108.000.

Morikami, Masashi: *See*—
Masuda, Fumitoshi; and Morikami, Masashi, 6,040,757, Cl. 338-160.000.

Morikawa, Junya; and Miwa, Makoto, to Denso Corporation. Air-fuel ratio controller for an internal combustion engine. 6,039,032, Cl. 123-520.000.

Morikawa, Kiyoshi: *See*—
Ishida, Nobuo; Togashi, Jun; Kimura, Tomomichi; Morikawa, Kiyoshi; Nakayama, Yoshihumi; Akiyama, Hiroshi; Yanagisawa, Tatsuya; and Ota, Takashi, 6,041,032, Cl. 369-191.000.

Morikawa, Takeshi, to Minolta Co., Ltd. Image forming apparatus capable of forming an image at a plurality of resolutions. 6,041,165, Cl. 395-102.000.

Morimoto, Koichi: *See*—
Sageser, David Mark; Shirakawa, Takuya; and Morimoto, Koichi, 6,039,906, Cl. 264-156.000.

Morishita, Hideki: *See*—
Ueda, Makoto; Shiga, Shigenori; Tajima, Satoko; and Morishita, Hideki, 6,041,091, Cl. 376-327.000.

Morishita, Jun-ichi: *See*—
Wu, Shang-Qian; Morishita, Jun-ichi; Ishihara, Yoshio; and Kimijima, Tetsuya, 6,040,915, Cl. 356-435.000.

Morishita, Yasuo: *See*—
Takehara, Nobuyuki; Shimoda, Kazuhisa; and Morishita, Yasuo, 6,038,771, Cl. 29-897.200.

Morisige, Takayuki: *See*—
Takamori, Hiroki; and Morisige, Takayuki, 6,041,067, Cl. 370-514.000.

Morita, Keizo: *See*—
Murakami, Hiroshi; Yoshioka, Koji; Morita, Keizo; Itokazu, Masafumi; Nakabayashi, Ken-ichi; Yamamoto, Akira; and Haraguchi, Munehiro, 6,040,814, Cl. 345-94.000.

Morita, Naotoshi; and Wakita, Sachio, to NGK Spark Plug Co., Ltd. Ozonizer, water purifier and method of cleaning an ozonizer. 6,039,816, Cl. 134-19.000.

Morita, Shinji: *See*—
Hirata, Toshiaki; Urano, Akihiro; Fujino, Shuji; Yamada, Mitsugu; Nakano, Hidetomo; Morita, Shinji; and Miyazaki, Satoshi, 6,041,353, Cl. 709-224.000.

Moriyama, Junichi: *See*—
Meki, Seiji; Yamada, Shunji; and Moriyama, Junichi, 6,041,066, Cl. 370-512.000.

Morokoshi, Hiroshi: *See*—
Ohmi, Tadahiro; Yamaji, Michio; Shinohara, Tsutomu; Itoi, Shigeru; Hirao, Keiji; Kawano, Yuji; Tanaka, Shigeaki; Yokoyama, Kosuke; Morokoshi, Hiroshi; and Ikeda, Nobukazu, 6,039,360, Cl. 285-61.000.

Moroney, Nathan, to Hewlett-Packard Company. Thresholded undercolor removal and black replacement in a thermal-inkjet printer or plotter. 6,039,434, Cl. 347-43.000.

Morooka, Hisao; Miura, Takamitsu; Yamada, Hiroshi; Kurihara, Katsuki; Matsuse, Mitsutaka; and Arai, Yasuyuki, to Semicondutor Energy Laboratory Co., Ltd.; and TDK Corporation. Solar cell and method of manufacturing the same. 6,040,520, Cl. 136-245.000.

Morov, Georgiy: *See*—
Shturman, Leonid; Morov, Georgiy; and Malgichev, Vladimir, 6,039,747, Cl. 606-159.000.

Morris, Mary L.: *See*—
Ho, Kwok-Lun; Follensbee, Robert A.; Harmer, Walter L.; and Morris, Mary L., 6,039,775, Cl. 51-295.000.

Morris, Nicholas Andrew: *See*—
Birch, Brian Jeffrey; and Morris, Nicholas Andrew, 6,039,861, Cl. 205-335.000.

Mortensen, Dave: *See*—
Forbes, David R.; Mortensen, Dave; Bean, Ron M; and Williams, Gregory G., 6,039,627, Cl. 446-208.000.

Mosel Vitelic, Inc.: *See*—
Sung, Kuo-Tung, 6,040,216, Cl. 438-257.000.

Moser, Gregory C.: *See*—
Bedja, Abdelkrim; Moser, Gregory C.; and King, Raymond P., 6,039,149, Cl. 182-20.000.

Mosesian, Jerry L.: *See*—

Martenson, Kenneth R.; Mosesian, Jerry L.; Wilkinson, Alan F.; and Goldbach, William, 6,040,971, Cl. 361-118.000.
Moslehi, Mehrdad M.: Davis, Cecil J.; and Heimanson, Dorian, to CVC Products, Inc. Ultra-high vacuum apparatus and method for high productivity physical vapor deposition.. 6,039,848, Cl. 204-192.120.
Moss, Bernard: *See*—
Earl, Patricia L.; Broder, Christopher C.; Doms, Robert W.; and Moss, Bernard, 6,039,957, Cl. 424-208.100.
Motizuki, Kunihiro: *See*—
Konosu, Koji; Sugiura, Akio; and Motizuki, Kunihiro, 6,039,256, Cl. 235-462.430.
Motoe, Katsuro: *See*—
Hara, Yoshikazu; Motoe, Katsuro; and Sanagi, Hisashi, 6,038,968, Cl. 101-116.000.
Motonami, Kaoru: *See*—
Kitaguchi, Akira; Hatakenaka, Makoto; Nakajima, Michio; Motonami, Kaoru; Shiroshima, Kiyoyuki; and Yamashita, Takekazu, 6,040,614, Cl. 257-529.000.
Motooka, Eiji, to Noritsu Koki Co., Ltd. Method of printing photosensitive material. 6,040,896, Cl. 355-72.000.
Motorola: *See*—
Murray, Bradley A., 6,040,781, Cl. 340-825.220.
Motorola, Inc.: *See*—
Alterman, Steven S.; Sanchez, Mauricio E.; and Longhurst, Audrey, 6,041,045, Cl. 370-313.000.
Amero, Willard F., Jr.; and Herrmann, John E., 6,039,608, Cl. 439-651.000.
Caravella, James S.; Mietus, David F.; and Moore, Jeremy W., 6,041,221, Cl. 455-186.100.
Chambers, Benjamin C.; Blood, William R., Jr.; and Lee, Tien-Yu T., 6,040,624, Cl. 257-692.000.
Erickson, Paul M.; and Spets, Timothy J., 6,041,048, Cl. 370-349.000.
Geis, David G.; Doikas, Peter; and Demonaco, Jeffrey, 6,039,582, Cl. 439-76.100.
Kosiec, Jeannie Han, 6,040,720, Cl. 327-83.000.
Lauvray, Olivier J.; and Rodriguez, David, 6,040,604, Cl. 257-355.000.
Mangat, Pawitter Jit Singh; Seese, Philip Armin; and Dauksher, William Joseph, 6,039,835, Cl. 156-345.000.
Mottier, Matthew D., 6,040,683, Cl. 320-137.000.
Paulson, Jeffrey R.; and Fonda, Arturo, 6,039,849, Cl. 204-192.120.
Reed, John Douglas; and Smith, Jack Anthony, 6,041,239, Cl. 455-453.000.
Roeckner, William, 6,041,007, Cl. 365-225.700.
Sanchez, Hector; Alvarez, Jose M.; Siegel, Joshua; and Nicoletta, Carmine, 6,040,729, Cl. 327-309.000.
Skoro, John P., III; Bunkenburg, Brian K.; and Shaughnessy, Mark L., 6,041,226, Cl. 455-405.000.
Stanton, Stephen Millard; Davis, James Talmage, II; Dutson, Alan James; and Henderson, Gregory Lane, 6,040,846, Cl. 345-905.000.
Sumner, Terence Edward, 6,041,227, Cl. 455-412.000.
Trissel, David Wesley, 6,039,765, Cl. 703-26.000.
Vega, Victor Allen; and Eberhardt, Noel H., 6,040,773, Cl. 340-572.100.
Willey, William Daniel, 6,041,241, Cl. 455-574.000.
Motose, Hitoshi, to Yamaha Hatsudoki Kabushiki Kaisha. Exhaust timing valve control for watercraft engine. 6,039,013, Cl. 123-65.0PE.
Motoyama, Yu, to Yamaha Hatsudoki Kabushiki Kaisha. Operating control system for 2 cycle direct injection engine. 6,039,012, Cl. 123-65.0PE.
Mottier, Matthew D., to Motorola, Inc. Battery charger with active feedback voltage controller. 6,040,683, Cl. 320-137.000.
Motyka, Andrea Lee; Broaze, Guy; and Kugler, Alison, to Colgate-Palmolive Co. Laundry concentrates. 6,040,071, Cl. 428-704.000.
Motyka, Andrea Lee; Broaze, Guy; and Kugler, Alison, to Colgate-Palmolive Co. Laundry concentrates. 6,040,287, Cl. 510-340.000.
Motzheim, Ralf: *See*—
Krumm, Helmut; Kittel, Florenz; Koette, Rolf; and Motzheim, Ralf, 6,039,907, Cl. 264-161.000.
Moulthrop, Andrew Alfred: *See*—
Clark, Christopher Joseph; Moulthrop, Andrew Alfred; Muha, Michael Steven; and Silva, Christopher Patrick, 6,041,077, Cl. 375-224.000.
Moulton, Russell D.: *See*—
Cheu, S. Scot; and Moulton, Russell D., 6,040,085, Cl. 429-185.000.
Mount Sinai School of Medicine: *See*—
Bancroft, Frank Carter; and Fliss, Makiko, 6,040,144, Cl. 435-6.000.
Pogo, Beatriz; and Holland, James, 6,040,146, Cl. 435-7.230.
Moutet, Marc: *See*—
Tailhan-Lomont, Catherine; Erdelmeier, Irène; Moutet, Marc; Chaudiere, Jean; and Yadan, Jean-Claude, 6,040,328, Cl. 514-398.000.
Moyer, Thomas P.: *See*—
Long, David C.; Moyer, Thomas P.; O'Neil, Keith C.; Perry, Charles H.; Pomerantz, Glenn A.; Case, James R.; Kando, Laszlo; and Kozol, John E., 6,038,931, Cl. 73-850.000.
Moyle, Matthew: *See*—
Vlasuk, George Phillip; Stanssens, Patrick Eric Hugo; Messens, Joris Hilda Lieven; Lauwereys, Marc Josef; LaRoche, Yves Rene; Jespers, Laurent Stephane; Gansemans, Yannick Georges Jozef; Moyle, Matthew; and Bergum, Peter W., 6,040,441, Cl. 536-252.000.
Mroczka, David E.: *See*—
Ley, Wayne A.; Mroczka, David E.; and Talaski, Edward J., 6,039,548, Cl. 417-313.000.
Mrosik, Jan Michael; Nagel, Joerg; and Stojanoff, Christo G. FMCW distance measurement process. 6,040,898, Cl. 356-5.090.
Mrotzek, Werner; Gräf, Bernd; and Schönke, Ingoberth, to Schering Aktiengesellschaft. Adapter for extracting a liquid from a container closed with a stopper. 6,039,093, Cl. 141-386.000.
MTD Products Inc: *See*—
Marsic, Martin D., 6,039,162, Cl. 192-108.000.
MTD Products Inc.: *See*—
Ciavarella, Nicholas, 6,039,598, Cl. 439-451.000.
MTI Corporation: *See*—
Liu, Jiancheng; and Yamazaki, Kazuo, 6,040,584, Cl. 250-559.110.
MTS Systems Corporation: *See*—
Meyer, Richard A., 6,038,933, Cl. 73-862.045.
Muckelmann, Klaus: *See*—
Van De Venne, Gunter; Kemmerling, Frank; Bonse, Michael; Muckelmann, Klaus; and Peters, Rainer, 6,039,536, Cl. 415-216.100.
Mueller, Manfred W., to Mobil Oil Corporation. Downhole wash tool. 6,039,117, Cl. 166-312.000.
Mufti, Naheed: *See*—
Sanjurjo, Angel; Lau, Kai-Hung; Lowe, David; Canizales, Anastasia; Jiang, Naixiong; Wong, Victor; Jiang, Liqiang; Schneider, Luke V.; Mufti, Naheed; Rewick, Robert T.; Johansson, Marie; and Kardos, Keith, 6,039,894, Cl. 252-301.40R.
Muha, Michael Steven: *See*—
Clark, Christopher Joseph; Moulthrop, Andrew Alfred; Muha, Michael Steven; and Silva, Christopher Patrick, 6,041,077, Cl. 375-224.000.
Mühlbauer, Wolfgang: *See*—
Hübner, Heijo; Lübbers, Dierk; and Mühlbauer, Wolfgang, 6,040,354, Cl. 523-109.000.
Muhlhoff, Olivier, to Compagnie Generale des Etablisse-Michelin-Michelin & Cie. Safety insert with warning function. 6,039,099, Cl. 152-158.000.
Mukai, Masanori, to Fujitsu Limited. Notes accepting apparatus. 6,039,246, Cl. 235-379.000.
Mukaihira, Takafumi: *See*—
Yamamoto, Ichiro; Itoh, Manabu; Shimojo, Masato; Yumiya, Yasunobu; Mukaihira, Takafumi; and Akada, Yasushige, 6,040,331, Cl. 514-411.000.
Mukojima, Masahiro; and Kamiya, Ryo, to Yamaha Corporation. Method and device for generating a tone. 6,040,515, Cl. 84-603.000.
Mulders, Stephanus: *See*—
Kraiczyk, Josef; and Mulders, Stephanus, 6,039,601, Cl. 439-500.000.
Muliadiredja, Achmad R.: *See*—
Kennelly, Kevin; Gardiner, Ian; Noble, David; and Muliadiredja, Achmad R., 6,039,507, Cl. 405-227.000.
Müller, Anton, to Eisen - und Drahtwerk Erlau Aktiengesellschaft. Stay member for tire chains, especially for protective tire chains. 6,039,100, Cl. 152-243.000.
Muller, Gerhard: *See*—
Berlien, Hans-Peter; Muller, Gerhard; Beuthan, Jürgen; and Philipp, Carsten, 6,039,728, Cl. 606-15.000.
Muller, Harry; and Mathes, Joachim, to ITT Manufacturing Enterprises, Inc. Overpaintable bumper with ultrasound transducer. 6,039,367, Cl. 293-117.000.
Müller, Heinz: *See*—
Hegner, Frank; Schmidt, Elke Maria; Güther, Volker; Otto, Andreas; Breme, Jürgen; Müller, Heinz; and Turnsek, Jürgen Peter, 6,039,918, Cl. 420-422.000.
Müller, Hubert; and Svejkovsky, Ulrich, to SMS Schloemann-Siemag Aktiengesellschaft. Method of operating a roll stand arrangement. 6,038,757, Cl. 29-527.700.
Müller, Klaus-Helmut: *See*—
Thielert, Wolfgang; Bohne, Gerhard; and Müller, Klaus-Helmut, 6,040,271, Cl. 504-134.000.
Mullis, Kary B.: *See*—
Erlich, Henry A.; Horn, Glenn; Saiki, Randall K.; Mullis, Kary B.; and Gelfand, David H., 6,040,166, Cl. 435-194.000.
Multilift Oy: *See*—
Mylläri, Esa, 6,039,527, Cl. 414-491.000.
Multisorb Technologies, Inc.: *See*—
Murray, Patrick M., 6,038,881, Cl. 62-474.000.
Mumm, Rita: *See*—
Spencer, Michael; Mumm, Rita; and Gwyn, Jeff, 6,040,497, Cl. 800-288.000.
Mumper, Russell J.: *See*—
Rolland, Alain; and Mumper, Russell J., 6,040,295, Cl. 514-44.000.
Munch, Carl A., to TRW Inc. Vehicle occupant weight sensor. 6,040,532, Cl. 177-144.000.
Münch, Ulrich; Jaeggi, Dominik; and Schneeberger, Niklaus, to EM Microelectronic-Marin SA. Thermoelectric sensor. 6,040,579, Cl. 250-344.000.
Münker, Jochen: *See*—
Hartung, Hans-Georg; Münker, Jochen; and Richter, Hans-Peter, 6,038,906, Cl. 72-241.800.
Munneke, Christiaan Antoon: *See*—
de Haan, Hendrik Andries; and Munneke, Christiaan Antoon, 6,038,835, Cl. 53-460.000.
Munnich, Arnold: *See*—
Melki, Judith; and Munnich, Arnold, 6,040,142, Cl. 435-6.000.
Munoz, Jorge: *See*—
Cheah, Chuan; Munoz, Jorge; and Kinzer, Dan, 6,040,626, Cl. 257-735.000.
Munoz-Baca, Julio Manuel; Bäumer, Klaus; and Bald, Erhard, to Hylsa S.A. de C.V.; and SMS Schloemann-Siemag Aktiengesellschaft. Thin strip coiling system. 6,039,283, Cl. 242-534.000.

Murakami, Eiji: *See*—
Kimura, Kenichi; Shiga, Akira; Hashiguchi, Toshihiko; Murakami, Eiji; and Sasaki, Katsumi, 6,039,752, Cl. 606-205.000.

Murakami, Hiroshi; Yoshioka, Koji; Morita, Keizo; Itokazu, Masafumi; Nakabayashi, Ken-ichi; Yamamoto, Akira; and Haraguchi, Munehiro, to Fujitsu Limited. Active-matrix liquid crystal display and method of driving same. 6,040,814, Cl. 345-94.000.

Murakami, Katsumi: *See*—
Kataoka, Ichiro; Aoki, Kunimitsu; Furuya, Yoshiyuki; Matsushita, Junichi; Nishiyama, Hiroshi; Nakajima, Katsutoshi; Norizuki, Akira; Murakami, Katsumi; and Amari, Takeyuki, 6,040,760, Cl. 340-425.500.

Murali, Dhanabalan: *See*—
Hausheer, Fredrick H.; Murali, Dhanabalan; and Seetharamulu, Peddaiahgari, 6,040,330, Cl. 514-408.000.

Muramatsu, Hironobu: *See*—
Fujiki, Hironao; Miyoshi, Kei; and Muramatsu, Hironobu, 6,040,361, Cl. 523-209.000.

Murata, Jun, to Canon Kabushiki Kaisha. Charging member having an elastomeric member including an elastomeric material having a double oxide. 6,041,209, Cl. 399-313.000.

Murata, Kousaku: *See*—
Ogura, Takashi; and Murata, Kousaku, 6,039,145, Cl. 181-167.000.

Murata Manufacturing Co., Ltd.: *See*—
Abe, Yoshiaki; and Hirota, Toshiharu, 6,040,755, Cl. 338-22.00R.
Kaida, Hiroaki, 6,040,652, Cl. 310-320.000.
Kushihi, Yuichi; and Shikata, Masaru, 6,040,806, Cl. 343-853.000.
Masuda, Fumitoshi; and Morikami, Masashi, 6,040,757, Cl. 338-160.000.
Sekijima, Takenori; Fujii, Takashi; Wakino, Kikuo; and Okada, Masakatsu, 6,039,802, Cl. 117-49.000.
Takeuchi, Haruyuki, 6,040,972, Cl. 361-119.000.
Tanaka, Hiroaki; Sasaki, Yutaka; and Hashimoto, Takuya, 6,040,745, Cl. 333-26.000.

Murata, Masanao: *See*—
Onishi, Masanori; Murata, Masanao; Nakai, Yutaka; Yasuda, Katsumi; Sugino, Tsukasa; Nakagawa, Susumu; and Miura, Kouji, 6,041,274, Cl. 701-26.000.

Murata, Shizuo: *See*—
Sawada, Shinichi; Murata, Shizuo; and Isoyama, Toyoshiro, 6,040,890, Cl. 349-182.000.

Murata, Toshinori: *See*—
Bando, Yumi; Okamura, Takumi; and Murata, Toshinori, 6,040,867, Cl. 348-423.000.

Murdock, Thomas O.: *See*—
Venkatraman, Subramanian S.; Murdock, Thomas O.; and Pudjijanto, Stephanus, 6,039,977, Cl. 424-486.000.

Murphy, Edward J.; Classey, Jeffrey; and Szum, David M., to DSM N.V. Method of making a radiation-curable ink composition, radiation-curable ink composition and ribbon assembly. 6,040,357, Cl. 523-160.000.

Murphy, James L.: *See*—
Ringel, Cary J.; and Murphy, James L., 6,039,151, Cl. 187-207.000.

Murphy, Mike: *See*—
Ng, Tony; and Murphy, Mike, 6,039,460, Cl. 362-267.000.

Murphy, Oliver J.; Salinas, Carlos; and Cisar, Alan J., to Lynntech, Inc. Apparatus and method for compressing a stack of electrochemical cells. 6,040,072, Cl. 429-12.000.

Murray, Bradley A., to Motorola. Event reminder for a communication device. 6,040,781, Cl. 340-825.220.

Murray, Inc.: *See*—
Bates, Ray G., Jr.; Deweese, Robert M., Jr.; and Burns, John A., 6,038,841, Cl. 56-15.800.

Murray, Patrick M., to Multisorb Technologies, Inc. Adsorbent unit for air conditioning system. 6,038,881, Cl. 62-474.000.

Murthy, Ashok: *See*—
Komplin, Steven Robert; Murthy, Ashok; and Sullivan, Carl Edmond, 6,039,439, Cl. 347-65.000.

Murty, Balarama Vempaty, to General Motors Corporation. High voltage bus and auxiliary heater control system for an electric or hybrid vehicle. 6,040,561, Cl. 219-494.000.

Muscara, Dominic. Conveyor drive and control system. 6,039,092, Cl. 141-129.000.

Muscat, Armond. Process and apparatus for the treatment of waste. 6,039,504, Cl. 405-129.000.

Muschik, Peter: *See*—
Krause, Werner; Maier, Franz-Karl; Bauer, Michael; Schuhmann Giampieri, Gabriele; Press, Wolf-Rudiger; and Muschik, Peter, 6,040,432, Cl. 534-16.000.

Muser, Paul, to Supima Holdings Inc. Bicycle seat and seat cover. 6,039,396, Cl. 297-214.000.

Musgrove, Rupert Jeremy: *See*—
Bickerton, Matthew John; Bohrer, Kathryn Ann; Hughes, Emma Suzanne; Kenworthy, Edward William; Musgrove, Rupert Jeremy; Patterson, LindaMay Rose; Porter, Steven; Salt, David Dennis; and Scattergood, Duncan Keith, 6,041,312, Cl. 705-30.000.

Mushabac, David R.; and Policht, Stanislaw A., to Dentrac Corp. Remote sensor apparatus and method. 6,038,780, Cl. 33-512.000.

Mussmann, Lothar; Chauvin, Yves; and Olivier, Helene, to Institut Francais du Petrole. Catalytic composition based on transition metal complexes, and a process for the hydrogenation of unsaturated compounds. 6,040,263, Cl. 502-164.000.

Musy, Jean-Pierre: *See*—
Tu, Mai Xuan; Schwab, Michel; and Musy, Jean-Pierre, 6,041,022, Cl. 368-64.000.

Mutoh Industries Ltd.: *See*—
Yamada, Yoshikuni; Nozawa, Shinya; and Yamada, Yutaka, 6,038,776, Cl. 33-18.100.

Muttin, Frédéric: *See*—
Laporte, Jean-Jacques; Tassily, Eric; and Muttin, Frédéric, 6,039,349, Cl. 280-748.000.

MWM Distributors: *See*—
Meli, Oswald P. J., 6,039,361, Cl. 285-148.190.

Myers, Charles; Trepel, Jane; Kang, Won Ki; Whitesell, Luke; and Neckers, Len, to United States of America, Health and Human Services. Use of inhibitors of 3-hydroxy-3-methylglutaryl coenzyme a reductase as a modality in cancer therapy. 6,040,334, Cl. 514-460.000.

Myers, Ken L.: *See*—
L'Allier, James J.; Welsh, Sally H.; Nielsen, Boyd W.; Miles, Kurt W.; Myers, Ken L.; Henrie, Stephen P.; Norberg, Michael I.; and Hellwell, Laura I., 6,039,575, Cl. 434-323.000.

Myers, Loren D., to Loudon Enterprises, Inc. Rock drill. 6,039,127, Cl. 175-57.000.

Mylchreest, Donald G.: *See*—
Anderson, David K.; Chiu, John H.; McNary, Steven F.; Phyfe, Nicole M.; Turek, David G.; and Mylchreest, Donald G., 6,039,008, Cl. 122-510.000.

Mylläri, Esa, to Multilift Oy. Container combination and a mehtod of handling containers. 6,039,527, Cl. 414-491.000.

N. E. Medical Center Hospitals: *See*—
Durville, Frederick M.; Connolly, Raymond J; Lantis, John C; Rediker, Robert H; and Schwaitzberg, Steven D., 6,039,729, Cl. 606-16.000.

Nabahi, Shohre, to Hoechst Marion Roussel. Intravaginal drug delivery device. 6,039,968, Cl. 424-433.000.

Nabors, William; Yates, Debra S.; Linnebur, David H.; Rodriguez, Jon; and Hill, Andrew, to Coleman Company, Inc., The. Foldable tool with removable tool cartridged mechanism for securing tool cartridge. 6,038,723, Cl. 7-128.000.

Nadherny, Rudolph E., to Ireco, Inc. Cam-operated single acting hatch cover lock. 6,039,362, Cl. 292-197.000.

Nadkarni, Anil V.: *See*—
Dalal, Kirit; Köhler, Ekkehard; and Nadkarni, Anil V., 6,039,785, Cl. 75-235.000.

Näff, Dominik; and Lörenz, René, to Etablissement Supervis. Method of forming a formlocking connection of two telescopic tubes and a formlocking connection formed thereby. 6,039,502, Cl. 403-282.000.

Nagahashi, Kenji: *See*—
Kawabe, Keiko; Matsuo, Akihiko; Kimura, Minako; Nagahashi, Kenji; and Uehara, Sanya, 6,041,177, Cl. 395-704.000.

Nagai, Michio: *See*—
Okumura, Yoichiro; Nagai, Michio; Terada, Hiroshi; and Maruyama, Atsushi, 6,041,187, Cl. 396-132.000.

Nagai, Nobuyuki: *See*—
Oono, Masahiro; Iwanade, Hisao; Saitoh, Noboru; Sato, Koji; Shiba, Sukenori; Yoshida, Tatsuya; and Nagai, Nobuyuki, 6,040,677, Cl. 318-696.000.

Nagai, Seiji: *See*—
Koide, Norikatsu; Asami, Shinya; Umezaki, Junichi; Koike, Masayoshi; Yamasaki, Shiro; and Nagai, Seiji, 6,040,588, Cl. 257-15.000.

Nagai, Yukihiro; and Mametani, Tomoharu, to Mitsubishi Denki Kabushiki Kaisha. Semiconductor device with moisture resistant fuse portion. 6,040,615, Cl. 257-529.000.

Nagakubo, Yasunori: *See*—
Miyazaki, Akimitsu; Ibukuro, Sadao; and Nagakubo, Yasunori, 6,040,931, Cl. 359-110.000.

Nagano, Akihiko: *See*—
Tsuboi, Takayuki; Yagyu, Mineto; Nagano, Akihiko; and Kikuchi, Hiroshi, 6,040,880, Cl. 349-5.000.

Nagaraj, Krishnaswamy, to Lucent Technologies, Inc. Circuit for optimal signal slicing in a binary receiver. 6,041,084, Cl. 375-317.000.

Nagaraj, Ravi: *See*—
Hart, Frank P.; Nagaraj, Ravi; Noble, James L.; and Songer, Neil W., 6,041,372, Cl. 710-62.000.

Nagasaka, Hideaki; Samoto, Haruhiko; Yashiro, Yoshinobu; and Higaki, Yoshiyuki, to Yamaha Hatsudoki Kabushiki Kaisha. Induction system for fuel injected engine. 6,039,029, Cl. 123-442.000.

Nagasawa, Tadahiko, to Amada Company, Limited. Method of bending operations and bending system using the same. 6,038,899, Cl. 72-14.800.

Nagashima, Tomotaka; Okabe, Michio; Noda, Toshiharu; and Okawachi, Kiyoshi, to Daido Tokushuko Kabushiki Kaisha; and Nittan Valve Co., Ltd. High corrosion resisting alloy for diesel engine valve. 6,039,919, Cl. 420-446.000.

Nagata, Kinya: *See*—
Ogawa, Kazuyuki; Tanaka, Kazuya; Nagata, Kinya; and Takano, Syoichi, 6,040,426, Cl. 530-350.000.

Nagatani, Kazuo: *See*—
Fukumasa, Hidenobu; Oishi, Yasuyuki; Nagatani, Kazuo; and Hamada, Hajime, 6,041,034, Cl. 370-203.000.

Nagayama, Hitoshi; and Nezu, Motoi, to Speedfam Co., Ltd. Work planarizing method and apparatus. 6,039,638, Cl. 451-288.000.

Nagel, Joerg: *See*—
Mrosik, Jan Michael; Nagel, Joerg; and Stojanoff, Christo G., 6,040,898, Cl. 356-5.090.

Nagle, James Robert, II: *See*—

Kinal, George Vladimir; Nagle, James Robert, II; Soddu, Claudio; and Ryan, Fintan Richard, 6,040,798, Cl. 342-357.010.

Naiini, Ahmad A.: *See*—
Blakeney, Andrew J.; Medina, Arturo N.; Toukhy, Medhat A.; Ferreira, Lawrence; Jeffries, Alfred T., III; and Naiini, Ahmad A., 6,040,107, Cl. 430-165.000.

Naikal, Najibullah: *See*—
Diep, Vinh Hew; and Naikal, Najibullah, 6,041,121, Cl. 379-446.000.

Nailor, William K., III: *See*—
Clark, Stephen L.; Horchler, David C.; Stoner, Stuart C.; Pontius, Glenn J.; and Nailor, William K., III, 6,038,762, Cl. 29-739.000.

Naito, Takashi: *See*—
Yamamoto, Hiroki; Naito, Takashi; Namekawa, Takashi; Takahashi, Ken; Watanabe, Masahiro; and Takeo, Noriyuki, 6,040,029, Cl. 428-64.100.

Naka, Akio; Yamamoto, Tetsuya; and Mori, Yoshikuni, to Nippon Shokubai Co., Ltd. Carrier particles for use in electrostatic image development and electrostatic image developer. 6,040,101, Cl. 430-108.000.

Naka, Hiroyuki: *See*—
Mitani, Masato; Nakajima, Kazuto; Kotani, Hiroyuki; Hokazono, Nobutaka; Naka, Hiroyuki; Yamaguchi, Akira; Ikeda, Junji; and Aoki, Nobuyuki, 6,040,016, Cl. 427-421.000.

Nakabayashi, Ken-ichi: *See*—
Murakami, Hiroshi; Yoshioka, Koji; Morita, Keizo; Itokazu, Masafumi; Nakabayashi, Ken-ichi; Yamamoto, Akira; and Haraguchi, Munehiro, 6,040,814, Cl. 345-94.000.

Nakada, Mitsuyuki: *See*—
Fujii, Nobuhiko; Nakada, Mitsuyuki; and Aoki, Kazuomi, 6,040,377, Cl. 524-571.000.

Nakadaira, Shiro: *See*—
Tanaka, Tetsuya; Tsuzuki, Koichi; Nishijima, Noriyo; Handa, Fumitaka; and Nakadaira, Shiro, 6,039,866, Cl. 210-136.000.

Nakagawa, Kazumoto: *See*—
Himeshima, Tomoharu; Nakagawa, Kazumoto; Iwai, Tatsuo; and Watanabe, Takayuki, 6,039,892, Cl. 252-188.280.

Nakagawa, Susumu: *See*—
Onishi, Masanori; Murata, Masanao; Nakai, Yutaka; Yasuda, Katsumi; Sugino, Tsukasa; Nakagawa, Susumu; and Miura, Kouji, 6,041,274, Cl. 701-26.000.

Nakagawa, Taizo: *See*—
Takeshita, Naoki; Kusano, Manabu; Sagawa, Fumihiko; and Nakagawa, Taizo, 6,040,529, Cl. 174-254.000.

Nakagawa, Takao; and Tsuda, Tadayuki, to Canon Kabushiki Kaisha. Developer detecting apparatus for detecting the position of an upper surface of developer contained in a container and process cartridge comprising such apparatus. 6,041,196, Cl. 399-27.000.

Nakagawa, Yoshio: *See*—
Kimura, Nobutake; Ariga, Masato; Yamakawa, Hirohito; Nakagawa, Yoshio; and Shimizu, Akio, 6,040,495, Cl. 800-8.000.

Nakagawa, Yoshiro: *See*—
Kanazawa, Kiyosumi; and Nakagawa, Yoshiro, 6,040,962, Cl. 360-113.000.

Nakahama, Hidenari: *See*—
Ishida, Tatsuyoshi; Yasuda, Masaaki; Onishi, Hitoshi; Kihara, Noriaki; Tsutsui, Toshiyuki; Sagane, Toshihiro; Kawasaki, Masaaki; and Nakahama, Hidenari, 6,040,407, Cl. 526-281.000.

Nakahama, Tadamitsu: *See*—
Marutani, Yoshiaki; Tomita, Takashi; Nakahama, Tadamitsu; Uemura, Hiroyuki; Koga, Kazuhi; and Ohsawa, Mika, 6,040,009, Cl. 427-241.000.

Nakai, Yutaka: *See*—
Onishi, Masanori; Murata, Masanao; Nakai, Yutaka; Yasuda, Katsumi; Sugino, Tsukasa; Nakagawa, Susumu; and Miura, Kouji, 6,041,274, Cl. 701-26.000.

Nakajima Cooper Works, Inc: *See*—
Nakajima, Masahiko; Yamasawa, Naoyuki; and Nakamura, Masaru, 6,039,237, Cl. 228-51.000.

Nakajima, Katsutoshi: *See*—
Kataoka, Ichiro; Aoki, Kunimitsu; Furuya, Yoshiyuki; Matsushita, Junichi; Nishiyama, Hiroshi; Nakajima, Katsutoshi; Norizuki, Akira; Murakami, Katsumi; and Amari, Takeyuki, 6,040,760, Cl. 340-425.500.

Nakajima, Kazuto: *See*—
Mitani, Masato; Nakajima, Kazuto; Kotani, Hiroyuki; Hokazono, Nobutaka; Naka, Hiroyuki; Yamaguchi, Akira; Ikeda, Junji; and Aoki, Nobuyuki, 6,040,016, Cl. 427-421.000.

Nakajima, Masahiko; Yamasawa, Naoyuki; and Nakamura, Masaru, to Nakajima Cooper Works, Inc. Heating tip and method of manufacturing the same. 6,039,237, Cl. 228-51.000.

Nakajima, Michio: *See*—
Kitaguchi, Akira; Hatakenaka, Makoto; Nakajima, Michio; Motonami, Kaoru; Shiroshima, Kiyoyuki; and Yamashita, Takekazu, 6,040,614, Cl. 257-529.000.

Nakajima, Yoshiyuki, to Honda Giken Kogyo Kabushiki Kaisha. Vehicle theft prevention device with a low powered receiver. 6,040,763, Cl. 340-427.000.

Nakamura, Masaki; and Yoshida, Satoshi, to Fuji Xerox Co., Ltd. Electrophotographic toner, electrophotographic developer, and image forming method. 6,040,104, Cl. 430-110.000.

Nakamura, Masaru, to Ricoh Company, Ltd. Spread spectrum pulse position modulation system. 6,041,074, Cl. 375-200.000.

Nakamura, Masaru: *See*—
Nakajima, Masahiko; Yamasawa, Naoyuki; and Nakamura, Masaru, 6,039,237, Cl. 228-51.000.

Nakamura, Masatsugu: *See*—
Nakata, Katsuhiko; Nakamura, Masatsugu; and Hamano, Takashi, 6,040,343, Cl. 514-549.000.

Nakamura, Shigeru: *See*—
Nakao, Yasushi; and Nakamura, Shigeru, 6,040,015, Cl. 427-407.100.

Nakamura, Shin: *See*—
Kurata, Mamoru; and Nakamura, Shin, 6,041,424, Cl. 714-33.000.

Nakamura, Tamotsu, to Showa Corporation. Tilt cylinder device for outboard motor. 6,039,617, Cl. 440-61.000.

Nakamura, Yasushi, to Shimano, Inc. Multiple sprocket assembly for a bicycle. 6,039,665, Cl. 474-157.000.

Nakanishi, Akira: *See*—
Saito, Takahiko; Nakanishi, Akira; Obayashi, Shunzi; Genda, Kyoji; and Toshikage, Hideki, 6,041,191, Cl. 396-311.000.

Nakanishi, Tatsuo; Hamaguchi, Shinichi; and Kijima, Eiichi, to Konica Corporation. Electrophotographic photoreceptor, and a production method of the same. 6,040,105, Cl. 430-127.000.

Nakano, Hidetomo: *See*—
Hirata, Toshiaki; Urano, Akihiro; Fujino, Shuji; Yamada, Mitsugu; Nakano, Hidetomo; Morita, Shinji; and Miyazaki, Satoshi, 6,041,353, Cl. 709-224.000.

Nakano, Toshio: *See*—
Kanda, Motohiro; Yamamoto, Akira; Nakano, Toshio; and Yoshida, Minoru, 6,041,391, Cl. 711-112.000.

Nakao, Yasushi; and Nakamura, Shigeru, to Kansai Paint Co. Ltd. Process for formation of multilayer film. 6,040,015, Cl. 427-407.100.

Nakashima, Katsumi: *See*—
Okita, Tomoaki; Nakashima, Katsumi; Mizushima, Takashi; and Wadaki, Takeru, 6,040,351, Cl. 521-140.000.

Nakata, Katsuhiko; Nakamura, Masatsugu; and Hamano, Takashi, to Santen Pharmaceutical Co., Ltd. Remedy for keratoconjunctival diseases. 6,040,343, Cl. 514-549.000.

Nakata, Kouichi: *See*—
Tanaka, Masato; Takai, Hideyuki; and Nakata, Kouichi, 6,040,100, Cl. 430-72.000.

Nakata, Yoshie: *See*—
Noguchi, Hiromichi; Sugitani, Hiroshi; Koizumi, Yutaka; Inamoto, Tadayoshi; Aono, Kiyomi; and Nakata, Yoshie, 6,040,002, Cl. 427-96.000.

Nakata, Yuji: *See*—
Ohtomo, Fumio; Nakata, Yuji; Fukuyama, Yoshitaka; Inomata, Asako; Shibuya, Sachio; Koga, Akinori; Ishii, Junji; Ito, Shoko; and Yamamoto, Hironobu, 6,038,850, Cl. 60-39.182.

Nakatsuji, Fumio; Maeda, Toshinori; and Kamiyama, Hiroshi, to Matsushita Electric Industrial, Co. System for operating input, processing and output units in parallel and using DMA circuit for successively transferring data through the three units via an internal memory. 6,041,368, Cl. 710-20.000.

Nakauchi, Osamu, to NEC Corporation. CML-CMOS conversion circuit. 6,040,710, Cl. 326-66.000.

Nakayama, Kazuya; and Sugiyama, Koichi, to Kabushiki Kaisha Toshiba. High-breakdown-voltage semiconductor apparatus. 6,040,598, Cl. 257-329.000.

Nakayama, Yoko: *See*—
Shiraishi, Takuya; Nogi, Toshiharu; Ohsuga, Minoru; Nakayama, Yoko; and Tokuyasu, Noboru, 6,039,026, Cl. 123-399.000.

Nakayama, Yoshihumi: *See*—
Ishida, Nobuo; Togashi, Jun; Kimura, Tomomichi; Morikawa, Kiyoshi; Nakayama, Yoshihumi; Akiyama, Hiroshi; Yanagisawa, Tatsuya; and Ota, Takashi, 6,041,032, Cl. 369-191.000.

Nakayoshi, Kazumi: *See*—
Mine, Katsutoshi; Mitani, Osamu; Nakayoshi, Kazumi; and Tazawa, Rikako, 6,039,831, Cl. 156-272.600.
Mine, Katsutoshi; Mitani, Osamu; Nakayoshi, Kazumi; and Tazawa, Rikako, 6,040,362, Cl. 523-212.000.

Nakhamkin, Michael; and Potashnik, Boris, to Nakhamkin, Michael. Method of operating a combustion turbine power plant using supplemental compressed air. 6,038,849, Cl. 60-39.050.

Nam, Kee Soo: *See*—
Paek, Mun Cheol; Choi, Sung Woo; and Nam, Kee Soo, 6,040,001, Cl. 427-78.000.

Nam, Seung-hee: *See*—
Park, Young-wook; Yoo, Cha-young; Kim, Young-sun; and Nam, Seung-hee, 6,039,811, Cl. 118-719.000.

Namekawa, Takashi: *See*—
Yamamoto, Hiroki; Naito, Takashi; Namekawa, Takashi; Takahashi, Ken; Watanabe, Masahiro; and Takeo, Noriyuki, 6,040,029, Cl. 428-64.100.

Namikawa, Makoto: *See*—
Shirai, Seiichirou; Onozuka, Toshihiko; Noishiki, Takayuki; Sakai, Satoshi; Sasajima, Katsuhiro; Toyoda, Eiji; and Namikawa, Makoto, 6,040,110, Cl. 430-258.000.

Namiki, Fumihiro: *See*—
Kosaka, Tadayoshi; Toyoda, Osamu; and Namiki, Fumihiro, 6,039,622, Cl. 445-52.000.

Namiki, Hiroaki: *See*—
Kawawada, Naoki; Namiki, Hiroaki; Takehara, Isamu; Iwaki, Tadao; Ishida, Takashi; Hayashizaki, Shinichi; Shimaguchi, Hirotada; and Konno, Katsushige, 6,040,648, Cl. 310-90.000.

Nan Ya Plastics Corporation: *See*—
Jen, Zo-Chun, 6,038,847, Cl. 57-908.000.

Nankee, Robert J., II: *See*—
Kennie, Jerry; Cheng, Yi; Hope, Mark E.; Huff, Shean; Nankee, Robert J., II; Joyce, Mary; Krozek, Dennis A.; Moote, Richard K.; Richardson, Roland T.; Rotramel, William D.; and Seitz, Gary L., 6,041,278, Cl. 701-103.000.

Nanoptics, Inc.: *See*—
Lewis, Aaron; Palanker, Daniel; and Turovets, Igor, 6,039,726, Cl. 606-3.000.

Narisawa, Yoshiyuki; and Araki, Toshiyuki, to Rion Kabushiki Kaisha. Battery receiving chamber and hearing aid. 6,041,128, Cl. 381-322.000.

Narita, Keishi; Ishida, Chika; Takeuchi, Yoshie; Ohto, Chikara; Ohnuma, Shinichi; and Nishino, Tokuzo, to Toyota Jidosha Kabushiki Kaisha. Mutant prenyl diphosphate synthase. 6,040,165, Cl. 435-193.000.

Narita, Takato: *See*—
Asai, Toshiya; and Narita, Takato, 6,040,862, Cl. 348-409.000.

Narita, Tsutayoshi: *See*—
Takeuchi, Yoshiharu; Aburaya, Kiyoji; Yasu, Toshiharu; Tsubokawa, Masahiro; Sakai, Manabu; Aoshika, Shoji; and Narita, Tsutayoshi, 6,039,551, Cl. 418-88.000.

Nartey, Alwyn: *See*—
Popoff, Christine; Nartey, Alwyn; Gabriel, Robert; and Aubay, Eric, 6,040,288, Cl. 510-466.000.

Nasibova, Ayten: *See*—
Agalarov, Jafar; Nasibova, Ayten; and Nuriyev, Barat, 6,039,011, Cl. 123-51.0AA.

Nassiff, Amado: *See*—
Fado, Frank; Guasti, Peter; Nassiff, Amado; and VanBuskirk, Ronald, 6,041,301, Cl. 704-270.000.

Nation, George Wayne: *See*—
Earl, Joel Ray; Goodman, David John; and Nation, George Wayne, 6,041,324, Cl. 707-9.000.

National Aeronautics and Space Administration, The United States of America as represented by Administration of the: *See*—
Hung, Ching-Cheh, 6,039,930, Cl. 423-592.000.

National Education Corporation: *See*—
L'Allier, James J.; Welsh, Sally H.; Nielsen, Boyd W.; Miles, Kurt W.; Myers, Ken L.; Henrie, Stephen P.; Norberg, Michael I.; and Helliwell, Laura I., 6,039,575, Cl. 434-323.000.

National Jewish Medical and Research Center: *See*—
Kupfer, Abraham; Kupfer, Hannah; and Monks, Colin R. F., 6,040,152, Cl. 435-29.000.

National Molding Corporation: *See*—
Anscher, Joseph; and Capiello, Raymond, 6,038,746, Cl. 24-115.00G.

National Registry, Inc., The: *See*—
Merjanian, John Michael, 6,041,134, Cl. 382-126.000.

National Semiconductor Corporation: *See*—
Blair, Christopher S., 6,040,606, Cl. 257-384.000.
Henry, Paul M., 6,040,718, Cl. 327-71.000.
Qureshi, Fazal Ur Rehman, 6,041,426, Cl. 714-719.000.

National Starch and Chemical Investment Holding Corporation: *See*—
Carrier, Allen M.; Humphreys, Robert W. R.; and Petersen, Paul M., 6,040,406, Cl. 526-238.220.

Natsume, Munehiro: *See*—
Fujikura, Teruhiko; Kinoshita, Naoyoshi; Fujii, Makoto; Matsuhara, Kenji; and Natsume, Munehiro, 6,041,214, Cl. 399-403.000.

Naud, Steven F.; Weber, Max D.; Lucero, Lei Lani; Bird, J. Dexter, III; and Fink, Martin D., to United States of America, Navy. Integrated and automated control of a crane's rider block tagline system. 6,039,193, Cl. 212-270.000.

Naumann, Heinz: *See*—
Bach, Guenther; and Naumann, Heinz, 6,039,634, Cl. 451-49.000.

Naura, David, to STMicroelectronics S.A. Method for writing in an electrically modifiable non-volatile memory. 6,040,994, Cl. 365-185.180.

Nava, Vito Giovanni. Apparatus for packaging products in open or closed boxes, starting from a flat paperboard material. 6,038,831, Cl. 53-207.000.

Navarro, Pablo. Dredger with lockable rear door. 6,038,795, Cl. 37-341.000.

NCR Corporation: *See*—
Rainbow, David J., 6,040,040, Cl. 428-212.000.

Neag, Dorinel; Meidanis, Stylianos A.; and Carbone, Thomas R., to Chrysler Corporation. Hinge assembly. 6,038,738, Cl. 16-324.000.

NEC Corporaiton: *See*—
Okamoto, Akihiko; and Ito, Fuminori, 6,040,973, Cl. 361-235.000.

NEC Corporation: *See*—
Aiso, Fumiki, 6,040,236, Cl. 438-486.000.
Akiyama, Yutaka, 6,041,174, Cl. 395-500.330.
Anzai, Makoto, 6,041,085, Cl. 375-326.000.
Banno, Satoshi, 6,040,782, Cl. 340-825.250.
Hagiwara, Yoshihiro; Suetsugu, Junichi; Mizoguchi, Tadashi; Minemoto, Hitoshi; Takemoto, Hitoshi; Shima, Kazuo; and Yakushiji, Toru, 6,039,442, Cl. 347-89.000.
Harano, Nobuya, 6,040,804, Cl. 343-702.000.
Hasegawa, Takumi, 6,041,168, Cl. 395-500.070.
Hisamune, Yosiaki, 6,040,234, Cl. 438-439.000.
Hori, Takeshi; Uezono, Tsutomu; Yoshii, Tomoyuki; and Funayama, Yasuhiro, 6,040,106, Cl. 430-127.000.
Kakehashi, Eiichirou, 6,040,242, Cl. 438-672.000.
Kamishima, Yoshiyuki, 6,041,434, Cl. 714-807.000.
Kamiya, Hiroshi, 6,040,724, Cl. 327-170.000.
Kashihara, Mabumi, 6,041,197, Cl. 399-50.000.
Kazo, Osamu; and Kokubo, Tsuyoshi, 6,039,412, Cl. 311-39.100.
Kishimoto, Kazunori, 6,040,709, Cl. 326-59.000.
Kudoh, Kazuhiro, 6,041,218, Cl. 455-38.400.
Matsubara, Yoshihisa, 6,040,240, Cl. 438-618.000.
Mimura, Kazuya, 6,040,975, Cl. 361-523.000.
Mitsuhashi, Masashige; Ohno, Kenichi; and Yoshida, Kenichi, 6,039,635, Cl. 451-72.000.
Nakauchi, Osamu, 6,040,710, Cl. 326-66.000.
Nishio, Makoto; and Watanabe, Hiromitsu, 6,041,037, Cl. 370-228.000.
Nozaki, Takeo; and Nishii, Satoshi, 6,040,911, Cl. 356-394.000.
Onoda, Naka, 6,040,583, Cl. 250-492.220.
Takaishi, Yoshihiro, 6,040,215, Cl. 438-253.000.
Takatori, Ken-Ichi; and Sumiyoshi, Ken, 6,040,889, Cl. 349-174.000.
Takeda, Haruo; Tatsumi, Yukio; Fujitani, Ikuji; Shioda, Takuya; Yoshimi, Tomofumi; Sugimoto, Tomohiko; and Haeiwa, Kazuhisa, 6,041,082, Cl. 375-300.000.
Tanoue, Katsumi, 6,041,238, Cl. 455-452.000.
Tsuchiya, Tomohiro, 6,041,006, Cl. 365-210.000.
Uchida, Jun, 6,040,738, Cl. 329-302.000.
Yamaguchi, Yasuhiro, 6,041,342, Cl. 709-202.000.
Yanagi, Kenzo, 6,041,213, Cl. 399-401.000.
Yanagisawa, Masahiro, 6,040,031, Cl. 428-65.400.
Yoshimoto, Susumu; and Yamamoto, Yasushi, 6,040,651, Cl. 310-313.00B.

NEC Research Institute, Inc.: *See*—
Kim, Tae Jin; Thio, Tineke; and Ebbesen, Thomas Wren, 6,040,936, Cl. 359-245.000.

Neckers, Len: *See*—
Myers, Charles; Trepel, Jane; Kang, Won Ki; Whitesell, Luke; and Neckers, Len, 6,040,334, Cl. 514-460.000.

NEDCON Magazijninrichting B. V.: *See*—
Hollander, Rudolf Richard, 6,039,192, Cl. 211-186.000.

Neelchine Engineering, Inc.: *See*—
Neeley, Rocky E.; and Lane, James N., 6,038,893, Cl. 70-175.000.

Neeley, Rocky E.; and Lane, James N., to Neelchine Engineering, Inc. Lockout device. 6,038,893, Cl. 70-175.000.

Neher, Dieter: *See*—
Lupo, Donald; Remmers, Marcus; and Neher, Dieter, 6,040,069, Cl. 428-690.000.

Neher, Erwin; and Würriehausen, Frank, to Max-Planck-Gesellschaft zur Forderung der Wissenschaften e.V. Method and device for controlling fast periodic motion. 6,040,567, Cl. 250-206.000.

Nehse, Wolfgang: *See*—
John, Thomas; Kuhn, Thomas; and Nehse, Wolfgang, 6,041,276, Cl. 701-67.000.

Nelson, Dale H.; and Koullias, Iconomos A., to Lucent Technologies, Inc. Active substrate noise injection cancellation. 6,040,728, Cl. 327-292.000.

Nelson, J. Robert, Jr.: *See*—
Fleischhauer, Grier S.; Higgins, Charles T.; Losee, D. Bruce; Nelson, J. Robert, Jr.; Ripley, Robert L.; Sano, Masato; Sharpe, David E.; and Watkins, Michael L., 6,040,560, Cl. 219-494.000.

Nelson, Ricky F. Seat for use on an inner tube. 6,038,991, Cl. 114-131.000.

Nemoto, Akira, to Tachi-S Co., Ltd. Seat provided with a seat climbing/descending aid structure for easy climbing onto and descending from the seat, and a seat climbing/descending aid designed for that purpose. 6,039,402, Cl. 297-411.340.

Nemoto, Minehiro: *See*—
Shiina, Kazuhiro; Kawamoto, Koji; Miura, Masato; Ohura, Hitoshi; Ozeki, Shoichi; Akiyama, Noboru; Nunomura, Kuniharo; Nemoto, Minehiro; and Iwamura, Masahiro, 6,040,827, Cl. 345-208.000.

Nemoto, Ryoji, to Hitachi Electronics Engineering Co., Ltd. Fluorescence detector. 6,039,925, Cl. 422-82.080.

Nemugaki, Shuichi: *See*—
Hyoda, Shunji; Kita, Masaharu; Sawada, Hirotoshi; Nemugaki, Shuichi; Otsuka, Sumio; Miyawaki, Yoshitaka; Ogawa, Takashi; and Kubo, Yuhki, 6,040,453, Cl. 548-250.000.

NeoMagic Corporation: *See*—
Puar, Deepraj S.; and Ranganathan, Ravi, 6,041,010, Cl. 365-226.000.

Neopac AG: *See*—
Jordi, Hans Ulrich, 6,039,199, Cl. 215-254.000.

Morita, Naotoshi; and Wakita, Sachio, 6,039,816, Cl. 134-19.000.

Ngo, Sang T.: *See*—
Huynh, Quoi V.; Ngo, Sang T.; Judkins, Joseph James, III; and Alfano, Donald E., 6,040,668, Cl. 318-471.000.

Nguyen, Binh Q.: Redpath, Richard J.; and Singhal, Sandeep Kishan, to International Business Machines Corp. Method and system for a hybrid peer-server communications structure. 6,041,343, Cl. 709-203.000.

Nguyen, Dat Quoc: *See*—
Black, David Glenn; Hinch, Garry Dale; Nguyen, Dat Quoc; and Srinivasan, Kasturi Rangan, 6,040,098, Cl. 430-59.600.

Nguyen, Sam Linh: *See*—
Dvorak, Charles A.; Wren, Douglas L.; Fisher, Lawrence E.; Axt, Steven D.; Humphreys, Eric R.; Arzeno, Humberto B.; Beard, Colin C.; Nguyen, Sam Linh; Han, Yeun-Kwei; Roberts, Christopher R.; Lund, Jan P.; and Fatheree, Paul R., 6,040,446, Cl. 544-276.000.

Nicca Chemical Co., Ltd.: *See*—
Mizuno, Yuhei; Kawamura, Yoshihiro; and Kondo, Shiro, 6,039,766, Cl. 8-142.000.

Nichols, Stacy W.: *See*—
Beshai, Maged E.; and Nichols, Stacy W., 6,041,040, Cl. 370-232.000.

Nickerson, Danny L. Baseball scorekeeper. 6,041,266, Cl. 700-92.000.

Nickey, George A.: *See*—
Flynn, Robin L.; Hayes, Dan M.; and Nickey, George A., 6,038,888, Cl. 65-304.000.

Nickias, Peter N.; Marks, Tobin J.; and Obora, Yasushi, to Dow Chemical Company, The; and Northwestern University. Saturated tricyclic ligand containing metal complexes and olefin polymerization process. 6,040,401, Cl. 526-160.000.

Nicoletta, Carmine: *See*—
Sanchez, Hector; Alvarez, Jose M.; Siegel, Joshua; and Nicoletta, Carmine, 6,040,729, Cl. 327-309.000.

Nicox S.A.: *See*—
Del Soldato, Piero; and Sannicolo', Francesco, 6,040,341, Cl. 514-509.000.

Niederman, Robert Raymond; Starner, Allen Richard; and Ryan, Shawn Gregory, to General Motors Corporation. Variable output inflator with adaptive heat sinking. 6,039,348, Cl. 280-741.000.

Niedospial, John J., Jr., to Bracco Research USA. Multiple use universal connector. 6,039,718, Cl. 604-408.000.

Niehaus, Jeffrey Alan: *See*—
Yu, Xianggang; Sculley, Terry Lee; and Niehaus, Jeffrey Alan, 6,041,339, Cl. 708-313.000.

Niehaus, K. Lynn: *See*—
Edwards, David H.; Newcomer, Kevin L.; and Niehaus, K. Lynn, 6,039,546, Cl. 417-61.000.

Nielsen, Boyd W.: *See*—
L'Allier, James J.; Welsh, Sally H.; Nielsen, Boyd W.; Miles, Kurt W.; Myers, Ken L.; Henrie, Stephen P.; Norberg, Michael I.; and Helliwell, Laura I., 6,039,575, Cl. 434-323.000.

Nielsen, Peter Madelaire: *See*—
Burns, Clay Allen; Nielsen, Peter Madelaire; Sullivan, John Aloysius; and Sullivan, Frederic Ballou-Viaux, 6,039,329, Cl. 280-11.190.

Nifco Inc.: *See*—
Nishina, Yuji; and Kimisawa, Toshihide, 6,039,296, Cl. 248-311.200.

Niimi, Tomohiro: *See*—
Yamane, Kazuyasu; Oikawa, Takeya; and Niimi, Tomohiro, 6,041,244, Cl. 455-575.000.

Nijhof, Engbert B. G.: *See*—
Bucks, Marcel J. M.; and Nijhof, Engbert B. G., 6,040,663, Cl. 315-291.000.

Nika Health Products Limited: *See*—
Glück, Reinhard; Klein, Peter; Herrmann, Peter; and Wälti, Ernst Rudolf, 6,040,167, Cl. 435-235.100.

Nikon Corporation: *See*—
Enichen, William A.; and Robinson, Christophe F., 6,040,095, Cl. 430-5.000.
Inoue, Hideya; and Takemoto, Masami, 6,041,184, Cl. 396-51.000.
Kakizaki, Yukio; Kiuchi, Toru; Amano, Kesayoshi; and Umatate, Toshikazu, 6,040,096, Cl. 430-5.000.
Ono, Kazuya, 6,040,675, Cl. 318-649.000.

Nill, Andrew J., Jr. Roof vents with moisture detectors and roof systems incorporating same. 6,040,775, Cl. 340-604.000.

Nims, Robert A.; O'Brien, Patrick Lee; and Emerson, Terrence, to Allied-Signal, Inc. Microturbine power generating system. 6,040,635, Cl. 290-52.000.

Nimura, Mitsuhiro; Hayashi, Seiji; Ito, Yasunobu; and Inoue, Keizo, to Aisin AW Co., Ltd. Information guidance system based on structure configuration map. 6,041,281, Cl. 701-211.000.

Nine West Group, Inc.: *See*—
Pyle, Clifford L.; and Ludemann, John F., 6,038,790, Cl. 36-30.00R.

Nippon Hoso Kyokai: *See*—
Takeda, Haruo; Tatsumi, Yukio; Fujitani, Ikuji; Shioda, Takuya; Yoshimi, Tomofumi; Sugimoto, Tomohiko; and Haeiwa, Kazuhisa, 6,041,082, Cl. 375-300.000.

Nippon Precision Circuits, Inc.: *See*—
Yamazaki, Motohiro; Ando, Shuichi; and Toyama, Akira, 6,041,291, Cl. 702-191.000.

Nippon Sanso Corporation: *See*—
Wu, Shang-Qian; Morishita, Jun-ichi; Ishihara, Yoshio; and Kimijima, Tetsuya, 6,040,915, Cl. 356-435.000.

Nippon Sheet Glass Co., Ltd.: *See*—
Anzaki, Toshiaki; and Ogino, Etsuo, 6,040,056, Cl. 428-432.000.

Nippon Shokubai Co., Ltd.: *See*—
Naka, Akio; Yamamoto, Tetsuya; and Mori, Yoshikuni, 6,040,101, Cl. 430-108.000.

Nippon Steel Corp.: *See*—
Nishida, Takanobu; and Jikuhara, Ichiro, 6,040,789, Cl. 341-50.000.

Nippon Zoki Pharmaceuticals Co., Ltd.: *See*—
Hotta, Nigishi; and Fujisawa, Hiroki, 6,040,326, Cl. 514-386.000.

Nishida, Hideo: *See*—
Kobayashi, Hiromi; Nishida, Hideo; Miura, Haruo; Eino, Takashi; and Takahashi, Kazuki, 6,039,535, Cl. 415-172.100.

Nishida, Hirobumi, to Ricoh Company, Ltd. Method and device for extracting features from gray-scale image and generating boundaries of document elements. 6,041,138, Cl. 382-197.000.

Nishida, Koji: *See*—
Kurasawa, Yoshihiro; and Nishida, Koji, 6,040,084, Cl. 429-176.000.

Nishida, Masatsugu; Ikeda, Toru; and Yokoyama, Tomoki, to Fujitsu Limited. Motor driving device, method of adjusting the same, and information storage device. 6,040,674, Cl. 318-632.000.

Nishida, Shinsuke, to Fourie Inc. Apparatus for spacially changing sound with display location and window size. 6,040,831, Cl. 345-340.000.

Nishida, Takanobu; and Jikuhara, Ichiro, to Nippon Steel Corp. Data conversion system. 6,040,789, Cl. 341-50.000.

Nishii, Satoshi: *See*—
Nozaki, Takeo; and Nishii, Satoshi, 6,040,911, Cl. 356-394.000.

Nishijima, Noriyo: *See*—
Tanaka, Tetsuya; Tsuzuki, Koichi; Nishijima, Noriyo; Handa, Fumitaka; and Nakadaira, Shiro, 6,039,866, Cl. 210-136.000.

Nishikawa, Hideki: *See*—
Imoto, Kazunobu; Oshima, Katsuyuki; and Nishikawa, Hideki, 6,040,269, Cl. 503-227.000.

Nishikawa, Kohei; Shibouta, Yumiko; and Kubo, Keiji, to Takeda Chemical Industries, Inc. Prophylactic or therapeutic drug for renal diseases. 6,040,324, Cl. 514-381.000.

Nishiki, Kenya: *See*—
Sugauchi, Kiminori; Hirata, Toshiaki; Nishiki, Kenya; Miyazaki, Satoshi; Mizuguchi, Keizo; and Fujino, Shuji, 6,041,349, Cl. 709-223.000.

Nishikibe, Masaru: *See*—
Tsuchiya, Yoshimi; Nomoto, Takashi; Ohsawa, Hirokazu; Kawakami, Kumiko; Ohwaki, Kenji; and Nishikibe, Masaru, 6,040,449, Cl. 546-193.000.

Nishimura, Koichi; Kawamura, Tatsuya; and Fujioka, Toyozo, to Idemitsu Petrochemical Co., Ltd. Copolymer, hydrogenated product thereof, and process for producing the same. 6,040,388, Cl. 525-332.100.

Nishimura, Masaharu; Ohnishi, Keizo; Yasuda, Chiaki; Kajii, Shinichiro; Patrick, William P.; and Zander, Anthony C., to Mitsubishi Jukogyo Kabushiki Kaishal; and United Technologies Corporation. Active acoustic wall. 6,041,125, Cl. 381-71.400.

Nishimura, Naoto: *See*—

Yamada, Kazuo; Mitate, Takehito; Nishimura, Naoto; Tsukuda, Yoshihiro; and Minato, Kazuaki, 6,040,092, Cl. 429-331.000.
Nishimura, Toshio, to Sharp Kabushiki Kaisha. Display device having display and imaging pixels sandwiched between same substrates. 6,040,810, Cl. 345-87.000.
Nishina, Yuji; and Kimisawa, Toshihide, to Honda Giken Kogyo Kabushiki Kaisha; and Nifco Inc. Beverage container holder for a vehicle. 6,039,296, Cl. 248-311.200.
Nishino, Tokuzo: *See*—
Narita, Keishi; Ishida, Chika; Takeuchi, Yoshie; Ohto, Chikara; Ohnuma, Shinichi; and Nishino, Tokuzo, 6,040,165, Cl. 435-193.000.
Nishio, Koji: *See*—
Sunagawa, Takuya; Watanabe, Hiroshi; Ohshita, Ryuji; Fujimoto, Masahisa; Nohma, Toshiyuki; and Nishio, Koji, 6,040,090, Cl. 429-231.950.
Nishio, Makoto; and Watanabe, Hiromitsu, to NEC Corporation. ATM virtual path switching node. 6,041,037, Cl. 370-228.000.
Nishioka, Kimihiko: *See*—
Ono, Katsuya; Shiraiwa, Masaru; and Nishioka, Kimihiko, 6,041,154, Cl. 385-116.000.
Nishioka, Kiyokazu: *See*—
Terada, Koichi; Kojima, Keiji; Fujikawa, Yoshifumi; Nojiri, Tohru; and Nishioka, Kiyokazu, 6,041,399, Cl. 712-24.000.
Nishioka, Mototsugu; Umeki, Hisashi; and Matsui, Susumu, to Hitachi, Ltd. Key distribution method and system in secure broadcast communication. 6,041,408, Cl. 713-171.000.
Nishiwaki, Jiro: *See*—
Mikami, Kazuhiro; Yamada, Kazuhito; and Nishiwaki, Jiro, 6,039,673, Cl. 477-93.000.
Nishiyama, Hiroshi: *See*—
Kataoka, Ichiro; Aoki, Kunimitsu; Furuya, Yoshiyuki; Matsushita, Junichi; Nishiyama, Hiroshi; Nakajima, Katsutoshi; Norizuki, Akira; Murakami, Katsumi; and Amari, Takeyuki, 6,040,760, Cl. 340-425.500.
Niska, Håkan; Kvarnström, Bo; and Oom, Jan, to Telefonaktiebolaget LM Ericsson. Open 'plug and play' O and M architecture for a radio base station. 6,041,228, Cl. 455-419.000.
Nissan Chemical Industries, Ltd.: *See*—
Watanabe, Yoshitane; Suzuki, Keitaro; Koyama, Yoshinari; and Iijima, Motoko, 6,040,372, Cl. 524-413.000.
Nissan Motor Co., Ltd.: *See*—
Adachi, Kazutaka; and Watanabe, Akira, 6,039,675, Cl. 477-174.000.
Fukui, Takayuki, 6,040,350, Cl. 521-135.000.
Iwano, Hiroshi; Kazama, Isamu; and Yasuoka, Masayuki, 6,039,025, Cl. 123-399.000.
Nisshin Flour Milling Co., Ltd.: *See*—
Kimura, Nobutake; Ariga, Masato; Yamakawa, Hirohito; Nakagawa, Yoshio; and Shimizu, Akio, 6,040,495, Cl. 800-8.000.
Nito, Keiichi: *See*—
Yasuda, Akio; Nito, Keiichi; Matsui, Eriko; Takanashi, Hidehiko; and Bao, Yang Ying, 6,040,884, Cl. 349-129.000.
Nitta, Satoru; and Mizunuma, Koji, to Toshiba Machine Co., Ltd. Method of adjusting a heat-displacing T-die. 6,039,904, Cl. 264-40.500.
Nitta, Takahisa: *See*—
Ohmi, Tadahiro; and Nitta, Takahisa, 6,039,814, Cl. 134-1.000.
Nittan Valve Co., Ltd.: *See*—
Nagashima, Tomotaka; Okabe, Michio; Noda, Toshiharu; and Okawachi, Kiyoshi, 6,039,919, Cl. 420-446.000.
Nittetu Chemical Engineering Ltd.: *See*—
Shimoi, Yoichi; Tamura, Hideo; Okazaki, Masaomi; and Suganuma, Takao, 6,039,879, Cl. 210-641.000.
Nitto Denko Corporation: *See*—
Shirai, Seiichirou; Onozuka, Toshihiko; Noishiki, Takayuki; Sakai, Satoshi; Sasajima, Katsuhiro; Toyoda, Eiji; and Namikawa, Makoto, 6,040,110, Cl. 430-258.000.
Niwa, Hisao: *See*—
Yamamoto, Hiroshi; Niwa, Hisao; Kojima, Yoshihiro; Maruno, Susumu; Kayashima, Kazuhiro; Kouda, Toshiyuki; Maekawa, Hidetsugu; Ito, Satoru; and Shimeki, Yasuharu, 6,041,141, Cl. 382-231.000.
Njoroge, F. George; Vibulbhan, Bancha; Pinto, Patrick A.; and Girijavallabhan, Viyyoor M., to Schering Corporation. Benzo(5,6)cycloheptapyridine cyclic ureas and lactams useful as farnesyl protein transferase inhibitors. 6,039,683, Cl. 574-274.000.
Njoroge, George F.: *See*—
Taveras, Arthur G.; and Njoroge, George F., 6,040,305, Cl. 514-232.800.
Noar, Scott R.: *See*—
Bangs, William E.; Dibenedetto, Joseph D.; Friedberg, Joyce L.; Giordano, Denise A.; Glover, Judy M.; Khoo, Chor San Heng; Ko, Sandy; MacNair, R. David C.; Noar, Scott R.; Randazzi, John J., Jr.; Stoever, Harro; and Ziegler, Paula J., 6,039,989, Cl. 426-106.000.
Noax B.V.: *See*—
Raab, Francis J., 6,038,958, Cl. 91-486.000.
Noble, David: *See*—
Kennelly, Kevin; Gardiner, Ian; Noble, David; and Muliadiredja, Achmad R., 6,039,507, Cl. 405-227.000.
Noble, James L.: *See*—
Hart, Frank P.; Nagaraj, Ravi; Noble, James L.; and Songer, Neil W., 6,041,372, Cl. 710-62.000.
Noda, Masayuki: *See*—
Ootuka, Minoru; Hiraoka, Hirokazu; Shimadu, Toru; and Noda, Masayuki, 6,040,252, Cl. 442-169.000.
Noda, Takehiko: *See*—
Tomikawa, Ichiro; Soga, Mitsuhide; Fujii, Katsuyuki; Ogawa, Katsuhide; Yoshida, Junichi; Kawachi, Shigeo; and Noda, Takehiko, 6,039,441, Cl. 347-86.000.
Noda, Toshiharu: *See*—
Nagashima, Tomotaka; Okabe, Michio; Noda, Toshiharu; and Okawachi, Kiyoshi, 6,039,919, Cl. 420-446.000.
Noe, Reginald J.; and Stroud, Toni S. Grill lifting tool. 6,039,372, Cl. 294-10.000.
Nogi, Toshiharu: *See*—
Shiraishi, Takuya; Nogi, Toshiharu; Ohsuga, Minoru; Nakayama, Yoko; and Tokuyasu, Noboru, 6,039,026, Cl. 123-399.000.
Noguchi, Hiromichi; Sugitani, Hiroshi; Koizumi, Yutaka; Inamoto, Tadayoshi; Aono, Kiyomi; and Nakata, Yoshie, to Canon Kabushiki Kaisha. Etching resist composition, pattern forming method making use of the same, printed-wiring board and its production. 6,040,002, Cl. 427-96.000.
Noguchi, Mitsuhiro; and Oowaki, Yukihito, to Kabushiki Kaisha Toshiba. Semiconductor device. 6,040,610, Cl. 257-392.000.
Noguchi, Takaharu: *See*—
Okamoto, Hiroo; Hosokawa, Kyoichi; Owashi, Hitoaki; Tachibana, Hiroaki; and Noguchi, Takaharu, 6,041,161, Cl. 386-112.000.
Noguchi, Toshitada: *See*—
Takenouchi, Kenji; Hamamoto, Tomoki; and Noguchi, Toshitada, 6,040,158, Cl. 435-89.000.
Noguchi, Yuji, to Aisin Seiki Kabushiki Kaisha. Valve timing control device. 6,039,016, Cl. 123-90.170.
Nohma, Toshiyuki: *See*—
Sunagawa, Takuya; Watanabe, Hiroshi; Ohshita, Ryuji; Fujimoto, Masahisa; Nohma, Toshiyuki; and Nishio, Koji, 6,040,090, Cl. 429-231.950.
Noishiki, Takayuki: *See*—
Shirai, Seiichirou; Onozuka, Toshihiko; Noishiki, Takayuki; Sakai, Satoshi; Sasajima, Katsuhiro; Toyoda, Eiji; and Namikawa, Makoto, 6,040,110, Cl. 430-258.000.
Nojiri, Tohru: *See*—
Terada, Koichi; Kojima, Keiji; Fujikawa, Yoshifumi; Nojiri, Tohru; and Nishioka, Kiyokazu, 6,041,399, Cl. 712-24.000.
Nojiri, Toshiyuki; and Saito, Shinichi, to Ishizuka Electronics Corporation. Frost detecting device. 6,038,872, Cl. 62-140.000.
Nokia Mobile Phones, Ltd.: *See*—
Gortz, Udo, 6,041,298, Cl. 704-223.000.
Oksanen, Markku Tapio; Peranto, Juha; and Vuorio, Martti Ensio, 6,041,234, Cl. 455-434.000.
Olkkola, Jari, 6,041,120, Cl. 379-433.000.
Turner, Clive Nathan, 6,041,229, Cl. 455-420.000.
Nokia Telecommunications Oy: *See*—
Aalto, Risto, 6,041,235, Cl. 455-437.000.
Kilkki, Matti Kalevi; and Ruutu, Jussi Pekka Olavi, 6,041,039, Cl. 370-230.000.
Siira, Mikko, 6,041,230, Cl. 455-422.000.
Nomoto, Takashi: *See*—
Tsuchiya, Yoshimi; Nomoto, Takashi; Ohsawa, Hirokazu; Kawakami, Kumiko; Ohwaki, Kenji; and Nishikibe, Masaru, 6,040,449, Cl. 546-193.000.
Noone, Michael J.: *See*—
Stahl, Kermit E.; Noone, Michael J.; and Quaranta, Joseph, 6,038,826, Cl. 52-554.000.
Norand Corporation: *See*—
Durbin, Dennis A.; and Danielson, Arvin D., 6,039,258, Cl. 235-472.010.
Norberg, Michael I.: *See*—
L'Allier, James J.; Welsh, Sally H.; Nielsen, Boyd W.; Miles, Kurt W.; Myers, Ken L.; Henrie, Stephen P.; Norberg, Michael I.; and Hellwell, Laura I., 6,039,575, Cl. 434-323.000.
Norblad, Olof: *See*—
Markström, Lars; Zander, Lennarth; Olofsson, Erik; and Norblad, Olof, 6,038,855, Cl. 60-323.000.
Nord-Micro Elektronik Feinmechanik AG: *See*—
Wandel, Hermann; Jost, Michael; Sommer, Helmut; and Fischer-Wilk, Robert, 6,038,932, Cl. 73-861.650.
Nordquist, Jack; Calahan, Mark J.; Damiano, Timothy J.; and Botka, Christopher M., to Parker-Hannifin Corporation. Passive electronic damping for step motor. 6,040,676, Cl. 318-696.000.
Nordson Corporation: *See*—
Faulkner, W. Harrison, III; Bullock, David; DeGray, Dennis; and Sarasohn, Neil, 6,039,217, Cl. 222-146.500.
Noréus, Sture E. O.: *See*—
Brännland, Rolf C. A.; and Noréus, Sture E. O., 6,039,837, Cl. 162-29.000.
Noritsu Koki Co., Ltd.: *See*—
Motooka, Eiji, 6,040,896, Cl. 355-72.000.
Norizuki, Akira: *See*—
Kataoka, Ichiro; Aoki, Kunimitsu; Furuya, Yoshiyuki; Matsushita, Junichi; Nishiyama, Hiroshi; Nakajima, Katsutoshi; Norizuki, Akira; Murakami, Katsumi; and Amari, Takeyuki, 6,040,760, Cl. 340-425.500.
Nortel Networks Corporation: *See*—
Bernardin, Charles P.; and Yee, Meng F., 6,041,236, Cl. 455-446.000.
Beshai, Maged E.; and Nichols, Stacy W., 6,041,040, Cl. 370-232.000.
Khaleghi, Farideh; Solheim, Alan Glen; and Barnard, Chris Wilhelm, 6,040,933, Cl. 359-124.000.
Shelton, Brian R., 6,041,111, Cl. 379-201.000.
Thomas, Robert McLaren, 6,041,223, Cl. 455-326.000.

North Caroline State University: *See*—
Stomp, Anne-Marie; and Rajbhandari, Nirmala, 6,040,498, Cl. 800-294.000.
Northern Research and Engineering Corp: *See*—
Stoner, George S.; and Schoonmaker, Peter M., 6,039,534, Cl. 415-162.000.
Northern Telecom Limited: *See*—
Smith, Martin Stevens; Smith, Adrian David; Dalley, James Edward Joseph; and McKenna, Stephen John, 6,040,802, Cl. 343-700.0MS.
Northrop Grumman Corporation: *See*—
Davidson, Steven Frederic; Vollendorf, Kim David; DiCicco, Michael Frank; Collar, Stuart John; and Stone, Jeffrey Jay, 6,041,243, Cl. 455-575.000.
Sher, Richard Alan, 6,041,379, Cl. 710-129.000.
Northwestern University: *See*—
Nickias, Peter N.; Marks, Tobin J.; and Obora, Yasushi, 6,040,401, Cl. 526-160.000.
Nose, Sachiyuki, to Matsushita Electronics Corporation. Semiconductor device and wiring body. 6,040,621, Cl. 257-666.000.
Nova, Richard C.: *See*—
Sullivan, Joseph L.; Borschowa, Lawrence A.; and Nova, Richard C., 6,041,254, Cl. 607-5.000.
Novak, Mark A.: *See*—
Messick, DeLaun T.; and Novak, Mark A., 6,039,073, Cl. 137-515.700.
Novartis AG: *See*—
Dietrich, Paul S.; Van Grinsven, Martinus Quirinus Joseph Marie; Gielen, Johannes Jacobus Ludgerus; de Haas, Johannes Maria; and Van Driel, Roeland, 6,040,185, Cl. 435-468.000.
Gabe, Howard L., 6,040,501, Cl. 800-312.000.
Hemmings, Brian Arthur; and Millward, Thomas Anders, 6,040,164, Cl. 435-189.000.
Hirt, Thomas; Baron, Richard Carlton; Lohmann, Dieter; and Meier, Wolfgang Peter, 6,039,913, Cl. 264-331.110.
Threlkeld, Kevin; and McClure, Donald, 6,040,502, Cl. 800-312.000.
Novartis Finance Corporation: *See*—
Law, Marcus Dixon; and Dietz, Jon M., 6,040,496, Cl. 800-280.000.
Rice, Douglas; Carozzi, Nadine; Anderson, David M.; Rajasekaran, Kanniah; Rangan, Thirumale S.; Yenofsky, Richard; and Lotstein, Richard, 6,040,504, Cl. 800-314.000.
Novartis Nutrition AG: *See*—
Cracauer, Raymond F.; and Michels, Lester D., 6,039,714, Cl. 604-174.000.
Novason Corporation: *See*—
Walker, William F.; Toth, Cynthia A.; and Davidsen, Richard E., 6,039,691, Cl. 600-452.000.
Novellus Systems, Inc.: *See*—
Raaijmakers, Ivo J.; Burkhart, Chris W.; Christensen, David; and Susoeff, Michael N., 6,039,074, Cl. 137-537.000.
Novo Nordick A/S: *See*—
Lassen, Soren Flensted; Bech, Lisbeth; Ohmann, Anders; Breinholt, Jens; Fuglsang, Claus Crone; and Ostergaard, Peter Rahbek, 6,039,942, Cl. 424-94.600.
Novo Nordisk A/S: *See*—
Andersen, Knud Erik; Jørgensen, Tine Krogh; Hohlweg, Rolf; Fischer, Erik; Olsen, Uffe Bang; Polivka, Zdenek; Sindelar, Karel; and Valenta, Vladimir, 6,040,318, Cl. 514-329.000.
Berkner, Kathleen L.; Petersen, Lars Christian; Hart, Charles E.; Hedner, Ulla; and Bregengaard, Claus, 6,039,944, Cl. 424-94.640.
Hohlweg, Rolf; Madsen, Peter; Jørgensen, Tine Krogh; Andersen, Knud Erik; Watson, Brett; Polivka, Zdenek; Konigova, Otylie; Kovandova, Martina; Silhánková, Alexandra; and Valenta, Vladimir, 6,040,302, Cl. 514-217.000.
Madsen, Ole Dragsbaek; Michelsen, Birgitte Koch; Petersen, Jacob Steen; Roep, Bart O.; and Teisner, Borge, 6,040,134, Cl. 435-4.000.
Wagner, Peter; and Si, Joan Qi, 6,039,982, Cl. 426-18.000.
Wagner, Peter; and Si, Joan Qi, 6,039,983, Cl. 426-18.000.
Nowak, David: *See*—
Cummings, Tom; Nowak, David; and Chang, Byung Jin, 6,039,461, Cl. 362-287.000.
Nozaki, Takeo; and Nishii, Satoshi, to NEC Corporation. Reference image forming method and pattern inspection apparatus. 6,040,911, Cl. 356-394.000.
Nozawa, Shinya: *See*—
Yamada, Yoshikuni; Nozawa, Shinya; and Yamada, Yutaka, 6,038,776, Cl. 33-18.100.
NSM Aktiengesellschaft: *See*—
Schulze, Ullrich, 6,039,649, Cl. 463-16.000.
NTN Corporation: *See*—
Furukawa, Taichiro; Kondoh, Kohhei; Yamashita, Atsushi; and Kanbori, Seiji, 6,039,475, Cl. 384-580.000.
Nudelman, Abraham: *See*—
Rephaeli, Ada; and Nudelman, Abraham, 6,040,342, Cl. 514-548.000.
Nunan, John G., to Asec Manufacturing General Partnership. Methods of making highly dispersed substantially uniform cerium and zirconium mixed-metal-oxide composite supports for exhaust conversion catalysts. 6,040,265, Cl. 502-242.000.
Nunomura, Kunihoro: *See*—
Shiina, Kazuhiro; Kawamoto, Koji; Miura, Masato; Ohura, Hitoshi; Ozeki, Shoichi; Akiyama, Noboru; Nunomura, Kunihoro; Nemoto, Minehiro; and Iwamura, Masahiro, 6,040,827, Cl. 345-208.000.
Nuriyev, Barat: *See*—
Agalarov, Jafar; Nasibova, Ayten; and Nuriyev, Barat, 6,039,011, Cl. 123-51.0AA.
Nutt, Alan C. G.: *See*—
Hirsh, Jeffrey I.; Revelli, Joseph F., Jr.; and Nutt, Alan C. G., 6,040,857, Cl. 348-241.000.
Nutt, Stephen L.: *See*—
Kamboj, Rajender; Elliott, Candace E.; and Nutt, Stephen L., 6,040,175, Cl. 435-325.000.
NV Owens-Corning S.A.: *See*—
Jander, Michael Horst, 6,038,949, Cl. 83-13.000.
Nyacol Products, Inc.: *See*—
Catone, David L., 6,040,371, Cl. 524-409.000.
Nyce, Jonathan W., to East Carolina University. Specific antisense oligonucleotide composition & method for treatment of disorders associated with bronchoconstriction and lung inflammation. 6,040,296, Cl. 514-44.000.
Nygren, William D., to Lockheed Martin Corporation. Hinge for deployable truss. 6,038,736, Cl. 16-275.000.
Nynex Science and Technology Inc.: *See*—
Citron, Howard M.; Asano, David K.; Baietto, Henry R.; Chen, Sullivan S.; De Frondeville, Alexis W.; Hahn, Jeffrey H.; Probst, Thomas J., Jr.; Massucci, John E.; Costin, Dinu; and Peragine, Ralph E., 6,038,952, Cl. 83-605.000.
Nypro Inc.: *See*—
Cote, Andrew L., Sr.; and Ganem, Charles F., 6,039,302, Cl. 251-149.100.
O.M.D. Optical Memory Devices, Ltd.: *See*—
Glushko, Boris, 6,039,898, Cl. 264-1.330.
O, Waho; and Katsuyama, Tsutomu, to Oki Electric Industry Co., Ltd. CDMA transmitter having a variable gain circuit inserted between a transmitter mixer and a transmitter antenna. 6,041,081, Cl. 375-297.000.
Oak Technology, Inc.: *See*—
Quan, Thomas A.; and Grimsley, John L., 6,041,028, Cl. 369-44.340.
Oakley, Inc.: *See*—
Jarvis, Edward C., 6,038,705, Cl. 2-424.000.
OB Inovations, Inc.: *See*—
Sliwa, Jack; and Blumenfeld, Lee A., 6,039,701, Cl. 600-588.000.
Obana, Katsumi: *See*—
Iwata, Naohiro; Obana, Katsumi; Terashima, Hideyuki; and Aoki, Noriyuki, 6,040,919, Cl. 358-400.000.
Obayashi, Shunzi: *See*—
Saito, Takahiko; Nakanishi, Akira; Obayashi, Shunzi; Genda, Kyoji; and Toshikage, Hideki, 6,041,191, Cl. 396-311.000.
Obejct Technology Licensing Corporation: *See*—
Webb, Richard D.; and Watanabe, Ryoji, 6,040,838, Cl. 345-433.000.
Obora, Yasushi: *See*—
Nickias, Peter N.; Marks, Tobin J.; and Obora, Yasushi, 6,040,401, Cl. 526-160.000.
OBrien, John; Scherer, Axel; Yariv, Amnon; Lee, Reginald; Xu, Yuanjian; and Painter, Oskar, to California Institute of Technology. Semiconductor device with electrostatic control. 6,040,590, Cl. 257-94.000.
O' Brien, Patrick Lee: *See*—
Nims, Robert A.; O'Brien, Patrick Lee; and Emerson, Terrence, 6,040,635, Cl. 290-52.000.
O' Brien, Timothy: *See*—
Compadre, Cesar; Breen, Philip; Salari, Hamid; Fifer, E. Kim; Lattin, Danny L.; Slavik, Michael; Li, Yanbin; and O'Brien, Timothy, 6,039,992, Cl. 426-332.000.
Occidental Chemical Corporation: *See*—
Hichri, Habib; Lesins, Viesturs; and Sommer, Christopher C., 6,040,477, Cl. 562-46.000.
OCE-Nederland B.V.: *See*—
van Eekhout, Mike Paul; Klerken, Pierre Antonius Marie; and Quirijnen, Robertus Petrus Cornelis, 6,040,847, Cl. 347-151.000.
Oclassen Pharmaceuticals, Inc.: *See*—
Adair, Dennis W.; Johnson, Karl M.; and Kern, Earl R., 6,040,298, Cl. 514-50.000.
Oda, Hidekazu: *See*—
Shimizu, Satoshi; and Oda, Hidekazu, 6,040,629, Cl. 257-770.000.
Oda, Kozo: *See*—
Yoshida, Akira; Oda, Kozo; Kasai, Takashi; Shimada, Kousei; Kogen, Hiroshi; Hayakawa, Ichiro; Ishihara, Sadao; Koga, Teiichiro; Kitazawa, Eiichi; and Tokui, Taro, 6,040,339, Cl. 514-485.000.
Oda, Shigeru; and Kawabata, Eiji, to Sanko Kaihatsu Kagaku Kenkyusho. Sulfonyl compound and thermalsensitive recording medium using the same. 6,040,470, Cl. 558-58.000.
Odashima, Hisao; Takahashi, Tomomi; and Shimizu, Toshiyuki, to Toyo Boseki Kabushiki Kaisha. Chromium-free, metal surface-treating composition and surface-treated metal sheet. 6,040,054, Cl. 428-413.000.
Odenthal, Heinz F., to SIG Pack Systems AG. Method of closing and sealing cardboard boxes. 6,038,837, Cl. 53-484.000.
ODME International B.V.: *See*—
de Boer, Jacob; Hamming, Martin; and Goudsmits, Petrus J. M., 6,039,172, Cl. 198-750.100.
O' Donovan, Tim; and Fenelon, Don, to McKenzie Forest Products. Inc. Apparatus and method for drilling holes in dimensional lumber. 6,039,514, Cl. 408-1.00R.
Ofcharsky, John: *See*—
Larson, John A.; Gretz, Thomas J.; and Ofcharsky, John, 6,038,821, Cl. 52-97.000.
Ofer, Erez: *See*—
Halligan, Kenneth A.; and Ofer, Erez, 6,041,394, Cl. 711-166.000.

Oga, Toshikazu: *See*—
Koguro, Kiyoto; Oga, Toshikazu; Tokunaga, Norihito; Mitsui, Sunao; and Orita, Ryozo, 6,040,454, Cl. 548-253.000.
Ogawa, Katsuhide: *See*—
Tomikawa, Ichiro; Soga, Mitsuhide; Fujii, Katsuyuki; Ogawa, Katsuhide; Yoshida, Junichi; Kawachi, Shigeo; and Noda, Takehiko, 6,039,441, Cl. 347-86.000.
Ogawa, Kazuyuki; Tanaka, Kazuya; Nagata, Kinya; and Takano, Syoichi, to BML, Inc. Human Th2 specific protein. 6,040,426, Cl. 530-350.000.
Ogawa, Makoto: *See*—
Yamada, Chuji; Kobayashi, Shin; Ogawa, Makoto; Kuwahara, Tohru; and Okumura, Eiji, 6,039,157, Cl. 188-158.000.
Ogawa, Takashi: *See*—
Hyoda, Shunji; Kita, Masaharu; Sawada, Hirotoshi; Nemugaki, Shuichi; Otsuka, Sumio; Miyawaki, Yoshitaka; Ogawa, Takashi; and Kubo, Yuhki, 6,040,453, Cl. 548-250.000.
Ogawa, Yoji: *See*—
Inoue, Soichi; Higashikawa, Iwao; Ogawa, Yoji; Hara, Shigehiro; and Yamamoto, Kazuko, 6,040,114, Cl. 430-296.000.
Ogawa, Yuji; Abe, Yasuo; and Inoue, Tamotsu, to Denso Corporation. Method for cutting tube. 6,038,950, Cl. 83-54.000.
Ogawa, Yuri: *See*—
Kojima, Hiroyuki; Ogawa, Yuri; Kawamura, Kazue; and Sano, Konosuke, 6,040,160, Cl. 435-115.000.
Ogden, Steven D.: *See*—
Gontarski, Christopher J.; Ogden, Steven D.; and Gannon, John J., Jr., 6,039,106, Cl. 160-201.000.
Ogi, Hirotsugu: *See*—
Ohtani, Toshihiro; Ogi, Hirotsugu; and Hirao, Masahiko, 6,038,925, Cl. 73-598.000.
Ogino, Etsuo: *See*—
Anzaki, Toshiaki; and Ogino, Etsuo, 6,040,056, Cl. 428-432.000.
Oguchi, Wataru, to Alps Electric Co., Ltd. IC card connector device. 6,039,587, Cl. 439-159.000.
Ogura, Takashi; and Murata, Kousaku, to Matsushita Electric Industrial Co., Ltd. Diaphragm-edge integral moldings for speakers, acoustic transducers comprising same and method for fabricating same. 6,039,145, Cl. 181-167.000.
Ogusu, Masahiro; Tomioka, Tazuko; and Ohshima, Shigeru, to Kabushiki Kaisha Toshiba. Receptacle-type optical transmission/reception apparatus. 6,040,934, Cl. 359-152.000.
Oh, Min-Jung, to Daewoo Electronics Co., Ltd. Refrigerator having a device for generating an air curtain. 6,038,880, Cl. 62-408.000.
Oh, Won Zin; Lee, Kune Woo; Choi, Wang Kyu; Park, Hyun Soo; Kim, Jong Seung; Cho, Moon Hwan; and Kim, Jong Kook, to Korea Atomic Energy Research Institute; and Korea Electric Power Corporation. Calix[4]arene dibenzo crown ethers, their preparation process and their use for the selective extraction of cesium ion. 6,040,462, Cl. 549-352.000.
Oh-e, Masahito: *See*—
Ota, Masuyuki; Kawachi, Genshiro; Kitajima, Masaaki; Sasaki, Tohru; Oh-e, Masahito; Kondo, Katsumi; and Tsumura, Makoto, 6,040,886, Cl. 349-141.000.
O' Herron, Michael R.; Loebach, John A.; and Whitehead, Greg A., to QuesTech Packaging, Inc. Liquidating Trust. Automated testing apparatus and method, especially for flexible walled containers. 6,038,915, Cl. 73-49.300.
Ohga, Manabu, to Canon Kabushiki Kaisha. Image processing apparatus and method. 6,041,136, Cl. 382-162.000.
Ohga, Norio; and Ukita, Yoshitaka, to Sony Corporation. Data disk including supplementary information enabling retrieval of related information from another storage medium. 6,041,025, Cl. 369-30.000.
Ohio State University, The: *See*—
Rapp, Robert A., 6,039,862, Cl. 205-386.000.
Stevens, Vernon C., 6,039,948, Cl. 424-184.100.
Ohira, Tadashi; Sato, Yoshiaki; and Kodama, Kazuhiko, to Matsushita Electric Industrial Co., Ltd. Fabrication method for housing structure for projection type television receivers. 6,039,912, Cl. 264-328.100.
Öhlin, Kenth; and Danek, Magnus, to Yamaha Hatsudoki Kabushiki Kaisha; and Öhlins Racing AB. Shock absorber arrangement and use. 6,039,159, Cl. 188-322.150.
Öhlins Racing AB: *See*—
Öhlin, Kenth; and Danek, Magnus, 6,039,159, Cl. 188-322.150.
Ohmann, Anders: *See*—
Lassen, Soren Flensted; Bech, Lisbeth; Ohmann, Anders; Breinholt, Jens; Fuglsang, Claus Crone; and Ostergaard, Peter Rahbek, 6,039,942, Cl. 424-94.600.
Ohmi, Tadahiro; Yamaji, Michio; Shinohara, Tsutomu; Itoi, Shigeru; Hirao, Keiji; Kawano, Yuji; Tanaka, Shigeaki; Yokoyama, Kosuke; Morokoshi, Hiroshi; and Ikeda, Nobukazu, to Ohmi, Tadahiro; and Fujikin Incorporated. Couplings for fluid controllers. 6,039,360, Cl. 285-61.000.
Ohmi, Tadahiro; and Nitta, Takahisa, to Tadahiro Ohmi; and Kabushiki Kaiha Ultraclean Technology Research Institute. Cleaning method utilizing degassed cleaning liquid with applied ultrasonics. 6,039,814, Cl. 134-1.000.
Ohmi, Takao, to Kabushiki Kaisha Toshiba. Optical disk recording/reproducing device with eccentric and incline chuck control. 6,041,030, Cl. 369-54.000.
Ohmuro, Katsufumi: *See*—
Koike, Yoshio; Ohmuro, Katsufumi; Sasaki, Takahiro; and Takeda, Arihiro, 6,040,885, Cl. 349-129.000.
Ohnishi, Keizo: *See*—
Nishimura, Masaharu; Ohnishi, Keizo; Yasuda, Chiaki; Kajii, Shinichiro; Patrick, William P.; and Zander, Anthony C., 6,041,125, Cl. 381-71.400.
Ohnishi, Sei; and Hatayama, Yoshinori, to Sony Corporation. Damper and electronic equipment employing the damper. 6,039,299, Cl. 248-562.000.
Ohno, Kazunori, to Fuji Photo Optical Co., Ltd. Simple wide-angle zoom lens. 6,040,949, Cl. 359-689.000.
Ohno, Kenichi: *See*—
Mitsuhashi, Masashige; Ohno, Kenichi; and Yoshida, Kenichi, 6,039,635, Cl. 451-72.000.
Ohno, Manabu; Ohtake, Takeshi; Matsunaga, Satoshi; and Doujo, Tadashi, to Canon Kabushiki Kaisha. Toner for developing electrostatic image and image forming method. 6,040,103, Cl. 430-110.000.
Ohno, Motoyasu: *See*—
Umeda, Takashi; and Ohno, Motoyasu, 6,040,922, Cl. 358-468.000.
Ohnuma, Shinichi: *See*—
Narita, Keishi; Ishida, Chika; Takeuchi, Yoshie; Ohto, Chikara; Ohnuma, Shinichi; and Nishino, Tokuzo, 6,040,165, Cl. 435-193.000.
Ohsaki, Kozo: *See*—
Michiki, Hideyuki; Miyakawa, Hisashi; and Ohsaki, Kozo, 6,041,272, Cl. 700-266.000.
Ohsaki, Yoshinori: *See*—
Hasegawa, Masanobu; Yoshii, Minoru; and Ohsaki, Yoshinori, 6,040,909, Cl. 356-375.000.
Ohsato, Kiyoshi: *See*—
Ichimura, Isao; Maeda, Fumisada; Yamamoto, Kenji; Ohsato, Kiyoshi; Watanabe, Toshio; and Suzuki, Akira, 6,041,031, Cl. 369-112.000.
Ohsawa, Hirokazu: *See*—
Tsuchiya, Yoshimi; Nomoto, Takashi; Ohsawa, Hirokazu; Kawakami, Kumiko; Ohwaki, Kenji; and Nishikibe, Masaru, 6,040,449, Cl. 546-193.000.
Ohsawa, Mika: *See*—
Marutani, Yoshiaki; Tomita, Takashi; Nakahama, Tadamitsu; Uemura, Hiroyuki; Koga, Kazuhi; and Ohsawa, Mika, 6,040,009, Cl. 427-241.000.
Ohshima, Shigeru: *See*—
Ogusu, Masahiro; Tomioka, Tazuko; and Ohshima, Shigeru, 6,040,934, Cl. 359-152.000.
Ohshita, Ryuji: *See*—
Sunagawa, Takuya; Watanabe, Hiroshi; Ohshita, Ryuji; Fujimoto, Masahisa; Nohma, Toshiyuki; and Nishio, Koji, 6,040,090, Cl. 429-231.950.
Ohsuga, Minoru: *See*—
Shiraishi, Takuya; Nogi, Toshiharu; Ohsuga, Minoru; Nakayama, Yoko; and Tokuyasu, Noboru, 6,039,026, Cl. 123-399.000.
Ohtake, Takeshi: *See*—
Ohno, Manabu; Ohtake, Takeshi; Matsunaga, Satoshi; and Doujo, Tadashi, 6,040,103, Cl. 430-110.000.
Ohtani, Toshihiro; Ogi, Hirotsugu; and Hirao, Masahiko, to Ebara Corporation. Focal type electromagnetic acoustic transducer and flaw detection system and method. 6,038,925, Cl. 73-598.000.
Ohto, Chikara: *See*—
Narita, Keishi; Ishida, Chika; Takeuchi, Yoshie; Ohto, Chikara; Ohnuma, Shinichi; and Nishino, Tokuzo, 6,040,165, Cl. 435-193.000.
Ohtomo, Fumio; Nakata, Yuji; Fukuyama, Yoshitaka; Inomata, Asako; Shibuya, Sachio; Koga, Akinori; Ishii, Junji; Ito, Shoko; and Yamamoto, Hironobu, to Kabushiki Kaisha Toshiba. Combined cycle power plant. 6,038,850, Cl. 60-39.182.
Ohtorii, Hiizu: *See*—
Sato, Shuzo; and Ohtorii, Hiizu, 6,039,631, Cl. 451-37.000.
Ohura, Hitoshi: *See*—
Shiina, Kazuhiro; Kawamoto, Koji; Miura, Masato; Ohura, Hitoshi; Ozeki, Shoichi; Akiyama, Noboru; Nunomura, Kunihoro; Nemoto, Minehiro; and Iwamura, Masahiro, 6,040,827, Cl. 345-208.000.
Ohwaki, Kenji: *See*—
Tsuchiya, Yoshimi; Nomoto, Takashi; Ohsawa, Hirokazu; Kawakami, Kumiko; Ohwaki, Kenji; and Nishikibe, Masaru, 6,040,449, Cl. 546-193.000.
Oikawa, Takeya: *See*—
Yamane, Kazuyasu; Oikawa, Takeya; and Niimi, Tomohiro, 6,041,244, Cl. 455-575.000.
Oil-Dri Corporation of America: *See*—
Goss, G. Robert; and Soral, Robert, 6,039,004, Cl. 119-172.000.
Oishi, Yasuyuki: *See*—
Fukumasa, Hidenobu; Oishi, Yasuyuki; Nagatani, Kazuo; and Hamada, Hajime, 6,041,034, Cl. 370-203.000.
Oji Paper Co., Ltd.: *See*—
Ootuka, Minoru; Hiraoka, Hirokazu; Shimadu, Toru; and Noda, Masayuki, 6,040,252, Cl. 442-169.000.
Oka, Shogo: *See*—
Kawasaki, Toshisuke; and Oka, Shogo, 6,040,156, Cl. 435-69.100.
Okabe, Michio: *See*—
Nagashima, Tomotaka; Okabe, Michio; Noda, Toshiharu; and Okawachi, Kiyoshi, 6,039,919, Cl. 420-446.000.
Okabe, Takanori; Ban, Takashi; Suzuki, Shigeru; and Hirose, Tatsuya, to Kabushiki Kaisha Toyoda Jidoshokki Seisakusho. Viscous fluid type heat generator. 6,039,264, Cl. 237-12.30R.
Okabe, Takanori: *See*—
Ban, Takashi; Hoshino, Tatsuyuki; Okabe, Takanori; and Ban, Takahisa, 6,039,007, Cl. 122-26.000.
Okabe, Yasushi: *See*—

Suzuki, Tsutomu; Sato, Shougo; and Okabe, Yasushi, 6,041,203, Cl. 399-111.000.

Okada, Kesao; and Kurose, Shigeo, to TDK Corporation. Lapping tape. 6,040,034, Cl. 428-143.000.

Okada, Masakatsu: *See*—
Sekijima, Takenori; Fujii, Takashi; Wakino, Kikuo; and Okada, Masakatsu, 6,039,802, Cl. 117-49.000.

Okada, Mitsuharu, to Mita Industrial Co., Ltd. Toner replenishing device of image forming machine and toner cartridge for use therein. 6,041,212, Cl. 399-359.000.

Okada, Noboru, to Yokohama Rubber Co., Ltd., The. Method of forming green tire with strip winding. 6,039,826, Cl. 156-117.000.

Okamoto, Akihiko; and Ito, Fuminori, to NEC Corporaiton. Method of driving a field emission cold cathode device and a field emission cold cathode electron gun. 6,040,973, Cl. 361-235.000.

Okamoto, Hiroo; Hosokawa, Kyoichi; Owashi, Hitoaki; Tachibana, Hiroaki; and Noguchi, Takaharu, to Hitachi, Ltd. Input-output circuit, recording apparatus and reproduction apparatus for digital video signal. 6,041,161, Cl. 386-112.000.

Okamoto, Karlton K.: *See*—
Jones, John J.; Saggio, Rosario S.; Okamoto, Karlton K.; and Lenoil, Isidor, 6,039,519, Cl. 410-69.000.

Okamoto, Masakazu; and Kurihara, Toshiyuki, to Daikin Industries, Ltd. Cryogenic refrigerating machine and control method therefor. 6,038,866, Cl. 62-6.000.

Okamoto, Takafumi, to Honda Giken Kogyo Kabushiki Kaisha. Fuel cell. 6,040,073, Cl. 429-26.000.

Okamura, Takumi: *See*—
Bando, Yumi; Okamura, Takumi; and Murata, Toshinori, 6,040,867, Cl. 348-423.000.

Okano, Masayuki: *See*—
Terai, Tadayoshi; Hitomi, Yoshinori; Okano, Masayuki; and Kinoshita, Kazutoshi, 6,038,728, Cl. 15-250.201.

Okawachi, Kiyoshi: *See*—
Nagashima, Tomotaka; Okabe, Michio; Noda, Toshiharu; and Okawachi, Kiyoshi, 6,039,919, Cl. 420-446.000.

Okazaki, Masaomi: *See*—
Shimoi, Yoichi; Tamura, Hideo; Okazaki, Masaomi; and Suganuma, Takao, 6,039,879, Cl. 210-641.000.

Oketani, Tetsuya; and Uemura, Tadashi, to Howa Machinery, Ltd. Tool changing mechanism. 6,039,680, Cl. 483-57.000.

Oki Data Corporation: *See*—
Kobayashi, Hideyuki; Kishimoto, Mitsuru; Ooishi, Noboru; and Ikeda, Kiyoshi, 6,039,433, Cl. 347-40.000.

Oki Electric Industry Co., Ltd.: *See*—
O, Waho; and Katsuyama, Tsutomu, 6,041,081, Cl. 375-297.000.
Sato, Hisatake, 6,040,723, Cl. 327-144.000.
Yokomizo, Koichi, 6,041,089, Cl. 375-371.000.

Okido, Yoshiyuki: *See*—
Tanaka, Hiroaki; Okido, Yoshiyuki; and Sano, Hideki, 6,039,910, Cl. 264-248.000.

Okino, Hirohito: *See*—
Ichioka, Ryoji; Yamakawa, Shinobu; Okino, Hirohito; Kato, Hajime; Iwayama, Kazuyoshi; Konta, Hiroshi; and Kitamura, Akira, 6,040,490, Cl. 585-475.000.

Okita, Tomoaki; Nakashima, Katsumi; Mizushima, Takashi; and Wadaki, Takeru, to Toyoda Gosei Co. Ltd. Foam rubber composition and a molded product of foam rubber. 6,040,351, Cl. 521-140.000.

Okiura, Tomoo: *See*—
Sota, Akio; Okiura, Tomoo; and Azuma, Masaki, 6,039,782, Cl. 71-10.000.

Okmetic Ltd.: *See*—
Ellison, Alex; Kordina, Olle; Gu, Chun-Yuan; Hallin, Christer; Janzen, Erik; and Tuominen, Marko, 6,039,812, Cl. 118-725.000.

Oksanen, Markku Tapio; Peranto, Juha; and Vuorio, Martti Ensio, to Nokia Mobile Phones Limited. Method and apparatus for registering a radio telephone subscriber unit wherein the subscriber unit remains tuned to the registering channel after successful registration. 6,041,234, Cl. 455-434.000.

Okubo, Hiromi; and Ishii, Rie, to Ricoh Company, Ltd. Image processing apparatus. 6,041,139, Cl. 382-199.000.

Okuda, Akihito; Fushimi, Koichi; and Terayama, Hiroshi, to Honda Giken Kogyo Kabushiki Kaisha. Hydraulic and mechanical transmission apparatus. 6,039,666, Cl. 475-72.000.

Okuda, Mitsuhiro: *See*—
Terada, Akihiro; and Okuda, Mitsuhiro, 6,040,554, Cl. 219-124.340.

Okuma, Kazuyoshi: *See*—
Yamato, Seiichi; Kamei, Noboru; Okuma, Kazuyoshi; Sugawa, Katsumi; Kadota, Hironori; and Sakata, Tomoyuki, 6,041,062, Cl. 370-465.000.

Okumura, Daisuke: *See*—
Kushiya, Katsumi; Okumura, Daisuke; and Sugiyama, Ichiro, 6,040,521, Cl. 136-265.000.

Okumura, Eiji: *See*—
Yamada, Chuji; Kobayashi, Shin; Ogawa, Makoto; Kuwahara, Tohru; and Okumura, Eiji, 6,039,157, Cl. 188-158.000.

Okumura, Yoichiro; Nagai, Michio; Terada, Hiroshi; and Maruyama, Atsushi, to Olympus Optical Co., Ltd. Power transmission apparatus. 6,041,187, Cl. 396-132.000.

Olarig, Sompong Paul: *See*—
Mayer, Dale J.; Olarig, Sompong Paul; Whiteman, William F.; and Heinrich, David F., 6,041,377, Cl. 710-113.000.

Olerud, Sven. Method and a device for implant locking. 6,039,740, Cl. 606-72.000.

Olicom A/S: *See*—
Povlsen, Lars; Skjoldborg, Erling; and Goldman, Tomasz Jerzy, 6,041,063, Cl. 370-465.000.

Olin Corporation: *See*—
Harris, Melvin Ward; and Mayfield, Scott Hayward, 6,038,978, Cl. 102-467.000.

Olin Microelectronic Chemicals, Inc.: *See*—
Blakeney, Andrew J.; Medina, Arturo N.; Toukhy, Medhat A.; Ferreira, Lawrence; Jeffries, Alfred T., III; and Naiini, Ahmad A., 6,040,107, Cl. 430-165.000.

Olin, Wesley L.: *See*—
Fox, Richard H.; Steinbacher, David M.; Olin, Wesley L.; Meyers, Vernon O.; and Zimmerle, William J., 6,039,158, Cl. 188-162.000.

Oliver, Richard Joseph: *See*—
Claar, Jeffrey Mark; Duvall, Roger Mather; and Oliver, Richard Joseph, 6,041,407, Cl. 713-1.000.

Olivier, Helene; Commereuc, Dominique; and Drochon, Sebastien, to Institut Francais du Petrole. Process for hydroformylating olefins. 6,040,483, Cl. 568-454.000.

Olivier, Helene: *See*—
Mussmann, Lothar; Chauvin, Yves; and Olivier, Helene, 6,040,263, Cl. 502-164.000.

Olkkola, Jari, to Nokia Mobile Phones Limited. Installation and assembly holding mat for a telephone. 6,041,120, Cl. 379-433.000.

Olofsson, Erik: *See*—
Markström, Lars; Zander, Lennarth; Olofsson, Erik; and Norblad, Olof, 6,038,855, Cl. 60-323.000.

Olsen, Uffe Bang: *See*—
Andersen, Knud Erik; Jørgensen, Tine Krogh; Hohlweg, Rolf; Fischer, Erik; Olsen, Uffe Bang; Polivka, Zdenek; Sindelar, Karel; and Valenta, Vladimir, 6,040,318, Cl. 514-329.000.

Olson, Wayne C.: *See*—
Bhatt, Sanjiv M.; Eggum, Shawn D.; and Olson, Wayne C., 6,039,186, Cl. 206-711.000.

Olstad, Marvel: *See*—
Olstad, Todd; and Olstad, Marvel, 6,039,202, Cl. 220-533.000.

Olstad, Todd; and Olstad, Marvel. Cooler insert system. 6,039,202, Cl. 220-533.000.

Oltman, John Edward: *See*—
Adey, Robert; Dopp, Robert Brian; and Oltman, John Edward, 6,040,074, Cl. 429-27.000.

Olympus Optical Co., Ltd.: *See*—
Aoki, Norihiko, 6,041,193, Cl. 396-379.000.
Ichikawa, Yoshito; Mihori, Takashi; Sakurai, Tomohisa; and Honda, Yoshitaka, 6,039,732, Cl. 606-38.000.
Katagiri, Moriya; Sugita, Yukihiko; and Kitahara, Yoshiyuki, 6,039,476, Cl. 396-418.000.
Kawasaki, Kenji, 6,040,940, Cl. 359-389.000.
Kimura, Kenichi; Shiga, Akira; Hashiguchi, Toshihiko; Murakami, Eiji; and Sasaki, Katsumi, 6,039,752, Cl. 606-205.000.
Okumura, Yoichiro; Nagai, Michio; Terada, Hiroshi; and Maruyama, Atsushi, 6,041,187, Cl. 396-132.000.
Ono, Katsuya; Shiraiwa, Masaru; and Nishioka, Kimihiko, 6,041,154, Cl. 385-116.000.
Suzuki, Tatsuya, 6,041,185, Cl. 396-56.000.

Olzak, Richard A., to AlliedSignal. Access panel retention device. 6,040,526, Cl. 174-52.100.

Oman, Price Ward: *See*—
Bass, Brian Mitchell; Hubbard, James Allison; Oman, Price Ward; and Pita, Frank J., 6,041,375, Cl. 710-103.000.

Omni International, Inc.: *See*—
Thomas, Jackie K., 6,039,418, Cl. 312-258.000.

Omni Manufacturing, Inc.: *See*—
Sanduja, Mohan L.; Horowitz, Carl; Kamruzzaman, Mohammed; Thottathil, Paul; and Ramsey, Earl A., 6,039,964, Cl. 424-404.000.

Omnicell Technologies, Inc.: *See*—
Holmes, William K., 6,039,467, Cl. 364-479.010.

Omnipoint Corporation: *See*—
Scott, Logan; and Williams, Claude M., 6,041,046, Cl. 370-319.000.

OMS Investments, Inc.: *See*—
Goertz, Harvey M.; Timmons, Richard J.; and Johnson, William R., 6,039,781, Cl. 71-1.000.

O' Neal, Timothy L., to Intex Exhibits International, L.L.C. Light bracket. 6,039,457, Cl. 362-217.000.

OneClip.com, Incorporated: *See*—
Laor, Raviv, 6,041,309, Cl. 705-14.000.

O' Neil, Keith C.: *See*—
Long, David C.; Moyer, Thomas P.; O'Neil, Keith C.; Perry, Charles H.; Pomerantz, Glenn A.; Case, James R.; Kando, Laszlo; and Kozol, John E., 6,038,931, Cl. 73-850.000.

O' Neill, Cormac G., to Kinetic Ceramics, Inc. Piezoelectric positioner. 6,040,653, Cl. 310-328.000.

Onishi, Hitoshi: *See*—
Ishida, Tatsuyoshi; Yasuda, Masaaki; Onishi, Hitoshi; Kihara, Noriaki; Tsutsui, Toshiyuki; Sagane, Toshihiro; Kawasaki, Masaaki; and Nakahama, Hidenari, 6,040,407, Cl. 526-281.000.

Onishi, Masanori; Murata, Masanao; Nakai, Yutaka; Yasuda, Katsumi; Sugino, Tsukasa; Nakagawa, Susumu; and Miura, Kouji, to Shinko Electric Co., Ltd. Positional deviation detecting device for a mobile body and position correcting apparatus for a working machine mounted on a mobile body. 6,041,274, Cl. 701-26.000.

Ono, Haruo: *See—*
Takahashi, Kazuhiro; Kobayashi, Toshitake; Takemoto, Masataka; Matano, Takashi; and Ono, Haruo, 6,040,044, Cl. 428-323.000.

Ono, Katsuya; Shiraiwa, Masaru; and Nishioka, Kimihiko, to Olympus Optical Co., Ltd. Image fiber and method of fabricating the same. 6,041,154, Cl. 385-116.000.

Ono, Kazuya, to Nikon Corporation. Supporting apparatus using magnetic power. 6,040,675, Cl. 318-649.000.

Onoda, Naka, to NEC Corporation. Electron beam exposure method using a moving stage. 6,040,583, Cl. 250-492.220.

Onodera, Masahiro: *See—*
Haneda, Satoshi; Tokimatsu, Hiroyuki; Onodera, Masahiro; and Hamada, Shuta, 6,041,204, Cl. 399-159.000.

Onozuka, Toshihiko: *See—*
Shirai, Seiichirou; Onozuka, Toshihiko; Noishiki, Takayuki; Sakai, Satoshi; Sasajima, Katsuhiro; Toyoda, Eiji; and Namikawa, Makoto, 6,040,110, Cl. 430-258.000.

Onuma, Hiraku: *See—*
Hara, Akira; Onuma, Hiraku; Oyaizu, Hideo; Suzuki, Yuuichi; and Gasparrini, C. Robert, 6,038,731, Cl. 15-256.510.

Ooishi, Noboru: *See—*
Kobayashi, Hideyuki; Kishimoto, Mitsuru; Ooishi, Noboru; and Ikeda, Kiyoshi, 6,039,433, Cl. 347-40.000.

Oom, Jan: *See—*
Niska, Håkan; Kvarnström, Bo; and Oom, Jan, 6,041,228, Cl. 455-419.000.

Oono, Masahiro; Iwanade, Hisao; Saitoh, Noboru; Sato, Koji; Shiba, Sukenori; Yoshida, Tatsuya; and Nagai, Nobuyuki, to Asahi Kogaku Kogyo Kabushiki Kaisha. Apparatus for driving stepper motor of camera. 6,040,677, Cl. 318-696.000.

Oota, Tsutomu: *See—*
Shirai, Kenji; Yokoyama, Seiya; and Oota, Tsutomu, 6,040,665, Cl. 318-14.000.

Ootuka, Minoru; Hiraoka, Hirokazu; Shimadu, Toru; and Noda, Masayuki, to Shin-Kobe Electric Machinery Co.; Teijin Limited; and Oji Paper Co., Ltd. Laminate base material, a method of producing the same, a prepreg and a laminate. 6,040,252, Cl. 442-169.000.

Oowaki, Yukihito: *See—*
Noguchi, Mitsuhiro; and Oowaki, Yukihito, 6,040,610, Cl. 257-392.000.

Opfer, John C.: *See—*
French, Thomas G.; Guio, Raphael H.; Kowalyshen, Henry W.; McGlone, Buddy B.; Mears, Gregory C.; and Opfer, John C., 6,040,538, Cl. 200-293.000.

Oprea, Florin I. Side rearview mirror device. 6,039,448, Cl. 359-850.000.

Optimize Incorporated: *See—*
Hebert, Raymond T., 6,040,946, Cl. 359-630.000.

Oracle Corporation: *See—*
Bodamer, Roger; Draaijer, Jacco; Voss, Eric; and Mani, Raghu, 6,041,344, Cl. 709-203.000.
Tsukerman, Alex, 6,041,423, Cl. 714-19.000.
Waddington, William H.; Tan, Leng Leng; and Grewell, Patricia, 6,041,384, Cl. 710-200.000.

Orem, Michael W.: *See—*
Boettcher, John W.; Jagannathan, Seshadri; Orem, Michael W.; and Zola, Philip J., 6,040,128, Cl. 430-569.000.

Orion Electric Co., Ltd.: *See—*
Yoon, Sang Youl; and Shon, Ho Seok, 6,040,097, Cl. 430-28.000.

Orita, Ryozo: *See—*
Koguro, Kiyoto; Oga, Toshikazu; Tokunaga, Norihito; Mitsui, Sunao; and Orita, Ryozo, 6,040,454, Cl. 548-253.000.

Orla Kragh Jensen: *See—*
Kolstrup, Anders Peter, 6,039,668, Cl. 475-183.000.

Orr, Brian Norman: *See—*
Haag, Ronald Helmut; Orr, Brian Norman; and Moceanu, John Ion, 6,038,818, Cl. 49-360.000.

Orr, William C. Non leaded fuel composition. 6,039,772, Cl. 44-359.000.

Orsi, Marco, to Consulagri S.r.l. Self-regulated fertilizing irrigation system with ground and over-the-crop dispensing means and snow-forming frost protection means. 6,039,267, Cl. 239-63.000.

Ortec International, Inc.: *See—*
Eisenberg, Mark, 6,039,760, Cl. 623-15.000.

Ortho-McNeil Pharmaceutical, Inc.: *See—*
Beers, Scott A.; Malloy, Elizabeth A.; Wachter, Michael P.; and Wu, Wei, 6,040,320, Cl. 514-341.000.

Ortho Pharmaceutical Corporation: *See—*
Lambelet, Lawrence E., Jr., 6,039,208, Cl. 221-25.000.

Orthosis Corrective Systems: *See—*
Bzoch, Jan J., 6,039,709, Cl. 602-26.000.

Orzell, Robert A.: *See—*
Dangat, Geetaram S.; Milne, Robert J.; and Orzell, Robert A., 6,041,267, Cl. 700-107.000.

Osame, Juichiro: *See—*
Koyama, Kuniaki; and Osame, Juichiro, 6,039,958, Cl. 424-230.100.

Osawa, Seiichi; and Komiyama, Takeo, to Citizen Watch Co., Ltd. Ink-jet head. 6,039,440, Cl. 347-70.000.

Osawa, Toshio, to Matsushita Electric Industrial Co., Ltd. Rotary connector. 6,039,588, Cl. 439-164.000.

Osborn, Kenneth L.: *See—*
Quiachon, Dinah B.; Piplani, Alec A.; Baker, Steve G.; Williams, Ronald G.; Williams, Richard S.; Osborn, Kenneth L.; Layman, Ted W.; and Johansson, Peter K., 6,039,758, Cl. 623-1.000.

Oshima, Katsuyuki: *See—*
Imoto, Kazunobu; Oshima, Katsuyuki; and Nishikawa, Hideki, 6,040,269, Cl. 503-227.000.

Osmic, Inc.: *See—*
Gutman, George; Jiang, Licai; and Verman, Boris, 6,041,099, Cl. 378-85.000.

Ossian, Inc.: *See—*
Ossian, Kenneth C.; and Steinhauser, Norbert J., 6,039,890, Cl. 252-70.000.

Ossian, Kenneth C.; and Steinhauser, Norbert J., to Ossian, Inc. Quick acting ice melter composition. 6,039,890, Cl. 252-70.000.

Ostergaard, Peter Rahbek: *See—*
Lassen, Soren Flensted; Bech, Lisbeth; Ohmann, Anders; Breinholt, Jens; Fuglsang, Claus Crone; and Ostergaard, Peter Rahbek, 6,039,942, Cl. 424-94.600.

Osuga, Naohito: *See—*
Hosokoshiyama, Hiroshi; Yoneyama, Masashi; Busujima, Makoto; Tokuda, Hiroaki; Osuga, Naohito; and Tashiro, Kouji, 6,039,204, Cl. 220-623.000.

Osuga, Satoshi; and Inamoto, Yoshihiro, to Sony Corporation. Deflecting yoke gradient adjusting apparatus. 6,039,623, Cl. 445-63.000.

Ota, Masuyuki; Kawachi, Genshiro; Kitajima, Masaaki; Sasaki, Tohru; Oh-e, Masahito; Kondo, Katsumi; and Tsumura, Makoto, to Hitachi, Ltd. Active matrix type LCD with two shield electrodes. 6,040,886, Cl. 349-141.000.

Ota, Takashi: *See—*
Ishida, Nobuo; Togashi, Jun; Kimura, Tomomichi; Morikawa, Kiyoshi; Nakayama, Yoshihumi; Akiyama, Hiroshi; Yanagisawa, Tatsuya; and Ota, Takashi, 6,041,032, Cl. 369-191.000.

Ota, Toshiyuki; Sano, Kimiyasu; Tashiro, Hideaki; and Sato, Hozumi, to JSR Corporation. Negative photoresist stripping liquid composition. 6,040,117, Cl. 430-311.000.

Otani, Seigen, to Fujitsu Limited. High permittivity ST thin film and a capacitor for a semiconductor integrated circuit having such a thin film. 6,040,594, Cl. 257-295.000.

Otis, Alton B., Jr.: *See—*
Cutler, Stanley; Gerth, Gayle B.; Otis, Alton B., Jr.; and Chau, Taylor, 6,039,702, Cl. 601-15.000.

Otis Elevator: *See—*
Bittar, Joseph; Barker, Frederick H.; Cooney, Anthony; Perl, David I.; Peruggi, Richard E.; and Silverberg, Michael D., 6,038,980, Cl. 104-20.000.

Otis Elevator Company: *See—*
Schöps, Karl-Friedrich; and Warzecha, Wolfgang, 6,039,152, Cl. 187-414.000.

Otsubo, Kensei; and Yamaguchi, Hideo, to Matsushita Electric Industrial Co., Ltd. Disk holding device. 6,041,033, Cl. 369-271.000.

Otsuka, Sumio: *See—*
Hyoda, Shunji; Kita, Masaharu; Sawada, Hirotoshi; Nemugaki, Shuichi; Otsuka, Sumio; Miyawaki, Yoshitaka; Ogawa, Takashi; and Kubo, Yuhki, 6,040,453, Cl. 548-250.000.

Otsuka, Youichi, to Sony Corporation. Solid state imaging device having refractive index adjusting layer and method for making same. 6,040,591, Cl. 257-232.000.

Otsuka, Yukio; and Ozaki, Motoaki, to Toyota Jidosha Kabushiki Kaisha. Mask for piling process, mask-producing method, and mask-employing method. 6,040,094, Cl. 430-5.000.

Ott, Norbert: *See—*
Daberkow, Andreas; Krause, Ralf; Ott, Norbert; and Krouzilek, Rolf, 6,038,981, Cl. 105-168.000.

Otten, Martina: *See—*
Kast, Jürgen; Vossen, Marcus; von Deyn, Wolfgang; Engel, Stefan; Hill, Regina Luise; Kardorff, Uwe; Otten, Martina; Plath, Peter; Walter, Helmut; Westphalen, Karl-Otto; and Misslitz, Ulf, 6,040,274, Cl. 504-348.000.

Otto, Andreas: *See—*
Hegner, Frank; Schmidt, Elke Maria; Güther, Volker; Otto, Andreas; Breme, Jürgen; Müller, Heinz; and Turnsek, Jürgen Peter, 6,039,918, Cl. 420-422.000.

Otto Sauer Achsenfabrik Keilberg: *See—*
Frey, Christopher, 6,039,336, Cl. 280-124.128.

Ottoboni, Thomas B.; Yamamoto, Ronald K.; and Conston, Stanley R., to Point Biomedical Corporation. Intravesical drug delivery system. 6,039,967, Cl. 424-426.000.

Ouellette, Christopher J.: *See—*
Miller, Daniel L.; Haney, Scott J.; and Ouellette, Christopher J., 6,041,332, Cl. 707-104.000.

Outkumpu Technology Oy: *See—*
Hultholm, Stig-Erik; and Fugleberg, Sigmund Peder, 6,039,790, Cl. 75-739.000.

Outokumpu Copper OY: *See—*
Teuho, Juhani, 6,038,759, Cl. 29-599.000.

Ouziel, Philippe, to Ciba Specialty Chemicals Corporation. Process for the treatment of dyed cellulosic fiber material. 6,039,768, Cl. 8-543.000.

Ovalstrapping, Inc.: *See—*
Chak, Yee C.; Dierick, Bryan R.; and Hylton, Gary L., 6,038,967, Cl. 100-2.000.

Overbay, Mark A.: *See—*

Cheng, Luo; Irick, Glenn E., Sr.; Chu, Youe-Tsyr; Ghorashi, Hossein M.; Galyon, Michael E.; and Overbay, Mark A., 6,040,905, Cl. 356-238.300.

Owashi, Hitoaki: *See*—
Okamoto, Hiroo; Hosokawa, Kyoichi; Owashi, Hitoaki; Tachibana, Hiroaki; and Noguchi, Takaharu, 6,041,161, Cl. 386-112.000.

Owens-Brockway Glass Container Inc.: *See*—
Flynn, Robin L.; Hayes, Dan M.; and Nickey, George A., 6,038,888, Cl. 65-304.000.

Owens-Brockway Prescription Products Inc.: *See*—
Konefal, Robert S.; and Vander, Noel T., 6,039,195, Cl. 215-209.000.

Owens Corning Fiberglas Technology, Inc.: *See*—
Smith, Roy E., 6,040,003, Cl. 427-177.000.

Owens-Illinois Closure Inc.: *See*—
Wolfe, Steven R.; and Mierzwiak, James G., 6,039,198, Cl. 215-228.000.

Oxis International S.A.: *See*—
Tailhan-Lomont, Catherine; Erdelmeier, Irène; Moutet, Marc; Chaudiere, Jean; and Yadan, Jean-Claude, 6,040,328, Cl. 514-398.000.

Oya, Yasuhiro: *See*—
Takahashi, Sakon; Takagi, Shinpei; Mizutani, Noriyuki; Oya, Yasuhiro; and Ishida, Haruhide, 6,040,102, Cl. 430-108.000.

Oyaizu, Hideo: *See*—
Hara, Akira; Onuma, Hiraku; Oyaizu, Hideo; Suzuki, Yuuichi; and Gasparrini, C. Robert, 6,038,731, Cl. 15-256.510.

Ozaki, Motoaki: *See*—
Otsuka, Yukio; and Ozaki, Motoaki, 6,040,094, Cl. 430-5.000.

Ozawa, Hiroyuki: *See*—
Yamaguchi, Yuji; Yoshimori, Masaharu; Ozawa, Hiroyuki; Iida, Ryohei; and Taniguchi, Kazuo, 6,040,844, Cl. 345-518.000.

Ozcelik, Taner; Gadre, Shirish; and Tan, Yew-Koon, to Sony Corporation; and Sony Electronics Inc. Distributed extensible processing architecture for digital signal processing applications. 6,041,400, Cl. 712-35.000.

Ozeki, Keita, to TRW Steering Systems Japan Ltd. Rack and pinion steering device. 6,039,334, Cl. 280-93.514.

Ozeki, Shoichi: *See*—
Shiina, Kazuhiro; Kawamoto, Koji; Miura, Masato; Ohura, Hitoshi; Ozeki, Shoichi; Akiyama, Noboru; Nunomura, Kuniharo; Nemoto, Minehiro; and Iwamura, Masahiro, 6,040,827, Cl. 345-208.000.

Paalman, Donald Henry: *See*—
Jessup, James Lyle; and Paalman, Donald Henry, 6,039,716, Cl. 604-385.100.

Pabst, Manfred, to A. Monforts Textilmaschinen GmbH & Co. Stenter for a textile material web. 6,038,750, Cl. 26-76.000.

Padilla, Mark D. Arrow rest having ball contact bearings. 6,039,036, Cl. 124-44.500.

Paek, Mun Cheol; Choi, Sung Woo; and Nam, Kee Soo, to Electronics and Telecommunications Research Institute. Method of manufacturing a diamond vacuum device. 6,040,001, Cl. 427-78.000.

Paganini, Lisa M.; Casilio, Frank; Peters, Roy; Straub, Kurt M.; DeHondt, Rene C.; and Fry, Tova, to Chrysler Corporation. Selector switch circuit for disabling an airbag. 6,040,637, Cl. 307-10.100.

Page, Loretta Ann Grezzo; Spinelli, Harry Joseph; and Anton, Waifong Liew, to Du Pont de Nemours, E. I., and Company. Ink jet inks containing linear polymer additives. 6,040,358, Cl. 523-161.000.

Pai Lung Machinery Mill Co., Ltd.: *See*—
Wang, Ping-Shin, 6,038,890, Cl. 66-157.000.

Painter, Oskar: *See*—
OBrien, John; Scherer, Axel; Yariv, Amnon; Lee, Reginald; Xu, Yuanjian; and Painter, Oskar, 6,040,590, Cl. 257-94.000.

Painter, Robert. Theft prevention attachment system. 6,039,140, Cl. 180-287.000.

Pakarinen, Pekka: *See*—
Kaihovirta, Juha; Pakarinen, Pekka; and Luontama, Matti, 6,038,789, Cl. 34-448.000.

Palackal, Syriac J.: *See*—
Peifer, Bernd; Palackal, Syriac J.; Welch, M. Bruce; Alt, Helmut G.; and Schertl, Peter, 6,040,402, Cl. 526-160.000.

Palaniappan, Sevugan: *See*—
Swank, Ronald; and Palaniappan, Sevugan, 6,039,922, Cl. 422-24.000.

Palanker, Daniel: *See*—
Lewis, Aaron; Palanker, Daniel; and Turovets, Igor, 6,039,726, Cl. 606-3.000.

Palazzoli S.p.A.: *See*—
Zuppa, Riccardo, 6,039,594, Cl. 439-318.000.

Pall Corporation: *See*—
Wu, Xiaosong; Shertok, Joel; and Konstantin, Peter, 6,039,872, Cl. 210-500.350.

Palm, Charles S.: *See*—
Binns, Bruce W.; Price, Rodney M.; Palm, Charles S.; and Weaver, Suzanne E., 6,041,140, Cl. 382-209.000.

Palmas, Paolo, to UOP LLC. Fluidized particle contacting process with elongated combustor. 6,039,863, Cl. 208-113.000.

Palmer, David, to List AG. Mixing kneader. 6,039,469, Cl. 366-97.000.

Palmer, Theodore R. Building guard rail scaffold assembly. 6,039,150, Cl. 182-113.000.

Pamart, Olivier: *See*—
LaLange, Jacques; and Pamart, Olivier, 6,039,589, Cl. 439-188.000.

Pan, Jing-Jong; Xu, Jingyu; and Shi, Yingzhong, to E-Tek Dynamics, Inc. Precision tunable optical filter. 6,040,944, Cl. 359-590.000.

Pan, Jing-Jong: *See*—
Zhou, Ming; Zhou, Feng Qing; and Pan, Jing-Jong, 6,039,806, Cl. 118-665.000.

Pan, Rennan: *See*—
Kostka, Stanley J.; and Pan, Rennan, 6,039,966, Cl. 424-405.000.

Panaghe, Stylianos. Electrical connection method. 6,039,238, Cl. 228-110.100.

Panagos, Euthimios: *See*—
Biliris, Alexandros; Hillyer, Bruce K.; and Panagos, Euthimios, 6,041,354, Cl. 709-226.000.

Panchou, Karen A.; Newton, Charles M.; and Rosier, Charles D., to Harris Corporation. Integrated circuit package for flip chip with alignment preform feature and method of forming same. 6,040,630, Cl. 257-783.000.

Pandey, Pradeep: *See*—
Shah, Sunil C.; Pandey, Pradeep; and Erickson, Mark A., 6,041,172, Cl. 395-500.270.

Pangborn, Donald R.: *See*—
Ransil, Matthew J.; and Pangborn, Donald R., 6,038,986, Cl. 108-145.000.

Pantochim S.A.: *See*—
Bertola, Aldo; and Cassarino, Salvatore, 6,040,460, Cl. 549-262.000.

Papavassiliou, Vasilis; Wagner, Matthew Lincoln; and Day, Roger William, to Praxair Technology, Inc. High purity oxygen for ethylene oxide production. 6,040,467, Cl. 549-534.000.

Paper Converting Machine Company: *See*—
Delwiche, Christopher; Bero, Joseph; and Ginnow, Gregory, 6,038,972, Cl. 101-216.000.

Parallel Design, Inc.: *See*—
Finsterwald, P. Michael; Douglas, Stephen Joseph; and Just, Ricky Gail, 6,038,752, Cl. 29-25.350.

Parenti, David: *See*—
Dourra, Hussein; Holbrook, Gerald L.; Correa, Colt R.; and Parenti, David, 6,039,674, Cl. 477-166.000.

Parham, Greg L.: *See*—
Minter, Larry L.; and Parham, Greg L., 6,039,915, Cl. 266-49.000.

Park, Bae-seung; Kim, Jin-heung; and Cho, Jung-hyun, to Samsung Electronics Co., Ltd. Method of and apparatus for laminating a semiconductor wafer with protective tape. 6,039,830, Cl. 156-267.000.

Park, Chang Soon; Kim, Tae Geun; and Tak, Sung Woo, to Electronics and Telecommunications Research Institute. Method for preparing safe electronic notarized documents in electronic commerce. 6,039,248, Cl. 235-379.000.

Park, Chan-ho; and Park, Jae-hong, to Samsung Electronics Co., Ltd. Method of fabricating power semiconductor device using semi-insulating polycrystalline silicon (SIPOS) film. 6,040,219, Cl. 438-268.000.

Park, Dong seek, to Samsung Electronics Co., Ltd. Method for decoding video data corrupted by channel noise. 6,040,879, Cl. 348-845.100.

Park, Edward H.; and Sweeney, Philip, to Gillette Canada Company. Dental floss. 6,039,054, Cl. 132-321.000.

Park, Hwi C: *See*—
Byun, Hong J; Lim, Jun W; and Park, Hwi C, 6,039,146, Cl. 181-169.000.

Park, Hyun Soo: *See*—
Oh, Won Zin; Lee, Kune Woo; Choi, Wang Kyu; Park, Hyun Soo; Kim, Jong Seung; Cho, Moon Hwan; and Kim, Jong Kook, 6,040,462, Cl. 549-352.000.

Park, Jae-hong: *See*—
Park, Chan-ho; and Park, Jae-hong, 6,040,219, Cl. 438-268.000.

Park, Jong-kwon; and Tsuneji, Anjai, to Samsung Electronics Co., Ltd. Mold for injection molding of a plastic product. 6,039,558, Cl. 425-556.000.

Park, Jong-min; and Jung, Tae-sung, to Samsung Electronics Co., Ltd. Reference voltage generators including first and second transistors of same conductivity type. 6,040,735, Cl. 327-541.000.

Park, Jong-sool, to Hyundai Motor Company. Powertrain for 5-speed automatic transmissions. 6,039,670, Cl. 475-275.000.

Park, June Ho: *See*—
Lee, Eung Suk; Park, Wan Hee; Park, June Ho; and Jung, Seung Bae, 6,038,779, Cl. 33-503.000.

Park, Ki Pan, to LG Electronics Inc. Liquid crystal display. 6,040,828, Cl. 345-213.000.

Park, Sang Hoon, to Hyundai Electronics Industries Co., Ltd. Image sensor having self-aligned silicide layer. 6,040,593, Cl. 257-292.000.

Park, Seon-Hee: *See*—
Kim, Seung-Hwan; Park, Seon-Hee; and Ryu, Chang-Su, 6,040,641, Cl. 307-112.000.

Park, Sun-Eun, to Hansung Special Glass Co., Ltd. Blinder. 6,038,816, Cl. 49-86.100.

Park, Wan Hee: *See*—
Lee, Eung Suk; Park, Wan Hee; Park, June Ho; and Jung, Seung Bae, 6,038,779, Cl. 33-503.000.

Park, Won-seo; Ho, Wan-chol; Ryu, Duk-Kyun; and Kim, Jong-yeob. Mixed lock type toll collecting system and method for toll collection of vehicles on toll road. 6,040,785, Cl. 340-928.000.

Park, woo-yong, to Samsung Electronics Co., Ltd. Squeeze roller elevating apparatus of liquid electrophotographic printer. 6,041,206, Cl. 399-249.000.

Park, Young-Woo: *See*—
Choi, Chang-Shik; and Park, Young-Woo, 6,040,596, Cl. 257-306.000.

Park, Young-wook; Yoo, Cha-young; Kim, Young-sun; and Nam, Seung-hee, to Samsung Electronics Co., Ltd. Apparatus for fabricating polysilicon film for semiconductor device. 6,039,811, Cl. 118-719.000.

Parker, Danny S.; Su, Guan Hua; and Hibbs, Bart D., to University of Central Florida. High efficiency ceiling fan. 6,039,541, Cl. 416-223.00R.

Parker, Donald D.; Boggs, Darrell D.; and Kyker, Alan B., to Intel Corporation. Method and apparatus for generating a microinstruction responsive to the specification of an operand, in addition to a microinstruction based on the opcode, of a macroinstruction. 6,041,403, Cl. 712-210.000.

Parker-Hannifin Corporation: *See*—
Nordquist, Jack; Calahan, Mark J.; Damiano, Timothy J.; and Botka, Christopher M., 6,040,676, Cl. 318-696.000.

Parker, Theodore L.: *See*—
Edwards, Stuart D.; Wehman, Thomas C.; Parker, Theodore L.; Kucklick, Theodore; Skalnyi, Eugene V.; and Stein, Alan, 6,039,757, Cl. 623-1.000.

Parlar, Hüseyin: *See*—
Demiryont, Hüyla; Parlar, Hüseyin; Ersoy, Ayse; and Aktulga, Ender, 6,040,939, Cl. 359-360.000.

Parral, Loretta S.: *See*—
Kelley, David E.; Kramer, Jeffrey C.; Pontell, Jonathan L.; Parral, Loretta S.; Roth, Michelle V.; Yergen, Anoush; and Sanford, Arlene, 6,039,710, Cl. 602-74.000.

Parrish, Clyde F.: *See*—
Lueck, Dale E.; and Parrish, Clyde F., 6,039,783, Cl. 71-59.000.

Parsadayan, Alex; and Parsadayan, Walter, to Elite Entry Phone Corp. Access control apparatus for use with buildings, gated properties and the like. 6,041,106, Cl. 379-102.060.

Parsadayan, Walter: *See*—
Parsadayan, Alex; and Parsadayan, Walter, 6,041,106, Cl. 379-102.060.

Pasternack, Gary R., to Johns Hopkins University. Nucleic acid encoding a novel mammalian protein associated with uncontrolled cell division. 6,040,173, Cl. 435-320.100.

Patek Philippe S.A.: *See*—
Tu, Mai Xuan; Schwab, Michel; and Musy, Jean-Pierre, 6,041,022, Cl. 368-64.000.

Patel, Viren C., to STMicroelectronics, Inc. Structure to provide junction breakdown stability for deep trench devices. 6,040,617, Cl. 257-571.000.

Paterson, Robert Ian; and Sweeney, Patrick John, to Helifix Limited. Wall tie reinforcement and method. 6,039,125, Cl. 173-1.000.

Patmore, Kevin M.; Price, Jeffrey A.; and Trombley, Michael C., to Irvin Automotive Products, Inc. Compressible pocket for cargo shade attachment. 6,039,105, Cl. 160-24.000.

Patrick, William P.: *See*—
Nishimura, Masaharu; Ohnishi, Keizo; Yasuda, Chiaki; Kajii, Shinichiro; Patrick, William P.; and Zander, Anthony C., 6,041,125, Cl. 381-71.400.

Patterson, Gregory S., to Ericsson Inc. Swivel clip for releasably securing personal articles. 6,038,742, Cl. 24-3.120.

Patterson, LindaMay Rose: *See*—
Bickerton, Matthew John; Bohrer, Kathryn Ann; Hughes, Emma Suzanne; Kenworthy, Edward William; Musgrove, Rupert Jeremy; Patterson, LindaMay Rose; Porter, Steven; Salt, David Dennis; and Scattergood, Duncan Keith, 6,041,312, Cl. 705-30.000.

Patterson, Ralph A.: *See*—
Rahn, John P.; Patterson, Ralph A.; and Cordova, Amado, 6,040,908, Cl. 356-350.000.

Patterson, Robert; Whitmore, Rebecca E; Bowers, Debra D.; and Swoboda, Dean P., to Fort James Corporation. Disposable beverage brewing system. 6,038,963, Cl. 99-287.000.

Pattok, Kathryn Lynn: *See*—
Chandy, Ashok; Pattok, Kathryn Lynn; and Chhaya, Deepak, 6,039,144, Cl. 180-446.000.

Patzelt, Helmut; and Schremmer, Gottfried, to DaimlerChrysler AG. Motor vehicle adjustable telescopic steering column. 6,039,350, Cl. 280-775.000.

Paul, Donald C.; Bennett, Joseph C.; Bettini, Joseph A.; and Gordon, Edward J., to Tricon Industries, Incorporated. Sealed socket assembly for a plug-in lamp and a method for assembling same. 6,039,579, Cl. 439-56.000.

Paul Hellerman GmbH: *See*—
Kurmis, Viktor, 6,039,089, Cl. 140-93.200.

Paul Müller GmbH & Co. KG: *See*—
Schuster, Johann, 6,040,644, Cl. 310-43.000.

Paul, William C.; and Sieloff, Gloria, to General Electric Company. Multilayer thermoformable laminates and methods of their manufacture. 6,040,250, Cl. 442-61.000.

Paulsen, Mark J.; Miller, Jennifer P.; and Ebert, Michael J., to Medtronic, Inc. Medical electrical lead and reinforced silicone elastomer compositions used therein. 6,040,369, Cl. 524-212.000.

Paulson, Jeffrey R.; and Fonda, Arturo, to Motorola, Inc. Method for the manufacture of electronic components. 6,039,849, Cl. 204-192.120.

Pauza, William Vito; and Kerlin, Harold William, to Whitaker Corporation, The. Multiple circuit fork contact connector. 6,039,610, Cl. 439-682.000.

Pavelle, Richard: *See*—
Aisenberg, Sol; Freedman, George; Hed, A. Ze'ev; and Pavelle, Richard, 6,038,786, Cl. 34-267.000.

Pavese, Guy. Process for improving the combustion of a blow-type burner. 6,039,261, Cl. 236-14.000.

Pavirani, Andréa: *See*—
Imler, Jean-Luc; Mehtali, Majid; and Pavirani, Andréa, 6,040,174, Cl. 435-325.000.

Pavlov, Vladimir Borisovich: *See*—
Antonova, Tatijana Borisovna; Bougrov, Gleb Elmirovich; Kondranin, Sergey Gennadievich; Kralkina, Elena Alexandrovna; Pavlov, Vladimir Borisovich; Alexandrov, Andrej Fedorovich; and Rukhadze, Anri Amvrosievich, 6,040,547, Cl. 219-121.430.

Pawling, Paul G.: *See*—
Hooper, James R.; Strother, Richard K.; Fish, John; Pawling, Paul G.; and Sauer, Gerald L., 6,040,397, Cl. 525-526.000.

Pawlowski, Christoph; Langer, Günter; and Meyer, Wilhelm. Ice skate blade. 6,039,328, Cl. 280-7.130.

Payne, Roger Dennis, to Apollo Fire Detectors Limited. Detecting device and an alarm system. 6,040,769, Cl. 340-506.000.

Payne, Sam G.: *See*—
Javier, Manuel A., Jr.; Pearce, Stephen B.; Kesten, Randy J.; Payne, Sam G.; and Gertner, Kevin, 6,039,727, Cl. 606-10.000.

Payne, Thomas S. Edge and spot cleaning system for vacuum cleaners. 6,039,817, Cl. 134-21.000.

Payrou, Viviane: *See*—
Lattes, Isabelle; Feurer, Bernard; Guidetti, Brigitte; and Payrou, Viviane, 6,040,485, Cl. 570-126.000.

Pearce, Frank H., to Brinsea Products, Inc. Incubator for hatching the eggs of birds. 6,039,006, Cl. 119-315.000.

Pearce, Jerry W. Casing board including clear overlay defining exterior pocket. 6,039,494, Cl. 402-73.000.

Pearce, Stephen B.: *See*—
Javier, Manuel A., Jr.; Pearce, Stephen B.; Kesten, Randy J.; Payne, Sam G.; and Gertner, Kevin, 6,039,727, Cl. 606-10.000.

Pearson, Timothy: *See*—
Abrams, Jack; Pearson, Timothy; and Gurak, Ronald, 6,039,286, Cl. 242-564.400.

Pechanek, Gerald George; Vassiliadis, Stamatis; and Delgado-Frias, Jose Guadalupe, to International Business Machines Corporation. Massively parallel multiple-folded clustered processor mesh array. 6,041,398, Cl. 712-11.000.

Peck, Michael: *See*—
David, Samuel; Antel, Jochen; Brueckner, Reinhard; Ziegler, Dieter; Eeckhout, Christian; Bielenberg, Gerhard-Wilhelm; and Peck, Michael, 6,040,303, Cl. 514-218.000.

Peck, Thomas N.: *See*—
Vrescak, Warren David; Vest, Daniel Brown; Thomas, Nils Ian; Peck, Thomas N.; and Mabry, Thomas, 6,040,657, Cl. 313-544.000.

Pedracine, Richard L.; and Michalsen, Robert M., to Rayovac Corporation. Hearing aid battery inserter. 6,039,185, Cl. 206-704.000.

Peeren, René: *See*—
Jellema, Bart; Peeren, René; Croughan, Louise; and Aben, Freek, 6,041,115, Cl. 379-230.000.

Peeters, Kenneth J.; and Landon, Gregory L., to H&S Manufacturing Co., Inc. Folding hay rake with extension linkage. 6,038,844, Cl. 56-377.000.

Pei Chi Enterprise Co., Ltd.: *See*—
Chang, Sen-Jung, 6,038,985, Cl. 108-84.000.

Peifer, Bernd; Palackal, Syriac J.; Welch, M. Bruce; Alt, Helmut G.; and Schertl, Peter, to Phillips Petroleum Company. Polymeric ligands, polymeric metallocenes, catalyst systems, preparation, and use. 6,040,402, Cl. 526-160.000.

Peiffer, Larry; Zeigler, Terry; and Guo, William G., to Bergstrom, Inc. Modular low pressure delivery vehicle air conditioning system. 6,038,877, Cl. 62-244.000.

Peignon, Philippe: *See*—
Mangano, Alain; Allart, Bernard; Bigo, Louis; Garczarek, Michel; Ethet, Yannick; Crave, Joël; and Peignon, Philippe, 6,038,859, Cl. 60-436.000.

Pelagalli, Sergio; and Losi, Marco, to STMicroelectronics S.R.L. Connection matrix for a microcontroller emulation chip. 6,041,428, Cl. 714-734.000.

Pendleton, David: *See*—
Kesterman, James; and Pendleton, David, 6,039,201, Cl. 220-484.000.

Penetrante, Bernardino M.; Vogtlin, George E.; Merritt, Bernard T.; and Brusasco, Raymond M., to University of California, The Regents of the. Plasma-assisted catalytic storage reduction system. 6,038,853, Cl. 60-274.000.

Penetrante, Bernardino M.; Vogtlin, George E.; Merritt, Bernard T.; and Brusasco, Raymond M., to University of California, The Regents of the. Plasma regenerated particulate trap and NO_x reduction system. 6,038,854, Cl. 60-297.000.

Penford Corporation: *See*—
Luebke, Gary; Benton, Kenneth Curtis; and Letuchy, Yakov A., 6,040,379, Cl. 524-734.000.

Penketh, Philip G.: *See*—
Sartorelli, Alan C.; Shyam, Krishnamurthy; Penketh, Philip G.; and Chen, Shu-Hui, 6,040,338, Cl. 514-482.000.

Penn State Research Foundation, The: *See*—
Wu, Shudong; and Lu, Guowen, 6,040,910, Cl. 356-376.000.

Pennington, Donald R.; Stickley, Keith A.; and Reesby, Cyril F., to Midmark Corporation. Surgical table. 6,038,718, Cl. 5-618.000.

Pentti, Ismo; and Leskinen, Pauli, to Borealis A/S. Process for the preparation of repolymerized catalyst composition and a process for polymerizing α-olefins. 6,040,260, Cl. 502-103.000.

Pepper, Tammy; Krüger, Christof; and Mäkelä, Matti, to Xyrofin OY. Fructose-based granulated product and a process for the production thereof. 6,039,813, Cl. 127-42.000.

Peragine, Ralph E.: *See*—
Citron, Howard M.; Asano, David K.; Baietto, Henry R.; Chen, Sullivan S.; De Frondeville, Alexis W.; Hahn, Jeffrey H.; Probst, Thomas J., Jr.; Massucci, John E.; Costin, Dinu; and Peragine, Ralph E., 6,038,952, Cl. 83-605.000.

Peranto, Juha: *See*—
Oksanen, Markku Tapio; Peranto, Juha; and Vuorio, Martti Ensio, 6,041,234, Cl. 455-434.000.

Perdrieux, Sylvain: *See*—

Bertocchio, Rene; Lacroix, Eric; and Perdrieux, Sylvain, 6,039,845, Cl. 203-57.000.
Perea, Kim: *See*—
Perea, Larry; and Perea, Kim, 6,039,338, Cl. 280-288.400.
Perea, Larry; and Perea, Kim. Sound generating device for spoked wheel. 6,039,338, Cl. 280-288.400.
Pereira, John; Machado, Manuel; and Antaya, Stephen, to Antaya Technologies Corporation. Circular electrical connector. 6,039,616, Cl. 439-874.000.
Pericard, Louis; and Guillemot, Georges, to Precision Valve Corporation. Aerosol valve. 6,039,306, Cl. 251-353.000.
Perkin-Elmer Corporation, The: *See*—
Slettnes, Tor, 6,040,586, Cl. 250-573.000.
Perks, Michael Albert; and Sehorne, Mark Alvin, to International Business Machines Corporation. System and method for optimizing template object files. 6,041,180, Cl. 395-709.000.
Perl, David I.: *See*—
Bittar, Joseph; Barker, Frederick H.; Cooney, Anthony; Perl, David I.; Peruggi, Richard E.; and Silverberg, Michael D., 6,038,980, Cl. 104-20.000.
Pero, Ronald W., to CampaMed, Inc. Method of preparation and composition of a water soluble extract of the plant species uncaria. 6,039,949, Cl. 424-195.100.
Perrault, James J.; and Rouns, Cameron G., to Ballard Medical Products. Inherently antimicrobial quaternary amine hydrogel wound dressings. 6,039,940, Cl. 424-78.060.
Perrier, Alexandre: *See*—
Krettek, Christian; Könemann, Bernd; Perrier, Alexandre; and Senn, Peter, 6,039,742, Cl. 606-96.000.
Perrier, Eric; Antoni, Daniele; and Huc, Alain, to Coletica. Lipophilic hydroxylated acid, its use in cosmetics and pharmacy, and its process of preparation. 6,039,961, Cl. 424-401.000.
Perruchoud, Raymond: *See*—
Kazeef, Michael G.; and Perruchoud, Raymond, 6,039,791, Cl. 75-764.000.
Perry, Charles H.: *See*—
Long, David C.; Moyer, Thomas P.; O'Neil, Keith C.; Perry, Charles H.; Pomerantz, Glenn A.; Case, James R.; Kando, Laszlo; and Kozol, John E., 6,038,931, Cl. 73-850.000.
Perry, Edward H.: *See*—
Ramanathan, Srinivas; Perry, Edward H.; and Jin, Tai, 6,041,041, Cl. 370-241.000.
Persoon, Eric H. J.: *See*—
Rosengren, Jürgen F.; Saeijs, Ronald W. J. J.; and Persoon, Eric H. J., 6,041,068, Cl. 370-538.000.
Persson, Bengt: *See*—
Diachina, John W.; Persson, Bengt; Raith, Alex K.; and Sammarco, Anthony J., 6,041,047, Cl. 370-347.000.
Persson, Bror, to Errarp Innovation AB. Device for a bed. 6,038,717, Cl. 5-607.000.
Persson, Curt, to Tepro Machine & Pac-System Aktiebolag. Vacuum lifting plate with suction passageway ball valves. 6,039,529, Cl. 414-627.000.
Persson, Gunnar Magnus Severus: *See*—
Gustafsson, Lars Erik; Persson, Gunnar Magnus Severus; and Strömberg, Stefan Per Axel, 6,038,913, Cl. 73-23.300.
Peruggi, Richard E.: *See*—
Bittar, Joseph; Barker, Frederick H.; Cooney, Anthony; Perl, David I.; Peruggi, Richard E.; and Silverberg, Michael D., 6,038,980, Cl. 104-20.000.
Peters, Michael G.: *See*—
Zhang, Lei; Chou, William; Peters, Michael G.; and Beilin, Solomon I., 6,039,889, Cl. 216-17.000.
Peters, Rainer: *See*—
Van De Venne, Gunter; Kemmerling, Frank; Bonse, Michael; Muckelmann, Klaus; and Peters, Rainer, 6,039,536, Cl. 415-216.100.
Peters, Richard E., to A. O. Smith Corporation. Plug for changing an operating condition of an electric motor. 6,040,646, Cl. 310-71.000.
Peters, Roy: *See*—
Paganini, Lisa M.; Casilio, Frank; Peters, Roy; Straub, Kurt M.; DeHondt, Rene C.; and Fry, Tova, 6,040,637, Cl. 307-10.100.
Peters, Samuel J.: *See*—
Denton, Claude; Kirkpatrick, Donald C.; and Peters, Samuel J., 6,041,043, Cl. 370-254.000.
Petersen, Jacob Steen: *See*—
Madsen, Ole Dragsbaek; Michelsen, Birgitte Koch; Petersen, Jacob Steen; Roep, Bart O.; and Teisner, Borge, 6,040,134, Cl. 435-4.000.
Petersen, Lars Christian: *See*—
Berkner, Kathleen L.; Petersen, Lars Christian; Hart, Charles E.; Hedner, Ulla; and Bregengaard, Claus, 6,039,944, Cl. 424-94.640.
Petersen, Paul M.: *See*—
Carrier, Allen M.; Humphreys, Robert W. R.; and Petersen, Paul M., 6,040,406, Cl. 526-238.220.
Peterson, Dean F., to Wytec, Incorporated. Integrated orthogonal mode transducer/filter design for microwave frequency-domain. 6,041,219, Cl. 455-81.000.
Peterson, Roger. Sampler apparatus and method of use. 6,038,934, Cl. 73-863.860.
Petrick, Jörg; and Stähle, Michael, to Schering Aktiengesellschaft. Portable apparatus for simulating ultrasonic examinations. 6,039,573, Cl. 434-268.000.
Petrov, Viacheslav Alexandrovich: *See*—
Baker, Ralph Thomas; Petrov, Viacheslav Alexandrovich; and Rao, Vellyurnott Mallikarjuna, 6,040,487, Cl. 570-172.000.
Petterson, Tor H.: *See*—
Dunn, Steven B.; and Petterson, Tor H., 6,038,784, Cl. 34-104.000.
Pettijohn, Kevin L.: *See*—
Caulfield, John T.; Wyles, Richard H.; Schlesselmann, John D.; and Pettijohn, Kevin L., 6,040,568, Cl. 250-208.100.
Pettitt, Gregory S.; and Markandey, Vishal, to Texas Instruments Incorporated. Low intensity contouring and color shift reduction using dither. 6,040,876, Cl. 348-624.000.
Pezron, Erwoan: *See*—
Iliopoulos, Ilias; Lafuma, Francoise; Gillet, Jean-Philippe; and Pezron, Erwoan, 6,040,386, Cl. 525-329.900.
Pfab, Hans, to Siemens Aktiengesellschaft. Electromagnetic switching device. 6,040,750, Cl. 335-156.000.
Pfaff, Georg; and Keller, Herbert, to Robert Bosch GmbH. Method and circuit for monitoring the functioning of a sensor bridge. 6,040,779, Cl. 340-661.000.
Pfander, Hanspeter; and Traber, Bruno, to Roche Vitamins Inc. Intermediate compounds for making metabolites of lycopene. 6,040,475, Cl. 560-264.000.
Pfaundler, Julian, to Robert Bosch GmbH. Motor driven hand tool with improved elastic supporting members connecting an oscillating work tool carrier with the tool housing. 6,039,639, Cl. 451-356.000.
Pfeifer, Clemens: *See*—
Du, Weimin; Davis, James W.; Pfeifer, Clemens; Shan, Ming-Chien; and Sheard, Nicolas, 6,041,306, Cl. 705-8.000.
Pfeiffer, Frank: *See*—
Hasing, Friedrich Wolfgang; Pfeiffer, Frank; and Büker, Harald, 6,041,150, Cl. 385-12.000.
Pfister, Dennis M.; and Byrd, Charles M., to Sun Microsystems, Inc. Method and apparatus for cooling electrical components. 6,038,878, Cl. 62-259.200.
Pfister, Dennis M.; and Byrd, Charles M., to Sun Microsystems, Inc. Electromagnetic wave-activated sorption refrigeration system. 6,038,883, Cl. 62-480.000.
Pfister, Norbert; Grazioli, Mario; and Ehmig, Gerhard, to Hilti Aktiengesellschaft. Setting tool. 6,039,229, Cl. 227-10.000.
Pfizer Inc: *See*—
Marfat, Anthony, 6,040,329, Cl. 514-405.000.
Pfizer, Inc.: *See*—
Dack, Kevin Neil; and Dickinson, Roger Peter, 6,040,309, Cl. 514-253.000.
Dow, Robert L.; and Tate, Bonnie F., 6,040,310, Cl. 514-258.000.
Pham, Duc, to Diamond Multimedia Systems, Inc. Enhanced SCSI transmitter and adapter. 6,041,373, Cl. 710-62.000.
Phan, Dean Van: *See*—
Trokhan, Paul Dennis; Phan, Dean Van; Deason, Howard Thomas; and Kleinwächter, Jörg, 6,039,839, Cl. 162-116.000.
Pharmacia & Upjohn Company: *See*—
Batts, Donald Herman; and Ulrich, Roger G., 6,040,306, Cl. 514-236.800.
Pharmaprint Inc.: *See*—
Khwaja, Tasneem A.; and Friedman, Elliot P., 6,039,950, Cl. 424-195.100.
Philip Morris Incorporated: *See*—
Fleischhauer, Grier S.; Higgins, Charles T.; Losee, D. Bruce; Nelson, J. Robert, Jr.; Ripley, Robert L.; Sano, Masato; Sharpe, David E.; and Watkins, Michael L., 6,040,560, Cl. 219-494.000.
Philipp, Carsten: *See*—
Berlien, Hans-Peter; Muller, Gerhard; Beuthan, Jürgen; and Philipp, Carsten, 6,039,728, Cl. 606-15.000.
Philippe, Michel; Luppi, Bernadette; and Semeria, Didier, to L'Oreal. Ceramide compounds, process for their preparation and use. 6,039,963, Cl. 424-401.000.
Phillips & Temro Industries Inc.: *See*—
Prust, Andrew J.; and Thimmesch, Jan P., 6,040,557, Cl. 219-206.000.
Phillips & Temro Industries Ltd.: *See*—
Witkowski, Ireneusz; and Zubin, Claudio, 6,039,602, Cl. 439-550.000.
Phillips Petroleum Company: *See*—
Drake, Charles A.; Wu, An-hsiang; and Yao, Jianhua, 6,040,257, Cl. 502-64.000.
Hanes, Mark D., 6,040,382, Cl. 525-98.000.
Peifer, Bernd; Palackal, Syriac J.; Welch, M. Bruce; Alt, Helmut G.; and Schertl, Peter, 6,040,402, Cl. 526-160.000.
Phillips, Raymond A., Jr.: *See*—
Dibble, Eric P.; Johnson, Eric A.; and Phillips, Raymond A., Jr., 6,040,631, Cl. 257-783.000.
Philp, Sanborn F: *See*—
Milde, Helmut I; and Philp, Sanborn F, 6,039,883, Cl. 210-748.000.
Phoenix Closures, INc.: *See*—
Ekkert, Len; Miller, Albert R.; and Zemlo, Bridgett, 6,039,196, Cl. 215-216.000.
Phuapradit, Wantanee: *See*—
Shah, Navnit Hargovindas; Railkar, Aruna M.; and Phuapradit, Wantanee, 6,039,975, Cl. 424-473.000.
Phyfe, Nicole M.: *See*—
Anderson, David K.; Chiu, John H.; McNary, Steven F.; Phyfe, Nicole M.; Turek, David G.; and Mylchreest, Donald G., 6,039,008, Cl. 122-510.000.
Physical Optics Corporation: *See*—

Ho, Zonh-Zen; Jannson, Tomasz P.; Lieberman, Robert A.; Savant, Gajendra D.; and Wang, Allan, 6,040,171, Cl. 435-288.100.
Physio-Control Manufacturing Corporation: *See*—
Sullivan, Joseph L.; Borschowa, Lawrence A.; and Nova, Richard C., 6,041,254, Cl. 607-5.000.
Picker International, Inc.: *See*—
Miller, Lester D.; Maska, Mark S.; and Kaczmarek, Andrew R., Jr., 6,041,100, Cl. 378-141.000.
Roos, Pieter Gerhard; Ivan, Andrew J.; and Mattson, Rodney A., 6,041,097, Cl. 378-62.000.
Pidutti, Albino; and Legnani, Marco Alessandro, to STMicroelectronics S.R.L. Nonlinear multiplier for switching mode controller. 6,040,687, Cl. 323-316.000.
Pierburg AG: *See*—
Van De Venne, Gunter; Kemmerling, Frank; Bonse, Michael; Muckelmann, Klaus; and Peters, Rainer, 6,039,536, Cl. 415-216.100.
Pierce Chemical Company: *See*—
Savage, M. Dean, 6,040,150, Cl. 435-28.000.
Sykaluk, Laura L., 6,039,871, Cl. 210-321.710.
Pierce, Michael E.; Chen, Cheng Y.; Choudhury, Anusuya; Radesca, Lilian A.; Tan, Lushi; and Zhao, Dalian, to Du Pont Pharmaceuticals Company. Asymmetric synthesis of benzoxazinones. 6,040,480, Cl. 564-390.000.
Pierrat, Christophe, to Micron Technology, Inc. Multiple image reticle for forming layers. 6,040,892, Cl. 355-53.000.
Pierre, Bernard Raymond: *See*—
Le Riche, Frédéric Pierre Alain; and Pierre, Bernard Raymond, 6,040,006, Cl. 427-209.000.
Pigozzi, Gian Maria, to Iveco Fiat S.p.A. Gear change for an automobile vehicle. 6,039,669, Cl. 475-207.000.
Pina, Amado, Jr. Modular outdoor grill with a pivotal food supporting rack. 6,039,039, Cl. 126-25.00R.
Pink, John J., to Amana Company, L.P. Multiple height package retainer. 6,039,424, Cl. 312-405.100.
Pinney, David: *See*—
Casper, Stephen L.; Pinney, David; and Keeth, Brent, 6,041,003, Cl. 365-202.000.
Pinter, Hans-Dieter: *See*—
Gestermann, Fritz; Pinter, Hans-Dieter; Metzger, Karl-Ludwig; and Herold, Heiko, 6,039,853, Cl. 204-258.000.
Pinto, Patrick A.: *See*—
Njoroge, F. George; Vibulbhan, Bancha; Pinto, Patrick A.; and Girijavallabhan, Viyyoor M., 6,039,683, Cl. 574-274.000.
Pioneer Electronic Corp.: *See*—
Ishida, Nobuo; Togashi, Jun; Kimura, Tomomichi; Morikawa, Kiyoshi; Nakayama, Yoshihumi; Akiyama, Hiroshi; Yanagisawa, Tatsuya; and Ota, Takashi, 6,041,032, Cl. 369-191.000.
Pioneer Hi-Bred International, Inc.: *See*—
Wehrmann, Hartwig Josef Bernhard, 6,040,505, Cl. 800-320.100.
Piperato, Michael C.; and Zimerla, Edward L. Method for preventing closure of body piercing openings. 6,039,049, Cl. 128-898.000.
Piplani, Alec A.: *See*—
Quiachon, Dinah B.; Piplani, Alec A.; Baker, Steve G.; Williams, Ronald G.; Williams, Richard S.; Osborn, Kenneth L.; Layman, Ted W.; and Johansson, Peter K., 6,039,758, Cl. 623-1.000.
Pirshin, Igor V.: *See*—
Touryanski, Alexander G.; Vinogradov, Alexander V.; and Pirshin, Igor V., 6,041,098, Cl. 378-70.000.
Pisterzi, Michael J.: *See*—
Melane, Marcus L.; Pisterzi, Michael J.; Mills, Edward G.; and Hargroves, Curtis L., 6,039,414, Cl. 312-205.000.
Pita, Frank J.: *See*—
Bass, Brian Mitchell; Hubbard, James Allison; Oman, Price Ward; and Pita, Frank J., 6,041,375, Cl. 710-103.000.
Pitney Bowes Inc.: *See*—
Bass, Edward R.; Kodonas, Konstantin G.; and Weis, Vincent R., 6,041,319, Cl. 705-409.000.
Berson, William; and Auslander, Judith D., 6,039,257, Cl. 235-468.000.
Pittard, Michael L. Vehicle window shade assembly. 6,039,107, Cl. 160-370.220.
Pittsburgh Mineral and Environmental Technology, Inc.: *See*—
Koshinski, Casmir J., 6,038,987, Cl. 110-344.000.
Pitzi, Vincent: *See*—
Meistrick, Zdenek; and Pitzi, Vincent, 6,039,022, Cl. 123-321.000.
Plasma Tech Co., Ltd.: *See*—
Antonova, Tatijana Borisovna; Bougrov, Gleb Elmirovich; Kondranin, Sergey Gennadievich; Kralkina, Elena Alexandrovna; Pavlov, Vladimir Borisovich; Alexandrov, Andrej Fedorovich; and Rukhadze, Anri Amvrosievich, 6,040,547, Cl. 219-121.430.
Plastek Group, The: *See*—
Szekely, Alex S., 6,039,483, Cl. 401-50.000.
Plastic Components, Inc.: *See*—
Larson, John A.; Gretz, Thomas J.; and Ofcharsky, John, 6,038,821, Cl. 52-97.000.
Plath, Peter: *See*—
Kast, Jürgen; Vossen, Marcus; von Deyn, Wolfgang; Engel, Stefan; Hill, Regina Luise; Kardorff, Uwe; Otten, Martina; Plath, Peter; Walter, Helmut; Westphalen, Karl-Otto; and Misslitz, Ulf, 6,040,274, Cl. 504-348.000.
Platsch, Hans, to Heidelberger Druckmaschinen AG. Device for applying powder to sheets. 6,038,998, Cl. 118-46.000.
Platt, Robert C., Jr., to Sherwood Services AG. Side-Fire coagulator. 6,039,736, Cl. 606-49.000.
Platte, Hans-Joachim, to Deutsche Thomson-Brandt GmbH. Telecommunications device having a remote controller. 6,041,159, Cl. 386-46.000.
Platzek, Johannes: *See*—
Schmitt-Willich, Heribert; Platzek, Johannes; Gries, Heinz; Schumann-Giampieri, Gabrielle; Weinmann, Hanns-Joachim; Vogler, Hubert; Deutsch, Julius; and Conrad, Juergen, 6,039,931, Cl. 424-9.364.
PlayStar, Incorporated: *See*—
Zeilinger, Brian K., 6,039,654, Cl. 472-118.000.
Pliquett, Uwe: *See*—
Kost, Joseph; Pliquett, Uwe; Mitragotri, Samir S.; Langer, Robert S.; and Weaver, James C., 6,041,253, Cl. 604-20.000.
PMI Industries, Inc.: *See*—
Albert, Frank, 6,039,081, Cl. 138-120.000.
Poclain Hydraulics Industrie: *See*—
Mangano, Alain; Allart, Bernard; Bigo, Louis; Garczarek, Michel; Ethet, Yannick; Crave, Joël; and Peignon, Philippe, 6,038,859, Cl. 60-436.000.
Podlipec, Bostjan: *See*—
Podlipec, Milan; Podlipec, Bostjan; Zepic, Janez; and Vizjak, Kilijan, 6,038,969, Cl. 101-127.100.
Podlipec, Milan; Podlipec, Bostjan; Zepic, Janez; and Vizjak, Kilijan, to LPKF d.o.o. Tensioning frame. 6,038,969, Cl. 101-127.100.
Podobnik, Ivan Zlatko: *See*—
Mabry, Melinda Ann; Rumpf, Frederick Harry; Podobnik, Ivan Zlatko; Westveer, Scott Adrian; Morgan, Allan Clark; Chung, Bin; and Andrews, Malcolm John, 6,040,364, Cl. 523-318.000.
Pogo, Beatriz; and Holland, James, to Mount Sinai School of Medicine. Detection of mammary tumor virus-like sequences in human breast cancer. 6,040,146, Cl. 435-7.230.
Pohang Iron & Steel Co., Ltd.: *See*—
Lee, Eung Suk; Park, Wan Hee; Park, June Ho; and Jung, Seung Bae, 6,038,779, Cl. 33-503.000.
Pohlner, Johannes: *See*—
Klauser, Thomas; Kramer, Joachim; Meyer, Thomas F.; and Pohlner, Johannes, 6,040,141, Cl. 435-6.000.
Point Biomedical Corporation: *See*—
Ottoboni, Thomas B.; Yamamoto, Ronald K.; and Conston, Stanley R., 6,039,967, Cl. 424-426.000.
Poletto, Vanni: *See*—
Milanesi, Andrea; Poletto, Vanni; Poma, Alberto; and Morelli, Marco, 6,040,736, Cl. 327-541.000.
Policht, Stanislaw A.: *See*—
Mushabac, David R.; and Policht, Stanislaw A., 6,038,780, Cl. 33-512.000.
Polivka, Zdenek: *See*—
Andersen, Knud Erik; Jørgensen, Tine Krogh; Hohlweg, Rolf; Fischer, Erik; Olsen, Uffe Bang; Polivka, Zdenek; Sindelar, Karel; and Valenta, Vladimir, 6,040,318, Cl. 514-329.000.
Hohlweg, Rolf; Madsen, Peter; Jørgensen, Tine Krogh; Andersen, Knud Erik; Watson, Brett; Polivka, Zdenek; Konigova, Otylie; Kovandova, Martina; Silhánková, Alexandra; and Valenta, Vladimir, 6,040,302, Cl. 514-217.000.
Polley, Zackery. Guitar pick with hook and loop closure material. 6,040,512, Cl. 84-322.000.
Pollin, Robert E., to Autoscribe Corporation. Automated payment system and method. 6,041,315, Cl. 705-45.000.
Poma, Alberto: *See*—
Milanesi, Andrea; Poletto, Vanni; Poma, Alberto; and Morelli, Marco, 6,040,736, Cl. 327-541.000.
Pomerantz, Glenn A.: *See*—
Long, David C.; Moyer, Thomas P.; O'Neil, Keith C.; Perry, Charles H.; Pomerantz, Glenn A.; Case, James R.; Kando, Laszlo; and Kozol, John E., 6,038,931, Cl. 73-850.000.
Pomerantz, Mitchell P.: *See*—
Graber, John H.; and Pomerantz, Mitchell P., 6,039,043, Cl. 128-202.140.
Ponnekanti, Hari: *See*—
Tanaka, Tsutomu; Kelkar, Mukul; Fairbairn, Kevin; Ponnekanti, Hari; and Cheung, David, 6,039,834, Cl. 156-345.000.
Pontaoe, John S.: *See*—
Hamilton, Jeffrey R.; Pontaoe, John S.; and Thatcher, Bryce, 6,038,747, Cl. 24-164.000.
Pontell, Jonathan L.: *See*—
Kelley, David E.; Kramer, Jeffrey C.; Pontell, Jonathan L.; Parral, Loretta S.; Roth, Michelle V.; Yergen, Anoush; and Sanford, Arlene, 6,039,710, Cl. 602-74.000.
Pontius, Glenn J.: *See*—
Clark, Stephen L.; Horchler, David C.; Stoner, Stuart C.; Pontius, Glenn J.; and Nailor, William K., III, 6,038,762, Cl. 29-739.000.
Poole, David L.: *See*—
Seffernick, Lewis L.; and Poole, David L., 6,040,823, Cl. 345-168.000.
Pooley, Michael B.; Strotton, Carl N.; and Wardle, David G., to BOC Group plc, The. Freezer apparatus. 6,038,868, Cl. 62-63.000.
Popoff, Christine; Nartey, Alwyn; Gabriel, Robert; and Aubay, Eric, to Rhodia Inc. Fabric color protection compositions and methods. 6,040,288, Cl. 510-466.000.
Popovich, Milan M., to DigiLens, Inc. Holographic desktop monitor. 6,040,928, Cl. 359-15.000.
Poppenga, Burton H.: *See*—
Campbell, Russell; Dow, Richard M.; Blair, Timothy P.; and Poppenga, Burton H., 6,040,917, Cl. 358-1.170.

Poreh, Illan; Algom, Avner; Vaindiner, Alexander; and Shpilberg, Ilya, to AnySoft Ltd. Apparatus for and method of acquiring, processing and routing data contained in a GUI window. 6,040,832, Cl. 345-340.000.
Portaz, Joseph M.: *See—*
Isaacs, Ralph G.; and Portaz, Joseph M., 6,041,132, Cl. 382-100.000.
Porter, John D.; Weber, Larren G.; and Thompson, William N., to Micron Technology, Inc. Buffer with fast edge propagation. 6,040,713, Cl. 326-83.000.
Porter, Steven: *See—*
Bickerton, Matthew John; Bohrer, Kathryn Ann; Hughes, Emma Suzanne; Kenworthy, Edward William; Musgrove, Rupert Jeremy; Patterson, LindaMay Rose; Porter, Steven; Salt, David Dennis; and Scattergood, Duncan Keith, 6,041,312, Cl. 705-30.000.
Porter, Stuart C.: *See—*
Mehra, Dev K.; Ramireddy, Chittamuru; Tang, Li-Juan; and Porter, Stuart C., 6,039,976, Cl. 424-480.000.
Portevin, Bernard: *See—*
De Nanteuil, Guillaume; Portevin, Bernard; Bonnet, Jacqueline; and Fradin, Armel, 6,040,327, Cl. 514-394.000.
Porton, Barbara: *See—*
Greengard, Paul; Porton, Barbara; and Kao, Hung-Teh, 6,040,168, Cl. 435-235.100.
Poss, Michael A.: *See—*
Kim, Kyoung S.; Kimball, S. David; Cai, Zhen-wei; Rawlins, David B.; Misra, Raj N.; Poss, Michael A.; Webster, Kevin R.; Hunt, John T.; and Han, Wen-Ching, 6,040,321, Cl. 514-369.000.
Posselt, Andreas; and Koehler, Christian, to Robert Bosch GmbH. Method and arrangement for controlling an internal combustion engine having lean-burn operation. 6,039,021, Cl. 123-306.000.
Postman, Joel R.; Miller, George B.; and Fish, Ronald C., to PSC Inc. PCMCIA interface card for coupling input devices such as barcode scanning engines to personal digital assistants and palmtop computers. 6,041,374, Cl. 710-73.000.
Potashnik, Boris: *See—*
Nakhamkin, Michael; and Potashnik, Boris, 6,038,849, Cl. 60-39.050.
Pottenger, Lawrence A.; and Draganich, Louis F., to ARCH Development Corporation. Prosthetic knee with adjusted center of internal/external rotation. 6,039,764, Cl. 623-20.000.
Povlsen, Lars; Skjoldborg, Erling; and Goldman, Tomasz Jerzy, to Olicom A/S. High availability, scaleable bandwidth, multiport ATM-emulated LAN interface. 6,041,063, Cl. 370-465.000.
Powell, Beth P.: *See—*
Hobson, Alex R.; McCollam, F. Michael J.; and Powell, Beth P., 6,041,211, Cl. 399-352.000.
Powers, Daniel J: *See—*
MacDuff, Ian G; Powers, Daniel J; and Cole, Clinton S, 6,041,257, Cl. 607-5.000.
Powers, Edward T.: *See—*
Headley, Thomas D.; and Powers, Edward T., 6,039,711, Cl. 604-4.000.
PPG Industries Ohio, Inc.: *See—*
Amato, Domenick V.; and Gorton, Earl M., 6,040,488, Cl. 570-264.000.
Wilt, Truman F.; Walters, David N.; Claar, James A.; Donnelly, Karen D.; Carney, Joseph M.; and Wolff, Andrew R., 6,040,394, Cl. 525-474.000.
Prade, Bernd; Schetter, Bernhard; and Streb, Holger, to Siemens Aktiengesellschaft. Burner with annular gap and gas flow with constant meridional velocity through the annular gap and gas turbine having the burner. 6,038,864, Cl. 60-748.000.
Prasad, Arun; Karmaker, Ajit; Zammarieh, Elie; and Day, Grant P., to Jeneric/Pentron Incorporated. Fiber-reinforced dental structures and method of manufacture thereof. 6,039,569, Cl. 433-180.000.
Praxair Technology, Inc.: *See—*
Papavassiliou, Vasilis; Wagner, Matthew Lincoln; and Day, Roger William, 6,040,467, Cl. 549-534.000.
Precision Valve Corporation: *See—*
Pericard, Louis; and Guillemot, Georges, 6,039,306, Cl. 251-353.000.
Prem, Wolfgang: *See—*
Hoffmann, Eduard; and Prem, Wolfgang, 6,038,975, Cl. 101-375.000.
Premark Feg L.L.C.: *See—*
Tiby, Gérard, 6,038,870, Cl. 62-129.000.
Premier Farnell Corp.: *See—*
Mandzukic, Thomas, 6,039,269, Cl. 239-458.000.
Premix, Inc.: *See—*
Rinz, James E., 6,040,391, Cl. 525-375.000.

Quintero-Flores, Raul Gerardo: *See*—
Celada-Gonzalez, Juan; Quintero-Flores, Raul Gerardo; Viramontes-Brown, Ricardo; and Flores-Serrano, Roberto Octaviano, 6,039,916, Cl. 266-82.000.

Quinton Instruments Company: *See*—
dePinto, Victor M., 6,041,250, Cl. 600-509.000.

Quirijnen, Robertus Petrus Cornelis: *See*—
van Eekhout, Mike Paul; Klerken, Pierre Antonius Marie; and Quirijnen, Robertus Petrus Cornelis, 6,040,847, Cl. 347-151.000.

Quiroga, Osvaldo R. Rotary mower apparatus. 6,038,842, Cl. 56-17.500.

Qureshi, Fazal Ur Rehman, to National Semiconductor Corporation. Built in self test BIST for RAMS using a Johnson counter as a source of data. 6,041,426, Cl. 714-719.000.

Qureshi, Imran Iqbal: *See*—
Bretschneider, Richard; Siu, Burton; and Qureshi, Imran Iqbal, 6,041,333, Cl. 707-203.000.

Raab, Francis J., to Noax B.V. Porting for hydraulic pressure transformer. 6,038,958, Cl. 91-486.000.

Raaijmakers, Ivo J.; Burkhart, Chris W.; Christensen, David; and Susoeff, Michael N., to Novellus Systems, Inc. Pressure-induced shut-off valve for a liquid delivery system. 6,039,074, Cl. 137-537.000.

Rabin, Yoed; Julian, Thomas Benjamin; and Wolmark, Norman, to Allegheny-Singer Research Institute. Method and apparatus for cryosurgery. 6,039,730, Cl. 606-23.000.

Rack, Michael: *See*—
Vogelbacher, Uwe Josef; Keil, Michael; Klintz, Ralf; Wahl, Josef; Wingert, Horst; König, Hartmann; Rack, Michael; Götz, Roland; and Teles, Joaquim Henrique, 6,040,458, Cl. 548-371.100.

Radesca, Lilian A.: *See*—
Pierce, Michael E.; Chen, Cheng Y.; Choudhury, Anusuya; Radesca, Lilian A.; Tan, Lushi; and Zhao, Dalian, 6,040,480, Cl. 564-390.000.

Radin, Norman S.: *See*—
Shayman, James A.; and Radin, Norman S., 6,040,332, Cl. 514-428.000.

Radionics, Inc.: *See*—
Kooy, Hanne M.; Hacker, Fred L.; and Bellerive, Marc R., 6,041,101, Cl. 378-147.000.

Radosevich, James W.: *See*—
Meyer, Bennett S.; Chatfield, William D.; Sluder, Larry R.; and Radosevich, James W., 6,041,304, Cl. 705-4.000.

Radosevich, Joseph R.: *See*—
Dennis, Donald C.; Radosevich, Joseph R.; and Singh, Ranbir, 6,040,616, Cl. 257-535.000.

Ragot, Françoise: *See*—
Gendrot, Edouard; Cousin, Gérard; Ragot, Françoise; and Clee-Bouvet, Marie-Christine, 6,039,979, Cl. 424-497.000.

Rahn, John P.; Patterson, Ralph A.; and Cordova, Amado, to Litton Systems, Inc. Method for stress tuning fiber optic sensor coils. 6,040,908, Cl. 356-350.000.

Railkar, Aruna M.: *See*—
Shah, Navnit Hargovindas; Railkar, Aruna M.; and Phuapradit, Wantanee, 6,039,975, Cl. 424-473.000.

Rainbolt, John, to Rainbolt, John. Cable and panel fabric. 6,038,820, Cl. 52-83.000.

Rainbow, David J., to NCR Corporation. Multi-layer thermal transfer media from selectively curable formulations. 6,040,040, Cl. 428-212.000.

Rainer Carrier: *See*—
Carrier, Rainer, 6,038,770, Cl. 29-894.100.

Raith, Alex K.; Ramesh, Rajaram; Molnar, Karl; Koilpillai, R. David; and Koorapaty, Havish, to Ericsson Inc. Systems and methods for locating remote terminals in radiocommunication systems. 6,040,800, Cl. 342-387.000.

Raith, Alex K.: *See*—
Diachina, John W.; Persson, Bengt; Raith, Alex K.; and Sammarco, Anthony J., 6,041,047, Cl. 370-347.000.

Rajasekaran, Kanniah: *See*—
Rice, Douglas; Carozzi, Nadine; Anderson, David M.; Rajasekaran, Kanniah; Rangan, Thirumale S.; Yenofsky, Richard; and Lotstein, Richard, 6,040,504, Cl. 800-314.000.

Rajbhandari, Nirmala: *See*—
Stomp, Anne-Marie; and Rajbhandari, Nirmala, 6,040,498, Cl. 800-294.000.

Ramakrishnan, Sriram; Steigerwald, Robert Louis; and Bicknell, William Hull, to Lockheed Martin Corp. Ultra-low-profile tube-type magnetics. 6,040,753, Cl. 336-223.000.

Ramakrishnan, Terizhandur S.; Schwartz, Lawrence M.; Fordham, Edmund J.; Kenyon, William E.; and Wilkinson, David J., to Schlumberger Technology Corporation. Method for estimating pore structure in carbonates from NMR measurements. 6,040,696, Cl. 324-303.000.

Ramanathan, Srinivas; Perry, Edward H.; and Jin, Tai. Method and system for managing data service systems. 6,041,041, Cl. 370-241.000.

Ramari, Luigi. Fast coupling automatic latching connector releasable by movement of an external body. 6,039,614, Cl. 439-843.000.

Ramaswamy, Sridhar: *See*—
Duvvury, Charvaka; Amerasekera, E. Ajith; and Ramaswamy, Sridhar, 6,040,968, Cl. 361-56.000.

Rambo, Ken: *See*—
Cardy, Douglas Ross; Rambo, Ken; and Waller, Carol, 6,041,109, Cl. 379-201.000.

Ramesh, Rajaram: *See*—
Raith, Alex K.; Ramesh, Rajaram; Molnar, Karl; Koilpillai, R. David; and Koorapaty, Havish, 6,040,800, Cl. 342-387.000.

Ramireddy, Chittamuru: *See*—
Mehra, Dev K.; Ramireddy, Chittamuru; Tang, Li-Juan; and Porter, Stuart C., 6,039,976, Cl. 424-480.000.

Ramot University Authority for Applied Research & Industrial Development Ltd.: *See*—
Mendlovic, David; and Marom, Dan M., 6,041,151, Cl. 385-16.000.

Ramsey, Earl A.: *See*—
Sanduja, Mohan L.; Horowitz, Carl; Kamruzzaman, Mohammed; Thottathil, Paul; and Ramsey, Earl A., 6,039,964, Cl. 424-404.000.

Ramsey, Jens K.; Stevens, Jeffrey C.; Tubbs, Michael E.; and Stancil, Charles J., to Compaq Computer Corporation. Computer system that places a cache memory into low power mode in response to special bus cycles executed on the bus. 6,041,401, Cl. 712-43.000.

Randall, Jeffrey T.: *See*—
Dallas, Milton R., Jr.; and Randall, Jeffrey T., 6,039,224, Cl. 222-565.000.

Randazzi, John J., Jr.: *See*—
Bangs, William E.; Dibenedetto, Joseph D.; Friedberg, Joyce L.; Giordano, Denise A.; Glover, Judy M.; Khoo, Chor San Heng; Ko, Sandy; MacNair, R. David C.; Noar, Scott R.; Randazzi, John J., Jr.; Stoever, Harro; and Ziegler, Paula J., 6,039,989, Cl. 426-106.000.

Rangan, Thirumale S.: *See*—
Rice, Douglas; Carozzi, Nadine; Anderson, David M.; Rajasekaran, Kanniah; Rangan, Thirumale S.; Yenofsky, Richard; and Lotstein, Richard, 6,040,504, Cl. 800-314.000.

Ranganathan, Ravi: *See*—
Puar, Deepraj S.; and Ranganathan, Ravi, 6,041,010, Cl. 365-226.000.

Rangewest Technologies Ltd.: *See*—
Kisman, Kenneth Edwin, 6,039,121, Cl. 166-369.000.

Ranjan, Nalini; and Yang, Henry, to S3 Incorporated. Output buffer circuit and method that compensate for operating conditions and manufacturing processes. 6,040,737, Cl. 327-543.000.

Ransil, Matthew J.; and Pangborn, Donald R., to Weber Knapp Company. Brake operational control. 6,038,986, Cl. 108-145.000.

Rao, Dantam K. Stator with coplanar tapered conductors. 6,040,650, Cl. 310-268.000.

Rao, G. R. Mohan, to E Cirrus Logic, Inc. Memory architecture using content addressable memory, and systems and methods using the same. 6,041,389, Cl. 711-108.000.

Rao, R. Padmanabha; and Chin, Amanda L., to General Instrument Corporation. Analyzer and methods for detecting and processing video data types in a video data stream. 6,041,142, Cl. 382-232.000.

Rao, Sailesh Krishna, to Level One Communications, Inc. Method for simplifying bit matched motion estimation. 6,041,078, Cl. 375-240.000.

Rao, Velliyurnott Mallikarjuna: *See*—
Baker, Ralph Thomas; Petrov, Viacheslav Alexandrovich; and Rao, Velliyurnott Mallikarjuna, 6,040,487, Cl. 570-172.000.

Rao, V. N. Mallikarjuna: *See*—
Corbin, David Richard; and Rao, V. N. Mallikarjuna, 6,040,486, Cl. 570-168.000.

Rapp, Donita M. Adjustable strap. 6,038,745, Cl. 24-68.00R.

Rapp, Robert A., to Ohio State University, The. Method featuring a non-consumable anode for the electrowinning of aluminum. 6,039,862, Cl. 205-386.000.

Rath, Andreas: *See*—
Hoger, Heinz; and Rath, Andreas, 6,038,740, Cl. 16-382.000.

Raulerson, David A.; Amos, Jay; and Smith, Kevin D., to United Technologies Corporation. Method and apparatus for inspection of components. 6,040,695, Cl. 324-240.000.

Ravikumar, Vasulinga T.: *See*—
Cheruvallath, Zacharia S.; Ravikumar, Vasulinga T.; Cole, Douglas L.; and Capaldi, Daniel C., 6,040,438, Cl. 536-25.300.

Rawlins, David B.: *See*—
Kim, Kyoung S.; Kimball, S. David; Cai, Zhen-wei; Rawlins, David B.; Misra, Raj N.; Poss, Michael A.; Webster, Kevin R.; Hunt, John T.; and Han, Wen-Ching, 6,040,321, Cl. 514-369.000.

Raynus, Abel: *See*—
Cherry, James R.; and Raynus, Abel, 6,040,765, Cl. 340-436.000.

Rayovac Corporation: *See*—
Adey, Robert; Dopp, Robert Brian; and Oltman, John Edward, 6,040,074, Cl. 429-27.000.
Bennett, Patricia S.; Kenyon, Kenneth H.; Ekern, Ronald J.; Rose, Janna L.; and Wieser, Josie B., 6,040,088, Cl. 429-229.000.
Pedracine, Richard L.; and Michalsen, Robert M., 6,039,185, Cl. 206-704.000.

Raytheon Company: *See*—
Caulfield, John T.; Wyles, Richard H.; Schlesselmann, John D.; and Pettijohn, Kevin L., 6,040,568, Cl. 250-208.100.
Chen, Ricky Y.; Linder, Lloyd F.; Devendorf, Don C.; and Gorder, Matthew S., 6,040,731, Cl. 327-359.000.
Cunningham, Robert J., 6,040,523, Cl. 174-35.00R.
Sciarretta, William A.; Setzco, Paul; and Arangio, James D., 6,039,580, Cl. 439-63.000.

Ready, David C.: *See*—
Flanders, John A.; Ready, David C.; Van Seters, Steven; Schwartz, Leonard; and Townsend, William D., 6,041,058, Cl. 370-401.000.

Reccia, Ralph; and Smith, Arthur C., to Xico, Inc. Secure, stored-value systems and methods of transferring monetary values in one or more transactions to a specific receiving device. 6,039,247, Cl. 235-379.000.

Rech, Bernd: *See*—
Lübke, Andreas; Rech, Bernd; and Zawade, Torsten, 6,040,766, Cl. 340-438.000.

Rechi Precision Co., Ltd.: *See*—
Tarng, Guang-Der; and Chang, Lung-Tsai, 6,039,549, Cl. 418-55.500.

Redden, James P.: *See*—
Dawson, Gerald L.; and Redden, James P., 6,038,897, Cl. 70-303.00A.

Redei, Eva; Aird, Fraser; Rittenhouse, Peter A.; and McGivern, Robert F., to University of, The, Pennsylvania, Trustees of the. Corticotropin release inhibiting factor and methods of using same for treating behavioral symptoms in an anxiety disorder. 6,039,956, Cl. 424-198.100.

Rediker, Robert H: *See*—
Durville, Frederick M.; Connolly, Raymond J; Lantis, John C; Rediker, Robert H; and Schwaitzberg, Steven D., 6,039,729, Cl. 606-16.000.

Redmon, Martin P.: *See*—
Gao, Yun; Hett, Robert; Fang, Kevin Q.; Wald, Stephen A.; Redmon, Martin P.; and Senanayake, Chris Hugh, 6,040,344, Cl. 514-554.000.

Redpath, Richard J.: *See*—
Nguyen, Binh Q.; Redpath, Richard J.; and Singhal, Sandeep Kishan, 6,041,343, Cl. 709-203.000.

Reed, John C., to University of Pennsylvania. Regulation of bcl-2 gene expression. 6,040,181, Cl. 435-377.000.

Reed, John Douglas; and Smith, Jack Anthony, to Motorola, Inc. Method and apparatus for distributing offered load in a wireless communications system. 6,041,239, Cl. 455-453.000.

Reeder, Kenneth W., to M-C Power Corporation. One piece fuel cell separator plate. 6,040,076, Cl. 429-35.000.

Rees, Jochen; and Steinke, Jürgen, to Asea Brown Boveri AG. Converter with DC voltage intermediate circuit and method for operating such a converter. 6,040,988, Cl. 363-37.000.

Reesby, Cyril F.: *See*—
Pennington, Donald R.; Stickley, Keith A.; and Reesby, Cyril F., 6,038,718, Cl. 5-618.000.

Reflexite Corporation: *See*—
Bernard, Gus; and Soaft, Jay, 6,039,909, Cl. 264-220.000.

Regal Products, Inc.: *See*—
Gagliardo, John P., 6,039,065, Cl. 137-3.000.

Regan, Paul. Protective hockey undershirt. 6,038,701, Cl. 2-125.000.

Regn, Judith, to Siemens Aktiengesellschaft. Device for making a guide path for an instrument on a patient. 6,041,249, Cl. 600-429.000.

Rehfuss, John W.: *See*—
McGee, John D.; Campbell, Donald H.; and Rehfuss, John W., 6,040,062, Cl. 428-500.000.

Reichel, Curtis J.: *See*—
Fishback, Thomas L.; Heyman, Duane A.; Reichel, Curtis J.; and Jaglowski, Adam J., 6,040,413, Cl. 528-44.000.

Reichelt, Werner: *See*—
Eckstein, Lutz; and Reichelt, Werner, 6,039,142, Cl. 180-333.000.

Reichenbach, Jürgen; and Hippenmeyer, Heinrich, to Sick AG. Method and apparatus for the recognition and reading of a bar code. 6,039,253, Cl. 235-462.010.

Reichwein, Adrianus Maria: *See*—
Sikkema, Doetze Jakob; and Reichwein, Adrianus Maria, 6,040,478, Cl. 562-424.000.

Reid, Paul I.: *See*—
Audibert, Annie; Argillier, Jean-Francois; Bailey, Louise; and Reid, Paul I., 6,040,276, Cl. 507-214.000.

Reid, Ted W.: *See*—
Spallholz, Julian E.; and Reid, Ted W., 6,040,197, Cl. 436-525.000.

Reif, Heinz: *See*—
Siegel, Jörg; Borst, Hans-Ulrich; Bell, Peter; Büscher, Ralf; Reif, Heinz; and Jung, Jürgen, 6,040,125, Cl. 430-506.000.

Reinehr, Dieter: *See*—
Metzger, Georges; Reinehr, Dieter; and Hauger, Serge, 6,040,443, Cl. 544-90.000.

Reinhart, Gregory A.: *See*—
Sunvold, Gregory D.; Tetrick, Mark A.; and Reinhart, Gregory A., 6,039,952, Cl. 424-195.100.

Reis, Klaus-Peter: *See*—
Menke, Johannes-Theodor; and Reis, Klaus-Peter, 6,038,895, Cl. 70-278.100.

Reisinger, Hans; Grüning, Ulrike; Wendt, Hermann; Stengl, Reinhard; Lehmann, Volker; Willer, Josef; Franosch, Martin; Schäfer, Herbert; Krautschneider, Wolfgang; Hofmann, Franz; and Böhm, Thomas, to Siemens Aktiengesellschaft. Method of operating a storage cell arrangement. 6,040,995, Cl. 365-185.180.

Reiter, Ferdinand, to Robert Bosch GmbH. Fuel injection valve. 6,039,271, Cl. 239-585.400.

Reliance Electric Industrial Company: *See*—
Dister, Carl J.; and Discenzo, Frederick M., 6,041,287, Cl. 702-182.000.

Reltec Corporation: *See*—
Suffi, Louis; and Ladd, Arnold M., 6,039,578, Cl. 439-54.000.

Remmers, Marcus: *See*—
Lupo, Donald; Remmers, Marcus; and Neher, Dieter, 6,040,069, Cl. 428-690.000.

Remnant, David K.: *See*—
Cannon, William J.; Remnant, David K.; Ward, Paul D.; and Hoerig, Timothy R., 6,041,402, Cl. 712-200.000.

Remo, Inc.: *See*—
Belli, Remo D., 6,040,513, Cl. 84-411.00R.

Ren, Wei-Min; and Wieczorek, David, to Siemens Automotive Corporation. Swirl generator in a fuel injector. 6,039,272, Cl. 239-597.000.

Rephaeli, Ada; and Nudelman, Abraham, to Bar-Ilan University; and General Federation of Labor, Kupat Holim Health Institution of the. Retinoyloxy (alkyl-substituted) methyl butyrates useful for the treatment of cancer and other proliferative diseases. 6,040,342, Cl. 514-548.000.

Replication Medical, Inc.: *See*—
Cooke, Randolph L.; and Stoy, Vladimir A., 6,040,493, Cl. 602-41.000.

Research Corporation Technologies, Inc.: *See*—
Carpino, Louis A.; and El-Faham, Ayman Ahmed, 6,040,422, Cl. 530-333.000.

Research Foundation for Microbial Diseases of Osaka University, The: *See*—
Koyama, Kuniaki; and Osame, Juichiro, 6,039,958, Cl. 424-230.100.

Research Foundation of State of New York: *See*—
Lee, George C.; and Liang, Zhong, 6,038,924, Cl. 73-514.340.

Research Institute Korea Telecom: *See*—
Un, Sung-Kyong; Cho, Hyun-Sook; Kim, Hwan-Chul; and Lee, Soo-In, 6,040,850, Cl. 348-10.000.

Research Institute of Industrial Science & Technology: *See*—
Lee, Eung Suk; Park, Wan Hee; Park, June Ho; and Jung, Seung Bae, 6,038,779, Cl. 33-503.000.

Research Triangle Institute: *See*—
Wall, Monroe E.; and Wani, Mansukh C., 6,040,313, Cl. 514-283.000.

Restle, Serge; and Cauwet-Martin, Daniéle, to L'Oreal. Nanoemulsion based on non-ionic and cationic amphiphilic lipids and uses thereof. 6,039,936, Cl. 424-70.100.

Revelli, Joseph F., Jr.: *See*—
Hirsh, Jeffrey I.; Revelli, Joseph F., Jr.; and Nutt, Alan C. G., 6,040,857, Cl. 348-241.000.

Rewick, Robert T.: *See*—
Sanjurjo, Angel; Lau, Kai-Hung; Lowe, David; Canizales, Anastasia; Jiang, Naixiong; Wong, Victor; Jiang, Liqiang; Schneider, Luke V.; Mufti, Naheed; Rewick, Robert T.; Johansson, Marie; and Kardos, Keith, 6,039,894, Cl. 252-301.40R.

Rey, Paul A.: *See*—
Donlan, Rodney M.; Elliot, David L.; Kapp, Nancy J.; Wiatr, Christopher L.; and Rey, Paul A., 6,039,965, Cl. 424-405.000.

Reynolds Industries Incorporated: *See*—
Kim, Derek; and Lopez, Thomas, 6,039,585, Cl. 439-137.000.

Reynolds, Kim A.; Marino, Charles P.; and Kray, Kevin P., to Markel Corporation. Cable assemblies. 6,040,384, Cl. 525-180.000.

Rheinische Filztuchfabrik GmbH: *See*—
Hennecken, Bruno, 6,040,253, Cl. 442-239.000.

Rheinmetall W & M GmbH: *See*—
Manz, Herbert; Tuncer, Haluk; and Zaeper, Manfred, 6,040,551, Cl. 219-121.650.

Rheinmetall W.& M. GmbH: *See*—
Thiesen, Stefan; Jungbluth, Dieter; and Böcker, Jürgen, 6,038,955, Cl. 89-41.170.

Rhodes, Richard O., to FAFCO, Incorporated. Method and apparatus for coupling panel boards and tubing to a header pipe. 6,038,768, Cl. 29-890.043.

Rhodia Chimie: *See*—
Chambost, Bernard; Marion, Philippe; and Mathieu, Corinne, 6,040,481, Cl. 564-422.000.
Costantini, Michel; Gilbert, Laurent; and Spagnol, Michel, 6,040,484, Cl. 568-803.000.

Rhodia Inc.: *See*—
Popoff, Christine; Nartey, Alwyn; Gabriel, Robert; and Aubay, Eric, 6,040,288, Cl. 510-466.000.

Rhone Poulenc Rorer SA: *See*—
Bouchard, Hervé; Bourzat, Jean-Dominique; and Commerçon, Alain, 6,040,466, Cl. 549-510.000.

Rhum, David: *See*—
Hostettler, Fritz; Rhum, David; Forman, Michael R.; Helmus, Michael N.; and Ding, Ni, 6,040,058, Cl. 428-457.000.

Rhythm Corporation: *See*—
Takehara, Nobuyuki; Shimoda, Kazuhisa; and Morishita, Yasuo, 6,038,771, Cl. 29-897.200.

RIC Company, Ltd.: *See*—
Sakamoto, Yoshiaki, 6,040,517, Cl. 84-713.000.

Ricco, Mario, to Elasis Sistema Ricerca Fiat Nel Mezzogiorno Societa Consortile per Azioni. Device for fastening and sealing a metering valve in an internal combustion engine fuel injector. 6,039,031, Cl. 123-470.000.

Rice, Douglas; Carozzi, Nadine; Anderson, David M.; Rajasekaran, Kanniah; Rangan, Thirumale S.; Yenofsky, Richard; and Lotstein, Richard, to Novartis Finance Corporation. Cotton promoter. 6,040,504, Cl. 800-314.000.

Rice, Robert L.: *See*—

Lazo, John S.; Rice, Robert L.; Cunningham, April; and Wipf, Peter, 6,040,323, Cl. 514-374.000.

Richard, Harry Gene: *See—*
Kawamoto, Shiro; Richard, Harry Gene; Sheldon, John; and Imgawa, Yoichi, 6,039,020, Cl. 123-196.00R.

Richards, David: *See—*
Guinn, Robert; and Richards, David, 6,039,648, Cl. 463-16.000.

Richards, John S., to Heidelberger Druckmaschinen AG. Gripper deceleration cross folder. 6,038,974, Cl. 101-232.000.

Richardson, Leland Duane: *See—*
Lee, William Robert; and Richardson, Leland Duane, 6,040,725, Cl. 327-175.000.

Richardson, Roland T.: *See—*
Kennie, Jerry; Cheng, Yi; Hope, Mark E.; Huff, Shean; Nankee, Robert J., II; Joyce, Mary; Krozek, Dennis A.; Moote, Richard K.; Richardson, Roland T.; Rotramel, William D.; and Seitz, Gary L., 6,041,278, Cl. 701-103.000.

Richter, Hans-Peter: *See—*
Hartung, Hans-Georg; Münker, Jochen; and Richter, Hans-Peter, 6,038,906, Cl. 72-241.800.

Rickard, Wayne; Fiacco, Peter; and Chau, Vi, to Emulex Corporation. Efficient transmission buffer management system. 6,041,397, Cl. 711-209.000.

Ricoh Company Ltd: *See—*
Hart, Peter; and Graham, Jamey, 6,041,182, Cl. 395-712.000.
Hayafune, Takeshi; Maemura, Kouichiro; and Miura, Takahito, 6,041,183, Cl. 395-712.000.
Nakamura, Masaru, 6,041,074, Cl. 375-200.000.
Nishida, Hirobumi, 6,041,138, Cl. 382-197.000.
Okubo, Hiromi; and Ishii, Rie, 6,041,139, Cl. 382-199.000.
Sekiya, Takuro; and Iwasaki, Kyuhachiro, 6,039,425, Cl. 347-15.000.

Ricoh Corporation: *See—*
Hart, Peter; and Graham, Jamey, 6,041,182, Cl. 395-712.000.

Riddell, Stanley R.; and Greenberg, Philip D., to Fred Hutchinson Cancer Research Center. High efficiency transduction of T lymphocytes using rapid expansion methods ("REM"). 6,040,177, Cl. 435-372.300.

Ridker, Paul; and Hennekens, Charles H., to Brigham and Women's Hospital, Inc., The. Systemic inflammatory markers as diagnostic tools in the prevention of atherosclerotic diseases and as tools to aid in the selection of agents to be used for the prevention and treatment of atherosclerotic disease. 6,040,147, Cl. 435-7.240.

Ridley, Jeffrey A.: *See—*
Youngner, Daniel W.; and Ridley, Jeffrey A., 6,040,749, Cl. 335-78.000.

Riedel, Michael; Weller, Thomas; Jacobs, Alexandra; Herrmann, Wolfgang Anton; and Morawietz, Markus, to Targor GmbH. Metallocene compound. 6,040,469, Cl. 556-53.000.

Riegel, James M. Mechanized scaffold. 6,039,148, Cl. 182-16.000.

Rieger, Uwe; Kern, Klaus; and Thomas, Daniel, to Schroff GmbH. Switch cabinet for electronics and electrical engineering. 6,039,364, Cl. 292-300.000.

Riego, Domingo C.; Cox, Kenneth C.; Sexton, Franklin E.; and Meadows, James C., to Monsanto Company. Aqueous glyphosate/surfactant compositions for basal and dormant stem brush control. 6,040,272, Cl. 504-206.000.

Ries, Andrew J.: *See—*
Haas, David P.; Howard, William G.; Crespi, Ann M.; Rorvick, Anthony R.; Rockow, Steven; and Ries, Andrew J., 6,040,082, Cl. 429-163.000.

Riesland, David Henrik: *See—*
Hopkins, William Thomas; Riesland, David Henrik; and Banks, Anthony William, 6,040,778, Cl. 340-650.000.

Rijpers, Johannes C.N.: *See—*
Zhou, Guo-Fu; Jacobs, Bernardus A.J.; Rijpers, Johannes C.N.; and Borg, Hermanus J., 6,040,066, Cl. 428-641.000.

Ringel, Cary J.; and Murphy, James L., to Inventio AG. Backup apparatus for a hydraulic elevator brake control. 6,039,151, Cl. 187-207.000.

Ringler, Daniel Robert: *See—*
Korsunsky, Iosif; Grabbe, Dimitry; Hasircoglu, Alex; Schroepfer, Richard; and Ringler, Daniel Robert, 6,039,583, Cl. 439-101.000.

Rinz, James E., to Premix, Inc. Process for thickening thermoset resin molding compound compositions. 6,040,391, Cl. 525-375.000.

Rioland, Jacques; Thibout, Paul; and Jano, Patrice, to Thomson-CSF. Device to control the aiming and focusing of laser systems on a target. 6,040,566, Cl. 250-201.900.

Rion Kabushiki Kaisha: *See—*
Narisawa, Yoshiyuki; and Araki, Toshiyuki, 6,041,128, Cl. 381-322.000.

Ripley, Robert L.: *See—*
Fleischhauer, Grier S.; Higgins, Charles T.; Losee, D. Bruce; Nelson, J. Robert, Jr.; Ripley, Robert L.; Sano, Masato; Sharpe, David E.; and Watkins, Michael L., 6,040,560, Cl. 219-494.000.

Riquier, Jean-Claude: *See—*
Chevallet, Jacques; and Riquier, Jean-Claude, 6,039,877, Cl. 210-636.000.

Riso Kagaku Corporation: *See—*
Hara, Yoshikazu; Motoe, Katsuro; and Sanagi, Hisashi, 6,038,968, Cl. 101-116.000.

Ristolainen, Kimmo J.: *See—*
Weckstrom, Kurt P.; and Ristolainen, Kimmo J., 6,041,247, Cl. 600-323.000.

Rittal-Werk Rudolf Loh GmbH & Co. KG: *See—*
Besserer, Horst; Hartel, Marc; and Zachrai, Jürgen, 6,039,420, Cl. 312-265.100.

Rittenhouse, Peter A.: *See—*
Redei, Eva; Aird, Fraser; Rittenhouse, Peter A.; and McGivern, Robert F., 6,039,956, Cl. 424-198.100.

Rivard, Germain Francois: *See—*
Klemm, William Robert; and Rivard, Germain Francois, 6,039,923, Cl. 422-61.000.

Riverside Research Institute: *See—*
Lizzi, Frederic, 6,039,689, Cl. 600-439.000.

Robert Bosch GmbH: *See—*
Buck, Manfred; Brost, Wolfgang; Handschuh, Robert; and Kratt, Helmut, 6,039,038, Cl. 125-39.000.
Fischer, Werner; and Luebbert, Birte, 6,040,721, Cl. 327-110.000.
Herden, Werner; Konrad, Johann; Jahn, Hans-Peter; Knapp, Martin; Fuessl, Hans-Peter; and Qu, Ning, 6,040,204, Cl. 438-109.000.
Hog, Norbert, 6,040,669, Cl. 318-480.000.
Pfaff, Georg; and Keller, Herbert, 6,040,779, Cl. 340-661.000.
Pfaundler, Julian, 6,039,639, Cl. 451-356.000.
Posselt, Andreas; and Koehler, Christian, 6,039,021, Cl. 123-306.000.
Reiter, Ferdinand, 6,039,271, Cl. 239-585.400.
Steinlechner, Siegbert, 6,041,336, Cl. 708-4.000.
Takamatsu, Risuke; and Kimura, Seiichi, 6,039,300, Cl. 251-129.120.
Weyl, Helmut; and Wild, Bernhard, 6,039,856, Cl. 204-400.000.

Robert Bosch Technology Corporation: *See—*
Demoise, Thomas Edwin, Jr., 6,039,155, Cl. 188-73.390.
Towers, Kenneth Scott; McClain, Richard Becker; and Mackiewicz, John e., 6,038,857, Cl. 60-422.000.

Roberts, Ceredig, to Micron Technology. Semiconductor memory device and method of forming transistors in a peripheral circuit of the semiconductor memory device. 6,040,209, Cl. 438-238.000.

Roberts, Christopher R.: *See—*
Dvorak, Charles A.; Wren, Douglas L.; Fisher, Lawrence E.; Axt, Steven D.; Humphreys, Eric R.; Arzeno, Humberto B.; Beard, Colin C.; Nguyen, Sam Linh; Han, Yeun-Kwei; Roberts, Christopher R.; Lund, Jan P.; and Fatheree, Paul R., 6,040,446, Cl. 544-276.000.

Roberts, John D.: *See—*
Carter, Thurman B.; Luke, Michael A.; and Roberts, John D., 6,039,118, Cl. 166-355.000.

Roberts, Jon L. Writing implement sterilization apparatus. 6,039,928, Cl. 422-186.300.

Roberts, Martin Ceredig, to Micron Technology, Inc. Method of forming diodes. 6,039,577, Cl. 437-237.000.

Robertson, Charles L.; Hedding, Michael A.; and McGrath, Michael C., to Hayes Lemmerz International, Inc. Electronic trailer brake controller. 6,039,410, Cl. 303-7.000.

Robertson, John, to Barr & Stroud Limited. Solid state lasers. 6,039,632, Cl. 451-41.000.

Robinson, Barry S.; and Kilgore, Jason T., to Siemens Automotive Corporation. Fuel system containing a shape memory alloy. 6,039,030, Cl. 123-457.000.

Robinson, Christophe F.: *See—*
Enichen, William A.; and Robinson, Christophe F., 6,040,095, Cl. 430-5.000.

Robinson, David L.: *See—*
Whalen, John F.; and Robinson, David L., 6,039,399, Cl. 297-362.120.

Robinson, Jerry Allen: *See—*
Androski, Frank J.; Binowski, Nancy; Ehlinger, James; Robinson, Jerry Allen; and Sheinbein, Daniel, 6,041,117, Cl. 379-268.000.

Robinson, Ross G.: *See—*
Talley, Laroul J.; Yurek, Theodore F.; Ziegler, Douglas D.; and Robinson, Ross G., 6,038,902, Cl. 72-128.000.

Robson, Michael G.: *See—*
Moore, Richard L.; Robson, Michael G.; Lockeby, Warren E., Jr.; and Kaylor, Billy E., 6,038,813, Cl. 47-75.000.

Robson, Peter: *See—*
LeFlécher, René; and Robson, Peter, 6,039,994, Cl. 426-498.000.

Roche Molecular Systems, Inc.: *See—*
Erlich, Henry A.; Horn, Glenn; Saiki, Randall K.; Mullis, Kary B.; and Gelfand, David H., 6,040,166, Cl. 435-194.000.

Roche, Robert P.: *See—*
Grasso, Albert P.; Martin, Ronald G.; and Roche, Robert P., 6,039,823, Cl. 156-89.260.

Roche, Steven L., to Colorado School of Mines. Method for correcting amplitude and phase differences between time-lapse seismic surveys. 6,041,018, Cl. 367-46.000.

Roche Vitamins Inc.: *See—*
Pfander, Hanspeter; and Traber, Bruno, 6,040,475, Cl. 560-264.000.

Rochfort, Gary L.: *See—*
Kelly, Timm L.; and Rochfort, Gary L., 6,040,280, Cl. 508-503.000.

Rock, David A.; Schmitter, Paul; Castelnuovo, David; and Goebel, Clement James, III, to Acuson Corporation. Method and system for changing the appearance of a control region of a medical device such as a diagnostic medical ultrasound system. 6,039,047, Cl. 128-897.000.

Rockefeller University, The: *See—*
Greengard, Paul; Porton, Barbara; and Kao, Hung-Teh, 6,040,168, Cl. 435-235.100.
Kaplitt, Michael G., 6,040,172, Cl. 435-320.100.

Rockow, Steven: *See—*
Haas, David P.; Howard, William G.; Crespi, Ann M.; Rorvick, Anthony R.; Rockow, Steven; and Ries, Andrew J., 6,040,082, Cl. 429-163.000.

Rockwell Collins, Inc.: *See—*
Thedens, John R., 6,041,035, Cl. 370-217.000.

Rockwell Science Center, Inc.: *See—*
Grave, Duane A., 6,039,451, Cl. 362-29.000.

Röder, Klaus Walter: *See*—
Lehrieder, Erwin Paul Josef; Röder, Klaus Walter; and Trutschel, Hartwig Horst, 6,039,284, Cl. 242-559.000.

Rodgers, Kenneth W.; Strong, Gary D.; Christy, Michael C.; and Mason, Russell C., to Mentor Corporation. Filling device for use in manufacturing of gel filled prostheses. 6,039,091, Cl. 141-83.000.

Rodriguez, David: *See*—
Lauvray, Olivier J.; and Rodriguez, David, 6,040,604, Cl. 257-355.000.

Rodriguez, Herman: *See*—
Himmel, Maria Azua; and Rodriguez, Herman, 6,041,360, Cl. 709-245.000.

Rodriguez, Jon: *See*—
Nabors, William; Yates, Debra S.; Linnebur, David H.; Rodriguez, Jon; and Hill, Andrew, 6,038,723, Cl. 7-128.000.

Roeckner, William, to Motorola, Inc. Device with programmable memory and method of programming. 6,041,007, Cl. 365-225.700.

Roehm GmbH: *See*—
Knebel, Joachim; and Spalt, Werner, 6,040,473, Cl. 560-217.000.

Roehm GmbH Chemische Fabrik: *See*—
Albrecht, Klaus; Hoess, Werner; and Schikowsky, Hartmut, 6,040,387, Cl. 525-330.500.

Roep, Bart O.: *See*—
Madsen, Ole Dragsbaek; Michelsen, Birgitte Koch; Petersen, Jacob Steen; Roep, Bart O.; and Teisner, Borge, 6,040,134, Cl. 435-4.000.

Rogatnev, Nikolai Timofeevich. Seal-locking mechanism. 6,039,365, Cl. 292-327.000.

Rogelstad, Wayne A.: *See*—
Brown, Dana Henry; Christensen, Thomas Charles; Cunningham, Earl A.; and Rogelstad, Wayne A., 6,040,955, Cl. 360-75.000.

Rogers, Graham. Container. 6,039,174, Cl. 206-6.000.

Roh, Warren E. Protective cover for baby seats. 6,039,393, Cl. 297-184.130.

Rohm and Haas Company: *See*—
Lau, Willie; Kelly, Michael DeWayne; Lorah, Dennis Paul; and Heinley, David Ralph, 6,040,409, Cl. 526-328.000.
Maver, Tammy Lynne; and Krasnansky, Robert, 6,040,368, Cl. 524-110.000.

Rohm Co., Ltd.: *See*—
Kuriyama, Chojiro, 6,040,229, Cl. 438-396.000.

Rolland, Alain; and Mumper, Russell J., to Genemedicine, Inc. Formulated nucleic acid compositions and methods of administering the same for gene therapy. 6,040,295, Cl. 514-44.000.

Rollerblade, Inc.: *See*—
Cornelius, Dirk L.; and Mittersinker, Gregor, 6,038,791, Cl. 36-115.000.

Rollins, Scott; Rother, Russell P.; Matis, Louis A.; and Evans, Mark J., to Alexion Pharmaceuticals, Inc. Porcine E-selectin. 6,040,428, Cl. 530-350.000.

Roman, James Price: *See*—
Young, Henry Todd; Beach, Frederick Gaylord; and Roman, James Price, 6,041,285, Cl. 702-113.000.

Romano, Charles E.: *See*—
Missel, Gregory E.; and Romano, Charles E., 6,040,060, Cl. 428-478.200.

Romeo, Aurelio: *See*—
Callegaro, Lanfranco; Romeo, Aurelio; and Benedetti, Luca, 6,039,970, Cl. 424-434.000.

Romero, Dennis Mark: *See*—
Freund, Joseph Michael; Przybylek, George John; and Romero, Dennis Mark, 6,039,833, Cl. 156-344.000.

Roos, Pieter Gerhard; Ivan, Andrew J.; and Mattson, Rodney A., to Picker International, Inc. Method and apparatus for acquiring volumetric image data using flat panel matrix image receptor. 6,041,097, Cl. 378-62.000.

Rorvick, Anthony R.: *See*—
Haas, David P.; Howard, William G.; Crespi, Ann M.; Rorvick, Anthony R.; Rockow, Steven; and Ries, Andrew J., 6,040,082, Cl. 429-163.000.

Rosati, Louis: *See*—
Mallon, Joseph J.; Farinato, Raymond S.; Rosati, Louis; and Freeman, John J., Jr., 6,040,376, Cl. 524-547.000.

Rosati, Ronald F., to Hughes Electronics Corporation. Method and system for providing global variable data rate connectivity in a satellite-based communications network. 6,041,233, Cl. 455-427.000.

Rosch Holding S.A.: *See*—
Schreck, Roman, 6,038,708, Cl. 4-244.100.

Rose, James Wilson: *See*—
Wojnarowski, Robert John; Rose, James Wilson; Balch, Ernest Wayne; Douglas, Leonard Richard; Downey, Evan Taylor; and Gdula, Michael, 6,040,226, Cl. 438-381.000.

Rose, Janna L.: *See*—
Bennett, Patricia S.; Kenyon, Kenneth H.; Ekern, Ronald J.; Rose, Janna L.; and Wieser, Josie B., 6,040,088, Cl. 429-229.000.

Rose, Mark D.; and Haining, Robert W., to Tunnel Radio of America, Inc. Radio communication system for use in tunnels. 6,041,216, Cl. 455-9.000.

Rosemount Inc.: *See*—
Filippi, Giovanni; and Maria van Os, Rudolphus Louis, 6,038,961, Cl. 92-98.00R.

Rosen, Craig A.: *See*—
Hu, Jing-Shan; Rosen, Craig A.; and Cao, Liang, 6,040,157, Cl. 435-69.400.

Rosengren, Jürgen F.; Saeijs, Ronald W. J. J.; and Persoon, Eric H. J., to U.S. Philips Corporation. Method and apparatus for multiplexing and transmitting autonomously/intra coded pictures along with the main or I, P, B pictures/video. 6,041,068, Cl. 370-538.000.

Rosheim, Mark E., to Ross-Himes Designs, Incorporated. Controlled robotic carrier. 6,038,940, Cl. 74-490.110.

Rosier, Charles D.: *See*—
Panchou, Karen A.; Newton, Charles M.; and Rosier, Charles D., 6,040,630, Cl. 257-783.000.

Ross, Danna L.: *See*—
Govind, Nayna; Jinks, Philip A.; Ross, Danna L.; and Ward, Gary H., 6,039,932, Cl. 424-45.000.

Ross, Debra A.: *See*—
Winkler, James L.; Fodor, Stephen P. A.; Buchko, Christopher J.; Ross, Debra A.; Aldwin, Lois; and Modlin, Douglas N., 6,040,193, Cl. 436-180.000.

Ross-Himes Designs, Incorporated: *See*—
Rosheim, Mark E., 6,038,940, Cl. 74-490.110.

Ross, Steven L., to Universal Electric Corporation. Electrical power distribution system. 6,039,584, Cl. 439-115.000.

Ross, Yvan, to GEBO Conveyors Consultants & Systems, Inc. Method of manufacturing air conveyor panels by laser ablation drilling. 6,040,553, Cl. 219-121.710.

Rossen, Kai: *See*—
Corley, Edward G.; Davies, Ian W.; Larsen, Robert D.; Pye, Philip J.; and Rossen, Kai, 6,040,319, Cl. 514-334.000.
Davies, Ian W.; Journet, Michel; Gerena, Linda; Larsen, Robert D.; Pye, Philip J.; and Rossen, Kai, 6,040,450, Cl. 546-256.000.

Rostami, Ader M.; DeCoster, David C.; Vassiliou, Eustathios; and Dassel, Mark W., to RPC Inc. Methods of recycling catalyst in oxidations of hydrocarbons. 6,039,902, Cl. 264-37.180.

Rosthauser, James W.: *See*—
Cline, Robert L.; Rosthauser, James W.; and Markusch, Peter H., 6,040,028, Cl. 428-41.800.

Rote, John K.: *See*—
Brito, Joao Carlos F.; Rote, John K.; Trafton, Frederick W.; and Martins, Marcus M., 6,040,671, Cl. 318-603.000.

Rotermund, Udo: *See*—
Knorr, Gottfried; Rotermund, Udo; Baum, Eva; Seifert, Holger; and Wiegmann, Werner, 6,040,349, Cl. 521-131.000.

Roth, Michelle V.: *See*—
Kelley, David E.; Kramer, Jeffrey C.; Pontell, Jonathan L.; Parral, Loretta S.; Roth, Michelle V.; Yergen, Anoush; and Sanford, Arlene, 6,039,710, Cl. 602-74.000.

Rother, Russell P.: *See*—
Rollins, Scott; Rother, Russell P.; Matis, Louis A.; and Evans, Mark J., 6,040,428, Cl. 530-350.000.

Rothermel, Stephen J., to Imation Corp. Fringe field compensation system for multi-track servo recording head. 6,040,963, Cl. 360-118.000.

Rotor Clamp, Inc.: *See*—
Zielinski, Michael, 6,038,744, Cl. 24-20.00R.

Rotramel, William D.: *See*—
Kennie, Jerry; Cheng, Yi; Hope, Mark E.; Huff, Shean; Nankee, Robert J., II; Joyce, Mary; Krozek, Dennis A.; Moote, Richard K.; Richardson, Roland T.; Rotramel, William D.; and Seitz, Gary L., 6,041,278, Cl. 701-103.000.

Rottner, Kurt: *See*—
Bakowski, Mietek; Gustafsson, Ulf; Rottner, Kurt; and Savage, Susan, 6,040,237, Cl. 438-521.000.

Rounds, Robert, III: *See*—
Fauteux, Denis G.; Rounds, Robert, III; and Farina, Michael, 6,040,078, Cl. 429-48.000.

Rouns, Cameron G.: *See*—
Perrault, James J.; and Rouns, Cameron G., 6,039,940, Cl. 424-78.060.

Roussel, Patrice; Chennupaty, Srinivas; Cranford, Mike; Abdallah, Mohammad; Coke, Jim; and Kong, Katherine, to Intel Corporation. Dual function system and method for shuffling packed data elements. 6,041,404, Cl. 712-210.000.

Rowe, David F., Jr.: *See*—
Hendrix, Dean P.; and Rowe, David F., Jr., 6,039,547, Cl. 417-234.000.

Rowe, Neal Edward: *See*—
Brown, Jack L.; Bruner, Rodney William; Rowe, Neal Edward; Wilkie, William Edward, II; and Yanniello, Robert, 6,039,612, Cl. 439-716.000.

Rower, Gary. Venturi cleaning system. 6,039,060, Cl. 134-167.00R.

Royalty, Charles Michael: *See*—
Liston, Laurence D. N.; Schoepf, Joseph L.; and Royalty, Charles Michael, 6,039,287, Cl. 244-54.000.

RPC Inc.: *See*—
Rostami, Ader M.; DeCoster, David C.; Vassiliou, Eustathios; and Dassel, Mark W., 6,039,902, Cl. 264-37.180.

Rubin, Steven A., to Universal Products, Inc. Capacitor cover. 6,040,974, Cl. 361-519.000.

Rubinsztajn, Slawomir: *See*—
Burkus, Frank S., II; Jeram, Edward M.; and Rubinsztajn, Slawomir, 6,040,366, Cl. 524-99.000.

Rucker, Brad L.: *See*—
Mears, Randall F.; and Rucker, Brad L., 6,041,362, Cl. 709-300.000.

Rudloff, Hilmar: *See*—
Klemm, Peter; and Rudloff, Hilmar, 6,039,310, Cl. 267-137.000.

Rudnick, James J.; and Golden, Martin, to Meadox Medicals, Inc. Blister package for implantable medical devices. 6,039,183, Cl. 206-570.000.

Rudolf, Klaus: *See*—
Eberlein, Wolfgang; Engel, Wolfhard; Rudolf, Klaus; Doods, Henri; Wieland, Heike-Andrea; and Willim, Klaus-Dieter, 6,040,289, Cl. 514-2.000.

Ruffolo, Ralph A.; and Sinerchio, John A., to AT&T Corp. Method and apparatus for evaluating power equipment. 6,041,288, Cl. 702-184.000.
Rukhadze, Anri Amvrosievich: *See*—
Antonova, Tatijana Borisovna; Bougrov, Gleb Elmirovich; Kondranin, Sergey Gennadievich; Kralkina, Elena Alexandrovna; Pavlov, Vladimir Borisovich; Alexandrov, Andrej Fedorovich; and Rukhadze, Anri Amvrosievich, 6,040,547, Cl. 219-121.430.
Rumbaugh, Erik: *See*—
Christiansen, John A.; and Rumbaugh, Erik, 6,039,875, Cl. 210-606.000.
Rumpel, Manfred Carl: *See*—
Jones, Robert Allen; Kaufman, Mark C.; and Rumpel, Manfred Carl, 6,039,351, Cl. 280-781.000.
Rumpf, Frederick Harry: *See*—
Mabry, Melinda Ann; Rumpf, Frederick Harry; Podobnik, Ivan Zlatko; Westveer, Scott Adrian; Morgan, Allan Clark; Chung, Bin; and Andrews, Malcolm John, 6,040,364, Cl. 523-318.000.
Ruozi, Giuseppe. Method and apparatus for sanitizing minced meat. 6,039,991, Cl. 426-241.000.
Ruppel, Wolfgang; and Schmalzried, Guenther, to Behr Industrietechnik GmbH & Co. Plate-type heat exchanger and method of making same. 6,039,112, Cl. 165-109.100.
Rus, Liviu, to Lear Corporation. Self-latching and self-releasing latch mechanism for removable seat. 6,039,401, Cl. 297-378.130.
Russell, Donald G. Intermediate density marker and a method using such a marker for radiographic examination. 6,041,094, Cl. 378-37.000.
Russell, Ernest J.: *See*—
Baudouin, Daniel; Russell, Ernest J.; and Janzen, Jeffrey W., 6,040,983, Cl. 361-760.000.
Rutar, Michael J. Sticker display system. 6,038,801, Cl. 40-593.000.
Rüther, Hubert. Modular furniture. 6,039,501, Cl. 403-231.000.
Rutter, John W.: *See*—
Larson, Margaret J.; Rutter, John W.; and Smith, Larry L., 6,039,694, Cl. 600-459.000.
Ruutu, Jussi Pekka Olavi: *See*—
Kilkki, Matti Kalevi; and Ruutu, Jussi Pekka Olavi, 6,041,039, Cl. 370-230.000.
Ryan, Fintan Richard: *See*—
Kinal, George Vladimir; Nagle, James Robert, II; Soddu, Claudio; and Ryan, Fintan Richard, 6,040,798, Cl. 342-357.010.
Ryan, Shawn Gregory; Webber, James Lloyd; and Borowski, Joachim, to General Motors Corporation. Air bag module with variable inflation. 6,039,346, Cl. 280-736.000.
Ryan, Shawn Gregory: *See*—
Niederman, Robert Raymond; Starner, Allen Richard; and Ryan, Shawn Gregory, 6,039,348, Cl. 280-741.000.
Ryan, Thomas P.: *See*—
Buysse, Steven P.; Kennedy, Jenifer S.; Lands, Michael J.; Loeffler, Donald R.; Lukianow, S. Wade; and Ryan, Thomas P., 6,039,733, Cl. 606-40.000.
Rybarczyk, David F.; Mar, Lori S.; Mets, Christiaan M.H.; and Xi, Xiaojin, to Honeywell Inc. Graphical tool for creating discrete phase sequences and device control. 6,041,178, Cl. 395-705.000.
Ryden, William Dennis; and McNeal, Joseph Ross, to Smith Sport Optics. Sports goggle having a ventilating fan. 6,038,707, Cl. 2-436.000.
Ryles, Roderick G.: *See*—
Davies, William Bloor; Healy, John Edward; Miller, Gary Kaui Lani; Kozakiewicz, Joseph J.; and Ryles, Roderick G., 6,039,881, Cl. 210-732.000.
Ryll, Patrick B.: *See*—
Jackson, Neil A.; Williamson, John T.; Frantz, Francis J.; Ryll, Patrick B.; and Greenbaum, Hyman A., 6,041,019, Cl. 367-124.000.
Ryobi Outdoor Products, Inc.: *See*—
Kawamoto, Shiro; Richard, Harry Gene; Sheldon, John; and Imgawa, Yoichi, 6,039,020, Cl. 123-196.00R.
Ryoo, Hyung-Taeg, to Samsung Electronics Co., Ltd. Interface method performed by modem between base station and control station. 6,041,113, Cl. 379-209.000.
Ryu, Chang-Su: *See*—
Kim, Seung-Hwan; Park, Seon-Hee; and Ryu, Chang-Su, 6,040,641, Cl. 307-112.000.
Ryu, Duk-Kyun: *See*—
Park, Won-seo; Ho, Wan-chol; Ryu, Duk-Kyun; and Kim, Jong-yeob, 6,040,785, Cl. 340-928.000.
S&C Electric Company: *See*—
French, Thomas G.; Guio, Raphael H.; Kowalyshen, Henry W.; McGlone, Buddy B.; Mears, Gregory C.; and Opfer, John C., 6,040,538, Cl. 200-293.000.
S3 Incorporated: *See*—
Huang, Chi-Jung; and Li, Ken Ming, 6,041,419, Cl. 713-401.000.
Ranjan, Nalini; and Yang, Henry, 6,040,737, Cl. 327-543.000.
Sacks, Michael D., to University of Florida. Silicon carbide fibers with boron nitride coatings. 6,040,008, Cl. 427-226.000.
Sadahiro, Kenichi: *See*—
Toge, Tetsuo; Komatsubara, Michiro; Honda, Atsuhito; Sadahiro, Kenichi; and Senda, Kunihiro, 6,039,818, Cl. 148-307.000.
Sadler, Mark: *See*—
Ertmann, Alexander Gareth; and Sadler, Mark, 6,038,957, Cl. 91-461.000.
Sadrakula, Philip V.; Kampa, Leonard; Hamerski, Michael D.; and Bries, James L., to 3M Innovative Properties Company. Sheet material dispenser with safer sheet cutting means. 6,039,102, Cl. 156-510.000.
Saeijs, Ronald W. J. J.: *See*—
Rosengren, Jürgen F.; Saeijs, Ronald W. J. J.; and Persoon, Eric H. J., 6,041,068, Cl. 370-538.000.
Saffian, Bernd: *See*—
Haehnel, Thomas; Breitlow-Hertzfeldt, Juergen; Saffian, Bernd; and Kern, Josef, 6,040,751, Cl. 335-185.000.
Safranek, Robert J.: *See*—
Gilbert, Bruce Michael; Joersz, Robert T.; Lovett, Thomas D.; and Safranek, Robert J., 6,041,376, Cl. 710-108.000.
Sagane, Toshihiro: *See*—
Ishida, Tatsuyoshi; Yasuda, Masaaki; Onishi, Hitoshi; Kihara, Noriaki; Tsutsui, Toshiyuki; Sagane, Toshihiro; Kawasaki, Masaaki; and Nakahama, Hidenari, 6,040,407, Cl. 526-281.000.
Sagawa, Fumihiko: *See*—
Takeshita, Naoki; Kusano, Manabu; Sagawa, Fumihiko; and Nakagawa, Taizo, 6,040,529, Cl. 174-254.000.
Sageser, David Mark; Shirakawa, Takuya; and Morimoto, Koichi, to Procter & Gamble Company, The. Method for aperturing a laminate. 6,039,906, Cl. 264-156.000.
Saggio, Rosario S.: *See*—
Jones, John J.; Saggio, Rosario S.; Okamoto, Karlton K.; and Lenoil, Isidor, 6,039,519, Cl. 410-69.000.
Sahoo, Keshaba Chandra, to Autodesk, Inc. Intelligent proxy objects. 6,040,830, Cl. 345-335.000.
Saijo, Eiji: *See*—
Wakata, Shigekazu; and Saijo, Eiji, 6,039,603, Cl. 439-587.000.
Saiki, Randall K.: *See*—
Erlich, Henry A.; Horn, Glenn; Saiki, Randall K.; Mullis, Kary B.; and Gelfand, David H., 6,040,166, Cl. 435-194.000.
Saint Gobain Vitrage: *See*—
Krumm, Helmut; Kittel, Florenz; Koette, Rolf; and Motzheim, Ralf, 6,039,907, Cl. 264-161.000.
Saitama Daiichi Pharmaceutical Co., Ltd.: *See*—
Kusunoki, Akihiko; Kawamura, Naohisa; Sugizaki, Yoshiki; and Kuwahara, Akio, 6,039,971, Cl. 424-443.000.
Saito, Kazuhisa: *See*—
Hisano, Seiichi; Saito, Kazuhisa; Sano, Kazushi; Konno, Shinichi; Horikawa, Yoshichika; and Aihara, Yasuhiko, 6,040,043, Cl. 428-323.000.
Saito, Shinichi: *See*—
Nojiri, Toshiyuki; and Saito, Shinichi, 6,038,872, Cl. 62-140.000.
Saito, Takahiko; Nakanishi, Akira; Obayashi, Shunzi; Genda, Kyoji; and Toshikage, Hideki, to Sony Corporation. Photographic camera system. 6,041,191, Cl. 396-311.000.
Saitoh, Masayuki; Kitajima, Yasuo; Iwasawa, Norio; Miura, Kenju; Haruyama, Munetada; and Hashino, Junko, to Suntory Limited. Therapeutics for thrombocytopenia. 6,040,335, Cl. 514-460.000.
Saitoh, Noboru: *See*—
Oono, Masahiro; Iwanade, Hisao; Saitoh, Noboru; Sato, Koji; Shiba, Sukenori; Yoshida, Tatsuya; and Nagai, Nobuyuki, 6,040,677, Cl. 318-696.000.
Saitoh, Takahiro: *See*—
Kanamaru, Atsushi; Kakihara, Toshio; Kigami, Yuhji; and Saitoh, Takahiro, 6,041,392, Cl. 711-113.000.
Saitou, Mitsuo: *See*—
Kuramitsu, Masayuki; Saitou, Mitsuo; Maeno, Yutaka; and Hara, Takefumi, 6,040,127, Cl. 430-567.000.
Sakaegi, Yuji, to Canon Kabushiki Kaisha. Electronic camera capable of performing photography and character recognition. 6,040,856, Cl. 348-232.000.
Sakai, Manabu: *See*—
Takeuchi, Yoshiharu; Aburaya, Kiyoji; Yasu, Toshiharu; Tsubokawa, Masahiro; Sakai, Manabu; Aoshika, Shoji; and Narita, Tsutayoshi, 6,039,551, Cl. 418-88.000.
Sakai, Motohiro: *See*—
Watanabe, Hideo; Sakai, Motohiro; and Tezuka, Hirofusa, 6,038,865, Cl. 62-3.600.
Sakai, Nobuo; Ishida, Migaku; and Irie, Junichi, to Mitsui High-tec Inc. Carrying apparatus for spherical objects. 6,039,511, Cl. 406-46.000.
Sakai, Satoshi: *See*—
Shirai, Seiichirou; Onozuka, Toshihiko; Noishiki, Takayuki; Sakai, Satoshi; Sasajima, Katsuhiro; Toyoda, Eiji; and Namikawa, Makoto, 6,040,110, Cl. 430-258.000.
Sakai, Seiichi; Yoshida, Teruyuki; and Abe, Fumiyoshi, to Sony Corporation. User initiated magnetic head wear measuring and display system. 6,040,693, Cl. 324-210.000.
Sakamoto, Hiromi: *See*—
Kurogane, Saori; and Sakamoto, Hiromi, 6,040,206, Cl. 438-149.000.
Sakamoto, Hiroshi; and Abe, Hideaki, to Matsushita Electric Works, Ltd.; and Sakamoto, Hiroshi. Non-contact power transmitting device having simplified self-oscillation feedback loop which interrupts power transmission when no load is present. 6,040,986, Cl. 363-20.000.
Sakamoto, Toshio; Tanaka, Toshizumi; Itoi, Hiromu; and Yoshihara, Masatoshi, to Fuji Photo Optical Co., Ltd. Probe coupler for ultrasound examination system. 6,039,695, Cl. 600-459.000.
Sakamoto, Yoshiaki, to RIC Company, Ltd. Rhythmic tone generator. 6,040,517, Cl. 84-713.000.
Sakata, Masahiro: *See*—
Hamagishi, Goro; Kanatani, Keiichi; Kishimoto, Shunichi; Sakata, Masahiro; Yamashita, Atsuhiro; Matsushita, Naoki; and Mashitani, Ken, 6,040,807, Cl. 345-6.000.
Sakata, Tomoyuki: *See*—

Yamato, Seiichi; Kamei, Noboru; Okuma, Kazuyoshi; Sugawa, Katsumi; Kadota, Hironori; and Sakata, Tomoyuki, 6,041,062, Cl. 370-465.000.

Sakaue, Shigeo: *See*—
Tamura, Akihiro; Sakaue, Shigeo; and Hamasaki, Takeshi, 6,040,860, Cl. 348-252.000.

Sakuma, Fukuyo: *See*—
Kondo, Motoyasu; Sakuma, Fukuyo; Urakawa, Youichi; Yokoyama, Yoshihito; and Hinai, Masatoshi, 6,040,704, Cl. 324-762.000.

Sakura Color Products Corporation: *See*—
Fukuo, Hidetoshi; and Yokoi, Masakazu, 6,039,795, Cl. 106-31.580.

Sakurai, Tomohisa: *See*—
Ichikawa, Yoshito; Mihori, Takashi; Sakurai, Tomohisa; and Honda, Yoshitaka, 6,039,732, Cl. 606-38.000.

Sakurai, Yasuhiro; and Fukayama, Hiroyuki, to Citizen Watch Co., Ltd. Temperature-compensated crystal oscillator. 6,040,744, Cl. 331-176.000.

Sakurai, Yasuo, to Daishin Frame Inc. Method and apparatus of controlling reservation for goods and the like. 6,041,305, Cl. 705-5.000.

Salari, Hamid: *See*—
Compadre, Cesar; Breen, Philip; Salari, Hamid; Fifer, E. Kim; Lattin, Danny L.; Slavik, Michael; Li, Yanbin; and O'Brien, Timothy, 6,039,992, Cl. 426-332.000.

Salerno, Anthony J. Decorative tree device. 6,040,023, Cl. 428-16.000.

Salesin, David H.: *See*—
Cohen, Michael F.; He, Li-wei; and Salesin, David H., 6,040,841, Cl. 345-473.000.

Saliba, George, to Quantum Corporation. Method and apparatus for multiple channel head assembly. 6,040,964, Cl. 360-121.000.

Salinas, Carlos: *See*—
Murphy, Oliver J.; Salinas, Carlos; and Cisar, Alan J., 6,040,072, Cl. 429-12.000.

Sällberg, Matti, to Tripep AB. Antigen/antibody specification exchanger. 6,040,137, Cl. 435-5.000.

Salley, Thomas F.: *See*—
Brown, Charles R.; Fogle, Marion O.; and Salley, Thomas F., 6,039,419, Cl. 312-262.000.

Salquero, George J.: *See*—
Green, H. Dean; Salquero, George J.; Lang, Lowell, deceased, 6,041,310, Cl. 705-27.000.

Salt, David Dennis: *See*—
Bickerton, Matthew John; Bohrer, Kathryn Ann; Hughes, Emma Suzanne; Kenworthy, Edward William; Musgrove, Rupert Jeremy; Patterson, LindaMay Rose; Porter, Steven; Salt, David Dennis; and Scattergood, Duncan Keith, 6,041,312, Cl. 705-30.000.

Salus Media Inc.: *See*—
Douglas, Peter; Dudik, Evan; Evans, John; and Kritzer, Alan, 6,039,688, Cl. 600-300.000.

Samad, Nidal A.: *See*—
Teran, Alfredo J.; Derrick, John R., Jr.; Samad, Nidal A.; Willoughby, W. Todd; and Wood, Richard G., 6,039,874, Cl. 210-605.000.

Samain, Henri; and Cretois, Isabelle, to L'Oreal. Cosmetic composition pressurized in an aerosol device and the resulting foam. 6,039,933, Cl. 424-47.000.

Samavedam, Srikanth B.: *See*—
Fitzgerald, Eugene A.; and Samavedam, Srikanth B., 6,039,803, Cl. 117-89.000.

Sammarco, Anthony J.: *See*—
Diachina, John W.; Persson, Bengt; Raith, Alex K.; and Sammarco, Anthony J., 6,041,047, Cl. 370-347.000.

Samoto, Haruhiko: *See*—
Nagasaka, Hideaki; Samoto, Haruhiko; Yashiro, Yoshinobu; and Higaki, Yoshiyuki, 6,039,029, Cl. 123-442.000.

Samsung Display Devices Co., Ltd.: *See*—
Kang, Young-Cheol; Lee, Byung-Hak; and Song, Man-Ho, 6,039,619, Cl. 445-24.000.

Choi, Chang-Shik; and Park, Young-Woo, 6,040,596, Cl. 257-306.000.
Eum, Jae-yong, 6,039,663, Cl. 474-103.000.
Ham, Sang-Man, 6,039,481, Cl. 400-708.000.
Han, Youn-soo; Kim, Hyeung-ki; Kim, Hyun-joon; and Kim, Seung-un, 6,038,699, Cl. 2-69.000.
Jun, Sung-Gon, 6,040,868, Cl. 348-448.000.
Jung, Sung-Gon, 6,041,225, Cl. 455-352.000.
Kim, Han-sung, 6,040,582, Cl. 250-492.210.
Kim, Jin-Bog, 6,040,874, Cl. 348-569.000.
Kim, Jin-hwan; and Jang, Min-ho, 6,041,027, Cl. 369-44.240.
Kim, Jong-Woo, 6,041,201, Cl. 399-93.000.
Koo, Hyoung Mo, 6,038,873, Cl. 62-196.400.
Lee, Sang-oh, 6,040,722, Cl. 327-143.000.
Lim, Chang-su; Kim, Hyeog-ki; Kim, Sue-ryeon; and Kim, Il-kyoung, 6,040,254, Cl. 442-261.000.
Lim, Kwang-taek, 6,039,315, Cl. 271-160.000.
Park, Bae-seung; Kim, Jin-heung; and Cho, Jung-hyun, 6,039,830, Cl. 156-267.000.
Park, Chan-ho; and Park, Jae-hong, 6,040,219, Cl. 438-268.000.
Park, Dong seek, 6,040,879, Cl. 348-845.100.
Park, Jong-kwon; and Tsuneji, Anjai, 6,039,558, Cl. 425-556.000.
Park, Jong-min; and Jung, Tae-sung, 6,040,735, Cl. 327-541.000.
Park, Young-wook; Yoo, Cha-young; Kim, Young-sun; and Nam, Seung-hee, 6,039,811, Cl. 118-719.000.
Park, woo-yong, 6,041,206, Cl. 399-249.000.
Ryoo, Hyung-Taeg, 6,041,113, Cl. 379-209.000.
Won, Jong-ho, 6,040,877, Cl. 348-748.000.
Yang, Yun-sik; Cha, Hun; and Chae, Seung-ki, 6,039,770, Cl. 29-25.010.

Samulski, Richard Jude: *See*—
Ferrari, Forrest K.; Xiao, Xiao; and Samulski, Richard Jude, 6,040,183, Cl. 435-457.000.

Sanada, Yoshiaki: *See*—
Ishiguro, Yasuyuki; Sanada, Yoshiaki; Takaya, Toshihiko; Kimura, Takahiko; Kaneshige, Masatoshi; and Yamamoto, Shuuhei, 6,041,207, Cl. 399-275.000.

Sanagi, Hisashi: *See*—
Hara, Yoshikazu; Motoe, Katsuro; and Sanagi, Hisashi, 6,038,968, Cl. 101-116.000.

Sanchez, Hector; Alvarez, Jose M.; Siegel, Joshua; and Nicoletta, Carmine, to Motorola, Inc. Digital output buffer for multiple voltage system. 6,040,729, Cl. 327-309.000.

Sanchez, Luis A.: *See*—
Gundlach, Kurt B.; Sanchez, Luis A.; Colt, Richard L.; and Sweeney, Maura A., 6,039,793, Cl. 106-31.280.

Sanchez, Mauricio E.: *See*—
Alterman, Steven S.; Sanchez, Mauricio E.; and Longhurst, Audrey, 6,041,045, Cl. 370-313.000.

Sanden Corporation: *See*—
Fukushima, Eiji; and Shimizu, Shigemi, 6,038,960, Cl. 92-12.200.

Sanders, Marcus Maria; Kapitan, John Mark; and Brown, Henry John Harding, to Depuy Orthopaedics, Inc. Fastener. 6,039,738, Cl. 606-61.000.

Sanders, Ray W., to Circuit Path Network Systems Corporation. Cell selector method and apparatus for use in time division multiplexers and switches. 6,041,050, Cl. 370-352.000.

Sanderson, Lelon Wayne. Communication system for providing broadband data services using a high-voltage cable of a power system. 6,040,759, Cl. 340-310.010.

Sandhu, Gurtej; and Thakur, Randhir P. S., to Micron Technology, Inc. Method of forming a film having enhanced reflow characteristics at low thermal budget. 6,040,020, Cl. 427-557.000.

Sandhu, Gurtej S.; Elliott, Richard L.; Doan, Trung T.; and Larsen, Jody D., to Micron Technology, Inc. IC mechanical planarization process incorporating two slurry compositions for faster material removal times. 6,040,245, Cl. 438-692.000.

Sandhu, Gurtej S.: *See*—
Srinivasan, Anand; and Sandhu, Gurtej S., 6,040,010, Cl. 427-250.000.

SanDisk Corporation: *See*—
Wallace, Robert F., 6,040,622, Cl. 257-679.000.

Sands, Matthew Richard: *See*—
Dalgleish, David Thomson; and Sands, Matthew Richard, 6,040,042, Cl. 428-308.400.

Sands, Steven L.: *See*—
Gandre, Jerry D.; Sands, Steven L.; Mills, R. Steven; and Lopez, Arthur, 6,040,982, Cl. 361-724.000.

Sandstrom, Paul Harry: *See*—
Wideman, Lawson Gibson; and Sandstrom, Paul Harry, 6,040,389, Cl. 525-332.600.

Sanduja, Mohan L.; Horowitz, Carl; Kamruzzaman, Mohammed; Thottathil, Paul; and Ramsey, Earl A., to Omni Manufacturing, Inc. Germicidally protected conveyor components. 6,039,964, Cl. 424-404.000.

Sanduja, Mohan L.; Horowitz, Carl; Thomas, Abraham; and Thottathil, Paul, to AFG Industries, Inc. Coating for glass substrate for anti-reflective properties with abrasion, chemical and UV resistance. 6,040,378, Cl. 524-588.000.

Sanford, Arlene: *See*—
Kelley, David E.; Kramer, Jeffrey C.; Pontell, Jonathan L.; Parral, Loretta S.; Roth, Michelle V.; Yergen, Anoush; and Sanford, Arlene, 6,039,710, Cl. 602-74.000.

Sanford, Scott A., to DEC International, Inc. Teatcup liner with desired mouthpiece chamber vacuum. 6,039,001, Cl. 119-14.470.

Sanjurjo, Angel; Lau, Kai-Hung; Lowe, David; Canizales, Anastasia; Jiang, Naixiong; Wong, Victor; Jiang, Liqiang; Schneider, Luke V.; Mufti, Naheed; Rewick, Robert T.; Johansson, Marie; and Kardos, Keith, to SRI International; and STC Technologies. Production of substantially monodisperse phosphor particles. 6,039,894, Cl. 252-301.40R.

Sanko Kaihatsu Kagaku Kenkyusho: *See*—
Oda, Shigeru; and Kawabata, Eiji, 6,040,470, Cl. 558-58.000.

Sankousha Co., Ltd.: *See*—
Uchikoshi, Mitsuyuki, 6,038,796, Cl. 38-20.000.

Sankyo Company, Limited: *See*—
Yoshida, Akira; Oda, Kozo; Kasai, Takashi; Shimada, Kousei; Kogen, Hiroshi; Hayakawa, Ichiro; Ishihara, Sadao; Koga, Teiichiro; Kitazawa, Eiichi; and Tokui, Taro, 6,040,339, Cl. 514-485.000.

Sannicolo', Francesco: *See*—
Del Soldato, Piero; and Sannicolo', Francesco, 6,040,341, Cl. 514-509.000.

Sano, Hideki: *See*—
Tanaka, Hiroaki; Okido, Yoshiyuki; and Sano, Hideki, 6,039,910, Cl. 264-248.000.

Sano, Kazushi: *See*—
Hisano, Seiichi; Saito, Kazuhisa; Sano, Kazushi; Konno, Shinichi; Horikawa, Yoshichika; and Aihara, Yasuhiko, 6,040,043, Cl. 428-323.000.

Sano, Kimiyasu: *See*—
Ota, Toshiyuki; Sano, Kimiyasu; Tashiro, Hideaki; and Sato, Hozumi, 6,040,117, Cl. 430-311.000.

Sano, Konosuke: *See*—
Kojima, Hiroyuki; Ogawa, Yuri; Kawamura, Kazue; and Sano, Konosuke, 6,040,160, Cl. 435-115.000.
Sano, Masato: *See*—
Fleischhauer, Grier S.; Higgins, Charles T.; Losee, D. Bruce; Nelson, J. Robert, Jr.; Ripley, Robert L.; Sano, Masato; Sharpe, David E.; and Watkins, Michael L., 6,040,560, Cl. 219-494.000.
Sano, Toshiaki; Ishii, Tomoyuki; Yano, Kazuo; and Mine, Toshiyuki, to Hitachi, Ltd. Semiconductor memory device. 6,040,605, Cl. 257-369.000.
Sanshin Kogyo Kabushiki Kaisha: *See*—
Hiraoka, Noriyoshi; and Takahashi, Masanori, 6,039,618, Cl. 440-89.000.
Santa, Gene J., Jr. Bulkhead penetrator and method for separating cables from a bulkhead penetrator. 6,039,324, Cl. 277-606.000.
Santen Pharmaceutical Co., Ltd.: *See*—
Nakata, Katsuhiko; Nakamura, Masatsugu; and Hamano, Takashi, 6,040,343, Cl. 514-549.000.
Santini, Andree F.; and Miller, Richard E., to Binney & Smith Inc. Washable coloring composition suitable for use in dry erase markers. 6,040,359, Cl. 523-161.000.
Santini, Thomas F., to Wessel Fragrances, Inc. Method and apparatus for dispensing volatile components of an air treating gel. 6,039,266, Cl. 239-60.000.
Santos, Gregory N.: *See*—
Melo, Maria L.; and Santos, Gregory N., 6,040,845, Cl. 345-520.000.
Santry, Charles N.: *See*—
Dupre, Herman K.; and Santry, Charles N., 6,039,265, Cl. 239-14.200.
Sanyo Chemical Industries Ltd.: *See*—
Kinsho, Toshihiko; Satake, Munekazu; and Miyazaki, Tadakazu, 6,040,398, Cl. 525-527.000.
Sanyo Electric Co., Ltd.: *See*—
Hamagishi, Goro; Kanatani, Keiichi; Kishimoto, Shunichi; Sakata, Masahiro; Yamashita, Atsuhiro; Matsushita, Naoki; and Mashitani, Ken, 6,040,807, Cl. 345-6.000.
Kubota, Norikazu, 6,039,560, Cl. 431-9.000.
Sunagawa, Takuya; Watanabe, Hiroshi; Ohshita, Ryuji; Fujimoto, Masahisa; Nohma, Toshiyuki; and Nishio, Koji, 6,040,090, Cl. 429-231.950.
Takahashi, Tatsuya, 6,040,859, Cl. 348-243.000.
Toya, Shoichi; and Kokuga, Toshiharu, 6,040,680, Cl. 320-108.000.
Sanyo Machine Works, Ltd.: *See*—
Ito, Shinichi, 6,038,767, Cl. 29-888.020.
Sarasohn, Neil: *See*—
Faulkner, W. Harrison, III; Bullock, David; DeGray, Dennis; and Sarasohn, Neil, 6,039,217, Cl. 222-146.500.
Sarco LC: *See*—
Jacobsen, Stephen C.; Davis, Clark C.; and Knutti, David F., 6,039,075, Cl. 137-625.280.
Sarkar, Vivek: *See*—
Ju, Dz Ching; Ng, John Shek-Luen; and Sarkar, Vivek, 6,041,181, Cl. 395-709.000.
Sarkisian, Gevork: *See*—
Miller, Bearge; Miller, Norman K.; Sarkisian, Gevork; Sarkissian, Karen; and Galperin, Anatoly, 6,040,536, Cl. 200-83.00N.
Sarkissian, Karen: *See*—
Miller, Bearge; Miller, Norman K.; Sarkisian, Gevork; Sarkissian, Karen; and Galperin, Anatoly, 6,040,536, Cl. 200-83.00N.
Sarnoff Corporation: *See*—
Levine, Peter Alan; Sauer, Donald Jon; and McCaffrey, Nathaniel Joseph, 6,040,570, Cl. 250-208.100.
Schepps, Jonathan Lloyd, 6,040,774, Cl. 340-572.100.
Sarosy, Michelle A.: *See*—
Blaisdell, Dennis R.; Mattison, Bruce W.; Farthing, Robert C.; and Sarosy, Michelle A., 6,041,171, Cl. 395-500.270.
Sartorelli, Alan C.; Shyam, Krishnamurthy; Penketh, Philip G.; and Chen, Shu-Hui, to Yale University. N,n-bis(sulfonyl)hydrazines useful as antineoplastic agents. 6,040,338, Cl. 514-482.000.
Sasa, Masahiko: *See*—
Kato, Hiroyuki; and Sasa, Masahiko, 6,041,119, Cl. 379-424.000.
Sasahara, Kouji: *See*—
Kanai, Hiroaki; Yagyu, Kiyohide; Maruta, Akira; Sasahara, Kouji; and Shiomi, Tsugio, 6,038,758, Cl. 29-557.000.
Sasajima, Katsuhiro: *See*—
Shirai, Seiichirou; Onozuka, Toshihiko; Noishiki, Takayuki; Sakai, Satoshi; Sasajima, Katsuhiro; Toyoda, Eiji; and Namikawa, Makoto, 6,040,110, Cl. 430-258.000.
Sasaki, Katsumi: *See*—
Kimura, Kenichi; Shiga, Akira; Hashiguchi, Toshihiko; Murakami, Eiji; and Sasaki, Katsumi, 6,039,752, Cl. 606-205.000.
Sasaki, Takahiro: *See*—
Koike, Yoshio; Ohmuro, Katsufumi; Sasaki, Takahiro; and Takeda, Arihiro, 6,040,885, Cl. 349-129.000.
Sasaki, Tohru: *See*—
Ota, Masuyuki; Kawachi, Genshiro; Kitajima, Masaaki; Sasaki, Tohru; Oh-e, Masahito; Kondo, Katsumi; and Tsumura, Makoto, 6,040,886, Cl. 349-141.000.
Sasaki, Tsuneo, to Kansei Corporation. Automotive air bag device. 6,039,342, Cl. 280-728.300.
Sasaki, Yasushi: *See*—
Mori, Kenichi; Ito, Katsuya; Kotani, Tooru; Suzuki, Toshitake; and Sasaki, Yasushi, 6,039,444, Cl. 347-105.000.
Sasaki, Yutaka: *See*—
Tanaka, Hiroaki; Sasaki, Yutaka; and Hashimoto, Takuya, 6,040,745, Cl. 333-26.000.
Satake, Munekazu: *See*—
Kinsho, Toshihiko; Satake, Munekazu; and Miyazaki, Tadakazu, 6,040,398, Cl. 525-527.000.
Sato, Atsushi, to Aisin Seiki Kabushiki Kaisha. Valve timing control device. 6,039,015, Cl. 123-90.170.
Sato, Hajime: *See*—
Yoshimura, Yuichiro; Tanaka, Atsushi; Yanagisawa, Ryozo; Kobayashi, Katsuyuki; and Sato, Hajime, 6,041,284, Cl. 702-56.000.
Sato, Hideo, to Sony Corporation. Copy protection by inserting a phase-shifted color burst signal into the burst interval of an analog color video signal. 6,041,158, Cl. 386-1.000.
Sato, Hisaaki; Kumagai, Masato; and Araki, Tomoaki, to Unisia Jecs Corporation. Throttle valve device. 6,039,027, Cl. 123-399.000.
Sato, Hisatake, to Oki Electric Industry Co., Ltd. Interface circuit with high speed data transmission. 6,040,723, Cl. 327-144.000.
Sato, Hozumi: *See*—
Ota, Toshiyuki; Sano, Kimiyasu; Tashiro, Hideaki; and Sato, Hozumi, 6,040,117, Cl. 430-311.000.
Sato, Koji: *See*—
Oono, Masahiro; Iwanade, Hisao; Saitoh, Noboru; Sato, Koji; Shiba, Sukenori; Yoshida, Tatsuya; and Nagai, Nobuyuki, 6,040,677, Cl. 318-696.000.
Sato, Shoji: *See*—
Iida, Michihiko; Kawashima, Tetsuji; Sato, Shoji; and Masuda, Shozo, 6,041,029, Cl. 369-50.000.
Sato, Shougo: *See*—
Suzuki, Tsutomu; Sato, Shougo; and Okabe, Yasushi, 6,041,203, Cl. 399-111.000.
Sato, Shuzo; and Ohtorii, Hiizu, to Sony Corporation. Polishing method, abrasive material, and polishing apparatus. 6,039,631, Cl. 451-37.000.
Sato, Susumu: *See*—
Takeda, Sunao; Kaneko, Yasushi; Tokizawa, Minoru; Eto, Hiromichi; Ishida, Kazuya; Maebashi, Kazunori; Matsumoto, Masaru; Asaoka, Takemitsu; and Sato, Susumu, 6,040,325, Cl. 514-383.000.
Sato, Yoshiaki: *See*—
Ohira, Tadashi; Sato, Yoshiaki; and Kodama, Kazuhiko, 6,039,912, Cl. 264-328.100.
Sato, Yoshitoshi: *See*—
Ikeda, Kazuo; Komorita, Hiroshi; Sato, Yoshitoshi; Komatsu, Michiyasu; and Mizunoya, Nobuyuki, 6,040,039, Cl. 428-210.000.
Satoh, Hiroki; Taguchi, Yoshio; and Shoyama, Noriko, to Bando Chemical Industries, Ltd. Water-color ink absorbing material and laminated film having layer of the absorbing material. 6,040,035, Cl. 428-195.000.
Satoh, Hiroshi: *See*—
Minami, Toshiya; Satoh, Hiroshi; and Satoh, Takanobu, 6,040,818, Cl. 345-147.000.
Satoh, Takanobu: *See*—
Minami, Toshiya; Satoh, Hiroshi; and Satoh, Takanobu, 6,040,818, Cl. 345-147.000.
Sauer, Donald Jon: *See*—
Levine, Peter Alan; Sauer, Donald Jon; and McCaffrey, Nathaniel Joseph, 6,040,570, Cl. 250-208.100.
Sauer, Gerald L.: *See*—
Hooper, James R.; Strother, Richard K.; Fish, John; Pawling, Paul G.; and Sauer, Gerald L., 6,040,397, Cl. 525-526.000.
Saulnier, Christian: *See*—
Garcia, Douglas J.; and Saulnier, Christian, 6,040,705, Cl. 324-762.000.
Sauter, Herbert, to Schneider (Europe) A.G. Docking assembly for the extension of a guidewire. 6,039,700, Cl. 600-585.000.
Sauvageau, Mario A.: *See*—
Gilbert, Richard; Sauvageau, Mario A.; and Bourgeois, Stephane, 6,038,920, Cl. 73-170.230.
Savage, George M.; Christian, Jeffrey J.; and Dillow, David Curtis, to FemRx, Inc. Disposable laparoscopic morcellator. 6,039,748, Cl. 606-180.000.
Savage, M. Dean, to Pierce Chemical Company. Formulations for fluorogenic peroxidase assays. 6,040,150, Cl. 435-28.000.
Savage, Susan: *See*—
Bakowski, Mietek; Gustafsson, Ulf; Rottner, Kurt; and Savage, Susan, 6,040,237, Cl. 438-521.000.
Savant, Gajendra D.: *See*—
Ho, Zonh-Zen; Jannson, Tomasz P.; Lieberman, Robert A.; Savant, Gajendra D.; and Wang, Allan, 6,040,171, Cl. 435-288.100.
Savio Macchine Tessili SpA: *See*—
Badiali, Roberto; Bertoli, Luciano; and Colomberotto, Giorgio, 6,039,281, Cl. 242-475.500.
Sawada, Hirotoshi: *See*—
Hyoda, Shunji; Kita, Masaharu; Sawada, Hirotoshi; Nemugaki, Shuichi; Otsuka, Sumio; Miyawaki, Yoshitaka; Ogawa, Takashi; and Kubo, Yuhki, 6,040,453, Cl. 548-250.000.
Sawada, Shinichi; Murata, Shizuo; and Isoyama, Toyoshiro, to Chisso Corporation. Electric optical liquid crystal system. 6,040,890, Cl. 349-182.000.
Sawada, Takayuki, to SMC Kabushiki Kaisha. Cylinder device for displacing workpiece. 6,038,959, Cl. 92-5.00R.
Sawyer, Larry D.: *See*—
Bowman, Howard L.; Darwin, Robert L.; Maraffio, William M.; Sawyer, Larry D.; Williams, Robert B.; Hudson, Frank E.; Hunstad, Mary; and Decker, Mark W., 6,039,124, Cl. 169-61.000.
Sayo, Noboru: *See*—
Miyano, Sotaro; Hattori, Tetsutaro; Uesugi, Osamu; Tamai, Yasufumi; and Sayo, Noboru, 6,040,465, Cl. 549-510.000.

SC-Wireless Inc.: *See*—
Jennings, Earle Willis, III, 6,041,232, Cl. 455-422.000.

SCA Hygiene Products AB: *See*—
Kalentun, Pia; Buschka, Anette; Schmid, Andrea; and Strömbom, Eva, 6,040,494, Cl. 604-369.000.
Larsson, Björn, 6,039,717, Cl. 604-391.000.

Scattergood, Duncan Keith: *See*—
Bickerton, Matthew John; Bohrer, Kathryn Ann; Hughes, Emma Suzanne; Kenworthy, Edward William; Musgrove, Rupert Jeremy; Patterson, LindaMay Rose; Porter, Steven; Salt, David Dennis; and Scattergood, Duncan Keith, 6,041,312, Cl. 705-30.000.

Schablonentechnik Kufstein Aktiengesellschaft: *See*—
Fischer, Hannes, 6,038,971, Cl. 101-129.000.

Schade GmbH & Co. KG: *See*—
Schulte, Martin; and Levermann, Ulrich, 6,039,384, Cl. 296-146.200.

Schädeli, Ulrich; Zambounis, John S.; Iqbal, Abul; Hao, Zhimin; and Dubas, Henri, to Ciba Specialty Chemicals Corporation. Compositions for making structured color images and application thereof. 6,040,108, Cl. 430-200.000.

Schäfer, Herbert: *See*—
Reisinger, Hans; Grüning, Ulrike; Wendt, Hermann; Stengl, Reinhard; Lehmann, Volker; Willer, Josef; Franosch, Martin; Schäfer, Herbert; Krautschneider, Wolfgang; Hofmann, Franz; and Böhm, Thomas, 6,040,995, Cl. 365-185.180.

Schaffer, Daniel H., to Sun Microsystems, Inc,. Imbedding virtual device driver (VxD) calls in a dynamic link library (DLL). 6,041,363, Cl. 709-301.000.

Schall, William D.: *See*—
Venta, Patrick J.; Brewer, George J.; Yuzbasiyan-Gurkan, Vilma; and Schall, William D., 6,040,143, Cl. 435-6.000.

Schaming, Michael J. Flexible cord collar harness device. 6,039,708, Cl. 602-18.000.

Schantz, Matthäus; Köppl, Franz; and Flottmann, Dirk, to Wacker-Chemie GmbH. Optoelectronic separation apparatus. 6,040,544, Cl. 209-577.000.

Schappler, Joseph: *See*—
Houvener, Robert C.; Hoenisch, Ian P.; and Schappler, Joseph, 6,040,783, Cl. 340-825.310.

Schaub, Michael P., to Donnelly Optics. Digital camera objective with diffractive optical surface. 6,040,943, Cl. 359-565.000.

Scheck, Georg; Klippert, Uwe; and Brandt, Carsten, to Brose Fahrzeugteile GmbH & Co. KG, Coburg. Bowden tube window winder with compensation for cable length. 6,038,817, Cl. 49-352.000.

Scheidt & Bachmann GmbH: *See*—
Miller, Gert; and Höffges, Peter, 6,039,314, Cl. 271-9.010.

Schena, Martin J.: *See*—
Khanna, Yash P.; Puterbuagh, Frank H., Jr.; Kuhn, William P.; and Schena, Martin J., 6,040,392, Cl. 525-432.000.

Schenkel, Jeffrey, to Linear Technology Corporation. Low noise step-down switching regulator circuits with programmable slew rate limiter and methods of use. 6,040,686, Cl. 323-282.000.

Schepisi, Natale, to Vital Hair Tools, LLC. Blow dryer having airflow control means. 6,038,782, Cl. 34-97.000.

Schepps, Jonathan Lloyd, to Sarnoff Corporation. Locating system and method employing radio frequency tags. 6,040,774, Cl. 340-572.100.

Scherbring, David J.: *See*—
Comer, Robert C.; and Scherbring, David J., 6,038,989, Cl. 111-123.000.

Scherer, Axel: *See*—
OBrien, John; Scherer, Axel; Yariv, Amnon; Lee, Reginald; Xu, Yuanjian; and Painter, Oskar, 6,040,590, Cl. 257-94.000.

Scherer, David F., to TRW Vehicle Safety Systems Inc. Air bag cover with horn switch. 6,039,343, Cl. 280-731.000.

Schering Aktiengesellschaft: *See*—
Chwalisz, Krzysztof; and Garfield, Robert E., 6,040,340, Cl. 514-509.000.
Krause, Werner; Maier, Franz-Karl; Bauer, Michael; Schuhmann Giampieri, Gabriele; Press, Wolf-Rudiger; and Muschik, Peter, 6,040,432, Cl. 534-16.000.
Mrotzek, Werner; Gräf, Bernd; and Schönke, Ingoberth, 6,039,093, Cl. 141-386.000.
Petrick, Jörg; and Stähle, Michael, 6,039,573, Cl. 434-268.000.
Schmitt-Willich, Heribert; Platzek, Johannes; Gries, Heinz; Schumann-Giampieri, Gabrielle; Weinmann, Hanns-Joachim; Vogler, Hubert; Deutsch, Julius; and Conrad, Juergen, 6,039,931, Cl. 424-9.364.
Scholz, Peter; Weber, Jörg; and Angstwurm, Klemens, 6,040,336, Cl. 514-468.000.

Schering Corporation: *See*—
Njoroge, F. George; Vibulbhan, Bancha; Pinto, Patrick A.; and Girijavallabhan, Viyyoor M., 6,039,683, Cl. 574-274.000.
Taveras, Arthur G.; and Njoroge, George F., 6,040,305, Cl. 514-232.800.

Schertl, Peter: *See*—
Peifer, Bernd; Palackal, Syriac J.; Welch, M. Bruce; Alt, Helmut G.; and Schertl, Peter, 6,040,402, Cl. 526-160.000.

Schetter, Bernhard: *See*—
Prade, Bernd; Schetter, Bernhard; and Streb, Holger, 6,038,864, Cl. 60-748.000.

Scheurlen, Michael, to Siemens Aktiengesellschaft. Turbine blade which can be subjected to a hot gas flow. 6,039,537, Cl. 416-97.00R.

Schidmeister, Erwin: *See*—
Stephens, Roger D.; and Schmidmeister, Erwin, 6,039,280, Cl. 242-388.600.

Schikowsky, Hartmut: *See*—
Albrecht, Klaus; Hoess, Werner; and Schikowsky, Hartmut, 6,040,387, Cl. 525-330.500.

Schilling, Jan C.; Cornell, Jay L.; and Stevenson, Joseph T., to General Electric Company. Panel damped hybrid blade. 6,039,542, Cl. 416-233.000.

Schimitzek, Peter, to CSB-System Software-Entwicklung & Unternehmensberatung GmbH. Method and device for a data management system which is capable of calibration. 6,041,289, Cl. 702-187.000.

Schlage Lock Company: *See*—
Chamberlain, L. C. Derek; and Hensley, Frederick M., 6,038,896, Cl. 70-279.100.

Schlenker, Michael: *See*—
Focke, Heinz; Häfker, Thomas; Stiller, Martin; and Schlenker, Michael, 6,038,832, Cl. 53-234.000.

Schless, Ely. Multi-terrain electric motor driven cycle. 6,039,137, Cl. 180-220.000.

Schlesselmann, John D.: *See*—
Caulfield, John T.; Wyles, Richard H.; Schlesselmann, John D.; and Pettijohn, Kevin L., 6,040,568, Cl. 250-208.100.

Schlumberger Technology Corporation: *See*—
Ramakrishnan, Terizhandur S.; Schwartz, Lawrence M.; Fordham, Edmund J.; Kenyon, William E.; and Wilkinson, David J., 6,040,696, Cl. 324-303.000.

Schmalz, Kurt; Schmalz, Wolfgang; and Eisele, Thomas, to J. Schmalz GmbH. Vacuum manipulation device. 6,039,530, Cl. 414-627.000.

Schmalz, Wolfgang: *See*—
Schmalz, Kurt; Schmalz, Wolfgang; and Eisele, Thomas, 6,039,530, Cl. 414-627.000.

Schmalzried, Guenther: *See*—
Ruppel, Wolfgang; and Schmalzried, Guenther, 6,039,112, Cl. 165-109.100.

Schmid, Andrea: *See*—
Kalentun, Pia; Buschka, Anette; Schmid, Andrea; and Strömbom, Eva, 6,040,494, Cl. 604-369.000.

Schmid, Michael, to Ina Walzlarger Schaefler KG. Tensioning device for traction systems such as belts and chains. 6,039,664, Cl. 474-135.000.

Schmidmeister, Erwin: *See*—
Stephens, Roger D.; and Schmidmeister, Erwin, 6,039,280, Cl. 242-388.600.

Schmidt, Elke Maria: *See*—
Hegner, Frank; Schmidt, Elke Maria; Güther, Volker; Otto, Andreas; Breme, Jürgen; Müller, Heinz; and Turnsek, Jürgen Peter, 6,039,918, Cl. 420-422.000.

Schmidt, Robert: *See*—
Batistic, Ivica; and Schmidt, Robert, 6,041,277, Cl. 701-71.000.

Schmidt, Rudolf; and Thalhofer, Augustin. Device for controlling the intensity of the light emitted by a lighting element of a lighting apparatus, in particular a flashlight. 6,040,660, Cl. 315-200.00A.

Schmitt, John V.; and Marsh, Richard A., to Applied Materials Inc. Measurement of quantity of incompressible substance in a closed container. 6,038,919, Cl. 73-149.000.

Schmitt, Stefan: *See*—
Lehnen, Hans Gunter; Lorig, Roland; and Schmitt, Stefan, 6,038,930, Cl. 73-774.000.

Schmitt, Ty; and Sim, Vibora, to Dell USA, L.P. Method and apparatus for a power supply cam with integrated cooling fan. 6,040,981, Cl. 361-695.000.

Schmitt, Ty. R., to Dell USA, L.P. Combination keylock device and securing device. 6,038,892, Cl. 70-78.000.

Schmitter, Paul: *See*—
Rock, David A.; Schmitter, Paul; Castelnuovo, David; and Goebel, Clement James, III, 6,039,047, Cl. 128-897.000.

Schmitt-Willich, Heribert; Platzek, Johannes; Gries, Heinz; Schumann-Giampieri, Gabrielle; Weinmann, Hanns-Joachim; Vogler, Hubert; Deutsch, Julius; and Conrad, Juergen, to Schering Aktiengesellschaft. Derivatized DTPA complexes, pharmaceutical agents containing these compounds, their use, and processes for their production. 6,039,931, Cl. 424-9.364.

Schmitz, Tracy: *See*—
Huber, Brigitte T.; Schmitz, Tracy; and Underwood, Robert, 6,040,145, Cl. 435-7.200.

Schnabel, Werner: *See*—
Butz, Thomas; Kaller, Ralf; Kissel, Guenther; Mayer, Gehard; Koch, Volker; and Schnabel, Werner, 6,039,779, Cl. 55-499.000.

Schnapp, Susan T: *See*—
Dunphy, Katherine Ann; Schnapp, Susan T; and Johnson, David C, 6,039,443, Cl. 347-92.000.

Schneeberger, Niklaus: *See*—
Münch, Ulrich; Jaeggi, Dominik; and Schneeberger, Niklaus, 6,040,579, Cl. 250-344.000.

Schneider (Europe) A.G.: *See*—
Sauter, Herbert, 6,039,700, Cl. 600-585.000.

Schneider, Daniel P., to Kelsey Hayes Company. Slide pin bushing for disc brake assembly. 6,039,156, Cl. 188-73.440.

Schneider, Hans jun; and Schneider, Rolf. Caterpillar board designed in particular for use on grass slopes. 6,039,331, Cl. 280-14.200.

Schneider (USA) Inc.: *See*—
Hostettler, Fritz; Rhum, David; Forman, Michael R.; Helmus, Michael N.; and Ding, Ni, 6,040,058, Cl. 428-457.000.

Schneider, Jon: *See*—
Carroll, Patrick; Schneider, Jon; and Bell, Douglas E., 6,040,195, Cl. 436-514.000.

Schneider, Luke V.: *See*—

Sanjurjo, Angel; Lau, Kai-Hung; Lowe, David; Canizales, Anastasia; Jiang, Naixiong; Wong, Victor; Jiang, Liqiang; Schneider, Luke V.; Mufti, Naheed; Rewick, Robert T.; Johansson, Marie; and Kardos, Keith, 6,039,894, Cl. 252-301.40R.

Schneider National, Inc.: *See*—
Danford-Klein, Henrik; and Kring, John, 6,041,318, Cl. 705-400.000.

Schneider, Otto; and Kratschmera, Ralf, to Wacker-Chemie GmbH. Process for altering the viscosity of organopolysiloxanes. 6,040,410, Cl. 528-14.000.

Schneider, Rolf: *See*—
Schneider, Hans jun; and Schneider, Rolf, 6,039,331, Cl. 280-14.200.

Schneidereit, Ulrich: *See*—
Esser, Thomas; and Schneidereit, Ulrich, 6,040,854, Cl. 348-159.000.

Schoenzeit, Loren: *See*—
Glass, William H.; Lokhorst, Mark; Lodwick, Philip A.; and Schoenzeit, Loren, 6,041,200, Cl. 399-82.000.

Schoepf, Joseph L.: *See*—
Liston, Laurence D. N.; Schoepf, Joseph L.; and Royalty, Charles Michael, 6,039,287, Cl. 244-54.000.

Scholz, Friedhold: *See*—
Koch, Michael; Kock, Wulf; Lupton, David Francis; and Scholz, Friedhold, 6,039,920, Cl. 420-590.000.

Scholz, Matthew T.; and Tiers, George V., to Minnesota Mining and Manufacturing Company. Coating composition having anti-reflective and anti-fogging properties. 6,040,053, Cl. 428-412.000.

Scholz, Peter; Weber, Jörg; and Angstwurm, Klemens, to Schering Aktiengesellschaft. Prostane derivatives and the combination thereof with antibiotics in the treatment of bacterial infections. 6,040,336, Cl. 514-468.000.

Schönke, Ingoberth: *See*—
Mrotzek, Werner; Gräf, Bernd; and Schönke, Ingoberth, 6,039,093, Cl. 141-386.000.

Schoolcraft, Brian: *See*—
Brown, Cary Lee; Hartsfield, Richard C.; Harter, Bernard Gerald; and Schoolcraft, Brian, 6,040,647, Cl. 310-89.000.

Schoonmaker, Peter M.: *See*—
Stoner, George S.; and Schoonmaker, Peter M., 6,039,534, Cl. 415-162.000.

Schöps, Karl-Friedrich; and Warzecha, Wolfgang, to Otis Elevator Company. Elevator system with controller located under elevator landing. 6,039,152, Cl. 187-414.000.

Schreck, Roman, to Rosch Holding S.A. Automatic toilet seat with protective covering. 6,038,708, Cl. 4-244.100.

Schreck, Stefan G.: *See*—
Carpentier, Alain; Guo, George X.; and Schreck, Stefan G., 6,039,759, Cl. 623-2.000.

Schremmer, Gottfried: *See*—
Patzelt, Helmut; and Schremmer, Gottfried, 6,039,350, Cl. 280-775.000.

Schrems, Martin, to Siemens Aktiengesellschaft. Semiconductors having defect denuded zones. 6,040,211, Cl. 438-238.000.

Schröder, Raimund: *See*—
Helmstädter, Karl-Heinz; and Schröder, Raimund, 6,038,976, Cl. 101-410.000.

Schroepfer, Richard: *See*—
Korsunsky, Iosif; Grabbe, Dimitry; Hasircoglu, Alex; Schroepfer, Richard; and Ringler, Daniel Robert, 6,039,583, Cl. 439-101.000.

Schroff GmbH: *See*—
Rieger, Uwe; Kern, Klaus; and Thomas, Daniel, 6,039,364, Cl. 292-300.000.

Schroth, James Gregory: *See*—
Krajewski, Paul Edward; Lanzi, Ronald George; and Schroth, James Gregory, 6,038,911, Cl. 72-379.200.

Schubert, Jan, to Bernhard Mittelhäuser. Exterior rearview mirror with cable pull adjustment. 6,039,450, Cl. 359-872.000.

Schudel, Gregg W.; and Knight, J. Scott, to GTE Internetworking Incorporated. Electroactive waveform control device and related method. 6,040,672, Cl. 318-611.000.

Schuhmann Giampieri, Gabriele: *See*—
Krause, Werner; Maier, Franz-Karl; Bauer, Michael; Schuhmann Giampieri, Gabriele; Press, Wolf-Rudiger; and Muschik, Peter, 6,040,432, Cl. 534-16.000.

Schuler Pressen GmbH & Co.: *See*—
Klemm, Peter; and Rudloff, Hilmar, 6,039,310, Cl. 267-137.000.

Schulte, Martin; and Levermann, Ulrich, to Schade GmbH & Co. KG. Door shell of a vehicle. 6,039,384, Cl. 296-146.200.

Schultz, Dirk: *See*—
Heilig, Alexander; and Schultz, Dirk, 6,039,380, Cl. 296-70.000.

Schulz, Gregory R.; and Greene, Michael J., to Bayer Corporation. Process for the preparation of highly chromatic perylene pigments. 6,039,769, Cl. 8-574.000.

Schulz, Stephen C., to Minnesota Mining and Manufacturing Company. Sputtering of lithium. 6,039,850, Cl. 204-192.150.

Schulze, Eckehart. Electrohydraulic control valve arrangement. 6,039,077, Cl. 137-625.630.

Schulze, Ullrich, to NSM Aktiengesellschaft. Money-operated entertainment machine. 6,039,649, Cl. 463-16.000.

Schumann-Giampieri, Gabrielle: *See*—
Schmitt-Willich, Heribert; Platzek, Johannes; Gries, Heinz; Schumann-Giampieri, Gabrielle; Weinmann, Hanns-Joachim; Vogler, Hubert; Deutsch, Julius; and Conrad, Juergen, 6,039,931, Cl. 424-9.364.

Schunck, Richard A.; and Sokolowski, Gordon L., to Falk Corporation, The. Sun gear lubrication and inspection mechanism. 6,039,667, Cl. 475-159.000.

Schuster, Frédéric: *See*—
Anderbouhr, Stéphanie; Schuster, Frédéric; Blanquet, Elisabeth; and Theret, Gérald, 6,040,012, Cl. 427-255.391.

Schuster, Johann, to Paul Müller GmbH & Co. KG. Shaft for a motor-driven spindle. 6,040,644, Cl. 310-43.000.

Schuster, Mike; and Fukada, Toshiaki, to ATR Interpreting Telecommunications Research Laboratories. Apparatus for calculating a posterior probability of phoneme symbol, and speech recognition apparatus. 6,041,299, Cl. 704-232.000.

Schuttarle, Karl: *See*—
Kalbacher, Klaus; Schuttarle, Karl; Temmesfeld, Axel; and Eckerskorn, Winfried, 6,039,263, Cl. 236-93.00A.

Schütte, Markus: *See*—
Hirath, Jürgen; and Schütte, Markus, 6,038,830, Cl. 52-788.100.

Schwab, Michel: *See*—
Tu, Mai Xuan; Schwab, Michel; and Musy, Jean-Pierre, 6,041,022, Cl. 368-64.000.

Schwabische Huttenwerke GmbH: *See*—
Heinz-Michael, Zaoralek, 6,039,681, Cl. 492-20.000.

Schwaitzberg, Steven D.: *See*—
Durville, Frederick M.; Connolly, Raymond J; Lantis, John C; Rediker, Robert H; and Schwaitzberg, Steven D., 6,039,729, Cl. 606-16.000.

Schwartz, Lawrence M.: *See*—
Ramakrishnan, Terizhandur S.; Schwartz, Lawrence M.; Fordham, Edmund J.; Kenyon, William E.; and Wilkinson, David J., 6,040,696, Cl. 324-303.000.

Schwartz, Leonard: *See*—
Flanders, John A.; Ready, David C.; Van Seters, Steven; Schwartz, Leonard; and Townsend, William D., 6,041,058, Cl. 370-401.000.

Schwarz, Hans-Peter: *See*—
Turecek, Peter; Schwarz, Hans-Peter; and Eibl, Johann, 6,039,945, Cl. 424-94.640.

Schweiger, Gerd, to AVL Medical Instruments AG. Method for determining the concentration C of an absorbent homogeneously distributed in a carrier. 6,040,190, Cl. 436-164.000.

Sciarretta, William A.; Setzco, Paul; and Arangio, James D., to Raytheon Company. RF connector having a compliant contact. 6,039,580, Cl. 439-63.000.

SCM Metal Products, Inc.: *See*—
Dalal, Kirit; Köhler, Ekkehard; and Nadkarni, Anil V., 6,039,785, Cl. 75-235.000.

Scott, Logan; and Williams, Claude M., to Omnipoint Corporation. Cyclic time hopping in time division multiple access communication system. 6,041,046, Cl. 370-319.000.

Scrafford, Roy: *See*—
Beeche, Gregory L.; and Scrafford, Roy, 6,039,194, Cl. 212-301.000.

Scripps Research Institute, The: *See*—
Kent, Stephen Brian Henry; Milton, Saskia Charlotte Florence; and Milton, Raymond Cecil deLisle, 6,040,133, Cl. 435-4.000.

Scroll Technologies: *See*—
Friedley, Vernon E.; and Barito, Thomas R., 6,039,550, Cl. 418-55.600.

Sculley, Terry Lee: *See*—
Yu, Xianggang; Sculley, Terry Lee; and Niehaus, Jeffrey Alan, 6,041,339, Cl. 708-313.000.

SDGI Holdings, Inc.: *See*—
McKay, William F., 6,039,762, Cl. 623-17.000.

SDL, Inc.: *See*—
Koch, Thomas L.; and Waarts, Robert, 6,041,070, Cl. 372-6.000.
Ventrudo, Brian F.; and Berrang, Peter G., 6,041,072, Cl. 372-102.000.

Se-Kure Controls, Inc.: *See*—
Leyden, Roger; and Surma, Terrance, 6,039,498, Cl. 403-61.000.

Seagate Technology, Inc.: *See*—
Gaertner, Mark A.; and Heath, Mark A., 6,040,952, Cl. 360-48.000.
Lindrose, Albert Michael; and Stefansky, Frederick Mark, 6,040,960, Cl. 360-105.000.

Seb S.A.: *See*—
Antoine, Dominique; and Hantz, Dominique, 6,038,760, Cl. 29-605.000.

Sebben, Daniel Angelo; Lux, Melvin Orville; Zellmer, Timothy Paul; Gueller, Matthew Paul; and Seegert, Brian David, to Deere & Company. Clippings dispersal mechanism. 6,038,843, Cl. 56-202.000.

Seco Tools AB: *See*—
Lamberg, Fredrik, 6,039,515, Cl. 408-188.000.

Seddon, Mark Arthur; and Barnes, Clive, to Gillette Company, The. Ball point pen. 6,039,493, Cl. 401-209.000.

Sedor, Thomas M.; and Valavanis, Theodore, to Midway Games Inc. Potentiometer mounting clip for a joystick controller. 6,040,758, Cl. 338-197.000.

Seegert, Brian David: *See*—
Sebben, Daniel Angelo; Lux, Melvin Orville; Zellmer, Timothy Paul; Gueller, Matthew Paul; and Seegert, Brian David, 6,038,843, Cl. 56-202.000.

Seese, Philip Armin: *See*—
Mangat, Pawitter Jit Singh; Seese, Philip Armin; and Dauksher, William Joseph, 6,039,835, Cl. 156-345.000.

Seetharamulu, Peddaiahgari: *See*—
Hausheer, Fredrick H.; Murali, Dhanabalan; and Seetharamulu, Peddaiahgari, 6,040,330, Cl. 514-408.000.

Seffernick, Lewis L.; and Poole, David L., to CTS. Computer keyboard having top molded housing with rigid pointing stick integral and normal to front surface of housing as one unit part to be used with strain sensors in navigational control. 6,040,823, Cl. 345-168.000.

Sehorne, Mark Alvin: *See*—

Perks, Michael Albert; and Sehorne, Mark Alvin, 6,041,180, Cl. 395-709.000.
Seidel, Gregg A. Advertising display device. 6,038,800, Cl. 40-517.000.
Seifert, Holger: *See—*
Knorr, Gottfried; Rotermund, Udo; Baum, Eva; Seifert, Holger; and Wiegmann, Werner, 6,040,349, Cl. 521-131.000.
Seifert, Raymond C.; and Bradbury, John R., to Steris Corporation. Medical and biological fluid collection and disposal system. 6,039,724, Cl. 604-533.000.
Seiffert, Jörg O.; and Widmer, Daniel F., to International Business Machines Corporation. Control network and configuration method therefor. 6,041,044, Cl. 370-254.000.
Seikagaku Corporation: *See—*
Hirata, Michimasa, 6,040,291, Cl. 514-12.000.
Kawasaki, Toshisuke; and Oka, Shogo, 6,040,156, Cl. 435-69.100.
Seiko Epson Corporation: *See—*
Karasawa, Joji, 6,040,945, Cl. 359-630.000.
Kubota, Kazuhide; and Miyabayashi, Toshiyuki, 6,039,796, Cl. 106-31.600.
Shinkawa, Osamu; and Koike, Kunio, 6,041,021, Cl. 368-64.000.
Yuzawa, Hideki, 6,040,093, Cl. 430-5.000.
Seiko Instruments Inc.: *See—*
Hayashi, Yutaka; Kamiya, Masaaki; Kojima, Yoshikazu; and Takasu, Hiroaki, 6,040,200, Cl. 438-30.000.
Kawawada, Naoki; Namiki, Hiroaki; Takehara, Isamu; Iwaki, Tadao; Ishida, Takashi; Hayashizaki, Shinichi; Shimaguchi, Hirotada; and Konno, Katsushige, 6,040,648, Cl. 310-90.000.
Seiler, Douglas A. Convertible protective cover for a mask. 6,038,706, Cl. 2-426.000.
Seitz, Gary L.: *See—*
Kennie, Jerry; Cheng, Yi; Hope, Mark E.; Huff, Shean; Nankee, Robert J., II; Joyce, Mary; Krozek, Dennis A.; Moote, Richard K.; Richardson, Roland T.; Rotramel, William D.; and Seitz, Gary L., 6,041,278, Cl. 701-103.000.
Sekharipuram, Venkateshwaran N.; Mecham, Beverly Sue; Bhatnagar, Atul; and McGrath, James E., to Johnson & Johnson Vision Products, Inc.; and Virginia Tech Intellectual Properties, Inc. Melt polymer synthesis of poly ether phosphine oxides. 6,040,416, Cl. 528-168.000.
Sekijima, Takenori; Fujii, Takashi; Wakino, Kikuo; and Okada, Masakatsu, to Murata Manufacturing Co., Ltd. Single crystal growth method. 6,039,802, Cl. 117-49.000.
Sekine, Masahiro: *See—*
Kimura, Mikihiro; and Sekine, Masahiro, 6,040,199, Cl. 438-17.000.
Sekiya, Takuro; and Iwasaki, Kyuhachiro, to Ricoh Company, Ltd. Ink jet recording method and head. 6,039,425, Cl. 347-15.000.
Seko, Masahiro: *See—*
Arimori, Susumu; Seko, Masahiro; Tanaka, Masakazu; Monden, Noriko; and Yokota, Hideyuki, 6,040,415, Cl. 528-71.000.
Sekula, Bernard Charles; and Golden, Rosemary Antoinette, to Bestfoods. Freezable low-calorie spoonable dressing and method for their production. 6,039,998, Cl. 426-605.000.
Selby, William J. Safety hose system. 6,039,066, Cl. 137-312.000.
Selkirk, Inc.: *See—*
Barth, James T., 6,039,041, Cl. 126-85.00B.
Sells, Gary L., to Cor-A-Vent, Incorporated. Ventilating cap for covering a vent opening, transport container, and method for their manufacture. 6,039,646, Cl. 454-365.000.
Selvidge, Charles W.; and Vauk, Dennis A., to KRC-GP, Inc. Formulation and method of preparation of energy fortified diesel fuel. 6,039,771, Cl. 44-311.000.
Sember, Mark A., to Chrysler Corporation. Method for calculating fuel economy using manifold air pressure (MAP) and fuel rail temperature. 6,038,917, Cl. 73-114.000.
Semco Machine Corporation: *See—*
Holmes, Frederick J., 6,040,699, Cl. 324-754.000.
Semeria, Didier: *See—*
Philippe, Michel; Luppi, Bernadette; and Semeria, Didier, 6,039,963, Cl. 424-401.000.
Semiconductor Energy Laboratory Co., Ltd.: *See—*
Zhang, Hongyong; Koyama, Jun; and Teramoto, Satoshi, 6,040,589, Cl. 257-59.000.
Semicondutor Energy Laboratory Co., Ltd.: *See—*
Morooka, Hisao; Miura, Takamitsu; Yamada, Hiroshi; Kurihara, Katsuki; Matsuse, Mitsutaka; and Arai, Yasuyuki, 6,040,520, Cl. 136-245.000.
Senanayake, Chris Hugh: *See—*
Gao, Yun; Hett, Robert; Fang, Kevin Q.; Wald, Stephen A.; Redmon, Martin P.; and Senanayake, Chris Hugh, 6,040,344, Cl. 514-554.000.
Senda, Kunihiro: *See—*
Toge, Tetsuo; Komatsubara, Michiro; Honda, Atsuhito; Sadahiro, Kenichi; and Senda, Kunihiro, 6,039,818, Cl. 148-307.000.
Senn, Peter: *See—*
Krettek, Christian; Könemann, Bernd; Perrier, Alexandre; and Senn, Peter, 6,039,742, Cl. 606-96.000.
Sensor Technologies, Inc.: *See—*
Chick, William L.; Wolf, David E.; and Cardullo, Richard A., 6,040,194, Cl. 436-501.000.
Sensormatic Electronics Corporation: *See—*
Wilson, Charles Park; Winter, Gerhard Josef; and MacCormack, David Ross, 6,041,361, Cl. 709-253.000.
Sensui, Takayuki, to Asahi Kogaku Kogyo Kabushiki Kaish. Finder system. 6,041,186, Cl. 396-80.000.
Seo, Shuzo, to Asahi Kogaku Kogyo Kabushiki Kaisha. Data symbol reading apparatus. 6,039,255, Cl. 235-462.350.
Sepracor Inc.: *See—*
Gao, Yun; Hett, Robert; Fang, Kevin Q.; Wald, Stephen A.; Redmon, Martin P.; and Senanayake, Chris Hugh, 6,040,344, Cl. 514-554.000.
Gray, Nancy M.; and Woosley, Raymond Leon, 6,040,307, Cl. 514-252.000.
Septak, Michael, to Becton Dickinson and Company. Method and materials for efficiency protein immobilization on tissue culture treated assay plates. 6,040,182, Cl. 435-395.000.
Sequent Computer Systems, Inc.: *See—*
Gilbert, Bruce Michael; Joersz, Robert T.; Lovett, Thomas D.; and Safranek, Robert J., 6,041,376, Cl. 710-108.000.
Sergeant, John: *See—*
Kennedy, Joe B.; Davyduke, Roland; Jackson, James G.; Hannebauer, James B.; Newnes, William R.; Stroud, Brian; and Sergeant, John, 6,039,097, Cl. 144-357.000.
Kennedy, Joe B.; Davyduke, Roland; Jackson, James G.; Hannebauer, James B.; Newnes, William R.; Stroud, Brian; and Sergeant, John, 6,039,098, Cl. 144-357.000.
Serikov, Vladimir: *See—*
Mauze, Ganapati R.; and Serikov, Vladimir, 6,038,922, Cl. 73-335.080.
Serrmi Products, Inc.: *See—*
Gallimore, Michael B.; and Gibson, Donald, 6,038,823, Cl. 52-126.100.
Setzco, Paul: *See—*
Sciarretta, William A.; Setzco, Paul; and Arangio, James D., 6,039,580, Cl. 439-63.000.
Seward, James Bernard; and Tajik, Abdul Jamil, to Mayo Foundation for Medical Education and Research. Volumetric image ultrasound transducer underfluid catheter system. 6,039,693, Cl. 600-459.000.
Sewell, Michael R.: *See—*
Cech, Leonard S.; Sewell, Michael R.; Gillis, Edward J.; and Talley, David B., 6,039,345, Cl. 280-735.000.
Sextant Avionique: *See—*
Breda, Jean-Marc, 6,040,899, Cl. 356-28.500.
Sexton, Franklin E.: *See—*
Riego, Domingo C.; Cox, Kenneth C.; Sexton, Franklin E.; and Meadows, James C., 6,040,272, Cl. 504-206.000.
SGS-Thomson Microelectronics Limited: *See—*
Warren, Robert, 6,041,378, Cl. 710-127.000.
SGS-Thomson Microelectronics S.A.: *See—*
Fraisse, Christian, 6,041,080, Cl. 375-242.000.
SGS-Thomson Microelectronics S.r.l.: *See—*
Airaksinen, Maria Leena; and Catanzaro, Giorgio, 6,040,711, Cl. 326-81.000.
Fabbrizio, Vito; and Kramer, Alan, 6,041,321, Cl. 706-41.000.
Ferrario, Bruno, 6,040,730, Cl. 327-344.000.
Milanesi, Andrea; Poletto, Vanni; Poma, Alberto; and Morelli, Marco, 6,040,736, Cl. 327-541.000.
Villa, Corrado; Bettini, Luigi; and Bartoli, Simone, 6,040,734, Cl. 327-530.000.
Shah, Ashok; Blum, Rick; and Dickinson, Gary, to Lockformer Company, The. Insulated glass window spacer and method for making window spacer. 6,038,825, Cl. 52-172.000.
Shah, Nadir: *See—*
Chandler, William Keith; Shah, Nadir; Mahmood, Waqar; and Csipkes, Andrei, 6,039,630, Cl. 451-6.000.
Shah, Navnit Hargovindas; Railkar, Aruna M.; and Phuapradit, Wantanee, to Hoffman-La Roche Inc. Colon targeted delivery system. 6,039,975, Cl. 424-473.000.
Shah, Sunil C.; Pandey, Pradeep; and Erickson, Mark A., to Voyan Technology. Multiple scale signal processing and control system. 6,041,172, Cl. 395-500.270.
Shah, Tasvir; Harrison, Mark A.; and Bilbo, Matthew, to Alcatel USA Sourcing, L.P. System and method for controlling access to a telephony database. 6,041,325, Cl. 707-10.000.
Shan, Ming-Chien: *See—*
Du, Weimin; Davis, James W.; Pfeifer, Clemens; Shan, Ming-Chien; and Sheard, Nicolas, 6,041,306, Cl. 705-8.000.
Sharghi, Aaron Safula: *See—*
Coonce, Richard L.; Sharghi, Aaron Safula; and Slife, Douglas Alan, 6,039,319, Cl. 277-314.000.
Sharp Kabushiki Kaisha: *See—*
Furukawa, Hiroyuki, 6,040,826, Cl. 345-196.000.
Hayashi, Motohiko; and Tanaka, Masahiro, 6,040,921, Cl. 358-434.000.
Hotta, Yasuhiro; and Kouchi, Shuichiro, 6,040,999, Cl. 365-200.000.
Ishiguro, Yasuyuki; Sanada, Yoshiaki; Takaya, Toshihiko; Kimura, Takahiko; Kaneshige, Masatoshi; and Yamamoto, Shuuhei, 6,041,207, Cl. 399-275.000.
Kurogane, Saori; and Sakamoto, Hiromi, 6,040,206, Cl. 438-149.000.
Miyamoto, Yasuo; and Takata, Hidekazu, 6,041,015, Cl. 365-236.000.
Nishimura, Toshio, 6,040,810, Cl. 345-87.000.
Tamagaki, Akira; Shimazawa, Yoichi; Matsuda, Hideo; and Yoshiura, Syoichiro, 6,040,924, Cl. 358-523.000.
Wada, Yasuhiro, 6,041,224, Cl. 455-327.000.
Wakahara, Shirou, 6,039,435, Cl. 347-55.000.
Yamada, Kazuo; Mitate, Takehito; Nishimura, Naoto; Tsukuda, Yoshihiro; and Minato, Kazuaki, 6,040,092, Cl. 429-331.000.
Sharpe, David E.: *See—*
Fleischhauer, Grier S.; Higgins, Charles T.; Losee, D. Bruce; Nelson, J. Robert, Jr.; Ripley, Robert L.; Sano, Masato; Sharpe, David E.; and Watkins, Michael L., 6,040,560, Cl. 219-494.000.

Shaughnessy, Mark L.: *See*—
Skoro, John P., III; Bunkenburg, Brian K.; and Shaughnessy, Mark L., 6,041,226, Cl. 455-405.000.

Shavit, Gideon: *See*—
Wruck, Richard A.; and Shavit, Gideon, 6,041,264, Cl. 700-40.000.

Shaw, H. John: *See*—
Hodgson, Craig W.; Wagener, Jefferson L.; Digonnet, Michel J. F.; and Shaw, H. John, 6,040,571, Cl. 250-227.140.

Shayman, James A.; and Radin, Norman S., to University of Michigan, The Regents of the. Amino ceramide-like compounds and therapeutic methods of use. 6,040,332, Cl. 514-428.000.

Shea, Allan K.: *See*—
Hemme, Kent R.; and Shea, Allan K., 6,039,076, Cl. 137-625.370.

Sheard, Nicolas: *See*—
Du, Weimin; Davis, James W.; Pfeifer, Clemens; Shan, Ming-Chien; and Sheard, Nicolas, 6,041,306, Cl. 705-8.000.

Shearon, William B.: *See*—
Young, William R.; and Shearon, William B., 6,040,707, Cl. 326-21.000.

Sheinbein, Daniel: *See*—
Androski, Frank J.; Binowski, Nancy; Ehlinger, James; Robinson, Jerry Allen; and Sheinbein, Daniel, 6,041,117, Cl. 379-268.000.

Sheldon, John: *See*—
Kawamoto, Shiro; Richard, Harry Gene; Sheldon, John; and Imgawa, Yoichi, 6,039,020, Cl. 123-196.00R.

Shellcase Ltd.: *See*—
Badehi, Pierre, 6,040,235, Cl. 438-464.000.

Shelnut, James G.: *See*—
Sonnenberg, Wade; Houle, Patrick J.; Luong, Thong B.; Shelnut, James G.; and Fisher, Gordon, 6,039,859, Cl. 205-159.000.

Shelokov, Alexis P., to Disc Replacement Technologies, Inc. Articulating spinal disc prosthesis. 6,039,763, Cl. 623-17.000.

Shelton, Brian R., to Nortel Networks Corporation. Remote telephone data access and display. 6,041,111, Cl. 379-201.000.

Sheperd, Peter: *See*—
Kubalak, Thomas P.; Sheperd, Peter; and LaPlante, Jeffrey P., 6,039,750, Cl. 606-201.000.

Sher, Alexander A.: *See*—
Mallangi, Chandrasekhar R; Sher, Alexander A.; Fuchs, Eileen Carol; Vadehra, Dharam Vir; and Wedral, Elaine Regina, 6,039,986, Cl. 426-74.000.

Sher, Richard Alan, to Northrop Grumman Corporation. Processor interface for a distributed memory addressing system. 6,041,379, Cl. 710-129.000.

Sherer, W. Paul: *See*—
Hart, John H.; and Sherer, W. Paul, 6,041,166, Cl. 395-200.680.

Sheridan, Brian M. H., to Sheridan Racing Design, LLC. Adjustable cross-loading go-cart chassis. 6,039,335, Cl. 280-124.103.

Sheridan Racing Design, LLC: *See*—
Sheridan, Brian M. H., 6,039,335, Cl. 280-124.103.

Sherman, Andrew J.: *See*—
Fay, Thomas F., III; La Ferla, Raffaele; Sherman, Andrew J.; and Stankiewicz, Edwin P., 6,040,266, Cl. 502-439.000.

Shertok, Joel: *See*—
Wu, Xiaosong; Shertok, Joel; and Konstantin, Peter, 6,039,872, Cl. 210-500.350.

Sherwood Services AG: *See*—
Platt, Robert C., Jr., 6,039,736, Cl. 606-49.000.

Sheu, Lih-Ching, to Kuan Hsieng Industrial Co., Ltd. Hubcap fastener structure. 6,039,406, Cl. 301-108.400.

Shi, Yingzhong: *See*—
Pan, Jing-Jong; Xu, Jingyu; and Shi, Yingzhong, 6,040,944, Cl. 359-590.000.

Shiba, Akio, to Kabushiki Kaisha Toshiba. Exhaust re-combustion type combined cycle power generation plant. 6,038,851, Cl. 60-39.182.

Shiba, Sukenori: *See*—
Oono, Masahiro; Iwanade, Hisao; Saitoh, Noboru; Sato, Koji; Shiba, Sukenori; Yoshida, Tatsuya; and Nagai, Nobuyuki, 6,040,677, Cl. 318-696.000.

Shibasaki, Naoji: *See*—
Ueno, Takeshi; Kita, Tatsuya; and Shibasaki, Naoji, 6,040,268, Cl. 503-227.000.

Shibata, Shiro: *See*—
Andoh, Tomio; Shibata, Shiro; and Marugame, Tomoyuki, 6,039,480, Cl. 400-662.000.

Shibata, Shogo; Fujita, Minoru; Ikeda, Yuji; Ueda, Takaya; Itoh, Fumiaki; and Hirota, Makoto, to Canon Kabushiki Kaisha. Document processing method and apparatus therefor for translating keywords according to a meaning of extracted words. 6,041,293, Cl. 704-4.000.

Shibouta, Yumiko: *See*—
Nishikawa, Kohei; Shibouta, Yumiko; and Kubo, Keiji, 6,040,324, Cl. 514-381.000.

Shibuya, Hisataka: *See*—
Hanano, Takashi; and Shibuya, Hisataka, 6,039,108, Cl. 164-72.000.

Shibuya, Sachio: *See*—
Ohtomo, Fumio; Nakata, Yuji; Fukuyama, Yoshitaka; Inomata, Asako; Shibuya, Sachio; Koga, Akinori; Ishii, Junji; Ito, Shoko; and Yamamoto, Hironobu, 6,038,850, Cl. 60-39.182.

Shido, Shunichi; and Kuroda, Ryo, to Canon Kabushiki Kaisha. Information recording apparatus and method of recording information by applying voltage between probe and recording medium. 6,040,848, Cl. 347-159.000.

Shieh, Johnny Meng-Han: *See*—
Maddalozzo, John, Jr.; McBrearty, Gerald Francis; and Shieh, Johnny Meng-Han, 6,041,366, Cl. 710-5.000.

Shiell, Jonathan H., to Texas Instruments Incorporated. Emulation devices utilizing state machines. 6,041,176, Cl. 395-500.480.

Shiga, Akira: *See*—
Kimura, Kenichi; Shiga, Akira; Hashiguchi, Toshihiko; Murakami, Eiji; and Sasaki, Katsumi, 6,039,752, Cl. 606-205.000.

Shiga, Hitoshi: *See*—
Banba, Hironori; Shiga, Hitoshi; Atsumi, Shigeru; and Umezawa, Akira, 6,041,012, Cl. 365-226.000.

Shiga, Shigenori: *See*—
Ueda, Makoto; Shiga, Shigenori; Tajima, Satoko; and Morishita, Hideki, 6,041,091, Cl. 376-327.000.

Shigeyama, Yasuhiro: *See*—
Yuyama, Shoji; and Shigeyama, Yasuhiro, 6,039,209, Cl. 221-171.000.

Shiina, Kazuhiro; Kawamoto, Koji; Miura, Masato; Ohura, Hitoshi; Ozeki, Shoichi; Akiyama, Noboru; Nunomura, Kunihoro; Nemoto, Minehiro; and Iwamura, Masahiro, to Hitachi, Ltd.; and Hitachi Haramachi Electronics Co., Ltd. Driver circuit, driver integrated circuit, and display device and electronic device using the driver circuit and driver integrated circuit. 6,040,827, Cl. 345-208.000.

Shiitani, Shuichi; and Watanabe, Masaki, to Fujitsu Limited. Modelling method, modelling system, and computer memory product of the same. 6,040,836, Cl. 345-427.000.

Shikata, Masaru: *See*—
Kushihi, Yuichi; and Shikata, Masaru, 6,040,806, Cl. 343-853.000.

Shikoku Kakoki Co., Ltd.: *See*—
Fujikawa, Yasuji; and Ueda, Michio, 6,039,058, Cl. 134-104.100.

Shima, Kazuo: *See*—
Hagiwara, Yoshihiro; Suetsugu, Junichi; Mizoguchi, Tadashi; Minemoto, Hitoshi; Takemoto, Hitoshi; Shima, Kazuo; and Yakushiji, Toru, 6,039,442, Cl. 347-89.000.

Shimada, Kousei: *See*—
Yoshida, Akira; Oda, Kozo; Kasai, Takashi; Shimada, Kousei; Kogen, Hiroshi; Hayakawa, Ichiro; Ishihara, Sadao; Koga, Teiichiro; Kitazawa, Eiichi; and Tokui, Taro, 6,040,339, Cl. 514-485.000.

Shimadu, Toru: *See*—
Ootuka, Minoru; Hiraoka, Hirokazu; Shimadu, Toru; and Noda, Masayuki, 6,040,252, Cl. 442-169.000.

Shimaguchi, Hirotada: *See*—
Kawawada, Naoki; Namiki, Hiroaki; Takehara, Isamu; Iwaki, Tadao; Ishida, Takashi; Hayashizaki, Shinichi; Shimaguchi, Hirotada; and Konno, Katsushige, 6,040,648, Cl. 310-90.000.

Shimano, In.: *See*—
Sugimoto, Masanori, 6,039,153, Cl. 188-24.220.

Shimano, Inc.: *See*—
Nakamura, Yasushi, 6,039,665, Cl. 474-157.000.

Shimazawa, Yoichi: *See*—
Tamagaki, Akira; Shimazawa, Yoichi; Matsuda, Hideo; and Yoshiura, Syoichiro, 6,040,924, Cl. 358-523.000.

Shimeki, Yasuharu: *See*—
Yamamoto, Hiroshi; Shimeki, Yasuharu; Kayashima, Kazuhiro; Maruno, Susumu; Fujimoto, Makoto; and Kojima, Yoshihiro, 6,040,825, Cl. 345-173.000.
Yamamoto, Hiroshi; Niwa, Hisao; Kojima, Yoshihiro; Maruno, Susumu; Kayashima, Kazuhiro; Kouda, Toshiyuki; Maekawa, Hidetsugu; Ito, Satoru; and Shimeki, Yasuharu, 6,041,141, Cl. 382-231.000.

Shimizu, Akio: *See*—
Kimura, Nobutake; Ariga, Masato; Yamakawa, Hirohito; Nakagawa, Yoshio; and Shimizu, Akio, 6,040,495, Cl. 800-8.000.

Shimizu, Satoshi; and Oda, Hidekazu, to Mitsubishi Denki Kabushiki Kaisha. Semiconductor integrated circuit having silicided elements of short length. 6,040,629, Cl. 257-770.000.

Shimizu, Shigemi: *See*—
Fukushima, Eiji; and Shimizu, Shigemi, 6,038,960, Cl. 92-12.200.

Shimizu, Toshiyuki: *See*—
Odashima, Hisao; Takahashi, Tomomi; and Shimizu, Toshiyuki, 6,040,054, Cl. 428-413.000.

Shimoda, Kazuhisa: *See*—
Takehara, Nobuyuki; Shimoda, Kazuhisa; and Morishita, Yasuo, 6,038,771, Cl. 29-897.200.

Shimoi, Yoichi; Tamura, Hideo; Okazaki, Masaomi; and Suganuma, Takao, to Nittetu Chemical Engineering Ltd.; and Ajinomoto Co., Inc. Method for separating and recovering objective component. 6,039,879, Cl. 210-641.000.

Shimojo, Masato: *See*—
Yamamoto, Ichiro; Itoh, Manabu; Shimojo, Masato; Yumiya, Yasunobu; Mukaihira, Takafumi; and Akada, Yasushige, 6,040,331, Cl. 514-411.000.

Shimosaka, Hirotaka: *See*—
Kasashima, Atsuki; Ihara, Keisuke; and Shimosaka, Hirotaka, 6,039,660, Cl. 473-378.000.

Shimura, Masato: *See*—
Matsuyama, Shigeru; Asuma, Hiroaki; Shimura, Masato; Tomita, Yoshifumi; and Aratani, Sukekazu, 6,040,887, Cl. 349-141.000.

Shin-Etsu Chemical Co., Ltd.: *See*—
Fujiki, Hironao; Miyoshi, Kei; and Muramatsu, Hironobu, 6,040,361, Cl. 523-209.000.
Fukuda, Kenichi; and Tarumi, Yasuo, 6,040,400, Cl. 526-126.000.

Shin-Etsu Polymer Co., Ltd.: *See*—
Imai, Tsuyoshi, 6,040,037, Cl. 428-209.000.

Shin, Hung Tae: *See*—

Lee, Yoon Pyo; Lee, Chun Sik; Kim, Kwang Ho; Jurng, Jong Soo; Kim, Young Il; Shin, Hung Tae; and Han, Hee Suk, 6,038,869, Cl. 62-100.000.

Shin Jiuh Corp.: *See*—
Chou, Chin-Wen, 6,039,478, Cl. 400-472.000.

Shin-Kobe Electric Machinery Co.: *See*—
Ootuka, Minoru; Hiraoka, Hirokazu; Shimadu, Toru; and Noda, Masayuki, 6,040,252, Cl. 442-169.000.

Shinchi, Akira, to Yazaki Corporation. Method of fixing packing and structure for fixing packing. 6,039,592, Cl. 439-271.000.

Shinkawa, Osamu; and Koike, Kunio, to Seiko Epson Corporation. Electronically controlled mechanical timepiece and control method therefor. 6,041,021, Cl. 368-64.000.

Shinko Electric Co., Ltd.: *See*—
Onishi, Masanori; Murata, Masanao; Nakai, Yutaka; Yasuda, Katsumi; Sugino, Tsukasa; Nakagawa, Susumu; and Miura, Kouji, 6,041,274, Cl. 701-26.000.

Shinohara, Hisaji: *See*—
Kitamura, Tadao; and Shinohara, Hisaji, 6,040,528, Cl. 174-138.00C.

Shinohara, Tsutomu: *See*—
Ohmi, Tadahiro; Yamaji, Michio; Shinohara, Tsutomu; Itoi, Shigeru; Hirao, Keiji; Kawano, Yuji; Tanaka, Shigeaki; Yokoyama, Kosuke; Morokoshi, Hiroshi; and Ikeda, Nobukazu, 6,039,360, Cl. 285-61.000.

Shinya, Keigo; Kou, Wen Long; Suzuki, Osamu; and Tetsui, Shunichi, to Denyo Kabushiki Kaisha. Engine driven arc welder. 6,040,556, Cl. 219-133.000.

Shioda, Takuya: *See*—
Takeda, Haruo; Tatsumi, Yukio; Fujitani, Ikuji; Shioda, Takuya; Yoshimi, Tomofumi; Sugimoto, Tomohiko; and Haeiwa, Kazuhisa, 6,041,082, Cl. 375-300.000.

Shiomi, Tsugio: *See*—
Kanai, Hiroaki; Yagyu, Kiyohide; Maruta, Akira; Sasahara, Kouji; and Shiomi, Tsugio, 6,038,758, Cl. 29-557.000.

Shiotsu, Tamotsu: *See*—
Yamamoto, Iwao; Kakikura, Eisaku; Kinouchi, Masami; Inoue, Yoshiaki; and Shiotsu, Tamotsu, 6,040,051, Cl. 428-367.000.

Shipley Company, L.L.C.: *See*—
Sonnenberg, Wade; Houle, Patrick J.; Luong, Thong B.; Shelnut, James G.; and Fisher, Gordon, 6,039,859, Cl. 205-159.000.

Shipman, Mark S.; Christeson, Orville H.; and Labatte, Timothy E. W., to Intel Corporation. Method and apparatus for protecting data using lock values in a computer system. 6,041,385, Cl. 710-200.000.

Shirai, Kenji; Yokoyama, Seiya; and Oota, Tsutomu, to Toyota Jidosha Kabushiki Kaisha. Electric brake device. 6,040,665, Cl. 318-14.000.

Shirai, Seiichirou; Onozuka, Toshihiko; Noishiki, Takayuki; Sakai, Satoshi; Sasajima, Katsuhiro; Toyoda, Eiji; and Namikawa, Makoto, to Nitto Denko Corporation. Process and apparatus for the removal of resist. 6,040,110, Cl. 430-258.000.

Shiraishi, Takuya; Nogi, Toshiharu; Ohsuga, Minoru; Nakayama, Yoko; and Tokuyasu, Noboru, to Hitachi, Ltd. Method of controlling internal combustion engine. 6,039,026, Cl. 123-399.000.

Shiraiwa, Masaru: *See*—
Ono, Katsuya; Shiraiwa, Masaru; and Nishioka, Kimihiko, 6,041,154, Cl. 385-116.000.

Shirakawa, Takuya: *See*—
Sageser, David Mark; Shirakawa, Takuya; and Morimoto, Koichi, 6,039,906, Cl. 264-156.000.

Shiroshima, Kiyoyuki: *See*—
Kitaguchi, Akira; Hatakenaka, Makoto; Nakajima, Michio; Motonami, Kaoru; Shiroshima, Kiyoyuki; and Yamashita, Takekazu, 6,040,614, Cl. 257-529.000.

Shlik, Oleg Eduardovich, to Accusteel Ltd. Method for measuring the temperature of a metallurgical furnace using an acoustic noise parameter and rate of consumption of electrical power. 6,039,472, Cl. 374-117.000.

Shogren, Randal: *See*—
Doane, William M.; Lawton, John W., Jr.; and Shogren, Randal, 6,040,063, Cl. 428-532.000.

Shon, Ho Seok: *See*—
Yoon, Sang Youl; and Shon, Ho Seok, 6,040,097, Cl. 430-28.000.

Shoot the Moon Products, Inc.: *See*—
Small, David, 6,040,870, Cl. 348-476.000.

Shou, Guoliang: *See*—
Ito, Fumihito; and Shou, Guoliang, 6,040,228, Cl. 438-393.000.

Showa Corporation: *See*—
Nakamura, Tamotsu, 6,039,617, Cl. 440-61.000.

Showa Shell Sekiyu K.K.: *See*—
Kushiya, Katsumi; Okumura, Daisuke; and Sugiyama, Ichiro, 6,040,521, Cl. 136-265.000.

Shoyama, Noriko: *See*—
Satoh, Hiroki; Taguchi, Yoshio; and Shoyama, Noriko, 6,040,035, Cl. 428-195.000.

Shpilberg, Ilya: *See*—
Poreh, Illan; Algom, Avner; Vaindiner, Alexander; and Shpilberg, Ilya, 6,040,832, Cl. 345-340.000.

Shturman Cardiology Systems, Inc.: *See*—
Shturman, Leonid; Morov, Georgiy; and Malgichev, Vladimir, 6,039,747, Cl. 606-159.000.

Shturman, Leonid; Morov, Georgiy; and Malgichev, Vladimir, to Shturman Cardiology Systems, Inc. Rotational atherectomy device with improved optical tachometer. 6,039,747, Cl. 606-159.000.

Shubinsky, Vladimir: *See*—
Butkovich, George M.; and Shubinsky, Vladimir, 6,038,936, Cl. 74-15.400.

Shuey, David Joseph: *See*—
Franco, Rodrigo; Chen, Ai Ru Sun; and Shuey, David Joseph, 6,040,436, Cl. 536-23.100.

Shyam, Krishnamurthy: *See*—
Sartorelli, Alan C.; Shyam, Krishnamurthy; Penketh, Philip G.; and Chen, Shu-Hui, 6,040,338, Cl. 514-482.000.

Shyang Feng Electric & Machinery Co., Inc.: *See*—
Hu, Francisco, 6,038,894, Cl. 70-224.000.

Si, Joan Qi: *See*—
Wagner, Peter; and Si, Joan Qi, 6,039,982, Cl. 426-18.000.
Wagner, Peter; and Si, Joan Qi, 6,039,983, Cl. 426-18.000.

Sick AG: *See*—
Reichenbach, Jürgen; and Hippenmeyer, Heinrich, 6,039,253, Cl. 235-462.010.

Sicom, Inc.: *See*—
McCallister, Ronald D., 6,041,088, Cl. 375-358.000.

Siegel, Jörg; Borst, Hans-Ulrich; Bell, Peter; Büscher, Ralf; Reif, Heinz; and Jung, Jürgen, to Agfa-Gevaert NV. High-speed color photographic recording material having increased sensitivity in the blue spectral region. 6,040,125, Cl. 430-506.000.

Siegel, Joshua: *See*—
Sanchez, Hector; Alvarez, Jose M.; Siegel, Joshua; and Nicoletta, Carmine, 6,040,729, Cl. 327-309.000.

Siegenthaler, Karl J., to Bridgestone Corporation. Method of forming a complete tire carcass. 6,039,825, Cl. 156-111.000.

Sieko Epson Corporation: *See*—
Edatsune, Isao; Kuriyama, Hiroshi; and Urano, Osamu, 6,040,918, Cl. 358-296.000.

Sieling, Frederick W., to Building Materials Corporation of America. Triaminate roofing shingle. 6,038,827, Cl. 52-557.000.

Sieloff, Gloria: *See*—
Paul, William C.; and Sieloff, Gloria, 6,040,250, Cl. 442-61.000.

Siemens AG: *See*—
Lehmann, Volker; and Gericke, Joachim, 6,040,970, Cl. 361-115.000.

Siemens Aktiengesellschaft: *See*—
Becker, Erich, 6,040,694, Cl. 324-230.000.
Fleck, Rod G.; and Arnold, Roger D., 6,041,387, Cl. 711-5.000.
Froese-Peeck, Rüdiger; Gerhard, Detlef; and Lechner, Johann, 6,039,254, Cl. 235-462.320.
Gehre, Hans-Joachim; and Winterstein, Frank, 6,040,640, Cl. 307-66.000.
Haas, Gerhard, 6,040,895, Cl. 355-70.000.
Kraiczyk, Josef; and Mulders, Stephanus, 6,039,601, Cl. 439-500.000.
Meiler, Reinhold; and Stevens, Dirk, 6,038,761, Cl. 29-605.000.
Pfab, Hans, 6,040,750, Cl. 335-156.000.
Prade, Bernd; Schetter, Bernhard; and Streb, Holger, 6,038,864, Cl. 60-748.000.
Regn, Judith, 6,041,249, Cl. 600-429.000.
Reisinger, Hans; Grüning, Ulrike; Wendt, Hermann; Stengl, Reinhard; Lehmann, Volker; Willer, Josef; Franosch, Martin; Schäfer, Herbert; Krautschneider, Wolfgang; Hofmann, Franz; and Böhm, Thomas, 6,040,995, Cl. 365-185.180.
Scheurlen, Michael, 6,039,537, Cl. 416-97.00R.
Schrems, Martin, 6,040,211, Cl. 438-238.000.
Sung, Chih-Ta Star; Mattela, Venkat; Afsar, Muhammad; Singh, Balraj; and Hung, Chih-Teng, 6,040,998, Cl. 365-194.000.

Siemens Aktiengesellschaft: *See*—
Farsakh, Christof, 6,041,237, Cl. 455-450.000.

Siemens Automotive Corporation: *See*—
Ren, Wei-Min; and Wieczorek, David, 6,039,272, Cl. 239-597.000.
Robinson, Barry S.; and Kilgore, Jason T., 6,039,030, Cl. 123-457.000.

Siemens Electromechanical Components GmbH & Co. KG: *See*—

Sigma-Tau Industrie Farmaceutiche Riunite S.p.A.: *See*—
Moretti, Sonia, 6,040,346, Cl. 514-642.000.

Sigmar, Axel M.; Iseli, James W.; Szalay, Jozsef; Haide, Janos; and Feszthammer, Andras A., to Input/Output, Inc. Remote control system for seismic acquisition. 6,041,283, Cl. 702-16.000.

Siira, Mikko, to Nokia Telecommunications Oy. Transmission method and a cellular radio system. 6,041,230, Cl. 455-422.000.

Sikdar, Subhas; and Vane, Leland, to United States of America, Environmental Protection Agency. Recovery of volatile organic compounds from emulsion of volatile organic compounds in water by pervaporation. 6,039,878, Cl. 210-640.000.

Sikes, Jimmy A. Convection based cooking apparatus with improved air-flow. 6,038,964, Cl. 99-340.000.

Sikkema, Doetze Jakob; and Reichwein, Adrianus Maria, to Akzo Nobel N.V. Process for dicarboxylating dihydric phenols. 6,040,478, Cl. 562-424.000.

Silberg, Barry. External ultrasound treatment of connective tissue. 6,039,048, Cl. 128-898.000.

Silhánková, Alexandra: *See*—

Hohlweg, Rolf; Madsen, Peter; Jørgensen, Tine Krogh; Andersen, Knud Erik; Watson, Brett; Polivka, Zdenek; Konigova, Otylie; Kovandova, Martina; Silhánková, Alexandra; and Valenta, Vladimir, 6,040,302, Cl. 514-217.000.

Silicone Specialties, Inc.: *See*—
Cathey, Joe Ray, 6,039,503, Cl. 404-67.000.

Siller, Curtis A.: *See*—
Doshi, Bharat Tarachand; Dravida, Subrahmanyam; Kustka, George John; Magill, Peter D.; Siller, Curtis A.; and Sriram, Kotikalapudi, 6,041,051, Cl. 370-352.000.

Silva, Albert W.: *See*—
Cooper, Austin M.; Hazencomb, Robert M.; Silva, Albert W.; and Wright, Robert William, 6,039,860, Cl. 205-208.000.

Silva, Christopher Patrick: *See*—
Clark, Christopher Joseph; Moulthrop, Andrew Alfred; Muha, Michael Steven; and Silva, Christopher Patrick, 6,041,077, Cl. 375-224.000.

Silverberg, Michael D.: *See*—
Bittar, Joseph; Barker, Frederick H.; Cooney, Anthony; Perl, David I.; Peruggi, Richard E.; and Silverberg, Michael D., 6,038,980, Cl. 104-20.000.

Silvis, Gary: *See*—
Snoke, Steven R.; Silvis, Gary; and Howland, Thomas E., 6,039,417, Cl. 312-257.100.

Sim, Vibora: *See*—
Schmitt, Ty; and Sim, Vibora, 6,040,981, Cl. 361-695.000.

Simon, Bernd, to Howmedica GmbH. Targeting apparatus for a locking nail. 6,039,739, Cl. 606-64.000.

Simpson Farm Enterprises, Inc.: *See*—
Simpson, Virgil, 6,038,990, Cl. 111-124.000.

Simpson, Virgil, to Simpson Farm Enterprises, Inc. Seeder and liquid applicator. 6,038,990, Cl. 111-124.000.

Sindelar, Karel: *See*—
Andersen, Knud Erik; Jørgensen, Tine Krogh; Hohlweg, Rolf; Fischer, Erik; Olsen, Uffe Bang; Polivka, Zdenek; Sindelar, Karel; and Valenta, Vladimir, 6,040,318, Cl. 514-329.000.

Sinerchio, John A.: *See*—
Ruffolo, Ralph A.; and Sinerchio, John A., 6,041,288, Cl. 702-184.000.

Singer, Irek: *See*—
Symonds, Robert D.; Singer, Irek; St. George, Peter; and Gill, Robert Bradley, 6,039,245, Cl. 235-379.000.

Singh, Balraj: *See*—
Sung, Chih-Ta Star; Mattela, Venkat; Afsar, Muhammad; Singh, Balraj; and Hung, Chih-Teng, 6,040,998, Cl. 365-194.000.

Singh, Jaswinder, to CCL Industries Inc. Aerosol dispenser. 6,039,212, Cl. 222-30.000.

Singh, Rajinder Paul: *See*—
Liu, Peichun Peter; Singh, Rajinder Paul; and Tung, Shih-Hsiung Steve, 6,041,390, Cl. 711-110.000.

Singh, Ranbir: *See*—
Dennis, Donald C.; Radosevich, Joseph R.; and Singh, Ranbir, 6,040,616, Cl. 257-535.000.

Singh, Vikram: *See*—
Dhindsa, Rajinder; Singh, Vikram; and Tokunaga, Ken, 6,039,836, Cl. 156-345.000.

Singhal, Sandeep Kishan: *See*—
Nguyen, Binh Q.; Redpath, Richard J.; and Singhal, Sandeep Kishan, 6,041,343, Cl. 709-203.000.

Siniaguine, Oleg, to IPEC Precision, Inc. Apparatus for generating and deflecting a plasma jet. 6,040,548, Cl. 219-121.480.

Sinnott, Robert A.; Clark, W. Dennis; and DeBoer, Kenneth Frank, to Larreacorp, Ltd. Nontoxic extract of *Larrea tridentata* and method of making the same. 6,039,955, Cl. 424-195.100.

Siomkin, Boris Vasilievich: *See*—
Zinoviev, Nikolai Timofeevich; and Siomkin, Boris Vasilievich, 6,039,274, Cl. 241-1.000.

Sioud, Mouldy, to Gene Shears Pty. Limited. TNF-α ribozymes and derivatives capable of decreasing degradation of MRNA in vivo. 6,040,159, Cl. 435-91.310.

SiRF Technology, Inc.: *See*—
Kohli, Sanjai; and Chen, Steven, 6,041,280, Cl. 701-201.000.

Siros Technologies, Inc.: *See*—
Heanue, John F.; Daiber, Andrew J.; and Colvin, James, 6,040,930, Cl. 359-21.000.

Sistanizadeh, Kamran: *See*—
Bigham, John A.; Little, Dave; Mihm, Edward C.; Sistanizadeh, Kamran; Amin-Salehi, Bahman; Jain, Alpna; Lightfoot, Regina; and Arthur, Ulric E., 6,041,056, Cl. 370-395.000.

Sitrin, Michael D.: *See*—
Brasitus, Thomas A.; Bissonnette, Bruce Marc; and Sitrin, Michael D., 6,040,300, Cl. 514-167.000.

Siu, Burton: *See*—
Bretschneider, Richard; Siu, Burton; and Qureshi, Imran Iqbal, 6,041,333, Cl. 707-203.000.

Sjöwall, Sony, to Vattenfall AB. Method and apparatus handling radioactive waste material. 6,040,491, Cl. 588-16.000.

Skalnyi, Eugene V.: *See*—
Edwards, Stuart D.; Wehman, Thomas C.; Parker, Theodore L.; Kucklick, Theodore; Skalnyi, Eugene V.; and Stein, Alan, 6,039,757, Cl. 623-1.000.

Skarpelos, Michael J.; van der Linden, Robbert; Carley, William J.; Lyon, James M.; and McCline, Matthew C., to Tandem Computers Incorporated. Multi-volume audit trails for fault tolerant computers. 6,041,420, Cl. 714-7.000.

Skjoldborg, Erling: *See*—
Povlsen, Lars; Skjoldborg, Erling; and Goldman, Tomasz Jerzy, 6,041,063, Cl. 370-465.000.

Skoro, John P., III; Bunkenburg, Brian K.; and Shaughnessy, Mark L., to Motorola, Inc. Method and apparatus for monitoring subscriber talk-around usage. 6,041,226, Cl. 455-405.000.

Skrabanja, Arnold Titus Philip; and Tully, Robert Edward, to Akzo Nobel, N.V. Oral liquid antidepressant solution. 6,040,301, Cl. 514-214.000.

Sladek, David T., to Thayer Medical Corporation. Portable chamber for metered dose inhaler dispensers. 6,039,042, Cl. 128-200.230.

Slane, Albert Alfonse: *See*—
Leichty, Philip Lynn; and Slane, Albert Alfonse, 6,041,060, Cl. 370-412.000.

Slangen, Hubertus J. M.; and Kemper, Astrid E., to Holland Sweetener Company V.O.F. Aspartame powders for powder mixtures. 6,039,275, Cl. 241-17.000.

Slater, Joseph A.; and Chan, Sam, to Glaxo Wellcome Inc. Position triggered dispenser and methods. 6,039,211, Cl. 222-1.000.

Slavik, Michael: *See*—
Compadre, Cesar; Breen, Philip; Salari, Hamid; Fifer, E. Kim; Lattin, Danny L.; Slavik, Michael; Li, Yanbin; and O'Brien, Timothy, 6,039,992, Cl. 426-332.000.

Slesinger, Kris Allen: *See*—
Davis, John Gillette; Mays, Allen Thomas; and Slesinger, Kris Allen, 6,039,805, Cl. 118-74.000.

Slettnes, Tor, to Perkin-Elmer Corporation, The. Method and system for velocity-normalized position-based scanning. 6,040,586, Cl. 250-573.000.

Slife, Douglas Alan: *See*—
Coonce, Richard L.; Sharghi, Aaron Safula; and Slife, Douglas Alan, 6,039,319, Cl. 277-314.000.

Slimak, Karen M.: *See*—
Slimak, Robert A.; Haudenschild, Christian C.; and Slimak, Karen M., 6,040,057, Cl. 428-453.000.

Slimak, Robert A.; Haudenschild, Christian C.; and Slimak, Karen M., to Slimak, Karen M. Enhancing the strength, moisture resistance, and fire-resistance of wood, timber, lumber, similar plant-derived construction and building materials, and other cellulosic materials. 6,040,057, Cl. 428-453.000.

Sliwa, Jack; and Blumenfeld, Lee A., to OB Inovations, Inc. Method and apparatus for monitoring cervical diameter. 6,039,701, Cl. 600-588.000.

Sloan, Jack C.: *See*—
Sloan, Mark A.; and Sloan, Jack C., 6,039,213, Cl. 222-39.000.

Sloan-Kettering Institute for Cancer Research: *See*—
Kolesnick, Richard N.; Liu, Jun; and Zhang, Yuhua, 6,040,149, Cl. 435-15.000.

Sony Pictures Entertainment, Inc.: *See—*
Claar, Jeffrey Mark; Duvall, Roger Mather; and Oliver, Richard Joseph. 6,041,407, Cl. 713-1.000.
Soper, Jon C.; and Thomas, M. Teresa, to Givaudan Roure Flavors Corporation. Enzymatically protein encapsulating oil particles by complex coacervation. 6,039,901, Cl. 264-4.300.
Soral, Robert: *See—*
Goss, G. Robert; and Soral, Robert. 6,039,004, Cl. 119-172.000.
Sorenson, Karen. Infant observation mirror attachable to an infant car seat. 6,039,455, Cl. 362-142.000.
Sorkin, Felix L. Method and apparatus for cutting a tendon used in a post-tension anchor system. 6,040,546, Cl. 219-121.390.
Sota, Akio; Okiura, Tomoo; and Azuma, Masaki, to Kyowa Hakko Kogyo Co., Ltd. Preparing organic powder by anaerobically treating fermentation waste fluid and aerobically treating the digested fermentation liquor. 6,039,782, Cl. 71-10.000.
Southpac Trust International, Inc.: *See—*
Weder, Donald E.; and Feld, Jack. 6,039,179, Cl. 206-423.000.
Spaete, Richard; and Cha, Tai-An, to Aviron. Human cytomegalovirus DNA sequences. 6,040,170, Cl. 435-252.300.
Spagnol, Michel: *See—*
Costantini, Michel; Gilbert, Laurent; and Spagnol, Michel. 6,040,484, Cl. 568-803.000.
Spall, John M., to Ericsson Inc. Dual band diversity antenna having parasitic radiating element. 6,040,803, Cl. 343-700.0MS.
Spallholz, Julian E.; and Reid, Ted W. Method for the preparation of free radical pharmaceuticals, diagnostics and devices using selenium conjugates. 6,040,197, Cl. 436-525.000.
Spalt, Werner: *See—*
Knebel, Joachim; and Spalt, Werner. 6,040,473, Cl. 560-217.000.
Sparta, Inc.: *See—*
Monroe, John W.; Smith, John J.; Kenyon, Stephen C.; and Anderson, Michael E., 6,040,843, Cl. 345-507.000.
Spath, Mark James, to General Motors Corporation. Hydraulic lash adjuster with plunger inner control ring. 6,039,018, Cl. 123-90.550.
Speare Tools, Inc.: *See—*
Speare, William J., 6,038,945, Cl. 81-23.000.
Speare, William J., to Speare Tools, Inc. Nail starter integrally formed in head for a hammer. 6,038,945, Cl. 81-23.000.
Spector, Donald. Animal-like ride-on toy vehicle. 6,039,327, Cl. 280-7.021.
Speedfam Co., Ltd.: *See—*
Arai, Hatsuyuki; and Ikeyama, Yasushi. 6,040,244, Cl. 438-691.000.
Nagayama, Hitoshi; and Nezu, Motoi. 6,039,638, Cl. 451-288.000.
Speier, Wolfgang: *See—*
Szot, Krzysztof; Speier, Wolfgang; and Herion, Jörg. 6,040,070, Cl. 428-700.000.
Spence, Jonathan P. Apparatus for cooking eggs. 6,038,966, Cl. 99-440.000.
Spencer, Julian A. Q., to Gateway 2000, Inc. Portable computer having folding speakers. 6,040,978, Cl. 361-683.000.
Spencer, Michael; Mumm, Rita; and Gwyn, Jeff, to Dekalb Genetics Corporation. Glyphosate resistant maize lines. 6,040,497, Cl. 800-288.000.
Spets, Timothy J.: *See—*
Erickson, Paul M.; and Spets, Timothy J., 6,041,048, Cl. 370-349.000.
Spinelli, Harry Joseph: *See—*
Page, Loretta Ann Grezzo; Spinelli, Harry Joseph; and Anton, Waifong Liew, 6,040,358, Cl. 523-161.000.
Spletzer, David. Exercise thigh weight system. 6,039,677, Cl. 482-105.000.
Sporleder, C. Ray; and Clemmer, David E., to Indiana University Advanced Research & Technology Institute Inc. Electric field generation for charged particle analyzers. 6,040,573, Cl. 250-281.000.
Sprakelaar, Gertjan van: *See—*
Maluf, Nadim I.; Logan, John R.; and Sprakelaar, Gertjan van, 6,038,928, Cl. 73-724.000.
SRI International: *See—*
Sanjurjo, Angel; Lau, Kai-Hung; Lowe, David; Canizales, Anastasia; Jiang, Naixiong; Wong, Victor; Jiang, Liqiang; Schneider, Luke V.; Mufti, Naheed; Rewick, Robert T.; Johansson, Marie; and Kardos, Keith, 6,039,894, Cl. 252-301.40R.
Srinivas, Hosahalli R.: *See—*
Chen, Feng; Kolagotla, Ravi K.; Ly, Le T.; Mo, Jiancheng; and Srinivas, Hosahalli R., 6,041,418, Cl. 713-400.000.
Srinivasan, Anand; and Sandhu, Gurtej S., to Micron Technology, Inc. Catalytic breakdown of reactant gases in chemical vapor deposition. 6,040,010, Cl. 427-250.000.
Srinivasan, Kasturi Rangan: *See—*
Black, David Glenn; Hinch, Garry Dale; Nguyen, Dat Quoc; and Srinivasan, Kasturi Rangan, 6,040,098, Cl. 430-59.600.
Sriram, Kotikalapudi: *See—*
Doshi, Bharat Tarachand; Dravida, Subrahmanyam; Kustka, George John; Magill, Peter D.; Siller, Curtis A.; and Sriram, Kotikalapudi, 6,041,051, Cl. 370-352.000.
SSAC, Inc.: *See—*
Gluszek, Andrew, 6,040,689, Cl. 324-127.000.
SSP Co., Ltd.: *See—*
Takeda, Sunao; Kaneko, Yasushi; Tokizawa, Minoru; Eto, Hiromichi; Ishida, Kazuya; Maebashi, Kazunori; Matsumoto, Masaru; Asaoka, Takemitsu; and Sato, Susumu, 6,040,325, Cl. 514-383.000.
St. Croix Medical, Inc.: *See—*
Bushek, Donald J., 6,039,685, Cl. 600-25.000.
Stadler, Rolf, to Firma Carl Freudenberg. Sealing arrangement. 6,039,322, Cl. 277-551.000.
Staff Co., Ltd.: *See—*
Todokoro, Masatoshi, 6,039,655, Cl. 473-116.000.
Stafford, Jay M., to Fairchild Holding Corp. Nut removal and installation tool. 6,038,754, Cl. 29-267.000.
Stahl, Kermit E.; Noone, Michael J.; and Quaranta, Joseph, to CertainTeed Corporation. Stack and package of laminated shingles. 6,038,826, Cl. 52-554.000.
Stahl, Uwe: *See—*
Lautenschlager, Wolfgang; and Stahl, Uwe, 6,041,110, Cl. 379-201.000.
Stähle, Michael: *See—*
Petrick, Jörg; and Stähle, Michael, 6,039,573, Cl. 434-268.000.
Stähler, Theo. Process for the thoroughgoing aerobic biological purification of waste water. 6,039,873, Cl. 210-605.000.
Stahovic, Robert. Animal excrement collecting device and collecting tool. 6,039,369, Cl. 294-1.400.
Staiger, Wolfgang: *See—*
Becker, Klaus; Staiger, Wolfgang; Jung, Matthias; and Heinemeyer, Peter, 6,039,114, Cl. 165-170.000.
Stancil, Charles J.: *See—*
Ramsey, Jens K.; Stevens, Jeffrey C.; Tubbs, Michael E.; and Stancil, Charles J., 6,041,401, Cl. 712-43.000.
Standiford, Jocelyn D.; and Edgerle, Candius L. Time monitoring portable game system. 6,039,574, Cl. 434-304.000.
Stanford, Dean: *See—*
Hanners, John C.; Miller, Charles A.; and Stanford, Dean, 6,040,691, Cl. 324-158.100.

Goldman, Richard B., 6,039,926, Cl. 422-116.000.
Steen, C. Raymond, Jr.: *See—*
Warther, Richard O.; and Steen, C. Raymond, Jr., 6,039,356, Cl. 283-61.000.
Stefansky, Frederick Mark: *See—*
Lindrose, Albert Michael; and Stefansky, Frederick Mark, 6,040,960, Cl. 360-105.000.
Steffan, Paul J.; and Chen, Ming Chun, to Advanced Micro Devices, Inc. Automatic recipe adjust and download based on process control window. 6,041,270, Cl. 700-121.000.
Steigerwald, Robert Louis: *See—*
Ramakrishnan, Sriram; Steigerwald, Robert Louis; and Bicknell, William Hull, 6,040,753, Cl. 336-223.000.
Stein, Alan: *See—*
Edwards, Stuart D.; Wehman, Thomas C.; Parker, Theodore L.; Kucklick, Theodore; Skalnyi, Eugene V.; and Stein, Alan, 6,039,757, Cl. 623-1.000.

Stein, Bernd; Lehnert, Heinz; Zimmermann, Wilhelm; and Steinhauer, Heinz, to Dynamit Nobel Gmbh Explosivstoff-und Systemstechnik. Method and device for producing press-rolled pipes with inner wall thickenings at the ends. 6,038,901, Cl. 72-85.000.

Stein, John P.; and Hendrickson, J. Dean. Carrier for a trailer-hitch receiver with improved pin lock. 6,039,228, Cl. 224-532.000.

Steinbach, Andrew J.: *See—*
Debe, Mark K.; Haugen, Gregory M.; Steinbach, Andrew J.; Thomas, John H., III; and Ziegler, Raymond J., 6,040,077, Cl. 429-40.000.

Steinbacher, David M.: *See—*
Fox, Richard H.; Steinbacher, David M.; Olin, Wesley L.; Meyers, Vernon O.; and Zimmerle, William J., 6,039,158, Cl. 188-162.000.

Steiner, Karl V.: *See—*
Caron, James N.; Mehl, James B.; and Steiner, Karl V., 6,041,020, Cl. 367-149.000.

Steiner, Klaus; Gangkofner, Stefan; and Grunenwald, Jean-Marie, to Goedecke Aktiengesellschaft; and Cu Chemie Uetikon GmbH. Racemic separation of ketamine. 6,040,479, Cl. 564-304.000.

Steiner, Reinhard; and Graefe, Dieter, to Carl Zeiss Jena GmbH. Microscope system for the detection of emission distribution and process for operation of the same. 6,040,907, Cl. 356-311.000.

Steinetz, Bruce M.; and Kren, Lawrence A., to United States of America, National Aeronautics and Space Administration. Resilient braided rope seal. 6,039,325, Cl. 277-633.000.

Steinhauer, Heinz: *See—*
Stein, Bernd; Lehnert, Heinz; Zimmermann, Wilhelm; and Steinhauer, Heinz, 6,038,901, Cl. 72-85.000.

Steinhauser, Norbert J.: *See—*
Ossian, Kenneth C.; and Steinhauser, Norbert J., 6,039,890, Cl. 252-70.000.

Steinke, Jürgen: *See—*
Rees, Jochen; and Steinke, Jürgen, 6,040,988, Cl. 363-37.000.

Steinlechner, Siegbert, to Robert Bosch GmbH. Circuit arrangement for arithmetic combination of an analog signal with a digital value and method and circuit arrangement for determination of an angle. 6,041,336, Cl. 708-4.000.

Stengl, Reinhard: *See—*
Reisinger, Hans; Grüning, Ulrike; Wendt, Hermann; Stengl, Reinhard; Lehmann, Volker; Willer, Josef; Franosch, Martin; Schäfer, Herbert; Krautschneider, Wolfgang; Hofmann, Franz; and Böhm, Thomas, 6,040,995, Cl. 365-185.180.

Stenhouse, William L., to Steel Heddle Manufacturing Co. Reed assembly with angled dents. 6,039,088, Cl. 139-192.000.

Stenhouse, William L.: *See—*
Thompson, Robert G., III; and Stenhouse, William L., 6,039,087, Cl. 139-192.000.

Stephens, Roger D.; and Schmidmeister, Erwin, to Stephens, Roger D.; and Schidmeister, Erwin. Monitor cable caddy. 6,039,280, Cl. 242-388.600.

Stephens, William D.: *See—*
Harrod, Charles E.; and Stephens, William D., 6,039,819, Cl. 149-19.200.

Stephenson, Daniel Lee: *See—*
Anderson, David C.; and Stephenson, Daniel Lee, 6,041,155, Cl. 385-139.000.

Steris Corporation: *See—*
Seifert, Raymond C.; and Bradbury, John R., 6,039,724, Cl. 604-533.000.

Stern, Roger A.; Sullivan, Vincent N.; and Marion, Robert L., to Vesta Medical, Inc. Method and apparatus for endometrial ablation. 6,041,260, Cl. 607-98.000.

Sternal, Thorsten: *See—*
Bonny, Pierre; Kreutzig, Norbert; and Sternal, Thorsten, 6,038,769, Cl. 29-890.080.

Sterner, Mark H.: *See—*
Ehlers, Jeffrey D.; and Sterner, Mark H., 6,040,503, Cl. 800-313.000.

Stevens, Dirk: *See—*
Meiler, Reinhold; and Stevens, Dirk, 6,038,761, Cl. 29-605.000.

Stevens, Jeffrey C.: *See—*
Ramsey, Jens K.; Stevens, Jeffrey C.; Tubbs, Michael E.; and Stancil, Charles J., 6,041,401, Cl. 712-43.000.

Stevens, Vernon C., to Ohio State University, The. Method for treatment of antigenically modified polypeptides. 6,039,948, Cl. 424-184.100.

Stevenson, Joseph T.: *See—*
Schilling, Jan C.; Cornell, Jay L.; and Stevenson, Joseph T., 6,039,542, Cl. 416-233.000.

Stevenson, Mark D.; and Brady, Jerry L., to Atlantic Richfield Company. Oil and gas production with periodic gas injection. 6,039,116, Cl. 166-263.000.

Stewart, David John: *See—*
Inaba, Tadanobu; Fayz, Shirin; and Stewart, David John, 6,040,434, Cl. 536-23.000.

Stewart, Francis, to European Molecular Biology Laboratory (EMBL). Nucleic acid encoding site specific recombinase and nuclear receptor fusion protein. 6,040,430, Cl. 530-358.000.

Stewart, Lansing Joseph: *See—*
Kim, Hidong; and Stewart, Lansing Joseph, 6,039,804, Cl. 117-206.000.

St. George, Peter: *See—*
Symonds, Robert D.; Singer, Irek; St. George, Peter; and Gill, Robert Bradley, 6,039,245, Cl. 235-379.000.

Stickley, Keith A.: *See—*
Pennington, Donald R.; Stickley, Keith A.; and Reesby, Cyril F., 6,038,718, Cl. 5-618.000.

Stier, Peter. Tapered steel post. 6,039,298, Cl. 248-545.000.

Stiller, Martin: *See—*
Focke, Heinz; Häfker, Thomas; Stiller, Martin; and Schlenker, Michael, 6,038,832, Cl. 53-234.000.
Focke, Heinz; and Stiller, Martin, 6,038,836, Cl. 53-462.000.

Stirling Technology, Inc.: *See—*
Chagnot, Catherine J.; and Crum, Joseph Arden, 6,039,109, Cl. 165-8.000.

STMicroelectronics, Inc.: *See—*
Hodges, Robert Louis, 6,040,233, Cl. 438-427.000.
McClure, David C.; and Youssef, Tom, 6,041,000, Cl. 365-200.000.
Patel, Viren C., 6,040,617, Cl. 257-571.000.

STMicroelectronics S.A.: *See—*
Naura, David, 6,040,994, Cl. 365-185.180.

STMicroelectronics S.r.l.: *See—*
Frisina, Ferruccio; Bolognesi, Davide; and Magri', Angelo, 6,040,609, Cl. 257-391.000.
Pelagalli, Sergio; and Losi, Marco, 6,041,428, Cl. 714-734.000.
Pidutti, Albino; and Legnani, Marco Alessandro, 6,040,687, Cl. 323-316.000.

Stoebe, Timothy W.: *See—*
Eshelman, Lyn M.; and Stoebe, Timothy W., 6,040,131, Cl. 430-619.000.

Stoever, Harro: *See—*
Bangs, William E.; Dibenedetto, Joseph D.; Friedberg, Joyce L.; Giordano, Denise A.; Glover, Judy M.; Khoo, Chor San Heng; Ko, Sandy; MacNair, R. David C.; Noar, Scott R.; Randazzi, John J., Jr.; Stoever, Harro; and Ziegler, Paula J., 6,039,989, Cl. 426-106.000.

Stojanoff, Christo G.: *See—*
Mrosik, Jan Michael; Nagel, Joerg; and Stojanoff, Christo G., 6,040,898, Cl. 356-5.090.

Stokes, Mitchell O.: *See—*
Amos, David J.; and Stokes, Mitchell O., 6,038,861, Cl. 60-737.000.

Stoll, Kurt; Berger, Rolf; and Gebauer, Günter, to Festo AG & Co. Connecting means for two members in fluid conducting assembly. 6,039,358, Cl. 285-23.000.

Stoller Enterprises, Inc.: *See—*
Dean, Frank William, 6,040,273, Cl. 504-328.000.

Stoltz, Gregory E.: *See—*
Waters, Brian G.; Stoltz, Gregory E.; and Maldanis, Algert J., 6,039,164, Cl. 194-206.000.

Stomp, Anne-Marie; and Rajbhandari, Nirmala, to North Caroline State University. Genetically engineered duckweed. 6,040,498, Cl. 800-294.000.

Stone, Geoffrey C., to Xylan Corporation. Self-configuring ATM network. 6,041,057, Cl. 370-397.000.

Stone, Jeffrey Jay: *See—*
Davidson, Steven Frederic; Vollendorf, Kim David; DiCicco, Michael Frank; Collar, Stuart John; and Stone, Jeffrey Jay, 6,041,243, Cl. 455-575.000.

Stoner, George S.; and Schoonmaker, Peter M., to Northern Research and Engineering Corp. Inlet guide vane assembly. 6,039,534, Cl. 415-162.000.

Stoner, Stuart C.: *See—*
Clark, Stephen L.; Horchler, David C.; Stoner, Stuart C.; Pontius, Glenn J.; and Nailor, William K., III, 6,038,762, Cl. 29-739.000.

Stork R.M.S. B.V.: *See—*
Beijaard, Barend Jacobus Emmanuel; Jacobs, Thomas Gerardus Maria; and Tiggeloven, Leonardus Jozephus Antonius, 6,039,080, Cl. 138-115.000.

Storz, Karl, deceased (by Sybill Storz-Reling, executrix), to Karl Storz GmbH & Co. KG. Rectoscope with semi-reflective tube surface. 6,039,687, Cl. 600-135.000.

Storz-Reling, Sybill, executrix: *See—*
Storz, Karl, deceased, 6,039,687, Cl. 600-135.000.

Stott, Paul Edwin: *See—*
Friedman, Howard Stephen; and Stott, Paul Edwin, 6,039,895, Cl. 252-404.000.

Stowell, Davin: *See—*
Khovaylo, Modest; Puyot, Michael A.; Dow, James C.; Henderson, Scott; and Stowell, Davin, 6,040,572, Cl. 250-235.000.

Stoy, Vladimir A.: *See—*
Cooke, Randolph L.; and Stoy, Vladimir A., 6,040,493, Cl. 602-41.000.

Straayer, David H.: *See—*
Franz, Patrick J.; Biehl, Philip D.; Straayer, David H.; and Dodier, Robert H., 6,040,821, Cl. 345-159.000.

Strahilevitz, Meir. Extracorporeal affinity adsorption devices. 6,039,946, Cl. 424-140.100.

Strahl, Robert Charles. Physical endurance drink and method of preventing cramping caused by strenuous bodily activity. 6,039,987, Cl. 426-74.000.

Strähle, Roland, to Laengerer & Reich GmbH & Co. Heat store, especially latent heat store. 6,039,110, Cl. 165-10.000.

Strankman, Douglas R. Moving head gate feeding apparatus. 6,039,002, Cl. 119-57.100.

Stratagene: *See—*
Greener, Alan L.; and Jerpseth, Bruce D., 6,040,184, Cl. 435-461.000.

Straub, Kurt M.: *See—*
Paganini, Lisa M.; Casilio, Frank; Peters, Roy; Straub, Kurt M.; DeHondt, Rene C.; and Fry, Tova, 6,040,637, Cl. 307-10.100.

Streb, Holger: *See—*
Prade, Bernd; Schetter, Bernhard; and Streb, Holger, 6,038,864, Cl. 60-748.000.

Strian, Ernst: *See—*
Birkner, Stefan; Strian, Ernst; and Kreibiehl, Markus, 6,040,059, Cl. 428-469.000.

Strickland, Charles, to Alexander, Jerry; and Hofler, Sr., Kenneth L. Oil lift system. 6,039,544, Cl. 417-53.000.
Strömberg, Stefan Per Axel: *See*—
Gustafsson, Lars Erik; Persson, Gunnar Magnus Severus; and Strömberg, Stefan Per Axel, 6,038,913, Cl. 73-23.300.
Strömbom, Eva: *See*—
Kalentun, Pia; Buschka, Anette; Schmid, Andrea; and Strömbom, Eva, 6,040,494, Cl. 604-369.000.
Strong, Gary D.: *See*—
Rodgers, Kenneth W.; Strong, Gary D.; Christy, Michael C.; and Mason, Russell C., 6,039,091, Cl. 141-83.000.
Strother, Richard K.: *See*—
Hooper, James R.; Strother, Richard K.; Fish, John; Pawling, Paul G.; and Sauer, Gerald L., 6,040,397, Cl. 525-526.000.
Strotton, Carl N.: *See*—
Pooley, Michael B.; Strotton, Carl N.; and Wardle, David G., 6,038,868, Cl. 62-63.000.
Stroud, Brian: *See*—
Kennedy, Joe B.; Davyduke, Roland; Jackson, James G.; Hannebauer, James B.; Newnes, William R.; Stroud, Brian; and Sergeant, John, 6,039,097, Cl. 144-357.000.
Kennedy, Joe B.; Davyduke, Roland; Jackson, James G.; Hannebauer, James B.; Newnes, William R.; Stroud, Brian; and Sergeant, John, 6,039,098, Cl. 144-357.000.
Stroud, Toni S.: *See*—
Noe, Reginald J.; and Stroud, Toni S., 6,039,372, Cl. 294-10.000.
Strübin, Pierre, to Liaisons Electronique - Mecaniques Lem S.A. Electrical current supply device with incorporated electrical current sensor. 6,040,688, Cl. 323-368.000.
Struck, Sönke; and Holger, Ernst, to U.S. Philips Corporation. Delay device. 6,040,727, Cl. 327-277.000.
Stryker Corporation: *See*—
Keck, Peter C.; and Smart, John E., 6,040,431, Cl. 530-399.000.
Stuber, Richard L., to MCI Communications Corporation. Forecasting resource requirements for a group of removable media devices by measuring residency time and generating model. 6,041,367, Cl. 710-18.000.
Stuettler, Herbert M., to Leica Microsystems AG. Method and device for the recording and reproduction of stereoscopic video images. 6,040,852, Cl. 348-43.000.
Stuntz, Ross Maxwell; and Zaremba, Alexander Timofeevich, to Ford Global Technologies, Inc. Active engine speed pulsation damping. 6,039,028, Cl. 123-436.000.
Su, Ching-Piao: *See*—
Wu, Chung-Yu; and Su, Ching-Piao, 6,041,105, Cl. 379-93.050.
Su, Guan Hua: *See*—
Parker, Danny S.; Su, Guan Hua; and Hibbs, Bart D., 6,039,541, Cl. 416-223.00R.
Su, Ming-Chang, to Macronix International Co., Ltd. Internal arbiter for a repeater in a computer network. 6,041,061, Cl. 370-461.000.
Su, Su-Ying: *See*—
Liu, Meng-Chang; Lin, Jyh-Feng; Yen, Ming-Shu; Su, Su-Ying; Chiu, Fu-Ying; and Lin, Chien-Hung, 6,040,223, Cl. 438-303.000.
Subramanian, Kumar: *See*—
Allen, Michael P.; Ellsworth, Stoughton L.; Ensler, Lawrence M.; and Subramanian, Kumar, 6,039,868, Cl. 210-232.000.
Suenaga, Kiyoshi; Tomita, Yasuoki; and Fukuno, Hiroki, to Mitsubishi Heavy Industries, Ltd. Gas turbine blade. 6,039,531, Cl. 415-115.000.
Suetsugu, Junichi: *See*—
Hagiwara, Yoshihiro; Suetsugu, Junichi; Mizoguchi, Tadashi; Minemoto, Hitoshi; Takemoto, Hitoshi; Shima, Kazuo; and Yakushiji, Toru, 6,039,442, Cl. 347-89.000.
Suffi, Louis; and Ladd, Arnold M., to Reltec Corporation. Network interface device for line testing. 6,039,578, Cl. 439-54.000.
Suganuma, Takao: *See*—
Shimoi, Yoichi; Tamura, Hideo; Okazaki, Masaomi; and Suganuma, Takao, 6,039,879, Cl. 210-641.000.
Sugauchi, Kiminori; Hirata, Toshiaki; Nishiki, Kenya; Miyazaki, Satoshi; Mizuguchi, Keizo; and Fujino, Shuji, to Hitachi, Ltd. System management/network correspondence display method and system therefor. 6,041,349, Cl. 709-223.000.
Sugawa, Katsumi: *See*—
Yamato, Seiichi; Kamei, Noboru; Okuma, Kazuyoshi; Sugawa, Katsumi; Kadota, Hironori; and Sakata, Tomoyuki, 6,041,062, Cl. 370-465.000.
Sugawara, Akira; Hana, Yoshitake; Endo, Takayoshi; and Sugiyama, Osamu, to Dowa Mining Co., Ltd.; and Yazaki Corporation. Hard coated copper alloys. 6,040,067, Cl. 428-647.000.
Sugimoto, Hiroshi; Hagiya, Shigeo; Taketani, Noriaki; Yonemoto, Takaharu; and Yoshioka, Osamu, to Hitachi Cable, Ltd. Lead frame for LOC having a regulating lead to prevent variation in adhesive coverage. 6,040,620, Cl. 257-666.000.
Sugimoto, Kouji: *See*—
Yamamoto, Tomohiko; Tsumiyama, Tatsuo; and Sugimoto, Kouji, 6,040,418, Cl. 528-353.000.
Sugimoto, Masanori, to Shimano, In. Bicycle brake with link-adjusted brake shoes. 6,039,153, Cl. 188-24.220.
Sugimoto, Takashi; and Honaga, Kazuhiro, to Suzuki Motor Corporation. Four-wheel drive vehicle with free wheels. 6,039,138, Cl. 180-245.000.
Sugimoto, Tomohiko: *See*—
Takeda, Haruo; Tatsumi, Yukio; Fujitani, Ikuji; Shioda, Takuya; Yoshimi, Tomofumi; Sugimoto, Tomohiko; and Haeiwa, Kazuhisa, 6,041,082, Cl. 375-300.000.
Sugimura, Atsurou; and Tuno, Yoshihide, to Takigen Manufacturing Co. Ltd. Door locking handle assembly of pull-out and side-swinging lever-action type. 6,039,363, Cl. 292-202.000.
Sugino, Tsukasa: *See*—
Onishi, Masanori; Murata, Masanao; Nakai, Yutaka; Yasuda, Katsumi; Sugino, Tsukasa; Nakagawa, Susumu; and Miura, Kouji, 6,041,274, Cl. 701-26.000.
Sugita, Hiroaki; and Yamamoto, Hisashi, to Toyota Jidosha Kabushiki Kaisha. Lithium ion secondary cell solvent. 6,040,091, Cl. 429-324.000.
Sugita, Takehiro, to Sony Corporation. Radio communication system and method and mobile communication terminal device. 6,041,124, Cl. 380-270.000.
Sugita, Yukihiko: *See*—
Katagiri, Moriya; Sugita, Yukihiko; and Kitahara, Yoshiyuki, 6,039,476, Cl. 396-418.000.
Sugitani, Hiroshi: *See*—
Noguchi, Hiromichi; Sugitani, Hiroshi; Koizumi, Yutaka; Inamoto, Tadayoshi; Aono, Kiyomi; and Nakata, Yoshie, 6,040,002, Cl. 427-96.000.
Sugiura, Akio: *See*—
Konosu, Koji; Sugiura, Akio; and Motizuki, Kunihiro, 6,039,256, Cl. 235-462.430.
Sugiura, Susumu, to Canon Kabushiki Kaisha. Image processing apparatus. 6,041,144, Cl. 382-239.000.
Sugiyama, Ichiro: *See*—
Kushiya, Katsumi; Okumura, Daisuke; and Sugiyama, Ichiro, 6,040,521, Cl. 136-265.000.
Sugiyama, Koichi: *See*—
Nakayama, Kazuya; and Sugiyama, Koichi, 6,040,598, Cl. 257-329.000.
Sugiyama, Mitsuhiro: *See*—
Mera, Takeshi; Endo, Satoru; and Sugiyama, Mitsuhiro, 6,040,655, Cl. 313-409.000.
Sugiyama, Osamu: *See*—
Sugawara, Akira; Hana, Yoshitake; Endo, Takayoshi; and Sugiyama, Osamu, 6,040,067, Cl. 428-647.000.
Sugiyama, Yasunori: *See*—
Miwa, Minoru; Takeno, Akiyoshi; Koike, Toshihiro; Ako, Satoshi; and Sugiyama, Yasunori, 6,040,941, Cl. 359-443.000.
Sugizaki, Yoshiki: *See*—
Kusunoki, Akihiko; Kawamura, Naohisa; Sugizaki, Yoshiki; and Kuwahara, Akio, 6,039,971, Cl. 424-443.000.
Suguro, Akihiro, to Kyocera Corporation. Portable radio communication apparatus. 6,041,220, Cl. 455-90.000.
Suiter, Harold R., to United States of America, Navy. Afocal water-air lens with greatly reduced lateral color aberration. 6,039,445, Cl. 351-43.000.
Sukigara, Akihiko: *See*—
Kaneko, Masanori; and Sukigara, Akihiko, 6,040,670, Cl. 318-561.000.
Sullivan, Carl Edmond: *See*—
Komplin, Steven Robert; Murthy, Ashok; and Sullivan, Carl Edmond, 6,039,439, Cl. 347-65.000.
Sullivan, Colin E., to University of Sydney. Gas delivery mask. 6,039,044, Cl. 128-205.250.
Sullivan, Frederic Ballou-Viaux: *See*—
Burns, Clay Allen; Nielsen, Peter Madelaire; Sullivan, John Aloysius; and Sullivan, Frederic Ballou-Viaux, 6,039,329, Cl. 280-11.190.
Sullivan, John Aloysius: *See*—
Burns, Clay Allen; Nielsen, Peter Madelaire; Sullivan, John Aloysius; and Sullivan, Frederic Ballou-Viaux, 6,039,329, Cl. 280-11.190.
Sullivan, Joseph L.; Borschowa, Lawrence A.; and Nova, Richard C., to Physio-Control Manufacturing Corporation. H-bridge circuit for generating a high-energy biphasic waveform in an external defibrillator and further including a protective component that has both inductive and resistive properties. 6,041,254, Cl. 607-5.000.
Sullivan, Vincent N.: *See*—
Stern, Roger A.; Sullivan, Vincent N.; and Marion, Robert L., 6,041,260, Cl. 607-98.000.
Sullivan, William T. Truck bed enclosure attachment posts. 6,039,521, Cl. 410-118.000.
Sumikawa, Akihiro, to Fuji Xerox Co., Ltd. Display apparatus and method for displaying windows on a display. 6,040,817, Cl. 345-113.000.
Sumitomo Bakelite Co., Ltd.: *See*—
Miyamoto, Tetsuya; and Kawata, Masakazu, 6,039,896, Cl. 252-511.000.
Sumitomo Chemical Company Limited: *See*—
Kawamura, Akira; Hasegawa, Toshiyuki; and Tanikawa, Akira, 6,039,799, Cl. 106-287.200.
Mito, Nobuaki, 6,040,270, Cl. 504-128.000.
Yako, Yuko; Takahashi, Kenji; Takagaki, Hiroshi; and Fukui, Nobuhito, 6,040,112, Cl. 430-270.100.
Sumitomo Electric Industries, Ltd.: *See*—
Tanaka, Tsutomu, 6,039,605, Cl. 439-610.000.
Sumitomo Rubber Industries, Ltd.: *See*—
Tanaka, Hiroaki; Okido, Yoshiyuki; and Sano, Hideki, 6,039,910, Cl. 264-248.000.
Sumitomo Wiring Systems, Ltd.: *See*—
Inamori, Nobuya, 6,041,087, Cl. 375-348.000.
Tanaka, Tsutomu, 6,039,605, Cl. 439-610.000.
Wakata, Shigekazu; and Saijo, Eiji, 6,039,603, Cl. 439-587.000.
Sumiyoshi, Ken: *See*—
Takatori, Ken-Ichi; and Sumiyoshi, Ken, 6,040,889, Cl. 349-174.000.

Sumner, Terence Edward, to Motorola, Inc. Method and apparatus for reducing transmission time required to communicate a silent portion of a voice message. 6,041,227, Cl. 455-412.000.

Sun, Hsiang-Ning; and Vaughn, Stephen Neil, to Exxon Chemical Patents Inc. Use of alkaline earth metal containing small pore non-zeolitic molecular sieve catalysts in oxygenate conversion. 6,040,264, Cl. 502-214.000.

Sun Hydraulics Corp.: *See—*
Zaehe, Bernd, 6,039,070, Cl. 137-491.000.

Sun Microsystems, Inc,: *See—*
Schaffer, Daniel H., 6,041,363, Cl. 709-301.000.

Sun Microsystems, Inc.: *See—*
Pfister, Dennis M.; and Byrd, Charles M., 6,038,878, Cl. 62-259.200.
Pfister, Dennis M.; and Byrd, Charles M., 6,038,883, Cl. 62-480.000.
Watkins, John, 6,041,369, Cl. 710-35.000.
Yamauchi, Alan M., 6,041,430, Cl. 714-752.000.

Sun, Yu: *See—*
Kim, Unsoon; Liu, Yowjuang W.; and Sun, Yu, 6,040,597, Cl. 257-321.000.

Sunagawa, Takuya; Watanabe, Hiroshi; Ohshita, Ryuji; Fujimoto, Masahisa; Nohma, Toshiyuki; and Nishio, Koji, to Sanyo Electric Co., Ltd. Positive electrode material for use in non-aqueous electrolyte battery, process for preparing the same, and non-aqueous electrolyte battery. 6,040,090, Cl. 429-231.950.

Sung, Chien-Min. Brazed diamond tools by infiltration. 6,039,641, Cl. 451-540.000.

Sung, Chih-Ta Star; Mattela, Venkat; Afsar, Muhammad; Singh, Balraj; and Hung, Chih-Teng, to Siemens Aktiengesellschaft. Memory activation devices and methods. 6,040,998, Cl. 365-194.000.

Sung, Kuo-Tung, to Mosel Vitelic, Inc. Method (and device) for producing tunnel silicon oxynitride layer. 6,040,216, Cl. 438-257.000.

Sunonwealth Electric Machine Industry Co., Ltd.: *See—*
Horng, Alex, 6,040,649, Cl. 310-91.000.

Sunpower, Inc.: *See—*
van der Walt, Nicholas R.; and Unger, Reuven Z., 6,038,874, Cl. 62-198.000.

Suntory Limited: *See—*
Saitoh, Masayuki; Kitajima, Yasuo; Iwasawa, Norio; Miura, Kenju; Haruyama, Munetada; and Hashino, Junko, 6,040,335, Cl. 514-460.000.

Sunvold, Gregory D.; Tetrick, Mark A.; and Reinhart, Gregory A., to Iams Company, The. Composition and method for improving clinical signs in animals with renal disease. 6,039,952, Cl. 424-195.100.

Supima Holdings Inc.: *See—*
Muser, Paul, 6,039,396, Cl. 297-214.000.

Surma, Terrance: *See—*
Leyden, Roger; and Surma, Terrance, 6,039,498, Cl. 403-61.000.

Susoeff, Michael N.: *See—*
Raaijmakers, Ivo J.; Burkhart, Chris W.; Christensen, David; and Susoeff, Michael N., 6,039,074, Cl. 137-537.000.

Suunto Oyj: *See—*
Lähteenmäki, Ari, 6,039,446, Cl. 351-43.000.

Suzuki, Akio; Yamamoto, Ei; Kitamura, Toshiyuki; and Yoshida, Hiroyoshi, to Canon Kabushiki Kaisha. Operational control device and method for an image processing apparatus. 6,041,265, Cl. 700-84.000.

Suzuki, Akira: *See—*
Ichimura, Isao; Maeda, Fumisada; Yamamoto, Kenji; Ohsato, Kiyoshi; Watanabe, Toshio; and Suzuki, Akira, 6,041,031, Cl. 369-112.000.

Suzuki, Hirokazu, to Kabushiki Kaisha Toshiba. Mobile communication system with roaming function. 6,041,231, Cl. 455-422.000.

Suzuki, Kazuo: *See—*
Matsumoto, Kenji; Suzuki, Kazuo; and Haga, Muneo, 6,040,004, Cl. 427-185.000.

Suzuki, Keitaro: *See—*
Watanabe, Yoshitane; Suzuki, Keitaro; Koyama, Yoshinari; and Iijima, Motoko, 6,040,372, Cl. 524-413.000.

Suzuki, Mitsuru, to Whitaker Corporation, The. Female electrical terminal having overstress members. 6,039,615, Cl. 439-849.000.

Suzuki Motor Corporation: *See—*
Minami, Hiromasa; Igarashi, Masaru; and Chiku, Takahiro, 6,040,080, Cl. 429-96.000.
Sugimoto, Takashi; and Honaga, Kazuhiro, 6,039,138, Cl. 180-245.000.
Takahashi, Tomoki, 6,039,391, Cl. 296-218.000.

Suzuki, Osamu: *See—*
Shinya, Keigo; Kou, Wen Long; Suzuki, Osamu; and Tetsui, Shunichi, 6,040,556, Cl. 219-133.000.

Suzuki, Shigeru: *See—*
Okabe, Takanori; Ban, Takashi; Suzuki, Shigeru; and Hirose, Tatsuya, 6,039,264, Cl. 237-12.30R.

Suzuki, Tatsuya, to Olympus Optical Co., Ltd. Camera with remote-control photography and stroboscopic photography function. 6,041,185, Cl. 396-56.000.

Suzuki, Tatsuya: *See—*
Honda, Tsutomu; Matsumoto, Hiroyuki; and Suzuki, Tatsuya, 6,041,195, Cl. 396-429.000.

Suzuki, Toshitake: *See—*
Mori, Kenichi; Ito, Katsuya; Kotani, Tooru; Suzuki, Toshitake; and Sasaki, Yasushi, 6,039,444, Cl. 347-105.000.

Suzuki, Tsutomu; Sato, Shougo; and Okabe, Yasushi, to Brother Kogyo Kabushiki Kaisha. Process unit, photosensitive member cartridge, developer cartridge, and image forming apparatus. 6,041,203, Cl. 399-111.000.

Suzuki, Yukiyoshi: *See—*
Maekawa, Kazuteru; Suzuki, Yukiyoshi; and Yanagikubo, Takeshi, 6,040,824, Cl. 345-173.000.

Suzuki, Yuuichi: *See—*
Hara, Akira; Onuma, Hiraku; Oyaizu, Hideo; Suzuki, Yuuichi; and Gasparrini, C. Robert, 6,038,731, Cl. 15-256.510.

Svejkovsky, Ulrich: *See—*
Müller, Hubert; and Svejkovsky, Ulrich, 6,038,757, Cl. 29-527.700.

Swafford, M. David; and Fenton, James M., to Tektronix, Inc. Thin profile vertically oriented probe adapter. 6,040,701, Cl. 324-754.000.

Swagelok Company: *See—*
Coonce, Richard L.; Sharghi, Aaron Safula; and Slife, Douglas Alan, 6,039,319, Cl. 277-314.000.

Swank, Ronald; and Palaniappan, Sevugan, to Tetra Laval Holdings & Finance, SA. UV radiation and vapor-phase hydrogen peroxide sterilization packaging. 6,039,922, Cl. 422-24.000.

Swanson, Gary K.; and L'Heureux, Ernest R., Jr., to Cooper Instrument Corporation. Adjustable pocket thermometer sheath assembly. 6,039,177, Cl. 206-306.000.

Swartz, Conrad Melton; and Abrams, Richard Stephen, to Somatics, Inc. Single-use oral protector especially for use in electroconvulsive therapy. 6,039,046, Cl. 128-859.000.

Sweeney, Maura A.: *See—*
Gundlach, Kurt B.; Sanchez, Luis A.; Colt, Richard L.; and Sweeney, Maura A., 6,039,793, Cl. 106-31.280.

Sweeney, Patrick John: *See—*
Paterson, Robert Ian; and Sweeney, Patrick John, 6,039,125, Cl. 173-1.000.

Sweeney, Philip: *See—*
Park, Edward H.; and Sweeney, Philip, 6,039,054, Cl. 132-321.000.

Swick, James A.: *See—*
Boekeloo, Harry F.; and Swick, James A., 6,038,774, Cl. 30-276.000.

Swingle, Karl F.: *See—*
Tomai, Mark A.; Hammerbeck, David M.; and Swingle, Karl F., 6,039,969, Cl. 424-434.000.

Swoboda, Dean P.: *See—*
Patterson, Robert; Whitmore, Rebecca E; Bowers, Debra D.; and Swoboda, Dean P., 6,038,963, Cl. 99-287.000.

Sykaluk, Laura L., to Pierce Chemical Company. Small dialysis device. 6,039,871, Cl. 210-321.710.

Symensma, Kenneth L.: *See—*
McKnight, Darwin T.; Essex, John D.; and Symensma, Kenneth L., 6,038,732, Cl. 15-414.000.

Symes, Kenneth Charles; and Mistry, Kishor Kumar, to Allied Colloids Limited. Particulate polymeric materials and their production. 6,039,900, Cl. 264-4.100.

Symonds, Robert D.; Singer, Irek; St. George, Peter; and Gill, Robert Bradley, to Diebold, Incorporated. Financial transaction processing system and method. 6,039,245, Cl. 235-379.000.

Synaptic Pharmaceutical Corporation: *See—*
Jeon, Yoon T.; and Gluchowski, Charles, 6,040,451, Cl. 548-181.000.

Synkinetics, Inc.: *See—*
Bursal, Faruk, 6,039,672, Cl. 476-36.000.

Syntex (U.S.A.): *See—*
Batcho, Andrew David; Manchand, Percy Sarwood; and Uskokovic, Milan Radoje, 6,040,461, Cl. 549-332.000.

Syntex (U.S.A.) Inc.: *See—*
Dvorak, Charles A.; Wren, Douglas L.; Fisher, Lawrence E.; Axt, Steven D.; Humphreys, Eric R.; Arzeno, Humberto B.; Beard, Colin C.; Nguyen, Sam Linh; Han, Yeun-Kwei; Roberts, Christopher R.; Lund, Jan P.; and Fatheree, Paul R., 6,040,446, Cl. 544-276.000.

Synthes (U.S.A.): *See—*
Krettek, Christian; Könemann, Bernd; Perrier, Alexandre; and Senn, Peter, 6,039,742, Cl. 606-96.000.

Synthonics, Incorporated: *See—*
Binns, Bruce W.; Price, Rodney M.; Palm, Charles S.; and Weaver, Suzanne E., 6,041,140, Cl. 382-209.000.

Szadkowski, Andrzej P.: *See—*
Bassett, Michael L.; Batterton, Gregory W.; and Szadkowski, Andrzej P., 6,039,163, Cl. 192-110.00R.

Szalay, Jozsef: *See—*
Sigmar, Axel M.; Iseli, James W.; Szalay, Jozsef; Haide, Janos; and Feszthammer, Andras A., 6,041,283, Cl. 702-16.000.

Szczepanski, Gerald; and Forsyth, John, to New Venture Gear, Inc. Shift fork/gate assembly. 6,038,938, Cl. 74-473.240.

Szekely, Alex S., to Plastek Group, The. Rotary dispenser. 6,039,483, Cl. 401-50.000.

Szewczykowski, Jerzy. Method for identifying counterfeit negotiable instruments. 6,039,249, Cl. 235-379.000.

Szot, Krzysztof; Speier, Wolfgang; and Herion, Jörg, to Forschungszentrum Jülich GmbH. Perovskite type ABO_3 with surface layer. 6,040,070, Cl. 428-700.000.

Szott, Michael J.: *See—*
Mockenhaupt, Martin; and Szott, Michael J., 6,039,323, Cl. 277-593.000.

Szum, David M.: *See—*
Murphy, Edward J.; Classey, Jeffrey; and Szum, David M., 6,040,357, Cl. 523-160.000.

Tabata, Yoshio: *See—*
Takashimizu, Yoshihiro; and Tabata, Yoshio, 6,040,923, Cl. 358-498.000.

Tachi-S Co., Ltd.: *See—*
Nemoto, Akira, 6,039,402, Cl. 297-411.340.

Tachibana, Hiroaki: *See*—
Okamoto, Hiroo; Hosokawa, Kyoichi; Owashi, Hitoaki; Tachibana, Hiroaki; and Noguchi, Takaharu, 6,041,161, Cl. 386-112.000.
Tachihara, Hiroyuki; Inoue, Hidemichi; and Endo, Hiroshi, to Harada Industry Co., Ltd. Beam steering antenna unit. 6,040,799, Cl. 342-357.060.
Tadahiro Ohmi: *See*—
Ohmi, Tadahiro; and Nitta, Takahisa, 6,039,814, Cl. 134-1.000.
Taguchi, Katsuhisa: *See*—
Kato, Kiichiro; Kondoh, Takeshi; Taguchi, Katsuhisa; and Takahashi, Kazuhiro, 6,040,048, Cl. 428-345.000.
Taguchi, Yoshio: *See*—
Satoh, Hiroki; Taguchi, Yoshio; and Shoyama, Noriko, 6,040,035, Cl. 428-195.000.
Tahara, Katsumi: *See*—
Yagasaki, Yoichi; and Tahara, Katsumi, 6,041,160, Cl. 386-94.000.
Tailhan-Lomont, Catherine; Erdelmeier, Irène; Moutet, Marc; Chaudiere, Jean; and Yadan, Jean-Claude, to Oxis International S.A. Aromatic diselenides and selenosulfides, their preparation and their uses, more particularly their therapeutical use. 6,040,328, Cl. 514-398.000.
Tain, Alexander C., to Advanced Micro Devices, Inc. Integrated circuit package verification. 6,041,269, Cl. 700-121.000.
Taiwan Semiconductor Manufacturing Company: *See*—
Chen, Chao-Cheng; Huang, Ming-Hsin; Tao, Hun-Jan; and Tsai, Chia-Shiung, 6,040,248, Cl. 438-725.000.
Liu, Meng-Chang; Lin, Jyh-Feng; Yen, Ming-Shu; Su, Su-Ying; Chiu, Fu-Ying; and Lin, Chien-Hung, 6,040,223, Cl. 438-303.000.
Wuu, Shou-Gwo; Chen, Lung; Yaung, Dun-Nian; and Lin, Yi-Miaw, 6,040,227, Cl. 438-382.000.
Taiwan Semiconductor Manufacturing Co., Ltd: *See*—
Hsiao, Yi Li, 6,040,585, Cl. 250-559.400.
Yang, Chie-Ming; Wang, Jih-Hwa; and Lin, Yen-Yi, 6,040,238, Cl. 438-592.000.
Tajik, Abdul Jamil: *See*—
Seward, James Bernard; and Tajik, Abdul Jamil, 6,039,693, Cl. 600-459.000.
Tajima, Satoko: *See*—
Ueda, Makoto; Shiga, Shigenori; Tajima, Satoko; and Morishita, Hideki, 6,041,091, Cl. 376-327.000.
Tak, Sung Woo: *See*—
Park, Chang Soon; Kim, Tae Geun; and Tak, Sung Woo, 6,039,248, Cl. 235-379.000.
Takada, Kazuyuki: *See*—
Isomura, Yoshinori; Yasohara, Masahiro; and Takada, Kazuyuki, 6,040,673, Cl. 318-615.000.
Takagaki, Hiroshi: *See*—
Yako, Yuko; Takahashi, Kenji; Takagaki, Hiroshi; and Fukui, Nobuhito, 6,040,112, Cl. 430-270.100.
Takagi, Shinpei: *See*—
Takahashi, Sakon; Takagi, Shinpei; Mizutani, Noriyuki; Oya, Yasuhiro; and Ishida, Haruhide, 6,040,102, Cl. 430-108.000.
Takagi, Takahiro: *See*—
Tokita, Yoshiaki; and Takagi, Takahiro, 6,040,024, Cl. 428-35.200.
Takahashi, Hideki, to Mitsubishi Denki Kabushiki Kaisha. Insulated trench semiconductor device with particular layer structure. 6,040,599, Cl. 257-330.000.
Takahashi, Kazuaki: *See*—
Minami, Itsuji; and Takahashi, Kazuaki, 6,040,612, Cl. 257-432.000.
Takahashi, Kazuhiro; Kobayashi, Toshitake; Takemoto, Masataka; Matano, Takashi; and Ono, Haruo, to Dai Nippon Printing Co., Ltd. Decorative material having abrasion resistance. 6,040,044, Cl. 428-323.000.
Takahashi, Kazuhiro, to Canon Kabushiki Kaisha. Projection exposure apparatus and device manufacturing method. 6,040,894, Cl. 355-53.000.
Takahashi, Kazuhiro: *See*—
Kato, Kiichiro; Kondoh, Takeshi; Taguchi, Katsuhisa; and Takahashi, Kazuhiro, 6,040,048, Cl. 428-345.000.
Takahashi, Kazuki: *See*—
Kobayashi, Hiromi; Nishida, Hideo; Miura, Haruo; Eino, Takashi; and Takahashi, Kazuki, 6,039,535, Cl. 415-172.100.
Takahashi, Kazuya: *See*—
Kurata, Tomoyuki; Kumano, Youichi; and Takahashi, Kazuya, 6,039,405, Cl. 301-43.000.
Takahashi, Ken: *See*—
Yamamoto, Hiroki; Naito, Takashi; Namekawa, Takashi; Takahashi, Ken; Watanabe, Masahiro; and Takeo, Noriyuki, 6,040,029, Cl. 428-64.100.
Takahashi, Kenji: *See*—
Yako, Yuko; Takahashi, Kenji; Takagaki, Hiroshi; and Fukui, Nobuhito, 6,040,112, Cl. 430-270.100.
Takahashi, Masanori: *See*—
Hiraoka, Noriyoshi; and Takahashi, Masanori, 6,039,618, Cl. 440-89.000.
Takahashi, Norio: *See*—
Kuroda, Tetsuo; Miyasaka, Matsuho; and Takahashi, Norio, 6,038,882, Cl. 62-476.000.
Takahashi, Sakon; Takagi, Shinpei; Mizutani, Noriyuki; Oya, Yasuhiro; and Ishida, Haruhide, to Fuji Xerox Co., Ltd. Electrostatic latent image developer and image forming method. 6,040,102, Cl. 430-108.000.
Takahashi, Tatsuya, to Sanyo Electric Co., Ltd. Image sensing apparatus and method for discharging dark current charge stored therein. 6,040,859, Cl. 348-243.000.
Takahashi, Tomoki, to Suzuki Motor Corporation. Hatch roof attaching construction for a T-bar roof car. 6,039,391, Cl. 296-218.000.
Takahashi, Tomomi: *See*—
Odashima, Hisao; Takahashi, Tomomi; and Shimizu, Toshiyuki, 6,040,054, Cl. 428-413.000.
Takahashi, Toshiki: *See*—
Hasshi, Suehiro; and Takahashi, Toshiki, 6,039,386, Cl. 296-185.000.
Takahashi, Yasuhiro; and Fukui, Wataru, to Mitsubishi Denki Kabushiki Kaisha. Combustion state detecting apparatus for an internal-combustion engine. 6,040,698, Cl. 324-399.000.
Takai, Hideyuki: *See*—
Tanaka, Masato; Takai, Hideyuki; and Nakata, Kouichi, 6,040,100, Cl. 430-72.000.
Takai, Hisashi: *See*—
Tsuji, Tomoko; Takai, Hisashi; and Goda, Hiroki, 6,039,555, Cl. 425-362.000.
Takaishi, Yoshihiro, to NEC Corporation. Method of manufacturing semiconductor device including memory cell having transistor. 6,040,215, Cl. 438-253.000.
Takamatsu, Risuke; and Kimura, Seiichi, to Robert Bosch GmbH. Gas supply valve for gas-powered vehicle. 6,039,300, Cl. 251-129.120.
Takamori, Hiroki; and Morisige, Takayuki, to Matsushita Electric Industrial Co., Ltd. Device for synchronizing data processing. 6,041,067, Cl. 370-514.000.
Takanashi, Hidehiko: *See*—
Yasuda, Akio; Nito, Keiichi; Matsui, Eriko; Takanashi, Hidehiko; and Bao, Yang Ying, 6,040,884, Cl. 349-129.000.
Takano, Syoichi: *See*—
Ogawa, Kazuyuki; Tanaka, Kazuya; Nagata, Kinya; and Takano, Syoichi, 6,040,426, Cl. 530-350.000.
Takasago International Corporation: *See*—
Miyano, Sotaro; Hattori, Tetsutaro; Uesugi, Osamu; Tamai, Yasufumi; and Sayo, Noboru, 6,040,465, Cl. 549-510.000.
Takashimizu, Yoshihiro; and Tabata, Yoshio, to Fujitsu Limited. Transfer control apparatus for optical image reading apparatus. 6,040,923, Cl. 358-498.000.
Takasu, Hiroaki: *See*—
Hayashi, Yutaka; Kamiya, Masaaki; Kojima, Yoshikazu; and Takasu, Hiroaki, 6,040,200, Cl. 438-30.000.
Takata, Hidekazu: *See*—
Miyamoto, Yasuo; and Takata, Hidekazu, 6,041,015, Cl. 365-236.000.
Takatori, Ken-Ichi; and Sumiyoshi, Ken, to NEC Corporation. Liquid crystal display with continuous grayscale, wide viewing angle, and exceptional shock resistance. 6,040,889, Cl. 349-174.000.
Takaya, Toshihiko: *See*—
Ishiguro, Yasuyuki; Sanada, Yoshiaki; Takaya, Toshihiko; Kimura, Takahiko; Kaneshige, Masatoshi; and Yamamoto, Shuuhei, 6,041,207, Cl. 399-275.000.
Takayama, Kuniharu: *See*—
Koshiba, Takeshi; Matsuoka, Masahiro; and Takayama, Kuniharu, 6,040,840, Cl. 345-441.000.
Takeda, Arihiro: *See*—
Koike, Yoshio; Ohmuro, Katsufumi; Sasaki, Takahiro; and Takeda, Arihiro, 6,040,885, Cl. 349-129.000.
Takeda Chemical Industries, Inc.: *See*—
Nishikawa, Kohei; Shibouta, Yumiko; and Kubo, Keiji, 6,040,324, Cl. 514-381.000.
Takeda, Haruo; Tatsumi, Yukio; Fujitani, Ikuji; Shioda, Takuya; Yoshimi, Tomofumi; Sugimoto, Tomohiko; and Haeiwa, Kazuhisa, to NEC Corporation; and Nippon Hoso Kyokai. Digital amplitude modulation amplifier and television broadcasting machine. 6,041,082, Cl. 375-300.000.
Takeda, Sunao; Kaneko, Yasushi; Tokizawa, Minoru; Eto, Hiromichi; Ishida, Kazuya; Maebashi, Kazunori; Matsumoto, Masaru; Asaoka, Takemitsu; and Sato, Susumu, to SSP Co., Ltd. Triazole derivative or salt thereof preparation process thereof, and pharmaceutical containing said compound as an effective ingredient. 6,040,325, Cl. 514-383.000.
Takehara, Isamu: *See*—
Kawawada, Naoki; Namiki, Hiroaki; Takehara, Isamu; Iwaki, Tadao; Ishida, Takashi; Hayashizaki, Shinichi; Shimaguchi, Hirotada; and Konno, Katsushige, 6,040,648, Cl. 310-90.000.
Takehara, Nobuyuki; Shimoda, Kazuhisa; and Morishita, Yasuo, to Rhythm Corporation. Method of manufacturing tie rod bar for steering linkage of motor vehicle. 6,038,771, Cl. 29-897.200.
Takemasa, Takao: *See*—
Damme, Eric; Gilson, Jean-Marc; Leempoel, Patrick; Lebecq, Fabrice; and Takemasa, Takao, 6,040,412, Cl. 528-34.000.
Takemoto, Hitoshi: *See*—
Hagiwara, Yoshihiro; Suetsugu, Junichi; Mizoguchi, Tadashi; Minemoto, Hitoshi; Takemoto, Hitoshi; Shima, Kazuo; and Yakushiji, Toru, 6,039,442, Cl. 347-89.000.
Takemoto, Masami: *See*—
Inoue, Hideya; and Takemoto, Masami, 6,041,184, Cl. 396-51.000.
Takemoto, Masataka: *See*—
Takahashi, Kazuhiro; Kobayashi, Toshitake; Takemoto, Masataka; Matano, Takashi; and Ono, Haruo, 6,040,044, Cl. 428-323.000.
Takemoto, Yasunori: *See*—
Monoi, Takashi; Yamamoto, Masakazu; Torigoe, Hidenobu; and Takemoto, Yasunori, 6,040,399, Cl. 526-106.000.
Takenaka, Mitsuhiko: *See*—
Fukushima, Hirotaka; and Takenaka, Mitsuhiko, 6,039,651, Cl. 464-98.000.
Takeno, Akiyoshi: *See*—
Miwa, Minoru; Takeno, Akiyoshi; Koike, Toshihiro; Ako, Satoshi; and Sugiyama, Yasunori, 6,040,941, Cl. 359-443.000.

Takenouchi, Kenji; Hamamoto, Tomoki; and Noguchi, Toshitada, to Yamasa Corporation. Process for preparing sugar nucleotide. 6,040,158, Cl. 435-89.000.

Takeo, Noriyuki: *See*—
Yamamoto, Hiroki; Naito, Takashi; Namekawa, Takashi; Takahashi, Ken; Watanabe, Masahiro; and Takeo, Noriyuki, 6,040,029, Cl. 428-64.100.

Takeshita, Naoki; Kusano, Manabu; Sagawa, Fumihiko; and Nakagawa, Taizo, to Alps Electric Co., Ltd. Flexible substrate. 6,040,529, Cl. 174-254.000.

Taketani, Noriaki: *See*—
Sugimoto, Hiroshi; Hagiya, Shigeo; Taketani, Noriaki; Yonemoto, Takaharu; and Yoshioka, Osamu, 6,040,620, Cl. 257-666.000.

Takeuchi, Haruyuki, to Murata Manufacturing Co., Ltd. Protection device for communication. 6,040,972, Cl. 361-119.000.

Takeuchi, Yoshie: *See*—
Narita, Keishi; Ishida, Chika; Takeuchi, Yoshie; Ohto, Chikara; Ohnuma, Shinichi; and Nishino, Tokuzo, 6,040,165, Cl. 435-193.000.

Takeuchi, Yoshiharu; Aburaya, Kiyoji; Yasu, Toshiharu; Tsubokawa, Masahiro; Sakai, Manabu; Aoshika, Shoji; and Narita, Tsutayoshi, to Matsushita Electric Industrial Co., Ltd. Gear pump for use in an electrically-operated sealed compressor. 6,039,551, Cl. 418-88.000.

Taki, Keishi; and Yanagi, Yutaka, to Kabushiki Kaisha Toshiba. TIG welding method and welding apparatus. 6,040,545, Cl. 219-75.000.

Takigen Manufacturing Co. Ltd.: *See*—
Sugimura, Atsurou; and Tuno, Yoshihide, 6,039,363, Cl. 292-202.000.

Takiguchi, Masahiro, to Jatco Corporation. Automatic transmission upshift control apparatus. 6,041,275, Cl. 701-55.000.

Takimoto, Minoru, to Fujitsu Limited. Network management system based upon managed objects. 6,041,350, Cl. 709-223.000.

Takubo, Yoneharu, to Matsushita Electric Industrial Co., Ltd. Active matrix liquid crystal display device and a method for driving the same. 6,040,813, Cl. 345-92.000.

Talaski, Edward J.: *See*—
Ley, Wayne A.; Mroczka, David E.; and Talaski, Edward J., 6,039,548, Cl. 417-313.000.

Talley, David B.: *See*—
Cech, Leonard S.; Sewell, Michael R.; Gillis, Edward J.; and Talley, David B., 6,039,345, Cl. 280-735.000.

Talley, Laroul J.; Yurek, Theodore F.; Ziegler, Douglas D.; and Robinson, Ross G., to Babcock & Wilcox Company, The. Intrados induction heating for tight radius rotary draw bend. 6,038,902, Cl. 72-128.000.

Tam, Herrick: *See*—
Chou, Marilyn M.; Tam, Herrick; Yu, King J. J.; and Yu, Ken T., 6,039,565, Cl. 433-29.000.

Tamagaki, Akira; Shimazawa, Yoichi; Matsuda, Hideo; and Yoshiura, Syoichiro, to Sharp Kabushiki Kaisha. Color image forming apparatus. 6,040,924, Cl. 358-523.000.

Tamai, Yasufumi: *See*—
Miyano, Sotaro; Hattori, Tetsutaro; Uesugi, Osamu; Tamai, Yasufumi; and Sayo, Noboru, 6,040,465, Cl. 549-510.000.

Tamari, Yehuda. Inline extracorporeal reservoir and pressure isolator. 6,039,078, Cl. 138-30.000.

Tamura, Akihiro; Sakaue, Shigeo; and Hamasaki, Takeshi, to Matsushita Electric Industrial Co., Ltd. Imaging apparatus for supplying images with rich gradation across the entire luminance range for all subject types. 6,040,860, Cl. 348-252.000.

Tamura, Hideo: *See*—
Shimoi, Yoichi; Tamura, Hideo; Okazaki, Masaomi; and Suganuma, Takao, 6,039,879, Cl. 210-641.000.

Tan, Leng Leng: *See*—
Waddington, William H.; Tan, Leng Leng; and Grewell, Patricia, 6,041,384, Cl. 710-200.000.

Tan, Lushi: *See*—
Pierce, Michael E.; Chen, Cheng Y.; Choudhury, Anusuya; Radesca, Lilian A.; Tan, Lushi; and Zhao, Dalian, 6,040,480, Cl. 564-390.000.

Tan, Manuel L.: *See*—
Chung, Kenny; Keeler, Tracy N.; and Tan, Manuel L., 6,039,960, Cl. 424-401.000.

Tan, Yew-Koon: *See*—
Ozcelik, Taner; Gadre, Shirish; and Tan, Yew-Koon, 6,041,400, Cl. 712-35.000.

Tanaka, Atsushi: *See*—
Yoshimura, Yuichiro; Tanaka, Atsushi; Yanagisawa, Ryozo; Kobayashi, Katsuyuki; and Sato, Hajime, 6,041,284, Cl. 702-56.000.

Tanaka Chemical Corporation: *See*—
Junichi, Imaizumi; Yuri, Kawasaki; Tetsushi, Makino; and Toyoshi, Iida, 6,040,007, Cl. 427-215.000.

Tanaka, Hiroaki; Okido, Yoshiyuki; and Sano, Hideki, to Sumitomo Rubber Industries, Ltd. Golf ball and manufacturing method of golf ball core. 6,039,910, Cl. 264-248.000.

Tanaka, Hiroaki; Sasaki, Yutaka; and Hashimoto, Takuya, to Murata Manufacturing Co., Ltd. Unbalanced-to-balanced converter. 6,040,745, Cl. 333-26.000.

Tanaka, Junichi; Miyoshi, Kunio; and Yamashita, Sensuke, to Tanaka, Junichi; Miyoshi, Kunio; and Yamashita, Sensuke. Catheter. 6,039,723, Cl. 604-532.000.

Tanaka, Kazuya: *See*—
Ogawa, Kazuyuki; Tanaka, Kazuya; Nagata, Kinya; and Takano, Syoichi, 6,040,426, Cl. 530-350.000.

Tanaka, Masahiro: *See*—
Hayashi, Motohiko; and Tanaka, Masahiro, 6,040,921, Cl. 358-434.000.

Tanaka, Masakazu: *See*—
Arimori, Susumu; Seko, Masahiro; Tanaka, Masakazu; Monden, Noriko; and Yokota, Hideyuki, 6,040,415, Cl. 528-71.000.

Tanaka, Masanobu; and Imanaka, Hideyuki, to Exedy Corporation. Twin-clutch device. 6,039,161, Cl. 192-70.180.

Tanaka, Masato; Takai, Hideyuki; and Nakata, Kouichi, to Canon Kabushiki Kaisha. Electrophotographic photosensitive member, process cartridge and electrophotographic apparatus. 6,040,100, Cl. 430-72.000.

Tanaka, Shigeaki: *See*—
Ohmi, Tadahiro; Yamaji, Michio; Shinohara, Tsutomu; Itoi, Shigeru; Hirao, Keiji; Kawano, Yuji; Tanaka, Shigeaki; Yokoyama, Kosuke; Morokoshi, Hiroshi; and Ikeda, Nobukazu, 6,039,360, Cl. 285-61.000.

Tanaka, Sumio: *See*—
Atsumi, Shigeru; and Tanaka, Sumio, 6,041,014, Cl. 365-230.060.

Tanaka, Tetsuya; Tsuzuki, Koichi; Nishijima, Noriyo; Handa, Fumitaka; and Nakadaira, Shiro, to Hitachi, Ltd. Fluidized bed filtering apparatus. 6,039,866, Cl. 210-136.000.

Tanaka, Toshizumi: *See*—
Sakamoto, Toshio; Tanaka, Toshizumi; Itoi, Hiromu; and Yoshihara, Masatoshi, 6,039,695, Cl. 600-459.000.

Tanaka, Tsutomu, to Harness Systems Technologies Research, Ltd.; Sumitomo Wiring Systems, Ltd.; and Sumitomo Electric Industries, Ltd. Shield connector with enhanced insulation of a shield shell. 6,039,605, Cl. 439-610.000.

Tanaka, Tsutomu; Kelkar, Mukul; Fairbairn, Kevin; Ponnekanti, Hari; and Cheung, David, to Applied Materials, Inc. Apparatus and methods for upgraded substrate processing system with microwave plasma source. 6,039,834, Cl. 156-345.000.

Tandem Computers Incorporated: *See*—
Skarpelos, Michael J.; van der Linden, Robbert; Carley, William J.; Lyon, James M.; and McCline, Matthew C., 6,041,420, Cl. 714-7.000.

Tang, Li-Juan: *See*—
Mehra, Dev K.; Ramireddy, Chittamuru; Tang, Li-Juan; and Porter, Stuart C., 6,039,976, Cl. 424-480.000.

Tang, Ping-Wah; Lussier, Barbara B.; and Cowan, Stanley W., to Eastman Kodak Company. Photographic yellow dye-forming couplers. 6,040,126, Cl. 430-557.000.

Tanghe, Steven J., to International Business Machines Corporation. High speed write driver for magnetic inductive write head using a half-switched H-driver. 6,040,954, Cl. 360-68.000.

Taniguchi, Hideyuki: *See*—
Matsushita, Masanao; and Taniguchi, Hideyuki, 6,040,120, Cl. 430-347.000.

Taniguchi, Kazuo: *See*—
Yamaguchi, Yuji; Yoshimori, Masaharu; Ozawa, Hiroyuki; Iida, Ryohei; and Taniguchi, Kazuo, 6,040,844, Cl. 345-518.000.

Tanikawa, Akira: *See*—
Kawamura, Akira; Hasegawa, Toshiyuki; and Tanikawa, Akira, 6,039,799, Cl. 106-287.200.

Tanoue, Katsumi, to NEC Corporation. Channel assignment method in mobile communications system. 6,041,238, Cl. 455-452.000.

Tao, Hun-Jan: *See*—
Chen, Chao-Cheng; Huang, Ming-Hsin; Tao, Hun-Jan; and Tsai, Chia-Shiung, 6,040,248, Cl. 438-725.000.

Tao, Ning, to Jarvis Walker Pty. Ltd. Spinning reel for fishing. 6,039,278, Cl. 242-246.000.

Taomo, Toshio; and Song, Wang Yan, to Kioritz Corporation. Power cutter and centrifugal clutch for a power cutter. 6,039,037, Cl. 125-13.010.

Targor GmbH: *See*—
Riedel, Michael; Weller, Thomas; Jacobs, Alexandra; Herrmann, Wolfgang Anton; and Morawietz, Markus, 6,040,469, Cl. 556-53.000.

Tarng, Guang-Der; and Chang, Lung-Tsai, to Rechi Precision Co., Ltd. Volute compressor. 6,039,549, Cl. 418-55.500.

Tarr, Phillip I.; Bilge, Sima S.; Besser, Thomas E.; and Vary, James C., Jr., to Children's Hospital and Medical Center; University of Washington; and University Research Foundation. *Escherichia coli* O157:H7 epithelial adhesion and vaccine. 6,040,421, Cl. 530-300.000.

Tarumi, Yasuo: *See*—
Fukuda, Kenichi; and Tarumi, Yasuo, 6,040,400, Cl. 526-126.000.

Tashiro, Hideaki: *See*—
Ota, Toshiyuki; Sano, Kimiyasu; Tashiro, Hideaki; and Sato, Hozumi, 6,040,117, Cl. 430-311.000.

Tashiro, Kouji: *See*—
Hosokoshiyama, Hiroshi; Yoneyama, Masashi; Busujima, Makoto; Tokuda, Hiroaki; Osuga, Naohito; and Tashiro, Kouji, 6,039,204, Cl. 220-623.000.

Tassily, Eric: *See*—
Laporte, Jean-Jacques; Tassily, Eric; and Muttin, Frédéric, 6,039,349, Cl. 280-748.000.

Tate, Bonnie F.: *See*—
Dow, Robert L.; and Tate, Bonnie F., 6,040,310, Cl. 514-258.000.

Tatsumi, Yukio: *See*—
Takeda, Haruo; Tatsumi, Yukio; Fujitani, Ikuji; Shioda, Takuya; Yoshimi, Tomofumi; Sugimoto, Tomohiko; and Haeiwa, Kazuhisa, 6,041,082, Cl. 375-300.000.

Taur, Yuan: *See*—
Boyd, Diane C.; Burns, Stuart M.; Hanafi, Hussein I.; Taur, Yuan; and Wille, William C., 6,040,214, Cl. 438-244.000.

Taveras, Arthur G.; and Njoroge, George F., to Schering Corporation. Compounds useful for inhibition of farnesyl protein transferase. 6,040,305, Cl. 514-232.800.
Taverna, Claudio: *See*—
Gorgi, Claudio; and Taverna, Claudio, 6,039,398, Cl. 297-354.100.
Tayebati, Parviz, to CoreTek, Inc. Electro-optically tunable external cavity mirror for a narrow linewidth semiconductor laser. 6,041,071, Cl. 372-64.000.
Taylor, Junius E.; and Acker, Loren C., to Engineering & Research Associates, Inc. Apparatus and method for determining the extent of ablation. 6,039,731, Cl. 606-34.000.
Taylor, Michael A. Underwater fishing line cutter. 6,038,807, Cl. 43-17.200.
Tazawa, Rikako: *See*—
Mine, Katsutoshi; Mitani, Osamu; Nakayoshi, Kazumi; and Tazawa, Rikako, 6,039,831, Cl. 156-272.600.
Mine, Katsutoshi; Mitani, Osamu; Nakayoshi, Kazumi; and Tazawa, Rikako, 6,040,362, Cl. 523-212.000.
TDK Corporation: *See*—
Kanazawa, Hiromichi; Ueda, Kunihiro; Yanagiuchi, Katsuaki; Ikarashi, Tsunehiko; and Kohno, Masahide, 6,040,052, Cl. 428-408.000.
Kanazawa, Kiyosumi; and Nakagawa, Yoshiro, 6,040,962, Cl. 360-113.000.
Kobayashi, Kanji; and Yamaguchi, Masao, 6,040,959, Cl. 360-103.000.
Morooka, Hisao; Miura, Takamitsu; Yamada, Hiroshi; Kurihara, Katsuki; Matsuse, Mitsutaka; and Arai, Yasuyuki, 6,040,520, Cl. 136-245.000.
Okada, Kesao; and Kurose, Shigeo, 6,040,034, Cl. 428-143.000.
Terunuma, Koichi; and Kamijima, Akifumi, 6,040,965, Cl. 360-122.000.
Utsunomiya, Hajime; Kato, Tatsuya; and Inoue, Hiroyasu, 6,040,030, Cl. 428-64.100.
Tecre Company, Inc.: *See*—
Braunberger, Benjamin A., 6,038,944, Cl. 79-4.000.
Tedesco, Daniel E.: *See*—
Walker, Jay S.; Case, T. Scott; Hartmann, Tracy; and Tedesco, Daniel E., 6,041,308, Cl. 705-14.000.
Tee, M. Richard, to Moore U.S.A. Inc. C-fold mailer/intermediate with certified return receipt. 6,039,242, Cl. 229-92.100.
Teh Yor Industrial Co., Ltd.: *See*—
Huang, Chung-Chen, 6,039,103, Cl. 156-511.000.
Teijin Limited: *See*—
Ootuka, Minoru; Hiraoka, Hirokazu; Shimadu, Toru; and Noda, Masayuki, 6,040,252, Cl. 442-169.000.
Teisner, Borge: *See*—
Madsen, Ole Dragsbaek; Michelsen, Birgitte Koch; Petersen, Jacob Steen; Roep, Bart O.; and Teisner, Borge, 6,040,134, Cl. 435-4.000.
Tekmar Company: *See*—
Lewis, Edmund T.; and Green, Thomas B., 6,040,186, Cl. 436-53.000.
Tektronix, Inc.: *See*—
Denton, Claude; Kirkpatrick, Donald C.; and Peters, Samuel J., 6,041,043, Cl. 370-254.000.
Swafford, M. David; and Fenton, James M., 6,040,701, Cl. 324-754.000.
Titterington, Donald R.; and Banning, Jeffery H., 6,039,794, Cl. 106-31.290.
Telair International GmbH: *See*—
Huber, Thomas; and Dürrwaechter, Martin, 6,039,288, Cl. 244-118.100.
TelCom Semiconductor, Inc.: *See*—
Huynh, Quoi V.; Ngo, Sang T.; Judkins, Joseph James, III; and Alfano, Donald E., 6,040,668, Cl. 318-471.000.
Telecordia Technologies, Inc.: *See*—
Carman, David; Dalal, Siddhartha R.; Jain, Ashish; and Karunanithi, Nachimuthu, 6,041,330, Cl. 707-101.000.
Telect, Inc.: *See*—
Werner, William R., 6,038,766, Cl. 29-876.000.
Teleflex, Inc.: *See*—
Martucci, Norman S.; and Mathew, Boney A., 6,039,084, Cl. 138-137.000.
Wheeler, Douglas J., 6,038,939, Cl. 74-473.300.
Telefonaktiebolaget LM Ericsson: *See*—
Björklid, Anders; Hardie, Malcolm; and Mäder, Heinz, 6,040,743, Cl. 331-57.000.
Diachina, John W.; Persson, Bengt; Raith, Alex K.; and Sammarco, Anthony J., 6,041,047, Cl. 370-347.000.
Ginell, Thomas; Thorsell, Lars; and Lindman, Per, 6,040,639, Cl. 307-44.000.
Glitho, Roch; and Banville, Mario, 6,041,327, Cl. 707-10.000.
Jellema, Bart; Peeren, René; Croughan, Louise; and Aben, Freek, 6,041,115, Cl. 379-230.000.
Niska, Håkan; Kvarnström, Bo; and Oom, Jan, 6,041,228, Cl. 455-419.000.
Westberg, Lars, 6,041,054, Cl. 370-389.000.
Teles, Joaquim Henrique: *See*—
Vogelbacher, Uwe Josef; Keil, Michael; Klintz, Ralf; Wahl, Josef; Wingert, Horst; König, Hartmann; Rack, Michael; Götz, Roland; and Teles, Joaquim Henrique, 6,040,458, Cl. 548-371.100.
Telesonic AG: *See*—
Frei, Karl; and Luger, Klaus, 6,039,867, Cl. 210-173.000.
Telser, Thomas; Huemmer, Wolfgang; and Kurtz, Karl-Rudolf, to BASF Aktiengesellschaft. Photosensitive recording element having a recording layer and a top layer possessing different solubility properties, and its development in one operation. 6,040,116, Cl. 430-306.000.
Temmesfeld, Axel: *See*—
Kalbacher, Klaus; Schuttarle, Karl; Temmesfeld, Axel; and Eckerskorn, Winfried, 6,039,263, Cl. 236-93.00A.
Temtchenko, Tatiana; and Malavasi, Massimo, to Ausimont S.p.A. Coatings for coils. 6,040,414, Cl. 528-70.000.
Tenbusch, Albert A., II. Technique for administering a lubricant in an underground pipe replacement system. 6,039,505, Cl. 405-156.000.
Teoh, Ping Chow: *See*—
Chooi, Kon Hing; Lim, Ka Tiek; and Teoh, Ping Chow, 6,039,512, Cl. 406-85.000.
Tepro Machine & Pac-System Aktiebolag: *See*—
Persson, Curt, 6,039,529, Cl. 414-627.000.
Terada, Akihiro; and Okuda, Mitsuhiro, to Fanuc Ltd. Welding robot control system. 6,040,554, Cl. 219-124.340.
Terada, Hiroshi: *See*—
Okumura, Yoichiro; Nagai, Michio; Terada, Hiroshi; and Maruyama, Atsushi, 6,041,187, Cl. 396-132.000.
Terada, Koichi; Kojima, Keiji; Fujikawa, Yoshifumi; Nojiri, Tohru; and Nishioka, Kiyokazu, to Hitachi, Ltd. VLIW system with predicated instruction execution for individual instruction fields. 6,041,399, Cl. 712-24.000.
Terai, Kenichi; and Hashimoto, Hiroyuki, to Matsushita Electric Industrial Co., Ltd. Noise cancellation system. 6,041,126, Cl. 381-71.600.
Terai, Tadayoshi; Hitomi, Yoshinori; Okano, Masayuki; and Kinoshita, Kazutoshi, to Asmo, Co., Ltd.; and Toyota Jidosha Kabushiki Kaisha. Wiper arm and wiper device for vehicle. 6,038,728, Cl. 15-250.201.
Teralogic Incorporated: *See*—
Chui, Charles K.; and Zhang, Lefan, 6,041,143, Cl. 382-232.000.
Teramoto, Fuminori: *See*—
Masuda, Kenichi; Hasegawa, Tsutomu; and Teramoto, Fuminori, 6,040,659, Cl. 315-56.000.
Teramoto, Satoshi: *See*—
Zhang, Hongyong; Koyama, Jun; and Teramoto, Satoshi, 6,040,589, Cl. 257-59.000.
Teran, Alfredo J.; Derrick, John R., Jr.; Samad, Nidal A.; Willoughby, W. Todd; and Wood, Richard G., to AJT & Associates, Inc. Apparatus and method for purification of agricultural animal waste. 6,039,874, Cl. 210-605.000.
Terasaki, Masanao: *See*—
Yoshida, Hiroaki; Hagiwara, Zenzo; and Terasaki, Masanao, 6,040,086, Cl. 429-211.000.
Terashima, Hideyuki: *See*—
Iwata, Naohiro; Obana, Katsumi; Terashima, Hideyuki; and Aoki, Noriyuki, 6,040,919, Cl. 358-400.000.
Terayama, Hiroshi: *See*—
Okuda, Akihito; Fushimi, Koichi; and Terayama, Hiroshi, 6,039,666, Cl. 475-72.000.
Terunuma, Koichi; and Kamijima, Akifumi, to TDK Corporation. Thin film magnetic head having grooves which become gradually shallower. 6,040,965, Cl. 360-122.000.
Tessier, Clément; Beaumont, François; and Turcotte, Pierre, to Centre de Recherche Indust. du Quebec. Apparatus for shielding an articulated structure. 6,039,068, Cl. 137-377.000.
Tetra Laval Holdings & Finance S.A.: *See*—
Fontanazzi, Paolo, 6,038,838, Cl. 53-551.000.
Tetra Laval Holdings & Finance, SA: *See*—
Swank, Ronald; and Palaniappan, Sevugan, 6,039,922, Cl. 422-24.000.
Tetrick, Mark A.: *See*—
Sunvold, Gregory D.; Tetrick, Mark A.; and Reinhart, Gregory A., 6,039,952, Cl. 424-195.100.
Tetsui, Shunichi: *See*—
Shinya, Keigo; Kou, Wen Long; Suzuki, Osamu; and Tetsui, Shunichi, 6,040,556, Cl. 219-133.000.
Tetsushi, Makino: *See*—
Junichi, Imaizumi; Yuri, Kawasaki; Tetsushi, Makino; and Toyoshi, Iida, 6,040,007, Cl. 427-215.000.
Teuho, Juhani, to Outokumpu Copper OY. Method of producing a superconductor billet. 6,038,759, Cl. 29-599.000.
Texas A & M University System: *See*—
Klemm, William Robert; and Rivard, Germain Francois, 6,039,923, Cl. 422-61.000.
Texas A&M University System, The: *See*—
Wang, Lihong, 6,041,248, Cl. 600-407.000.
Texas Instruments Incorporated: *See*—
Anthony, John Mark; Wallace, Robert M.; Wei, Yi; and Wilk, Glen, 6,040,230, Cl. 438-398.000.
Baudouin, Daniel; Russell, Ernest J.; and Janzen, Jeffrey W., 6,040,983, Cl. 361-760.000.
Blake, Terence G. W.; Andresen, Bernhard H.; and Wall, Frederick G., 6,040,708, Cl. 326-33.000.
Bosshart, Patrick W., 6,040,716, Cl. 326-98.000.
Brito, Joao Carlos F.; Rote, John K.; Trafton, Frederick W.; and Martins, Marcus M., 6,040,671, Cl. 318-603.000.
Chan, Min Yu; and Goh, Jing Sua, 6,040,623, Cl. 257-692.000.
Duvvury, Charvaka; Amerasekera, E. Ajith; and Ramaswamy, Sridhar, 6,040,968, Cl. 361-56.000.
Head, Claude D., III, 6,039,168, Cl. 198-341.070.
Holloway, Thomas C., 6,040,249, Cl. 438-769.000.
Hynecek, Jaroslav, 6,040,569, Cl. 250-208.100.
Malhi, Satwinder D. S., 6,040,811, Cl. 345-87.000.
Pettitt, Gregory S.; and Markandey, Vishal, 6,040,876, Cl. 348-624.000.
Provence, John D., 6,041,371, Cl. 710-58.000.
Shiell, Jonathan H., 6,041,176, Cl. 395-500.480.
Tezuka, Hirofusa: *See*—

Watanabe, Hideo; Sakai, Motohiro; and Tezuka, Hirofusa, 6,038,865, Cl. 62-3.600.
Thakur, Randhir P. S.: *See*—
Sandhu, Gurtej; and Thakur, Randhir P. S., 6,040,020, Cl. 427-557.000.
Thalhammer, Robert, to Merit-Malta Ltd. Starter switch, in particular ignition starter switch for motor vehicle. 6,040,535, Cl. 200-43.080.
Thalhofer, Augustin: *See*—
Schmidt, Rudolf; and Thalhofer, Augustin, 6,040,660, Cl. 315-200.00A.
Thatcher, Bryce: *See*—
Hamilton, Jeffrey R.; Pontaoe, John S.; and Thatcher, Bryce, 6,038,747, Cl. 24-164.000.
Thayer Medical Corporation: *See*—
Sladek, David T., 6,039,042, Cl. 128-200.230.
Thedens, John R., to Rockwell Collins, Inc. Open system modular electronics architecture. 6,041,035, Cl. 370-217.000.
Theders, John B. Finished swimming caps, and compositions and methods for producing same. 6,040,365, Cl. 524-47.000.
Themar, Charles E. Aquatic habit extension device. 6,039,005, Cl. 119-249.000.
Theret, Gérald: *See*—
Anderbouhr, Stéphanie; Schuster, Frédéric; Blanquet, Elisabeth; and Theret, Gérald, 6,040,012, Cl. 427-255.391.
Thermotrex Corporation: *See*—
Bruns, Donald G., 6,040,643, Cl. 310-26.000.
Thermovonics Co., Ltd.: *See*—
Watanabe, Hideo; Sakai, Motohiro; and Tezuka, Hirofusa, 6,038,865, Cl. 62-3.600.
Thibout, Paul: *See*—
Rioland, Jacques; Thibout, Paul; and Jano, Patrice, 6,040,566, Cl. 250-201.900.
Thielert, Wolfgang; Bohne, Gerhard; and Müller, Klaus-Helmut, to Bayer Aktiengesellschaft. Selective herbicides for the cultivation of sugar cane. 6,040,271, Cl. 504-134.000.
Thiesen, Stefan; Jungbluth, Dieter; and Böcker, Jürgen, to Rheinmetall W.& M. GmbH. Method for aiming the weapon of a weapon system and weapon system for implementing the method. 6,038,955, Cl. 89-41.170.
Thimmesch, Jan P.: *See*—
Prust, Andrew J.; and Thimmesch, Jan P., 6,040,557, Cl. 219-206.000.
Thio, Tineke: *See*—
Kim, Tae Jin; Thio, Tineke; and Ebbesen, Thomas Wren, 6,040,936, Cl. 359-245.000.
Thomas, Abraham: *See*—
Sanduja, Mohan L.; Horowitz, Carl; Thomas, Abraham; and Thottathil, Paul, 6,040,378, Cl. 524-588.000.

Thomson Consumer Electronics Inc.: *See*—
McCarthy, Dennis Ronald; Fossaceca, John Mark; and Kapadia, Maneck Behram, 6,041,240, Cl. 455-464.000.
Thomson-CSF: *See*—
Rioland, Jacques; Thibout, Paul; and Jano, Patrice, 6,040,566, Cl. 250-201.900.
Thorn, J. Stephen; and Woodward, Arthur E., to Emerson Electric Co. Device and method for generating three-phase sine waves using two pulse-width modulators. 6,040,989, Cl. 363-41.000.
Thorndyke, Robert J. Barbecue grill. 6,038,965, Cl. 99-340.000.
Thorsell, Lars: *See*—
Ginell, Thomas; Thorsell, Lars; and Lindman, Per, 6,040,639, Cl. 307-44.000.
Thottathil, Paul: *See*—
Sanduja, Mohan L.; Horowitz, Carl; Kamruzzaman, Mohammed; Thottathil, Paul; and Ramsey, Earl A., 6,039,964, Cl. 424-404.000.
Sanduja, Mohan L.; Horowitz, Carl; Thomas, Abraham; and Thottathil, Paul, 6,040,378, Cl. 524-588.000.
Threlkeld, Kevin; and McClure, Donald, to Novartis AG. Soybean cultivar C405323. 6,040,502, Cl. 800-312.000.
Thuma, Michael: *See*—
Danzyger, Howard L.; Brow, Karenann; Caruso, James; Hibbard, Timothy; McPhilliamy, Steven; and Thuma, Michael, 6,039,292, Cl. 248-118.500.
Thumfart, Dieter; and Kahlke, Michael, to Electrovac, Fabrikation elektrotechnischer Spezialartikel Gesellschaft m.b.H. Combined temperature limiter and ignition monitoring device for use in a cooking unit. 6,039,040, Cl. 126-39.00G.
Thyssen Aufzüge GmbH: *See*—
Vellinga, Jan, 6,039,167, Cl. 198-333.000.
Tiby, Gérard, to Premark Feg L.L.C. Device for monitoring the prevailing temperature in an enclosure such as a household refrigerator. 6,038,870, Cl. 62-129.000.
Tidwell, John E. Portable display system. 6,038,802, Cl. 40-610.000.
Tiedemann, Jens: *See*—
Hölzel, Folkhard; Kramer, Manfred; and Tiedemann, Jens, 6,039,072, Cl. 137-512.300.
Tiers, George V.: *See*—
Scholz, Matthew T.; and Tiers, George V., 6,040,053, Cl. 428-412.000.
Tiggeloven, Leonardus Jozephus Antonius: *See*—
Beijaard, Barend Jacobus Emmanuel; Jacobs, Thomas Gerardus Maria; and Tiggeloven, Leonardus Jozephus Antonius, 6,039,080, Cl. 138-115.000.
Tiller, Randolph C.; and Williams, Robert G., to Illinois Tool Works Inc. Remote control for welders and method therefor. 6,040,555, Cl. 219-132.000.
Timmons, Richard J.: *See*—
Goertz, Harvey M.; Timmons, Richard J.; and Johnson, William R., 6,039,781, Cl. 71-1.000.
Timofeev, Nikolai A.: *See*—
Bashlov, Nikolai L.; Vul, Alexandr Y.; Kidalov, Sergei V.; Kozyrev, Sergei; Milenin, Vyacheslav M.; and Timofeev, Nikolai A., 6,040,658, Cl. 313-637.000.
Timson, Colin J.; Yap, Chas Hock Eng; and Kelly, Sean, to TL Technology Rerearch (M) SDN. BHD. Apparatus and method for providing access to secured data or area. 6,041,412, Cl. 713-200.000.
Tindall, Glenn Andrew, to Metal Manufactures Limited. Cable coupling assembly. 6,039,604, Cl. 439-598.000.
Tinucci, Peter: *See*—
Jablonski, Ted M.; Meyer, Michael S.; Miller, David A.; Martin, Herman H.; Emody, Kenneth J.; Levine, Gary S.; and Tinucci, Peter, 6,039,220, Cl. 222-236.000.
Titterington, Donald R.; and Banning, Jeffery H., to Tektronix, Inc. Anthraquinone colorants for phase change inks. 6,039,794, Cl. 106-31.290.
TL Technology Rerearch (M) SDN. BHD.: *See*—
Timson, Colin J.; Yap, Chas Hock Eng; and Kelly, Sean, 6,041,412, Cl. 713-200.000.
TNT Steel Industries, Inc.: *See*—
Gillis, Donald G.; and Johnson, Daniel, 6,039,147, Cl. 182-15.000.
Toda, Kazuo: *See*—
Tominaga, Youji; Toda, Kazuo; and Yamamura, Nobuo, 6,040,049, Cl. 428-355.0EN.
Toda, Yukari: *See*—
Funada, Masahiro; and Toda, Yukari, 6,041,205, Cl. 399-196.000.
Todokoro, Masatoshi, to Staff Co., Ltd. Bowling game plate. 6,039,655, Cl. 473-116.000.
Toga, James E., to Intel Corporation. Method for transferring data between a network of computers dynamically based on tag information. 6,041,355, Cl. 709-227.000.
Togashi, Jun: *See*—
Ishida, Nobuo; Togashi, Jun; Kimura, Tomomichi; Morikawa, Kiyoshi; Nakayama, Yoshihumi; Akiyama, Hiroshi; Yanagisawa, Tatsuya; and Ota, Takashi, 6,041,032, Cl. 369-191.000.
Toge, Tetsuo; Komatsubara, Michiro; Honda, Atsuhito; Sadahiro, Kenichi; and Senda, Kunihiro, to Kawasaki Steel Corporation. Grain-oriented electromagnetic steel sheet and process for producing the same. 6,039,818, Cl. 148-307.000.
Tokimatsu, Hiroyuki: *See*—
Haneda, Satoshi; Tokimatsu, Hiroyuki; Onodera, Masahiro; and Hamada, Shuta, 6,041,204, Cl. 399-159.000.
Tokita, Yoshiaki; and Takagi, Takahiro, to Kyodo Shiko Co., Ltd. Laminated film, method for production thereof, and bag and package using the laminated film. 6,040,024, Cl. 428-35.200.
Tokizawa, Minoru: *See*—
Takeda, Sunao; Kaneko, Yasushi; Tokizawa, Minoru; Eto, Hiromichi; Ishida, Kazuya; Maebashi, Kazunori; Matsumoto, Masaru; Asaoka, Takemitsu; and Sato, Susumu, 6,040,325, Cl. 514-383.000.
Tokuda, Hiroaki: *See*—
Hosokoshiyama, Hiroshi; Yoneyama, Masashi; Busujima, Makoto; Tokuda, Hiroaki; Osuga, Naohito; and Tashiro, Kouji, 6,039,204, Cl. 220-623.000.
Tokui, Taro: *See*—

Yoshida, Akira; Oda, Kozo; Kasai, Takashi; Shimada, Kousei; Kogen, Hiroshi; Hayakawa, Ichiro; Ishihara, Sadao; Koga, Teiichiro; Kitazawa, Eiichi; and Tokui, Taro, 6,040,339, Cl. 514-485.000.

Tokumoto, Masahisa; and Ishibashi, Eiji, to Kabushiki Kaisha Kyushu Nissho. Structure for uniform heating in a heating device. 6,040,562, Cl. 219-530.000.

Tokunaga, Ken: *See*—
Dhindsa, Rajinder; Singh, Vikram; and Tokunaga, Ken, 6,039,836, Cl. 156-345.000.

Tokunaga, Norihito: *See*—
Koguro, Kiyoto; Oga, Toshikazu; Tokunaga, Norihito; Mitsui, Sunao; and Orita, Ryozo, 6,040,454, Cl. 548-253.000.

Tokuyasu, Noboru: *See*—
Shiraishi, Takuya; Nogi, Toshiharu; Ohsuga, Minoru; Nakayama, Yoko; and Tokuyasu, Noboru, 6,039,026, Cl. 123-399.000.

Tomai, Mark A.; Hammerbeck, David M.; and Swingle, Karl F., to 3M Innovative Properties Company. Immune response modifier compounds for treatment of TH2 mediated and related diseases. 6,039,969, Cl. 424-434.000.

Tomikawa, Ichiro; Soga, Mitsuhide; Fujii, Katsuyuki; Ogawa, Katsuhide; Yoshida, Junichi; Kawachi, Shigeo; and Noda, Takehiko, to Fuji Xerox Co., Ltd. Ink jet recording unit. 6,039,441, Cl. 347-86.000.

Tominaga, Youji; Toda, Kazuo; and Yamamura, Nobuo, to GEN Maintenance Technology Inc. Composite film and method of manufacturing surface coating material. 6,040,049, Cl. 428-355.0EN.

Tomioka, Tazuko: *See*—
Ogusu, Masahiro; Tomioka, Tazuko; and Ohshima, Shigeru, 6,040,934, Cl. 359-152.000.

Tomita, Takashi: *See*—
Marutani, Yoshiaki; Tomita, Takashi; Nakahama, Tadamitsu; Uemura, Hiroyuki; Koga, Kazuhi; and Ohsawa, Mika, 6,040,009, Cl. 427-241.000.

Tomita, Taku; Araki, Mitsutoshi; and Yasuda, Naoyuki, to SMC Kabushiki Kaisha. Valve seal mechanism. 6,039,071, Cl. 137-505.370.

Tomita, Yasuoki: *See*—
Suenaga, Kiyoshi; Tomita, Yasuoki; and Fukuno, Hiroki, 6,039,531, Cl. 415-115.000.

Tomita, Yoshifumi: *See*—
Matsuyama, Shigeru; Asuma, Hiroaki; Shimura, Masato; Tomita, Yoshifumi; and Aratani, Sukekazu, 6,040,887, Cl. 349-141.000.

Tompkins, Eugene. Magnetic switch for automotive security system. 6,040,762, Cl. 340-426.000.

Tonazzi, Juan Carlos Lopez: *See*—
Agrawal, Anoop; Tonazzi, Juan Carlos Lopez; LeCompte, Robert Steven; Baertelin, Carl; and Fischer, Douglas Alan, 6,039,390, Cl. 296-211.000.

Tonegawa, Takeshi: *See*—
Itoh, Shigeo; Makita, Yoshio; Tonegawa, Takeshi; Hirata, Yoshihiko; and Kadowaki, Akira, 6,039,620, Cl. 445-25.000.

Toner, Eugene M., to Kulicke & Soffa Investments, Inc. Missing wire detector. 6,039,234, Cl. 228-4.500.

Tong, Wen-hong: *See*—
Glover, Shedric Oneal; Lee, Chi-long; and Tong, Wen-hong, 6,040,353, Cl. 522-15.000.

Tonkin, John Phillip: *See*—
Cullen, Michael John; Tonkin, John Phillip; and Ferch, Eric Blaine, 6,039,023, Cl. 123-339.230.

Tonomura, Shoichiro: *See*—
Doi, Ichiro; and Tonomura, Shoichiro, 6,041,096, Cl. 378-48.000.

Top Power Supply Cord Set Co, Limited: *See*—
Cheung, Tat Kwong, 6,039,607, Cl. 439-622.000.

Toppan Printing Co., Ltd.: *See*—
Andoh, Tomio; Shibata, Shiro; and Marugame, Tomoyuki, 6,039,480, Cl. 400-662.000.

Toray Industries, Inc.: *See*—
Ichioka, Ryoji; Yamakawa, Shinobu; Okino, Hirohito; Kato, Hajime; Iwayama, Kazuyoshi; Konta, Hiroshi; and Kitamura, Akira, 6,040,490, Cl. 585-475.000.

Torigoe, Hidenobu: *See*—
Monoi, Takashi; Yamamoto, Masakazu; Torigoe, Hidenobu; and Takemoto, Yasunori, 6,040,399, Cl. 526-106.000.

Toro Company, The: *See*—
Comer, Robert C.; and Scherbring, David J., 6,038,989, Cl. 111-123.000.
Grundy, Michael J.; and Wright, James T., 6,039,268, Cl. 239-73.000.

Torpey, Peter A.: *See*—
Andrews, John R.; Torpey, Peter A.; Burke, Cathie J.; and Freire, Eduardo M., 6,039,436, Cl. 347-62.000.

Toshiba Battery Co., Ltd.: *See*—
Hikata, Seiichi; and Toyota, Natsuki, 6,040,083, Cl. 429-169.000.

Toshiba Kikai Kabushiki Kaisha: *See*—
Honda, Hirohiko; and Kato, Yoshinobu, 6,040,666, Cl. 318-276.000.

Toshiba Machine Co., Ltd.: *See*—
Nitta, Satoru; and Mizunuma, Koji, 6,039,904, Cl. 264-40.500.

Toshikage, Hideki: *See*—
Saito, Takahiko; Nakanishi, Akira; Obayashi, Shunzi; Genda, Kyoji; and Toshikage, Hideki, 6,041,191, Cl. 396-311.000.

Total Battery Management, Inc.: *See*—
Tsenter, Boris; and Golod, Mikhail, 6,040,685, Cl. 320-160.000.

Toth, Cynthia A.: *See*—
Walker, William F.; Toth, Cynthia A.; and Davidsen, Richard E., 6,039,691, Cl. 600-452.000.

Toukhy, Medhat A.: *See*—
Blakeney, Andrew J.; Medina, Arturo N.; Toukhy, Medhat A.; Ferreira, Lawrence; Jeffries, Alfred T., III; and Naiini, Ahmad A., 6,040,107, Cl. 430-165.000.

Touryanski, Alexander G.; Vinogradov, Alexander V.; and Pirshin, Igor V. X-ray reflectometer. 6,041,098, Cl. 378-70.000.

Towers, Kenneth Scott; McClain, Richard Becker; and Mackiewicz, John e., to Robert Bosch Technology Corporation. Control apparatus for a brake booster. 6,038,857, Cl. 60-422.000.

Townsend, William D.: *See*—
Flanders, John A.; Ready, David C.; Van Seters, Steven; Schwartz, Leonard; and Townsend, William D., 6,041,058, Cl. 370-401.000.

Toya, Shoichi; and Kokuga, Toshiharu, to Sanyo Electric Co., Ltd. Rechargeable battery pack and charging stand for charging the rechargeable battery pack by electromagnetic induction. 6,040,680, Cl. 320-108.000.

Toyama, Akira: *See*—
Yamazaki, Motohiro; Ando, Shuichi; and Toyama, Akira, 6,041,291, Cl. 702-191.000.

Toyama, Nobuaki, to Fuji Photo Optical Co., Ltd. Three-group zoom lens having a first positive refracting lens group, a second positive refracting lens group and a third negative refracting lens group. 6,040,948, Cl. 359-689.000.

Toyama, Yoshiharu; Kuroda, Akikazu; Kiyama, Tokuji; Kida, Sumio; Yoshida, Shunji; Yamamoto, Takashi; and Atsumi, Tetsuya, to Mitsubishi Materials Silicon Corporation; and Mitsubishi Materials Polycrystalline Silicon Corporation. Method and apparatus for feeding a gas for epitaxial growth. 6,039,809, Cl. 118-715.000.

Toyo Boseki Kabushiki Kaisha: *See*—
Kitagawa, Tooru; and Ishitobi, Michio, 6,040,050, Cl. 428-364.000.
Mori, Kenichi; Ito, Katsuya; Kotani, Tooru; Suzuki, Toshitake; and Sasaki, Yasushi, 6,039,444, Cl. 347-105.000.
Odashima, Hisao; Takahashi, Tomomi; and Shimizu, Toshiyuki, 6,040,054, Cl. 428-413.000.

Toyo Denso Kabushiki Kaisha: *See*—
Masuda, Kenichi; Hasegawa, Tsutomu; and Teramoto, Fuminori, 6,040,659, Cl. 315-56.000.

Toyo Engineering Corporation: *See*—
Michiki, Hideyuki; Miyakawa, Hisashi; and Ohsaki, Kozo, 6,041,272, Cl. 700-266.000.

Toyo Kasei Kogyo Company Limited: *See*—
Koguro, Kiyoto; Oga, Toshikazu; Tokunaga, Norihito; Mitsui, Sunao; and Orita, Ryozo, 6,040,454, Cl. 548-253.000.

Toyobo Co., Ltd.: *See*—
Arimori, Susumu; Seko, Masahiro; Tanaka, Masakazu; Monden, Noriko; and Yokota, Hideyuki, 6,040,415, Cl. 528-71.000.

Toyoda, Eiji: *See*—
Shirai, Seiichirou; Onozuka, Toshihiko; Noishiki, Takayuki; Sakai, Satoshi; Sasajima, Katsuhiro; Toyoda, Eiji; and Namikawa, Makoto, 6,040,110, Cl. 430-258.000.

Toyoda Gosei Co., Ltd.: *See*—
Koide, Norikatsu; Asami, Shinya; Umezaki, Junichi; Koike, Masayoshi; Yamasaki, Shiro; and Nagai, Seiji, 6,040,588, Cl. 257-15.000.
Okita, Tomoaki; Nakashima, Katsumi; Mizushima, Takashi; and Wadaki, Takeru, 6,040,351, Cl. 521-140.000.

Toyoda, Osamu: *See*—
Kosaka, Tadayoshi; Toyoda, Osamu; and Namiki, Fumihiro, 6,039,622, Cl. 445-52.000.

Toyoda, Yoshihiko; Fukada, Tetsuo; Mori, Takeshi; and Hasegawa, Makiko, to Mitsubishi Denki Kabushiki Kaisha. CVD apparatus for Cu formation. 6,039,808, Cl. 118-715.000.

Toyoguchi, Takashi: *See*—
Yamamoto, Takayuki; Kasamatsu, Yoshiharu; Toyoguchi, Takashi; Yokohata, Toru; and Koishi, Ryosuke, 6,040,958, Cl. 360-103.000.

Toyoshi, Iida: *See*—
Junichi, Imaizumi; Yuri, Kawasaki; Tetsushi, Makino; and Toyoshi, Iida, 6,040,007, Cl. 427-215.000.

Toyota Jidosha Kabushiki Kaisha: *See*—
Narita, Keishi; Ishida, Chika; Takeuchi, Yoshie; Ohto, Chikara; Ohnuma, Shinichi; and Nishino, Tokuzo, 6,040,165, Cl. 435-193.000.
Otsuka, Yukio; and Ozaki, Motoaki, 6,040,094, Cl. 430-5.000.
Shirai, Kenji; Yokoyama, Seiya; and Oota, Tsutomu, 6,040,665, Cl. 318-14.000.
Sugita, Hiroaki; and Yamamoto, Hisashi, 6,040,091, Cl. 429-324.000.
Terai, Tadayoshi; Hitomi, Yoshinori; Okano, Masayuki; and Kinoshita, Kazutoshi, 6,038,728, Cl. 15-250.201.

Toyota, Natsuki: *See*—
Hikata, Seiichi; and Toyota, Natsuki, 6,040,083, Cl. 429-169.000.

Tozu, Kenji; Itoh, Takayuki; Fukami, Masanobu; and Yokoyama, Satoshi, to Aisin Seiki Kabushiki Kaisha. Brake control system for a vehicle. 6,039,411, Cl. 303-116.100.

Traber, Bruno: *See*—
Pfander, Hanspeter; and Traber, Bruno, 6,040,475, Cl. 560-264.000.

Trafton, Frederick W.: *See*—
Brito, Joao Carlos F.; Rote, John K.; Trafton, Frederick W.; and Martins, Marcus M., 6,040,671, Cl. 318-603.000.

Tran, Jimmy Cuong: *See*—
Davidovici, Sorin; Tran, Jimmy Cuong; and Kanterakis, Emmanuel, 6,041,073, Cl. 375-148.000.

Transfusion Technologies Corporation: *See*—
Headley, Thomas D.; and Powers, Edward T., 6,039,711, Cl. 604-4.000.

Transgene S.A.: *See*—
Imler, Jean-Luc; Mehtali, Majid; and Pavirani, Andréa, 6,040,174, Cl. 435-325.000.

Transneuronix, Inc.: *See*—
Cigaina, Valerio; and Jenkins, David, 6,041,258, Cl. 607-40.000.
Transonic Systems, Inc.: *See*—
Krivitski, Nikolai M.; and Starostin, Dimitry M., 6,041,246, Cl. 600-322.000.
Traub, Zeno P., to Eaton Leonard, Inc. Dual headed bending machine. 6,038,903, Cl. 72-149.000.
Trautmann, Günther-Heinrich: *See*—
Link, Helmut Friedrich; and Trautmann, Günther-Heinrich, 6,038,948, Cl. 82-147.000.
Tredegar Corporation: *See*—
Ghiam, Farid F.; and DiPoto, James P., 6,040,046, Cl. 428-343.000.
Tremblay, Clement, to Tri Tool Inc. Quick return feed for machine tool. 6,038,947, Cl. 82-113.000.
Tremco Incorporated: *See*—
Dunaway, James H.; Hernandez, Pamela K.; and Bidinger, Gregory P., 6,040,380, Cl. 524-832.000.
Trepel, Jane: *See*—
Myers, Charles; Trepel, Jane; Kang, Won Ki; Whitesell, Luke; and Neckers, Len, 6,040,334, Cl. 514-460.000.
Tri Tool Inc.: *See*—
Tremblay, Clement, 6,038,947, Cl. 82-113.000.
Triangle Package Machinery Company: *See*—
Linkiewicz, John M., 6,038,839, Cl. 53-551.000.
Tricon Industries, Incorporated: *See*—
Paul, Donald C.; Bennett, Joseph C.; Bettini, Joseph A.; and Gordon, Edward J., 6,039,579, Cl. 439-56.000.
Trieb, Herbert, to Konrad Doppelmayr & Sohn Maschinenfabrik mbH & Co. KG. Conveyor system for transporting goods. 6,039,171, Cl. 198-699.000.
Tripep AB: *See*—
Sällberg, Matti, 6,040,137, Cl. 435-5.000.
Trisol Inc.: *See*—
Mesher, Shaun T. E., 6,039,865, Cl. 208-263.000.
Trissel, David Wesley, to Motorola, Inc. Computer instruction which generates multiple results of different data types to improve software emulation. 6,039,765, Cl. 703-26.000.
Tröger, Johannes: *See*—
Heisel, Uwe; and Tröger, Johannes, 6,039,096, Cl. 144-235.000.
Trokhan, Paul Dennis; Phan, Dean Van; Deason, Howard Thomas; and Kleinwächter, Jörg, to Procter & Gamble Company, The. Method for making paper structures having a decorative pattern. 6,039,839, Cl. 162-116.000.
Trombley, Michael C.: *See*—
Patmore, Kevin M.; Price, Jeffrey A.; and Trombley, Michael C., 6,039,105, Cl. 160-24.000.
Trustees of Princeton University, The: *See*—
Kahne, Daniel E.; and Yan, Lin, 6,040,433, Cl. 536-4.100.
Trutschel, Hartwig Horst: *See*—
Lehrieder, Erwin Paul Josef; Röder, Klaus Walter; and Trutschel, Hartwig Horst, 6,039,284, Cl. 242-559.000.
TRW Automotive Electronics & Components GmbH & Co. KG: *See*—
Kraus, Willibald, 6,039,523, Cl. 411-48.000.
TRW Inc.: *See*—
Cannon, William J.; Remnant, David K.; Ward, Paul D.; and Hoerig, Timothy R., 6,041,402, Cl. 712-200.000.
Hobaugh, James M., II; and Cartwright, Mark A., 6,038,941, Cl. 74-493.000.
Hsu, Shi-Ping; Ling, James M.; Messenger, Arthur F.; and Evans, Bruce W., 6,041,410, Cl. 713-186.000.

Munch, Carl A., 6,040,532, Cl. 177-144.000.
Urbach, Brian A., 6,039,337, Cl. 280-124.134.
Wedeen, Robert S.; Durham, Arthur J.; Ferris, Matthew D.; and Dow, G. Sam, 6,040,739, Cl. 330-66.000.
Wolfe, George B., 6,040,542, Cl. 200-512.000.
TRW Occupant Restraint Systems GmbH: *See*—
Fischer, Anton, 6,039,340, Cl. 280-728.200.
Wier, Franz, 6,039,352, Cl. 280-806.000.
TRW Occupant Restraitn Systems GmbH & Co. KG: *See*—
Heilig, Alexander; and Schultz, Dirk, 6,039,380, Cl. 296-70.000.
TRW Steering Systems Japan Ltd.: *See*—
Ozeki, Keita, 6,039,334, Cl. 280-93.514.
TRW Vehicle Safety Systems Inc.: *See*—
Bauer, Barney J.; and Herberg, Arnold J., 6,039,353, Cl. 280-806.000.
Scherer, David F., 6,039,343, Cl. 280-731.000.
Tsai, Chia-Shiung: *See*—
Chen, Chao-Cheng; Huang, Ming-Hsin; Tao, Hun-Jan; and Tsai, Chia-Shiung, 6,040,248, Cl. 438-725.000.
Tsai, Ching Cheng; and Chou, Wen To, to Chicony Electronics Co., Ltd. Keyswitch structure. 6,040,540, Cl. 200-344.000.
Tsai, Li C.; and Blumberg, Richard M., to Hewlett-Packard Company. Digital circuit to count like signals in a data word. 6,041,092, Cl. 377-1.000.
Tsangaris, Paris: *See*—
Kirchhoefer, Dennis Ray; Miller, Thomas Edward; and Tsangaris, Paris, 6,041,131, Cl. 381-415.000.
Tse, Bruno: *See*—
Balkovec, James M.; and Tse, Bruno, 6,040,463, Cl. 549-418.000.
Tseng, Gwou-Jong; and Kang, Yuh-Huey, to Hon Hai Precison Ind. Co., Ltd. Electrical connector. 6,039,595, Cl. 439-377.000.
Tseng, Horng-Huei: *See*—
Chiou, Chie-Wun; and Tseng, Horng-Huei, 6,039,526, Cl. 414-411.000.
Tsenter, Boris; and Golod, Mikhail, to Total Battery Management, Inc. Energy transfer and equalization in rechargeable lithium batteries. 6,040,685, Cl. 320-160.000.
Tsou, Andy H.: *See*—
Chen, Jiann H.; Lancaster, Robert A.; Tsou, Andy H.; and Anderson, Charles C., 6,041,210, Cl. 399-333.000.
Tsu, Wilson: *See*—
McMullen, Jacques; Tsu, Wilson; and Kargel, Reinhard, 6,039,789, Cl. 75-711.000.
Tsuboi, Takayuki; Yagyu, Mineto; Nagano, Akihiko; and Kikuchi, Hiroshi, to Canon Kabushiki Kaisha. Display device. 6,040,880, Cl. 349-5.000.
Tsuboi, Takayuki: *See*—
Kikuchi, Hiroshi; and Tsuboi, Takayuki, 6,041,190, Cl. 396-284.000.
Tsubokawa, Masahiro: *See*—
Takeuchi, Yoshiharu; Aburaya, Kiyoji; Yasu, Toshiharu; Tsubokawa, Masahiro; Sakai, Manabu; Aoshika, Shoji; and Narita, Tsutayoshi, 6,039,551, Cl. 418-88.000.
Tsubouchi, Nobuteru: *See*—
Chayahara, Akiyoshi; Horino, Yuji; Kinomura, Atsushi; Tsubouchi, Nobuteru; and Fujii, Kanenaga, 6,039,847, Cl. 204-192.110.
Tsuchiya, Tomohiro, to NEC Corporation. Semiconductor memory device. 6,041,006, Cl. 365-210.000.
Tsuchiya, Yoshimi; Nomoto, Takashi; Ohsawa, Hirokazu; Kawakami, Kumiko; Ohwaki, Kenji; and Nishikibe, Masaru, to Banyu Pharmaceutical Co Ltd. Fluorine-containing 1, 4-disubstituted piperidine derivatives. 6,040,449, Cl. 546-193.000.
Tsuda, Tadayuki: *See*—
Nakagawa, Takao; and Tsuda, Tadayuki, 6,041,196, Cl. 399-27.000.
Tsuda, Takao: *See*—
Makino, Masanori; Mochizuki, Hirotake; Misawa, Takao; and Tsuda, Takao, 6,040,891, Cl. 355-46.000.
Tsuji, Tomoko; Takai, Hisashi; and Goda, Hiroki, to Uni-Charm Corporation. Liquid-permeable topsheet for body exudates absorbent article, apparatus and method for manufacturing same. 6,039,555, Cl. 425-362.000.
Tsujimoto, Akira, to Canon Kabushiki Kaisha. Ink-jet head and ink-jet printing apparatus incorporating the same. 6,039,437, Cl. 347-63.000.
Tsukamoto, Hironori, to Sony Corporation. Method of manufacturing semiconductor devices. 6,040,224, Cl. 438-308.000.
Tsukamoto, Junichi: *See*—
Izumi, Nobuaki; Fukushima, Shinichi; and Tsukamoto, Junichi, 6,040,873, Cl. 348-559.000.
Tsukerman, Alex, to Oracle Corporation. Method and apparatus for using undo/redo logging to perform asynchronous updates of parity and data pages in a redundant array data storage environment. 6,041,423, Cl. 714-19.000.
Tsukuda, Yoshihiro: *See*—
Yamada, Kazuo; Mitate, Takehito; Nishimura, Naoto; Tsukuda, Yoshihiro; and Minato, Kazuaki, 6,040,092, Cl. 429-331.000.
Tsumiyama, Tatsuo: *See*—
Yamamoto, Tomohiko; Tsumiyama, Tatsuo; and Sugimoto, Kouji, 6,040,418, Cl. 528-353.000.
Tsumura, Makoto: *See*—
Ota, Masuyuki; Kawachi, Genshiro; Kitajima, Masaaki; Sasaki, Tohru; Oh-e, Masahito; Kondo, Katsumi; and Tsumura, Makoto, 6,040,886, Cl. 349-141.000.
Tsuneji, Anjai: *See*—
Park, Jong-kwon; and Tsuneji, Anjai, 6,039,558, Cl. 425-556.000.
Tsutsui, Toshiyuki: *See*—
Ishida, Tatsuyoshi; Yasuda, Masaaki; Onishi, Hitoshi; Kihara, Noriaki; Tsutsui, Toshiyuki; Sagane, Toshihiro; Kawasaki, Masaaki; and Nakahama, Hidenari, 6,040,407, Cl. 526-281.000.
Tsutsumi, Kojiro: *See*—
Isobe, Takashi; and Tsutsumi, Kojiro, 6,038,912, Cl. 73-1.590.
Tsuura, Katsuhiko, to Matsushita Electronics Corporation. Contactor and semiconductor device inspecting method. 6,040,706, Cl. 324-765.000.
Tsuzuki, Koichi: *See*—
Tanaka, Tetsuya; Tsuzuki, Koichi; Nishijima, Noriyo; Handa, Fumitaka; and Nakadaira, Shiro, 6,039,866, Cl. 210-136.000.
Tu, Mai Xuan; Schwab, Michel; and Musy, Jean-Pierre, to Patek Philippe S.A. Mechanical-electric energy converter and watch part comprising this energy converter. 6,041,022, Cl. 368-64.000.
Tubbs, Michael E.: *See*—
Ramsey, Jens K.; Stevens, Jeffrey C.; Tubbs, Michael E.; and Stancil, Charles J., 6,041,401, Cl. 712-43.000.
Tucker, Sean W.; Cowan, Michael R.; and Martin, Mark P., to Hewlett-Packard Company. Mechanism for removal of surface mount connectors using heat conduction through pins. 6,039,241, Cl. 228-264.000.
Tufano, Anthony: *See*—
Getselis, Arkady; Newman, Walter; and Tufano, Anthony, 6,039,597, Cl. 439-441.000.
Tufts University: *See*—
Huber, Brigitte T.; Schmitz, Tracy; and Underwood, Robert, 6,040,145, Cl. 435-7.200.
Tully, Robert Edward: *See*—
Skrabanja, Arnold Titus Philip; and Tully, Robert Edward, 6,040,301, Cl. 514-214.000.
Tuncer, Haluk: *See*—
Manz, Herbert; Tuncer, Haluk; and Zaeper, Manfred, 6,040,551, Cl. 219-121.650.
Tung, Shih-Hsiung Steve: *See*—

Liu, Peichun Peter; Singh, Rajinder Paul; and Tung, Shih-Hsiung Steve, 6,041,390, Cl. 711-110.000.
Tunnel Radio of America, Inc.: *See—*
Rose, Mark D.; and Haining, Robert W., 6,041,216, Cl. 455-9.000.
Tuno, Yoshihide: *See—*
Sugimura, Atsurou; and Tuno, Yoshihide, 6,039,363, Cl. 292-202.000.
Tuominen, Marko: *See—*
Ellison, Alex; Kordina, Olle; Gu, Chun-Yuan; Hallin, Christer; Janzen, Erik; and Tuominen, Marko, 6,039,812, Cl. 118-725.000.
Turcotte, Pierre: *See—*
Tessier, Clément; Beaumont, François; and Turcotte, Pierre, 6,039,068, Cl. 137-377.000.
Turcotte, Yvon; and Coulombe, Alain, to Turcotte, Yvon. Combined air exchange and air conditioning unit. 6,038,879, Cl. 62-325.000.
Turecek, Peter; Schwarz, Hans-Peter; and Eibl, Johann, to Baxter Aktiengesellschaft. Pharmaceutical preparation for treating blood coagulation disorders. 6,039,945, Cl. 424-94.640.
Turek, David G.: *See—*
Anderson, David K.; Chiu, John H.; McNary, Steven F.; Phyfe, Nicole M.; Turek, David G.; and Mylchreest, Donald G., 6,039,008, Cl. 122-510.000.
Turkiye Sise ve cam Fabrikalari A.S.: *See—*
Demiryont, Hüyla; Parlar, Hüseyin; Ersoy, Ayse; and Aktulga, Ender, 6,040,939, Cl. 359-360.000.
Turner, Clive Nathan, to Nokia Mobile Phones, Ltd. Transferring information. 6,041,229, Cl. 455-420.000.
Turner, Tom; and Livergood, Robert J., to Holmes Product Corp. Lamp with safety features. 6,039,462, Cl. 362-410.000.
Turnsek, Jürgen Peter: *See—*
Hegner, Frank; Schmidt, Elke Maria; Güther, Volker; Otto, Andreas; Breme, Jürgen; Müller, Heinz; and Turnsek, Jürgen Peter, 6,039,918, Cl. 420-422.000.
Turovets, Igor: *See—*
Lewis, Aaron; Palanker, Daniel; and Turovets, Igor, 6,039,726, Cl. 606-3.000.
Turrentine, Mary Faye. Cosmetic applicator. 6,039,053, Cl. 132-320.000.
Tuunanen, Jukka, to Labsystems Oy. Method and means for magnetic particle specific binding assay. 6,040,192, Cl. 436-177.000.
Twentieth Century Fox Film Corporation: *See—*
Kelley, David E.; Kramer, Jeffrey C.; Pontell, Jonathan L.; Parral, Loretta S.; Roth, Michelle V.; Yergen, Anoush; and Sanford, Arlene, 6,039,710, Cl. 602-74.000.
Tyrrell, Steven P., to Biosafe Laboratories, Inc. Method for correcting for blood volume in a serum analyte determination. 6,040,135, Cl. 435-4.000.
Ube Industries, Ltd.: *See—*
Yamamoto, Tomohiko; Tsumiyama, Tatsuo; and Sugimoto, Kouji, 6,040,418, Cl. 528-353.000.
Uchida, Jun, to NEC Corporation. Direct conversion receiver using single reference clock signal. 6,040,738, Cl. 329-302.000.
Uchihashi Estec Co., Ltd.: *See—*
Kawanishi, Toshiro, 6,040,754, Cl. 337-297.000.
Uchikoshi, Mitsuyuki, to Sankousha Co., Ltd. Pressing machine for trousers. 6,038,796, Cl. 38-20.000.
Uchino, Katsuhide, to Sony Corporation. Active matrix display device with phase-adjusted sampling pulses. 6,040,816, Cl. 345-99.000.
Uchiyama, Satomi: *See—*
Ueda, Shigeki; Inada, Ikuhiro; and Uchiyama, Satomi, 6,040,564, Cl. 219-682.000.
Uda, Mitsuru: *See—*
Masami, Shinohara; Uda, Mitsuru; and Enami, Kunio, 6,040,888, Cl. 349-155.000.
Ueda, Kunihiro: *See—*
Kanazawa, Hiromichi; Ueda, Kunihiro; Yanagiuchi, Katsuaki; Ikarashi, Tsunehiko; and Kohno, Masahide, 6,040,052, Cl. 428-408.000.
Ueda, Makoto; Shiga, Shigenori; Tajima, Satoko; and Morishita, Hideki, to Kabushiki Kaisha Toshiba. Control rod for nuclear reactor. 6,041,091, Cl. 376-327.000.
Ueda, Michio: *See—*
Fujikawa, Yasuji; and Ueda, Michio, 6,039,058, Cl. 134-104.100.
Ueda, Shigeki; Inada, Ikuhiro; and Uchiyama, Satomi, to Matsushita Electric Indutrial Co., Ltd. Microwave heating apparatus and microwave heating method. 6,040,564, Cl. 219-682.000.
Ueda, Takaya: *See—*
Shibata, Shogo; Fujita, Minoru; Ikeda, Yuji; Ueda, Takaya; Itoh, Fumiaki; and Hirota, Makoto, 6,041,293, Cl. 704-4.000.
Uehara, Sanya: *See—*
Kawabe, Keiko; Matsuo, Akihiko; Kimura, Minako; Nagahashi, Kenji; and Uehara, Sanya, 6,041,177, Cl. 395-704.000.
Uemura, Hiroyuki: *See—*
Marutani, Yoshiaki; Tomita, Takashi; Nakahama, Tadamitsu; Uemura, Hiroyuki; Koga, Kazuhi; and Ohsawa, Mika, 6,040,009, Cl. 427-241.000.
Uemura, Tadashi: *See—*
Oketani, Tetsuya; and Uemura, Tadashi, 6,039,680, Cl. 483-57.000.
Uenishi, Akio; and Minato, Tadaharu, to Mitsubishi Denki Kabushiki Kaisha. Trenched high breakdown voltage semiconductor device. 6,040,600, Cl. 257-330.000.
Ueno, Takeshi; Kita, Tatsuya; and Shibasaki, Naoji, to Dai Nippon Printing Co., Ltd. Transfer sheet for adhesive layer and use thereof. 6,040,268, Cl. 503-227.000.
Uesugi, Osamu: *See—*
Miyano, Sotaro; Hattori, Tetsutaro; Uesugi, Osamu; Tamai, Yasufumi; and Sayo, Noboru, 6,040,465, Cl. 549-510.000.
Uezono, Tsutomu: *See—*
Hori, Takeshi; Uezono, Tsutomu; Yoshii, Tomoyuki; and Funayama, Yasuhiro, 6,040,106, Cl. 430-127.000.
Ukita, Yoshitaka: *See—*
Ohga, Norio; and Ukita, Yoshitaka, 6,041,025, Cl. 369-30.000.
Ulema, Mehmet: *See—*
Brewster, John; and Ulema, Mehmet, 6,041,108, Cl. 379-196.000.
Ullah, Hamid, to Griffin LLC. Cold storage stabilized organophosphorus insecticide formulation and method of making same. 6,040,299, Cl. 514-75.000.
Ulrich, Roger G.: *See—*
Batts, Donald Herman; and Ulrich, Roger G., 6,040,306, Cl. 514-236.800.
Ultramet: *See—*
Fay, Thomas F., III; La Ferla, Raffaele; Sherman, Andrew J.; and Stankiewicz, Edwin P., 6,040,266, Cl. 502-439.000.
Umatate, Toshikazu: *See—*
Kakizaki, Yukio; Kiuchi, Toru; Amano, Kesayoshi; and Umatate, Toshikazu, 6,040,096, Cl. 430-5.000.
Umax Data Systems Inc.: *See—*
Wu, Chung-Yu; and Su, Ching-Piao, 6,041,105, Cl. 379-93.050.
Umeda, Takashi; and Ohno, Motoyasu, to Matsushita Electric Industrial Co., Ltd. Device and method for facsimile and data communication. 6,040,922, Cl. 358-468.000.
Umeki, Hisashi: *See—*
Nishioka, Mototsugu; Umeki, Hisashi; and Matsui, Susumu, 6,041,408, Cl. 713-171.000.
Umezaki, Junichi: *See—*
Koide, Norikatsu; Asami, Shinya; Umezaki, Junichi; Koike, Masayoshi; Yamasaki, Shiro; and Nagai, Seiji, 6,040,588, Cl. 257-15.000.
Umezawa, Akira; Atsumi, Shigeru; and Banba, Hironori, to Kabushiki Kaisha Toshiba. Booster circuit and semiconductor memory device having the same. 6,041,011, Cl. 365-226.000.
Umezawa, Akira: *See—*
Banba, Hironori; Shiga, Hitoshi; Atsumi, Shigeru; and Umezawa, Akira, 6,041,012, Cl. 365-226.000.
Un, Sung-Kyong; Cho, Hyun-Sook; Kim, Hwan-Chul; and Lee, Soo-In, to Electronics and Telecommunications; and Research Institute Korea Telecom. Method for interfacing between transmitter and receiver of digital broadcasting system through satellite. 6,040,850, Cl. 348-10.000.
Underwood, Robert: *See—*
Huber, Brigitte T.; Schmitz, Tracy; and Underwood, Robert, 6,040,145, Cl. 435-7.200.
Unger, Evan; McCreery, Thomas; Yellowhair, David; and Barrette, Terrence R., to ImaRx Pharmaceutical Corp. Apparatus for making gas-filled vesicles of optimal size. 6,039,557, Cl. 425-429.000.
Unger, Reuven Z.: *See—*
van der Walt, Nicholas R.; and Unger, Reuven Z., 6,038,874, Cl. 62-198.000.
Uni-Charm Corporation: *See—*
Tsuji, Tomoko; Takai, Hisashi; and Goda, Hiroki, 6,039,555, Cl. 425-362.000.
Unified Access Communications: *See—*
Harsham, Bret; and Jain, Lalit, 6,041,347, Cl. 709-220.000.
Unilever Patent Holdings BV: *See—*
Birch, Brian Jeffrey; and Morris, Nicholas Andrew, 6,039,861, Cl. 205-335.000.
Unisia Jecs Corporation: *See—*
Sato, Hisaaki; Kumagai, Masato; and Araki, Tomoaki, 6,039,027, Cl. 123-399.000.
Unisys Corporation: *See—*
Balousek, Andrew J., 6,039,429, Cl. 347-19.000.
Whittaker, Bruce Ernest, 6,041,337, Cl. 708-274.000.
United Microelectronics Corp.: *See—*
Gong, Jeng; and Yang, Sheng-Hsing, 6,040,601, Cl. 257-341.000.
Hsu, Chen-Chung; and Chang, Yih-Jau, 6,040,222, Cl. 438-301.000.
Jaw, Jerry, 6,040,794, Cl. 341-155.000.
Lee, Tzung-Han; and Chern, Horng-Nan, 6,040,241, Cl. 438-622.000.
Wu, Der-Yuan, 6,040,231, Cl. 438-424.000.
United Semiconductor Corp.: *See—*
Gau, Jing-Horng, 6,040,232, Cl. 438-424.000.
United States of America
Agriculture: *See—*
Doane, William M.; Lawton, John W., Jr.; and Shogren, Randal, 6,040,063, Cl. 428-532.000.
Air Force: *See—*
Michalicek, M. Adrian, 6,040,935, Cl. 359-198.000.
Army: *See—*
DeAnna, Russell, 6,039,262, Cl. 236-93.00R.
Environmental Protection Agency: *See—*
Sikdar, Subhas; and Vane, Leland, 6,039,878, Cl. 210-640.000.
Wolfe, N. Lee; and Cipollone, Mark G., 6,039,882, Cl. 210-747.000.
Health and Human Services: *See—*
Earl, Patricia L.; Broder, Christopher C.; Doms, Robert W.; and Moss, Bernard, 6,039,957, Cl. 424-208.100.
Myers, Charles; Trepel, Jane; Kang, Won Ki; Whitesell, Luke; and Neckers, Len, 6,040,334, Cl. 514-460.000.
National Aeronautics and Space Administration: *See—*
Burken, John J.; and Burcham, Frank W., Jr., 6,041,273, Cl. 701-3.000.

Lueck, Dale E.; and Parrish, Clyde F., 6,039,783, Cl. 71-59.000.
Steinetz, Bruce M.; and Kren, Lawrence A., 6,039,325, Cl. 277-633.000.

Navy: *See*—
Bowman, Howard L.; Darwin, Robert L.; Maraffio, William M.; Sawyer, Larry D.; Williams, Robert B.; Hudson, Frank E.; Hunstad, Mary; and Decker, Mark W., 6,039,124, Cl. 169-61.000.
Dawirs, Willis R., 6,040,801, Cl. 342-457.000.
Jackson, Neil A.; Williamson, John T.; Frantz, Francis J.; Ryll, Patrick B.; and Greenbaum, Hyman A., 6,041,019, Cl. 367-124.000.
Kaneda, Fumio, 6,040,682, Cl. 320-136.000.
Karafiath, Gabor; and Cusanelli, Dominic S., 6,038,995, Cl. 114-271.000.
Kuklinski, Robert, 6,039,309, Cl. 261-1.000.
Lee, Ilzoo; and Covino, Josephine, 6,039,929, Cl. 423-328.200.
Naud, Steven F.; Weber, Max D.; Lucero, Lei Lani; Bird, J. Dexter, III; and Fink, Martin D., 6,039,193, Cl. 212-270.000.
Suiter, Harold R., 6,039,445, Cl. 351-43.000.
Watson, Fred W.; Hannock, Wayne; Lam, Robert; and Evans, George, 6,038,979, Cl. 102-481.000.

U.S. Philips Corporation: *See*—

Koch, Michael; Kock, Wulf; Lupton, David Francis; and Scholz, Friedhold, 6,039,920, Cl. 420-590.000.

W. L. Gore & Associates, Inc.: *See—*
Hobson, Alex R.; McCollam, F. Michael J.; and Powell, Beth P., 6,041,211, Cl. 399-352.000.

W. Schlafhorst AG & Co.: *See—*
Hermanns, Ferdinand-Josef; and Meyer, Urs, 6,039,282, Cl. 242-485.100.

Waarts, Robert: *See—*
Koch, Thomas L.; and Waarts, Robert, 6,041,070, Cl. 372-6.000.

WABCO GmbH: *See—*
Hölzel, Folkhard; Kramer, Manfred; and Tiedemann, Jens, 6,039,072, Cl. 137-512.300.

Wabuco: *See—*
Culbertson, Russell D., 6,039,395, Cl. 297-202.000.

Wachter, Michael P.: *See—*
Beers, Scott A.; Malloy, Elizabeth A.; Wachter, Michael P.; and Wu, Wei, 6,040,320, Cl. 514-341.000.

Wacker-Chemie GmbH: *See—*
Dauth, Jochen; Hierstetter, Thomas; Deubzer, Bernward; and Gratzl, Petra, 6,040,383, Cl. 525-100.000.
Schantz, Matthäus; Köppl, Franz; and Flottmann, Dirk, 6,040,544, Cl. 209-577.000.
Schneider, Otto; and Kratschmera, Ralf, 6,040,410, Cl. 528-14.000.

Wada, Kimihito: *See—*
Mizoguchi, Naoyuki; Yamamoto, Katsuyuki; and Wada, Kimihito, 6,039,997, Cl. 426-549.000.

Wada, Yasuhiro, to Sharp Kabushiki Kaisha. DBS tuner for satellite broadcasting receivers. 6,041,224, Cl. 455-327.000.

Wadaki, Takeru: *See—*
Okita, Tomoaki; Nakashima, Katsumi; Mizushima, Takashi; and Wadaki, Takeru, 6,040,351, Cl. 521-140.000.

Waddington, William H.; Tan, Leng Leng; and Grewell, Patricia, to Oracle Corporation. Method for managing shared resources in a multiprocessing computer system. 6,041,384, Cl. 710-200.000.

Wagener, Jefferson L.: *See—*
Hodgson, Craig W.; Wagener, Jefferson L.; Digonnet, Michel J. F.; and Shaw, H. John, 6,040,571, Cl. 250-227.140.

Wagner, Matthew Lincoln: *See—*
Papavassiliou, Vasilis; Wagner, Matthew Lincoln; and Day, Roger William, 6,040,467, Cl. 549-534.000.

Wagner, Oliver: *See—*
Jambor, Arno; and Wagner, Oliver, 6,039,383, Cl. 296-108.000.

Wagner, Peer-Oliver, to Bayerische Motoren Werke Aktiengesellschaft. Switch arrangement for a vehicle seat. 6,040,533, Cl. 200-5.00A.

Wagner, Peter; and Si, Joan Qi, to Novo Nordisk A/S. Use of a deaminating oxidase in baking. 6,039,982, Cl. 426-18.000.

Wagner, Peter; and Si, Joan Qi, to Novo Nordisk A/S. Use of a pyranose oxidase in baking. 6,039,983, Cl. 426-18.000.

Wagner, Phillip C.: *See—*
Monk, David T.; Hill, Joe T.; Wagner, Phillip C.; Loprete, Joseph F.; and Young, Michael R., 6,040,679, Cl. 318-778.000.

Wahl, Josef: *See—*
Vogelbacher, Uwe Josef; Keil, Michael; Klintz, Ralf; Wahl, Josef; Wingert, Horst; König, Hartmann; Rack, Michael; Götz, Roland; and Teles, Joaquim Henrique, 6,040,458, Cl. 548-371.100.

Wakahara, Shirou, to Sharp Kabushiki Kaisha. Image forming apparatus with restructured image data. 6,039,435, Cl. 347-55.000.

Wakata, Shigekazu; and Saijo, Eiji, to Sumitomo Wiring Systems, Ltd. Rubber plug for waterproof connector. 6,039,603, Cl. 439-587.000.

Wakino, Kikuo: *See—*
Sekijima, Takenori; Fujii, Takashi; Wakino, Kikuo; and Okada, Masakatsu, 6,039,802, Cl. 117-49.000.

Wakita, Sachio: *See—*
Morita, Naotoshi; and Wakita, Sachio, 6,039,816, Cl. 134-19.000.

Walbro Corporation: *See—*
Ley, Wayne A.; Mroczka, David E.; and Talaski, Edward J., 6,039,548, Cl. 417-313.000.

Wald, Stephen A.: *See—*
Gao, Yun; Hett, Robert; Fang, Kevin Q.; Wald, Stephen A.; Redmon, Martin P.; and Senanayake, Chris Hugh, 6,040,344, Cl. 514-554.000.

Walker, Craig William: *See—*
Martin, Wallace Anthony; Adams, Jonathan Patrick; Andersen, Finn Thrige; Beaton, Stephen Robert; Christensen, Svend; Jensen, Allan G.; Kindt-Larsen, Ture; Lust, Victor; Walker, Craig William; and Wang, Daniel Tsu-Fang, 6,039,899, Cl. 264-1.360.

Walker, Jay S.; Case, T. Scott; Hartmann, Tracy; and Tedesco, Daniel E., to priceline.com Incorporated. System and method for motivating submission of conditional purchase offers. 6,041,308, Cl. 705-14.000.

Walker, Jeffrey P.; and Bernard, Robert M., to Ichor Medical Systems Inc. Drug delivery system and method. 6,041,252, Cl. 604-20.000.

Walker, Michael: *See—*
Matt, Hans Jürgen; Walker, Michael; and Ackermann, Uwe, 6,041,290, Cl. 702-191.000.

Walker, William F.; Toth, Cynthia A.; and Davidsen, Richard E., to Duke University; and Novason Corporation. Kinetic acoustic ocular examination apparatus and method. 6,039,691, Cl. 600-452.000.

Wall, Frederick G.: *See—*
Blake, Terence G. W.; Andresen, Bernhard H.; and Wall, Frederick G., 6,040,708, Cl. 326-33.000.

Wall, Monroe E.; and Wani, Mansukh C., to Research Triangle Institute. Water-soluble esters of camptothecin compounds. 6,040,313, Cl. 514-283.000.

Wallace, Robert F., to SanDisk Corporation. Semiconductor package using terminals formed on a conductive layer of a circuit board. 6,040,622, Cl. 257-679.000.

Wallace, Robert M.: *See—*
Anthony, John Mark; Wallace, Robert M.; Wei, Yi; and Wilk, Glen, 6,040,230, Cl. 438-398.000.

Waller, Carol: *See—*
Cardy, Douglas Ross; Rambo, Ken; and Waller, Carol, 6,041,109, Cl. 379-201.000.

Walter, Helmut: *See—*

Kast, Jürgen; Vossen, Marcus; von Deyn, Wolfgang; Engel, Stefan; Hill, Regina Luise; Kardorff, Uwe; Otten, Martina; Plath, Peter; Walter, Helmut; Westphalen, Karl-Otto; and Misslitz, Ulf, 6,040,274, Cl. 504-348.000.

Walter, Roland: *See*—
Merz, Albert; Vogg, Hubert; and Walter, Roland, 6,038,988, Cl. 110-346.000.

Walters, David N.: *See*—
Wilt, Truman F.; Walters, David N.; Claar, James A.; Donnelly, Karen D.; Carney, Joseph M.; and Wolff, Andrew R., 6,040,394, Cl. 525-474.000.

Wälti, Ernst Rudolf: *See*—
Glück, Reinhard; Klein, Peter; Herrmann, Peter; and Wälti, Ernst Rudolf, 6,040,167, Cl. 435-235.100.

Wandel, Hermann; Jost, Michael; Sommer, Helmut; and Fischer-Wilk, Robert, to Nord-Micro Elektronik Feinmechanik AG; and Daimler Chrysler AG. Aircraft pitot and static pressure sensing device and aircraft having the sensing device. 6,038,932, Cl. 73-861.650.

Wang, Allan: *See*—
Ho, Zonh-Zen; Jannson, Tomasz P.; Lieberman, Robert A.; Savant, Gajendra D.; and Wang, Allan, 6,040,171, Cl. 435-288.100.

Wang, Cheng-Chih, to Winbond Electronics Corp. Security control for computer power supply subsystem. 6,041,413, Cl. 713-202.000.

Wang, Daniel Tsu-Fang: *See*—
Martin, Wallace Anthony; Adams, Jonathan Patrick; Andersen, Finn Thrige; Beaton, Stephen Robert; Christensen, Svend; Jensen, Allan G.; Kindt-Larsen, Ture; Lust, Victor; Walker, Craig William; and Wang, Daniel Tsu-Fang, 6,039,899, Cl. 264-1.360.

Wang, David N. K.: *See*—
Chang, Mei; Wang, David N. K.; White, John M.; and Maydan, Dan, 6,040,022, Cl. 427-579.000.

Wang, Fei; Foote, David K.; Cagan, Myron R.; and Gupta, Subhash, to Advanced Micro Devices. Semiconductor device including antireflective etch stop layer. 6,040,619, Cl. 257-649.000.

Wang, Guijun: *See*—
Hollingsworth, Rawle I.; and Wang, Guijun, 6,040,464, Cl. 549-451.000.

Wang, Jih-Hwa: *See*—
Yang, Chie-Ming; Wang, Jih-Hwa; and Lin, Yen-Yi, 6,040,238, Cl. 438-592.000.

Wang, Lihong, to Texas A&M University System, The. Method and apparatus for frequency encoded ultrasound-modulated optical tomography of dense turbid media. 6,041,248, Cl. 600-407.000.

Wang, Lin: *See*—
Drysdale, Neville Everton; Wang, Lin; and Yang, Zhen-Yu, 6,040,419, Cl. 528-408.000.

Wang, Mai. Interactive and animated mini-theater. 6,039,625, Cl. 446-83.000.

Wang, Mam-Tsung: *See*—
Chen, Chia-Hsing; and Wang, Mam-Tsung, 6,040,993, Cl. 365-185.030.

Wang, Ping-Shin, to Pai Lung Machinery Mill Co., Ltd. Circular knitting machine shut-down positioning and needle/feeder position control method. 6,038,890, Cl. 66-157.000.

Wang, Shiuh-Liang. Lighted water globe. 6,039,453, Cl. 362-101.000.

Wang, Shumin: *See*—
Kaufman, Vlasta Brusic; and Wang, Shumin, 6,039,891, Cl. 252-79.100.

Wang, Yao-Tzung: *See*—
Huang, Nen-Fu; Wang, Yao-Tzung; and Lin, Trung-Pao, 6,041,358, Cl. 709-238.000.

Wang, Ziyi: *See*—
Wilke, Thomas A.; and Wang, Ziyi, 6,039,697, Cl. 600-532.000.

Wani, Mansukh C.: *See*—
Wall, Monroe E.; and Wani, Mansukh C., 6,040,313, Cl. 514-283.000.

Ward, Billy W.: *See*—
Libby, Charles J.; and Ward, Billy W., 6,039,000, Cl. 118-723.00E.

Ward, Gary H.: *See*—
Govind, Nayna; Jinks, Philip A.; Ross, Danna L.; and Ward, Gary H., 6,039,932, Cl. 424-45.000.

Ward, John S.: *See*—
Merritt, Leander; and Ward, John S., 6,040,442, Cl. 540-461.000.

Ward, Paul D.: *See*—
Cannon, William J.; Remnant, David K.; Ward, Paul D.; and Hoerig, Timothy R., 6,041,402, Cl. 712-200.000.

Wardeberg, Jørn; and Knudsen, Anton Marius, to Alcatel. Seismic cable and method of making the same. 6,041,282, Cl. 702-1.000.

Wardle, David G.: *See*—
Pooley, Michael B.; Strotton, Carl N.; and Wardle, David G., 6,038,868, Cl. 62-63.000.

Warner-Lambert Company: *See*—
Chen, Michael Huai Gu; Chung, Fu-Zon; and Lee, Helen Tsenwhei, 6,040,316, Cl. 514-316.000.

Warner, Mark W.; Drake, Steven D.; and Giardello, Michael A., to A. O. Smith Corporation. Metathesis polymerizered olefin composites including sized reinforcement material. 6,040,363, Cl. 523-214.000.

Warren, Robert, to SGS-Thomson Microelectronics Limited. Integrated circuit device and method of communication therewith. 6,041,378, Cl. 710-127.000.

Warther, Richard O.; and Steen, C. Raymond, Jr., to Vanguard Identification Systems, Inc. Printed sheet products. 6,039,356, Cl. 283-61.000.

Wartsila Diesel International Ltd Oy: *See*—
Gullberg, Lars, 6,039,497, Cl. 403-16.000.

Warzecha, Wolfgang: *See*—
Schöps, Karl-Friedrich; and Warzecha, Wolfgang, 6,039,152, Cl. 187-414.000.

Wasley, Jan W. F.: *See*—
Greenlee, William; Gangly, Ashit; and Wasley, Jan W. F., 6,040,448, Cl. 544-363.000.

Wasserman, Wyeth W.: *See*—
Fahl, William E.; and Wasserman, Wyeth W., 6,040,424, Cl. 530-350.000.

Watanabe, Akira: *See*—
Adachi, Kazutaka; and Watanabe, Akira, 6,039,675, Cl. 477-174.000.

Watanabe, Hideo; Sakai, Motohiro; and Tezuka, Hirofusa, to Thermovonics Co., Ltd. Temperature-controlled appliance. 6,038,865, Cl. 62-3.600.

Watanabe, Hiromitsu: *See*—
Nishio, Makoto; and Watanabe, Hiromitsu, 6,041,037, Cl. 370-228.000.

Watanabe, Hiroshi: *See*—
Mano, Shigeru; Watanabe, Hiroshi; Fukumuro, Kaori; and Yamaya, Yorihiro, 6,040,267, Cl. 503-201.000.
Sunagawa, Takuya; Watanabe, Hiroshi; Ohshita, Ryuji; Fujimoto, Masahisa; Nohma, Toshiyuki; and Nishio, Koji, 6,040,090, Cl. 429-231.950.

Watanabe, Masahiro, to Mitsubishi Denki Kabushiki Kaisha. Vehicle-mounted radar apparatus. 6,040,795, Cl. 342-70.000.

Watanabe, Masahiro: *See*—
Yamamoto, Hiroki; Naito, Takashi; Namekawa, Takashi; Takahashi, Ken; Watanabe, Masahiro; and Takeo, Noriyuki, 6,040,029, Cl. 428-64.100.

Watanabe, Masaki: *See*—
Shiitani, Shuichi; and Watanabe, Masaki, 6,040,836, Cl. 345-427.000.

Watanabe, Ryoji: *See*—
Webb, Richard D.; and Watanabe, Ryoji, 6,040,838, Cl. 345-433.000.

Watanabe, Takayuki: *See*—
Himeshima, Tomoharu; Nakagawa, Kazumoto; Iwai, Tatsuo; and Watanabe, Takayuki, 6,039,892, Cl. 252-188.280.

Watanabe, Toshio: *See*—
Ichimura, Isao; Maeda, Fumisada; Yamamoto, Kenji; Ohsato, Kiyoshi; Watanabe, Toshio; and Suzuki, Akira, 6,041,031, Cl. 369-112.000.

Watanabe, Yoshitane; Suzuki, Keitaro; Koyama, Yoshinari; and Iijima, Motoko, to Nissan Chemical Industries, Ltd. Hydrated zinc stannate sols, coating compositions and optical elements. 6,040,372, Cl. 524-413.000.

Waters, Brian G.; Stoltz, Gregory E.; and Maldanis, Algert J., to Agent Systems, Inc. Automatic validating farebox system and method. 6,039,164, Cl. 194-206.000.

Watkins, John, to Sun Microsystems, Inc. Reducing two variables in alternate clock cycles during data transmission for monitoring when a data burst is close to completion. 6,041,369, Cl. 710-35.000.

Watkins, Michael L.: *See*—
Fleischhauer, Grier S.; Higgins, Charles T.; Losee, D. Bruce; Nelson, J. Robert, Jr.; Ripley, Robert L.; Sano, Masato; Sharpe, David E.; and Watkins, Michael L., 6,040,560, Cl. 219-494.000.

Watson, Brett: *See*—
Hohlweg, Rolf; Madsen, Peter; Jørgensen, Tine Krogh; Andersen, Knud Erik; Watson, Brett; Polivka, Zdenek; Konigova, Otylie; Kovandova, Martina; Silhánková, Alexandra; and Valenta, Vladimir, 6,040,302, Cl. 514-217.000.

Watson, Charles C.; and Jones, William F., to CTI Pet Systems, Inc. Method and apparatus for forming multi-dimensional attenuation correction data in tomography applications. 6,040,580, Cl. 250-363.030.

Watson, Derrick John: *See*—
Jobson, Simon; and Watson, Derrick John, 6,040,474, Cl. 560-243.000.

Watson, Fred W.; Hannock, Wayne; Lam, Robert; and Evans, George, to United States of America, Navy. Insensitive warhead casings. 6,038,979, Cl. 102-481.000.

Watson, Lynn R.; Castleberry, James E.; Luke, David D.; and Gilbert, David C., to In-System Design, Inc. Universal serial bus to parallel bus signal converter and method of conversion. 6,040,792, Cl. 341-100.000.

Watson, Sarah May: *See*—
Miller-Kovach, Karen; Watson, Sarah May; Way, Marian Jane; Frye, Wanema; Melnyk, Mary Grace; and Forman, Adrienne, 6,040,531, Cl. 177-25.160.

Watt, Russell J.: *See*—
Etters, Harry N.; Fuerst, Robert M.; and Watt, Russell J., 6,039,600, Cl. 439-496.000.

Watts, Gary P.: *See*—
Geib, Joseph J.; Casanova, Scott D.; Mennie, Douglas U.; Mazur, Richard A.; and Watts, Gary P., 6,039,644, Cl. 453-10.000.

Watts, John Christopher, to Valeo Elecrical Systems, Inc. System and method for driving wipers in a windshield wiper system. 6,040,667, Cl. 318-280.000.

Wavetek Corporation: *See*—
Franchville, Douglas J.; and Chappell, Daniel K., 6,041,076, Cl. 375-224.000.

Wavish, Peter R.; and Connah, David M., to U.S. Philips Corporation. Process control with evaluation of stored referential expressions in a multi-agent system adapted for use with virtual actors which are directed by sequentially enabled script agents. 6,040,842, Cl. 345-473.000.

Way, Marian Jane: *See*—
Miller-Kovach, Karen; Watson, Sarah May; Way, Marian Jane; Frye, Wanema; Melnyk, Mary Grace; and Forman, Adrienne, 6,040,531, Cl. 177-25.160.

Weatherford/Lamb, Inc.: *See*—
Carter, Thurman B.; Luke, Michael A.; and Roberts, John D., 6,039,118, Cl. 166-355.000.

Weaver, James C.: *See*—

Kost, Joseph; Pliquett, Uwe; Mitragotri, Samir S.; Langer, Robert S.; and Weaver, James C., 6,041,253, Cl. 604-20.000.

Weaver, Suzanne E.: *See*—
Binns, Bruce W.; Price, Rodney M.; Palm, Charles S.; and Weaver, Suzanne E., 6,041,140, Cl. 382-209.000.

Webb, Richard D.; and Watanabe, Ryoji, to Obejct Technology Licensing Corporation. Graphic state processing. 6,040,838, Cl. 345-433.000.

Webb, R. Michael. Above-ground fuel storage system. 6,039,123, Cl. 169-45.000.

Webber, James Lloyd: *See*—
Ryan, Shawn Gregory; Webber, James Lloyd; and Borowski, Joachim, 6,039,346, Cl. 280-736.000.

Weber, Jörg: *See*—
Scholz, Peter; Weber, Jörg; and Angstwurm, Klemens, 6,040,336, Cl. 514-468.000.

Weber Knapp Company: *See*—
Ransil, Matthew J.; and Pangborn, Donald R., 6,038,986, Cl. 108-145.000.

Weber, Larren G.: *See*—
Porter, John D.; Weber, Larren G.; and Thompson, William N., 6,040,713, Cl. 326-83.000.

Weber, Max D.: *See*—
Naud, Steven F.; Weber, Max D.; Lucero, Lei Lani; Bird, J. Dexter, III; and Fink, Martin D., 6,039,193, Cl. 212-270.000.

Webster, Kevin R.: *See*—
Kim, Kyoung S.; Kimball, S. David; Cai, Zhen-wei; Rawlins, David B.; Misra, Raj N.; Poss, Michael A.; Webster, Kevin R.; Hunt, John T.; and Han, Wen-Ching, 6,040,321, Cl. 514-369.000.

Weckstrom, Kurt P.; and Ristolainen, Kimmo J., to Instrumentarium Corp. Non-invasive optical measuring sensor and measuring method. 6,041,247, Cl. 600-323.000.

Wedeen, Robert S.; Durham, Arthur J.; Ferris, Matthew D.; and Dow, G. Sam, to TRW Inc. Waveguide to microstrip backshort with external spring compression. 6,040,739, Cl. 330-66.000.

Weder, Donald E.; and Feld, Jack, to Southpac Trust International, Inc. Retaining flap for shipping cartons. 6,039,179, Cl. 206-423.000.

Wedral, Elaine Regina: *See*—
Mallangi, Chandrasekhar R; Sher, Alexander A.; Fuchs, Eileen Carol; Vadehra, Dharam Vir; and Wedral, Elaine Regina, 6,039,986, Cl. 426-74.000.

Weeger, Hans-Peter: *See*—
Machnik, Franz; and Weeger, Hans-Peter, 6,038,845, Cl. 57-267.000.

Wegman, Mark N.: *See*—
Bacon, David Francis; Wegman, Mark N.; and Zadeck, Frank Kenneth, 6,041,179, Cl. 395-709.000.

Wehman, Thomas C.: *See*—
Edwards, Stuart D.; Wehman, Thomas C.; Parker, Theodore L.; Kucklick, Theodore; Skalnyi, Eugene V.; and Stein, Alan, 6,039,757, Cl. 623-1.000.

Wehrmann, Hartwig Josef Bernhard, to Pioneer Hi-Bred International, Inc. Hybrid maize plant and seed 38F70. 6,040,505, Cl. 800-320.100.

Wehunt, Omer Lem, Jr.: *See*—
Chambers, Peter; and Wehunt, Omer Lem, Jr., 6,040,788, Cl. 341-26.000.

Wei, Yi: *See*—
Anthony, John Mark; Wallace, Robert M.; Wei, Yi; and Wilk, Glen, 6,040,230, Cl. 438-398.000.

Weigelt, Oliver: *See*—
Martin, Varenka; Archambaud, Denis; Feyfant, Patrick; Gaglione, Philippe; Yoshida, Satoshi; Winckel, Laurent; and Weigelt, Oliver, 6,041,217, Cl. 455-38.300.

Weight Watchers (UK) Limited: *See*—
Miller-Kovach, Karen; Watson, Sarah May; Way, Marian Jane; Frye, Wanema; Melnyk, Mary Grace; and Forman, Adrienne, 6,040,531, Cl. 177-25.160.

Weikel, Charles W., to Agricultural Building Holdings, Inc. Grain sweeper device. 6,039,647, Cl. 460-114.000.

Weiner, Howard L.; and Hafler, David A., to Autoimmune, Inc. Peptides derived from immunodominant epitopes of myelin basic protein. 6,039,947, Cl. 424-184.100.

Weiner, Michael L.; Kolb V, John Jacob; and Chronis, Todd, to Manning and Napier Information Services, LLC. Automatic extraction and graphic visualization system and method. 6,041,331, Cl. 707-103.000.

Weinmann, Hanns-Joachim: *See*—
Schmitt-Willich, Heribert; Platzek, Johannes; Gries, Heinz; Schumann-Giampieri, Gabrielle; Weinmann, Hanns-Joachim; Vogler, Hubert; Deutsch, Julius; and Conrad, Juergen, 6,039,931, Cl. 424-9.364.

Weis, Vincent R.: *See*—
Bass, Edward R.; Kodonas, Konstantin G.; and Weis, Vincent R., 6,041,319, Cl. 705-409.000.

Weisbecker, Carl: *See*—
Jain, Kanti; Dunn, Thomas J.; Farmiga, Nestor O.; Weisbecker, Carl; and Kling, Carl C., 6,040,552, Cl. 219-121.700.

Welch, M. Bruce: *See*—
Peifer, Bernd; Palackal, Syriac J.; Welch, M. Bruce; Alt, Helmut G.; and Schertl, Peter, 6,040,402, Cl. 526-160.000.

Welcome Company, Ltd.: *See*—
Chou, Ammy, 6,040,559, Cl. 219-229.000.

Weller, Thomas: *See*—
Riedel, Michael; Weller, Thomas; Jacobs, Alexandra; Herrmann, Wolfgang Anton; and Morawietz, Markus, 6,040,469, Cl. 556-53.000.

Wellig, Alain: *See*—
Heveling, Josef; and Wellig, Alain, 6,040,457, Cl. 548-333.500.

Welling, Lutz; and Ney, Hermann, to U.S. Philips Corporation. Method of deriving characteristics values from a speech signal. 6,041,296, Cl. 704-209.000.

Wells, James A.: *See*—
Garrard, Lisa J.; Henner, Dennis J.; Bass, Steven; Greene, Ronald; Lowman, Henry B.; Wells, James A.; and Matthews, David J., 6,040,136, Cl. 435-5.000.

Wellstream, Inc.: *See*—
Loper, Cobie W., 6,039,083, Cl. 138-135.000.

Welsh, Sally H.: *See*—
L'Allier, James J.; Welsh, Sally H.; Nielsen, Boyd W.; Miles, Kurt W.; Myers, Ken L.; Henrie, Stephen P.; Norberg, Michael I.; and Helliwell, Laura I., 6,039,575, Cl. 434-323.000.

Wendt, Hermann: *See*—
Reisinger, Hans; Grüning, Ulrike; Wendt, Hermann; Stengl, Reinhard; Lehmann, Volker; Willer, Josef; Franosch, Martin; Schäfer, Herbert; Krautschneider, Wolfgang; Hofmann, Franz; and Böhm, Thomas, 6,040,995, Cl. 365-185.180.

Werner, Alexander: *See*—
Behar, Emmanuel; and Werner, Alexander, 6,039,885, Cl. 210-767.000.

Werner, William R., to Telect, Inc. Method for assembling a jack assembly panel. 6,038,766, Cl. 29-876.000.

Wessel Fragrances, Inc.: *See*—
Santini, Thomas F., 6,039,266, Cl. 239-60.000.

Westberg, Lars, to Telefonaktiebolaget LM Ericsson. Efficient transport of internet protocol packets using asynchronous transfer mode adaptation layer two. 6,041,054, Cl. 370-389.000.

Westercamp, Kenneth Lee: *See*—
Kielar, Stanley John; Westercamp, Kenneth Lee; and Bauer, Chad David, 6,039,143, Cl. 180-412.000.

Westerhof, Willem A., to U.S. Philips Corporation. Container and sealing device for use in the container. 6,039,301, Cl. 251-144.000.

Westermann, Edward F.: *See*—
Boroczky, Lilla; Gebler, Charlene Ann; Kaczmarczyk, John M.; Westermann, Edward F.; and Woodard, Robert L., 6,040,861, Cl. 348-409.000.

Westinghouse Air Brake Company: *See*—
Engle, Thomas E., 6,039,409, Cl. 303-7.000.

Westphalen, Karl-Otto: *See*—
Kast, Jürgen; Vossen, Marcus; von Deyn, Wolfgang; Engel, Stefan; Hill, Regina Luise; Kardorff, Uwe; Otten, Martina; Plath, Peter; Walter, Helmut; Westphalen, Karl-Otto; and Misslitz, Ulf, 6,040,274, Cl. 504-348.000.

Westveer, Scott Adrian: *See*—
Mabry, Melinda Ann; Rumpf, Frederick Harry; Podobnik, Ivan Zlatko; Westveer, Scott Adrian; Morgan, Allan Clark; Chung, Bin; and Andrews, Malcolm John, 6,040,364, Cl. 523-318.000.

Weyl, Helmut; and Wild, Bernhard, to Robert Bosch GmbH. Measuring device. 6,039,856, Cl. 204-400.000.

Whalen, John F.; and Robinson, David L., to Fisher Dynamics Corporation. Linear seat recliner. 6,039,399, Cl. 297-362.120.

Wharton, Robert J.; Daniel, Eric R.; and Brown, Joseph D., to Hewlett-Packard Company. Versatile printed circuit board for testing processing reliability. 6,040,530, Cl. 174-261.000.

Wheeler, Douglas J., to Teleflex Incorporated. Modular single lever assembly for shifting a vehicle transmission. 6,038,939, Cl. 74-473.300.

Whitaker Corporation, The: *See*—
Benjamin, Karen Elizabeth; and Hyland, James Henry, 6,039,599, Cl. 439-489.000.
Boles, Timothy Edward, 6,040,225, Cl. 438-314.000.
Kitamura, Hiroshi, 6,039,586, Cl. 439-157.000.
Korsunsky, Iosif; Grabbe, Dimitry; Hasircoglu, Alex; Schroepfer, Richard; and Ringler, Daniel Robert, 6,039,583, Cl. 439-101.000.
LaLange, Jacques; and Pamart, Olivier, 6,039,589, Cl. 439-188.000.
Pauza, William Vito; and Kerlin, Harold William, 6,039,610, Cl. 439-682.000.
Suzuki, Mitsuru, 6,039,615, Cl. 439-849.000.
Whiteman, Robert Neil, Jr.; McCleerey, Earl William; and McClinton, Jeffrey Byron, 6,039,596, Cl. 439-404.000.

White, Brian M., to Stanley Fastening Systems, L.P. Adjustable energy control valve for a fastener driving device. 6,039,231, Cl. 227-130.000.

White, John L., to American Piledriving Equipment, Inc. Apparatus for inserting elongate members into the earth. 6,039,508, Cl. 405-232.000.

White, John M.: *See*—
Chang, Mei; Wang, David N. K.; White, John M.; and Maydan, Dan, 6,040,022, Cl. 427-579.000.

White, Larry L., to Sony Corporation; and Sony Electronics, Inc. Apparatus for and method of accurately obtaining the cycle time of completion of transmission of video frames within an isochronous stream of data transmitted over an IEEE 1394 serial bus network. 6,041,286, Cl. 702-176.000.

Whitehead, Greg A.: *See*—
O'Herron, Michael R.; Loebach, John A.; and Whitehead, Greg A., 6,038,915, Cl. 73-49.300.

Whitehouse, Craig M.; and Andrien, Bruce A., Jr., to Analytica of Branford, Inc. Mass spectrometry from surfaces. 6,040,575, Cl. 250-288.000.

Whiteman, Robert Neil, Jr.; McCleerey, Earl William; and McClinton, Jeffrey Byron, to Whitaker Corporation, The. Gaskets for power cable tap connector. 6,039,596, Cl. 439-404.000.

Whiteman, William F.: *See*—
Mayer, Dale J.; Olarig, Sompong Paul; Whiteman, William F.; and Heinrich, David F., 6,041,377, Cl. 710-113.000.

Whitesell, Luke: *See*—
Myers, Charles; Trepel, Jane; Kang, Won Ki; Whitesell, Luke; and Neckers, Len, 6,040,334, Cl. 514-460.000.

Whiteside, G. Michael. Transit packaging having reduced content. 6,039,181, Cl. 206-428.000.

Whitmore, Rebecca E: *See*—
Patterson, Robert; Whitmore, Rebecca E; Bowers, Debra D.; and Swoboda, Dean P., 6,038,963, Cl. 99-287.000.

Whittaker, Bruce Ernest, to Unisys Corporation. Linear function generator method with counter for implementation of control signals in digital logic. 6,041,337, Cl. 708-274.000.

Wiacek, Michael F.; and Koch, Gary L., to Kelsey-Hayes Company. Hub extender with tool clearance passageways and drive nuts for hub and brake assembly. 6,039,407, Cl. 301-111.000.

Wiatr, Christopher L.: *See*—
Donlan, Rodney M.; Elliot, David L.; Kapp, Nancy J.; Wiatr, Christopher L.; and Rey, Paul A., 6,039,965, Cl. 424-405.000.

Wideman, Lawson Gibson; and Sandstrom, Paul Harry, to Goodyear Tire & Rubber Company, The. Bis(hydroxyalkyl alky lester) polysulfides. 6,040,389, Cl. 525-332.600.

Widigen, Larry, to Advanced Micro Devices, Inc. Segment descriptor cache addressed by part of the physical address of the desired descriptor. 6,041,396, Cl. 711-206.000.

Widmer, Daniel F.: *See*—
Seiffert, Jörg O.; and Widmer, Daniel F., 6,041,044, Cl. 370-254.000.

Wie, Bong; Bailey, David A.; and Heiberg, Christopher J., to Honeywell Inc. Robust singularity avoidance in satellite attitude control. 6,039,290, Cl. 244-165.000.

Wieczorek, David: *See*—
Ren, Wei-Min; and Wieczorek, David, 6,039,272, Cl. 239-597.000.

Wiegmann, Werner: *See*—
Knorr, Gottfried; Rotermund, Udo; Baum, Eva; Seifert, Holger; and Wiegmann, Werner, 6,040,349, Cl. 521-131.000.

Wieland, Heike-Andrea: *See*—
Eberlein, Wolfgang; Engel, Wolfhard; Rudolf, Klaus; Doods, Henri; Wieland, Heike-Andrea; and Willim, Klaus-Dieter, 6,040,289, Cl. 514-2.000.

Wier, Franz, to TRW Occupant Restraint Systems GmbH. Buckle tensioner. 6,039,352, Cl. 280-806.000.

Wiesenhahn, Mark R.: *See*—
Gerold, Gregory L.; and Wiesenhahn, Mark R., 6,039,626, Cl. 446-175.000.

Wieser, Josie B.: *See*—
Bennett, Patricia S.; Kenyon, Kenneth H.; Ekern, Ronald J.; Rose, Janna L.; and Wieser, Josie B., 6,040,088, Cl. 429-229.000.

Wieslander, Anders; and Cappelli, Giorgio, to Gambro AB. Bag for containing a sterile medical solution and method of mixing a sterile medical solution. 6,039,719, Cl. 604-410.000.

Wieslander, Anders, to Gambro AB. Bag for containing a sterile medical solution. 6,039,720, Cl. 604-410.000.

Wiggins, Philippa M., to Biostore New Zealand, Ltd. Methods for the lyophilization of living biological materials. 6,040,132, Cl. 435-2.000.

Wiggins, William: *See*—
Wood, Mervin G.; Wiggins, William; Blake, Catherine; Carpenter, Albert; and Chen, Wha, 6,040,455, Cl. 548-259.000.

Wight, E. William, to Beloit Technologies, Inc. Loaded clamped foil blade for use in a web-forming section of a papermaking machine. 6,039,843, Cl. 162-352.000.

Wilcox, Allan L.; and Zhang, Yong-Kang, to Centaur Pharmaceuticals, Inc. Process for preparing furan nitrone compounds. 6,040,444, Cl. 544-152.000.

Wild, Bernhard: *See*—
Weyl, Helmut; and Wild, Bernhard, 6,039,856, Cl. 204-400.000.

Wild, Ronald Lee, to Lucent Technologies Inc. Methods for coin sorting, coin change mechanism, and public telephone operable therewith. 6,039,165, Cl. 194-217.000.

Wilk, Glen: *See*—
Anthony, John Mark; Wallace, Robert M.; Wei, Yi; and Wilk, Glen, 6,040,230, Cl. 438-398.000.

Wilke, Thomas A.; and Wang, Ziyi, to Datex-Ohmeda, Inc. Fiber optic based multicomponent infrared respiratory gas analyzer. 6,039,697, Cl. 600-532.000.

Wilkie, William Edward, II: *See*—
Brown, Jack L.; Bruner, Rodney William; Rowe, Neal Edward; Wilkie, William Edward, II; and Yanniello, Robert, 6,039,612, Cl. 439-716.000.
Bruner, Rodney William; and Wilkie, William Edward, II, 6,040,976, Cl. 361-611.000.

Wilkins, Frances Elizabeth. Apparatus for decorating picture holders with seasonal or other displays. 6,038,803, Cl. 40-773.000.

Wilkins, Robert Lee; and Moles, Peter, to Kvaerner Oilfield Products. Adjustable isolation sleeve. 6,039,120, Cl. 166-368.000.

Wilkinson, Alan F.: *See*—
Martenson, Kenneth R.; Mosesian, Jerry L.; Wilkinson, Alan F.; and Goldbach, William, 6,040,971, Cl. 361-118.000.

Wilkinson, David J.: *See*—
Ramakrishnan, Terizhandur S.; Schwartz, Lawrence M.; Fordham, Edmund J.; Kenyon, William E.; and Wilkinson, David J., 6,040,696, Cl. 324-303.000.

Wille, William C.: *See*—
Boyd, Diane C.; Burns, Stuart M.; Hanafi, Hussein I.; Taur, Yuan; and Wille, William C., 6,040,214, Cl. 438-244.000.

Willems, Markus; and Thomas, Reinhold, to SMS Schloemann-Siemag Aktiengesellschaft. Straightening machine for rolled beams. 6,038,907, Cl. 72-247.000.

Willer, Josef: *See*—
Reisinger, Hans; Grüning, Ulrike; Wendt, Hermann; Stengl, Reinhard; Lehmann, Volker; Willer, Josef; Franosch, Martin; Schäfer, Herbert; Krautschneider, Wolfgang; Hofmann, Franz; and Böhm, Thomas, 6,040,995, Cl. 365-185.180.

Willett, Kevin R., to BTR Sealing Systems Technical Center, Inc. Swivel sleeve for hand held seal installation tool. 6,038,753, Cl. 29-235.000.

Willey, William Daniel, to Motorola, Inc. Apparatus and method for balancing power savings and call set up time in a wireless communication device. 6,041,241, Cl. 455-574.000.

Williams, Antony J.: *See*—
Godleski, Stephen A.; Dickinson, David A.; and Williams, Antony J., 6,040,129, Cl. 430-604.000.

Williams, Claude M.: *See*—
Scott, Logan; and Williams, Claude M., 6,041,046, Cl. 370-319.000.

Williams, Eric: *See*—
Michel, Alan Dean; and Williams, Eric, 6,041,118, Cl. 379-391.000.

Williams, Gregory G.: *See*—
Forbes, David R.; Mortensen, Dave; Bean, Ron M; and Williams, Gregory G., 6,039,627, Cl. 446-208.000.

Williams, Richard S.: *See*—
Quiachon, Dinah B.; Piplani, Alec A.; Baker, Steve G.; Williams, Ronald G.; Williams, Richard S.; Osborn, Kenneth L.; Layman, Ted W.; and Johansson, Peter K., 6,039,758, Cl. 623-1.000.

Williams, Robert: *See*—
Jain, Sunil; and Williams, Robert, 6,040,834, Cl. 345-356.000.

Williams, Robert B.: *See*—
Bowman, Howard L.; Darwin, Robert L.; Maraffio, William M.; Sawyer, Larry D.; Williams, Robert B.; Hudson, Frank E.; Hunstad, Mary; and Decker, Mark W., 6,039,124, Cl. 169-61.000.

Williams, Robert G.: *See*—
Tiller, Randolph C.; and Williams, Robert G., 6,040,555, Cl. 219-132.000.

Williams, Ronald G.: *See*—
Quiachon, Dinah B.; Piplani, Alec A.; Baker, Steve G.; Williams, Ronald G.; Williams, Richard S.; Osborn, Kenneth L.; Layman, Ted W.; and Johansson, Peter K., 6,039,758, Cl. 623-1.000.

Williamson, John T.: *See*—
Jackson, Neil A.; Williamson, John T.; Frantz, Francis J.; Ryll, Patrick B.; and Greenbaum, Hyman A., 6,041,019, Cl. 367-124.000.

Willim, Klaus-Dieter: *See*—
Eberlein, Wolfgang; Engel, Wolfhard; Rudolf, Klaus; Doods, Henri; Wieland, Heike-Andrea; and Willim, Klaus-Dieter, 6,040,289, Cl. 514-2.000.

Willoughby, W. Todd: *See*—
Teran, Alfredo J.; Derrick, John R., Jr.; Samad, Nidal A.; Willoughby, W. Todd; and Wood, Richard G., 6,039,874, Cl. 210-605.000.

Wilson, Charles Park; Winter, Gerhard Josef; and MacCormack, David Ross, to Sensormatic Electronics Corporation. Digital video recorder providing separate pipelining for odd and even fields from a single camera. 6,041,361, Cl. 709-253.000.

Wilson, David John: *See*—
Hatt, Raymond John; Wilson, David John; and Batstone, Druce Barry, 6,039,276, Cl. 241-30.000.

Wilson, James: *See*—
Ferguson, Paul F., Jr.; and Wilson, James, 6,040,793, Cl. 341-143.000.

Wilson, William B.: *See*—
Bailey, James A.; and Wilson, William B., 6,040,742, Cl. 331-2.000.

Wilt, Michael J., to Acuity Imaging, LLC. System and method for extracting image data. 6,041,148, Cl. 382-308.000.

Wilt, Truman F.; Walters, David N.; Claar, James A.; Donnelly, Karen D.; Carney, Joseph M.; and Wolff, Andrew R., to PPG Industries Ohio, Inc. Curable compositions based on functional polysiloxanes. 6,040,394, Cl. 525-474.000.

Winbond Electronics Corp.: *See*—
Wang, Cheng-Chih, 6,041,413, Cl. 713-202.000.
Yang, Yu-Hao, 6,040,595, Cl. 257-300.000.

Winch, Peter G.; and Billingsley, Richard, to Electronic Systems Protection, Inc. Power filter circuit responsive to supply system fault conditions. 6,040,969, Cl. 361-82.000.

Winckel, Laurent: *See*—
Martin, Varenka; Archambaud, Denis; Feyfant, Patrick; Gaglione, Philippe; Yoshida, Satoshi; Winckel, Laurent; and Weigelt, Oliver, 6,041,217, Cl. 455-38.300.

Wingert, Horst: *See*—
Vogelbacher, Uwe Josef; Keil, Michael; Klintz, Ralf; Wahl, Josef; Wingert, Horst; König, Hartmann; Rack, Michael; Götz, Roland; and Teles, Joaquim Henrique, 6,040,458, Cl. 548-371.100.

Winkler, Franz: *See*—
Krasser, Fritz; and Winkler, Franz, 6,040,747, Cl. 335-35.000.

Winkler, James L.; Fodor, Stephen P. A.; Buchko, Christopher J.; Ross, Debra A.; Aldwin, Lois; and Modlin, Douglas N., to Affymetrix, Inc. Combinatorial strategies for polymer synthesis. 6,040,193, Cl. 436-180.000.

Winn, William E. Uni-grid and multi-faceted cleaner for a cotton gin. 6,038,741, Cl. 19-48.00R.

Winter, Gerhard Josef: *See*—
Wilson, Charles Park; Winter, Gerhard Josef; and MacCormack, David Ross, 6,041,361, Cl. 709-253.000.

Winter, Jeffrey J.; Holden, Homer N.; and Lawrence, James L., to Dayco Products, Inc. Flexible hose construction and method of making the same. 6,039,082, Cl. 138-121.000.

Winter, Kirt Alan; and Smith, Thomas G., to Hewlett-Packard Company. Color halftoning options influenced by print-mode setting. 6,040,927, Cl. 358-534.000.

Winterstein, Frank: *See*—
Gehre, Hans-Joachim; and Winterstein, Frank, 6,040,640, Cl. 307-66.000.

Wipf, Peter: *See*—
Lazo, John S.; Rice, Robert L.; Cunningham, April; and Wipf, Peter, 6,040,323, Cl. 514-374.000.

Wisconsin Alumni Research Foundation: *See*—
Fahl, William E.; and Wasserman, Wyeth W., 6,040,424, Cl. 530-350.000.

Witco Corporation: *See*—
Islam, Mojahedul, 6,039,800, Cl. 106-680.000.

Witkowski, Ireneusz; and Zubin, Claudio, to Phillips & Temro Industries Ltd. Bumper mounted cord set. 6,039,602, Cl. 439-550.000.

Witzig, Uli, to Provenda Marketing AG. Table with a height-adjustable tabletop part. 6,038,982, Cl. 108-3.000.

Wixey, Barry D.: *See*—
Brickner, Louis C., Jr.; and Wixey, Barry D., 6,038,953, Cl. 83-783.000.

Woerner, Klaus D.; and Sommers, Allen, to ATS Automation Tooling Systems Inc. Eccentric grinder loading system. 6,039,640, Cl. 451-460.000.

Wojnarowski, Robert John; Rose, James Wilson; Balch, Ernest Wayne; Douglas, Leonard Richard; Downey, Evan Taylor; and Gdula, Michael, to General Electric Company. Method for fabricating a thin film inductor. 6,040,226, Cl. 438-381.000.

Wolf, David E.: *See*—
Chick, William L.; Wolf, David E.; and Cardullo, Richard A., 6,040,194, Cl. 436-501.000.

Wolfe, George B., to TRW Inc. Flexible switch apparatus and method for making same. 6,040,542, Cl. 200-512.000.

Wolfe, N. Lee; and Cipollone, Mark G., to United States of America, Environmental Protection Agency; and Dyncorp, Inc. Remediation of environmental contaminants using a metal and a sulfur-containing compound. 6,039,882, Cl. 210-747.000.

Wolfe, Steven R.; and Mierzwiak, James G., to Owens-Illinois Closure Inc. Pierce and cut closure. 6,039,198, Cl. 215-228.000.

Wolff, Andrew R.: *See*—
Wilt, Truman F.; Walters, David N.; Claar, James A.; Donnelly, Karen D.; Carney, Joseph M.; and Wolff, Andrew R., 6,040,394, Cl. 525-474.000.

Wollenberg, Norbert, to Leybold Materials GmbH. Target for the sputtering cathode of a vacuum coating apparatus and method for its manufacture. 6,039,855, Cl. 204-298.120.

Wolmark, Norman: *See*—
Rabin, Yoed; Julian, Thomas Benjamin; and Wolmark, Norman, 6,039,730, Cl. 606-23.000.

Won, Jong-ho, to Samsung Electronics Co., Ltd. Air-cooling apparatus for a projection television. 6,040,877, Cl. 348-748.000.

Wong, Daniel; and Aleksic, Milivoje, to ATI Technologies, Inc. Method and apparatus for space variable texture filtering. 6,040,837, Cl. 345-430.000.

Wong, Gordon G.: *See*—
Lockhart, David J.; Brown, Eugene L.; Wong, Gordon G.; Chee, Mark S.; and Gingeras, Thomas R., 6,040,138, Cl. 435-6.000.

Wong, Victor: *See*—
Sanjurjo, Angel; Lau, Kai-Hung; Lowe, David; Canizales, Anastasia; Jiang, Naixiong; Wong, Victor; Jiang, Liqiang; Schneider, Luke V.; Mufti, Naheed; Rewick, Robert T.; Johansson, Marie; and Kardos, Keith, 6,039,894, Cl. 252-301.40R.

Woo, Jong-Soo; and Yi, Hong-Gi, to Hanmi Pharm. Co. Ltd. Antifungal oral composition containing itraconazole and process for preparing same. 6,039,981, Cl. 424-601.000.

Wood, Alan G.: *See*—
Hembree, David R.; Farnworth, Warren M.; Wood, Alan G.; Gochnour, Derek; and Akram, Salman, 6,040,702, Cl. 324-755.000.

Wood, Mervin G.; Wiggins, William; Blake, Catherine; Carpenter, Albert; and Chen, Wha, to Ciba Specialty Chemicals Corporation. One-pot process for the preparation of 5-sulfonyl-substituted benzotriazoles UV absorbers. 6,040,455, Cl. 548-259.000.

Wood, Richard G.: *See*—
Teran, Alfredo J.; Derrick, John R., Jr.; Samad, Nidal A.; Willoughby, W. Todd; and Wood, Richard G., 6,039,874, Cl. 210-605.000.

Woodard, Robert L.: *See*—
Boroczky, Lilla; Gebler, Charlene Ann; Kaczmarczyk, John M.; Westermann, Edward F.; and Woodard, Robert L., 6,040,861, Cl. 348-409.000.

Woodward, Arthur E.: *See*—
Thorn, J. Stephen; and Woodward, Arthur E., 6,040,989, Cl. 363-41.000.

Woosley, Raymond Leon: *See*—
Gray, Nancy M.; and Woosley, Raymond Leon, 6,040,307, Cl. 514-252.000.

WorkTools, Inc.: *See*—
Marks, Joel, 6,039,652, Cl. 464-147.000.

Worldwide Semiconductor Manufacturing Corporation: *See*—
Yang, Jiuun-Jer, 6,040,603, Cl. 257-344.000.

Worsnop, Douglas R.: *See*—
Jayne, John T.; Worsnop, Douglas R.; and Kolb, Charles E., 6,040,574, Cl. 250-288.000.

Wozny, Mary Ellen; Chambers, Ralph P.; and Bland, James L., to General Electric Company. Aqueous fluoropolymer dispersion and method for making fluoropolymer-containing thermoplastic resin composition. 6,040,370, Cl. 524-394.000.

Wren, Douglas L.: *See*—
Dvorak, Charles A.; Wren, Douglas L.; Fisher, Lawrence E.; Axt, Steven D.; Humphreys, Eric R.; Arzeno, Humberto B.; Beard, Colin C.; Nguyen, Sam Linh; Han, Yeun-Kwei; Roberts, Christopher R.; Lund, Jan P.; and Fatheree, Paul R., 6,040,446, Cl. 544-276.000.

Wright, James T.: *See*—
Grundy, Michael J.; and Wright, James T., 6,039,268, Cl. 239-73.000.

Wright, John T. M. Surgical suture holder. 6,039,176, Cl. 206-63.300.

Wright, Robert William: *See*—
Cooper, Austin M.; Hazencomb, Robert M.; Silva, Albert W.; and Wright, Robert William, 6,039,860, Cl. 205-208.000.

Wright, Robin E., to 3M Innovative Properties Company. Free radical polymerization process using a monochromatic radiation source. 6,040,352, Cl. 522-2.000.

Wright, Russel. Multi-pocket female wallet. 6,039,175, Cl. 206-37.000.

Wristers, Derick J.; Fulford, H. Jim; and Gardner, Mark I., to Advanced Micro Devices, Inc. Self aligned method for differential oxidation rate at shallow trench isolation edge. 6,040,607, Cl. 257-389.000.

Wruck, Richard A.; and Shavit, Gideon, to Honeywell Inc. Deadband control assistant eliminating offset from setpoint. 6,041,264, Cl. 700-40.000.

Wu, An-hsiang: *See*—
Drake, Charles A.; Wu, An-hsiang; and Yao, Jianhua, 6,040,257, Cl. 502-64.000.

Wu, Chung-Yu; and Su, Ching-Piao, to Umax Data Systems Inc. Adapter circuitry for computers to support computer telephony. 6,041,105, Cl. 379-93.050.

Wu, Der-Yuan, to United Microelectronics Corp. Method of fabricating a shallow trench isolation structure which includes using a salicide process to form an aslope periphery at the top corner of the substrate. 6,040,231, Cl. 438-424.000.

Wu, Dong-Her. Structure of a pad type roller massager. 6,039,705, Cl. 601-99.000.

Wu, Ping: *See*—
Anumula, Sudhaker Reddy; and Wu, Ping, 6,041,388, Cl. 711-100.000.

Wu, San-Chi. Fan blade assembly of a ceiling fan. 6,039,540, Cl. 416-210.00R.

Wu, Shang-Qian; Morishita, Jun-ichi; Ishihara, Yoshio; and Kimijima, Tetsuya, to Nippon Sanso Corporation. Analysis method for gases and apparatus therefor. 6,040,915, Cl. 356-435.000.

Wu, Shudong; and Lu, Guowen, to Penn State Research Foundation, The. Optical phase-shift triangulation technique (PST) for non-contact surface profiling. 6,040,910, Cl. 356-376.000.

Wu, Wei: *See*—
Beers, Scott A.; Malloy, Elizabeth A.; Wachter, Michael P.; and Wu, Wei, 6,040,320, Cl. 514-341.000.

Wu, Xiaosong; Shertok, Joel; and Konstantin, Peter, to Pall Corporation. Hydrophilic membrane. 6,039,872, Cl. 210-500.350.

Würriehausen, Frank: *See*—
Neher, Erwin; and Würriehausen, Frank, 6,040,567, Cl. 250-206.000.

Wurziger, Hanns: *See*—
Häusler, Günther; Gericke, Rolf; Wurziger, Hanns; Baumgarth, Manfred; Lues, Inge; De Peyer, Jacques; and Bergmann, Rolf, 6,040,308, Cl. 514-253.000.

Wuu, Shou-Gwo; Chen, Lung; Yaung, Dun-Nian; and Lin, Yi-Miaw, to Taiwan Semiconductor Manufacturing Company. IPO deposited with low pressure O_3-TEOS for planarization in multi-poly memory technology. 6,040,227, Cl. 438-382.000.

Wyatt, Stuart Alan. Method for defining and verifying user access rights to a computer information. 6,041,411, Cl. 713-200.000.

Wyland, Christopher P., to Integrated Device Technology, Inc. Device for simulating dissipation of thermal power by a board supporting an electronic component. 6,039,471, Cl. 374-43.000.

Wyles, Richard H.: *See*—
Caulfield, John T.; Wyles, Richard H.; Schlesselmann, John D.; and Pettijohn, Kevin L., 6,040,568, Cl. 250-208.100.

Wytec, Incorporated: *See*—
Peterson, Dean F., 6,041,219, Cl. 455-81.000.

Xerox Corporation: *See*—
Andrews, John R.; Torpey, Peter A.; Burke, Cathie J.; and Freire, Eduardo M., 6,039,436, Cl. 347-62.000.
Gundlach, Kurt B.; Sanchez, Luis A.; Colt, Richard L.; and Sweeney, Maura A., 6,039,793, Cl. 106-31.280.
Jackson, Warren B.; and Hogg, Tad H., 6,039,316, Cl. 271-194.000.
Kassmann, Gary W., 6,040,791, Cl. 341-95.000.
Law, Simon M., 6,040,790, Cl. 341-65.000.
Lewis, Alan G., 6,040,812, Cl. 345-89.000.

Xi, Xiaojin: *See*—
Rybarczyk, David F.; Mar, Lori S.; Mets, Christiaan M.H.; and Xi, Xiaojin, 6,041,178, Cl. 395-705.000.

Xiao, Xiao: *See*—
Ferrari, Forrest K.; Xiao, Xiao; and Samulski, Richard Jude, 6,040,183, Cl. 435-457.000.

Xico, Inc.: *See*—
Reccia, Ralph; and Smith, Arthur C., 6,039,247, Cl. 235-379.000.

Xilinx, Inc.: *See*—
Mintzer, Lester, 6,041,340, Cl. 708-403.000.

Xiong, Bo: *See*—
Chen, Ben W.; and Xiong, Bo, 6,041,346, Cl. 709-218.000.

XOMOX International GmbH & Co.: *See*—
Gonsior, Wolfgang, 6,039,069, Cl. 137-454.200.
Xu, Jingyu: *See*—
Pan, Jing-Jong; Xu, Jingyu; and Shi, Yingzhong, 6,040,944, Cl. 359-590.000.
Xu, Yuanjian: *See*—
OBrien, John; Scherer, Axel; Yariv, Amnon; Lee, Reginald; Xu, Yuanjian; and Painter, Oskar, 6,040,590, Cl. 257-94.000.
Xylan Corporation: *See*—
Stone, Geoffrey C., 6,041,057, Cl. 370-397.000.
Xyrofin OY: *See*—
Pepper, Tammy; Krüger, Christof; and Mäkelä, Matti, 6,039,813, Cl. 127-42.000.
Yadan, Jean-Claude: *See*—
Tailhan-Lomont, Catherine; Erdelmeier, Irène; Moutet, Marc; Chaudiere, Jean; and Yadan, Jean-Claude, 6,040,328, Cl. 514-398.000.
Yadava, Yogendra Prasad: *See*—
Koshy, Jacob; Thomas, Jijimon Kumpukkattu; Kurian, Jose; Yadava, Yogendra Prasad; and Damodaran, Alathoor Damodaran, 6,040,275, Cl. 505-471.000.
Yagasaki, Yoichi; and Tahara, Katsumi, to Sony Corporation. Method and apparatus for picture encoding and decoding. 6,041,160, Cl. 386-94.000.
Yager, Paul: *See*—
Lochhead, Michael J.; and Yager, Paul, 6,039,897, Cl. 264-1.240.
Yagi, Nobuaki; and Fujishima, Atuyoshi, to Max Co., Ltd. Roll staple and staple cartridge storing the same. 6,039,230, Cl. 227-120.000.
Yagyu, Kiyohide: *See*—
Kanai, Hiroaki; Yagyu, Kiyohide; Maruta, Akira; Sasahara, Kouji; and Shiomi, Tsugio, 6,038,758, Cl. 29-557.000.
Yagyu, Mineto: *See*—
Tsuboi, Takayuki; Yagyu, Mineto; Nagano, Akihiko; and Kikuchi, Hiroshi, 6,040,880, Cl. 349-5.000.
Yako, Yuko; Takahashi, Kenji; Takagaki, Hiroshi; and Fukui, Nobuhito, to Sumitomo Chemical Company, Limited. Photoresist composition. 6,040,112, Cl. 430-270.100.
Yakushiji, Toru: *See*—
Hagiwara, Yoshihiro; Suetsugu, Junichi; Mizoguchi, Tadashi; Minemoto, Hitoshi; Takemoto, Hitoshi; Shima, Kazuo; and Yakushiji, Toru, 6,039,442, Cl. 347-89.000.
Yale University: *See*—
Sartorelli, Alan C.; Shyam, Krishnamurthy; Penketh, Philip G.; and Chen, Shu-Hui, 6,040,338, Cl. 514-482.000.
Yamada, Chuji; Kobayashi, Shin; Ogawa, Makoto; Kuwahara, Tohru; and Okumura, Eiji, to Isuzu Motors Limited. Eddy current braking system. 6,039,157, Cl. 188-158.000.
Yamada, Hiroshi: *See*—
Morooka, Hisao; Miura, Takamitsu; Yamada, Hiroshi; Kurihara, Katsuki; Matsuse, Mitsutaka; and Arai, Yasuyuki, 6,040,520, Cl. 136-245.000.
Yamada, Kazuhito: *See*—
Mikami, Kazuhiro; Yamada, Kazuhito; and Nishiwaki, Jiro, 6,039,673, Cl. 477-93.000.
Yamada, Kazuo; Mitate, Takehito; Nishimura, Naoto; Tsukuda, Yoshihiro; and Minato, Kazuaki, to Sharp Kabushiki Kaisha. Nonaqueous secondary battery. 6,040,092, Cl. 429-331.000.
Yamada, Mitsugu: *See*—
Hirata, Toshiaki; Urano, Akihiro; Fujino, Shuji; Yamada, Mitsugu; Nakano, Hidetomo; Morita, Shinji; and Miyazaki, Satoshi, 6,041,353, Cl. 709-224.000.
Yamada, Shunji: *See*—
Meki, Seiji; Yamada, Shunji; and Moriyama, Junichi, 6,041,066, Cl. 370-512.000.
Yamada, Yoshikuni; Nozawa, Shinya; and Yamada, Yutaka, to Mutoh Industries Ltd. Automatic drafting machine. 6,038,776, Cl. 33-18.100.
Yamada, Yutaka: *See*—
Yamada, Yoshikuni; Nozawa, Shinya; and Yamada, Yutaka, 6,038,776, Cl. 33-18.100.
Yamaguchi, Akihiro: *See*—
Karasawa, Akio; Yamaguchi, Akihiro; Yamaguchi, Keizaburo; and Ishihara, Yuko, 6,040,111, Cl. 430-270.100.
Yamaguchi, Akira: *See*—
Mitani, Masato; Nakajima, Kazuto; Kotani, Hiroyuki; Hokazono, Nobutaka; Naka, Hiroyuki; Yamaguchi, Akira; Ikeda, Junji; and Aoki, Nobuyuki, 6,040,016, Cl. 427-421.000.
Yamaguchi, Atsuyoshi; and Kubota, Minoru, to Yazaki Corporation. Method of distributing a wire harness to a wall surface by detachably locking the wire harness on a trimming plate. 6,038,764, Cl. 29-854.000.
Yamaguchi, Hideki: *See*—
Yasumoto, Taka-aki; and Yamaguchi, Hideki, 6,040,068, Cl. 428-688.000.
Yamaguchi, Hideo: *See*—
Otsubo, Kensei; and Yamaguchi, Hideo, 6,041,033, Cl. 369-271.000.
Yamaguchi, Keizaburo: *See*—
Karasawa, Akio; Yamaguchi, Akihiro; Yamaguchi, Keizaburo; and Ishihara, Yuko, 6,040,111, Cl. 430-270.100.
Yamaguchi, Masao: *See*—
Kobayashi, Kanji; and Yamaguchi, Masao, 6,040,959, Cl. 360-103.000.
Yamaguchi, Masatoshi: *See*—
Ishimori, Shozo; Yamaguchi, Masatoshi; Auvergne, Cristophe; and Leguillette, Bertrand, 6,038,840, Cl. 56-13.300.
Yamaguchi, Tatsuo: *See*—
Yamamatsu, Setsuo; Yamaguchi, Tatsuo; and Yokota, Koshiro, 6,040,472, Cl. 560-210.000.
Yamaguchi, Yasuhiro, to NEC Corporation. Low traffic network management method using estimated process execution time for manager-agent synchronization. 6,041,342, Cl. 709-202.000.
Yamaguchi, Yuji; Yoshimori, Masaharu; Ozawa, Hiroyuki; Iida, Ryohei; and Taniguchi, Kazuo, to Sony Corporation. Apparatus and method for storing and accessing picture generation data. 6,040,844, Cl. 345-518.000.
Yamaha Corporation: *See*—
Masuda, Hideyuki, 6,040,516, Cl. 84-622.000.
Mukojima, Masahiro; and Kamiya, Ryo, 6,040,515, Cl. 84-603.000.
Yamaha Hatsudoki Kabushiki Kaisha: *See*—
Öhlin, Kenth; and Danek, Magnus, 6,039,159, Cl. 188-322.150.
Motose, Hitoshi, 6,039,013, Cl. 123-65.0PE.
Motoyama, Yu, 6,039,012, Cl. 123-65.0PE.
Nagasaka, Hideaki; Samoto, Haruhiko; Yashiro, Yoshinobu; and Higaki, Yoshiyuki, 6,039,029, Cl. 123-442.000.
Yamaji, Michio: *See*—
Ohmi, Tadahiro; Yamaji, Michio; Shinohara, Tsutomu; Itoi, Shigeru; Hirao, Keiji; Kawano, Yuji; Tanaka, Shigeaki; Yokoyama, Kosuke; Morokoshi, Hiroshi; and Ikeda, Nobukazu, 6,039,360, Cl. 285-61.000.
Yamakawa, Hirohito: *See*—
Kimura, Nobutake; Ariga, Masato; Yamakawa, Hirohito; Nakagawa, Yoshio; and Shimizu, Akio, 6,040,495, Cl. 800-8.000.
Yamakawa, Kimio: *See*—
Isshiki, Minoru; Mine, Katsutoshi; and Yamakawa, Kimio, 6,040,395, Cl. 525-476.000.
Yamakawa, Shinobu: *See*—
Ichioka, Ryoji; Yamakawa, Shinobu; Okino, Hirohito; Kato, Hajime; Iwayama, Kazuyoshi; Konta, Hiroshi; and Kitamura, Akira, 6,040,490, Cl. 585-475.000.
Yamamatsu, Setsuo; Yamaguchi, Tatsuo; and Yokota, Koshiro, to Asahi Kasei Kogyo Kabushiki Kaisha. Catalyst for use in producing carboxylic esters. 6,040,472, Cl. 560-210.000.
Yamamoto, Akira, to Hitachi, Ltd. Storage apparatus system. 6,041,421, Cl. 714-7.000.
Yamamoto, Akira: *See*—
Kanda, Motohiro; Yamamoto, Akira; Nakano, Toshio; and Yoshida, Minoru, 6,041,391, Cl. 711-112.000.
Murakami, Hiroshi; Yoshioka, Koji; Morita, Keizo; Itokazu, Masafumi; Nakabayashi, Ken-ichi; Yamamoto, Akira; and Haraguchi, Munehiro, 6,040,814, Cl. 345-94.000.
Yamamoto, Ei: *See*—
Suzuki, Akio; Yamamoto, Ei; Kitamura, Toshiyuki; and Yoshida, Hiroyoshi, 6,041,265, Cl. 700-84.000.
Yamamoto, Hiroki; Naito, Takashi; Namekawa, Takashi; Takahashi, Ken; Watanabe, Masahiro; and Takeo, Noriyuki, to Hitachi, Ltd. Glass substrate of disk for recording information, a disk for recording information, and a disk device for recording information. 6,040,029, Cl. 428-64.100.
Yamamoto, Hironobu: *See*—
Ohtomo, Fumio; Nakata, Yuji; Fukuyama, Yoshitaka; Inomata, Asako; Shibuya, Sachio; Koga, Akinori; Ishii, Junji; Ito, Shoko; and Yamamoto, Hironobu, 6,038,850, Cl. 60-39.182.
Yamamoto, Hiroshi; Shimeki, Yasuharu; Kayashima, Kazuhiro; Maruno, Susumu; Fujimoto, Makoto; and Kojima, Yoshihiro, to Matsushita Electric Industrial Co., Ltd. Input/display integrated information processing device. 6,040,825, Cl. 345-173.000.
Yamamoto, Hiroshi; Niwa, Hisao; Kojima, Yoshihiro; Maruno, Susumu; Kayashima, Kazuhiro; Kouda, Toshiyuki; Maekawa, Hidetsugu; Ito, Satoru; and Shimeki, Yasuharu, to Matsushita Electric Industrial Co., Ltd. Character recognition machine utilizing language processing. 6,041,141, Cl. 382-231.000.
Yamamoto, Hisashi: *See*—
Sugita, Hiroaki; and Yamamoto, Hisashi, 6,040,091, Cl. 429-324.000.
Yamamoto, Ichiro; Itoh, Manabu; Shimojo, Masato; Yumiya, Yasunobu; Mukaihira, Takafumi; and Akada, Yasushige, to Mochida Pharmaceutical Co., Ltd. Nerve cell protective agents. 6,040,331, Cl. 514-411.000.
Yamamoto, Iwao; Kakikura, Eisaku; Kinouchi, Masami; Inoue, Yoshiaki; and Shiotsu, Tamotsu, to Mitsubishi Chemical Corporation. Carbon fibers and process for their production, and fiber-reinforced resin composition employing them. 6,040,051, Cl. 428-367.000.
Yamamoto, Katsuyuki: *See*—
Mizoguchi, Naoyuki; Yamamoto, Katsuyuki; and Wada, Kimihito, 6,039,997, Cl. 426-549.000.
Yamamoto, Kazuko: *See*—
Inoue, Soichi; Higashikawa, Iwao; Ogawa, Yoji; Hara, Shigehiro; and Yamamoto, Kazuko, 6,040,114, Cl. 430-296.000.
Yamamoto, Kenji: *See*—
Ichimura, Isao; Maeda, Fumisada; Yamamoto, Kenji; Ohsato, Kiyoshi; Watanabe, Toshio; and Suzuki, Akira, 6,041,031, Cl. 369-112.000.
Yamamoto, Masakazu: *See*—
Monoi, Takashi; Yamamoto, Masakazu; Torigoe, Hidenobu; and Takemoto, Yasunori, 6,040,399, Cl. 526-106.000.
Yamamoto, Ronald K.: *See*—
Ottoboni, Thomas B.; Yamamoto, Ronald K.; and Conston, Stanley R., 6,039,967, Cl. 424-426.000.
Yamamoto, Shuuhei: *See*—
Ishiguro, Yasuyuki; Sanada, Yoshiaki; Takaya, Toshihiko; Kimura, Takahiko; Kaneshige, Masatoshi; and Yamamoto, Shuuhei, 6,041,207, Cl. 399-275.000.
Yamamoto, Takashi: *See*—

Toyama, Yoshiharu; Kuroda, Akikazu; Kiyama, Tokuji; Kida, Sumio; Yoshida, Shunji; Yamamoto, Takashi; and Atsumi, Tetsuya, 6,039,809, Cl. 118-715.000.

Yamamoto, Takayuki; Kasamatsu, Yoshiharu; Toyoguchi, Takashi; Yokohata, Toru; and Koishi, Ryosuke, to Fujitsu Limited. Magnetic head slider and magnetic disk apparatus having the magnetic head slider. 6,040,958, Cl. 360-103.000.

Yamamoto, Tetsuya: *See*—
Naka, Akio; Yamamoto, Tetsuya; and Mori, Yoshikuni, 6,040,101, Cl. 430-108.000.

Yamamoto, Tomohiko; Tsumiyama, Tatsuo; and Sugimoto, Kouji, to Ube Industries, Ltd. Fluorinated polyimides, laminated substrates and polyamic acid solutions. 6,040,418, Cl. 528-353.000.

Yamamoto, Yasuhiro, to Asahi Kogaku Kogyo Kabushiki Kaisha. Information recording device. 6,041,192, Cl. 396-315.000.

Yamamoto, Yasuhiro, to Asahi Kogaku Kogyo Kabushiki Kaisha. Position adjusting device. 6,041,194, Cl. 396-429.000.

Yamamoto, Yasushi: *See*—
Yoshimoto, Susumu; and Yamamoto, Yasushi, 6,040,651, Cl. 310-313.00B.

Yamamura, Nobuo: *See*—
Tominaga, Youji; Toda, Kazuo; and Yamamura, Nobuo, 6,040,049, Cl. 428-355.0EN.

Yamane, Kazuyasu; Oikawa, Takeya; and Niimi, Tomohiro, to Casio Computer Co., Ltd. Radio communication apparatus having a plurality of identification codes. 6,041,244, Cl. 455-575.000.

Yamasa Corporation: *See*—
Takenouchi, Kenji; Hamamoto, Tomoki; and Noguchi, Toshitada, 6,040,158, Cl. 435-89.000.

Yamasaki, Shiro: *See*—
Koide, Norikatsu; Asami, Shinya; Umezaki, Junichi; Koike, Masayoshi; Yamasaki, Shiro; and Nagai, Seiji, 6,040,588, Cl. 257-15.000.

Yamasawa, Naoyuki: *See*—
Nakajima, Masahiko; Yamasawa, Naoyuki; and Nakamura, Masaru, 6,039,237, Cl. 228-51.000.

Yamashita, Atsuhiro: *See*—
Hamagishi, Goro; Kanatani, Keiichi; Kishimoto, Shunichi; Sakata, Masahiro; Yamashita, Atsuhiro; Matsushita, Naoki; and Mashitani, Ken, 6,040,807, Cl. 345-6.000.

Yamashita, Atsushi: *See*—
Furukawa, Taichiro; Kondoh, Kohhei; Yamashita, Atsushi; and Kanbori, Seiji, 6,039,475, Cl. 384-580.000.

Yamashita, Rikiya, to Dai Nippon Printing Co., Ltd. Cover tape. 6,040,047, Cl. 428-343.000.

Yamashita, Sensuke: *See*—
Tanaka, Junichi; Miyoshi, Kunio; and Yamashita, Sensuke, 6,039,723, Cl. 604-532.000.

Yamashita, Shigeharu: *See*—
Kudo, Kenji; Kuwabara, Kohji; Yamashita, Shigeharu; Fuchigami, Kazutoshi; and Katsuyama, Norikazu, 6,040,987, Cl. 363-21.000.

Yamashita, Shinichiro: *See*—
Kobayashi, Yuji; and Yamashita, Shinichiro, 6,040,524, Cl. 174-36.000.

Yamashita, Takekazu: *See*—
Kitaguchi, Akira; Hatakenaka, Makoto; Nakajima, Michio; Motonami, Kaoru; Shiroshima, Kiyoyuki; and Yamashita, Takekazu, 6,040,614, Cl. 257-529.000.

Yamato, Seiichi; Kamei, Noboru; Okuma, Kazuyoshi; Sugawa, Katsumi; Kadota, Hironori; and Sakata, Tomoyuki, to Fujitsu Limited. High-speed synchronous multiplexing apparatus. 6,041,062, Cl. 370-465.000.

Yamauchi, Alan M., to Sun Microsystems, Inc. Error detection and correction code for data and check code fields. 6,041,430, Cl. 714-752.000.

Yamaya, Yorihiro: *See*—
Mano, Shigeru; Watanabe, Hiroshi; Fukumuro, Kaori; and Yamaya, Yorihiro, 6,040,267, Cl. 503-201.000.

Yamazaki, Kazuo: *See*—
Liu, Jiancheng; and Yamazaki, Kazuo, 6,040,584, Cl. 250-559.110.

Yamazaki, Michihito, to Canon Kabushiki Kaisha. Image heating apparatus. 6,040,558, Cl. 219-216.000.

Yamazaki, Motohiro; Ando, Shuichi; and Toyama, Akira, to Nippon Precision Circuits, Inc. Digital data processing circuit and digital data processing method. 6,041,291, Cl. 702-191.000.

Yan, Lin: *See*—
Kahne, Daniel E.; and Yan, Lin, 6,040,433, Cl. 536-4.100.

Yanagi, Kenzo, to NEC Corporation. Compact image forming apparatus capable of smooth double side printing in a short time. 6,041,213, Cl. 399-401.000.

Yanagi, Yutaka: *See*—
Taki, Keishi; and Yanagi, Yutaka, 6,040,545, Cl. 219-75.000.

Yanagikubo, Takeshi: *See*—
Maekawa, Kazuteru; Suzuki, Yukiyoshi; and Yanagikubo, Takeshi, 6,040,824, Cl. 345-173.000.

Yanagisawa, Masahiro, to NEC Corporation. Contact recording magnetic disk device. 6,040,031, Cl. 428-65.400.

Yanagisawa, Ryozo: *See*—
Yoshimura, Yuichiro; Tanaka, Atsushi; Yanagisawa, Ryozo; Kobayashi, Katsuyuki; and Sato, Hajime, 6,041,284, Cl. 702-56.000.

Yanagisawa, Tatsuya: *See*—
Ishida, Nobuo; Togashi, Jun; Kimura, Tomomichi; Morikawa, Kiyoshi; Nakayama, Yoshihumi; Akiyama, Hiroshi; Yanagisawa, Tatsuya; and Ota, Takashi, 6,041,032, Cl. 369-191.000.

Yanagiuchi, Katsuaki: *See*—
Kanazawa, Hiromichi; Ueda, Kunihiro; Yanagiuchi, Katsuaki; Ikarashi, Tsunehiko; and Kohno, Masahide, 6,040,052, Cl. 428-408.000.

Yang, Chie-Ming; Wang, Jih-Hwa; and Lin, Yen-Yi, to Taiwan Semiconductor Manufacturing Company, Ltd. Thermal annealing for preventing polycide void. 6,040,238, Cl. 438-592.000.

Yang, George, to All Best Electronics Co., Ltd. Connector. 6,039,611, Cl. 439-701.000.

Yang, Henry: *See*—
Ranjan, Nalini; and Yang, Henry, 6,040,737, Cl. 327-543.000.

Yang, Houching M., to Alcatel. Continuous composite reinforced buffer tubes for optical fiber cables. 6,041,153, Cl. 385-109.000.

Yang, Jiuun-Jer, to Worldwide Semiconductor Manufacturing Corporation. Electrostatic discharge protection circuit employing MOSFETs having double ESD implantations. 6,040,603, Cl. 257-344.000.

Yang, Rachel R. P.: *See*—
Graham, Alexandra E.; Thomas, Albert V.; and Yang, Rachel R. P., 6,040,440, Cl. 536-124.000.

Yang, Sheng-Hsing: *See*—
Gong, Jeng; and Yang, Sheng-Hsing, 6,040,601, Cl. 257-341.000.

Yang, Yan-Bo. Hydrophilic polystrene divinylbenzene based matrixes for chromatography. 6,039,876, Cl. 210-635.000.

Yang, Yu-Hao, to Winbond Electronics Corp. Structure of a non-destructive readout dynamic random access memory. 6,040,595, Cl. 257-300.000.

Yang, Yun-sik; Cha, Hun; and Chae, Seung-ki, to Samsung Electronics Co., Ltd. Semiconductor device manufacturing system having means for reducing a pressure difference between loadlock and processing chambers. 6,039,770, Cl. 29-25.010.

Yang, Zhen-Yu: *See*—
Drysdale, Neville Everton; Wang, Lin; and Yang, Zhen-Yu, 6,040,419, Cl. 528-408.000.

Yanniello, Robert: *See*—
Brown, Jack L.; Bruner, Rodney William; Rowe, Neal Edward; Wilkie, William Edward, II; and Yanniello, Robert, 6,039,612, Cl. 439-716.000.

Yano, Kazuo: *See*—
Sano, Toshiaki; Ishii, Tomoyuki; Yano, Kazuo; and Mine, Toshiyuki, 6,040,605, Cl. 257-369.000.

Yao, Jianhua: *See*—
Drake, Charles A.; Wu, An-hsiang; and Yao, Jianhua, 6,040,257, Cl. 502-64.000.

Yap, Chas Hock Eng: *See*—
Timson, Colin J.; Yap, Chas Hock Eng; and Kelly, Sean, 6,041,412, Cl. 713-200.000.

Yarbrough, Garrett S.: *See*—
Mina, Nabil L.; Vilanilam, Santosh; and Yarbrough, Garrett S., 6,040,543, Cl. 200-559.000.

Yariv, Amnon: *See*—
OBrien, John; Scherer, Axel; Yariv, Amnon; Lee, Reginald; Xu, Yuanjian; and Painter, Oskar, 6,040,590, Cl. 257-94.000.

Yashiro, Yoshinobu: *See*—
Nagasaka, Hideaki; Samoto, Haruhiko; Yashiro, Yoshinobu; and Higaki, Yoshiyuki, 6,039,029, Cl. 123-442.000.

Yasohara, Masahiro: *See*—
Isomura, Yoshinori; Yasohara, Masahiro; and Takada, Kazuyuki, 6,040,673, Cl. 318-615.000.

Yasu, Toshiharu: *See*—
Takeuchi, Yoshiharu; Aburaya, Kiyoji; Yasu, Toshiharu; Tsubokawa, Masahiro; Sakai, Manabu; Aoshika, Shoji; and Narita, Tsutayoshi, 6,039,551, Cl. 418-88.000.

Yasuda, Akio; Nito, Keiichi; Matsui, Eriko; Takanashi, Hidehiko; and Bao, Yang Ying, to Sony Corporation. Liquid crystal devices comprising a multitude of domains having different threshold voltages for switching liquid crystals. 6,040,884, Cl. 349-129.000.

Yasuda, Chiaki: *See*—
Nishimura, Masaharu; Ohnishi, Keizo; Yasuda, Chiaki; Kajii, Shinichiro; Patrick, William P.; and Zander, Anthony C., 6,041,125, Cl. 381-71.400.

Yasuda, Katsumi: *See*—
Onishi, Masanori; Murata, Masanao; Nakai, Yutaka; Yasuda, Katsumi; Sugino, Tsukasa; Nakagawa, Susumu; and Miura, Kouji, 6,041,274, Cl. 701-26.000.

Yasuda, Kazunori: *See*—
Kato, Motoki; Igi, Nobuhiro; and Yasuda, Kazunori, 6,040,865, Cl. 348-416.000.

Yasuda, Masaaki: *See*—
Ishida, Tatsuyoshi; Yasuda, Masaaki; Onishi, Hitoshi; Kihara, Noriaki; Tsutsui, Toshiyuki; Sagane, Toshihiro; Kawasaki, Masaaki; and Nakahama, Hidenari, 6,040,407, Cl. 526-281.000.

Yasuda, Naoyuki: *See*—
Tomita, Taku; Araki, Mitsutoshi; and Yasuda, Naoyuki, 6,039,071, Cl. 137-505.370.

Yasumoto, Taka-aki; and Yamaguchi, Hideki, to Kabushiki Kaisha Toshiba. Ceramic wiring board and method of producing the same. 6,040,068, Cl. 428-688.000.

Yasuoka, Masayuki: *See*—
Iwano, Hiroshi; Kazama, Isamu; and Yasuoka, Masayuki, 6,039,025, Cl. 123-399.000.

Yates, Debra S.: *See*—
Nabors, William; Yates, Debra S.; Linnebur, David H.; Rodriguez, Jon; and Hill, Andrew, 6,038,723, Cl. 7-128.000.

Yaun, James S. Acoustic stringed instrument enhancement device. 6,040,510, Cl. 84-294.000.

Yaung, Dun-Nian: *See*—
Wuu, Shou-Gwo; Chen, Lung; Yaung, Dun-Nian; and Lin, Yi-Miaw, 6,040,227, Cl. 438-382.000.
Yazaki Corporation: *See*—
Kataoka, Ichiro; Aoki, Kunimitsu; Furuya, Yoshiyuki; Matsushita, Junichi; Nishiyama, Hiroshi; Nakajima, Katsutoshi; Norizuki, Akira; Murakami, Katsumi; and Amari, Takeyuki, 6,040,760, Cl. 340-425.500.
Shinchi, Akira, 6,039,592, Cl. 439-271.000.
Sugawara, Akira; Hana, Yoshitake; Endo, Takayoshi; and Sugiyama, Osamu, 6,040,067, Cl. 428-647.000.
Yamaguchi, Atsuyoshi; and Kubota, Minoru, 6,038,764, Cl. 29-854.000.
Yee, Meng F.: *See*—
Bernardin, Charles P.; and Yee, Meng F., 6,041,236, Cl. 455-446.000.
Yeh, Ching-Fa; and Liu, Jeng-Shu. Method for forming a polyoxide film on doped polysilicon by anodization. 6,039,857, Cl. 205-106.000.
Yellowhair, David: *See*—
Unger, Evan; McCreery, Thomas; Yellowhair, David; and Barrette, Terrence R., 6,039,557, Cl. 425-429.000.
Yen, Ming-Shu: *See*—
Liu, Meng-Chang; Lin, Jyh-Feng; Yen, Ming-Shu; Su, Su-Ying; Chiu, Fu-Ying; and Lin, Chien-Hung, 6,040,223, Cl. 438-303.000.
Yenofsky, Richard: *See*—
Rice, Douglas; Carozzi, Nadine; Anderson, David M.; Rajasekaran, Kanniah; Rangan, Thirumale S.; Yenofsky, Richard; and Lotstein, Richard, 6,040,504, Cl. 800-314.000.
Yeol, Oh Eui; Mitsumori, Kenichi; and Miyazawa, Satoshi, to Alps Electric Co., Ltd. Cleaning method and apparatus for the same. 6,039,815, Cl. 134-2.000.
Yergen, Anoush: *See*—
Kelley, David E.; Kramer, Jeffrey C.; Pontell, Jonathan L.; Parral, Loretta S.; Roth, Michelle V.; Yergen, Anoush; and Sanford, Arlene, 6,039,710, Cl. 602-74.000.
Yi, Hong-Gi: *See*—
Woo, Jong-Soo; and Yi, Hong-Gi, 6,039,981, Cl. 424-601.000.
Yi, Seung Hyun; and Kim, Jae Whan, to Hyundai Electronics Industries Co., Ltd. Semiconductor memory device. 6,041,005, Cl. 365-207.000.
Yializis, Angelo: *See*—
Mikhael, Michael G.; Boufelfel, Ali; and Yializis, Angelo, 6,040,017, Cl. 427-496.000.
Yim, Changhoon, to Thomson Consumer Electronics, Inc,. Field/frame conversion of DCT domain mixed field/frame mode macroblocks using 1-dimensional DCT/IDCT. 6,041,079, Cl. 375-240.000.
Yokhin, Boris, to Jordan Valley Applied Radiation. X-ray fluorescence analyzer. 6,041,095, Cl. 378-45.000.
Yokohama Rubber Co., Ltd., The: *See*—
Okada, Noboru, 6,039,826, Cl. 156-117.000.
Yokohata, Toru: *See*—
Yamamoto, Takayuki; Kasamatsu, Yoshiharu; Toyoguchi, Takashi; Yokohata, Toru; and Koishi, Ryosuke, 6,040,958, Cl. 360-103.000.
Yokoi, Masakazu: *See*—
Fukuo, Hidetoshi; and Yokoi, Masakazu, 6,039,795, Cl. 106-31.580.
Yokomizo, Koichi, to Oki Electric Industry Co., Ltd. Bit phase synchronizing method and bit phase synchronizing circuit. 6,041,089, Cl. 375-371.000.
Yokota, Hideyuki: *See*—
Arimori, Susumu; Seko, Masahiro; Tanaka, Masakazu; Monden, Noriko; and Yokota, Hideyuki, 6,040,415, Cl. 528-71.000.
Yokota, Koshiro: *See*—
Yamamatsu, Setsuo; Yamaguchi, Tatsuo; and Yokota, Koshiro, 6,040,472, Cl. 560-210.000.
Yokoyama, Kosuke: *See*—
Ohmi, Tadahiro; Yamaji, Michio; Shinohara, Tsutomu; Itoi, Shigeru; Hirao, Keiji; Kawano, Yuji; Tanaka, Shigeaki; Yokoyama, Kosuke; Morokoshi, Hiroshi; and Ikeda, Nobukazu, 6,039,360, Cl. 285-61.000.
Yokoyama, Satoshi: *See*—
Tozu, Kenji; Itoh, Takayuki; Fukami, Masanobu; and Yokoyama, Satoshi, 6,039,411, Cl. 303-116.100.
Yokoyama, Seiya: *See*—
Shirai, Kenji; Yokoyama, Seiya; and Oota, Tsutomu, 6,040,665, Cl. 318-14.000.
Yokoyama, Tomoki: *See*—
Nishida, Masatsugu; Ikeda, Toru; and Yokoyama, Tomoki, 6,040,674, Cl. 318-632.000.
Yokoyama, Yoshihito: *See*—
Kondo, Motoyasu; Sakuma, Fukuyo; Urakawa, Youichi; Yokoyama, Yoshihito; and Hinai, Masatoshi, 6,040,704, Cl. 324-762.000.
Yonemoto, Takaharu: *See*—
Sugimoto, Hiroshi; Hagiya, Shigeo; Taketani, Noriaki; Yonemoto, Takaharu; and Yoshioka, Osamu, 6,040,620, Cl. 257-666.000.
Yoneyama, Masashi: *See*—
Hosokoshiyama, Hiroshi; Yoneyama, Masashi; Busujima, Makoto; Tokuda, Hiroaki; Osuga, Naohito; and Tashiro, Kouji, 6,039,204, Cl. 220-623.000.
Yoo, Cha-young: *See*—
Park, Young-wook; Yoo, Cha-young; Kim, Young-sun; and Nam, Seunghee, 6,039,811, Cl. 118-719.000.
Yoon, Sang Youl; and Shon, Ho Seok, to Orion Electric Co., Ltd. Solution for making photoconductive layer and an electrophotographic manufacturing method of the layer in CRT. 6,040,097, Cl. 430-28.000.
Yoshida, Akira; Oda, Kozo; Kasai, Takashi; Shimada, Kousei; Kogen, Hiroshi; Hayakawa, Ichiro; Ishihara, Sadao; Koga, Teiichiro; Kitazawa, Eiichi; and Tokui, Taro, to Sankyo Company, Limited. Urea derivatives having ACAT inhibitory activity, their preparation and their therapeutic and prophylactic use. 6,040,339, Cl. 514-485.000.
Yoshida, Hiroaki; Hagiwara, Zenzo; and Terasaki, Masanao, to Japan Storage Battery Co., Ltd. Nonaqueous electrolyte secondary battery. 6,040,086, Cl. 429-211.000.
Yoshida, Hiroyoshi: *See*—
Suzuki, Akio; Yamamoto, Ei; Kitamura, Toshiyuki; and Yoshida, Hiroyoshi, 6,041,265, Cl. 700-84.000.
Yoshida, Junichi: *See*—
Tomikawa, Ichiro; Soga, Mitsuhide; Fujii, Katsuyuki; Ogawa, Katsuhide; Yoshida, Junichi; Kawachi, Shigeo; and Noda, Takehiko, 6,039,441, Cl. 347-86.000.
Yoshida, Kenichi: *See*—
Mitsuhashi, Masashige; Ohno, Kenichi; and Yoshida, Kenichi, 6,039,635, Cl. 451-72.000.
Yoshida, Minoru: *See*—
Kanda, Motohiro; Yamamoto, Akira; Nakano, Toshio; and Yoshida, Minoru, 6,041,391, Cl. 711-112.000.
Yoshida, Satoshi: *See*—
Martin, Varenka; Archambaud, Denis; Feyfant, Patrick; Gaglione, Philippe; Yoshida, Satoshi; Winckel, Laurent; and Weigelt, Oliver, 6,041,217, Cl. 455-38.300.
Nakamura, Masaki; and Yoshida, Satoshi, 6,040,104, Cl. 430-110.000.
Yoshida, Shunji: *See*—
Toyama, Yoshiharu; Kuroda, Akikazu; Kiyama, Tokuji; Kida, Sumio; Yoshida, Shunji; Yamamoto, Takashi; and Atsumi, Tetsuya, 6,039,809, Cl. 118-715.000.
Yoshida, Tatsuya: *See*—
Oono, Masahiro; Iwanade, Hisao; Saitoh, Noboru; Sato, Koji; Shiba, Sukenori; Yoshida, Tatsuya; and Nagai, Nobuyuki, 6,040,677, Cl. 318-696.000.
Yoshida, Teruyuki: *See*—
Sakai, Seiichi; Yoshida, Teruyuki; and Abe, Fumiyoshi, 6,040,693, Cl. 324-210.000.
Yoshida, Tomonori; and Eguchi, Moriyuki, to Ikeda Bussan Co., Ltd. Seat reclining device. 6,039,400, Cl. 297-367.000.
Yoshihara, Masatoshi: *See*—
Sakamoto, Toshio; Tanaka, Toshizumi; Itoi, Hiromu; and Yoshihara, Masatoshi, 6,039,695, Cl. 600-459.000.
Yoshii, Minoru: *See*—
Hasegawa, Masanobu; Yoshii, Minoru; and Ohsaki, Yoshinori, 6,040,909, Cl. 356-375.000.
Yoshii, Tomoyuki: *See*—
Hori, Takeshi; Uezono, Tsutomu; Yoshii, Tomoyuki; and Funayama, Yasuhiro, 6,040,106, Cl. 430-127.000.
Yoshikawa, Masahito; and Davis, Mark E., to California Institute of Technology. Zeolite CIT-5 and method of making. 6,040,258, Cl. 502-64.000.
Yoshimi, Tomofumi: *See*—
Takeda, Haruo; Tatsumi, Yukio; Fujitani, Ikuji; Shioda, Takuya; Yoshimi, Tomofumi; Sugimoto, Tomohiko; and Haeiwa, Kazuhisa, 6,041,082, Cl. 375-300.000.
Yoshimori, Masaharu: *See*—
Yamaguchi, Yuji; Yoshimori, Masaharu; Ozawa, Hiroyuki; Iida, Ryohei; and Taniguchi, Kazuo, 6,040,844, Cl. 345-518.000.
Yoshimoto, Susumu; and Yamamoto, Yasushi, to NEC Corporation. Surface acoustic wave device. 6,040,651, Cl. 310-313.00B.
Yoshimura, Yuichiro; Tanaka, Atsushi; Yanagisawa, Ryozo; Kobayashi, Katsuyuki; and Sato, Hajime, to Canon Kabushiki Kaisha. Apparatus and method for determining coordinates of a designated point. 6,041,284, Cl. 702-56.000.
Yoshino Kogyosho Co., Ltd.: *See*—
Hosokoshiyama, Hiroshi; Yoneyama, Masashi; Busujima, Makoto; Tokuda, Hiroaki; Osuga, Naohito; and Tashiro, Kouji, 6,039,204, Cl. 220-623.000.
Yoshioka, Koji: *See*—
Murakami, Hiroshi; Yoshioka, Koji; Morita, Keizo; Itokazu, Masafumi; Nakabayashi, Ken-ichi; Yamamoto, Akira; and Haraguchi, Munehiro, 6,040,814, Cl. 345-94.000.
Yoshioka, Osamu: *See*—
Sugimoto, Hiroshi; Hagiya, Shigeo; Taketani, Noriaki; Yonemoto, Takaharu; and Yoshioka, Osamu, 6,040,620, Cl. 257-666.000.
Yoshiura, Syoichiro: *See*—
Tamagaki, Akira; Shimazawa, Yoichi; Matsuda, Hideo; and Yoshiura, Syoichiro, 6,040,924, Cl. 358-523.000.
Young, Henry Todd; Beach, Frederick Gaylord; and Roman, James Price, to General Electric Company. AC motorized wheel control system. 6,041,285, Cl. 702-113.000.
Young, Michael R.: *See*—
Monk, David T.; Hill, Joe T.; Wagner, Phillip C.; Loprete, Joseph F.; and Young, Michael R., 6,040,679, Cl. 318-778.000.
Young, Shirley M.: *See*—
Doxey, Mark Harvey; and Young, Shirley M., 6,039,341, Cl. 280-728.200.
Young, William R.; and Shearon, William B., to Intersil Corporation. Constant slew rate amplifier. 6,040,707, Cl. 326-21.000.
Youngner, Daniel W.; and Ridley, Jeffrey A., to Honeywell Inc. Apparatus and method for operating a micromechanical switch. 6,040,749, Cl. 335-78.000.
Yourbusiness Co., Ltd.: *See*—

Kinoshita, Tadatoshi, 6,038,908, Cl. 72-315.000.

Youssef, Tom: *See*—
McClure, David C.; and Youssef, Tom, 6,041,000, Cl. 365-200.000.

Yozan, Inc.: *See*—
Ito, Fumihito; and Shou, Guoliang, 6,040,228, Cl. 438-393.000.

Yu, Ching, to Advanced Micro Devices, Inc. Tracking availability of elements within a shared list of elements from an index and count mechanism. 6,041,328, Cl. 707-10.000.

Yu, Ken T.: *See*—
Chou, Marilyn M.; Tam, Herrick; Yu, King J. J.; and Yu, Ken T., 6,039,565, Cl. 433-29.000.

Yu, King J. J.: *See*—
Chou, Marilyn M.; Tam, Herrick; Yu, King J. J.; and Yu, Ken T., 6,039,565, Cl. 433-29.000.

Yu, Simon S. C. Electronic dumbbell. 6,039,679, Cl. 482-110.000.

Yu, Xianggang; Sculley, Terry Lee; and Niehaus, Jeffrey Alan, to ESS Technology, Inc. Efficient decimation filtering. 6,041,339, Cl. 708-313.000.

Yu, Young J., to LG Semicon Co., Ltd. Color linear charge coupled device and method for driving the same. 6,040,202, Cl. 438-70.000.

Yu, Yu Long; and Bensoussan, Alan, to Chinese Medicines Scientific Consultants Pty Ltd. Herbal compositions for treatment of gastrointestinal disorders. 6,039,954, Cl. 424-195.100.

Yuan, Jun; and Chen, Xi, to Neurogen Corporation. N-aminoalkyldibenzothiophenecarboxamides; new dopamine receptor subtype specific ligands. 6,040,459, Cl. 549-43.000.

Yudovsky, Joseph; and Kori, Moris, to Applied Materials, Inc. Substrate support member with a purge gas channel and pumping system. 6,040,011, Cl. 427-255.280.

Yui, Yasuji; and Kagami, Toshiki, to Sony Corporation. Printer head cleaning device for ink jet printer. 6,039,431, Cl. 347-30.000.

Yukumatsu, Masanobu: *See*—
Matsugatani, Kazuoki; and Yukumatsu, Masanobu, 6,040,796, Cl. 342-70.000.

Yumiya, Yasunobu: *See*—
Yamamoto, Ichiro; Itoh, Manabu; Shimojo, Masato; Yumiya, Yasunobu; Mukaihira, Takafumi; and Akada, Yasushige, 6,040,331, Cl. 514-411.000.

Yurek, Theodore F.: *See*—
Talley, Laroul J.; Yurek, Theodore F.; Ziegler, Douglas D.; and Robinson, Ross G., 6,038,902, Cl. 72-128.000.

Yuri, Kawasaki: *See*—
Junichi, Imaizumi; Yuri, Kawasaki; Tetsushi, Makino; and Toyoshi, Iida, 6,040,007, Cl. 427-215.000.

Yuyama, Shoji; and Shigeyama, Yasuhiro, to Kabushiki Kaisha Yuyama Seisakusho. Ampule feeder. 6,039,209, Cl. 221-171.000.

Yuzawa, Hideki, to Seiko Epson Corporation. Method and transferring conductor patterns to a film carrier, and masks and film carriers to be used therefor. 6,040,093, Cl. 430-5.000.

Yuzbasiyan-Gurkan, Vilma: *See*—
Venta, Patrick J.; Brewer, George J.; Yuzbasiyan-Gurkan, Vilma; and Schall, William D., 6,040,143, Cl. 435-6.000.

Zachrai, Jürgen: *See*—
Besserer, Horst; Hartel, Marc; and Zachrai, Jürgen, 6,039,420, Cl. 312-265.100.

Zadeck, Frank Kenneth: *See*—
Bacon, David Francis; Wegman, Mark N.; and Zadeck, Frank Kenneth, 6,041,179, Cl. 395-709.000.

Zaehe, Bernd, to Sun Hydraulics Corp. Pilot operated pressure valve. 6,039,070, Cl. 137-491.000.

Zaeper, Manfred: *See*—
Manz, Herbert; Tuncer, Haluk; and Zaeper, Manfred, 6,040,551, Cl. 219-121.650.

Zahorik, Russell C.: *See*—
McTeer, Everett A.; Zahorik, Russell C.; and Meikle, Scott G., 6,040,613, Cl. 257-437.000.

Zakrzewski, Robert Alan: *See*—
Kurdzo, James Patrick; and Zakrzewski, Robert Alan, 6,041,064, Cl. 370-466.000.

Zambounis, John S.: *See*—
Schädeli, Ulrich; Zambounis, John S.; Iqbal, Abul; Hao, Zhimin; and Dubas, Henri, 6,040,108, Cl. 430-200.000.

Zammarieh, Elie: *See*—
Prasad, Arun; Karmaker, Ajit; Zammarieh, Elie; and Day, Grant P., 6,039,569, Cl. 433-180.000.

Zamzow, Merle, to Hormel Foods, LLC. Method of making partially split slices of bacon. 6,039,995, Cl. 426-518.000.

Zander, Anthony C.: *See*—
Nishimura, Masaharu; Ohnishi, Keizo; Yasuda, Chiaki; Kajii, Shinichiro; Patrick, William P.; and Zander, Anthony C., 6,041,125, Cl. 381-71.400.

Zander, Lennarth: *See*—
Markström, Lars; Zander, Lennarth; Olofsson, Erik; and Norblad, Olof, 6,038,855, Cl. 60-323.000.

Zaniboni, Carlo, to Gima S.P.A. Multilevel storage device for containers, in particular CD cases. 6,039,169, Cl. 198-347.100.

Zaremba, Alexander Timofeevich: *See*—
Stuntz, Ross Maxwell; and Zaremba, Alexander Timofeevich, 6,039,028, Cl. 123-436.000.

Zawade, Torsten: *See*—
Lübke, Andreas; Rech, Bernd; and Zawade, Torsten, 6,040,766, Cl. 340-438.000.

Zeigler, Terry: *See*—
Peiffer, Larry; Zeigler, Terry; and Guo, William G., 6,038,877, Cl. 62-244.000.

Zeilinger, Brian K., to PlayStar, Incorporated. Swing set bracket. 6,039,654, Cl. 472-118.000.

Zellmer, Timothy Paul: *See*—
Sebben, Daniel Angelo; Lux, Melvin Orville; Zellmer, Timothy Paul; Gueller, Matthew Paul; and Seegert, Brian David, 6,038,843, Cl. 56-202.000.

Zellweger Uster, Inc.: *See*—
Cheng, Luo; Irick, Glenn E., Sr.; Chu, Youe-Tsyr; Ghorashi, Hossein M.; Galyon, Michael E.; and Overbay, Mark A., 6,040,905, Cl. 356-238.300.

Zemlo, Bridgett: *See*—
Ekkert, Len; Miller, Albert R.; and Zemlo, Bridgett, 6,039,196, Cl. 215-216.000.

Zeneca Limited: *See*—
Carr, Kathyrn; and Ferguson, Ian, 6,040,005, Cl. 427-197.000.
Cox, Brian Geoffrey; and Gray, Thomas, 6,040,452, Cl. 548-209.000.

Zepic, Janez: *See*—
Podlipec, Milan; Podlipec, Bostjan; Zepic, Janez; and Vizjak, Kilijan, 6,038,969, Cl. 101-127.100.

Zeren, Greg; and Derman, Jay S., to ACCO Brands, Inc. Security hole fastening device. 6,038,891, Cl. 70-58.000.

Zhang, Hongyong; Koyama, Jun; and Teramoto, Satoshi, to Semiconductor Energy Laboratory Co., Ltd. Semiconductor device having larger contact hole area than an area covered by contact electrode in the hole. 6,040,589, Cl. 257-59.000.

Zhang, Lefan: *See*—
Chui, Charles K.; and Zhang, Lefan, 6,041,143, Cl. 382-232.000.

Zhang, Lei; Chou, William; Peters, Michael G.; and Beilin, Solomon I., to Fujitsu Limited. Process flows for formation of fine structure layer pairs on flexible films. 6,039,889, Cl. 216-17.000.

Zhang, Yong-Kang: *See*—
Wilcox, Allan L.; and Zhang, Yong-Kang, 6,040,444, Cl. 544-152.000.

Zhang, Yuhua: *See*—
Kolesnick, Richard N.; Liu, Jun; and Zhang, Yuhua, 6,040,149, Cl. 435-15.000.

Zhao, Chengquan: *See*—
Lehrer, Robert I.; Zhao, Chengquan; and Lee, In-Hee, 6,040,293, Cl. 514-13.000.

Zhao, Dalian: *See*—
Pierce, Michael E.; Chen, Cheng Y.; Choudhury, Anusuya; Radesca, Lilian A.; Tan, Lushi; and Zhao, Dalian, 6,040,480, Cl. 564-390.000.

Zhou, Feng Qing: *See*—
Zhou, Ming; Zhou, Feng Qing; and Pan, Jing-Jong, 6,039,806, Cl. 118-665.000.

Zhou, Guo-Fu; Jacobs, Bernardus A.J.; Rijpers, Johannes C.N.; and Borg, Hermanus J., to U.S. Philips Corporation. Rewritable optical information medium. 6,040,066, Cl. 428-641.000.

Zhou, Mei-Sheng: *See*—
Li, Jianxun; Chooi, Simon; and Zhou, Mei-Sheng, 6,040,243, Cl. 438-687.000.

Zhou, Ming; Zhou, Feng Qing; and Pan, Jing-Jong, to E-Tek Dynamics, Inc. Precision thickness optical coating system and method of operation thereof. 6,039,806, Cl. 118-665.000.

Ziegler, Dieter: *See*—
David, Samuel; Antel, Jochen; Brueckner, Reinhard; Ziegler, Dieter; Eeckhout, Christian; Bielenberg, Gerhard-Wilhelm; and Peck, Michael, 6,040,303, Cl. 514-218.000.

Ziegler, Douglas D.: *See*—
Talley, Laroul J.; Yurek, Theodore F.; Ziegler, Douglas D.; and Robinson, Ross G., 6,038,902, Cl. 72-128.000.

Ziegler, Paula J.: *See*—
Bangs, William E.; Dibenedetto, Joseph D.; Friedberg, Joyce L.; Giordano, Denise A.; Glover, Judy M.; Khoo, Chor San Heng; Ko, Sandy; MacNair, R. David C.; Noar, Scott R.; Randazzi, John J., Jr.; Stoever, Harro; and Ziegler, Paula J., 6,039,989, Cl. 426-106.000.

Ziegler, Raymond J.: *See*—
Debe, Mark K.; Haugen, Gregory M.; Steinbach, Andrew J.; Thomas, John H., III; and Ziegler, Raymond J., 6,040,077, Cl. 429-40.000.

Zielinski, Michael, to Rotor Clamp, Inc. Hose clamp. 6,038,744, Cl. 24-20.00R.

Zika, Steven J.; and Hopper, C. Bradford, to Advanced Micro Devices, Inc. Method and apparatus for detecting process sensitivity to integrated circuit layout using wafer to wafer defect inspection device. 6,040,912, Cl. 356-394.000.

Zimerla, Edward L.: *See*—
Piperato, Michael C.; and Zimerla, Edward L., 6,039,049, Cl. 128-898.000.

Zimmerle, William J.: *See*—
Fox, Richard H.; Steinbacher, David M.; Olin, Wesley L.; Meyers, Vernon O.; and Zimmerle, William J., 6,039,158, Cl. 188-162.000.

Zimmerman, Julie G.; and Jacobsen, Alex W., to Kallman Corporation. Storage page for three-dimensional items. 6,039,495, Cl. 402-79.000.

Zimmerman, Roger A. Unused hanger indicator system and method therefor. 6,039,225, Cl. 223-85.000.

Zimmermann, Andreas: *See*—
Behme, Klaus-Jürgen; Jansen, Rolf-Michael; and Zimmermann, Andreas, 6,040,375, Cl. 524-492.000.

Zimmermann, Wilhelm: *See*—
Stein, Bernd; Lehnert, Heinz; Zimmermann, Wilhelm; and Steinhauer, Heinz, 6,038,901, Cl. 72-85.000.

Zink, Joe M. Portable sheet metal brake. 6,038,909, Cl. 72-319.000.
Zinoviev, Nikolai Timofeevich; and Siomkin, Boris Vasilievich, to Itac, Ltd. Method and apparatus for crushing nonconductive materials. 6,039,274, Cl. 241-1.000.
Zinser Textilmaschinen GmbH: *See—*
Machnik, Franz; and Weeger, Hans-Peter, 6,038,845, Cl. 57-267.000.
Mack, Karl-Heinz, 6,038,846, Cl. 57-281.000.
Zola, Philip J.: *See—*
Boettcher, John W.; Jagannathan, Seshadri; Orem, Michael W.; and Zola, Philip J., 6,040,128, Cl. 430-569.000.
Zollitsch, Ludwig; and Kreuz, Ulrich, to C.F.Scheer & Cie GmbH & Co. Apparatus and method for granulating plastic strands. 6,039,905, Cl. 264-143.000.
Zubin, Claudio: *See—*
Witkowski, Ireneusz; and Zubin, Claudio, 6,039,602, Cl. 439-550.000.
Zulu, Joshua. Steering control system for an articulating work machine having a steering fluid cylinder and a fluid-powered differential. 6,039,133, Cl. 180-6.640.
Zunquan, Liu. Device and method for data integrity and authentication. 6,041,409, Cl. 713-176.000.
Zuppa, Riccardo, to Palazzoli S.p.A. Body for electrical outlet or plug. 6,039,594, Cl. 439-318.000.
ZymoGenetics, Inc.: *See—*
Berkner, Kathleen L.; Petersen, Lars Christian; Hart, Charles E.; Hedner, Ulla; and Bregengaard, Claus, 6,039,944, Cl. 424-94.640.
314613 B.C. Ltd.: *See—*
Beder, Douglas S., 6,041,262, Cl. 607-139.000.
3Com Corporation: *See—*
Flanders, John A.; Ready, David C.; Van Seters, Steven; Schwartz, Leonard; and Townsend, William D., 6,041,058, Cl. 370-401.000.
Hart, John H.; and Sherer, W. Paul, 6,041,166, Cl. 395-200.680.
3M Innovative Properties Company: *See—*
Bland, Ralph H.; Jonza, James M.; Smith, James D.; Bradley, Jeffrey F.; and Smith, Kenneth B., 6,040,061, Cl. 428-480.000.
Debe, Mark K.; Haugen, Gregory M.; Steinbach, Andrew J.; Thomas, John H., III; and Ziegler, Raymond J., 6,040,077, Cl. 429-40.000.
Govind, Nayna; Jinks, Philip A.; Ross, Danna L.; and Ward, Gary H., 6,039,932, Cl. 424-45.000.
Ho, Kwok-Lun; Follensbee, Robert A.; Harmer, Walter L.; and Morris, Mary L., 6,039,775, Cl. 51-295.000.
Le Riche, Frédéric Pierre Alain; and Pierre, Bernard Raymond, 6,040,006, Cl. 427-209.000.
Lundin, David J.; and Eliason, Kevin M., 6,039,553, Cl. 425-115.000.
Matsumoto, Kenji; Suzuki, Kazuo; and Haga, Muneo, 6,040,004, Cl. 427-185.000.
Miller, Philip; and LaLiberte, Thomas R., 6,039,911, Cl. 264-280.000.
Sadrakula, Philip V.; Kampa, Leonard; Hamerski, Michael D.; and Bries, James L., 6,039,102, Cl. 156-510.000.
Tomai, Mark A.; Hammerbeck, David M.; and Swingle, Karl F., 6,039,969, Cl. 424-434.000.
Wright, Robin E., 6,040,352, Cl. 522-2.000.

LIST OF REISSUE PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 21st DAY OF MARCH, 2000

NOTE— Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Adamik, John A.: *See—*
Wang, David Nin-Kou; White, John M.; Law, Kam S.; Leung, Cissy; Umotoy, Salvador P.; Collins, Kenneth S.; Adamik, John A.; Perlov, Ilya; and Maydan, Dan, RE. 36,623, Cl. 427-579.000.

Andoh, Hisashi: *See—*
Maeda, Yoshihito; Ikuta, Isao; Andoh, Hisashi; Nagai, Masaichi; Katoh, Yoshimi; Sato, Yoshio; Tsuboi, Nobuyoshi; and Minemura, Hiroyuki, RE. 36,624, Cl. 430-270.130.

Applied Materials, Inc.: *See—*
Wang, David Nin-Kou; White, John M.; Law, Kam S.; Leung, Cissy; Umotoy, Salvador P.; Collins, Kenneth S.; Adamik, John A.; Perlov, Ilya; and Maydan, Dan, RE. 36,623, Cl. 427-579.000.

Clinical Dynamics Corporation: *See—*
Costello, Leo F., Jr., RE. 36,620, Cl. 250-252.100.

Collins, Kenneth S.: *See—*
Wang, David Nin-Kou; White, John M.; Law, Kam S.; Leung, Cissy; Umotoy, Salvador P.; Collins, Kenneth S.; Adamik, John A.; Perlov, Ilya; and Maydan, Dan, RE. 36,623, Cl. 427-579.000.

Costello, Leo F., Jr., to Clinical Dynamics Corporation. Pulse oximetry testing. RE. 36,620, Cl. 250-252.100.

Eastlex Machine Corporation: *See—*
Schmidt, Volker; and Schmidt, Erich A., RE. 36,619, Cl. 227-119.000.

Harker, Brian G., to Hilti Aktiengesellschaft. Drywall fastener. RE. 36,622, Cl. 411-21.000.

Herr, Rolf-Peter; Kelly, Stephen; Schadt, Martin; Schmitt, Klauss; and Schuster, Andreas, to Rolic AG. Linear and cyclic polymers or oligomers having a photoreactive ethene group. RE. 36,625, Cl. 526-245.000.

Hilti Aktiengesellschaft: *See—*
Harker, Brian G., RE. 36,622, Cl. 411-21.000.

Hitachi, Ltd.: *See—*
Maeda, Yoshihito; Ikuta, Isao; Andoh, Hisashi; Nagai, Masaichi; Katoh, Yoshimi; Sato, Yoshio; Tsuboi, Nobuyoshi; and Minemura, Hiroyuki, RE. 36,624, Cl. 430-270.130.

Ikuta, Isao: *See—*
Maeda, Yoshihito; Ikuta, Isao; Andoh, Hisashi; Nagai, Masaichi; Katoh, Yoshimi; Sato, Yoshio; Tsuboi, Nobuyoshi; and Minemura, Hiroyuki, RE. 36,624, Cl. 430-270.130.

Katoh, Yoshimi: *See—*
Maeda, Yoshihito; Ikuta, Isao; Andoh, Hisashi; Nagai, Masaichi; Katoh, Yoshimi; Sato, Yoshio; Tsuboi, Nobuyoshi; and Minemura, Hiroyuki, RE. 36,624, Cl. 430-270.130.

Kelly, Stephen: *See—*
Herr, Rolf-Peter; Kelly, Stephen; Schadt, Martin; Schmitt, Klauss; and Schuster, Andreas, RE. 36,625, Cl. 526-245.000.

Law, Kam S.: *See—*
Wang, David Nin-Kou; White, John M.; Law, Kam S.; Leung, Cissy; Umotoy, Salvador P.; Collins, Kenneth S.; Adamik, John A.; Perlov, Ilya; and Maydan, Dan, RE. 36,623, Cl. 427-579.000.

Leung, Cissy: *See—*
Wang, David Nin-Kou; White, John M.; Law, Kam S.; Leung, Cissy; Umotoy, Salvador P.; Collins, Kenneth S.; Adamik, John A.; Perlov, Ilya; and Maydan, Dan, RE. 36,623, Cl. 427-579.000.

Maeda, Yoshihito; Ikuta, Isao; Andoh, Hisashi; Nagai, Masaichi; Katoh, Yoshimi; Sato, Yoshio; Tsuboi, Nobuyoshi; and Minemura, Hiroyuki, to Hitachi, Ltd. Optical recording media and information recording and reproducing units. RE. 36,624, Cl. 430-270.130.

Maydan, Dan: *See—*
Wang, David Nin-Kou; White, John M.; Law, Kam S.; Leung, Cissy; Umotoy, Salvador P.; Collins, Kenneth S.; Adamik, John A.; Perlov, Ilya; and Maydan, Dan, RE. 36,623, Cl. 427-579.000.

Minemura, Hiroyuki: *See—*
Maeda, Yoshihito; Ikuta, Isao; Andoh, Hisashi; Nagai, Masaichi; Katoh, Yoshimi; Sato, Yoshio; Tsuboi, Nobuyoshi; and Minemura, Hiroyuki, RE. 36,624, Cl. 430-270.130.

Nagai, Masaichi: *See—*
Maeda, Yoshihito; Ikuta, Isao; Andoh, Hisashi; Nagai, Masaichi; Katoh, Yoshimi; Sato, Yoshio; Tsuboi, Nobuyoshi; and Minemura, Hiroyuki, RE. 36,624, Cl. 430-270.130.

Nakaoka, Yuji, to NEC Corporation. Semiconductor memory device. RE. 36,621, Cl. 365-189.010.

NEC Corporation: *See—*
Nakaoka, Yuji, RE. 36,621, Cl. 365-189.010.

Perlov, Ilya: *See—*
Wang, David Nin-Kou; White, John M.; Law, Kam S.; Leung, Cissy; Umotoy, Salvador P.; Collins, Kenneth S.; Adamik, John A.; Perlov, Ilya; and Maydan, Dan, RE. 36,623, Cl. 427-579.000.

Rolic AG: *See—*
Herr, Rolf-Peter; Kelly, Stephen; Schadt, Martin; Schmitt, Klauss; and Schuster, Andreas, RE. 36,625, Cl. 526-245.000.

Sato, Yoshio: *See—*
Maeda, Yoshihito; Ikuta, Isao; Andoh, Hisashi; Nagai, Masaichi; Katoh, Yoshimi; Sato, Yoshio; Tsuboi, Nobuyoshi; and Minemura, Hiroyuki, RE. 36,624, Cl. 430-270.130.

Schadt, Martin: *See—*
Herr, Rolf-Peter; Kelly, Stephen; Schadt, Martin; Schmitt, Klauss; and Schuster, Andreas, RE. 36,625, Cl. 526-245.000.

Schmidt, Erich A.: *See—*
Schmidt, Volker; and Schmidt, Erich A., RE. 36,619, Cl. 227-119.000.

Schmidt, Volker; and Schmidt, Erich A., to Eastlex Machine Corporation. Rotary hopper for an attaching apparatus. RE. 36,619, Cl. 227-119.000.

Schmitt, Klauss: *See—*
Herr, Rolf-Peter; Kelly, Stephen; Schadt, Martin; Schmitt, Klauss; and Schuster, Andreas, RE. 36,625, Cl. 526-245.000.

Schuster, Andreas: *See—*
Herr, Rolf-Peter; Kelly, Stephen; Schadt, Martin; Schmitt, Klauss; and Schuster, Andreas, RE. 36,625, Cl. 526-245.000.

Tsuboi, Nobuyoshi: *See—*
Maeda, Yoshihito; Ikuta, Isao; Andoh, Hisashi; Nagai, Masaichi; Katoh, Yoshimi; Sato, Yoshio; Tsuboi, Nobuyoshi; and Minemura, Hiroyuki, RE. 36,624, Cl. 430-270.130.

Umotoy, Salvador P.: *See—*
Wang, David Nin-Kou; White, John M.; Law, Kam S.; Leung, Cissy; Umotoy, Salvador P.; Collins, Kenneth S.; Adamik, John A.; Perlov, Ilya; and Maydan, Dan, RE. 36,623, Cl. 427-579.000.

Wang, David Nin-Kou; White, John M.; Law, Kam S.; Leung, Cissy; Umotoy, Salvador P.; Collins, Kenneth S.; Adamik, John A.; Perlov, Ilya; and Maydan, Dan, to Applied Materials, Inc. Process for PECVD of silicon oxide using TEOS decomposition. RE. 36,623, Cl. 427-579.000.

White, John M.: *See—*
Wang, David Nin-Kou; White, John M.; Law, Kam S.; Leung, Cissy; Umotoy, Salvador P.; Collins, Kenneth S.; Adamik, John A.; Perlov, Ilya; and Maydan, Dan, RE. 36,623, Cl. 427-579.000.

LIST OF REEXAMINATION PATENTEES

TO WHOM

CERTIFICATES WERE ISSUED

Ball, Hershell R., Jr.: *See—*
Swartzel, Kenneth R.; Ball, Hershell R., Jr.; and Hamid-Samimi, Mohammad-Hossein, B1 994,291, Cl. 426-399.000.

Barron, Charles Dwain: *See—*
Dailey, Patrick E.; and Barron, Charles Dwain, B1 646,611, Cl. 340-853.600.

Cal-West Equipment Company, Inc.: *See—*
Woodhall, Edward W.; and Kondrats, Nicholas, B1 411,760, Cl. 427-156.000.

Dailey, Patrick E.; and Barron, Charles Dwain, to Halliburton Energy Services, Inc. System and method for indirectly determining inclination at the bit. B1 646,611, Cl. 340-853.600.

Geneva Manufacturing Co.: *See—*
Lance, Sandra L.; and Lance, Marshall R., B1 743,584, Cl. 296-37.600.

Halliburton Energy Services, Inc.: *See—*
Dailey, Patrick E.; and Barron, Charles Dwain, B1 646,611, Cl. 340-853.600.

Hamid-Samimi, Mohammad-Hossein: *See—*
Swartzel, Kenneth R.; Ball, Hershell R., Jr.; and Hamid-Samimi, Mohammad-Hossein, B1 994,291, Cl. 426-399.000.

Kondrats, Nicholas: *See—*
Woodhall, Edward W.; and Kondrats, Nicholas, B1 411,760, Cl. 427-156.000.

Lance, Marshall R.: *See—*
Lance, Sandra L.; and Lance, Marshall R., B1 743,584, Cl. 296-37.600.

Lance, Sandra L.; and Lance, Marshall R., to Geneva Manufacturing Co. Vehicle mounted storage unit. B1 743,584, Cl. 296-37.600.

North Carolina State University: *See—*
Swartzel, Kenneth R.; Ball, Hershell R., Jr.; and Hamid-Samimi, Mohammad-Hossein, B1 994,291, Cl. 426-399.000.

Swartzel, Kenneth R.; Ball, Hershell R., Jr.; and Hamid-Samimi, Mohammad-Hossein, to North Carolina State University. Method for the ultrapasteurization of liquid whole egg. B1 994,291, Cl. 426-399.000.

Woodhall, Edward W.; and Kondrats, Nicholas, to Cal-West Equipment Company, Inc. Protective coating and method of such protective coating. B1 411,760, Cl. 427-156.000.

LIST OF DESIGN PATENTEES

Adams, Carl H.: *See*—
Kitabayashi, Joey; Lewis, Robert A.; Markowich, Michael; and Adams, Carl H., 421,694, Cl. D7-346.000.

American Standard Company: *See*—
Florian, Sean E., 421,699, Cl. D8-4.000.

American Standard Inc.: *See*—
Delker, Wilfried; and Schmitz, Walter, 421,789, Cl. D23-255.000.
Svendsen, Sean W., 421,793, Cl. D23-277.000.

Amway Corporation: *See*—
Heeter, Kristina B.; and DeBaschmakoff, Thierry Francois, 421,819, Cl. D28-85.000.

Armament Systems and Procedures, Inc.: *See*—
Parsons, Kevin L., 421,813, Cl. D26-46.000.

Armstrong, Donald M. Portable travel toothbrush. 421,679, Cl. D4-108.000.

Arnette, Kip, to Luxottica Leasing S.p.A. Eyewear front. 421,764, Cl. D16-326.000.

Arthur, Rodney Ivan, to Rope & Plastic Products Pty Ltd. Battery lift handle. 421,739, Cl. D13-119.000.

Avenatti, Giovanni, to Stilolinea S.r.l. Writing instrument. 421,771, Cl. D19-48.000.

Aztec Concrete Accessories, Inc.: *See*—
Haslem, Dale; Hartzheim, G. Douglas; Wilbur, Steve; and Lancial, Marty, 421,709, Cl. D8-354.000.

Baldwin Hardware Corporation: *See*—
Meck, Leslie A.; and Roberts, Rockwood T., III, 421,814, Cl. D26-67.000.

Barnaville, James: *See*—
Pickering, Colin; and Barnaville, James, 421,763, Cl. D16-326.000.

BBC International, Ltd.: *See*—
Debiase, Max; and Wilborn, Donald R., 421,676, Cl. D2-897.000.

Bergstrom, Kurt Jon: *See*—
Fierro, Anthony John; Bergstrom, Kurt Jon; Legge, Kevin Christopher; Griffin, David Allen; and Sevart, Jeffrey Leon, 421,732, Cl. D12-146.000.

Bevacco, Marc P., to Cherne Industries Incorporated. Two piece mechanical plug assembly. 421,792, Cl. D23-260.000.

Biermann, Gunter: *See*—
Graf, Torsten; Graf, Andrea; and Biermann, Gunter, 421,806, Cl. D25-113.000.

Bignon, Lucas: *See*—
Lion, Mathieu; and Bignon, Lucas, 421,706, Cl. D8-91.000.

Blair, Dwight Nelson; and Pangburn, Thomas Eugene, to Lexmark International, Inc. Printer. 421,768, Cl. D18-50.000.

Blenke, Timothy James: *See*—
Van Gompel, Paul Theodore; Roessler, Thomas Harold; Suprise, Jody Dorothy; Vogt, Robert Eugene; and Blenke, Timothy James, 421,802, Cl. D24-126.000.

Bodker, Alan N.: *See*—
Durliat, Leonaora M.; and Bodker, Alan N., 421,718, Cl. D9-434.000.

Bogard, Donald E. Pick-up truck lightweight cargo cover. 421,736, Cl. D12-401.000.

Bokros, Les: *See*—
Maayeh, George; Maayeh, Elias S.; and Bokros, Les, 421,759, Cl. D15-150.000.

Bonzer, Robert L. Hand-grip cordless inflator. 421,756, Cl. D15-7.000.

Borg, Chris Alan. Word formation game. 421,776, Cl. D21-336.000.

Bracken, Allen T.: *See*—
Sumner, Wayne A.; Griffith, David W.; Bracken, Allen T.; Brawne, Nicholas; and Nguyen, T. Greg, 421,748, Cl. D14-114.000.

Brandt, Charles M.: *See*—
Eberle, Theodore F.; Cheng, Jizu J.; Kraft, Richard G.; and Brandt, Charles M., 421,720, Cl. D9-500.000.

Brawne, Nicholas: *See*—
Sumner, Wayne A.; Griffith, David W.; Bracken, Allen T.; Brawne, Nicholas; and Nguyen, T. Greg, 421,748, Cl. D14-114.000.

Breen, John D., to Rubbermaid Incorporated. Broom shroud. 421,681, Cl. D4-199.000.

Bridgestone/Firestone, Research, Inc.: *See*—
Guspodin, James G.; Wright, Richard J.; and Regallis, John J., 421,733, Cl. D12-147.000.

Brostrom, Gerald M.; and Byram, David C., to 3M Innovative Properties Company. Carriage for drop-down mask assembly. 421,801, Cl. D24-110.100.

Brown, John P.; and Brown, Susan E. Ornamental hook. 421,712, Cl. D8-370.000.

Brown, Susan E.: *See*—
Brown, John P.; and Brown, Susan E., 421,712, Cl. D8-370.000.

Byram, David C.: *See*—
Brostrom, Gerald M.; and Byram, David C., 421,801, Cl. D24-110.100.

Canon Kabushiki Kaisha: *See*—
Kusanagi, Takashi, 421,767, Cl. D18-39.000.
Takizawa, Sakiko, 421,747, Cl. D14-113.000.

Canton Gongora, Antonio; Cruz Fernandez, Carlos Jesús; Muñagorri Enriquez, José Maria; and Rayo Ortigüela, Juan Carlos, to Telefonica de Espana, S.A. Modular lighting fixture. 421,816, Cl. D26-76.000.

Carbone, Richard J., to HP Intellectual Corp. Toaster. 421,693, Cl. D7-330.000.

Carrabba, Salvatore R. Storage cabinet. 421,685, Cl. D6-432.000.

Carroll, George H.: *See*—
Indelicato, Len; and Carroll, George H., 421,716, Cl. D9-318.000.

Casio Keisanki Kabushiki Kaisha: *See*—
Ono, Junichi, 421,744, Cl. D14-100.000.

Chan, Raymond, to IDT Communication Technology Ltd. Telephone. 421,751, Cl. D14-151.000.

Chaney, Michael T.; Hauberg, Jonathan C.; and Siudzinski, Paul A., to Dayton Technologies, Inc. Deck plank support extrusion. 421,808, Cl. D25-125.000.

Chang, Chih-Hung; and Wang, Wen-Tsung, to Largan Digital Co., Ltd. Camera. 421,761, Cl. D16-209.000.

Chang, Eddie, to Man Nin Shing Company Limited. Rocking clock. 421,722, Cl. D10-26.000.

Charles Worthington Hair Accessories Unlimited: *See*—
Worthington, John Charles, 421,680, Cl. D4-128.000.

Chen, Paul M.: *See*—
Doud, Galen C.; Sytsma, Cory J.; and Chen, Paul M., 421,688, Cl. D6-491.000.

Robrick Nursery, Inc.: *See*—
Kearley, Richard C., Jr., 11,310, Cl. Plt.-227.000.
Saville, F. Harmon, deceased (by Charles K. Brown, executor), to Nor'East Miniature Roses, Inc. Miniature rose plant named 'Savanight'. 11,303, Cl. Plt.-128.000.
Sun World International, Inc.: *See*—
Fear, Carlos D.; Mowrey, Bruce D.; and Cain, David W., 11,296, Cl. Plt.-197.000.
Sunshine Foliage World: *See*—
Brown, B. Frank; and Millare, Cleofar P., 11,305, Cl. Plt.-376.000.
Brown, B. Frank; and Millare, Cleofar P., 11,306, Cl. Plt.-376.000.
Tree Introductions, Inc.: *See*—
Moon, Dwayne C., 11,295, Cl. Plt.-221.000.
Utecht, Angelika, to Florfis AG. Geranium plant named 'Fiseye'. 11,302, Cl. Plt.-325.000.
Walden, John K., to Bear Creek Gardens, Inc. Floribunda rose plant named 'JACmebub'. 11,299, Cl. Plt.-149.000.
Zaiger, Chris Floyd; Gardner, Leith Marie; Zaiger, Gary Neil; and Zaiger, Grant Gene. Apricot tree named 'Bonny'. 11,307, Cl. Plt.-186.000.
Zaiger, Gary Neil: *See*—
Zaiger, Chris Floyd; Gardner, Leith Marie; Zaiger, Gary Neil; and Zaiger, Grant Gene, 11,307, Cl. Plt.-186.000.
Zaiger, Grant Gene: *See*—
Zaiger, Chris Floyd; Gardner, Leith Marie; Zaiger, Gary Neil; and Zaiger, Grant Gene, 11,307, Cl. Plt.-186.000.

CLASSIFICATION OF PATENTS

ISSUED MARCH 21, 2000

NOTE—First number, class; second number, subclass; third number, patent number
